Spontaneous and drug-induced cerebellar electrical activities recorded from in situ preparations, cerebellar slices, and tissue cultures are reviewed. The effects of central depressants such as barbiturates and benzodiazepines and of convulsants, anticonvulsants, and related agents (benzylpenicillin, pentetrazol, strychnine, harmaline, local anesthetics, and phenytoin) are discussed. Actions of putative neurotransmitters, cholinergic and anticholinergic agents, adrenergic and adrenolytic agents, and amino acids are also considered. 281 references.

003805 Goltermann, N. R.; Stengaard-Pedersen, K.; Rehfeld, J. F.; Christensen, N. J. Institute of Medical Biochemistry, University of Aarhus, DK-8000 Aarhus C, Denmark **Newly synthesized cholecystokinin in subcellular fractions of the rat brain.** Journal of Neurochemistry. 36(3):959-965, 1981.

The subcellular localization of newly synthesized cholecystokinin (CCK) in various parts of Wistar rat brain was studied after intracisternal pulse injections of (35S)methionine. De novo synthesized CCK in the crude mitochondrial/synaptosomal fraction and in the purified synaptosomal fraction was demonstrated by affinity chromatography, using antibodies specific for the COOH terminal sequence of CCK. Subsequent gel chromatography revealed two molecular forms of labeled CCK with elution constants of 1.1 (corresponding to the COOH terminal tetrapeptide amide, CCK-4) Results support the suggestion that the small molecular forms are transmitter forms of CCK. 16 references. 003806 Gospe, Sidney M., Jr.; Wilson, Wilkie A., Jr. Wilson: Epilepsy Center Research Laboratory, Bldg. 2, V.A. Medical Center, Durham, NC 27705 **Dopamine inhibits burst-firing of**

neurosecretory cell R 15 in Aplysia californica: establishment of a dose-response relationship. Journal of Pharmacology and Experimental Therapeutics. 214(1):112-118, 1980.

Burst firing in neurosecretory cell R-15 of Aplysia californica was inhibited by the bath application of dopamine. Dopamine reduced the inward current in the region of negative slope conductance and tended to linearize the current/voltage curve. The loss of inward current in the region of negative slope conductance was dose dependent, highly reproducible, and relatively resistant to desensitization. The dose/response curve was sigmoidal in shape, rising from minimal effect near 50mcM to a maximal effect near 500mcM. This dose/response curve can be used as a standard of comparison in studies of agonists and antagonists. 24 references. (Author abstract modified)

003807 Goto, Masayoshi; Inomata, Norio; Ono, Hideki; Saito, Ken-Ichi; Fukuda, Hideomi. Dept. of Toxicology and Pharmacology, Faculty of Pharmaceutical Sciences, University of Tokyo, Bunkyo-ku, Tokyo 113, Japan **Changes of electroretinogram and neurochemical aspects of GABAergic neurons of retina after intraocular injection of kainic acid in rats.** Brain Research. 211(2):305-314, 1981.

The effects of intraocular injections of kainic acid (KA) on electroretinogram (ERG) readings and neurochemical properties of the retina were examined in male Wistar rats. Histological alterations were evident 1 hour after injection: swelling was observed in the inner and outer plexiform layers, and certain ganglion cells and cells of the inner nuclear layers exhibited pyknotic nuclei. Most of the ganglion cells appeared to have degenerated within 48 hours, and the form of the outer plexiform layer was incomplete. The amplitude of the b-waves of the ERG decreased 2 hours after injection and never recovered, whereas the amplitude of the a-waves was unaffected by a 50nmol dose of KA and increased by a 200nmol dose. GABA content in the eyecups began to decrease within 1 hour and fell to 20% of its original level within 24 hours. Glutamic acid decarboxylase activity was unaffected 2 hours after injection but was reduced to 40% of its original level within 24 hours. Taurine was not altered by KA. 31 references. (Author abstract modified)

003808 Govoni, S.; Hong, J. S.; Yang, H.- Y. T.; Costa, E. Yang: Laboratory of Preclinical Pharmacology, NIMH, St. Elizabeths Hospital, Washington, DC 20032 **Increase of neurotensin content elicited by neuroleptics in nucleus accumbens.** Journal of Pharmacology and Experimental Therapeutics. 215(2):413-417, 1980.

Increases of neurotensin content of nucleus accumbens elicited by neuroleptics were investigated. Neurotensin immunoreactive material (neurotensin IR) of nucleus accumbens increased 16 hours after a single injection of haloperidol; this increase persisted for 8 hours or longer. Repeated injections of haloperidol caused a gradual and progressive increase of neurotensin IR. Maximal responses were obtained with 1mg/kg/day in 3 weeks. The increase of neurotensin IR material of nucleus accumbens was elicited also by chlorpromazine, trifluoroperazine and pimozide, while promazine and promethazine were ineffective. These data suggest a neuroleptic modulation of neurotensin metabolism, synthesis, or utilization directly or indirectly through dopaminergic synapses. 34 references. (Author abstract modified)

003809 Grandison, L.; Guidotti, A. Dept. of Physiology and Biophysics, Rutgers Medical School, Piscataway, NY **Role of the anterior pituitary GABA receptor in the control of prolactin release.** In: Brambilla, F., ed., Progress in psychoneuroendocrinology. New York, Elsevier/North Holland, 1980. 669 p. (p. 157-163).

Evidence is presented to support the hypothesis that GABA receptors in the anterior pituitary regulate release of prolactin (PRL). GABA receptors have been identified in membrane preparations of rat and human pituitary. Incubation of hemisected anterior pituitaries with the GABA agonist muscimol inhibits PRL release. The high concentration of GABA in human pituitary suggests that the pituitary is a target for GABA released under physiological conditions, even though the pituitary is not the source of GABA. The most likely source is the tuberoinfundibular GABA neuron, which may secrete GABA into the portal pituitary circulation. Unlike the tuberoinfundibular dopamine neuron, the GABA neuron does not appear to have a role in maintaining basal PRL release. 26 references.

003810 Grant, Steven J.; Redmond, D. E., Jr. Dept. of Psychiatry, Yale University School of Medicine, 333 Cedar St., New Haven, CT 06510 **The neuroanatomy and pharmacology of the nucleus locus coeruleus. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-31176, 1980. 49 p.

Research is reviewed on the neurophysiological and neuropharmacological characteristics of the nucleus locus coeruleus (LC) in the rat, a brain region which contains specialized catecholamine containing cells. Emphasis is on how the interaction of clonidine with noradrenergic nuclei, such as LC, might be responsible for clonidine's psychopharmacological properties. These results indicate that: 1) clonidine acts preferentially at alpha-2-adrenergic receptors, and in systemic doses of less than 50 to 100mcg/kg, clonidine exerts its effects at autoreceptors which initially decrease noradrenergic neuronal firing rates, norepinephrine (NE) release, and NE turnover; 2) this action produces functional decreases of the usual effects of these neurons at their postsynaptic alpha-1-adrenergic and beta-adrenergic receptor mediated projections; and 3) higher doses of clonidine produce agonist effects at alpha-1-adrenergic receptors, counteracting the effects of decreases in firing rate and turnover, while decreased function continues at beta-receptors. It is concluded that receptors for GABA, endorphins, substance-P, and acetylcholine on LC neurons provide an anatomical and physiological basis for interactions among systems using these substances as neurotransmitters by acting on a final noradrenergic common pathway. The noradrenergic pathways, in turn, also project and alter function in areas utilizing other neurotransmitters, and studies of LC may help determine the nature and effects of clonidine and other alpha-2-agonists on the brain. 107 references.

003811 Greeley, George H., Jr.; Kizer, J. S. Room 241, Biological Sciences Research Center (220H), University of North Carolina School of Medicine, Chapel Hill, NC 27514 **The effects of chronic methylphenidate treatment on growth and endocrine function in the developing rat.** Journal of Pharmacology and Experimental Therapeutics. 215(3):545-551, 1980.

The effects of chronic methylphenidate treatment on growth and endocrine function in the developing rat were investigated. At 35mg/kg per day and 100mg/kg per day, methylphenidate significantly decreased rate of skeletal growth and bodyweight gain in both males and females. Vaginal patency in females given 35mg/kg and 100mg/kg during neonatal life was significantly delayed and number of estrous cycles after cessation of chronic treatment was significantly reduced. In both males and females, chronic methylphenidate depresses serum prolactin levels at all doses, an effect which disappears after cessation of treatment. At all doses, chronic methylphenidate significantly decreases basal serum insulin levels. Chronic methylphenidate treatment significantly depresses growth hormone levels in females, with no consistent effect in males. In females, chronic methylphenidate has no consistent effect upon gonadotropin levels but significantly decreases luteinizing hormone and follicle stimulating hormone levels in males. 12 references. 003812 Green, Kenneth F. California State University, 6101 East 7th St., Long Beach, CA 90801 **Hippocampal slow activity: two input systems? (Unpublished paper).** Final Report, NIMH Grant R03-MH-32873, 1980. 7 p.

Inputs to the hippocampal formation that may affect an electrical rhythmic slow activity (RSA) in rats were investigated. Data obtained from 30 Ss indicated that with urethane, the RSA amplitude profile replicated profile past findings, as did RSA frequencies of 3 to 7 Hz. Atropine reduced percent time RSA while eserine increased percent time RSA. Stimulation of the performant path (PP) at RSA frequencies did not drive RSA in any reliable fashion. Stimulation of medial septal area (MS) at 50 to 60 Hz elicited RSA and, to a limited extent, increased RSA frequency as MS stimulation intensity increased. The findings indicated that RSA is not affected reliably by electrical stimulation of PP in urethane anesthetized rats. The results also suggest that the entorhinal cortex is not a driver of RSA in the hippocampus, even under the conditions which favor its appearance (urethane anesthesia, attention related input, slow stimulation rates, and eserine). If this result holds up in waking rats, several problems are seen to exist. It is recommended that fine analysis of cellular mechanisms should be reconciled with field potentials in future research.

003813 Grignolo, Alberto; Light, Kathleen C.; Obrist, Paul A. Dept. of Pharmacology, P.O. Box 3813, Duke University Medical Center, Durham, NC 27710 **Beta-adrenergic influence on cardiac dynamics during shock-avoidance in dogs.** Pharmacology Biochemistry and Behavior. 14(3):313-319, 1981.

The role of beta-adrenergic receptors in the mediation of the cardiodynamic effects of a shock avoidance task were evaluated in conscious dogs. Shock avoidance evoked reliable increases in left ventricular pressure (LV dP/dt), heartrate (HR), cardiac output (CO), systolic blood pressure (SBP), and diastolic blood pressure (DBP), as well as decreases in total peripheral resistance. Beta-adrenergic blockade by practolol (2 to 4mg/kg) eliminated the LV dP/dt increases, attenuated vasodilation and increases in HR and CO, diminished SBP increases in certain animals, and had no effect on DBP increases. Stable interindividual differences in the magnitude of LV dP/dt and HR increases during shock avoidance were demonstrated, but these differences were abolished by beta blockade. 32 references. 003814 Gripenberg, J.; Heinonen, E.; Jansson, S. -E. Heinonen: Dept. of Physiology, University of Helsinki, Siltavuorenpenger, SF-00170 Helsinki 17, Finland **Uptake of radiocalcium by nerve endings isolated from rat brain: kinetic studies.** British Journal of Pharmacology. 71(1):265-271, 1980.

The uptake of radiocalcium by nerve ending particles isolated from male Sprague-Dawley rat brain was studied in vitro by means of a rapid lanthanum quenching technique. During control conditions and during high potassium stimulation, the uptake fit a theoretical three compartment model with two separate uptake phases, a fast initial phase followed by a late slow phase. The uptake as a function of external calcium concentration could be described in terms of Michaelis-Menten kinetics during high potassium stimulation; the fit was not as good under control conditions. The affinity for uptake of calcium remained unchanged during control conditions, but decreased drastically during the late slow phase of uptake under high potassium conditions. For both fast and slow phases of uptake, the maximal velocity of calcium uptake during high potassium stimulation was twice that observed under control conditions. Magnesium ion had an inhibitory effect on uptake, particularly during high potassium stimulation. Tetrodotoxin had a slight inhibitory effect additional to that exerted by magnesium ion during the initial phase of uptake into potassium stimulated synaptosomes. 21 references. (Author abstract modified)

003815 Gripenberg, J.; Heinonen, E.; Jansson, S. -E. Heinonen: Dept. of Physiology, University of Helsinki, Siltavuorenpenger, SF-00170 Helsinki 17, Finland **Uptake of radiocalcium by nerve endings isolated from rat brain: pharmacological studies.** British Journal of Pharmacology. 71(1):273-278, 1980.

The uptake of radiocalcium by nerve ending particles isolated from male Sprague-Dawley rat striatum was studied, using lanthanum as a quenching agent. High-potassium-induced calcium uptake occurred in two phases, an initial rapid phase and a late slow phase. Following preincubation with calcium chloride, dopamine reduced high-potassium-induced calcium uptake during the initial rapid phase, but had no effect on the late slow uptake phase. Haloperidol had no direct effect on calcium uptake, but abolished the inhibitory effect of dopamine on the initial rapid phase of high-potassium-induced uptake. Dibutyryl cyclic AMP and prostaglandin-E1 had no effect on the initial rapid phase of high-potassium-induced calcium uptake by striatal synaptosomes. Results suggest that dopamine regulates the depolarization-induced influx of calcium in presynaptic nerve endings in the striatum. 27 references. (Author abstract modified)

003816 Gross, Gerhard; Brodde, Otto-Erich; Schumann, Hans-Joachim. Pharmakologisches Institut der Universitat Essen, Hufelandstrasse 55, D-4300 Essen, West Germany **Regulation of alpha1-adrenoceptors in the cerebral cortex of the rat by thyroid hormones.** Naunyn-Schmiedeberg's Archives of Pharmacology. 316(1);45-50, 1981.

The influence of thyroid hormones on alpha1-adrenoceptors in a crude membrane fraction from male Wistar rat cerebral cortex was studied using the 3H-WB-4101 binding assay. The maximal number of 3H-WB-4101 binding sites was increased by 27% in cortical membranes from animals made hyperthyroid by 6-propyl-2-thiouracil feeding for 8 weeks and was reduced by 23% in animals made hypothyroid by 9 days of triiodothyronine injections. Triiodothyronine treatment reversed the reduction in 3H-WB-4101 binding induced by 6-propyl-2-thiouracil. No change in receptor affinity was observed. Inhibition of 3H-WB-4101 binding by adrenergic agonists and antagonists revealed no differences between euthyoroid and hypothyroid animals. It is concluded that thyroid hormones regulate the number of alpha1-adrenoceptors in membranes of rat cerebral cortex. 36 references. (Author abstract modified)

003817 Gross, P. M.; Teasdale, G. M.; Angerson, W. J.; Harper, A. M. Teasdale: Dept. of Neurosurgery, Institute of Neurological Sciences, Southern General Hospital, Glasgow, Scotland **H2-receptors mediate increases in permeability of the blood-brain barrier during arterial histamine infusion.** Brain Research. 210(1-2):396-400, 1981.

Infusion of histamine into the internal carotid artery of Sprague-Dawley rats increased cerebrovascular permeability to isotopically labeled sucrose. Prior administration of the histamine H2-receptor antagonist metiamide attenuated or blocked this response. It is concluded that intravascular histamine stimulates H2-receptors of cerebral endothelia and increases permeability of the blood-brain barrier. 28 references.

003818 Guchhait, Ras B. Johns Hopkins University, Charles & 34th Streets, Baltimore, MD 21218 **Regulation of biogenesis of**

psychotomimetic amines. (Unpublished paper). Final Report, NIMH Grant 5R01-MH-27256. 1980. 9p.

The roles of S-adenosylmethionine (SAM) and of 5-methyl-tetrahydrofolate (MTHF) as physiological methyl group donors for biogenic amine transmethylation were studied. Rat brain and pineal tissues were used as the enzyme sources. It was established that MTHF is not a methyl donor for methylation of biogenic amines. The results indicate that the pineal gland generates its own SAM, the only physiological methyl donor for biogenic amines. The major product of pineal MAT was identified as S-adenosyl-L-methionine by three techniques. The results indicate that the pineal organ from rat and various other species is enriched with MAT enzyme. The MAT enzyme is also present in rat Harderian gland and retina.

003819 Gundersen, Cameron B.; Jenden, Donald J. Dept. of Pharmacology, School of Medicine, University of California, Los Angeles, CA 90024 **Oxotremorine does not enhance acetylcholine release from rat diaphragm preparations.** British Journal of Pharmacology. 70(1):8-10, 1980.

Oxotremorine (10mcM) caused no significant change in the spontaneous or evoked release of acetylcholine (ACh) from the rat phrenic nerve/diaphragm preparation. No significant change in tissue levels of ACh or choline was observed with 10mcM oxotremorine, although a small reduction in tissue ACh was observed with 100mcM oxotremorine. The findings are not consistent with the dramatic oxotremorine-induced increase in ACh previously reported in this preparation. 11 references. (Author abstract modified)

003820 Gundersen, Cameron B.; Jenden, Donald J. Jenden: Dept. of Pharmacology, School of Medicine, University of California, Los Angeles, CA 90024 **Alterations of acetylcholine and choline metabolism in mammalian preparations treated with beta-bungarotoxin.** Journal of Neurochemistry. 36(3):938-948, 1981.

A gas chromatographic/mass spectrometric assay was used to study the effects of beta-bungarotoxin on acetylcholine (ACh) and choline (Ch) metabolism in central and peripheral cholinergic preparations. Beta-bungarotoxin did not inhibit the high affinity uptake of labeled Ch or the synthesis of ACh in male Sprague-Dawley rat brain synaptosomal fractions. However, when incubated with synaptosomal fractions, the toxin significantly increased the amount of Ch in the medium. Beta-bungarotoxin also caused a large increase in ACh release from rat brain minces and a depletion of the ACh content of minces. A similar phenomenon was observed in diaphragm preparations exposed continuously to beta-bungarotoxin, but an increase in ACh content was seen in diaphragms treated with the toxin for only 30 minutes. Beta-bungarotoxin had no measurable effect on ACh turnover in smooth muscle preparations from guinea-pig ileum. 30 references. (Author abstract modified)

003821 Gunion, Mark W.; Brown, Danley F.; Peters, Ronald H.; Novin, Donald. Peters: Dept. of Psychology, Iowa State University, Ames, IA 50011 **Unimpaired quinine metabolism in rats with ventromedial hypothalamic lesions.** Pharmacology Biochemistry and Behavior. 14(3):283-286, 1981.

In vitro rates of quinine metabolism were studied in female Long-Evans hooded rats with lesions of the ventromedial hypothalamus (VMH). Determinations were made under basal conditions and under conditions known to cause induction of drug metabolizing enzymes. The rate of drug metabolism in VMH lesioned rats was nearly identical to that in controls under all conditions tested. Results indicate that impaired quinine metabolism cannot account for the heightened sensitivity of VMH lesioned animals to the food intake suppressing effect of dietary quinine. 24 references. 003822 Gyorgy, L.; Doda, M. Institute of Experimental Medicine, Hungarian Academy of Sciences, Budapest 1450, POB 67, Hungary **Influence of the dopaminergic agonists bromocriptine, piribedil and nomifensine on the sympathetic neural transmission in the nictitating membrane of the cat.** Archives Internationales de Pharmacodynamie et de Therapie. 249(1):4-11, 1981.

The effects of dopaminergic drugs on nictitating membrane contractions induced by cervical sympathetic nerve stimulation were studied in cats. Bromocriptine and piribedil injected into the lingual artery inhibited contractions induced by nerve stimulation, but did not suppress the effect of noradrenaline. In animals pretreated with desipramine, high doses of nomifensine inhibited contractions induced by nerve stimulation or by noradrenaline. Haloperidol and sulpiride both antagonized the inhibitory effect of piribedil, and sulpiride prevented the effect of bromocriptine. Results suggest that these agonists have a specific inhibitory effect on presynaptic dopaminergic receptors. 16 references. (Author abstract modified)

003823 Haga, Tatsuya; Haga, Kazuko. Dept. of Biochemistry, Hamamatsu University School of Medicine, Handa-cho, Hamamatsu 431-31, Japan **Characterization by (3H)dihydroergocryptine binding of alpha-adrenergic receptors in neuroblastoma x glioma hybrid cells.** Journal of Neurochemistry. 36(3):1152-1159, 1981.

The binding of tritiated dihydroergocryptine (3H-DHE) to sites in membranes from neuroblastoma/glioma hybrid cells (NG-108-15) with characteristics of alpha-adrenergic receptors was demonstrated. The binding was saturable and of high affinity. The specificity of the binding site for various ligands was more similar to that of alpha2-receptors than that of alpha1-receptors. Guanosine triphosphate lowered the affinity of agonists for the 3H-DHE binding site, but the nucleotide did not markedly affect the affinity of antagonists. 31 references. (Author abstract modified)

003824 Hall, Hakan; Ogren, Sven-Ove. Dept. of Pharmacology, Research and Development Laboratories, Astra Lakemedel AB, S-151 85, Sodertalje, Sweden **Effects of antidepressant drugs on different receptors in the brain.** European Journal of Pharmacology. 70(3):393-407, 1981.

Radioligand receptor binding techniques were used to characterize the effects of different structural types of antidepressant drugs on neurotransmitter receptors. Tricyclic antidepressants were relatively potent inhibitors of 3H-mepyramine, 3H-d-lysergic acid diethylamide (d-LSD), 3H-quinuclidinyl benzilate (QNB), and 3H-WB4101 binding to male Sprague-Dawley rat brain preparations. The potency of nontricyclic antidepressants varied greatly. Mianserin potently displaced 3H-mepyramine, 3H-d-LSD, and 3H-WB4101, but was a very weak displacer of 3H-QNB binding. Nomifensine, zimelidine, and alaproclate had very low affinity for these receptors. None of the antidepressants studied were active against the binding of 3H-dihydroalprenolol, 3H-spiroperidol, 3H-flunitrazepam, 3H-muscimol, and 3H-naloxone. Results are discussed in relation to biogenic amine theories of affective disorders. 76 references. (Author abstract modified)

003825 Hamon, M.; Mallat, M.; Herbet, A.; Nelson, D. L.; Audinot, M.; Pichat, L.; Glowinski, J. Groupe NB, INSERM U114, College de France, 11 place Marcelin Berthelot, F-75231 Paris Cedex 05, France **(3H)Metergoline: a new ligand of serotonin receptors in the rat brain.** Journal of Neurochemistry. 36(2):613-626, 1981.

A specific, high affinity binding site for 3H-metergoline was found in microsomal and synaptic plasma membranes from various areas of adult male rat brain. Experiments with 5,7-dihydroxytryptamine and kainic acid lesions indicated that this specific binding site was located postsynaptically with respect to serotonergic neurons. Serotonin was 400 times more potent than dopamine and noradrenaline in displacing bound 3H-metergoline in the hippocampus, but only 10 times more potent than dopamine in the striatum. Results suggest that 3H-metergoline binds to serotonin receptors in the hippocampus and to serotonin and possibly dopamine receptors in the striatum. 36 references. (Author abstract modified)

003826 Hanson, G.; Alphs, L.; Pradhan, Sikta; Lovenberg, W. Lovenberg: Section on Biochemical Pharmacology, NHBLI, NIH, Bethesda, MD 20205 **Response of striatonigral substance P systems to a dopamine receptor agonist and antagonist.** Neuropharmacology. 20(6):541-548, 1981.

Alterations in dopamine (DA) receptor activity significantly altered levels of substance-P-like immunoreactivity (SPI) in the susbtantia nigra of male Sprague-Dawley rats. DA receptor activation by apomorphine and receptor blockade by haloperidol both induced specific, dose dependent, and reversible decreases in the concentration of nigral SPI. Pretreatment with haloperidol antagonized the effect of apomorphine. Results suggest that DA receptor activity, mediated by the nigrostriatal DA system, exerts significant influence on the substance-P striato-nigral feedback loop. 41 references. (Author abstract modified)

003827 Harris, R. Adron; Hood, William F. Dept. of Pharmacology, University of Missouri School of Medicine, Columbia, MO 65212 **Inhibition of synaptosomal calcium uptake by ethanol.** Journal of Pharmacology and Experimental Therapeutics. 213(3):562-568, 1980.

In vitro addition of ethanol or pentobarbital to synaptosomes isolated from male Sprague-Dawley rat or Swiss-Webster mouse brain inhibited the depolarization dependent uptake of calcium, but did not affect uptake under nondepolarizing conditions. Synaptosomes from mice chronically ingesting ethanol were tolerant to the inhibitory effects of ethanol and pentobarbital, but not to the inhibitory effects of acetaldehyde. Synaptosomes from ethanol tolerant/dependent mice accumulated less calcium in the absence of ethanol than did synaptosomes from control mice. This depression of uptake was reversed by in vitro exposure of the synaptosomes to a low concentration of ethanol, suggesting it represents a biochemical response to the withdrawal of ethanol. A single injection of ethanol 1 hour before sacrifice did not alter the calcium uptake activity or drug sensitivity of the synaptosomes. Results suggest that the known inhibitory effects of ethanol and pentobarbital on the stimulated release of neurotransmitters and the development of tolerance to these effects may be mediated by the inhibition of the depolarization dependent influx of calcium by these drugs. 38 references. (Author abstract modified)

003828 Haubrich, D. R.; Gerber, N.; Pflueger, A. B.; Zweig, M. Merck Institute for Therapeutic Research, West Point, PA 19486 **Tissue choline studied using a simple chemical assay.** Journal of Neurochemistry. 36(4):1409-1417, 1981.

An enzymatic/radioisotopic assay was used to measure free choline in unextracted tissue in humans and animals. The lowest concentration of free choline in any tissue studied was present in human cerebrospinal fluid. A postmortem increase in concentration of free choline occurred in the blood, kidney, and liver of mice. Several treatments were found to increase the concentration of free choline. For example, intraperitoneal administration of choline or 2-amino-2-methyl-propanol (a choline oxidase inhibitor) induced an increase in the level of choline in blood, kidneys, liver, and brain of mice, and administration of 2-dimethylaminoethanol (deanol) caused an increase in kidney and liver choline. The level of choline in blood was increased when rats were treated orally with either antibiotics or esters of choline such as phosphorylcholine, glycerylphosphorylcholine, laroylcholine, or propionylcholine. Results show that the concentration of free choline may be regulated by intestinal metabolism, availability of esterified precursors, and activity of enzymes that metabolize choline. 43 references. (Author abstract modified)

003829 Haycock, Dean A.; Patrick, Robert L. Patrick: Box G., Brown University, Providence, RI 02912 **Catecholamine synthesis regulation in hypothalamic synaptosomes. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-31706, 1980. 34 p.

To characterize the properties of synaptosomal catecholamine formation in a predominantly noradrenergic preparation, catecholamine synthesis in rat brain hypothalamic synaptosomes was studied. Kinetic analysis revealed an apparent km for tyrosine of 2.5 micrometers and an apparent Vmax of 2.1 nmol/h/g. In the hypothalamus, norepinephrine-induced synthesis inhibition was reversed completely by preincubation with desipramine, a blocker of catecholamine uptake into noradrenergic tissue. Desipramine was relatively ineffective in the predominantly dopaminergic striatum, indicating that most of the catecholamine synthesis observed in the hypothalamic synaptosomes was taking place in noradrenergic, as opposed to dopaminergic, terminals. Synthesis was stimulated about 30% in the hypothalamus by elevated potassium, and this was antagonized markedly in a calcium free buffer and by the addition of tetraethylammonium chloride. Phenylethylamine compounds produced either stimulation (amphetamine) or inhibition (tyramine). The most effective synthesis stimulator was dibutyryl cyclic AMP. Lowering the pH of the incubation buffer increased the basal rate but decreased the stimulatory response to elevated potassium. These data suggest that synaptosomal preparations for the hypothalamus are useful in studying drug effects on catecholamine synthesis in noradrenergic terminals. 24 references. (Author abstract modified)

003830 Hays, Sally E.; Poland, Russell E.; Rubin, Robert T. Rubin: Division of Biological Psychiatry, Dept. of Psychiatry, Harbor-CLA Medical Center, Torrance, CA 90509 **Prolactin releasing potencies of antipsychotic and related nonantipsychotic compounds in female rats: relation to clinical potencies.** Journal of Pharmacology and and Experimental Therapeutics. 214(2):362-367, 1980.

The relationship between the clinical potency and ability to release prolactin in female rats was investigated in various antipsychotic and related nonantipsychotic drugs. Prolactin response to various intraperitoneal doses of nine antipsychotic and related nonantipsychotic compounds indicate that at doses of 50mg/kg or less, all drugs stimulated prolactin release into sera. The rank order of prolactin stimulation did not agree entirely with the ranking of relative antipsychotic potency of the compounds. The relations between prolactin stimulating potency and reported clinical potency was improved by comparing drugs within the same chemical classification. Reduced haloperidol, a major metabolite of haloperidol, was one fourth as potent as haloperidol in stimulating prolactin release, suggesting that the potential antipsychotic activity of reduced haloperidol should be investigated. 36 references. (Author abstract modified)

003831 Heikkila, John J.; Brown, Ian R. Brown: Dept. of Zoology, Scarborough College, University of Toronto, West Hill, Ontario M1C 1A4, Canada **Comparison of the effect of intravenous administration of d-lysergic acid diethylamide on free and membrane-bound polysomes in the rabbit brain.** Journal of Neurochemistry. 36(3):1219-1228, 1981.

Intravenous administration of d-lysergic acid diethylamide (LSD) to male New Zealand white rabbits resulted in disaggregation of free and membrane bound polysomes. Free polysomes were more sensitive than membrane bound polysomes to the drug. The degree of brain polysome shift was correlated with the extent of LSD-induced hyperthermia, and disaggregation was not observed when LSD-induced hyperthermia was prevented by maintaining the animals at 4 degrees. Induction of hyperthermia by elevation of ambient temperature also resulted in a shift in free and membrane bound polysomes. The disaggregation of polysomes to monosomes was not caused by ribonuclease activation. During polysome disaggregation, polyadenylated messenger RNA associated with free and membrane bound polysomes was relocalized from polysomes to monosomes. 57 references. (Author abstract modified)

003832 Heikkila, John J.; Cosgrove, James W.; Brown, Ian R. Brown: Dept. of Zoology, Scarborough College, University of Toronto, West Hill, Ontario, M1C 1A4, Canada **Cell-free translation of free and membrane-bound polysomes and polyadenylated mRNA from rabbit brain following administration of d-lysergic acid diethylamide in vivo.** Journal of Neurochemistry. 36(3):1229-1238, 1981.

Free and membrane bound polysomes and polyadenylated messenger RNA (mRNA) isolated from male New Zealand rabbit brain were translated in an mRNA dependent rabbit reticulocyte lysate system. Electrophoretic analysis of the cell free translation products indicate that most of the nascent proteins were common to free and membrane bound polysomes, but some qualitative and quantitative differences were observed. Compared with results obtained with purified polyadenylated mRNA, the addition of intact polysomes to the cell free translation assay was more efficient and produced higher molecular weight products. After hyperthermia induced by elevated ambient temperature products of free and membrane bound polysomes included a new 74K protein. 36 references. (Author abstract modified)

003833 Herkenham, Miles. Laboratory of Neurophysiology, NIMH, Bethesda, MD 20205 **Anesthetics and the habenulo-interpeduncular system: selective sparing of metabolic activity.** Brain Research. 210(1-2):461-466, 1981.

Regional localization of brain metabolism by (14C)deoxyglucose during anesthesia in male Sprague-Dawley rats showed that pentobarbital, ether, and chloral hydrate reduced deoxyglucose uptake in most neuronal regions. However, metabolism was unaltered or increased in the medial habenula, interpeduncular nucleus, and habenulointerpeduncular tract. Prior destruction of afferent inputs abolished the selective metabolic sparing in the habenulointerpeduncular system during chloral hydrate anesthesia. 13 references. (Author abstract modified)

003834 Hermann, A. University of Konstanz, Fakultat fur Biologie, D-7750 Konstanz, West Germany **Caffeine blocks the delayed K outward current of molluscan neurons.** Brain Research. 211(2):480-484, 1981.

Extracellular application of caffeine inhibited the delayed potassium (K) outward current of Aplysia neurons in a dose dependent manner without changing the kinetics. Half maximal blockade was obtained 1 to 2 minutes after application of 16mM caffeine. Intracellular injection of caffeine had an almost immediate blocking effect. Results suggest that the blocking site is on or close to the inner surface of the cellular membrane. 23 references. (Author abstract modified)

003835 Hersh, Louis B. Dept. of Biochemistry, University of Texas Health Science Center, 5323 Harry Hines Boulevard, Dallas, TX 75235 **Inhibition of aminopeptidase and acetylcholinesterase by puromycin and puromycin analogs.** Journal of Neurochemistry. 36(4):1594-1596, 1981.

Puromycin analogs in which the o-methyl-L-tyrosine moiety was substituted by a number of amino acids were examined as inhibitors of the puromycin sensitive rat brain aminopeptidase and bovine erythrocyte acetylocholinesterase. In the case of the aminopeptidase, the structure and stereochemistry of the amino acid substituent were important factors in determining inhibitor effectiveness. In the case of the acetylcholinesterase reaction, the aminonucleoside of puromycin was nearly as effective an inhibitor as puromycin itself, with little effect dependent on the nature of stereochemistry of the amino acid. 19 references. (Author abstract)

003836 Hertz, L.; Richardson, J. S.; Mukerji, S. Dept. of Pharmacology, University of Saskatchewan, Saskatoon, Saskatchewan, Canada S7N OWO **Doxepin, a tricyclic antidepressant, binds to normal, intact astroglial cells in cultures and inhibits the isoproterenol-induced increase in cyclic AMP production.** Canadian Journal of Physiology and Pharmacology. 58(12):1515-1519, 1980.

The binding of doxepin, a tricyclic antidepressant which is not a potent inhibitor of either monoamine uptake or monoamine oxidation, to normal, intact astroglial cells in cultures was examined. Doxepin binding to intact astrocytes in primary cultures is competitively displaceable by excess cold doxepin. The binding is pronounced (Bmax = 27nmol/mg protein), but the affinity is rather low (KD = 20mcM). The binding is inhibited by other antidepressants (amitriptyline, desipramine, tranylcypromine, iprindole) and propranolol, but not by isoproterenol. Doxepin effectively counteracts the increase in the production of cyclic AMP evoked by isoproterenol. 21 references. (Author abstract modified)

003837 Herz, A.; Duka, T.; Gramsch, C.; Hollt, V.; Osborne, H.; Przewlocki, R.; Schulz, R.; Wuster, M. Dept. of Neuropharmacology, Max-Planck-Institut fur Psychiatrie, D-8000 Munchen 40, West Germany **Pharmacologic manipulation of brain and pituitary endorphin content and release.** Advances in Biochemical Psychopharmacology. 22:323-333, 1980.

Studies involving pharmacologic manipulation of brain and pituitary endorphin content and release are described. These include: in vitro experiments concerning the mechanism of release and the possible modulation by drugs at the cellular level; and in vivo experiments with acute and chronic drug administration. Benzodiazepines induced opposite changes in the enkephalin levels in the striatum and in the hypothalamus in vivo, but not in vitro. It is noted that although drug treatment may be used as a tool to manipulate endorphin levels, in most cases these changes are not linked with gross behavioral alterations. Methodological implications are discussed. 34 references.

003838 Hevor, Tobias; Gayet, Jacques. Gayet: Laboratoire de Physiologie Generale, Universite de Nancy I, C.O. 140, F-54037 Nancy Cedex, France **Stimulation of fructose-1,6-biphosphatase activity and synthesis in the cerebral cortex of rats submitted to the convulsant methionine sulfoximine.** Journal of Neurochemistry. 36(3):949-958, 1981.

The effect of the convulsant methionine sulfoximine (MSO) on fructose-1,6-biphosphatase (FBPase) activity in male Sprague-Dawley rat cerebral cortex was examined. FBPase from cortex was purified by substrate elution from phosphocellulose followed by Sephadex-G-200 column filtration. Expressed as mcmol fructose-1,6-biphosphate hydrolyzed per gram brain tissue wet weight per minute, FBPase activity doubled 24 hours after i.p. injection of 100mg/kg MSO. The rate of incorporation of (1-14C)valine into brain FBPase showed an even larger increase. The number of immunotitrable FBPase molecules also increased after MSO, due to an increase in the synthesis of the enzyme. 47 references. (Author abstract modified)

003839 Hill, D. R.; Bowery, N. G. Dept. of Pharmacology, St. Thomas's Hospital Medical School, London SE1 7EH, England **3H-baclofen and 3H-GABA bind to bicuculline-insensitive GABAB sites in rat brain.** Nature 290(5802):149-152, 1981.

The high affinity saturable binding of 3H-baclofen and 3H-GABA to the bicuculline insensitive GABAB site in rat brain is reported. It is noted that the presence of a novel receptor for the neurotransmitter GABA on peripheral autonomic nerve terminals and in mammalian brain slices has been described recently. This receptor differs from the classical GABA site as it is unaffected by recognized GABA antagonists such as bicuculline and is not sensitive to the majority of accepted GABA mimetics such as 3-aminopropanesulphonic acid or isoguvacine. It is proposed that the classical site be designated GABAA and the novel site as the GABAB receptor. Results support the concept of a novel GABA receptor within the mammalian brain and show that GABA and baclofen can compete for the same recognition site. 20 references. (Author abstract modified)

003840 Hiller, Jacob M.; Simon, Eric J. Dept. of Psychiatry, New York University Medical Center, New York, NY 10016 **Specific, high affinity (3H)ethylketocyclazocine binding in rat central nervous system: lack of evidence for kappa receptors.** Journal of Pharmacology and Experimental Therapeutics. 214(3):516-519, 1980.

The binding properties and distribution of the tritiated benzomorphan, (3H)ethylketocyclazocine, were studied in rat CNS. Specific binding was saturable and represented 75% to 90% of total binding. Scatchard analysis was consistent with the existence of two classes of binding sites with Kd values of 0.5nM and 10.5nM, respectively. Ethylketocyclazocine binding was increased in the presence of sodium chloride. This characteristic resembles that of opiate antagonists rather than that of other agonists. The distribution of binding in rat CNS followed closely that seen with other opiate ligands. The IC50 values of various opioid agonists and antagonists for competition with (3H)ethylketocyclazocine correlated well with their IC50 values for competition with (3H)naloxone. This evidence does not lend support to the existence of a separate kappa receptor in rat CNS. 23 references. (Author abstract)

003841 Hillier, Keith; Templeton, Wilma W. Southampton University, Medical & Biological Sciences Bldg., Bassett Crescent East, Southampton S09 3TU, England **Regulation of noradrenaline overflow in rat cerebral cortex by prostaglandin E2.** British Journal of Pharmacology. 70(3):469-473, 1980.

The effects of prostaglandin (PG) and PG inhibitors on the potassium evoked overflow of 3H-noradrenaline (3H-NA) from female Wistar rat cerebral cortex slices were examined. Evoked overflow was reduced by PGE2 and increased by the PG synthesis inhibitor indomethacin or the PG receptor antagonist SC-19220. The inhibition of 3H-NA overflow by PGE2 was dose dependently antagonized by SC-19220. Results indicate that PGE2 modulates NA release in rat cerebral cortex in vitro. 27 references. 003842 Hinoki, M.; Nakanishi, K.; Ito, S. Dept. of Otolaryngology, Faculty of Medicine, Kyoto University, Sakyo-ku, Kyoto, Japan, 606 **Nystagmic responses of hippocampal origin with reference to excitability of cholinergic and adrenergic components involved in the hippocampus of rabbits.** Agressologie. 20(1):11-18, 1979.

Using chemical substances relevant to neurotransmission in the central nervous system, nystagmic responses of hippocampal origin were studied in rabbits. Adrenaline or carbachol at a rate of .005mg/kg of bodyweight was injected into the brain. Changes in reaction to the substances were examined before and after repeated electric stimulation of the brain. Results show two types of nystagmic responses of hippocampal origin, prompt and delayed. The former type of response is elicited soon after injection of carbachol into the hippocampus of a normal rabbit. The prompt response is a horizontal nystagmic response directed to the side of the injection and is accompanied by an EEG arousal state. The latter type of nystagmic response is a horizontal response directed to the right and the left, and it appears with rather long latency. The delayed response is elicited in a normal rabbit on the basis of a rebound in the EEGs, brought about by injection of carbachol into the hippocampus; it is also elicited in rabbits with repeated electric stimulations of the hippocampus on the basis of a rebound in the EEGs, brought about by injection of adrenaline into the same brain. Repeated electric stimulations of the hippocampus results in alterations of the two kinds of nervous components described above. Thus, after electric stimulation, the two types of nystagmic responses barely can be induced with an injection of carbachol. In contrast, nystagmic response of the delayed type is easily induced with an injection of adrenaline. 7 references. (Journal abstract modified)

003843 Hirai, K.; Koketsu, K. Dept. of Physiology, Kurume University School of Medicine, Kurume 830, Japan **Presynaptic regulation of the release of acetylcholine by 5-hydroxytryptamine.** British Journal of Pharmacology. 70(3):499-500, 1980.

The effect of 5-hydroxytryptamine (5-HT) on the release of acetylcholine (ACh) from bullfrog sympathetic preganglionic nerve terminals and frog sciatic nerve terminals was studied with intracellular microelectrodes. Low concentrations of 5-HT (1 to 30 mcM) facilitated ACh release, but higher concentrations of 5-HT (100 to 1000 mcM) depressed ACh release at preganglionic and motor nerve terminals. Results suggest that 5-HT may play a role in regulating cholinergic transmission in general. 3 references. (Author abstract modified)

003844 Hirsch, James D. Dept. of Biological Research, G. D. Searle & Co., P.O. Box 5110, Chicago, IL 60680 **Regional changes in (3H)diazepam binding in the brains of mice after removal of the olfactory bulbs.** Experimental Neurology. 72(1):91-98, 1981.

(3H)Diazepam binding was assayed 3 weeks after surgery in 13 brain regions derived from sham operated and bilaterally olfactory bulbectomized mice. In bulbectomized mice, (3H)diazepam binding was elevated 30% in the frontal cortex and 24% in the thalamus but decreased 26% in the striatum and 28% in the midbrain. These changes represent alterations in the number of binding sites. No binding changes were observed in the olfactory tubercle, amygdala, piriform cortex, olfactory peduncle, hypothalamus, hippocampus, colliculi, cerebellum, or pons/medulla of bulbectomized animals. These results are compared with the effects of other types of brain lesions on the brain benzodiazepine receptor, and are possibly related to the altered sensitivity of bulbectomized mice to benzodiazepines and convulsants. 30 references. (Author abstract)

003845 Hoffman, W. E.; Weet, J. F.; Phillips, M. I.; Schmid, P. G. Dept. of Medical Physiology, Texas A&M University, College Station TX 77843 **Central effects of angiotensin II in water and saline loaded rats.** Neuroendocrinology. 28:289-296, 1979.

Experiments were performed to evaluate the role of antidiuretic hormone (ADH) release versus neurogenic mechanisms in the antidiuretic responses to intracerebroventricular (IVT) angiotensin II (AII) injections. Median eminence lesions used to block ADH release abolished antidiuretic effects but only attenuated pressor responses to IVT AII infusions. Pretreatment with an intravenous infusion of ADH antibody had a similar effect. Central administration of AII in water and saline loaded rats produced no change in effective renal plasma flow or glomerular filtration rate. Natriuretic and kaliuretic responses to IVT AII injections were similar to those observed in intravenous ADH infusions. These data are consistent with the suggestion that antidiuresis and osmotic excretion observed after IVT AII injections in rats are the result of ADH release, and that neurogenic mechanisms play a greater role in the blood pressure but not in the antidiuretic responses. (Journal abstract modified)

003846 Hollt, V.; Haarmann, I.; Przewlocki, R.; Jerlicz, M. Dept. of Neuropharmacology, Max-Planck-Institut fur Psychiatrie, D-8000 Munchen 40, West Germany **Long-term treatment of rats with morphine decreases in vitro biosynthesis in and release of beta-endorphin from intermediate/posterior lobes of pituitary.** Advances in Biochemical Psychopharmacology. 22:399-407, 1980.

The effects of long-term treatment of rats with morphine on in vitro biosynthesis in and release of beta-endorphin from intermediate/posterior lobes of pituitary were investigated. The experimental system of isolated rat intermediate/posterior lobes in vitro allowed for simultaneous investigation of beta-endorphin release, synthesis of its precursor molecule, and the processing of this precursor into beta-lipotropin and beta-endorphin. The decreased in vitro release of beta-endorphin observed is indicative that the depressed levels of beta-endorphin in the intermediate/posterior lobes seen following long-term morphine treatment are probably not due to an increased release. In addition to a decreased biosynthesis of beta-endorphin, the data indicate a slight delay in the posttranslational processing of the precursor into beta-lipotropin and beta-endorphin in the pituitary lobes of the morphinized rats. Results are discussed in relation to mechanisms of opiate addiction. 16 references.

003847 Holmstedt, Bo; Nordgren, Ingrid. Swedish Medical Research Council, Karolinska Institutet, Stockholm, Sweden **Stable isotopes used in studies of metrifonate.** In: Klein, E. Stable isotopes. New York, Academic Press, 1979. (p. 443-451).

The transformation of metrifonate in vivo by the use of stable isotopes was examined. Chemical formation of dichlorvos (2,2-dichlorovinyl dimethyl phosphate) was found to occur in mouse brain after i.p. injection of metrifonate. A mass fragmentographic technique was used. Different isotopic variants were used both as internal standards and to compensate for dichlorvos formed during the workup procedure. The dichlorvos formed in vivo was found to have its maximal concentration a few minutes after the maximum of the metrifonate itself. It is concluded that metrifonate acts as a slow release formulation in the body giving rise to dichlorvos nonenzymatically. This circumstance at least partly explains its efficacy in the treatment of schistosomiasis. 22 references. (Author abstract modified)

003848 Honore, Tage; Lauridsen, Jorn; Krogsgaard-Larsen, Povl. Royal Danish School of Pharmacy, Dept. of Chemistry BC, Universitetsparken 2, DK-2100 Copenhagen O, Denmark **Ibotenic acid analogues as inhibitors of (3H)glutamic acid binding to cerebellar membranes.** Journal of Neurochemistry. 36(3):1302-1304, 1981.

The binding of L-(3H)glutamic acid to Sprague-Dawley rat cerebellar membranes prepared with or without preincubation at 37 degrees followed by washing was studied. The specificity of the binding of ibotenic acid analogues did not differ in the two preparations. The order of potency of ibotenic acid analogues as inhibitors of L-(3H)glutamic acid binding differed from that found in vivo, suggesting the binding sites differ from the physiological glutamic acid receptor. 18 references. (Author abstract modified)

003849 Hosford, David A.; Haigler, Henry J. Dept. of Pharmacology, Emory University, Atlanta, GA 30322 **Morphine and methionine-enkephalin: different effects on spontaneous and evoked neuronal firing in the mesencephalic reticular formation of the rat.** Journal of Pharmcology and Experimental Therapeutics. 213(2):355-363, 1980.

The effects of morphine and methionine-enkephalin (met-enk) on spontaneous neuronal firing and on firing evoked by a nociceptive stimulus (evoked firing) were investigated via microiontophoretic techniques. Morphine and met-enk produced one of the three following patterns of effects on single units in the mesencephalic reticular formation: 1) morphine but not met-enk blocked evoked firing; 2) met-enk but not morphine blocked evoked firing; and 3) both morphine and met-enk blocked evoked firing. There appear to be differences in cell size and location which are associated with different effects of the drugs. The difference in the effects of the drugs on evoked firing cannot be explained by differences in transport number, diffusion, or degradation of the drugs, nor by different locations of the drug ejection barrels. Naloxone, administered intravenously or microiontophoretically, antagonized the drug-induced blockade. The effects of morphine and met-enk on spontaneous firing did no correlate with their effect on evoked firing. Furthermore, in the majority of cases, the effects of morphine and met-enkephalin on spontaneous firing were not the same. These data indicate that there may be more than one type of opiate receptor in the mesencephalic reticular formation. 34 references. (Author abstract modified)

003850 Hotchkiss, Adair J.; Gibb, James W. Gibb: Dept. of Biochemical Pharmacology and Toxicology, University of Utah, Salt Lake City, UT 84112 **Long-term effects of multiple doses of methamphetamine on tryptophan hydroxylase and tyrosine hydroxylase activity in rat brain.** Journal of Pharmacology and Experimental Therapeutics. 214(2):257-262, 1980.

The long-term effects of multiple doses of methamphetamine (METH) on tryptophan hydroxylase (TPH) and tyrosine hydroxylase activity in rat brain were investigated. TPH activity was measured in various rat brain regions after administering large doses of METH. After four sequential doses of METH, given every 6 hours, TPH activity was decreased in both the neostriatum and hippocampus. The depression of enzyme activity persisted for at least 30 days. When compared with the depression of neostriatal tyrosine hydroxlyase activity, the depression of neostriatal and hippocampal TPH activity occurred sooner and was more pronounced. The depression of TPH activity was dependent on the number of doses and the amount of drug administered. Agents which prevent the METH-induced decrease of neostriatal tyrosine hydroxylase activity, i.e., haloperidol, alpha-methyl-p-tyrosine, and GABA transaminase inhibitors, also prevented the decrease in TPH activity caused by METH. In addition, fluoxetine, an inhibitor of 5-hydroxytryptamine reuptake, prevented the METH-induced decrease in neostriatal and hippocampal TPH activity but did not alter the decrease in neostriatal tyrosine hydoxylase activity. 20 references. (Author abstract modified)

003851 Hunt, P.; Clements-Jewery, S. Centre de Recherches Roussel-Uclaf, F-93230 Romainville, France **A steroid derivative, R 5135, antagonizes the GABA/benzodiazepine receptor interaction.** Neuropharmacology. 20(4):357-361, 1981.

The steroid derivative R-5135 (3alpha-hydroxy-16-imino-5beta-17-aza-androstan-11-one) showed high affinity for GABA and glycine receptors in vitro and displaced 3H-diazepam binding from the benzodiazepine receptor in male Sprague-Dawley rat cortical membranes. The high affinity component of R-5135 inhibition disappeared when endogenous GABA was reduced by extensive washing of the membrane preparation and reappeared when GABA was reintroduced. R-5135 was 500 times more active than was bicuculline as an antagonist of GABA stimulation of 3H-diazepam binding. 23 references. (Author abstract modified)

003852 Hussein, L.; Goedde, H. W. Goedde: Institut fur Humangenetik, Universitat Hamburg, Butenfeld 32, D-2000 Hamburg 54, West Germany **Studies on the kinetic properties of tryptophan hydroxylase of rabbit mesencephalon and pons medulla: effect of long-term treatment with neuroleptics and antidepressants.** Arzneimittel-Forschung. 30(10):1704-1708, 1980.

Tryptophan hydroxylase activity was measured in mesencephalon and pons medulla of rabbits receiving reserpine or other neuroleptics which are chemically related to phenothiazines (chlorpromazine), dibenzothiazepine (imipramine), dibenzobicyclooctadiene (maprotiline), dibenzothiepines (methiothepin), butyrophenones (haloperidol), and tetrahydroisoquinolines (nomifensine). Chronic intramuscular administration of imipramine and nomifensine increased the affinity of mesencephalic tryptophan hydroxylase for tryptophan. The injection of chlorpromazine increased the enzyme activity significantly in comparison to control values. 24 references. (Author abstract)

003853 Huth, P. J.; Schmidt, M. J.; Hall, P. V.; Fariello, R. G.; Shug, A. L. Shug: Metabolic Research Laboratory, William S. Middleton Memorial Veterans Hospital, 2500 Overlook Terrace, Madison, WI 53705 **The uptake of carnitine by slices of rat cerebral cortex.** Journal of Neurochemistry. 36(2):715-723, 1981.

The properties of carnitine uptake were studied in male Holtzman rat brain slices. Results were consistent with the presence of a relatively low affinity, high capacity, active transport system associated with the plasma membrane. L-carnitine uptake was competitively inhibited by GABA, suggesting that the two compounds may interact at a common carrier site and that carnitine may modulate GABA transport. Carnitine uptake was sodium dependent, but did not require potassium or calcium ions. 41 references. (Author abstract modified)

003854 Hwang, Eunyong Chung; Van Woert, Melvin H. Dept. of Neurology, Mount Sinai School of Medicine, Fifth Ave. and 100th St., New York, NY 10029 **Comparative effects of substituted phenylethylamines on brain serotonergic mechanisms.** Journal of Pharmacology and Experimental Therapeutics. 213(2):254-260, 1980.

A series of substituted phenylethylamines were examined for their relative potencies to: 1) release and inhibit accumulation of labeled serotonin in brain synaptosomes; 2) complete with serotonin receptor binding; and 3) induce the serotonin syndrome in mice. In general, the relative potencies of the phenylethylamine derivatives to procude the serotonin syndrome in mice. In general, the relative potencies of the phenylethylamine derivatives to produce the serotonin syndrome did not correlate well with their effects on synaptosomal uptake or release or serotonin or serotonin receptor binding. However, para chloro substitution was more effective than meta or ortho chlorophenylethylamine and para methoxy substitution more effective than ortho methoxyphenylethylamine for (3H)serotonin uptake inhibition and release and induction of the serotonin syndrome. The ability of phenylethylamine derivatives to release preferentially (3H)serotonin in vitro without damaging serotonin neurons and to consistently and rapidly produce the serotonin syndrome in vivo should make these compounds useful pharmacological tools for investigating brain serotonin matabolism. 26 references. (Author abstract modified)

003855 Hyslop, Deborah K.; Taylor, Duncan P. Biologic Research, Mead Johnson Pharmaceutical Division, Evansville, IN 47721 **The interaction of trazodone with rat brain muscarinic cholinoceptors.** British Journal of Pharmacology. 71(2):359-361, 1980.

The muscarinic receptor binding of trazodone, a new nontricyclic antidepressant, was examined. Inhibition of 3H-quinuclidinyl benzilate binding to washed membranes from male Sprague-Dawley rat hippocampus was used to estimate anticholinoceptor activity. Trazodone was at least two orders of magnitude weaker than the tricyclic antidepressants, which possess from 0.001 to 0.005 the potency of atropine in this assay. 10 references. (Author abstract modified)

003856 Ichida, Seiji; Okada, Kozo; Terao, Motome. Dept. of Toxicology, Faculty of Pharmacy, Kinki University, Kowakae, Higashi-Osaka 577, Japan **Effect of verapamil on 45Ca uptake by synaptosomes.** Japanese Journal of Pharmacology. 30(2):207-211, 1980.

Verapamil and manganese ion (Mn) inhibited the uptake of labeled calcium (45Ca) in male Sprague-Dawley synaptosomes incubated in a high potassium medium (60 mM), but not in a medium containing only 5 mM potassium. A decrease in the calcium concentration in the reaction medium from 1 mM to 0.1 mM decreased the medium inhibitory concentration for Mn from 1.7 mM to 0.2 mM, but did not significantly alter inhibition induced by verapamil. These findings indicate that verapamil and Mn act through different mechanisms to inhibit the potassium stimulated uptake of 45Ca. 18 references. (Author abstract modified)

003857 Iorio, Louis C.: Latranyi, Miklos; Heath, Eugene; Barnett, Allen. Biological Research, Schering Corp., Bloomfield, NJ 07003 **Blockade by l-lysine of non-narcotic analgesics.** Journal of Pharmacology and Experimental Therapeutics. 213(3):445-449, 1980.

The antinociceptive effects of the nonnarcotic analgesics clonixin, flunixin, acetylsalicyclic acid, aminopyrine, and phenylbutazone in the male CD rat yeast paw test were blocked by l-lysine. Lysine did not alter plasma or brain levels of flunixin or the binding of flunixin to plasma protein. The l-lysine blockade was not altered by l-arginine or l-ornithine, which compete with l-lysine for a common transport system; this finding suggests the l-lysine blockade was predominantly peripheral. The l-lysine blockade was not reversed by 5-hydroxytryptophan or fluoxetine, indicating the l-lysine blockade does not involve endogenous serotonin. In contrast to its effect on nonnarcotic analgesics, l-lysine potentiated the antinociceptive effects of morphine. 17 references. (Author abstract modified)

003858 Iwamoto, Edgar T. Dept. of Pharmacology, University of Kentucky, Lexington, KY 40536 **Studies on axonal transport in dopaminergic neurons: effect of neuropharmacologic lesions.** Life Sciences. 28(19):2179-2186, 1981.

Axonal transport of tritiated protein to the nucleus accumbens, olfactory tubercle, septal region, caudate nucleus, and hypothalamic region was studied in male Sprague-Dawley rats after unilateral injection of 3H-lysine into the substantia nigra. Results indicate that axonal transport of protein in dopamine containing systems is dependent upon the site of injection of labeled precursor and the integrity of a 6-hydroxydopamine sensitive pathway. Transport was sensitive to inhibitors of microtubule assembly and protein synthesis but not to intrastriatal kainic acid lesions. 16 references. (Author abstract modified)

003859 Jancso, Gabor; Kiraly, Elizabeth. Dept. of Anatomy, University Medical School, 6701 Szeged, P. O. B. 512, Hungary **Sensory neurotoxins: chemically induced selective destruction of primary sensory neurons.** Brain Research. 210(1-2):83-89, 1981.

Neonatal treatment with capsaicin or with some of its pungent congeners induced selective degeneration of type-B sensory ganglion cells in rats. The distribution pattern of axon terminal degeneration within the spinal cord and brainstem after high doses of capsaicin congeners was similar to that observed after capsaicin itself. The neurotoxic potency of capsaicin congeners, unlike their desensitizing activity, was closely related to the sensory irritant property of the compounds. It is suggested that the primary sensory neurons degenerating after neonatal administration of these capsaicin congeners are substance-P containing primary sensory neurons involved in the transmission of nociceptive impulses. 19 references. (Author abstract modified)

003860 Jav, Jaak; Hedlund, Britta; Bartfai, Tamas. Dept. of Organic Chemistry, Tartu University, Estonian SSR, USSR **Isomerization of the muscarinic receptor-antagonist complex.** Journal of Biological Chemistry. 254(13):5595-5598, 1979.

The mechanism of binding of two antagonists, 3-quinuclidinyl benzilate and N-methyl-4-piperidinyl benzilate, to the muscarinic receptor was studied. The pseudo first order rate constant of association showed a hyperbolic dependence on the concentration of the antagonist(s), indicating that the interaction involves two equilibria. The first binding equilibrium is reached rapidly and is characterized by dissociation constants 2.7nM and 6.7 nM in phosphate buffer for 3-quinuclidinyl benzilate and N-methyl-4-piperidinyl benzilate, respectively. The first binding equilibrium is followed by a slower isomerization step of the receptor/antagonist complex. The equilibrium constants for the isomerization step of the complex for both ligands were about 0.15. The overall constant of binding obtained as the product of the above constants shows good agreement with the results of equilibrium binding studies. 14 references. (Author abstract)

003861 Jensen, Robert A.; Martinez, Joe L., Jr.; McGaugh, James L.; Messing, Rita B.; Vasquez, Beatriz J. Dept. of Psychobiology, University of California, Irvine, CA 92664 **The psychobiology of aging.** In: Maletta, G.J., The aging nervous system. New York, Praeger, 1980. (p. 110-125).

The psychobiology of aging is examined in a report of research done with rats. The studies reviewed indicate that the memory deficits seen in aged animals are task specific and do not reflect generalized impairment, a finding in agreement with many studies conducted with aged humans. The impaired retention seen in the inhibitory avoidance task in the old rats demonstrates either that the initial level of acquisition strength is lower in these animals or that their rate of forgetting is greater. The data also indicate that there is comparable CNS degeneration in rats and that the consequence of this destruction is a decrease in the capacity of neurons to interact with one another. The appearance of these deficits is associated chronologically with both biochemical and behavioral changes. Basic age related differences in opiate receptor numbers and affinities that most probably relate in some way to the behavioral changes in the aged are noted. Relationships between the pharmacological basis of action of a drug and its neural substrate are related to behavioral differences between young and aged animals. 54 references.

003862 Jhamandas, K.; Elliott, J. Dept. of Pharmacology, Faculty of Medicine, Queen's University, Kingston, Ontario, Canada K7L 3N6 **Investigation of action of enkephalin on the spontaneous and evoked release of acetylcholine from rat cortical and striatal slices.** British Journal of Pharmacology. 71(1):211-217, 1980.

The effects of two synthetic enkephalins, D-Ala2-Met5-enkephalinamide (DALA) and D-Ala2-MePhe4-Met5-(O)-ol-enkephalin (33,824), on the spontaneous and stimulated release of acetylcholine (ACh) from male Sprague-Dawley rat cortical and striatal slices were studied. Spontaneous cortical ACh release was moderately increased by DALA, but not by 33,824. Neither enkephalin affected the release of cortical ACh induced by high potassium (25mM) or veratridine (20mcM). DALA had no effect on spontaneous ACh release from striatal slices or on striatal ACh release in the presence of potassium (25mM), veratridine (5mcM), or ouabain (10mcM); 33,824 slightly enhanced veratridine evoked release, but had no other effects on striatal ACh release. It is suggested that enkephalins have no significant action on ACh release from the cortex or striatum in vitro; their action on cortical ACh release in vivo may be exerted at a subcortical level. 25 references. (Author abstract modified)

003863 Jhamandas, Khem; Sutak, Maaja. Dept. of Pharmacology, Queen's University, Kingston, Ontario, Canada K7L 3N6 **Action of enkephalin analogues and morphine on brain acetylcholine release: differential reversal by naloxone and an opiate pentapeptide.** British Journal of Pharmacology. 71(1):201-210, 1980.

Intraventricular administration of Met-enkephalin, Leu-enkephalin, D-Ala2-Met5-enkephalinamide (DALA) or D-Ala2-D-Leu5-enkephalin (DALEU) produced a dose related inhibition of cortical acetylcholine (ACh) release in Sprague-Dawley rats in vivo. Met-enkephalin and Leu-enkephalin were similar in potency and time course; DALA and DALEU were more potent and had longer durations of action. Systemic injection of D-Met2-Pro5-enkephalinamide and D-Ala2-MePhe4-Met5(0)-ol-enkephalin produced a sustained inhibition of cortical ACh release. Systemic administration of naloxone reversed the effects of the enkephalins and their analogues, but D-Met2-Pro5-enkephalinamide was relatively resistant to naloxone. Intraventricular doses of D-Ala2-D-Ala3-Met5-enkephalinamide (TAAPM) that did not influence basal ACh release were able to block or reverse the inhibitory effect of morphine on ACh release. TAAPM did not block the effect of chlorpromazine under similar conditions and failed to reverse the inhibition of ACh release induced by systemically injected D-Met2-Pro5-enkephalinamide. Results suggest that enkephalinergic and cholinergic mechanisms may interact in the CNS. 25 references. (Author abstract modified)

003864 Jiang, Z. G.; Chelack, B. J.; Phillis, J. W. Dept. of Physiology, College of Medicine, University of Saskatchewan, Saskatoon, Saskatchewan, Canada S7N OWO **Effects of morphine and caffeine on adenosine release from rat cerebral cortex: is caffeine a morphine antagonist.** Canadian Journal of Physiology and Pharmacology. 58(12):1513-1515, 1980.

The effects of caffeine on the morphine evoked purine release from rat cerebral cortex were investigated. Morphine enhances the efflux of labeled adenosine and its derivatives from the rat cerebral cortex. Caffeine does not alter either basal purine efflux rates or the enhanced efflux elicited by morphine. Therefore, the antagonism by caffeine of morphine evoked inhibition of acetylcholine (ACh) release from the cerebral cortex is unlikely to be the result of an action of caffeine on the opiate receptor. It is suggested that the caffeine effect is due to an antagonism of the inhibitory effect of released adenosine on ACh release. Thus, the depression of ACh release by morphine may involve a purinergic step. 10 references. (Author abstract modified)

003865 Jobe, Phillip C.; Brown, R. Don; Dailey, John W. Dept. of Pharmacology and Therapeutics, Louisiana State University School of Medicine, P.O. Box 33932, Shreveport, LA 71130 **Effect of Ro 4-1284 on audiogenic seizure susceptibility and intensity in epilepsy-prone rats.** Life Sciences. 28(18):2031-2038, 1981.

The effects of CNS monoamine depletion on audiogenic seizure (AGS) susceptibility and intensity were studied in two types of Sprague-Dawley derived rats: 1) the progeny of a nonsusceptible strain (controls); and 2) the nonsusceptible progeny of epilepsy prone (audiogenic seizure susceptible) parents (NSPSP). Forty five minutes after injection of the benzoquinolizine Ro 4-1284, a significant fraction of the NSPSP developed AGS susceptibility, whereas the incidence in control Ss was not significant. AGS intensity was also significantly elevated 45 minutes and 19 days following Ro 4-1284 administration in NSPSP. In control Ss, there was a smaller, but significant elevation of seizure intensity only at the earlier time period. Both types of rats exhibited marked depletion of norepinephrine (NE) and 5-hydroxytryptamine (5-HT) in all six areas of CNS examined. In the NSPSP, a significant incidence of seizure susceptibility was retained as long as 19 days after Ro 4-1284 administration, despite the complete depletion of monoamine stores. These observations suggest that CNS monoaminergic neurons function as determinants of AGS susceptibility and AGS intensity in animals which also carry some other genetically determined susceptibility factor(s). 17 references. 003866 Johnson, Robert G.; Carty, Sally E.; Scarpa, Antonio. Scarpa: B-501 Richards Building, Dept. of Biochemistry and Biophysics, University of Pennsylvania, Philadelphia, PA 19104 **Accumulation of amantadine by isolated chromaffin granules.** Biochemical Pharmacology. 30(7):763-769, 1981.

The accumulation of amantadine and the effect of this pharmacologic amine upon the magnitude of the transmembrane proton gradient (delta pH) and of the transmembrane potential gradient (delta psi) were investigated in bovine adrenal chromaffin granules isolated in isotonic sucrose. The addition of amantadine to well buffered suspensions of granules at pH 7.0 resulted in a dose related alkalinization of the granule interior. Similar results were obtained with equivalent external concentrations of ammonia. When the time resolved influx of labeled amines into the granules was studied radiochemically, using low external amine concentrations, the accumulation of (3H)amantadine was quite similar to that of (14C)methylamine with regard to rate and extent over a wide range of magnitudes of the transmembrane proton gradient. Unlike biogenic amine accumulation into the chromaffin granule, which is driven by both transmembrane proton and potential gradients, the accumulation of (3H)amantadine was not stimulated by the existence of a transmembrane potential, nor was it inhibited by reserpine. Moreover, low concentrations of amantadine did not competitively inhibit biogenic amine accumulation in the isolated granules. Results indicate that amantadine can distribute across the membrane of chromaffin granules according to the magnitude of the endogenous delta pH, and suggest that in vivo amantadine may be concentrated and stored as a pharmacologic agent in amine containing granules. 25 references. 003867 Johnston, G. A. R.; Hailstone, M. H.; Freeman, C. G. Dept. of Pharmacology, University of Sydney, N. S. W. 2006, Australia **Baclofen: stereoselective inhibition of excitant amino acid release.** Journal of Pharmacy and Pharmacology. 32(3):230-231, 1980.

The effects of baclofen on the release of labeled D-aspartate and GABA from rat cerebral cortex and cat spinal cord slices were examined. Results showed that (-)-baclofen (4mcM) inhibited the evolved release of preloaded 3H-D-aspartate by about 50%; ()-baclofen was inactive at 4mcM and weakly potentiated D-aspartate release at 10mCM. Neither isomer altered the release of 3H-GABA. 16 references.

003868 Jones, Stephen W.; Sumikawa, Katumi. 146 Clark Hall, c/o Applied Physics, Cornell University, Ithaca, NY 14853 **Quinuclidinyl benzilate binding in house fly heads and rat brain.** Journal of Neurochemistry. 36(2):454-459, 1981.

The binding of 3-quinuclidinyl benzilate (QNB) to house fly heads was similar in affinity and pharmacology to that in rat brain. The house fly site bound (-)QNB preferentially, as do classic muscarinic receptors. The binding was sensitive to other muscarinic agonists and antagonists. Nicotinic drugs were no more effective on the house fly site than on the rat brain muscarinic receptor. Results suggest that the house fly QNB site is a classic muscarinic acetylcholine receptor. 17 references. (Author abstract modified)

003869 Juel, C. Zoophysiological Laboratory B, August Krogh Institute, 13 Universitetsparken, DK-2100 Copenhagen O, Denmark **Presynaptic modulation of synaptic transmission in Helix Pomatia: the effects of serotonin and dopamine antagonists.** Neuropharmacology. 20(4):323-326, 1981.

Presynaptic serotonin (5-HT) and dopamine (DA) receptors in Helix pomatia were characterized. The 5-HT antagonists tryptamine, 7-methyltryptamine, morphine, atropine, and methysergide decreased transmitter mobilization; while 5-methoxy-gramine, a selective inhibitor of hyperpolarizing 5-HT responses, had no effect. The dopamine antagonists curare, chlorpromazine, and haloperidol decreased transmitter mobilization, while ergometrine, flupenthixol, promthazine, and 6-hydroxydopamine induced a small increase. The use of the Helix nervous system in studies of the mechanism of action of antipsychotic drugs is discussed. 21 references. (Author abstract modified)

003870 Juorio, A. V. Psychiatric Research Division, University Hospital, Saskatoon, Saskatchewan, S7N OXO, Canada **Effects of molindone and fluphenazine on the brain concentration of some phenolic and catecholic amines in the mouse and the rat.** British Journal of Pharmacology. 70(3):475-480, 1980.

Dopamine, 3,4-dihydroxyphenylacetic acid, homovanillic acid, p-tyramine, and m-tyramine concentrations were measured in the striatum of male Swiss mice and male Wistar rats after subcutaneous injection of molindone or fluphenazine. Low doses of molindone (1 to 10mg/kg) reduced striatal p-tyramine, increased m-tyramine, and increased dopamine turnover. Similar effects were seen after all doses of fluphenazine (0.1 to 5mg/kg). A high dose of molindone (100mg/kg) had opposite effects on tyramines and dopamine metabolism. Higher doses of molindone (20 to 100mg/kg) also increased hypothalamic concentrations of p-octopamine and m-octopamine in mice. All doses of fluphenazine reduced hypothalamic p-octopamine. Results suggest that molindone acts as a blocker or partial agonist of dopamine receptor sites and support the proposed reciprocal relation between dopamine and tyramine. 29 references. 003871 Kamata, Katsuo; Kamata, Michiru; Ino, Hiroya; Kameyama, Tsutomu. Dept. of Chemical Pharmacology, Faculty of Pharmaceutical Sciences, Meijo University, Nagoya 468, Japan **Change in catecholamine-sensitive Na,K-ATPase activity in the rat striatum microsomes following electrolytic or 6-hydroxydopamine-induced lesions of dopaminergic neurons.** Japanese Journal of Pharmacology. 30(3):401-404, 1980.

Sodium and potassium stimulated adenosine triphosphatase (NA,K-ATPase) activity was measured in the striatum of male Wistar rats with unilateral lesions of the left substantia nigra made by microinjection of 6-hydroxydopamine or by electrolytic coagulation. Striatal Na,K-ATPase activity was markedly enhanced by dopamine or norepinephrine; isoproterenol was also active, but serotonin, carbachol, and GABA were inactive. Unilateral nigral lesions reduced the dopamine content in the ipsilateral striatum to 0 to 30% of that in the contralateral striatum or in intact striatum. The sensitivity of Na,K-ATPase to dopamine in the ipsilateral striatum was increased 2 days after surgery and continued to increase gradually until a maximum was reached 7 to 10 days after lesion. Results are discussed in relation to dopaminergic supersensitivity in caudate neurons. 19 references.

003872 Kamer, Russell S.; Turi, Anthony R.; Solomon, Paul R.; Kaplan, Lawrence J. Solomon: Dept. of Psychology, Williams College, Williamstown, MA 01267 **Increased mesolimbic dopamine binding following chronic haloperidol treatment.** Psychopharmacology. 72(3):261-263, 1981.

In a study of the effect of chronic neuroleptic treatment on mesolimbic dopamine receptor binding, male Sprague-Dawley rats were given haloperidol (0.5mg/kg), sodium phenobarbital (50mg/kg), or saline daily for 21 days. One week after the last injection, rats were sacrificed and the septi were removed from the 3H-dopamine binding assay. Haloperidol treatment resulted in a 52% increase in 3H-dopamine binding in the septum, whereas phenobarbital treatment caused no significant change. 12 references. (Author abstract modified)

003873 Kamp, Cylia W.; Morgan, William W. Dept. of Anatomy, University of Texas Health Science Center at San Antonio, 7703 Floyd Curl Drive, San Antonio, TX 78283 **Some barbiturates enhance the effect of muscimol on dopamine turnover in the rat retina.** Journal of Pharmacology and Experimental Therapeutics. 213(2):332-336, 1980.

The effects of several barbiturates on the muscimol mediated reduction of the light evoked activation of dopamine (DA) turnover were tested. The decline in retinal DA content after alpha-methyl-p-tyrosine was used as an indication of turnover. Neither pentobarbital nor the low dosage of muscimol alone significantly altered the light evoked increase in retinal DA turnover. However, the combination of pentobarbital and muscimol significantly reduced the light mediated increase in DA turnover to a level below that normally observed in dark maintained animals. These results and other data provide evidence for a GABA potentiating component to the anesthetic and anticonvulsant mechanism of barbiturate action and the first neurochemical demonstration of barbiturate mediated potentiation of GABA agonist. 26 references. 003874 Kan, J. P.; Benedetti, M. Strolin. Benedette: Centre de Recherche Delalande, 10, rue des Carrieres, F-92500 Rueil-Malmaison, France **Characteristics of the inhibition of rat brain monoamine oxidase in vitro by MD780515.** Journal of Neurochemistry. 36(4):1561-1571, 1981.

The inhibition of type-A and type-B monoamine oxidase (MAO-A, MAO-B) in rat forebrain crude membrane preparations by MD780515 was investigated in vitro with 5-hydroxytryptamine (5-HT) and beta-phenylethylamine as substrates. The inhibition of the high affinity binding of (3-H)harmaline, a specific marker of MAO-A, was also studied. MD780515 appeared to be a pure mixed MAO inhibitor of 5-HT deamination. The hypothesis that beta-phenylethylamine (PEA) can be deaminated by both forms of MAO was confirmed by biphasic inhibition curves of PEA obtained when MD780515, clorgyline, harmaline, and deprenyl were used as MAO inhibitors. It is concluded that MD780515 is a reversible, specific, and potent type-A MAO inhibitor. 30 references. (Author abstract modified)

003875 Kaufmann, Konrad. Max-Planck-Institut fur biophysikalische Chemie, D-34 Gottingen, West Germany **Inseparability of acetylcholinesterase and nerve excitation.** Neurochemistry International. 2(1/3):111-112, 1980.

It is proposed that acetylcholinesterase causes the movement of sodium and potassium ions toward equilibrium during nerve excitation. This proposition is consistent with the observed kinetics of acetylcholine (ACh) at unmodified membrane fragments. Conductivity increases for sodium and potassium ions can be observed after application of ACh onto blackfilm lipid membranes near the phase transition, as well as at cholinergic membranes where lipids are generally away from their phase transition temperature. It is concluded that unit channels at unmodified cholinergic membranes can be triggered by the microenvironment of acetylcholinesterase after application of the physiological agonist ACh. 14 references.

003879 Kenakin, Terry P. Dept. of Pharmacology, Burroughs Wellcome Co., Ltd., 3030 Cornwallis Road, Research Triangle Park, NC 27709 **On the importance of agonist concentration-gradients within isolated tissues. Increased maximal responses of rat vasa deferentia to (-)-noradrenaline after blockade of neuronal uptake.** Journal of Pharmacy and Pharmacology. 32(12):833-838, 1980.

The increased maximal responses of Sprague-Dawley rat vasa deferentia to (-)-noradrenaline (NA) after blockade of neuronal uptake by cocaine or desmethylimipramine were studied. Relationships between the neuronal uptake of NA, the free diffusion of NA into the tissue, and the number of smooth muscle cells required for production of maximal responses were examined. The data were compared with a theoretical calculation based on a model of restricted diffusion of enzyme substrates into structured tissues. The experimental data and theoretical calculations suggest that an altered concentration gradient of NA within the muscle layers is responsible for the increased maximal responses. Results indicate that an increase in maximal responses to agonists after blockade of uptake processes should not be taken as evidence of postsynaptic effects of the uptake inhibitor. 37 references. 003880 Kerwin, R. W.; Olpe, H.- R.; Schmutz, M. Dept. of Pharmacology, Medical School, University of Bristol, Bristol BS8 1TD, England **The effect of sodium-n-dipropyl acetate on gamma-aminobutyric acid-dependent inhibition in the rat cortex and substantia nigra in relation to its anticonvulsant activity.** British Journal of Pharmacology. 71(2):545-551, 1980.

Valproate sodium (100 to 400mg/kg i.p.) protected male SIV-50 rats from electroshock-induced convulsions, with the latency of the effect decreasing as a function of dose from 5 to 2 minutes. A parallel time course was seen for the inhibitory effect of valproate sodium (100 to 400mg/kg i.p.) on the spontaneous firing rate of cortical and nigral neurons. The inhibitory action of microiontophoretically applied GABA and muscimol on the firing rate of cortical neurons was potentiated within 1 to 3 minutes of microiontophoretic application of valproate sodium, but the inhibitory action of glycine was not affected. Microiontophoretically applied valproate sodium also potentiated inhibitory responses to GABA in rats pretreated with the GABA transaminase inhibitor gabaculine (100mg/kg i.p.). Valproate sodium did not markedly affect the duration of transsynaptic inhibitory responses recorded from the substantia nigra and cortex after submaximal electrical stimulation of the striatum and cortex, respectively. 24 references. 003881 Kessler, John A.; Black, Ira B. Division of Developmental Neurology, Dept. of Neurology, Cornell University Medical College, 1300 York Ave., New York, NY 10021 **Nerve growth factor stimulates development of substance P in the embryonic spinal cord.** Brain Research. 208(1):135-145, 1981.

Development of the putative neurotransmitter substance-P (SP) was studied in vivo in the embryonic rat dorsal root ganglion (DRG) and spinal cord. SP was not detectable by radioimmunoassay before day 17 of gestation (E17). On E17, cervical sensory ganglia contained 4 pg SP/ganglion, rising to 49 pg/ganglion at birth. The dorsal cervical spinal cord contained 0.75 ng SP/mg protein on E17, rising to 6 ng SP/mg protein on postnatal day 3. The ventral spinal cord contained approximately 20% of the SP content in the dorsal spinal cord at each gestational age. Intrauterine forelimb amputation partially prevented the normal developmental increase of SP in sensory ganglia destined to innervate that limb, suggesting that target structures regulate the development of peptidergic neurons. Conversely, treatment with nerve growth factor (NGF) stimulated development of SP in the DRG. Moreover, NGF treatment increased SP in the dorsal spinal cord, suggesting that NGF can modulate development within the CNS, as well as in peripheral structures. It is likely that the CNS effect reflects NGF action on peripheral ganglia, but a direct effect on the spinal cord has not been excluded. However, treatment with antiserum to NGF failed to significantly inhibit development of ganglion SP. It is suggested that the system of SP containing neurons in the DRG may provide a convenient model for defining events regulating peptidergic maturation. 34 references. (Author abstract)

003882 Khachaturyan, G. S.; Kazaryan, K. A. NIL biosinteticheskikh reaktsiy mozga, Yerevanskiy meditsinskiy institut, Yerevan, USSR **/The effect of adenosine and guanosine on the content of serotonin and catecholamines in the brain in the restoration period following experimental clinical death./** Deystviye adenozina i guanozina na soderzhaniye serotonina i katekholaminov v mozge v vosstanovitel'nom periode posle eksperimental'noy klinicheskoy smerti. Zhurnal Eksperimental'noy i Klinicheskoy Meditsiny. 20(5):469-474, 1980.

The effect of adenosine and guanosine on the content of serotonin and catecholamines in the brain in the restoration period following experimental clinical death was studied in white male rats. Adenosine and guanosine were injected together with blood during revival of the organism. Results show that in the restoration period after revival of the organism, adenosine and guanosine stimulate the normalization of the level of serotonin, noradrenaline, and dopamine. Guanosine first has an effect on the normalization of the dopamine level, and then on the level of noradrenaline and serotonin. These results suggest that these nucleotides can be used in preventive treatment and therapy in terminal conditions. In addition, these results could be used as a basis for further study of the effect of nucleotides on the normalization of the content of serotonin, noradrenaline, and dopamine in the restoration period, as enzymes of their synthesis and breakdown. 15 references.

003883 Khanna, J. M.; Kalant, H.; Le, A. D.; Mayer, J.; LeBlanc, A. E. Dept. of Pharmacology, University of Toronto, Toronto, Ontario, Canada M5S 1A8 **Effect of p-chlorophenylalanine on the acquisition of tolerance to the hypnotic effects of pentobarbital, barbital, and ethanol.** Canadian Journal of Physiology and Pharmacology. 58(9):1031-1041, 1980.

The effect of p-chlorophenylalanine (p-CPA on the acquisition of tolerance to the hypnotic effects of pentobarbital, barbital, and ethanol was investigated. Rats were given pentobarbital by daily intubation, and sleeping times and blood levels of drug were measured at awakening and after i.p. test doses of ethanol, pentobarbital, or barbital. No CNS tolerance to pentobarbital or cross-tolerance to barbital or ethanol occurred on treatment with sodium pentobarbital. However, when the size and frequency of pentobarbital treatment doses were increased from 50mg/kg/day to 50mg/kg to 80mg/kg thrice daily, a clear CNS tolerance to barbital occurred. Chronic administration of p-CPA, in a dose previously shown to maintain more than 95% depletion of brain serotonin (5-HT), enhanced the acute hypnotic effect of barbiturates and ethanol. Independently of this effect, p-CPA treatment also resulted in a reduction in development of CNS tolerance. Results are consistent with earlier findings that brain 5-HT depletion retards tolerance development to central depressant drugs as measured by a variety of unrelated tests. 41 references. (Author abstract modified)

003884 Khodorov, B. I.; Revenko, S. V. Biophysics Laboratory, Vishnevski Surgical Institute, Moscow, USSR **Further analysis of the mechanisms of action of batrachotoxin on the membrane of myelinated nerve.** Neuroscience. 4:1315-1330, 1979.

The mode of action of batrachotoxin on myelinated frog nerve fibers was investigated. Batrachotoxin altered a certain fraction of the sodium channels in the node of Ranvier frog so that the modified channels lost inactivation and opened and closed with exponential kinetics. Batrachotoxin shifted the sodium activation by 50 mV to more negative voltages and increased the maximum time constant of activation by factor of 10. Dose response relations for batrachotoxin-induced modification show that one batrachotoxin molecule modified one sodium channel, the dissociation constant being 1000 nM. The receptor for batrachotoxin in considered to be linked allosterically to all principle subunits of the sodium channel: the voltage sensor, the gates, and the selectivity filter. The similarity of the effects of batrachotoxin and anther potent alkaloid, aconitine, are pointed out. (Journal abstract modified)

003885 Kikvadze, I. N.; Ioseliani, T. K. Tbilisskiy gosudarstvennyy universitet, Tbilisi, USSR /**The effect of electrical stimulation of the locus coeruleus and intraperitoneal injection of certain pharmacological substances on the threshold of hippocampal afterdischarges.**/ Vliyaniye elektricheskogo razdrazheniya sinego pyatna i intraperitoneal'nogo vvedeniya nekotorykh farmakologicheskikh veshchestv na porog gippokampal'nykh razryadov posledeystviya. Soobshcheniya Akademii Nauk Gruzinskoy SSR. 100(1):193-196, 1980.

The effect of electrical stimulation of the locus coeruleus and the intraperitoneal injection of reserpine and L-DOPA on the threshold of hippocampal afterdischarges was studied in adult cats. Results show that: stimulation of the locus coeruleus significantly raised the threshold of hippocampal afterdischarges; reserpine (4mg/kg) lowered the threshold of epileptogenic stimulation, and diminished the inhibitory effect of the locus coeruleus stimulation, as well as the threshold of afterdischarges. 13 references. 003886 Klemm, William R. Dept. of Veterinary Anatomy, Texas A&M University, College Station, TX 77843 **Opiate mechanisms: evaluation of research involving neuronal action potentials.** Progress in Neuro-Psychopharmacology. 5(1):1-33, 1981.

Studies of the effects of opiates and opioids on unit activity are reviewed. Opiates generally depress neuronal activity with pharmacological stereospecificity, but excitatory effects occur in several brain regions, particularly during the development of tolerance. Opiates interact with major neurotransmitter systems in a variety of ways, but the mechanisms of these interactions are poorly understood. Opiates have profound effects in various brain structures associated with prominent behavioral effects of opiates, such as catalepsy, euphoria, reward, and analgesia. The widespread distribution of cells sensitive to both stereospecific and nonstereospecific effects of opiates suggests that the behavioral effects of opiates are mediated through several receptor types and several levels of the nervous system. 98 references. 003887 Klugman, K. P.; Lembeck, F.; Markowitz, S.; Mitchell, G.; Rosendorff, C. Dept. of Physiology, University of the Witwatersrand Medical School, Hospital St., Johannesburg, South Africa **Substance P increases hypothalamic blood flow via an indirect adrenergic-cholinergic interaction.** British Journal of Pharmacology. 71(2):623-629, 1980.

Intrahypothalamic injections of 50 or 500mg substance-P increased hypothalamic blood flow (HBF) in conscious New Zealand rabbits. A 5ng dose of substance-P had no effect. The effect of substance-P was abolished by cholinoceptor blockade with atropine or mecamylamine and by adrenoceptor blockade with proproanolol or phenoxybenzamine. The vasodilator action of substance-P was also abolished by chemical sympathectomy of the hypothalamus with 6-hydroxydopamine or by destruction of the intracerebral nonadrenergic pathway (INP). Barbiturate and bicarbonate, which block the vasodilator action of the INP, also blocked the vasodilator effect of substance-P. Results suggest that substance-P may increase HBF via release of endogenous acetylcholine, which in turn stimulates the INP. 37 references. (Author abstract modified)

003888 Knych, E. T.; Eisenberg, R. M. Dept. of Pharmacology, University of Minnesota, School of Medicine, Duluth, MN 55812 **Effect of amphetamine on plasma corticosterone in the conscious rat.** Neuroendocrinology. 29:110-118, 1979.

The effect of amphetamine (AMPH) on plasma corticosterone was studied in the conscious, unstressed rat. AMPH (0.5 to 5.0mg/kg) produced a dose dependent increase in plasma corticosterone that was not altered by the adrenergic blocking agents phenoxybenzamine or propranolol. In contrast, the serotonergic depleting agent p-chloroamphetamine significantly inhibited the AMPH-induced rise in corticosterone. In addition, the serotonergic blocking agent methysergide, but not cyproheptadine, inhibited the corticosterone increase induced by AMPH. (Journal abstract)

003889 Kohler, Christer; Schwarcz, Robert. ASTRA Research Laboratories, ASTRA Lakemedel AB, Sodertalje, Sweden **Monosodium glutamate: increased neurotoxicity after removal of neuronal re-uptake sites.** Brain Research. 211(2):485-491, 1981.

Microinjections of monosodium glutamate (MSG) into the hippocampus of male Sprague-Dawley rats produced only marginal damage to local neurons. Hippocampal granule cells were markedly more vulnerable to the neurotoxic effect of MSG after perforant path transections, which removed their glutamatergic afferents. Results are discussed in relation to human neurodegenerative disorders such as Huntington's disease. 20 references. (Author abstract modified)

003890 Kohli, Jai D.; Goldberg, Leon I. Dept. of Pharmacological and Physiological Sciences, University of Chicago, 947 East 58th St., Chicago, IL 60637 **Effects of 3',4'-dihydroxynomifensine on the dopamine vascular receptor.** Journal of Pharmacy and Pharmacology. 32(3):225-226, 1980.

The activity of 3',4'-dihydroxynomifensine as a dopamine (DA) vascular agonist was studied in the canine renal vascular bed. Results indicated that 3',4'-dihydroxynomifensine is a partial DA vascular agonist. The compound had weaker alpha-adrenergic effect than DA and showed no betal-adrenergic effects. Results suggest that further modification of the nomifensine molecule may yield a more potent DA agonist with relatively little effect on adrenergic receptors. 5 references.

003891 Krishnan, H.; Baquer, N. Z.; Singh, R/ Neurochemistry Unit, School of Life Sciences, Jawaharlal Nehru University, New Delhi-110 067, India **Changes in gamma-aminobutyric acid-shunt enzymes in regions of rat brain with ketamine anaesthesia.** Neuropharmacology. 20(6):567-574, 1981.

The effects of ketamine hydrochloride (100mg/kg i.p.) on the activity of glutamic acid decarboxylase (GAD), 4-aminobutyrate-2-oxoglutarate aminotransferase (GABA-T), and succinic semialdehyde dehydrogenase (SSA-DH) were studied in homogenates and subcellular fractions from female Wistar rat brainstem, cerebellum, and cerebral hemispheres. Ketamine increased GABA GAD activity in synaptosomal fractions from brainstem and cerebellum but not from the cerebral hemispheres. Ketamine inhibited GABA-T and SSA-DH activity (mitochondrial fractions) in brainstem, but caused only transient increases in

GABA-T and SSA-DH activity in cerebral hemispheres. In cerebellum (mitochrondrial fractions), ketamine had no effect on GABA-T activity, but inhibited SSA-DH activity. Results are discussed in relation to the anticonvulsant effect of ketamine. 30 references. (Author abstract modified)

003892 Kuhn, Donald M.; Wolf, William A.; Lovenberg, Walter. Section on Biochemical Pharmacology, Hypertension-Endocrine Branch, NHLBI, NIH, Building 10, Room 7N262, Bethesda, MD 20205 **Pressor effects of electrical stimulation of the dorsal and median raphe nuclei in anesthetized rats.** Journal of Pharmacology and Experimental Therapeutics. 214(2):403-409, 1980.

Electrical stimulation of the dorsal or median raphe nucleus in anesthetized rats produced a transient increase in arterial blood pressure. Heartrate and respiratory rate did not appear to change systematically after stimulation. Transections rostral or caudal to the raphe nuclei or electrolytic lesions in the area of the nucleus linearis, pars caudalis abolished the pressor response to stimulation. Depletion of brain serotonin with p-chloropheny-lalanine significantly attenuated the pressor effect of both dorsal and median raphe stimulation. The data suggest that stimulation of the ascending serotonergic neuronal system produces a phasic pressor effect which is mediated, at least in part, by synaptic serotonin. 23 references. Shionogi Research Laboratory, Shionogi and Co., Ltd., Fukushima-ku, Osaka 553, Japan **Effect of neonatal hydrocortisone treatment on brain monoamines in developing rats.** Japanese Journal of Pharmacology. 30(2):213-220, 1980.

Subcutaneous injection of 0.5mg hydrocortison on postnatal day 2 significantly suppressed the development of whole brain in Wistar rats. Norepinephrine, dopamine, and serotonin contents in the brains of treated rats were higher than those in controls. Results suggested that hydrocortisone potentiated monoaminergic nervous systems in the hypothalamus, diencephalon, and pons/medulla oblongata. 26 references. (Author abstract modified)

003894 Laasberg, L. H.; Johnson, E. E.; Hedley-Whyte, J. Hedley-Whyte: 330 Brookline Avenue, Y-423, Boston, MA 02115 **Effect of morphine and naloxone on Leu-enkephalin-like immunoreactivity in dogs.** Journal of Pharmacology and Experimental Therapeutics. 212(3):496-502, 1980.

The effect of intravenously administered morphine sulfate and naloxone hydrochloride on leucine-enkephalin-like immunoreactivity (LELIR) in blood was determined. Is extracts of femoral artery and portal, jugular, and hepatic veins of 15 dogs anesthetized with pentobarbital, a compound with LELIR was present which cochromatographed on a thin layer plate with synthetic leucine-enkephalin and showed immunoreactivity with the antiserum to leucine-enkephalin bovine serum albumin complex. After morphine administration, the LELIR was approximately twice the control values, except in specimens from hepatic vein, where no apparent change was observed. Evidence supports the concept of multiple type receptors for receptor sites for endogenous opioid peptides and narcotic drugs. The catabolism of leucine-enkephalin-like material by the liver remains apparently unchanged during morphine and naloxone administration as judged from the enkephalin values in hepatic venous blood. 45 references. 003895 Laborit, G.; Baron, C.; Topal, G.; Henriet, I. Hopital Boucicaut, 78, rue de la Convention, F-75730 Paris Cedex 15, France **/Na gamma hydroxybutyrate in cerebral protection during severe hypoxemia in the rat./** Interet du gamma hydroxybutyrate de Na dans la protection cerebrale au cours des hypoxies severes chez le rat. Agressologie. 21(4):189-197, 1980.

The effect of 4-sodium hydroxybutyrate (4-OHB) on induced anoxias in rats was studied. Anoxia was induced in two groups of rats, with and without the protection of either 4-OHB or pentobarbital. In the first group, pH and plasmatic lactate were measured before and after anoxia while cerebral elctrogenesis was controlled; in the second group, levels of norepinephrine, dopamine, 5-HT, and lactic acid in brain tissue were measured. Results show that plasmatic pH before anoxia is unchanged with 4-OHB and lowered with pentobarbital; immediately after anoxia plasmatic pH is lowered less by 4-OHB than by pentobarbital. In brain tissue 4-OHB raises the level of norepinephrine significantly, whereas pentobarbital does not. Similar results were found with dopamine. Concentrations of 5-HT varied little, and levels of lactic acid were increased most by pentobarbital. The increase in norepinephrine and dopamine with 4-OHB explains the favorable results with humans when using this substance to protect the brain. 38 references. (Journal abstract modified)

003896 Laduron, P. M.; Leysen, J. E.; Gorissen, H. Dept. of Biochemical Pharmacology, Janssen Pharmaceutica, B-2340 Beerse, Belgium **Muscarinic receptor: multiple sites or unitary concept?** Archives Internationales de Pharmacodynamie et de Therapie. 249(2):319-321, 1981.

The binding of 3H-dexetimide was studied in various brain regions of rats and dogs and in dog stomach. The potency of pirenzepine in displacing 3H-dexetimide was similar in striatum, cortex, and stomach. The potency of atropine was also similar in the various preparations studied. These findings do not support the suggestion that there are multiple sites or subclasses of muscarinic acetycholine receptors. 6 references.

003897 Larsson, P. A.; Dahlstrom, A.; Heiwall, P. O.; Booj, S. Institute of Neurobiology, University of Goteborg, Goteborg, Sweden **The effect of chronic nicotine and withdrawal on intraaxonal transport of acetylcholine and related enzymes in sciatic nerve of the rat.** Journal of Neural Transmission. 47:243-251, 1980.

The content of acetylcholine (ACh) and activities of the cholinergic enzymes choline acetyltransferase (CAT) and ACh-esterase (AChE) were studied in intact and crushed rat sciatic nerve after chronic nicotine administration and withdrawal 2 days before the final experiment. Nicotine was given in the drinking water during 8 to 10 weeks and the final dose reached was about 8mg/kg/day, i.e., equivalent to that of the heavy cigarette smoker. In the chronic nicotine group, ACh levels and AChE activity of uncrushed nerve were significantly decreased as compared to the controls. The accumulation of ACh and AChE proximal to a single crush was also somewhat decreased, but significant only for AChE at 18 hours postoperatively. After withdrawal of nicotine for 2 days, the ACh content of both uncrushed and 12 hours crushed nerves were further decreased, while AChE was instead increased to control (uncrushed) or even supranormal (18 hour crush) levels. (Journal abstract)

003898 Le Fur, G.; Mizoule, J.; Burgevin, M. C.; Ferris, O.; Heaulme, M.; Gauthier, A.; Gueremy, C.; Uzan, A. Pharmindustrie, Groupe PHARMUKA, 35, Quai du Moulin de Cage, F-92231 Gennevilliers, France **Multiple benzodiazepine receptors: evidence of a dissociation between anticonflict and anticonvulsant properties by PK 8165 and PK 9084 (two quinoline derivatives).** Life Sciences. 28(13):1439-1448, 1981.

Evidence of a dissociation between the anticonflict and anticonvulsant properties of two quinoline derivatives (PK-8165 and

PK-9084) is presented. These drugs appeared to be more potent at displacing (3H)diazepam from its binding sites in the presence of halides suggesting that they are acting on benzodiazepine receptors associated to a chloride ionophore. Like the benzodiazepines, PK-8165 and PK-9084 increase punished responding in the rat conflict procedure but do not produce ataxia or sedation even at doses five to 20 times higher than those which are effective in the conflict test. Moreover, they do not possess anticonvulsant properties. PK-8165 and PK-9084 do not change cyclic GMP content of the cerebellar cortex and do not antagonize the increase in cyclic GMP induced by the GABA antagonists isoniazid and picrotoxin. Thus PK-8165 and PK-9084 pure anticonflict drugs might act on GABA independent benzodiazepine receptors associated to a chloride ionophore. 33 references. (Author abstract modified)

003899 Le Fur, Gerard; Guilloux, Francoise; Kabouche, Marie; Mitrani, Nicole; Ferris, Odette; Uzan, Andre. Uzan: Pharmindustrie, Groupe PHARMUKA, 35, quai du Moulin de Cage, F-92231 Gennevilliers, France **Central dopaminergic neurons during development of genetic and DOCA-salt hypertension in the rat.** Developmental Brain Research. 1(2):153-163, 1981.

The in vivo binding of (3H)spiroperidol was measured in discrete areas of the brain in 7-week-old, 9-week-old, and 16-week-old spontaneously hypertensive rats (SHR) and age matched normotensive Wistar-Kyoto (WKY) controls. An increase in the (3H)spiroperidol binding in the striatum, tuberculum olfactorium, and frontal cortex but not in the cerebellum was detected at all ages in SHR. The increase was more pronounced in 7-week-old SHR than in 9-week-old or 16-week-old SHR rats. In vitro data indicate an increase in Bmax but no variation in Kd in the striatum of 7-week-old SHR. The DOPA accumulation after injection of the DOPA decarboxylase inhibitor NSD 1015 was greater in the tuberculum olfactorium from 7-week-old SHR. An increase in (3H)spiroperidol binding sites was also observed in the striatum and tuberculum olfactorium after 7 weeks of deoxycorticosterone (DOCA) salt treatment. Results suggest that dopaminergic neurons might be implicated in that onset of hypertension in the rat. 31 references. (Author abstract modified)

003900 Lee, Chi Ho; Strosberg, Arthur M.; Warren, Lea Ann. Dept. of Pharmacology, Syntex Research, Palo Alto, CA 94304 **The importance of catecholamine uptake inhibition in the reversal of guanethidine blockade of adrenergic neurons.** Research Communications in Chemical Pathology and Pharmacology. 30(1):3-14, 1980.

Desipramine, imipramine, viloxazine, tripelennamine, tranylcypromine, and d-amphetamine reversed the adrenergic blocking activity of guanethidine against pressor responses induced by spinal electrical stimulation in pithed male Sprague-Dawley rats. Although these compounds are from different pharmacological classes, all have neuronal uptake inhibitory activity. It is suggested that inhibition of catecholamine uptake is sufficient to antagonize guanethidine adrenergic neuron blockade. 22 references. (Author abstract modified)

003901 Leelavathi, Doddamane E.; Misra, Chandra H.; Shelat, Harnath; Smith, Robert C. Smith: Texas Research Institute of Mental Sciences, 1300 Moursund, Texas Medical Center, Houston, TX 77030 **Effects of acute and chronic administration of phencyclidine on dopaminergic receptors in rat striatum.** Communications in Psychopharmacology. 4(5):417-424, 1980.

The effects of acute and chronic administraton of phencyclidine (PCP) on dopaminergic receptors in rat striatum are discussed. PCP (10mg/kg) produced a significant decrease in dopamine (DA) stimulated adenylate cyclase activity and phosphodiesterase activity in rat striatum, both after a single PCP dose and 24 hours after 30 days of chronic PCP injections. However, 15 minutes after the 31st PCP dose, there was a relative increase in striatal DA stimulated adenylate cyclase activity compared to chronic PCP rats who received saline on day 31. PCP added in vitro did not displace specific 3H-spiperone binding to rat striatal membranes, but PCP 10mg/kg injected into rats produced a small but significant increase in specific binding of spiperone in rat striatum. 23 references. 003902 Leslie, Frances M.; Chavkin, Charles; Cox, Brian M. Cox: Addiction Research Foundation, 701 Welch Road, Palo Alto, CA 94304 **Opioid binding properties of brain and peripheral tissues: evidence for heterogeneity in opioid ligand binding sites.** Journal of Pharmacology of Experimental Therapeutics. 214(2):395-402, 1980.

The specific binding of (3H)dihydromorphine ((3H)DHM) and (3H)D-Ala2-D-Leu5-enkephalin ((3H)DADLE) to binding sites in bovine corpus striatum, bovine adrenal medulla, guinea-pig, rabbit, and rat ileum, and mouse vas deferens has been characterized. In all tissues, the properties of high affinity (3H)DADLE binding sites were discriminable from (3H)DHM binding sites in terms of the relative potencies of competing opioid ligand. (3H)DADLE binding was more readily displaced by peptide opioids such as D-Ala2-L-Leu5-enkephalin than by alkaloids such as morphine, whereas (3H)DHM sites showed the reverse selectivity. Correlation of relative ligand potencies indicate that the enkephalin selective or alkaloid selective binding sites display similar properties across tissues and species. 33 references. 003903 Leung, Lai-Wo Stan. Dept. of Psychology, University of Western Ontario, London, Ontario N6A 5C2, Canada **Differential effects of pentobarbital and ether on the synaptic transmission of the hippocampal CA1 region in the rat.** Electroencephalography and Clinical Neurophysiology. 51(3):291-305, 1981.

The effect of ether and sodium pentobarbital on the synaptic transmission of the hippocampal CA1 region was studied in chronically implanted rats. Animal behavior, EEG, and average evoked potentials (AEPs) following electrical stimulation of the alveus or the striatum radiatum of the CA1 region were recorded. Components of the AEPs, interpreted previously as generated by population excitatory postsynaptic potentials (EPSPs), population inhibitory postsynaptic potentials (IPSPs) or population postsynaptic spikes were differentially sensitive to ether or pentobarbital. It is concluded that ether and pentobarbital both suppress hippocampal neuronal excitability but the effect of anesthesia differs for different anesthetics, for different synapses, and for different levels of activity in the input fibers. 37 references. 003904 Levin, Barry E. Veterans Administration Medical Center, East Orange, NJ 07019 **Reserpine effect on the axonal transport of dopamine-beta-hydroxylase and tyrosine hydroxylase in rat brain.** Experimental Neurology. 72(1):99-112, 1981.

Th effects of reserpine on the axonal transport of dopamine-beta-hydroxylase (DBH) and tyrosine hydroxylase (TH) were investigated in rats with 6-hydroxydopamine (6-OHDA) lesions in the rostral forebrain. Both BDH and TH activities accumulated linearly for 48 hours in the anterior hypothalamic sections proximal to the lesions. While DBH activity decreased toward baseline over the next 4 days, TH activity remained at the 48 hour levels, suggesting a faster turnover time of DBH activity at the lesion site. Accumulation of both enzymes was totally blocked by ipsilateral 6-OHDA lesions in the ascending dorsal and ventral noradrenergic bundles, suggesting that dopaminergic fibers do not contribute significantly to the accumulation of

TH activity. Reserpine induced DBH and TH production in noradrenergic neurons of the locus coeruleus was followed, after a delay of days, by increased levels in distally innervated regions. Single dose reserpine administration produced transient and sporadic decreases in the axonal transport of DBH and TH during the first 5 days after injection, followed by a steady increase to 693% of control for DBH at 7 days and 270% at 8 days for TH. This delay is attributed to delay in the onset of increased enzyme transport from the cell bodies. 46 references. (Author abstract modified)

003905 Levin, Barry E.; Comai, Karen; Sullivan, Ann C. Neurology Service (127), V.A. Medical Center, East Orange, NJ 07019 **Metabolic and sympatho-adrenal abnormalities in the obese Zucker rat: effect of chronic phenoxybenzamine treatment.** Pharmacology Biochemistry and Behavior. 14(4):517-525, 1981.

Male homozygous lean and obese Zucker rats were subjected to various stresses that activate the sympathoadrenal system and to chronic treatment with the alpha-adrenergic receptor blocker phenoxybenzamine (PBZ, 16 to 19 days). The obese Zucker rat exhibited abnormalities of lipid and carbohydrate metabolism that were corrected (hyperinsulinemia), induced (hyperglycemia), or exaggerated (hyperglycerolemia) by stress-induced activation of the sympathoadrenal systems. Chronic PBZ treatment increased baseline sympathetic activity in the obese rat and led to marked improvement in hyperinsulinemia. Weight loss was associated with a significant decrease in food intake in lean rats, but not in obese rats. Results suggest that a sympathoadrenal dysfunction may account for some of the metabolic abnormalities seen in obese Zucker rats. 53 references. (Author abstract modified)

003906 Lin, Chun Wel; Maayani, Saul; Wilk, Sherwin. Wilk: Dept. of Pharmacology, Mount Sinai School of Medicine, City University of New York, One Gustave Levy Place, New York, NY 10029 **The effect of typical and atypical neuroleptics on binding of (3H)spiroperidol in calf caudate.** Journal of Pharmacology and Experimental Therapeutics. 212(3):462-468, 1980.

The effect of typical and atypical neuroleptics on the binding of (3H)spiroperidol to calf caudate membranes was studied. Saturable or specific binding was defined as the difference between binding in the absence and in the presence of 1mcM d-butaclamol. The inhibition constants (Ki) and IC50 values for various typical and atypical neuroleptics and for two clinically inactive butyrophenones were determined. The Ki and IC50 values of typical neuroleptics paralleled their potencies in vivo. In contrast, the binding potencies of atypical neuroleptics did not correlate with their effects in vivo. The most striking discrepancy between binding and properties in vivo was found for the benzamide derivatives, sulpiride and metoclopramide. It is concluded that binding assays with (3H)spiroperidol in calf caudate cannot account for the antidopamine effects in vivo of atypical neuroleptics. 46 references. (Author abstract modified)

003907 Lin, M. T.; Chandra, A.; Liu, G. G. Dept. of Physiology and Biophysics, National Defense Medical Center, Taipei, Taiwan **The effects of theophylline and caffeine on thermoregulatory functions of rats at different ambient temperatures.** Journal of Pharmacy and Pharmacology. 32(3):204-208, 1980.

Central and systemic administration of theophylline and caffeine produced dose dependent increases in rectal temperature in male Sprague Dawley rats in ambient temperatures of 8, 22, and 30 degrees C. The xanthines also produced behavioral excitation, cutaneous vasodilation, and diuresis. Respiratory evaporative heat loss was not altered, but metabolic heat production was increased. The xanthine-induced hyperthermia was antagonized by destruction of central catecholaminergic nerve fibers with 6-hydroxydopamine and by blockade of alpha-adrenergic and dopaminergic receptors with phentolamine and haloperidol. Results suggest that theophylline and caffeine elicit central activation of adrenergic and dopaminergic receptors via release of endogenous catecholamines. 24 references. (Author abstract modified)

003908 Lindamood, Charles, III; Colasanti, Brenda K. Dept. of Pharmacology and Toxicology, West Virginia University Medical Center, Morgantown, WV 26506 **Effects of delta9-tetrahydrocannabinol and cannabidiol on sodium-dependent high affinity choline uptake in the rat hippocampus.** Journal of Pharmacology and Experimental Therapeutics. 213(2):216-221, 1980.

Dose of delta9-tetrahydrocannabinol (delta9-THC) and cannabidiol (CBD) affording the same degree of protection against seizures induced by maximal electroshock were compared for their effects on sodium dependent high affinity choline uptake into six rat brain regions (cortex, striatum, medulla/pons, hypothalamus, midbrain, and hippocampus). One hour after administration of CBD, choline uptake was not altered in any brain region. In contrast, 1 hour after adminsitration of delta9-THC, choline uptake in hippocampus and hypothalamus was significantly reduced. Moreover, in vivo administration of delta9-THC was followed by a dose related reduction in vitro hippocampal choline uptake. After direct addition to the hippocampal homogenates, both delta9-THC and CBD inhibited choline uptake. Results suggest that the septal/hippocampal cholinergic tract is a major site of action of delta9-THC and may provide a neurochemical basis for the differntial pharmacological properties of delta9-THC and CBD. 30 references. (Author abstract modified)

003909 Lindberg, Iris; Dahl, June L. Dahl: Dept. of Pharmacology, University of Wisconsin Medical School, 426 N. Charter St., Madison, WI 53706 **Characterization of enkephalin release from rat striatum.** Journal of Neurochemistry. 36(2):506-512, 1981.

Antisera specific for methionine-enkephalin and leucine-enkephalin were used to study the release of these peptides from male Holtzmann rat striatal slices. Only 2 to 3% of the total tissue stores of enkephalin could be released by potassium depolarization. Similar percentages were released from globus pallidus, thalamus, and nucleus accumbens. No enkephalin release from hippocampus was detected. Striatal release of enkephalins was altered by changes in potassium and calcium levels in the superfusion medium, but lithium had no effect on basal or potassium stimulated release. Striatal enkephalins were stable during the short-term incubation periods used in these experiments. 29 references. (Author abstract modified)

003910 Lindvall, Olle; Ingvar, Martin; Stenevi, Ulf. Laboratory of Experimental Brain Research, University of Lund, Lund, Sweden **Effects of metamphetamine on blood flow in the caudate-putamen after lesions of the nigrostriatal dopaminergic bundle in the rat.** Brain Research. 211(1):211-216, 1981.

Metamphetamine was given to male Wistar rats with unilateral 6-hydroxydopamine lesions of the nigrostriatal dopaminergic bundle. Local cerebral blood flow, measured autoradiographically with (14C)iodoantipyrine as the diffusible tracer, was more than twice as high in the denervated caudate/putamen than in controls. Measurements of local glucose consumption with the (14C)deoxyglucose technique showed no corresponding change in local metabolic rate; in fact, glucose consumption was reduced in the caudate/putamen on the lesioned side. Results indicate that the amphetamine-induced increase in cerebral blood flow does not require an intact nigrostriatal dopaminergic system. Dopamine relased by amphetamine appeared to constrict the vessels and reduce blood flow in the caudate putamen. 20 references. (Author abstract modified)

003911 Listinsky, Jay J.; Kohli, Jai D.; Goldberg, Leon I. Kohli: Dept. of Pharmacology, University of Chicago, 947 East 58th St., Chicago, IL 60637 **Consistent unmasking of dopamine-induced dilation of the canine femoral vascular bed.** Journal of Pharmacology and Experimental Therapeutics. 215(3):662-667, 1980.

Dopamine (DA) produced dose related vasodilation in the canine femoral vascular bed after the administration of two alpha-adrenergic blocking agents, WR-149,024 or yohimbine. DA-induced vasodilation unmasked by yohimbine was not antagonized by propranolol, pyrilamine, and metiamide, hexamethonium, or atropine, but was attenuated selectively by the DA antagonist sulpiride. The R-enantiomer of sulpiride was more effective than the S-enantiomer in attenuating DA-induced dilation. Phenoxybenzamine produced moderate (apparently nonspecific) attenuation of vasodilator responses to DA. The weaker vascular DA agonist, N,N-di-n-propyl dopamine, was approximately 4% the potentcy of DA in eliciting femoral vasodilation after yohimbine treatment. These findings suggest that DA produces femoral vasodilation after WR-149,024 or yohimbine by activation of vascular DA receptors similar to those proposed to exist in the renal vascular bed. 30 references. (Author abstract modified)

003912 Loomis, Christopher W.; Racz, William J. Dept. of Pharmacology, Queen's University, Kingston, Ontario, Canada K7L 3N6 **Drug interactions of amitriptyline and nortriptyline with warfarin in the rat.** Research Communications in Chemical Pathology and Pharmacology. 30(1):41-58, 1980.

The interaction of tricyclic antidepressants with warfarin and their effects on hepatic drug metabolism were studied in male Sprague-Dawley rats. Treatment with amitriptyline or nortriptyline for 6 days (6, 15, or 30mg/kg i.p.) did not increase the activities of aniline hydroxylase and did not alter the content of microsomal protein. Significant decreases in aminopyrine N-demethylase activity and cytochrome P-450 content were observed with the 30mg/kg dose. Amitriptyline and nortriptyline increased the prothrombin time of warfarin treated rats. At high tricyclic antidepressant doses, these increases in prothrombin time correlated with increases in the plasma half-life of warfarin. In vitro studies suggested that amitriptyline and nortriptyline competitively inhibited the metabolism of warfarin. The inhibition of warfarin metabolism and enhanced anticoagulant effect were greater after nortriptyline than after comparable doses of amitripyline. 27 references. (Author abstract modified)

003913 Loonen, Anton J. M.; Soe-Agnie, Carmen J.; Soudijn, Willem. Psychiatric Hospital Voorburg, P.O. Box 10150, 5260 GB Vught, The Netherlands **Effects of halopemide on GABA receptor binding, uptake and release.** Brain Research. 210(1-2):485-492, 1981.

The effects of halopemide on GABA uptake, receptor binding, and release were studied in male Wistar rat forebrain preparations in vitro. Results indicated that halopemide and its putative metabolites may interfere with GABA related synaptic mechanisms. The antipsychotic agent was similar to related neuroleptics in its effect on GABA uptake, release, and receptor binding. It is suggested that antagonistic effects of halopemide metabolites may contribute to its antipsychotic actions and lack of extrapyramidal side-effects. 19 references.

003914 Loscher, W. Free University of Berlin, School of Veterinary Medicine, Koserstrasse 20, D-1000 Berlin 33, West Germany **Effect of inhibitors of GABA aminotransferase on the metabolism of GABA in brain tissue and synaptosomal fractions.** Journal of Neurochemistry. 36(4):1521-1527, 1981.

The effects of five inhibitors of the GABA degrading enzyme GABA aminotransferase (GABA-T) (gabaculine, gamma-acetylenic GABA, gamma-vinyl GABA, ethanolamine O-sulphate, and aminooxyacetic acid), GABA, and the antiepileptic sodium valproate on the metabolism of GABA in brain tissue and synaptosomal fractions were investigated. The experimental mice were killed at the time of maximal anticonvulsant effect of the respective drugs and GABA, GABA-T, and glutamate decarboxylase (GAD) were determined in whole brain and synaptosomes. All drugs studied brought about significant increases in both whole brain and synaptosomal GABA concentrations, and, except GABA itself, inhibited the activity of GABA-T. Furthermore, all drugs, except GABA and gamma-acetylenic GABA, activated GAD in the synaptosomal fraction. Results suggest that activation of GAD is an important factor in the mechanism by which several inhibitors of GABA-T and also valproate increase GABA concentrations in nerve terminals, at least in the relatively nontoxic doses employed. 30 references. (Author abstract modified)

003915 Lucot, James B.; McMillan, D. E.; Leander, J. David. McMillan: University of Arkansas for Medical Sciences, 4301 West Markham Street, Little Rock, AR 72201 **The behavioral effects of d-amphetamine alone and in combination with acute and chronic morphine treatments in rats.** Journal of Pharmacology and Experimental Therapeutics. 210(2):158-165, 1979.

The behavioral effects of d-amphetamine were determined in rats responding under fixed-interval 5 minute or multiple fixed-interval 2.5 minute fixed-ration 30 response schedule of food presentation. The behavioral effects of d-amphetamine then were redetermined either in combination with acute doses of morphine or when the rats were drinking a .5 or a 1 mg/ml morphine solution, when the rats were undergoing withdrawal from morphine, and after withdrawal from morphine was presumed complete. Across the different control rates of responding, morphine and d-amphetamine administered alone produced dose related decreases in responding. The combination of d-amphetamine with acute doses of morphine produced effects which were greater than the sum of the effects of each drug alone. The daily dose of orally consumed morphine increased throughout the morphine drinking period. The rats displayed gross signs of withdrawal, particularly large losses in bodyweight (but not disruption of operant responding), when the morphine solution was withheld for 24 hours before a session. The effects of d-amphetamine were not altered during morphine drinking, during morphine withdrawal, or after withdrawal was presumed complete. 32 references. (Author abstract)

003916 Lullmann-Rauch, R.; Thesleff, S. Dept. of Anatomy, University of Kiel, Kiel, West Germany **Effects of taipoxin on the ultrastructure of cholinergic axon terminals in the mouse adrenal medulla.** Neuroscience. 4:837-841, 1979.

The effects of intravenous injections of the neurotoxin, taipoxin, on the ultrastructure of cholinergic axon terminals were investigated in the mouse adrenal medulla. Conspicuous changes were found in the ultrastructure of axon terminals upon chromaffin cells in the adrenal gland. The alterations were in several respects similar to those previously described at the neuromuscular junction. The electron density of the axoplasm was greatly increased and the mitochondria swollen. In many instances the number of synaptic vesicles was reduced. The alterations were more marked the longer the period of toxin action. It is suggested that the toxin molecule, which has phospholipase A2 activity, enters the axoplasm before exerting a hydrolytic and thereby neurotoxic action on cholinergic nerve terminals. 003917 Lundberg, Dag B. A.; Mueller, Robert A.; Breese, George R. Mueller: Dept. of Anesthesiology, School of Medicine, University of North Carolina, NCMH 204H, Chapel Hill, NC 27514 **An evaluation of the mechanism by which serotonergic activation depresses respiration.** Journal of Pharmacology and Experimental Therapeutics. 212(3):397-404, 1980.

The central or peripheral mechanism by which serotonergic activation depresses respiration was explored. Systemic administration of 5-hydroxytryptophan (5-HTP) to pargyline treated animals and 5-methoxy-N,N-di-methyltryptophan (5-MDMT) probably depress respiration secondary to central penetration of these drugs, since: 1) adult rats with biochemical evidence of partial destruction of central serotonergic neurons after neonatal intracisternal 5,7-dihydroxytryptamine were supersensitive to the respiratory depressing effect of 5-HTP and 5-MDMT; 2) the ventilatory effect of the serotonergic agonists was not reduced by surgical deafferentiation induced by bilateral transection of the glossopharyngeal nerves; 3) after sectioning of the vagus nerve, the absolute change produced by serotonergic agonists was less; and 4) inhibition of peripheral aromatic amino acid decarboxylase by RO-4-4602 significantly blunted the respiratory depressant activity of 5-HTP observed at 15 minutes, but not that present 30 minutes after 5-HTP. Results suggest that the central nervous system areas involved in respiratory control may be modulated at some level by the activity of central serotonergic neurons. 30 references. 003918 Lynch, Gary S.; Jensen, Robert A.; McGaugh, James L.; Davila, Kenneth; Oliver, Michael W. Dept. of Psychobiology, University of California, Irvine, CA 92717 **Effects of enkephalin, morphine, and naloxone on the electrical activity of the in vitro hippocampal slice preparation.** Experimental Neurology. 71(3):527-540, 1981.

The effects of infusion of low concentrations of D-Ala-D-Leu-enkephalin, morphine, or naloxone on electrical responses to stimulation of the in vitro hippocampal slice preparation were investigated. Concentrations of enkephalin as low as 10 nM and morphine as low as 1 mcM dramatically increased the magnitude of the population spike response of pyramidal cells to Schaffer commissural stimulation. Enhancement of the population spike by either morphine or enkephalin was blocked by the opiate receptor antagonist naloxone. The response to antidromic stimulation was not altered by enkephalin, nor was the slope of the dendritic response, indicating that the enkephalin effect is not mediated by depolarization of the pyramidal cells themselves nor by facilitation of synaptic processes at the dendrites. The possibility that the enkephalin effect might be produced by alteration of either a feed forward or a feedback mechanism mediated by basket cells was investigated. It is suggested that enkephalin acts to alter the efficiency of a mechanisms involved in coupling the dendritic excitatory postsynaptic potential with the spike initiation mechanisms of the cell body. 18 references. 003919 Machula, A. I.; Barkov, N. K.; Pokryshkin, V. I. Barkov: Laboratoiya, Tsentral'nyy NII sudebnoy psikhiatrii im. prof. Serbskogo, MZ SSSR, Moskva, USSR **/The effect of psychostimulants on changes in the excitability of the visual cerebral cortex./** Osobennosti izmeneniy vozbudimosti zritel'noy oblasti kory golovnogo mozga pri deystvii psikhostimulyatorov. Farmakologiya i Toksikologiya. 43(4):338-341, 1980.

The effect of psychostimulants on changes in the excitability of the visual cerebral cortex was studied in cats by recording the primary responses of the visual cortex with the aid of implanted electrodes. Results show that amphetamine (0.5mg/kg), sydnocarb (3mg/kg), and catinon (1mg/kg) depressed the primary response amplitude and concurrently lessened the depression of the testing response in the primary response recovery cycle. Results also show that cocaine (1mg/kg) suppressed the amplitude of the primary responses and intensified the depression of the testing primary response in the recovery cycle. 4 references. 003920 Maeda, Kiyoshi; Frohman, Lawrence A. Frohman: Division of Endocrinology and Metabolism, Michael Reese Medical Center, 2900 S. Ellis Ave., Chicago, IL 60616 **Neurotensin release by rat hypothalamic fragments in vitro.** Brain Research. 210(1-2):261-269, 1981.

The release of neurotensin by male Sprague-Dawley rat hypothalamic fragments in vitro was studied. Neurotensin-like immunoreactivity released into the incubation medium coeluted with synthetic neurotensin on gel filtration chromatography and paralleled synthetic neurotensin in radioimmunoassay. Neurotensin-like immunoreactivity released into the incubation medium was degraded by released hypothalamic peptidases, and this degradation was partially prevented by bacitracin. Neurotensin release was stimulated by dibutyryl cyclic AMP and by depolarizing concentrations of potassium; the latter effect was calcium dependent. Dopamine stimulated neurotensin release in a dose dependent manner, and this effect was blocked by haloperidol. Neurotensin release was not stimulated by norepinephrine or serotonin. 20 references. 003921 Maitre, L.; Moser, P.; Baumann, P. A.; Waldmeier, P. C. no address **Amine uptake inhibitors: criteria of selectivity.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):97-110, 1980.

The effects of classical antidepressants and newer, potentially antidepressant drugs on the uptake of noradrenaline (NA) and serotonin (5-HT) were measured in a number of in vivo and in vitro test systems and the correlations between the results obtained in the different test systems were calculated. Good correlations were found between the prevention of amine depletion induced by H77/77 or H75/12 and the effects on amine uptake in synaptosomal preparations from treated animals. For between systems measuring peripheral and central amine uptake inhibition the correlations were less clear, but still significant. Those between in vitro and in vivo test systems were generally very poor. It is suggested that in estimating the selectivity of amine uptake inhibitors, a procedure measuring central amine uptake in vivo should be chosen and only data relating on one single system should be compared. 23 references.

003922 Mandell, Arnold J.; Bullard, Wilson P.; Yellin, Joseph B.; Russo, Patrick V. Dept. of Psychiatry, University of California, La Jolla, CA **The influence of d-amphetamine on rat brain striatal reduced biopterin concentration.** Journal of Pharmacology and Experimental Therapeutics. 213(3):569-574, 1980.

The effects of d-amphetamine on levels of reduced biopterin (BH4) in male Sprague-Dawley rat striatum were examined. In untreated rats, striatal BH4 levels varied diurnally by twofold, oscillating around a concentration of 3mcM. D-amphetamine consistently induced a decrease in BH4 levels that did not exceed 25 to 30%. Recovery of control levels required several hours. Several other psychotropic drugs, including other stimulants and phenylethylamine congeners, failed to induce a similar change in BH4 level. The amphetamine effect was blocked by methylphenidate and reserpine. The prolonged time for BH4 recovery may have been due to an amphetamine-induced functional uncoupling of quinonoid dihydropteridine reductase from striatal tyrosine hydroxylase, leading to spontaneous isomerization of the partially reduced pterin to its nonquinonoid form, which is not a substrate for the BH4 regenerating enzyme. 43 references. (Author abstract modified)

003923 Mangano, Richard M.; Schwarcz, Robert. Schwarcz: Maryland Psychiatric Research Center, P.O. Box 3235, Baltimore, MD 21229 **The human platelet as a model for the glutamatergic neuron: platelet uptake of L-glutamate.** Journal of Neurochemistry. 36(3):1067-1076, 1981.

The kinetic and pharmacological properties of glutamate uptake mechanisms in human platelets and rat brain crude synaptosomal preparations were compared. A sodium dependent high affinity L-glutamate uptake system and a temperature dependent low affinity uptake site were demonstrated in human platelets. Kinetic properties were similar to those in rat brain synaptosomes, but maximal velocity values were higher in rat brain. Threo-3-hydroxy-DL-aspartate, DL-aspartate-beta-hydroxamate, L-glutamate, and L-aspartate had similar effects in the human platelet and rat brain synaptosome preparations. Studies of intrasubject and intersubject variability in human volunteers indicate that glutamate uptake measurements in human platelets are suitable for clinical studies. 34 references. 003924 Marchbanks, R. M.; Wonnacott, S.; Rubio, M. A. Dept. of Biochemistry, Institute of Psychiatry, London SE5 8AF, England **The effect of acetylcholine release on choline fluxes in isolated synaptic terminals.** Journal of Neurochemistry. 36(2):379-393, 1981.

Choline influx into guinea-pig cortical synaptosomes was enhanced after a period of depolarization-induced release of acetylcholine (ACh). Influx was stimulated by high internal concentrations of choline, and efflux was stimulated by high external concentrations. The maximal influx and efilux at saturating opposite concentrations of choline were equal, with a value of 500pmol/minute/mg synaptosomal protein. Increased ACh concentrations inhibited choline influx and efflux from the trans position. Increased intrasynaptosomal ACh concentrations abolished the stimulation of influx by depolarization. It is suggested that high concentrations of ACh immobilize the choline carrier on the inside of the synaptic membrane and that ACh release relieves this immobilization. 38 references. 003925 Marin, J.; Sanchez, C. F. Depto. de Farmacologia y Terapeutica, Facultad de Medicina, Universidad Autonoma, C/ Arzobipo Morcillo, 1, Madrid 34, Spain **Influence of calcium on noradrenaline release evoked by 5-hydroxytryptamine, tyramine and potassium from goat pial arteries.** Journal of Pharmacy and Pharmacology. 32(9):643-646, 1980.

The release of tritium evoked by tyramine, potassium (K), and 5-hydroxytryptamine (5-HT) from goat pial arteries preloaded with tritiated noradrenaline (NA) was studied. In normal Krebs-bicarbonate solution, all three agents caused a transient increase in radioactivity release. The effects of tyramine and 5-HT had slow onset and decline, but K produced a rapid peak of 3H release followed by a quick decline. Removal of calcium ions (Ca2) from the medium did not alter the effect of tyramine, markedly reduced the effect of K, and partially reduced the afflux evoked by 5-HT. Results indicate that K evokes NA release from brain vessels by a Ca2 dependent process, probably of an exocytotic nature, whereas tyramine mediates NA release via a Ca2 independent mechanism. The 5-HT effect appears to involve both components. 16 references. (Author abstract modified)

003926 Marwaha, Jwaharlal; Palmer, Michael R.; Woodward, Donald J.; Hoffer, Barry J.; Freedman, Robert. Freedman: Dept. of Psychiatry, C268, University of Colorado Health Sciences Center, 4200 E. Ninth Avenue, Denver, CO 80262 **Electrophysiological evidence for presynaptic actions of phencyclidine on noradrenergic transmission in rat cerebellum.** Journal of Pharmacology and Experimental Therapeutics. 215(3):606-613, 1980.

The actions of the psychotomimetic drug phencyclidine (PCP) were studied using Purkinje neurons in the cerebellum of urethane anesthetized rats. PCP, applied by micropressure ejection through multibarreled micropipettes, depressed the spontaneous activity of these neurons as recorded by extracellular electrophysiological techniques. This depressant effect was blocked by neuroleptic drugs and lithium, both of which also block the depressant effects of norepinephrine, but not those of GABA. PCP elicited depressions could not be obtained in rats in which the cerebellar noradrenergic terminals had been lesioned with 6-hydroxydopamine (6-OHDA). However, PCP was still an effective depressant in animals after destruction of nonnoradrenergic intrinsic excitatory and inhibitory interneurons which synapse on the Purkinje cell by neonatal X-irradiation. Further treatment of the X-irradiated animal with 6-OHDA resulted in Purkinje neurons which were not responsible to PCP. Administration of magnesium ions, which reduces the release of neurotransmitters from afferent terminals, also suggests that PCP acts in the cerebellum by a presynaptic mechanism involving release of norepinephrine from intact, functioning noradrenergic terminals. 30 references. 003927 Marzullo, Giovanni; Friedhoff, Arnold J. Millhauser Laboratories, Psychiatry Dept., New York University School of Medicine, New York, NY 10016 **COMT-A and COMT-B: catalytic differences and role of disulfides bonds.** Research Report, NIMH Grant 5P01-MH-8618, 1980. 11 p.

Differences between the two principal forms of the enzyme catechol-0-methyltransferase (COMT-A and COMT-B) are described, and the mechanism which is involved in the production of different meta/para methylation ratios is examined. For analysis of meta/para methylation ratios, normal and isovanillic acids resulting from dihydroxybenzoate were separated by this layer chromatography. It appeared that the configuration of the catechol binding site of COMT-B differed from that of COMT-A in a way which resulted in a reduced probability of the catechol binding in a paramethylating orientation. The higher ability of COMT-B to methylate hydroxy groups adjacent to methoxy groups was also probably a reflection of the same configurational difference at the binding site. The SS bridge appeared to influence the configuration of the catechol binding site in a way that reduced the probability of the paramethylating binding mode. This same type of disulfide bridge appeared to form between enzyme nonomer and GSSG when homogenates were incubated with oxidized glutathione. 27 references.

003928 Masso, J. L.; Roberts, D. J. Roberts: Dept. of Pharmacology, Research Institute of Laboratorios Almirall, Cardoner 68-74, Barcelona, Spain **Comparison of the potencies of clebopride and other substituted benzamide drugs on isolated gastrointestinal tract of the guinea-pig and rat.** Journal of Pharmacy and Pharmacology. 32(10):727-728, 1980.

The effects of the substituted benzamides clebopride, metoclopramide, and sulpiride were studied in strips of rat gastric fundus and portions of guinea-pig ileum and colon. Clebopride induced dose-related contractions in all three preparations, as did 5-hydroxytryptamine (5-HT). Metoclopramide was weaker than clebopride in all three preparations, and sulpiride was active only in the ileum preparation. The ileum was the most sensitive and the colon the least sensitive to 5-HT and the substituted benzamides. Results indicate that clebopride is more potent than other substituted benzamide drugs in the gastrointestinal tract, which is consistent with previous findings in other models of CNS antidopaminergic activity. 18 references.

003929 Matthews, W. D.; McCafferty, G. P.; Setler, P. E. Dept. of Pharmacology, Smith Kline & French Laboratories, Philadelphia, PA 19101 **An electrophysiological model of GABA-mediated neurotransmission.** Neuropharmacology. 20(6):561-565, 1981.

Electrical stimulation of the perforant pathway in anesthetized male Sprague-Dawley rats resulted in excitation followed by inhibition of granule cells in the hippocampal dentate gyrus. Physiological, biochemical, and immunocytochemical evidence suggests that the inhibition of granule cell activity was mediated by recurrent collateral activation of an inhibitory GABA interneuron. The GABA antagonist bicuculline reduced recurrent inhibition in the dentate gyrus, whereas the GABA agonist, nipecotic acid, prolonged the inhibition. The GABA uptake inhibitors guvacine and L-2,4-diaminobutyric acid enhanced the duration of recurrent inhibition up to 75%. Strychnine had no effect on the duration of recurrent inhibition. Blockade of GABA synthesis with isoniazid markedly reduced or abolished the inhibition. Results indicate that recurrent inhibition in the dentate gyrus is mediated by synaptically released GABA and that uptake into neurons or glia limits its duration of action. 19 references. 003930 Mautner, Henry G. Dept. of Biochemistry and Pharmacology, Tufts University School of Medicine, Boston, MA 02111 **Acetylcholine and choline acetyltransferase.** Neurochemistry International. 2(1/3):123-134, 1980.

The thermodynamics and kinetics of the alcoholysis of thiolesters are discussed in relation to choline acetyltransferase. The conformational and rotational barriers of acetylcholine are described, as is the specific inability of choline to induce depolarization. Evidence is presented for the involvement of imidazole and the lack of involvement of thiol groups in the active site of choline acetyltransferase. The interaction of coenzyme-A (CoA) and a series of CoA analogs and the interaction of dyes with the CoA binding site are discussed. The importance of the 3'-phospho group of CoA and an active site arginine for these interactions is emphasized. 75 references.

003931 Mayer, M. L.; Straughan, D. W. Dept. of Pharmacology and Toxicology, University of Texas Medical Branch, Galveston, TX 77550 **Effects of 5-hydroxytryptamine on central neurones antagonized by bicuculline and picrotoxin.** Neuropharmacology. 20(4):347-350, 1981.

In anesthetized Wistar rats, ionotophoretic application of bicuculline methochloride blocked the inhibitory effects of GABA and 5-hydroxytryptamine (5-HT) on 8 of 11 medial preoptic neurons. The inhibitory action of glycine was affected only slightly by bicuculline. The inhibitory effect of 5-HT on visual cortex neurons was blocked by applications of 5-HT or picrotoxin. Results suggest that 5-HT and GABA may act on the same receptor/effector complex in some neurons. 20 references. (Author abstract modified)

003932 Mazurkiewicz-Kwilecki, I. M. Dept. of Pharmacology, Faculty of Health Sciences, School of Medicine, University of Ottawa, 275 Nicholas St., Ottawa, Canada K1N 9A9 **Effect of diazepam on stress induced changes in brain histamine.** Pharmacology Biochemistry and Behavior. 14(3):333-338, 1981.

Acute treatment with diazepam (2.5, 5, and 10mg/kg orally) did not affect the basal concentration of histamine in the hypothalamus of male Sprague-Dawley rats. The increase in hypothalamic histamine induced by 15 minutes of platform stress was significantly attenuated by 5 or 10mg/kg diazepam, but the elevation induced by 15 minutes of air blasts was not altered. Diazepam significantly reduced the rise in plasma corticosterone concentration in response to air blast stress, but did not affect the increase caused by platform stress. 70 references. (Author abstract modified)

003933 McLennan, Peter L. Dept. of Pharmacology, Monash University, Clayton, Victoria, Australia, 3168 **The hypothermic effect of clonidine and other imidazolidines in relation to their ability to enter the central nervous system in mice.** European Journal of Pharmacology. 69(4):477-482, 1981.

The ability of clonidine and structurally related imidazolidines to enter the CNS was studied in female Swiss mice. All the imidazolidines tested caused dose dependent reductions in body temperature. The drug-induced hypothermia was inhibited by intracisternal (but not intraperitoneal) injections of piperoxan, an alpha-adrenoceptor antagonist. It is concluded that the test compounds all crossed the blood-brain barrier to interact with alpha-adrenoceptors and cause hypothermia. These findings suggest that the failure of some imidazolidines to cause sedation and hypotension is not due to an inability to penetrate the blood-brain barrier. 20 references. (Author abstract modified)

003934 Medvedev, B. A.; Mashkovskiy, M. D. Lab. farmakologii, Vsesoyuznyy nauchno-issledovatel'skiy khimiko-farmatsevticheskiy institut im. S. Ordzhonikidze, Moskva, USSR **/The effect of antidepressants on the hypotensive effect of clofelin in rats./** Vliyaniye antidepressantov na gipotenzivnyy effekt klofelina y krys. Farmakologiya i Toksikologiya. 43(4):374-376, 1980.

The effect of the antidepressants azaphen, pyrazidol, inkasan, imipramine, and amitriptyline on the hypotensive effect of clofelin was studied in unanesthetized rats with normal arterial blood pressure. Results show that the antidepressants reduced the hypotensive effect of clofelin. As the dosage was increased, the antidepressants themselves started to exert a hypotensive effect; but the antagonism to clofelin in relation to the arterial blood pressure was maintained. These results suggest that such an effect is due to the impairment of neuronal noradrenaline uptake, induced by the antidepressants. 12 references. (Journal abstract modified)

003935 Mefford, Ivan N.; Roth, Kevin A.; Gilberg, Mark; Barchas, Jack D. Dept. of Psychiatry and Behavioral Sciences, Stanford University School of Medicine, Stanford, CA 94305 **In vivo intraneuronal MAO inhibition in rat brain SKF 64139, comparison to other potent PNMT inhibitors.** European Journal of Pharmacology. 70(3):345-353, 1981.

Acute administration of the phenylethanolamine-N-methyltransferase inhibitor 7,8,dichloro-1,2,3,4-tetrahydroisoquinoline (SKF-64139) to male Sprague-Dawley rats increased brain serotonin levels and depleted brain levels of 5-hydroxyindolacetic acid, homovanillic acid, and 3,4-dihydroxyphenylacetic acid. Pretreatment with SKF-64139 antagonized the increase in acid metabolites and depletion of amines induced by reserpine. Results suggest that SKF-64139 may be a potent intraneuronal monoamine oxidase inhibitor. 14 references. (Author abstract modified)

003936 Messing, Rita B.; Vasquez, Beatriz J.; Samaniego, Bernardo; Jensen, Robert A.; Martinez, Joe L., Jr.; McGaugh, James L. Dept. of Psychobiology, University of California, Irvine, CA 92717 **Alterations in dihydromorphine binding in cerebral hemispheres of aged male rats.** Journal of Neurochemistry. 36(2):784-787, 1981.

Equilibrium binding of 3H-dihydromorphine was assayed in brain regions of young and aged male F344 rats. Young rats had significantly higher receptor densities than old rats in the frontal poles, anterior cortex, and striatum. In the frontal poles, the aged related decline in receptor concentration was accompanied by a significant increase in the apparent affinity of dihydromorphine for receptors. This pattern of receptor alterations differs from that previously observed in aged female rats, suggesting possible sex differences in mechanisms underlying age related synaptic alterations. 18 references. (Author abstract modified)

003937 Meyer, E. M.; Cooper, J. R. Cooper: Dept. of Pharmacology, Yale University School of Medicine, 333 Cedar St., New Haven, CT 06510 **Correlations between Na-K ATPase activity and acetylcholine release in rat cortical synaptosomes.** Journal of Neurochemistry. 36(2):467-475, 1981.

The efflux of tritiated acetylcholine (3H-ACh) and the activity of the sodium/potassium (Na/K) stimulated ATPase ion pump were studied concomitantly in male Sprague-Dawley rat cortical synaptosomes. Ouabain, strophanthidin, and parachloromercuribenzene sulfonate inhibited ouabain sensitive rubidium (86Rb) uptake and elevated 3H-ACh release independently of the external calcium concentration. Veratridine, electrical field stimulation, and the calcium ionophore A23187 also inhibited ouabain sensitive 86Rb uptake and released 3H-ACh, but by a calcium dependent process. Veratridine-induced 3H-ACH release and ion pump inhibition were blocked by pretreatment with tetrodotoxin. Results suggest that 3H-ACh release is due at least in part to inhibition of Na/K stimulated ATPase. 33 references. (Author abstract modified)

003938 Mikuni, Masahiko; Saito, Yoshiro; Koyama, Tsukasa; Yamashita, Itaru. Dept. of Psychiatry and Neurology, Hokkaido University School of Medicine, North 15 West 7, Kita-ku, Sapporo, Hokkaido, Japan **Circadian variation of cyclic AMP in the rat pineal gland.** Journal of Neurochemistry. 36(3):1295-1297, 1981.

Cyclic AMP concentrations in the male Wistar-King pineal gland showed a distinct circadian variation, with the maximum level at 0200 at the lowest at 1400. Propranolol completely blocked the dark-induced increase in pineal cyclic AMP at 0200. Isoproterenol induced a rapid, threefold increase in cyclic AMP level at 1400, but had no effect at 0200. 26 references. (Author abstract modified)

003939 Miller, Jeannette C.; Friedhoff, Arnold J. Millhauser Laboratories, New York University School of Medicine, 550 First Avenue, New York, NY 10016 **The effect of prenatal exposure to ethanol or opiates on brain catecholamine activity.** In: Parvez, H., Biogenic amines in development. Elsevier/North Holland, 1980. (p. 709-724).

A review is presented of the effects of prenatal exposure to ethanol and opiates, two classes of drugs of abuse, on central cholaminergic activity and related behaviors. Adverse clinical effects of ethanol exposure prenatally in human infants have analogues in animals prenatally exposed. Animal offspring exhibit decreased bodyweight, and decreased brain weight, and show impairments in learning ability and increased motor activity. Limited data do not permit definitive conclusions about the permanence of change in catecholamine synthesis in ethanol exposed offspring. In utero exposure to morphine or other narcotics results in growth retardation and behavioral disturbances in human infants. Growth retardation, postnatal mortality rate increases, tolerance to analgesic effects, disturbed mother-infant interaction, and dependence have been reported in prenatal exposure studies in the rat. Further, it is not unlikely that biochemical effects of opiates observed in treated adults would have similar effects on brain development of catecholaminergic systems and opioid peptide and receptor systems of prenatally and/or postnatally exposed animals. 96 references.

003940 Misra, Chandra H.; Smith, Robert C. Section of Biological Psychiatry, Texas Research Institute of Mental Science, 1300 Moursund, Texas Medical Center, Houston, TX 77030 **Effects of age on dopaminergic supersensitivity induced by chronic fluphenazine.** Communications in Psychopharmacology. 4(5):411-415, 1980.

The influence of age on dopaminergic supersensitivity induced by chronic fluphenazine was investigated. Twenty-five-month-old Fisher 344 rats terminated from chronic administration of fluphenazine developed a 24% increase in specific binding of spiperone in the striatum (compared to age matched saline controls), similar to the increase observed in 7-month-old fluphenazine treated rats. The older fluphenazine treated rats had a slightly lower increase in the Bmax of spiperone binding than did the younger rats. The aging rat brain retains the capacity to develop a supersensitive response to chronic neuroleptic administration. 13 references. (Author abstract modified)

Central Research Laboratories, Sankyo Co., Ltd., Hiromachi 1-2-58, Shinagawa-ku, Tokyo 140, Japan **Autoradiographic studies on distribution of L-3,4-dihydroxyphenylalanine (L-DOPA)-14C and L-5-hydroxytryptophan (L-5-HTP)-14C in the cat brain.** Japanese Journal of Pharmacology. 30(6):795-805, 1980.

Autoradiography and chromatography were used to study the distribution and metabolism of 14C-labeled L-DOPA and 5-hydroxytryptophan (5-HTP). An appreciable amount of radioactivity in the gray matter was found, but not in the white matter. After oral administration of L-DOPA-14C, radioactivity levels were high in the caudate nucleus, putamen, and pallidum. After i.v. administration of L-5-HTP-14C, radioactivity was high in the hypothalamus, raphe nucleus, substantia nigra, inferior olivalis, and caudate nucleus. After L-DOPA administration, high concentrations of dopamine were detected in the caudate nucleus and hypothalamus. After L-5-HTP administration, high concentrations of serotonin were detected in the hypothalamus and medulla oblongata. 18 references. (Author abstract modified)

003942 Morley, John E.; Brammer, Gary L.; Sharp, Burt; Yamada, Tadataka; Yuwiler, Arthur; Hershman, Jerome M. Brammer: Neurobiochemistry Research Laboratory T-85, VA Brentwood Medical Center, 11301 Wilshire Blvd., Los Angeles, CA 90073 **Neurotransmitter control of hypothalamic-pituitary-thyroid function in rats.** European Journal of Pharmacology. 70(3):263-271, 1981.

In a study of the role of monoamine neurotransmitters in the regulation of the hypothalamic/pituitary/thyroid axis, male Sprague-Dawley rats were treated acutely or chronically with neurotransmitter precursors (tryptophan and L-DOPA), synthesis inhibitors (p-chlorophenylalanine and alpha-methyltyrosine), uptake inhibitors (desipramine and zimelidine), or lithium carbonate. Hypothalamic levels of thyrotropin releasing hormone (TRH) and somatostatin-like immunoreactivity and serum levels of thyrotropin, thyroxine, and triiodothyronine were determined. Results suggested that TRH release is regulated by an excitatory noradrenergic system and by serotonergic and dopaminergic inhibitory systems. The serotonergic influence appeared to be a factor only after activation of the central serotonergic system. Lithium increased the level of TRH in the hypothalamus. 43 references. produces hyperglycemia in rats. Life Sciences. 28(19):2187-2190, 1981.

Intraventricular administration of cholecystokinin-octapeptide (CCK-8) produced hyperglycemia in rats. A 250ng dose of CCK-8 increased plasma glycagon levels, but 2.5 and 25ng doses increased glucose without altering glucagon levels. Insulin levels were not altered by any dose of CCK-8 tested. A 14C-glucose tracer study showed that the hyperglycemia induced by CCK-8 was not due to alterations in glucose clearance. 14 references. (Author abstract modified)

003944 Morris, Margaret J.; Elghozi, Jean-Luc; Dausse, Jean-Pierre; Meyer, Philippe. Meyer: INSERM U7, Research Unit, Dept.of Nephrology, Hopital Necker, 161 rue de Sevres, F-75015 Paris, France **Alpha1- and alpha2-adrenoceptors in rat cerebral cortex: effect of frontal lobotomy.** Naunyn-Schmiedeberg's Archives of Pharmacology. 316(1):42-44, 1981.

Frontal lobotomy caused a reduction in the noradrenaline content of male Wistar rat cerebral cortex, indicating effective noradrenergic denervation. Changes in 3H-clonidine and 3H-prazosin binding after surgery revealed a reduction in the number of alpha2-adrenoceptors and a smaller but significant increase in the number of alpha1-adrenoceptors in the lesioned cortex. Results indicate that alpha2-adrenoceptors located on presynaptic noradrenergic terminals represent only a small proportion of the total alpha2-adrenoceptor population in the cerebral cortex. 22 references. 003945 Nagy, A. no address **On the kinetics of imipramine and related antidepressants.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):147-156, 1980.

The kinetics of imipramine and related antidepressants are discussed. Several observations indicate that excessive demethylation can antagonize the therapeutic effect of antidepressants of the imipramine type. To date, there is no possibility of reducing demethylation other than by switching from oral to parenteral administration. Data are presented which indicate that treatment with imipramine-N-oxide does not increase the ratio between imipramine and desipramine in the plasma, but imipramine-N-oxide administration does increase this ratio in the blood cells and in the brain. A panel discussion of these topics is appended. 16 references.

003946 Nakadate, Teruo; Muraki, Takamura; Kato, Ryuichi. Dept. of Pharmacology, School of Medicine, Keio University, Shinanomachi, Shinjuku-ku, Tokyo 160, Japan **Effects of alpha- and beta-adrenergic blockers on chlorpromazine-induced elevation of plasma glucose and cyclic AMP in fed mice.** Japanese Journal of Pharmacology. 30(2):199-206, 1980.

Subcutaneous injection of chlorpromazine (CPZ) in fed male ddY mice caused dose dependent increases in plasma glucose and cyclic AMP levels, which were blocked by hexamethonium. Propranolol inhibited the increase in plasma cyclic AMP, but not the increase in plasma glucose. Phentolamine and yohimbine suppressed the elevation of plasma glucose, but not the increase in plasma cyclic AMP. Results indicate that CPZ-induced hyperglycemia is mediated via stimulation of alpha-adrenoceptors, whereas the CPZ-induced increase in plasma cyclic AMP is mediated via stimulation of beta-adrenoceptors. 37 references. 003947 Nakamura, Kazuo; Okada, Toshikazu; Ishii, Hisae; Nakamura, Keiji. Department of Pharmacology, Nippon Roche Research Center, Kamakura 247, Japan **Differential effects of alpha-methyldopamine, clonidine and hydralazine on norepinephrine and epinephrine synthesizing enzymes in the brainstem nuclei of spontaneously hypertensive rats.** Japanese Journal of Pharmacology. 30(1):1-10, 1980.

Repeated administration of clonidine to spontaneously hypertensive rats (SHR) markedly lowered dopamine-beta-hydroxylase (DBH) activity in the locus coeruleus and increased it in the spinal intermediolateral column. Alpha-methyldopa tended to lower DBH activity in the medullary nucleus tractus solitarii and A1 cell areas. Clonidine-induced inhibition of 3H-norepinephrine binding to crude synaptic membranes of SHR or Kyoto Wistar control rats was seven times greater than that of alpha-methyl-norepinephrine. Clonidine and hydralazine lowered phenylethanolamine N-methyltrasferase (PNMT) activity in the nucleus hypothalamicus posterior of SHR to control levels. Clonidine, hydralazine, and alpha-methyldopa increased PNMT in the nucleaus paraventricularis. Peripherally active hydralazine increased PNMT activity in the NTS and reduced activity in the A1 cell of SHR to control level. 39 references. (Author abstract modified)

003948 Near, Joseph A.; Mahler, Henry R. Mahler: Dept. of Chemistry, Indiana University, Bloomington, IN 47405 **Dopamine receptors in subcellular fractions from bovine caudate: enrichment of (3H)spiperone binding in a postsynaptic membrane fraction.** Journal of Neurochemistry. 36(3):1142-1151, 1981.

Specific binding of tritiated dopamine, spiperone, and N-propylnorapomorphine (NPA) in subcellular fractions from bovine caudate nucleus was examined. All fractions contained at least two sets of specific binding sites for 3H-spiperone and a single class of high affinity sites for 3H-dopamine. At least two classes of receptors were labeled by 3H-NPA. The binding of 3H-spiperone in a postsynaptic membrane fraction extracted and separated from synaptic plasma membranes (SPM) was enriched two to threefold over that in unfractionated SPM, with concomitant decrease in 3H-dopmaine binding. The enrichment in spiperone receptors was almost entirely due to an increase in the number of low affinity binding sites, suggesting these sites are associated with the postsynaptic membrane. 41 references. (Author abstract modified)

003949 Neff, N. H.; Parenti, M.; Gentleman, S.; Olianas, M. C. Laboratory of Preclinical Pharmacology, NIMH, St. Elizabeths Hospital, Washington, DC 20032 **Modulation of dopamine receptors by opiates. (Unpublished paper).** Bethesda, MD, NIMH, 1980. 9 p.

Evidence is presented in support of the view that opiate receptors are in communication with the dopamine receptor complex and act as modulators of the responsiveness of the dopamine adenylate-cyclase system. Research using rat striatal membranes is cited to demonstrate that morphine inhibits dopamine activated adenylate-cyclase; and that opioid peptides, but not other neuropeptides, inhibit dopamine stimulated adenylate-cyclase. A simple model is proposed to explain similarities in pharmacology between neuroleptic drugs and narcotics. Both classes of compounds prevent dopamine stimulating its receptor. Neuroleptics displace dopamine from its receptor site, while opiates do not displace, but prevent dopamine from activating adenylate-cyclase, perhaps by interacting with the GTP binding site. Such a mechanism implies that endogenous opiate peptides play a physiological role in dampening dopamine receptor responsiveness. The model would also predict that chronic treatment with morphine produces supersensitivity of the dopamine adenylate-cyclase system. 16 references.

003950 Nimit, Y.; Skolnick, P.; Daly, J. W. Daly: Bldg. 4, Room 212, NIH, Bethesda, MD 20205 **Adenosine and cyclic AMP in rat cerebral cortical slices: effects of adenosine uptake**

inhibitors and adenosine deaminase inhibitors. Journal of Neurochemistry. 36(3):908-912, 1981.

The adenosine deaminase inhibitor 2'-deoxycoformycin (2'-DCF) slightly increased the basal, adenosine elicited, and norepinephrine elicited accumulations of cyclic AMP in male Sprague-Dawley rat cortical slices. Dipyridamole, an adenosine uptake inhibitor, had an even greater effect on cyclic AMP accumulations, and the effects of combinations of 2'-DFC and dipyridamole were greater than those of either compound alone. Neither agent signficantly augmented accumulations of cyclic AMP elicited by veratridine, a depolarizing agent. 20 references. (Author abstract modified)

003951 Nishi, Hiroyoshi; Watanabe, Shigenori; Ueki, Showa. Pharmacology Group, Research Laboratory, Mitsubishi Yuka Pharmaceutical Co. Ltd., Ami-cho, Ibaraki 300-03, Japan **Effect of median raphe stimulation on hippocampal seizure discharge induced by carbachol in the rabbit.** Japanese Journal of Pharmacology. 30(5):759-762, 1980.

Carbachol (5mcg) administered into the rabbit dorsal hippocampus elicited a seizure discharge, but this effect was not seen when carbachol was given after electrical stimulation of the median raphe nucleus. The inhibitory effect of raphe stimulation on carbachol discharge was completely blocked by pretreatment with p-chlorophenylalanine. Results suggest that serotonin released by raphe stimulation plays an inhibitory role in the manifestation of carbachol-induced hippocampal seizure discharge. 9 references.

003952 Nistico, G.; Ientile, R.; Rotiroti, D.; Lanotte, M.; Di Giorgio, R. M. Institute of Pharmacology, University of Messina, Messina, Italy **Evidence to suggest that dopamine-induced increase in GABA concentrations in chick brain is mediated through cyclic AMP.** Journal of Pharmacy and Pharmacology. 32(9):663-664, 1980.

Administration of (-)-dopa or apomorphine into the third cerebral ventricle of Rhode Island Red chicks significantly stimulated GABA synthesis in the diencephalon. Intracerebroventricular injection of dibutyryl cyclic AMP or adenosine in chicks pretreated with aminophylline also increased GABA content and glutamic acid decarboxylase (GAD) activity. Results indicate that GABA synthesis is increased in conditions of increased dopaminergic activity and suggest that dopamine receptors coupled to adenylate cyclase may regulate GAD activity. 21 references.

003953 O'Fallon, James V.; Brosemer, Ronald W.; Harding, Joseph W. Harding: Dept. of Veterinary and Comparative Anatomy, Washington State University, Pullman, WA 99164 **The Na,K-ATPase: a plausible trigger for voltage-independent release of cytoplasmic neurotransmitters.** Journal of Neurochemistry. 36(2):369-378, 1981.

The release of neurotransmitters from eight regions of male Swiss-Webster mouse brain in response to 60mM potassium or 20mcM ouabain, a specific inhibitor of sodium/potassium stimulated adenosine triphophatase, was studied. Potassium was superior to ouabain in releasing biogenic amines. Putative amino acid transmitters generally were released by both agents. The pattern of release suggested that potassium initiated the release of transmitter from both vesicular and cytoplasmic pools, while ouabain stimulated stimulated release only from the cytoplasm in a voltage independent manner. 69 references. 003954 Osborne, Neville N. Nuffield Laboratory of Ophthalmology, University of Oxford, Walton St., Oxford OX2 6AW, England **Binding of (3H)-muscimol, a potent gamma-aminobutyric acid receptor agonist, to membranes of the bovine retina.** British Journal of Pharmacology. 71(1):259-264, 1980.

The binding of 3H-muscimol to crude membrane preparations of bovine retina was studied, using a filtration method to isolate membrane bound ligand. Specific binding was saturable and occurred at two binding sites with affinity constants of 4.3nM and 38.2nM. Binding was sodium independent, enhanced by freezing or Triton-X-100 treatment, and abolished by sodium laurylsulphate. The binding sites showed a high degree of pharmacological specificity; GABA was a potent displacer of 3H-muscimol. Specific 3H-muscimol binding was greater in subcellular fractions enriched with photoreceptor synaptosomes than in fractions enriched with conventional synaptosomes. 20 references. 003956 Palmer, Gene C.; Palmer, S. Jo; Legendre, Janet L. Dept. of Pharmacology, University of South Alabama College of Medicine, Mobile, AL 36688 **Guanylate cyclase--cyclic GMP in mouse cerebral cortex and cerebellum: modification by anticonvulsants.** Experimental Neurology. 71(3):601-614, 1981.

The modification by anticonvulsants of guanylate cyclase and cyclic GMP was studied in mouse cerebral cortex and cerebellum preparations. Incubated tissue slices readily accumulated cyclic GMP in response to challenge by ouabain, NaN3, NH2OH, or KCl, but not l-glutamate, l-aspartate, glycine, GABA, kainic acid, and the calcium ionophore, A-23187. Inhibition of the ouabain-induced accumulation of cyclic GMP was evident with valproate, carbamazepine, clonazepam, phenytoin, and phenobarbital. Only phenytoin blocked the action of KCl, and cyclic GMP responses to NaN3 were inhibited by high concentrations of valproate, carbamazepine, phenytoin, or phenobarbital. Results suggest that anticonvulsant drug actions with regard to central cyclic GMP systems are related to the Na-induced depolarization of nerve tissue and not to any direct action on the guanylate cyclase enzyme. 33 references. 003957 Palmer, Michael R.; Hoffer, Barry J. Dept. of Pharmacology, C236, University of Colorado Health Sciences Center, 4200 E. Ninth Avenue, Denver, CO 80262 **Catecholamine modulation of enkephalin-induced electrophysiological responses in cerebral cortex.** Journal of Pharmacology and Experimental Therapeutics. 213(2):205-215, 1980.

The interaction between locally applied D-Ala2-methionine enkephalinamide (2dA) and catecholamine inputs to frontal cortex was investigated in rats. Parenteral administration of antipsychotic agents known to block catecholamine receptors, such as spiroperidol, alpha-flupenthixol, and ()-butaclamol, reversibly antagonized enkephalin-induced depressions. The biochemically inactive isomers of these antipsychotics, beta-flupenthixol, and (-)-butaclamol, manifested no such activity. Unilateral lesions of the catecholaminergic projections to frontal cortex, produced by interstitial injection of 6-hydroxydopamine, resulted in an ipsilateral decrease in 2dA efficacy and in an elimination of the antogonisms of 2dA depressions by antipsychotic agents. The depressions caused by 2dA were not antagonized by iontophoretically applied Mg. It is concluded that intact catecholaminergic transmissions are required for the full expression of enkephalin-induced depressions in frontal cortex and that this mechanism probably does not involve presynaptic release. These results suggest that catecholamines may act as postsynaptic modulators to augment responsiveness to enkephalins. 66 references. (Author abstract modified)

003958 Parenti, M.; Gentleman, S.; Olianas, M. C.; Neff, N. H. Laboratory of Preclinical Pharmacology, WAW 134, St. Elizabeths Hospital, Washington, DC 20032 **The dopamine receptor complex: biochemical consequences of supersensitivity induced by treatment with 6-hydroxydopamine or morphine.** Washington, DC, NIMH, 1980. 7 p.

The biochemical consequences which occur when dopamine receptors become supersensitive by treatment with 6-hydroxydopamine (6-OHDA) or morphine were investigated to further investigate CNS adaptive mechanisms for maintaining neurochemical homeostasis in the rat. Evidence is presented to support the hypothesis that common biochemical mechanisms are responsible for the dopamine activated adenylate-cyclase supersensitivity induced by denervation with 6-OHDA and morphine dependence. The changes are apparently the result of a decreased ability of dopamine to interact favorably with its receptor complex in vivo. Denervation decreases the quantity of dopamine released by nerve impulses, while morphine prevents dopamine from activating adenylate-cyclase. The mechanisms for development of supersensitivity are unclear, but the findings indicate that supersensitivity is clearly the consequence of integrated changes of the receptor complex. 9 references. 003959 Patrick, Robert L. Box G, Division of Biology and Medicine, Brown University, Providence, RI 02912 **Phenylethylamine effects on dopamine synthesis: structure-activity relationships. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-31706, 1980. 21 p.

The effects of substituents on phenylethylamine and amphetamine-induced alterations in dopamine synthesis were studied in rat brain synaptosomal preparations isolated from the corpus striatum. The synthesis stimulation normally observed with phenylethylamine and amphetamine was converted into an inhibition by the addition of a p-hydroxy substituent on the ring. B-hydroxy substitution on the side chain somewhat lowered, but did not prevent, synthesis stimulation; the presence of both a B-hydroxy and p-hydroxy substituent increased the inhibitory effects, with 45% inhibition produced by 20 mcM dl-octopamine and 50% inhibition produced by 20 mcM dl-p-hydroxynorephedrine. The addition of an N-methyl substituent on d-amphetamine to form d-methamphetamine did not alter significantly the stimulatory potency of amphetamine. Tyramine-induced synthesis inhibition was prevented by preincubation with cocaine. Amphetamine antagonized the synthesis stimulation produced by the depolarizing agent veratridine, but tyramine did not have this effect. These findings suggest that the parent phenylethylamine compounds interact with an intracellular regulatory site, possibly related to calcium flux and/or dopamine release, that is not affected by the p-hyroxy derivatives. 28 references. (Author abstract modified)

003960 Patrick, Robert L.; Berkowitz, Alan L.; Regenstein, Anne C. Neuroscience Section, Division of Biology and Medicine, Brown University, Providence, RI 02912 **Effects of in vivo amphetamine administration on dopamine synthesis regulation in rat brain striatal synaptosomes. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-31706, 1980. 26 p.

The stimulation of dopamine synthesis in rat brain striatal synaptosomes produced by the depolarizing agent veratridine is reduced markedly by prior in vivo amphetamine administration. The effect apparently was not due to an interference with the depolarization process per se, since veratridine-induced inhibition of tyrosine uptake, a biochemical correlate of depolarization, was unaffected by amphetamine. Antagonism of veratridine-induced synthesis stimulation was not duplicated by an in vivo treatment with pargyline, apomorphine, gamma-butyrolactone, or haloperidol, suggesting that this effect may be due to a direct cellular action of amphetamine. In vitro amphetamine-induced synthesis stimulation was not reduced, but this stimulation was altered in character and was no longer calcium dependent. A similar loss of calcium dependency was observed following in vivo reserpine treatment. These results suggest in vivo amphetamine treatment can markedly alter the interactions between tyrosine hydroxylase and synaptosomal dopamine pools that may be involved in regulation of catecholamine formation. 44 references. 003961 Patsalos, P. N.; Lascelles, P. T. Dept. of Neurobiology and Anatomy, University of Texas Medical School, P.O. Box 20708, Houston, TX 77025 **Changes in regional brain levels of amino acid putative neurotransmitters after prolonged treatment with the anticonvulsant drugs diphenylhydantoin, phenobarbitone, sodium valproate, ethosuximide, and sulthiame in the rat.** Journal of Neurochemistry. 36(2):688-695, 1981.

The effects of 10 day treatment with anticonvulsant drugs on regional brain concentrations of amino acid neurotransmitters were studied in male Wistar rats. Diphenylhydantoin significantly reduced cerebellar GABA, taurine, and aspartate and hypothalamic GABA and aspartate. Sodium valproate significantly elevated GABA and taurine in most regions. Phenobarbitone significantly elevated GABA in all brain regions and increased taurine in the cerebral cortex. Ethosuximide induced relatively small changes. Complex changes were seen after sulthiame or combinations of anticonvulsants. 48 references. (Author abstract modified)

003962 Paul, Steven M.; Rehavi, Moshe; Rice, Kenner C.; Ittah, Yitzhak; Skolnick, Phil. Clinical Psychobiology Branch, NIMH, Bethesda, MD 20205 **Does high affinity (3H) imipramine binding label serotonin reuptake sites in brain and platelet?** Life Sciences. 28(24):2753-2760, 1981.

To establish whether high affinity (3H)imipramine binding sites (recently demonstrated in membrane preparations from rat brain, human platelet, and human brain) are associated with either platelet or neuronal uptake of serotonin, the relative potencies of a series of tricyclic antidepressants in inhibiting (3H)imipramine binding and serotonin uptake were determined under identical assay conditions. A close correlation between inhibition of serotonin uptake and (3H)imipramine binding was observed. In addition, electrolytic lesions of the midbrain raphe produced a decrease in (3H)imipramine binding in hypothalamic synaptosomes that paralleled the decrease in (3H)serotonin uptake. Finally, incubation of synaptosomal membranes with 2,8-dinitroimipramine, an irreversible inhibitor of (3H) imipramine binding, produced a dose dependent decrease in serotonin uptake, without altering the uptake of norepinephrine or dopamine. Results strongly suggest that high affinity binding of (3H)imipramine selectively labels serotonin uptake sites in brain and platelet. 19 references. (Author abstract modified)

003963 Perkins, M. N.; Stone, T. W. Dept. of Physiology, St. George's Hospital Medical School, University of London, London SW17 ORE, England **4-Aminopyridine blockade of neuronal depressant responses to adenosine triphosphate.** British Journal of Pharmacology. 70(3):425-428, 1980.

Microiontophoretic application of adenosine, adenosine monophosphate, and adenosine triphosphate depressed the firing rate of neurons in the male Porton Wistar rat cerebral cortex. Similar application of 4-aminopyridine blocked the depressant effects of the purines without affecting responses to GABA. This blockade was effected against purine depressions of spontaneous as well as glutamate evoked activity, which suggests the interaction occurred postsynaptically. 31 references. (Author abstract modified)

003964 Peroutka, Stephen J.; Snyder, Solomon H. Snyder: Dept. of Neuroscience, Johns Hopkins University School of Medicine, Baltimore, MD 21205 **Regulation of serotonin2 (5-HT2) receptors labeled with (3H)spiroperidol by chronic treatment with the antidepressant amitriptyline.** Journal of Pharmacology and Experimental Therapeutics. 215(3):582-587, 1980.

Regulation of serotonin2 (5-HT2) receptors labeled with (3H)spiroperidol by chronic amitriptyline treatment was investigated. Chronic but not acute treatment with the tricyclic antidepressant amitriptyline reduced binding to 5-HT2 receptors by (3H)spiroperidol and beta-adrenergic receptor binding of (3H)dihydroalprenolol in brain membranes. The decrease is time dependent, gradually reversible, and represents a change in the number of binding sites with no alteration in drug affinities for 5-HT2 receptors. The effect can be observed at daily doses of 2.5mg/kg, similar to clinically effective doses in humans. At all doses and time intervals, the decrease in 5-HT2 receptors is more marked than the concurrent change in total beta-adrenergic receptor binding. The properties of 5-HT2 receptor reduction after chronic antidepressant treatment indicate that this alteration could be associated with therapeutic response. 29 references. (Author abstract modified)

003965 Persson, Bengt; Henning, Matts. Dept. of Pharmacology, Fack, S-400 33 Goteborg, Sweden **Central cardiovascular and biochemical effects of baclofen in the conscious rat.** Journal of Pharmacy and Pharmacology. 32(6):417-422, 1980.

Baclofen (1.25 to 10mg/kg i.p.) elicited dose dependent increases in blood pressure and heartrate in conscious male Sprague-Dawley rats. Similar responses were observed after intracisternal or intracerebroventricular administration of 0.125 to 1mcg/kg baclofen. The cardiovascular effects of i.p. baclofen were antagonized by pretreatment with phenoxybenzamine, bethanidine, or hexamethonium and were significantly attenuated by combined pretreatment with alpha-methyl-m-tyrosine and alpha-methyl-p-tyrosine. Responses to baclofen were not affected by bilateral adrenal demedullation but were abolished by pentobarbitone anesthesia. At i.p., doses used in the circulatory studies, baclofen increased endogenous concentrations of brain dopamine and decreased dopamine utilization, but only slightly affected brain norepinephrine concentration and utilization. 34 references. (Author abstract modified)

003966 Petersen, Erling N. Dept. of Pharmacology, A/S Ferrosan, Sydmarken 5, DK-2860 Soeborg, Denmark **Pre- and postsynaptic alpha-adrenoceptor antagonism by neuroleptics in vivo.** European Journal of Pharmacology. 69(4):399-405, 1981.

The antagonistic actions of neuroleptics at presynaptic alpha-adrenoceptors of the sympathetic nerves to rat heart and at postsynaptic alpha-adrenoceptors in the systemic vascular circulation of rats were studied. Yohimbine (0.1mg/kg) was more active at presynaptic receptors than at postsynaptic receptors, whereas the reverse was true for prazosin (0.02 to 5mg/kg). Phentolamine (1 to 5mg/kg) was very active at both receptors. Melperone, haloperidol, thioridazine, and flupenthixol (0.1 to 5mg/kg) were more selective antagonists at postsynaptic alpha-adrenoceptors than prazosin. Clozapine, chlorpromazine, and chlorprothixene (0.1 to 5mg/kg) were antagonists at both types of receptors. It is suggested that neuroleptics with presynaptic alpha-adrenoceptor antagonism may enhance the activity of beta-adrenergic systems indirectly in peripheral organs and in the CNS. 15 references. (Author abstract modified)

003967 Peyer, Mark; Pletscher, Alfred. Pletscher: Dept. of Research, University Clinics, Kantonsspital Basel, CH-4031 Basel, Switzerland **Liberation of catecholamines and 5-hydroxytryptamine from human blood-platelets.** Naunyn-Schmiedeberg's Archives of Pharmacology. 316(1):81-86, 1981.

The release of 3H-dopamine, 3H-noradrenaline, and 14C-5-hydroxytryptamine from normal and reserpinized human blood platelets was examined. The effects of thrombin and various amine releasing drugs on platelets were compared with reported drug effects on monoaminergic neurons. Results indicate that platelets are not a completely satisfactory model for monoaminergic neurons, particularly catecholaminergic neurons. 21 references. (Author abstract modified)

003968 Philippu, Athineos; Dietl, Hans; Eisert, Albert. Institut fur Pharmakologie und Toxikologie der Universitat Wurzburg, Versbacher Strasse 9, D-8700 Wurzburg, West Germany **Hypotension alters the release of catecholamines in the hypothalamus of the conscious rabbit.** European Journal of Pharmacology. 69(4):519-523, 1981.

The effects of changes in blood pressure on the release of catecholamines in the hypothalamus of conscious, freely moving rabbits were examined. After the posterior hypothalamic nucleus was superfused with cerebrospinal fluid, an i.v. injection of nitropurisside elicited a fall of arterial blood pressure and an increase in the rates of release of endogenous catecholamines in the posterior hypothalamic nucleus. Noradrenaline increased blood pressure but did not alter the release of catecholamines. Results suggest that hypotension leads to a counteracting increase in the release of catecholamines in the posterior hypothalamus. 4 references. (Author abstract modified)

When applied to the intermediate chemosensitive areas of the ventrolateral medulla of pentobarbitone anesthetized cats, fentanyl depressed ventilation and naloxone stimulated ventilation. These responses could not be evoked from neighboring areas. Results suggest that endogenous opiates are involved in the central regulaton of respiration. 19 references.

003972 Polesskaya, M. M.; Yumatov, Ye. A. Lab. emotsiy i emotsional'nykh stressov, NII normal'noy fiziologii imeni P. K. Anokhina, AMN SSSR, Moskva, USSR **/Convergent properties and chemical sensitivity of midbrain reticular formation neurons of unanesthetized rabbits./** Konvergentnyye svoystva i khimicheskaya chuvstvitel'nost' neyronov retikulyarnoy formatsii srednego mozga nenarkotizirovannykh krolikov. Fiziologicheskiy Zhurnal SSSR imeni I. M. Sechenova. 66(9):1319-1324, 1980.

Convergent properties and chemical sensitivity of midbrain reticular formation neurons were studied in 38 unanesthetized and nonimmobilized rabbits. A stimulating macroelectrode was implanted in the region of the ventromedial hypothalamus. Using a multichannel glass microelectrode the impulse activity of individual neurons of the midbrain reticular formation was recorded extracellularly, and biologically active substances were applied electrophoretically. Neuronal responses of the midbrain reticular formation to light and sound stimuli and to biologically negative stimuli (electrical skin stimulation and stimulation of the ventromedial hypothalamus) were compared to neuronal sensitivity to microiontophoretic administration of acetylcholine, noradrenaline, and serotonin. Results show that the reticular neurons have interrelated convergent and chemical properties, which suggest the neurochemical maintenance of the integrative activity of these neurons. However, results show no significant correlation between neuronal responses to particular types of stimulation and neuronal sensitivity to a particular transmitter. 13 references. (Journal abstract modified)

003973 Pong, Sheng-Shung; Wang, Ching C.; Fritz, Lawrence C. Merck Institute for Therapeutic Research, Rahway, NJ 07065 **Studies on the mechanism of action of avermectin B1a: stimulation of release of gamma-aminobutyric acid from brain synaptosomes.** Journal of Neurochemistry. 34(2):351-358, 1980.

Avermectin-B1a, a novel macrocyclic lactone antiparasitic agent, caused a marked and sustained increase of gamma-aminobutyric acid release from rat brain synaptosomes. A concentration of 8mcM to 10mcM of avermectin-B1a produced the maximal effect, while the half maximal level was achieved at 2mcM to 3mcM. The drug also stimulated gamma-aminobutyric acid release from synaptosomes in calcium free medium, which was 28% lower than that in the 1.8mM Ca2 medium. The compound did not, however, affect the synaptosomal release of glutamate. At the lobster neuromuscular junction, avermectin-B1a reduced the input resistance of muscle fibers in control Ringer's solution as well as in Ringer's solution in which Co2 was substituted for Ca2. This observation is in accordance with the Ca2 independent stimulation of gamma-aminobutyric acid release seen with synaptosomes. A good correlation between antiparasitic activity and gamma-aminobutyric acid releasing activity has been found among various derivatives of avermectin-B1a, which suggests that the ability of the drug to release its neurotransmitter may be the basis of its antiparasitic action. 29 references. 003974 Preskorn, Sheldon H.; Hartman, Boyd K.; Raichle, Marcus E.; Clark, H. Brent. Dept. of Psychiatry, 4940 Audubon Avenue, Washington University School of Medicine, St. Louis, MO 63110 **The effect of dibenzazepines (tricyclic antidepressants) on cerebral capillary permeability in the rat in vivo.** Journal of Pharmacology and Experimental Therapeutics. 213(2):313-320, 1980.

The effects of dibenzazepines on cerebral capillary permeability were investigated in the rat in vivo. The degree of equilibration of (3H)water across the cerebral capillary was evaluated by measuring its cerebral extraction fraction (Ew) using a dual label radiactive tracer technique. All tricyclic antidepressants increased Ew as compared to base line. The rank order of the drugs in producing this response was doxepin greater than amitriptyline greater than imipramine greater than notriptyline greater than desmethylimipramine greater than protriptyline. The effect of amitriptyline, the prototype tricyclic for this study, was rapid in onset, reversible, dose dependent, and generalized throughout the brain. Amitriptyline also induced a marked increase in the cerebral extraction fraction of (3H)ethanol. A difference in the time course of the drug effect on these two tracers indicates that the elevation in Ew is due to the increase in cerebral capillary permeability to both polar and lipid soluble substances. Results demonstrate that tryicyclic antidepressants have important central effects on nonneuronal tissue. 28 references. (Author abstract modified)

003975 Propst, Friedrich; Hamprecht, Bernd. Hamprecht: Institut fur Physiologische Chemie der Universitat, Koellikerstr. 2, D-8700 Wurzburg, West Germany **Opioids, noradrenaline and GTP analogs inhibit cholera toxin activated adenylate cyclase in neuroblastoma x glioma hybrid cells.** Journal of Neurochemistry. 36(2):580-588, 1981.

Adenylate-cyclase in homogenates of neuroblastoma/glioma hybrid cells was inhibited by D-Ala2-Met5-enkephalin, morphine, and noradrenaline in a dose dependent manner, even after preactivation of the enzyme by cholera toxin. The effect of D-Ala2-Met5-enkephalin on cholera toxin activated enzyme was immediate in onset and rapidly reversed by naloxone. Guanyl-5'-yl-imidodiphosphate (GppNHp) stimulated basal enzyme activity, but inhibited enzyme activity activated by cholera toxin or prostaglandin-E1; stimulation occurred at concentrations of 100mcM or above, but inhibition occurred at concentrations as low as 0.1mcM. The inhibitory effect of GppNHp was antagonized by GTP. Results suggest that two separate guanyl nucleotide binding sites associated with adenylate-cyclase in the hybrid cells may mediate stimulation and inhibition of the enzyme by hormones. 42 references. 003976 Pycock, C. J.; Horton, R. W. Dept. of Pharmacology, Medical School, University of Bristol, Bristol, England **Dopamine-dependent hyperactivity in the following manipulation of GABA mechanisms in the region of the nucleus accumbens.** Journal of Neural Transmission. 245:17-33, 1979.

The effect of manipulation of gamma-aminobutyric acid (GABA) mechanisms in the region of the nucleus accumbens on dopamine dependent locomotor hyperactivity in the rat was studied. Two models of hyperactivity were used: the injection of dopamine into the region of the nucleus accumbens in nialamide pretreated animals and the systemic administration of d-amphetamine. Both GABA and the GABA agonist 3-aminopropane sulphonic acid depressed hyperactivity in a dose related manner. GABA receptor antagonism with low doses of either picrotoxin or bicuculline enhanced the mild locomotor response induced by a low dose of dopamine injected into the nucleus accumbens; higher doses of the GABA antagonists resulted in varying degrees of generalized seizures. Blockade of GABA uptake systems with cis-1,3-aminocyclohexane carboxylic acid, nipecotic acid, or beta-alanine within the region of the nucleus accumbens produced dose related depression of dopamine dependent hyperactivity in both models. The results demonstrate an inhibitory action of GABA and drugs facilitating GABAergic transmission on dopamine dependent hyperactivity in the rat. (Journal abstract modified)

003977 Quirce, Carlos M.; Odio-Yglesias, Mauricio; Solano-N., Jose M.; Maickel, Roger P. Lab. de Investigacion en Neurociencias, Facultad de Farmacia, Universidad de Costa Rica, Ciudad Universitaria Rodrigo Facio, Costa Rica **/Nonuniform reactions in the general adaptation syndrome./** Reacciones no uniformes del sindrome general de adaptacion. Revista Latinoamericana de Psicologia. 13(1):37-50, 1981.

Adult male Swiss Webster mice were subjected to acute, repetitive, and repetitive acute sessions of cold exposure, immobilization, and i.p. administration of d-amphetamine sulfate. Blood plasma levels of corticosterone, glucose, and free fatty acids were assayed for all the conditions tested. The metabolic effects were found to be similar only as regarded the mobilization of corticosterone during acute applications of the three stressors. The differences observed contradict the traditional concepts of stressor nonspecificity and general adaptation syndrome uniformity. 12 references. (Author abstract)

003978 Quirce, Carlos M.; Odio, Mauricio; Maickel, Roger P. Laboratorio de Neurociencias, Facultad de Farmacia, Universidad de Costa Rica, San Jose, Costa Rica **Stress-modulated alteration of brain biogenic amines in the rat: effects of L-tryptophan.** Communications in Psychopharmacology. 4(5):371-377, 1980.

The effect of L-tryptophan on stress modulated alteration of brain biogenic amines in the rat was investigated. Subjecting adult male rats to periods of restraint stress according to an irregular/unpredictable schedule led to a significant decrease in whole brain levels of dopamine and significant increases in whole brain levels of norepinephrine and serotonin. Administration of L-tryptophan on a similar irregular schedule had no effect on brain dopamine, but it lowered brain norepinephrine and raised brain serotonin. Combined treatment with L-tryptophan and restraint stress resulted in brain levels of all three biogenic amines that were virtually identical to nonhandled control rats. 32 references. 003979 Rabin, Richard A.; Wolfe, Barry B.; Dibner, Mark D.; Zahniser, Nancy R.; Melchior, Christine; Molinoff, Perry B. Molinoff: University of Colorado Health Science Center, Dept. of Pharmacology, 4200 E. Ninth Ave., Denver, CO 80262 **Effects of ethanol administration and withdrawal on neurotransmitter receptor systems in C57 mice.** Journal of Pharmacology and Experimental Therapeutics. 213(3):491-496, 1980.

Male C57BL/6 mice treated with ethanol for 7 days and withdrawn from ethanol for 24 hours showed a decreased hypothermic response to apomorphine, suggesting altered dopaminergic function. However, basal and dopamine stimulated adenylate cyclase activity in striatal homogenates from treated animals was not altered. No change in the affinity of apomorphine for the dopamine receptor or in the density or affinity of receptors for 3H-spiroperidol was found. Adrenergic receptor mediated accumulation of cyclic AMP in slices of cerebral cortex was not altered. However, the density of beta-2 adrenergic receptors decreased significantly in ethanol treated mice and in withdrawn mice. The density of muscarinic cholinergic receptors in the hippocampus and cerebral cortex was significantly increased after ethanol administration, but this effect was not observed after 24 hour withdrawal. 37 references. (Author abstract modified)

003980 Rando, Robert R.; Bangerter, Faan Wen; Farb, David H. Dept. of Pharmacology, Harvard Medical School, Boston, MA 02115 **The inactivation of gamma-aminobutyric acid transaminase in dissociated neuronal cultures from spinal cord.** Journal of Neurochemistry. 36(3):985-990, 1981.

Dissociated cell cultures from chick embryo spinal cord were able to synthesize GABA from added glutamate in a glutamate decarboxylase dependent reaction. A functional GABA transaminase in these cultures could be blocked by gabaculine, leading to an increase in GABA levels. Long-term (16 day) incubation with gabaculine in the medium did not appear to alter high affinity GABA transport in these cultures, which suggests the drug is not toxic to cells capable of accumulating GABA. 12 references. 003981 Rebec, George V.; Alloway, Kevin D.; Curtis, Stephen D. Dept. of Psychology, Indiana University, Bloomington, IN 47405 **Apparent serotonergic modulation of the dose-dependent biphasic response of neostriatal neurons produced by d-amphetamine.** Brain Research. 210(1-2):277-289, 1981.

Amphetamine-induced changes in unit activity in the anterior neostriatum were studied in male Sprague-Dawley rats 48 hours after i.p. injection of 300mg/kg para-chlorophenylalanine (PCPA) or vehicle. An i.p. injection of 1.0mg/kg d-amphetamine inhibited neostriatal activity in vehicle controls, but produced prolonged excitation in rats treated with PCPA. A 7.5mg/kg dose of d-amphetamine produced a pronounced increase in firing rate in controls, which was significantly reduced by PCPA pretreatment. PCPA produced a significant reduction in serotonin, but not dopamine or norepinephrine, in the telencephalon. 55 references. (Author abstract modified)

003982 Redmond, D. Eugene, Jr. Clinical Research Unit, Connecticut Mental Health Center, New Haven, CT 06510 **Clonidine and the primate locus coeruleus: evidence suggesting anxiolytic and anti-withdrawal effects. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-31176, 1979. 38 p.

The effects of clonidine on locus coeruleus (LC) associated behaviors in the primate were investigated, and evidence is provided which suggests that both clonidine and opioids block LC stimulation effects. A brain alarm system is proposed which is activated by fear provoking stimuli and by opiate withdrawal. The anxiolytic effects of clonidine were demonstrated, and suggestions are made for other psychiatric and medical conditions (in addition to drug withdrawal syndromes and anxiety) in which anxiety may contribute to dysfunction and morbidity and in which clonidine may have ameliorative effects (Gilles de la Tourette syndrome, migrane headache, and arteriosclerotic cardiovascular disease). The research indicates that the norepinephrine system is involved in fear and anxiety, and in mediating the actions of opioids and endorphins. The use of clonidine pharmacotherapy involves utilization of anatomically and neurophysiologically characterized receptors to produce the desired specific effects on norepinephrine systems predicted to be effective in reducing anxiety. 110 references.

Br., West Germany **Effect of prostaglandins D2, E2 and F2alpha on catecholamine release from slices of rat and rabbit brain.** European Journal of Pharmacology. 69(4):421-427, 1981.

The effects of prostaglandins (PGs) on catecholamine release were studied in slices of rabbit or male Wistar rat brain cortex preincubated with (3H)noradrenaline and slices of rabbit caudate nucleus or rat striatum preincubated with (3H)dopamine. PGE2 (0.01 to 1mcmol/l) markedly reduced the overflow of tritium evoked by electrical stimulation of rat cortex slices. PGF2alpha (1mcmol/l) caused slight decrease, but only after the formation of endogenous prostaglandins was blocked by indomethacin. PGD2 (1mcmol/l) had no effect. None of the PGs caused any change in catecholamine release from rabbit cortex and caudate nucleus or rat striatum. 20 references. (Author abstract modified)

003984 Rekhtman, M. B.; Samsonova, N. A.; Kryzhanovskiy, G. N. Institut obshchey patologii i patologicheskoy fiziologii AMN SSSR, Moskva, USSR **/The effect of diazepam on cyclic excitability changes in an epileptic focus in the cortex of the major hemispheres./** Vliyaniye diazepama na tsiklicheskoye izmeneniye vozbudimosti v epilepticheskom ochage kory bol'shikh polushariy. Neyrofiziologiya. 12(6):563-570, 1980.

Penicillin was applied to the motor cortex of rats, and n. ventroposterolateralis thalami was stimulated electrically at a rate of 1 per second at an intensity 3 times the threshold for the primary evoked potential, and the effect of diazepam on cyclic changes of excitability in an epileptic focus in the major hemispheres was studied. The application of penicillin and electrical stimulation produced an alternation of active and passive periods; during active periods epileptiform discharges appeared regularly at every electrical stimulus; during passive periods electrical stimulation of n. ventroposterolateralis thalami resulted in the emergence of evoked potentials only; injection of diazepam (2mg/kg) abolished rhythmogenesis in the epileptogenic focus, while 0.1mg/kg diazepam led to the disappearance of cyclic spike driving in the focus; and electrical stimulation of n. ventroposterolateralis thalami at a frequency of 2 per second restored cyclic spike driving. 18 references. Saturable and high affinity binding of an iodinated analog of a large and biologically active form of somatostatin, 125I(Leu8,D-Trp22,Tyr25)SS-28, was demonstrated in rat cortical membranes. Somatostatin, somatostatin-28, (D-Trp8)somatostatin, and (D-Trp22)somatostatin-28 completely displaced the radioligand in the nanomolar range. The inactive analog Des-Trp8-somatostatin and the unrelated peptide gonadotropin releasing hormone showed no affinity for these binding sites. Octapeptide and nonapeptide analogs of somatostatin were inactive. High binding was found in hippocampus, amygdala, tuberculum olfactorium, caudate/putamine, and cortex. Moderate binding was found in midbrain and hypothalamus, and no binding was seen in cerebellum. 29 references. (Author abstract modified)

003986 Richelson, Elliott. Dept. of Psychiatry, Mayo Foundation, Rochester, MN 55901 **Tricyclic antidepressants and histamine H1 receptors.** Mayo Clinic Proceedings. 54:669-674, 1979.

Tricyclic antidepressants and some structurally related compounds were tested for their ability to antagonize histamine (H1) and muscarinic acetylcholine receptors of cultured mouse neuroblastoma cells. As a group, tertiary amine tricyclic antidepressants tended to be more potent than did secondary amine drugs at both receptors. The most potent antihistamine, doxepin hydrochloride, was about four times more potent than amitriptyline hydrochloride, about 800 times more potent than diphenhydramine hydrochloride, and about 8,000 times more potent than desipramine hydrochloride (the least potent tricyclic antidepressant at both the histamine (H1) and the muscarinic acetylcholine receptors). All tricyclic drugs except desipramine hydrochloride were more potent as antihistamines than as anticholinergics. It is concluded that doxepin hydrochloride and amitriptyline hydrochloride may be the most potent antihistamines known, and the antihistaminic potencies of these and the other tricyclic antidepressant drugs may relate directly to their ability to cause sedation and drowsiness in patients. 56 references. 003987 Rittenhouse, Harry G.; Seguin, Edward B.; Fisher, Stephen K.; Agranoff, Bernard W. Agranoff: Neuroscience Lab., Mental Health Research Institute, University of Michigan, 1103 E. Huron, Ann Arbor, MI 48109 **Properties of a CDP-diglyceride hydrolase from guinea pig brain.** Journal of Neurochemistry. 36(3):991-999, 1981.

Enzymatic hydrolysis of the pyrophosphate bond of 5'-cytidine diphospho-1,2-diacyl-sn-glycerol (CDP-DG) was enriched in a lysosomal fraction of male guinea-pig cerebral cortex. When the purified enzyme was incubated with CDP dipalmitin, it produced stoichiometric amounts of CMP and phosphatidate. CDP-DG hydrolysis was not affected by the presence of excess amounts of CDP choline, CDP glycerol, sodium pyrophosphate, or cyclic AMP. 35 references. (Author abstract modified)

003988 Rodriguez, Sergia; Tamargo, Juan. Dept. of Pharmacology, Universidad Complutense, Madrid-3, Spain **Electrophysiological effects of imipramine on bovine ventricular muscle and Purkinje fibres.** British Journal of Pharmacology. 70(1):15-23, 1980.

The effects of imipramine (0.01mcM and 50 mcM) on bovine Purkinje fibers and ventricular muscle transmembrane potentials were examined. In electrically stimulated fibers, imipramine had no effect on resting membrane potential, but decreased the action potential amplitude, overshoot, and maximum rate of depolarization. In Purkinje fibers, imipramine decreased the conduction velocity and shifted the membrane responsiveness and recovery time curves downward and to the right. The properties of imipramine were quite similar to those of the class-1 antiarrhythmics quinidine and procainamide. 25 references. (Author abstract modified)

003989 Rosengarten, Helen; Friedhoff, Arnold J. Millhauser Laboratories, New York University School of Medicine, 550 First Avenue, New York, NY 10016 **Effect of prenatal neuroleptic treatment on membrane receptor development in the brain.** In: Parvez, H., Biogenic amines in development. New York, Elsevier/North Holland, 1980. (p. 607-616).

A review is presented of research into the effects of prenatal neuroleptic treatment on membrane receptor development in the rat and rabbit brain. Behavioral studies in animals treated with neuroleptics in the prenatal and early postnatal period demonstrate that catecholamine neurons are very vulnerable during ontogenesis, and that drugs administered during development of the dopaminergic system may induce alterations in transmitter functions, as evidenced in abnormal behavior. In histochemical studies, it has been found that maturation of the central noradrenergic system precedes that of the dopaminergic system. A number of drugs administered prenatally also have been found to have a detrimental effect on maze learning and conditioned avoidance performance. Further, differences in the rate of maturation of dopaminergic systems in different brain regions produce differences in vulnerability of those regions to early drug effects. Thus, substantial evidence exists that prenatal exposure to psychotropic agents, such as haloperidol, cannabis, triflupterazine, penfluridol, pimozide, clonidine, and chlorpromazine, can have substantial postpartum effects. 45 references.

003990 Ross, Stephen M.; Craig, Charles R. Craig: Dept. of Pharmacology and Toxicology, West Virginia University Medical Center, Morgantown, WV 26506 **Studies on gamma-aminobutyric acid transport in cobalt experimental epilepsy in the rat.** Journal of Neurochemistry. 36(3):1006-1011, 1981.

High and low affinity GABA transport were studied in crude brain homogenates and cerebral tissue slices from male Sprague-Dawley rats with cobalt metal implanted in the right and left cerebral cortices. High affinity GABA transport was reduced to 34% of control value 7 days after cobalt implantation, the time of peak seizure activity. Kinetic analysis of high affinity GABA transport revealed a significant decrease in maximal velocity 7 days after cobalt implantation; decrease was seen in the low affinity system. In vivo and in vitro administration of valproic acid had no effect on high or low affinity GABA transport. Results provide evidence for the involvement of GABA in experimental epilepsy. 18 references. (Author abstract modified)

003991 Ross, Svante B.; Hall, Hakan; Renyi, Anna L.; Westerlund, Douglas. Research and Development Laboratories, Astra Lakemedel AB, S-151 85 Sodertalje, Sweden **Effects of zimelidine on serotoninergic and noradrenergic neurons after repeated administration in the rat.** Psychopharmacology. 72(3):219-225, 1981.

The antidepressant zimelidine inhibited the accumulation of 14C-5-hydroxytryptamine (14C-5-HT) and 3H-noradrenaline (3H-NA) in male Sprague-Dawley rat hypothalamic slices, and this effect was increased only slightly by prolonged oral treatment (5, 12.5 or 25mcmol/kg twice daily for 2 weeks). The accumulation of 5-HT was about four times more sensitive than that of NA to the inhibitory effects of acute or prolonged treatment with zimelidine. The inhibition of 5-HT accumulation was correlated significantly to plasma and hypothalamic concentrations of norzimelidine 14 hours after the last dose. The 5-HT concentration in whole blood was reduced markedly at the same doses that produced inhibition of 5-HT uptake in brain. The concentration of 5-hydroxyindoleacetic acid in whole brain was reduced after single or repeated administration of zimelidine, but the concentration of 5-HT was reduced only after prolonged treatment. The density of beta-adrenoceptors was reduced significantly by chronic administration of zimelidine, but 5-HT and dopamine receptor binding were not altered. 42 references. 003992 Rouot, Bruno M.; U'Prichard, David C.; Snyder, Solomon H. Snyder: Dept. of Psychiatry and Behavioral Sciences, Johns Hopkins University School of Medicine, Baltimore, MD 21205 **Multiple alpha2-noradrenergic receptor sites in rat brain: selective regulation of high-affinity (3H)clonidine binding by guanine nucleotides and divalent cations.** Journal of Neurochemistry. 34(2):374-384, 1980.

The selective regulation of high affinity (3H)clonidine binding to rat cortex alpha1-noradrenergic receptors by guanine nucleotides and divalent cations was investigated. Both kinetic and equilibrium experiments indicated the presence of distinct high and low affinity (3H)clonidine binding associated with alpha2-noradrenergic receptors in rat cerebral cortex membranes. Guanine nucleotides selectively decreased the numbers of high affinity (3H)clonidine binding sites, and had no influence on the low affinity sites. The influence of nucleotides was exerted by guanosine triphosphate, its nonmetabolized analogue, guanyl-5'-yl imidodiphosphate, and guanosine diphosphate, but not by guanosine 5'-monophosphate, adenosine diphosphate, adenosine triphosphate, and adenosine 5'-monophosphate. In contrast, divalent cations increased high affinity (3H)clonidine binding, an effect which was not evident at low affinity sites. Manganese was the most potent of the divalent cations, while magnesium and calcium were less active. Divalent cations and guanine nucleotides appeared to elicit interactive rather than simply additive influences upon alpha2-receptors. The inhibitory influence of sodium upon alpha2--eceptor binding of (3H)clonidine is exerted to the same extent upon both high affinity and low affinity (3H)clonidine binding. 32 references. (Author abstract modified)

003993 Ruth, Robin C.; Owens, Kenneth; Weglicki, William B. Dept. of Biophysics, P.O. Box 694, MCV Station, Richmond, VA 23298 **Inhibition of lysosomal lipases by chlorpromazine: a possible mechanisms of stabilization.** Journal of Pharmacology and Experimental Therapeutics. 212(3):361-367, 1980.

The mechanism of the stabilization of hepatic lysosomes from rats by chlorpromazine at pH 5.0 has been investigated. When lysosomes are incubated at 37 degrees C, pH 5.0, in O.25M sucrose, the latency of the lysosomal enzymes is gradually lost; this loss occurs more rapidly if the incubated lysosomes, particularly Triton filled lysosomes, are cooled before assay. Chlorpromazine protects maximally at a concentration of 0.0005M against the loss of latency which occurs at 37 degrees C, but, for Triton filled lysosomes, protection is much less if the incubated lysosomes are cooled before assay. Osmotic fragility curves were obtained by exposing lysosomes for short periods of time at pH 5.0 to buffers containing decreasing concentrations of sucrose. Rates of production of lysophospholipids and nonesterified fatty acids, as well as rates of degradation of triglycerides during incubation at 37 degrees C, pH 5.0 were examined. Chlorpromazine appeared to strongly inhibit endogenous phospholipase and triglyceride lipase activities. Although questions remain concerning the lack of protection when the incubated Triton filled lysosomes are cooled before assay, it is suggested that inhibition of the formation of potentially lytic lipid breakdown products is the basis of the stabilizing effect of the drug. 19 references. 003994 Saratikov, A. S.; Alekseyeva, L. P.; Agarkova, V. P.; Zamoshchina, T. A. Kafedra farmakologii, Tomskiy meditsinskiy institut, Tomsk, USSR **/The effect of lithium hydroxybutyrate on the bioelectrical activity of the cortex and some subcortical structures of the rabbit brain./** Vliyaniye oksibutirata litiya na bioelektricheskuyu aktivnost' kory i nekotorykh podkorkovykh struktur mozga krolika. Farmakologiya i Toksikologiya. 43(4):353-356, 1980.

The effect of intravenous administration of lithium hydroxybutyrate (10mg/kg) on the bioelectrical activity of the cortex and subcortical structures of the rabbit brain was studied. Results show that: lithium hydroxybutyrate depressed the spontaneous bioelectrical activity of the cortex; this effect progressed to the subcortex; the drug reduced the electrical excitation of the motor cortex, caudate nucleus, thalamus, posterior hypothalamus, and midbrain reticular formation; it lowered the convulsive threshold of the amygdaloid complex; but it did not significantly alter hippocampal electrical excitability. These results show that the depressant effect of lithium hydroxybutyrate is comparable to that of lithium chloride. 15 references. (Journal abstract modified)

003995 Scatton, Bernard; Zivkovic, Branimir; Dedek, Jaroslav. Synthelabo-LERS, 31, Avenue Paul-Vaillant Couturier, F-92220 Bagneux, France **Antidopaminergic properties of yohimbine.** Journal of Pharmacology and Experimental Therapeutics. 215(2):494-499, 1980.

The effect of the alpha-adrenoceptor blocking agent yohimbine on cerebral dopamine metabolism was investigated in the rat. In both striatum and limbic areas, yohimbine increased: 1) homovanillic acid and dihydroxyphenylacetic acid levels; 2) tyrosine hydroxylase activity measured in vitro; 3) the in vivo accumulation of dihydroxyphenylalanine after NSD 1015; and 4) the rate of dopamine disappearance after alpha-methyl-p-tyrosine. These results suggest that alpha-adrenoceptors are not involved in the yohimbine-induced alteration of dopamine metabolism. It is concluded that yohimbine possesses postsynaptic dopamine receptor blocking properties in addition to its ability to inhibit alpha-adrenergic receptors. The failure of yohimbine to affect dopamine sensitive adenylate cyclase activity in striatal homogenates suggests an action of the compound on the D2 receptors. 48 references. (Author abstract modified)

003996 Schmidt, D. E.; Wecker, Lynn. Dept. of Pharmacology, Vanderbilt University School of Medicine, Nashville, TN 37232 **CNS effects of choline administration: evidence for temporal dependence.** Neuropharmacology. 20(6):535-539, 1981.

Choline (60mg/kg i.p.) attenuated the atropine-induced depletion of acetylcholine (ACh) in male Sprague-Dawley rat hippocampus and striatum, but this effect did not coincide with the occurrence of elevated free choline levels in brain. In the hippocampus, the effects of choline were not evident until 60 minutes after administration and persisted for at least 24 hours. The effects of choline in the striatum were evident immediately after administration, but lasted from less than 24 hours. Results suggest that exogenous choline administration increases the ability of cholinergic neurons to synthesize ACh in response to increased neuronal demand and that these effects are not mediated directly through increased total free brain choline or through increased steady-state levels of ACh. It is suggested that the use of specific pools of lipid bound choline plays a crucial role in central cholinergic mechanisms and may be responsible for the acute effects of choline on central cholinergic neurons. 21 references. (Author abstract modified)

003997 Schmucker, Douglas L.; Wang, Rose K. Cell Biology Section, V.A. Hospital, 4150 Clement St., San Francisco, CA 94121 **Effects of animal age and phenobarbital on rat liver glucose-6-phosphatase activity.** Experimental Gerontology. 15(1):7-13, 1980.

The effects of animal age and phenobarbital on rat liver glucose-6-phosphatase activity were investigated. Hepatic glucose-6-phosphatase activity declines gradually throughout development, maturation, and senescence in the Fischer 344 male rat. The loss of activity between maturity and senescence may be correlated with a concomitant reduction in the amount of hepatic smooth surfaced endoplasmic reticulum membrane (SER), a primary intracellular site of this enzyme. Phenobarbital, a repressor of glucose-6-phosphatase, caused a marked decline in the activity of this enzyme in young, mature, and senescent rats. However, the young animals exhibited a more rapid loss of enzyme activity and a quicker subsequent recovery to basal levels following the cessation of drug treatment than did either the mature or senescent rats. The data suggest that the hepatic adaptive capacity as manifested in enzyme repression and recovery declines as a function of animal age. This phenomenon may represent an additional biochemical index of chronological age, i.e., similar to the reported lag in hepatic enzyme induction with increasing age. 20 references. 003998 Schwartz, Joan P. Laboratory of Preclinical Pharmacology, NIMH, Saint Elizabeths Hospital, Washington, DC 20032 **RNA polymerase II in C6 glioma cells: alpha-amanitin blockade of cyclic AMP phosphodiesterase induction by beta-adrenergic stimulation. (Unpublished paper).** Washington, DC, NIMH, 1981. 20p.

The role of RNA polymerase II, the enzyme responsible for the synthesis of messenger RNA (mRNA) in the induction of cAMP phosphodiesterase (cAMP PDE) in C6 glioma cells was examined in rat C6 glioma cells. Exposure of intact cells to isoproterenol, a beta-adrenergic receptor agonist, results in an increase in the activity of cAMP PDE. This increase in PDE activity is blocked by incubation of the cells with alpha-amanitin or actinomycin-D, suggesting that RNA polymerase II is necessary for synthesis of mRNA for the increase in PDE activity. The RNA polymerase II activity is not increased in isoproterenol-treated cells, although it is more strongly inhibited by alpha-amanitin. The Ki for the effect of alpha-amanitin on intact cells is 250nM, and the inhibitor acts rapidly, with a maximal effect within 15 minutes of exposure. The effect of alpha-amanitin is very specific as no change in various cytoplasmic or nuclear enzymes or metabolites was observed. 20 references. (Author abstract modified)

003999 Segawa, Tomio; Mizuta, Tadashi. Dept. of Pharmacology, Inst. of Pharmaceutical Sciences, Hiroshima University School of Medicine, Kasumi 1-2-3, Hiroshima 734, Japan **Effect of imipramine on central 5-hydroxytryptamine turnover and metabolism in rats.** Japanese Journal of Pharmacology. 30(6):789-793, 1980.

Levels of tritiated 5-hydroxytryptamine (5-HT) and 5-hydroxyindoleacetic acid (5-HIAA) were measured at various intervals after intraventricular injection of (3H)-5-HT to male Wistar rats treated acutely or chronically with imipramine or saline. Levels of (3H)-5-HT and (3H)-5-HIAA 2, 5, and 10 minutes after (3H)-5-HT injection were lower in rats given a single injection of imipramine than in controls, but these differences were not significant; at later times, values were higher in rats given a single injection of imipramine than in controls. In rats treated chronically with imipramine, levels of (3H)-5-HT and (3H)-5-HIAA were lower than control levels at all times after (3H)-5-HT injection. Endogenous levels of tryptophan and 5-HIAA were not altered by imipramine, but endogenous 5-HT content was decreased by long-term administration of imipramine. Results indicate that long-term treatment with imipramine accelerates the rate of disappearance of 5-HT from presynaptic neurons. 8 references. (Author abstract modified)

004000 Sharif, Najam A.; Roberts, Peter J. Roberts: Dept. of Physiology, School of Biochemical and Physiological Sciences, University of Southampton, Southampton, S09 3TU, England **L-aspartate binding sites in rat cerebellum: a comparison of the binding of L-(3H)aspartate and L-(3H)glutamate to synaptic membranes.** Brain Research. 211(2):293-303, 1981.

The binding of L-(3H)aspartate to sonicated, extensively washed, and preincubated cerebellar synaptic membranes from female Wistar rats was investigated. Binding was optimal under physiological pH and temperature conditions. The binding was saturable and appeared to involve a single population of binding sites. Quisqualate, 4-fluoroglutamate, and 2-amino-4-phosphonobutyrate, which are good displacers of (3H)glutamate binding, were only weakly active against the aspartate system. The proposed aspartate receptor preferring agonist N-methyl-D-aspartate was inactive. Monovalent cations reduced L-(3H)aspartate binding, while divalent cations enhanced binding. Freezing or cold storage of the membranes diminished (3H)aspartate binding, but lyophilization conferred substantial stability and markedly increased the affinity of the binding site. 24 references. (Author abstract modified)

004001 Shavit, Sara; Kutz, I.; Korczyn, A. D.; Gitter, S. Korczyn: Dept. of Physiology and Pharmacology, Sackler School of Medicine, Tel Aviv University, Ramat Aviv, Israel **Interactions between chlorpromazine and some of its metabolites.** Communications in Psychopharmacology. 4(6):495-500, 1980.

The interaction between chlorpromazine (CPZ) and four of its major metabolites, 7-hydroxy-CPZ, 8-hydroxy-CPZ, desmethyl-CPZ, and CPZ sulfoxide, was determined in experimental models of antipsychotic activity. None of the metabolites antagonized any of the CPZ effects. All of them had an additive effect to CPZ in reducing spontaneous motor activity. Prolongation of barbiturate sleeping time induced by CPZ and the abolition of amphetamine induced stereotyped behavior by CPZ were found to be potentiated by 7-hydroxy-CPZ, but not by the other metabolties. 9 references. 004002 Shibla, Deborah B.; Gardell, Mary Ann; Neale, Joseph H. Dept. of Biology, Georgetown University, Washington, DC 20057 **The insensitivity of developing benzodiazepine receptors to chronic treatment with diazepam, GABA and muscimol in brain cell cultures.** Brain Research. 210(1-2):471-474, 1981.

The role of receptor ligands in the development of the benzodiazepine (BZ) receptor was studied in dissociated cell cultures prepared from fetal C57B1/6 mouse brain. A progressive increase in diazepam binding was observed during 3 weeks in culture, paralleling the development of these membrane receptors in vivo. The binding of neuronal and nonneuronal BZ receptor ligands indicated that nonneuronal elements may contribute more to total BZ receptor binding in culture than in adult brain in vivo. Chronic treatment with 1mcM diazepam, GABA, or muscimol for 3 weeks did not significantly alter BZ receptor binding in culture. Results indicate that the synthesis and catabolism of the BZ receptor are not regulated by long-term receptor occupancy. 8 references.

004003 Sibley, David R.; Creese, Ian. Creese: Dept. of Neurosciences M-008, University of California School of Medicine, San Diego, La Jolla, CA 92093 **Dopamine receptor binding in bovine intermediate lobe pituitary membranes.** Endocrinology. 107(5):1405-1409, 1980.

Evidence is presented that (3H)spiroperidol, or (3H)SPIRO and (3H)N-n-propylnorapomorphine, or (3H)NPA, a dopamine antagonist and agonist, respectively, bind stereospecifically to bovine intermediate lobe pituitary membranes. The specific binding was saturable and of high affinity. The rank order of catecholamines, phenothiazines, and related drugs in competing for (3H)SPIRO and (3H)NPA binding was consistent with interactions at a dopamine receptor. Guanine nucleotides selectively decreased agonist, but not antagonist, affinities for these binding sites. With the addition of 0.1 mM GTP, the ability agonists to displace (3H)SPIRO binding was decreased fivefold to sevenfold, while the dissociation constant for (3H)NPA was increased to 0.8 nM. These findings demonstrate dopamine receptors in the intermediate pituitary which may be involved in the regulation of beta-endorphin secretion. 27 references. (Journal abstract modified)

004004 Simpson, Lance L. Dept. of Pharmacology, College of Physicians and Surgeons, Columbia University, 630 W. 168th St., New York, NY 10032 **Evidence that there are subcellular pools of norepinephrine and that there is flux of norepinephrine between these pools.** Journal of Pharmacology and Experimental Therapeutics. 214(2):410-416, 1980.

Data are presented which suggest that norepinephrine (NE) exists in at least two subcellular pools, and models for NE storage in sympathetic nerves and for d-amphetamine-induced tachyphylaxis are described. D-Amphetamine evokes blood pressure responses that are dose dependent in magnitude and in shape. At a high dose, d-amphetamine evokes a response that decays biphasically. Chronic reserpine treatment diminishes the blood pressure response to a high dose of d-amphetamine, but it exerts a differential effect on the two components of the response. Acute reserpine treatment enhances blood pressure responses to d-amphetamine, mainly by enhancing the early, transient response. In addition, acutely administered reserpine reverses the tachyphylactic effect of d-amphetamine. 24 references. (Author abstract modified)

004005 Simpson, Lance L.; Barkai, Amiram. Dept. of Pharmacology, College of Physicians and Surgeons, 630 W. 168th St., New York, NY 10032 **Kinetic studies on the entry of d-amphetamine into the central nervous system: I. Cerebrospinal fluid.** Journal of Pharmacology and Experimental Therapeutics. 212(3):541-545, 1980.

The entry of d-amphetamine into the cerebrospinal fluid (CSF) following intravenous (i.v.) and intracerebroventricular (i.c.v.) administration was studied. After i.v. administration to rats, d-amphetamine undergoes a rapid distributive phase during which the drug is lost from plasma. The rate of entry into the CSF is also rapid, suggesting that the drug moves directly from plasma to CSF. Entry of drug into CSF is mainly by diffusion. Neither active transport associated with CSF formation nor active transport independent of CSF formation is quantatively important. After i.c.v. injection, d-amphetamine disappears from CSF relatively slowly. Egress of drug is mainly by diffusion, although active transport associated wit bulk absorption does play a measurable role. At steady-state, the concentration of free drug in plasma and in CSF is equivalent. 12 references. (Author abstract modified)

004006 Sjogren, C. AB Leo, Fack, S-251 00 Helsingborg, Sweden **The pharmacological profile of iofepramine, a new antidepressant drug.** Neuropharmacology. 19(12):1213-1214, 1980.

The pharmacological profile of lofepramine, a new antidepressant drug, is described. Lofepramine has a very low acute toxicity in experimental animals, has significantly lower effects than other antidepressants on salivary secretion, and has significantly lower effects than other antidepressants on blood pressure. In addition, lofepramine has significantly lower effects on heart beat than other antidepressants. Clinical studies have confirmed the slighter and less frequent side-effects of lofepramine and the equivalent therapeutic efficacy of lofepramine compared to other antidepressants. 4 references.

004007 Sloviter, Robert S.; Drust, Eugene G.; Damiano, Bruce P.; Connor, John D. Dept. of Pharmacology, Milton S. Hershey Medical Center, Penn State University College of Medicine, Hershey, PA 17033 **A common mechanism for lysergic acid, indolealkylamine and phenethylamine hallucinogens: serotonergic mediation of behavioral effects in rats.** Journal of Pharmacology and Experimental Therapeutics. 214(2):231-238, 1980.

A rat behavioral model that reflects central serotonin (5-HT) receptor activation in vivo was utilized in a study of indole and phenethylamine hallucinogens. Lysergic acid diethylamide (LSD) caused the 5-HT behavioral syndrome, and doses of LSD too low to cause the syndrome shifted the dose/response curve for 5-methoxy-N, N-dimethyltryptamine (a 5-HT receptor agonist) to the left. All indole and phenethylamine hallucinogens tested (5-methoxy-N,N-diethyltryptamine, ibogaine, mescaline, p-methoxyamphetamine, N,N-dimethyltryptamine, N,N-diethyltryptamine, and four other methoxy substituted amphetamines) evoked the same 5-HT behavioral syndrome in rats as did LSD. Studies on the mechanisms by which these compounds activated 5-HT receptors revealed that all except p-methoxyamphetamine were direct 5-HT agonists. P-Methoxyamphetamine produced its behavioral effect primarily through release of endogenous 5-HT. The findings support the hypothesis that lysergic acid, indoleaklylamine, and phenethylamine hallucinogens share a common mechanism of action, i.e., central 5-HT receptor activation. 59 references. 004008 Smith, Charles B.; Garcia-Sevilla, Jesus A.; Hollingsworth, Peggie J. Dept. of Pharmacology, University of Michigan Medical School, Ann Arbor, MI 48109 **Alpha2-adrenoreceptors in rat brain are decreased after long-term tricyclic antidepressant drug treatment.** Brain Research. 210(1-2):413-418, 1981.

The binding of 3H-clonidine to presynaptic alpha-adrenoreceptors to membranes isolated from the amygdala, hippocampus, anterior caudate nucleus, locus coeruleus, and hypothalamus of male Sprague-Dawley rats was decreased after 2 weeks of twice daily treatment with amitriptyline. Binding was not altered by antidepressant treatment for only 1 day. In vitro, a high concentration of amitriptyline caused a competitive inhibition of 3H-clonidine binding, but did not alter the number of binding sites after 2 weeks of amitriptyline may explain the subsensitivity of these receptors observed after prolonged administration of antidepressant drugs. Results suggest that endogenous depression may be the result of supersensitivity due to an increased number of presynaptic alpha2-adrenoreceptors in the brain. 17 references. 004009 Smith, D. J.; Azzaro, A. J.; Zaldivar, S. B.; Palmer, S.; Lee, H. S. Dept. of Anesthesiology, West Virginia University Medical Center, Morgantown, WV 26506 **Properties of the optical isomers and metabolites of ketamine on the high affinity transport and catabolism of monoamines.** Neuropharmacology. 20(4):391-396, 1981.

The effect of racemic ketamine hydrochloride and its isomers and metabolites on high affinity transport of tritiated monoamine neurotransmitters was studied in a crude synaptosomal fraction from male Sprague-Dawley rat cerebral cortex. Each of the agents caused a concentration dependent inhibition of transport processes. The ()-isomer of ketamine was about four times more potent than (-)-ketamine was on catecholamine transport, but the (-)-isomer was slightly more effective against serotonin transport. An N-demethylated derivative of ketamine (metabolite-1) and a cyclohexanone derivative of metabolite-1 were weaker inhibitors than was the parent drug. Metabolite-1 was a competitive inhibitor and inhibited the oxidative deamination of monamines more effectively than did ketamine. 37 references. (Author abstract modified)

004010 Smith, John Robert. Oregon State University, Marine Science Center, Newport, OR **The effects of thyrotropin-releasing hormone on cyclic AMP accumulation in rabbit cerebral cortical tissue in the presence and absence of CNS depressants.** Life Sciences. 28(18):2065-2069, 1981.

The in vitro effects of thyrotropin releasing hormone (TRH) on cyclic AMP accumulation in cortical brain slices from rabbits is reported. Incubation of cortical tissue at three concentrations of TRH (1nM, 2nM, and 5nM) had no discernible effects on baseline cyclic AMP levels. When cortical tissue was incubated in the presence of pentobarbital or if cortical tissue was taken from animals pretreated with alpha-methyl-p-tyrosine (alpha-MPT), the baseline cyclic AMP accumulation was reduced. This decrease could be eliminated by the addition of TRH to the incubation media. When cortical tissue from atropine pretreated animals was used or when atropine was added to the incubation media, there was an increase in baseline cyclic AMP accumulation which was unaffected by the addition of TRH. These results show that TRH can modify cyclic AMP accumulation in mammalian cortical brain tissue but this ability may become evident only in situations where normal cyclic AMP concentration has been reduced. 15 references. 004011 Soubrie, Philippe; Montastruc, Jean-Louis; Bourgoin, Sylvie; Reisine, Terry; Artaud, Francoise; Glowinski, Jacques. Glowinski: Groupe NB, INSERM U 114, College de France, 11, place Marcelin Berthelot, F-75231 Paris Cedex 5, France **In vivo evidence for GABAergic control of serotonin release in the cat substantia nigra.** European Journal of Pharmacology. 69(4):483-488, 1981.

Push/pull cannulae were used to estimate the release of endogenously synthesized 3H-serotonin in the substantia nigra (SN) and caudate nuclei (CN) of cats anesthetized with halothane. Unilateral nigral application of GABA reduced the local release of 3H-serotonin, whereas picrotoxin had the opposite effect. Both treatments failed to modify the 3H-serotonin release in the CN or contralateral SN. Results suggest that GABA neurons innervating the SN may regulate nigral serotonin transmission. The possibility that this regulation may be presynaptic or related to a change in the activity of the nigroraphe projection is discussed. 18 references. (Author abstract modified)

004012 Spealman, R. D.; Goldberg, S. R.; Kelleher, R. T.; Morse, W. H.; Goldberg, D. M.; Hakansson, C. G.; Nieforth, K. A.; Lazer, E. S. New England Regional Primate Research Center, One Pine Hill Drive, Southborough, MA 01772 **Effects of norcocaine and some norcocaine derivatives on schedule-controlled behavior of pigeons and squirrel monkeys.** Journal of Pharmacology and Experimental Theraputics. 210(2):196-205, 1979.

The behavioral effects of norcocaine, three N-alkylated derivatives of norcocaine, and a phenyltropane analog of norcocaine (WIN 35,981) were compared with those of cocaine and a phenyltropane analog of cocaine (WIN 35,065-2). Squirrel monkeys and pigeons responded under a multiple fixed-interval, fixed-ratio schedule of food presentation; squirrel monkeys also responded under a multiple fixed-interval, fixed-ratio schedule of termination of a stimulus associated with electric shock. The effects of the drugs were qualitatively similar in each species, and depended mainly on the type of schedule that controlled responding. In the fixed-interval components, some doses of each drug increased responding; maximal increases in responding were similar with each drug. Each drug also altered the pattern of responding in the fixed-interval components; suitable doses increased the low rates of responding, which occurred early in the intervals, but decreased higher rates of responding, which occurred later in the intervals. In the fixed-ratio components, each drug decreased responding in a dose related manner, decreases resulted both from increased periods of pausing and from increased rates of responding once responding began. Neither N-allyl-norcocaine nor N-cyclopropykemethyl-norcocaine antagonized the rate decreasing effects of cocaine under a fixed-ratio schedule of food presentation. Norcocaine and its N-alkylated derivatives had the most rapid onset of effects and the shortest duration of effect followed in order by cocaine, WIN 35,981 and WIN 35,065-2. Comparative potency is noted. 33 references. (Author abstract modified)

004013 Speth, R. C.; Wastek, G. J.; Reisine, T. D.; Yamamura, H. I. Dept. of Pharmacology, University of Arizona School of Medicine, Tuczon, AZ 85721 **Benzodiazepine receptors: effect of**

tissue preincubation at 37 degrees C. Neuroscience Letters. 13:243-247, 1979.

(3H)Flunitrazepam binding to rat brain homogenates was assayed in incubations between zero and 37 degrees C and in incubations at zero degrees C. The affinity of brain benzodiazepine receptors for (3H)flunitrazepam was significantly greater in the samples incubated at temperatures above zero degrees C. There was no change in the number of benzodiazepine receptors. The possible mechanisms for this enhanced binding affinity and the methodological implications for this observation are discussed. (Journal abstract modified)

004014 Spindel, E.; Arnold, M. A.; Cusack, B.; Wurtman, R. J. Dept. of Nutrition and Food Science, Room 56-242, Massachusetts Institute of Technology, Cambridge, MA 02139 **Effects of caffeine on anterior pituitary and thyroid function in the rat.** Journal of Pharmacology and Experimental Therapeutics. 214(1):58-62, 1980.

Acute i.p. administration of caffeine lowered serum thyrotropin (TSH) and growth hormone (GH) levels in male Sprague-Dawley rats in a dose dependent manner, with median effective doses of 30 and 50mg/kg, respectively. TSH levels were depressed 1 to 6 hours after caffein injection and were correlated with serum caffeine levels greater than 20mcg/ml. The decrease in serum TSH was followed by decreases in serum 3, 3'5-triiodothyroxine and thyroxine 4 hours after caffeine injection. Theophylline and theobromine had effects similar to those of caffeine on hormone levels. Caffeine did not significantly affect hormone secretion when incubated directly with rat pituitaries in vitro. Administration of antisomatostatin antiserum to rats blocked the inhibitory effects of caffeine on serum GH levels, suggesting caffein inhibits GH and TSH secretion by releasing hypothalamic somatostatin. 35 references. 004015 Sprick, U.; Oitzl, M.-S.; Ornstein, K.; Huston, J. P. Huston: Institute of Psychology III, University of Dusseldorf, Universitatsstrasse 1, 4000 Dusseldorf, West Germany **Spreading depression induced by microinjection of enkephalins into the hippocampus and neocortex.** Brain Research. 210(1-2):243-252, 1981.

Injections of leu-enkephalin, met-enkephalin, and D-ala2-met-enkephalinamide into the neocortex and hippocampus of male Sprague-Dawley rats elicited spreading depression (SD) in both structures. Naloxone pretreatment antagonized the enkephalin-induced hippocampal seizure activity that frequently preceded the wave of SD. Naloxone also prevented SD induced by leu-enkephalin in the neocortex and by met-enkephalin in the hippocampus, but did not alter SD induced by D-ala2-met-enkephalinamide in either structure. It is suggested that some reported behavioral effects of intracranial injections of enkephalins may be artifacts of hippocampal or cortical SD. 39 references. (Author abstract modified)

004016 Stabrovskiy, Ye. M.; Shpanskaya, L. S. Tsentral'naya nauchno-issledovatel'skaya laboratoriya, Institut usovershenstvovaniya vrachey im. S. M. Kirova, Leningrad, USSR **/The effect of pharmacological destruction of hypothalamic monoaminergic structures on body temperature and gas exchange during extreme cooling./** Effekt farmakologicheskoy destruktsii monoaminergicheskikh struktur gipotalamusa na temperaturu tela i gazoobmen pri ostrom okhlazhdenii. Fiziologicheskiy Zhurnal SSSR imeni I. M. Sechenova. 66(9):1307-1311, 1980.

The effect of pharmacological destruction of hypothalamic monoaminergic structures on body temperature and gas exchange during extreme cooling was studied in white male rats. The animals were divided into several groups, each of which was injected with various substances, some of which destroy the hypothalamic monoaminergic structures. Seven days after the injections the animals were placed for 1 hour in air temperatures of 22C and 5C. Gas exchange and body temperature were measured. Results show that pharmacological destruction of hypothalamic noradrenergic and dopaminergic terminals decreases body temperature, both in thermoneutral conditions and during cooling, by decreasing the heat production level. Destruction of hypothalamic serotoninergic terminals in conditions of extreme cooling lead to some hyperthermia by decreasing heat loss and increasing heat production. 6 references. 004017 Stanishevskaya, A. V.; Vekshina, N. L. Lab. psikhofarmakologii, Tsentral'nyy NII sudebnoy psikhiatrii imeni. V. P. Serbskogo, Moskva, USSR **/The role of opiate receptors of different brain regions in determining the emotional reactions of rats./** Rol' opiatnykh retseptorov razlichnykh otdelov mozga v formirovanii emotsional'nykh reaktsiy u krys. Fiziologicheskiy Zhurnal SSSR imeni I. M. Sechenova. 66(9):1287-1291, 1980.

The role of opiate receptors of different brain regions in determining emotional reactions was studied in male rats. Cannulas were implanted in the brain in the area of the amygdala and perioaqueductal gray matter. In some of the animals bipolar Nichrome electrodes also were implanted in the area of the lateral hypothalamus and periaqueductal gray matter. Morphine was introduced into the amygdala, causing emotional and behavioral changes characteristic of several forms of negative emotional states. Morphine also was introduced into the periaqueductal gray matter, causing inhibition of emotional reactivity. This was manifested in a reduction of sensitivity to positive and negative stimuli. Results show that the opiate receptors of rat amygdala and periaqueductal gray matter take part in the formation of different emotional states produced by local administration of morphine, with the nature of the states depending on the location of receptors in the cerebral structures. 14 references. (Journal abstract modified)

004018 Stoff, David M.; Gale, Karen. Adult Psychiatry Branch, NIMH, St. Elizabeths Hospital, WAW Building, Washington, DC 20032 **Beta-phenylethylamine reversal of chlorpromazine-induced activation of striatal tyrosine hydroxylase and catalepsy.** Brain Research. 211(2):492-496, 1981.

The ability of beta-phenylethylamine (PEA) to reverse the neurochemical and behavioral effects of striatal dopamine blockade was studied in male Sprague-Dawley rats. The stimulation of striatal tyrosine hydroxylase by 20mg/kg chlorpromazine was reduced by about 50% by a 75mg/kg dose of PEA and was reversed completely by 150mg/kg PEA. The 150mg/kg dose also partially reversed catalepsy induced by chlorpromazine. PEA was about 10 times less potent than amphetamine and 25 times less potent than apomorphine. 21 references. (Author abstract modified)

004019 Stramentinoli, G.; Catto, E.; Algeri, S. BioResearch Co., Research Laboratories, I-20060 Liscate, Milan, Italy **Decrease of noradrenaline O-methylation in rat brain induced by L-dopa. Reversal effect of S-adenosyl-L-methionine.** Journal of Pharmacy and Pharmacology. 32(6):430-431, 1980.

A 10mg/kg i.p. injection of L-dopa reduced brain concentrations of S-adenosyl-L-methionine (SAMe) and 3-methoxy-4-hydroxyphenylglycol-S04 (MHPG) in male CD-COBS rats. Intramuscular injection of 100mg/kg SAMe restored the concentration of MHPG to normal values and partially restored the SAMe concentration. Results indicate that exogenous SAMe can reverse the decreased O-methylation of brain noradrenaline induced by L-dopa and suggest that L-dopa-induced depletion of brain SAMe may affect methylation of other compounds that are substrates for methylating enzymes. 18 references.

004020 Study, Robert E. Laboratory of Neurophysiology, NINCDS, Building 36, Room 2C02, NIH, Bethesda, MD 20205 **Phenytoin inhibition of cyclic guanosine 3':5'-monophosphate (cGMP) accumulation in neuroblastoma cells by calcium channel blockade.** Journal of Pharmacology and Experimental Therapeutics. 215(3):575-581, 1980.

The mechanism of the phenytoin inhibition of cyclic GMP (cGMP) accumulation in neuroblastoma cells was investigated. It is noted that phenytoin inhibits the calcium dependent increases in cGMP produced by high potassium depolarization and by muscarinic receptor activation in N1E-115 neuroblastoma cells. The inhibition of the cGMP response to depolarization is half-maximal at 40mcM, similar to the plasma concentration associated with an optimal therapeutic response. The cGMP increase produced by the cationophore A23187 is insensitive to phenytoin blockade, indicating that the enzymatic machinery responsible for calcium stimulated cGMP accumulation is not affected. The calcium concentration/response curve for the cGMP response to high potassium showed noncompetitive inhibition by phenytoin. Results suggest that phenytoin inhibits cGMP responses by blocking calcium influx. The ability to block the depolarization-induced cGMP response is shared by other anticonvulsant which are effective against generalized tonic/clonic and cortical focal seizures but not by those effective against absence seizures. 50 references. (Author abstract modified)

004021 Subramanian, N.; Whitmore, W. L.; Seidler, F. J.; Slotkin, T. A. Slotkin: Box 3813, Duke University Medical Center, Durham, NC 27710 **Ontogeny of histaminergic neurotransmission in the rat brain: concomitant development of neuronal histamine, H-1 receptors, and H-1 receptor-mediated stimulation of phospholipid turnover.** Journal of Neurochemistry. 36(3):1137-1141, 1981.

The ontogeny of brain histaminergic transmission was studied in Sprague-Dawley rats. In the hypothalamus, which is rich in histaminergic innervation, histamine levels were low at birth, increased sharply at 8 days of age, and attained adult concentrations shortly thereafter. Regions poor in histaminergic innervation showed a high initial level of histamine and a subsequent decline with development. The developmental profile for H-1 receptor binding of 3H-mepyramine resembled that of the neuronal histamine pool; age related increases resulted from changes in the number of binding sites, with no change in affinity. The developmental profile for cellular responses to H-1 receptor activation was also similar to that observed for hypothalamic histamine levels. Results indicate that neuronal histamine, its key biosynthetic enzyme, and H-1 receptors coupled directly to cellular events develop simultaneously. 28 references. (Author abstract modified)

004022 Sugikawa, Masaki; Kagawa, Kyoichi; Tomizawa, Setsuo. Dept. of Pharmacology, Central Research Lab., Yomeishu Seizo Co., Ltd., 2132-37, Nakaminowa, Minowa-machi, Kami-Inagun, Nagano 399-46 Japan **Inhibitory action of the combination of aminopyrine and secobarbital on EEG activation, neocortical recruiting and augmenting responses in rabbits.** Japanese Journal of Pharmacology. 30(3):309-316, 1980.

The effect of aminopyrine and secobarbital (at a molar ratio of 2:1, the mixture and molecular compound) on rabbit EEG activation was examined. Secobarbital (40mg/kg, orally) elevated threshold voltages in the neocortical and hippocampal EEG produced by high frequency electrical stimulation of the midbrain reticular formation (MRF), nucleus centralis medialis (CM) of the thalamus, and posterior hypothalamus (PHA) by 40, 40, and 80%, respectively. Aminopyrine (80mg/kg) alone did not affect the arousal response. The molecular compound (120mg/kg) was more potent than secobarbital alone in inhibiting the arousal responses induced by stimulation of MRF and CM. The inhibitory action of the mixture (120mg/kg) on the PHA arousal response was significantly weaker than the effect of the molecular compound. Secobarbital and the molecular compound slightly inhibited the neocortical augmenting and recruiting responses. 10 references. (Author abstract modified)

004023 Supavilai, Porntip; Karobath, Manfred. Karobath: Psychiatrische Universitatsklinik, Lazarettgasse 14, A-1090 Wien, Austria **In vitro modulation by avermectin B1a of the GABA/benzodiazepine receptor complex of rat cerebellum.** Journal of Neurochemistry. 36(3):798-803, 1981.

Avermectin-B1a (AVM), a macrolytic lactone anthelmintic agent, caused a concentration dependent increase in 3H-flunitrazepam binding to membranes from Sprague-Dawley rat cerebellum by increasing the affinity and number of binding sites. GABA, piperidine-4-sulfonic acid, and 4,5,6,7-tetrahydroisoxazolo(4,5,c)pyridine-3-ol diminished the effects of AVM on benzodiazepine receptor binding in a bicuculline sensitive fashion. The stimulation of 3H-flunitrazepam binding by AVM was also decreased by the pyrazolopyridines etazolate and catazolate. Results suggest that AVM, the pyrazolopyridines, and GABA modulate benzodiazepine receptor binding by acting at different but functionally related sites. 14 references. (Author abstract modified)

004024 Suzuki, O.; Katsumata, Y.; Oya, M. Dept. of Legal Medicine, Hamamatsu University School of Medicine, Hamamatsu 431-31, Japan **Oxidation of beta-phenylethylamine by both types of monoamine oxidase: examination of enzymes in brain and liver mitochondria of eight species.** Journal of Neurochemistry. 36(3):1298-1301, 1981.

Beta-phenylethylamine (PEA) was characterized as a substrate for type-A and type-B monoamine oxidase (MAO) in brain and liver mitochondria of eight species. At 10.0mcM, PEA was almost specific for type-B MAO in all species. At 1000mcM, however, PEA was common for both types of MAO in rat brain and liver, human brain and liver, mouse brain, guinea-pig brain and liver, and bovine brain; at this concentration it was specific for type-B MAO in mouse liver, rabbit brain and liver, bovine liver, pig brain and liver, and chicken brain and liver. 25 references. (Author abstract modified)

004025 Sved, Alan F.; Goldberg, Irene M.; Fernstrom, John D. Fernstrom: Dept. of Nutrition and Food Science, Room 56-137, Massachusetts Institute of Technology, Cambridge, MA 02139 **Dietary protein intake influences the antihypertensive potency of methyldopa in spontaneously hypertensive rats.** Journal of Pharmacology and Experimental Therapeutics. 214(1):147-151, 1980.

When male spontaneously hypertensive Okamoto rats consumed a single meal before receiving methyldopa (MD), the increase in brain MD levels and the blood pressure reduction varied inversely with the meal's protein content. MD injection elicited a greater reduction in blood pressure and larger rise in brain MD in rats consuming a protein-free meal than in fasting animals and induced a smaller fall in blood pressure and a smaller increase in brain MD in rats ingesting a protein containing meal than in fasting animals. Ingestion of a food identical in amino acid content to 18% casein but containing an amino acid mixture instead of protein also blunted the MD-induced fall in blood pressure. However, consumption of a similar diet lacking the large neutral amino acids (LNAAS) but not other amino acid elicited an MD-induced blood pressure reduction similar to that caused by ingesting a protein free diet. The combined effects of meal consumption and MD injection on brain MD and blood pressure correlated significantly with the serum ratio of MD to the sum of the natural LNAAs and not with serum MD alone. Similar effects were observed with chronic dietary and MD treatments. Results indicate that dietary protein can significantly influence the potency of a clinically important amino acid drug that acts within the brain. 16 references. (Author abstract modified)

004026 Svensson, Torgny H. no address **Effect of chronic treatment with tricyclic antidepressant drugs on identified brain noradrenergic and serotonergic neurons.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):121-131, 1980.

The effect of chronic treatment with tricyclic antidepressant drugs on identified brain noradrenergic and serotonergic neurons was studied via single unit recording techniques. It is concluded that: 1) the feedback inhibition of central noradrenaline (NA) neurons in the dorsal raphe nucleus by some tricyclic drug (e.g. imipramine) is mediated by alpha-receptors of presynaptic character; 2) chronic treatment with imipramine, even in relatively high doses, causes a persistent inhibition of the activity of the NA neurons; 3) although some tricyclic antidepressasnt drugs may have presynaptic alpha-receptor blocking actions, others (e.g. chlorimipramine) obviously are devoid of such an effect; and 4) presynaptic serotonin receptors do not seem to show any altered response to a presynaptic serotonin receptor agonist. A panel discussion of these findings is appended. 36 references.

004027 Szeto, Hazel H.; Clapp, James F., III; Larrow, Rodney W.; Hewitt, Jean; Inturrisi, Charles E.; Mann, Leon I. Dept. of Pharmacology, Cornell University Medical College, New York, NY 10021 **Disposition of methadone in the ovine maternal-fetal unit.** Life Sciences. 28(19):2111-2117, 1981.

The distribution of methadone between mother and fetus after a single dose and at steady-state was determined, using the chronic pregnant ewe preparation. Following a single i.v. dose (O.5mg/kg) to the mother, methadone was rapidly distributed to the fetus; peak concentration in the umbilical vein occurred within 2 minutes. An umbilical venous/arterial gradient existed for 10 to 15 minutes after drug administration, indicating uptake of methadone by fetal tissues. Methadone concentration in the fetus was two to five times lower than those in the mother even in the postdistribution phase. When methadone was infused at a constant rate to the mother, steady-state was achieved in both mother and fetus within 4 to 5 hours. 11 references. (Author abstract modified)

004028 Takano, Yukio; Kohjimoto, Yoshiro; Kamiya, Hiro-o. Dept. of Pharmacology, School of Pharmaceutical Sciences, Fukuoka University, Fukuoka 814, Japan **The high affinity choline uptake system with respect to the muscarinic receptors using a synaptosomal fraction abundant in presynaptic membranes.** Japanese Journal of Pharmacology. 30(1):119-122, 1980.

The effects of atropine and oxotremorine on high affinity choline (Ch) uptake in guinea-pig brain were examined in vivo and in vitro. Ch uptake was significantly increased by i. p. administration of 5mg/kg atropine, but was not significantly decreased by oxotremorine (0.3mg/kg i.p.). In a synaptosomal fraction rich in presynaptic membranes, 10mcM and 100mcM atropine increased high affinity Ch by 51 and 56% respectively. A 10mcM concentration had no effect. Results suggest that high affinity Ch uptake is regulated by muscarinic receptors in presynaptic membranes. 18 references.

004029 Tardy, M.; Costa, M. F.; Rolland, B.; Fages, C.; Gonnard, P. Dept. de Biochimie, C.H.U. Henri-Mondor, F-94010 Creteil Cedex, France **Benzodiazepine receptors on primary cultures of mouse astrocytes.** Journal of Neurochemistry. 36(4):1587-1589, 1981.

Benzodiazepines were found to bind to glial membranes on a single type of site, with a high affinity on about 100 fmol of sites per mg protein. The number of binding sites is increased when the membranes are treated with Triton X-100. Antiepileptic drugs such as clonazepam and phenobarbital, and hypnotic drugs such as Ro-11-3128 and Ro-11-6896 are able in pharmacological concentrations to displace (3H)flunitrazepam from its glial binding sites. 13 references. 004030 Taylor, John E.; Richelson, Elliott. Dept. of Psychiatry, Mayo Foundation, Rochester, MN 55901 **Desensitization of histamine H1 receptor-mediated cyclic GMP formation in mouse neuroblastoma cells.** Molecular Pharmacology. 15:462-471, 1979.

Evidence is presented that histamine H1 receptor mediated cyclic GMP formation by intact mouse neuroblastoma cells (clone N1E-115) is attenuated by prolonged exposure to histamine. This desensitization was dependent upon the concentration of histamine and at 10mcM the half-time was about 9 min, whereas the half-time for resensitization in the absence of histamine was about 13 min. The order of potency for agonist-induced desensitization correlated with the order of potency for stimulating the H1 receptor in blocking desensitization by histamine. The ED50 for activation and for desensitization by histamine of the receptor mediated response was approximately equal to its KA for the H1 receptor. Omission of CA in the medium prevented cyclic GMP formation, but did not affect desensitization suggesting that cyclic GMP formation is not required for the development of the desensitized state. Desensitization was temperature dependent and marked inhibition of protein synthesis did not affect desensitization or its reversal. The ED50s for histamine stimulated cyclic GMP formation in control and in partially desensitized cells were similar, while the maximum response was reduced. 30 references. 004031 Taylor, W. J.; Wolf, A.; Young, J. M. Dept. of Pharmacology, University of Cambridge, Hills Road, Cambridge, CB2 2QD, England **The interaction of amine local anaesthetics with muscarinic receptors.** British Journal of Pharmacology. 71(1):327-335, 1980.

The binding of (-)-(3H)-quinuclidinyl benzilate (3H-QNB) to muscarinic receptors in crude synaptosomal preparations from guinea-pig brain was inhibited by the amine local anesthetics Proadifen, tetracaine, procaine, quinidine, procainamide, bupivacaine, lignocaine, and prilocaine, in decreasing order of potency. The concentration of tetracaine or prilocaine causing 50% inhibition of receptor specific binding of 3H-QNB varied linearly with the concentration of 3H-QNB, suggesting the interaction between these amines and the muscarinic receptor at lower concentrations of the amines is competitive. The log dose/response curve for the contractile response of longitudinal muscle strips from guinea-pig intestine to carbachol was shifted in a parallel fashion by low concentrations of tetracaine, but flattened by higher doses. A similar effect was observed for lignocaine and prilocaine. The curve for inhibition of 3H-QNB binding by carbachol was not significantly altered by 1mM prilocaine. Although prilocaine increases the affinity of nicotinic acetylcholine receptors for agonists, there was no evidence it has a similar effect on agonist binding to muscarinic receptors. 28 references. 004032 Theodorou, A. E.; Hall, M. D.; Jenner, P.; Marsden, C. D. Marsden: University Dept. of Neurology, Institute of Psychiatry, Denmark Hill, London SE5, England **Cation regulation differentiates specific binding of (3H)sulpiride and (3H)spiperone to**

rat striatal preparations. Journal of Pharmacy and Pharmacology. 32(6):441-444, 1980.

Female Wistar rat striatal membranes were used to compare the effects of monovalent and divalent cations on the binding of 3H-sulpiride, a substituted benzamide ligand for D-2 receptors, and 3H-spiperone, a typical neuroleptic that binds to both D-1 and D-2 receptors. The specific binding of 3H-sulpiride was highly dependent on the presence of sodium ions, whereas 3H-spiperone binding was not. Calcium, potassium, and magnesium ions did not markedly affect 3H-sulpiride binding. Results suggest that sodium dependency may account for the atypical properties of substituted benzamide drugs. 17 references.

004033 Theodorou, A.; Gommeren, W.; Clow, A.; Leysen, J.; Jenner, P.; Marsden, C. D. University Dept. of Neurology, Institute of Psychiatry, Denmark Hill, London SE5, England **Chronic neuroleptic treatment specifically alters the number of dopamine receptors in rat brain.** Life Sciences. 28(14):1621-1627, 1981.

The specificity of the alteration of number of dopamine receptors in rat brain by chronic neuroleptic treatment was investigated. Trifluoperazine dihydrochloride was administered continuously to rats drinking water for 6 months. Animals killed at this time exhibited an increase in the number of dopamine receptors in the striatum and mesolimbic area, with a corresponding decrease in affinity for 3H-spiperone binding. However, no changes in the following were observed: 3H-apomorphine binding, 3H-dexetemide binding to muscarinic receptors, 3H-mepyramine binding to H1 histamine receptors, 3H-WB 4101 binding to alpha-noradrenergic receptors, and 3H-muscimol binding to GABA receptors. Thus, chronic neuroleptic administration to rats appears to alter specifically the number of cerebral dopamine receptors. 25 references. (Author abstract modified)

004034 Thornhill, J. A.; Cooper, K. E.; Veale, W. L. Division of Medical Physiology, Faculty of Medicine, University of Calgary, Calgary, Alberta, Canada T2N 1N4 **Core temperature changes following administration of naloxone and naltrexone to rats exposed to hot and cold ambient temperatures. Evidence for the physiological role of endorphins in hot and cold acclimatization.** Journal of Pharmacy and Pharmacology. 32(6):427-430, 1980.

Core temperatures were measured in male Sprague-Dawley rats exposed to 4 or 38 degrees C and given a single subcutaneous 10mg/kg injection of naloxone or naltrexone. Both narcotic antagonists caused core temperature to decrease significantly below control level during exposure to cold and to increase above control level during exposure to heat. Results suggest that blockade of brain and pituitary endorphins by narcotic antagonists causes an acute disturbance in the animals' ability to acclimatize to severe changes in ambient temperature. 7 references.

004035 Ticku, Maharaj K. Dept. of Pharmacology, University of Texas Health Sciences Center, 7703 Floyd Curl Drive, San Antonio, TX 78284 **The effects of acute and chronic ethanol administration and its withdrawal on gamma-aminobutyric acid receptor binding in rat brain.** British Journal of Pharmacology. 70(3):403-410, 1980.

Acute treatment with ethanol (2 to 4mg/kg i.p.) increased the binding capacity of the low affinity GABA receptor site in male Sprague-Dawley rat brain. However, GABA receptor binding was not altered after chronic ethanol administration (1 to 21 days); this suggests that GABA receptors may adapt to the continuing presence of ethanol at the GABA synapse. The affinity of the low affinity GABA binding site 8 and 16 hours after withdrawal from chronic ethanol was significantly reduced, compared to the affinity in pair fed controls. Results suggest that GABA receptor sensitivity may play a role in some of the neuropharmacological effects of ethanol and in ethanol withdrawal symptoms. 41 references. (Author abstract modified)

004036 Ticku, Maharaj K. Dept. of Pharmacology, University of Texas Health Sciences Center, 7703 Floyd Curl Drive, San Antonio, TX 78284 **Interaction of stereoisomers of barbiturates with (3H)alpha-dihydropicrotoxinin binding sites.** Brain Research. 211(1):127-133, 1981.

Racemic depressant barbiturates inhibited the binding of the GABA antagonist (3H)alpha-dihydropicrotoxinin ((3H)DHP) to male Sprague-Dawley rat brain membranes with median inhibitory concentrations ranging from 5 to 50mcM. The (-)-isomers of pentobarbital and secobarbital were three to four times more potent than their ()-isomers in inhibiting 3H-DHP binding, but the ()-isomer of hexobarbital was more potent than (-)-hexobarbital. The stereoisomers of 1-methyl-5-phenyl-propylbarbituric acid (MPPB), which show opposite pharmacological activity, inhibited (3H)DHP binding in a biphasic manner with a plateau at 4 to 100nM MPPB. The possibility that depressant and convulsant barbiturates act at the DHP site at the GABA synapse is discussed. 24 references. (Author abstract modified)

004037 Ticku, Maharaj K.; Burch, Troie. Division of Molecular Pharmacology, Dept. of Pharmacology, University of Texas Health Sciences Center, San Antonio, TX **Alterations in gamma-aminobutyric acid receptor sensitivity following acute and chronic ethanol treatments.** Journal of Neurochemistry. 34(2):417-423, 1980.

The effects of acute and chronic ethanol ingestion on the binding of the inhibitory neurotransmitter 3-H-gamma-aminobutyric acid (GABA) was investigated in inbred strains of mice. Acute effects were analyzed in DBA/2J (alcohol avoiding) and C57BL/6J (alcohol preferring) mice, while chronic effects were analyzed in C57 mice. Acute ethanol produced a significant increase in the binding capacity of the low affinity GABA binding site in both C57 and DBA mice, without significantly altering other binding parameters. The enhanced binding capacity may be responsible for the behavioral depression associated with ethanol use. Chronically treated C57 mice exhibited a decrease in the density of low affinity GABA receptor sites. The results suggest the possible involvement of GABA synaptic function in the neuropharmacological effects of ethanol. The possibility that chronic ethanol administration may result in adaptation of GABA receptors to the continuous presence of ethanol-induced CNS depression is discussed. 45 references. 004038 Tortella, Frank C.; Moreton, J. Edward; Khazan, Naim. Moreton: Dept. of Pharmacology and Toxicology, Univ. of Maryland School of Pharmacy, 636 W. Lombard St., Baltimore, MD 21201 **Electroencephalographic and behavioral tolerance to and cross-tolerance between D-ala2-methionine-enkephalinamide and morphine in the rat.** Journal of Pharmacology and Experimental Therapeutics. 210(2):174-179, 1979.

Rats were given repeated i.vt. ijections of D-enkephalin (20mcg/4hr) or morphine (20mcg/4hr) for 72 to 96 hours during EEG recording. Initial epileptiform EEG and associated wet dog shakes occurred following D-enkephalin but not morphine. The epileptoid EEG progressed to a continuous high voltage EEG synchrony similar to morphine, and was associated with behavioral stupor. REM sleep also was suppressed. Repeated administration of D-enkephalin or morphine produced tolerance to their effects. When challenged with i.vt. morphine, D-enkephalin tolerant rats were cross-tolerant to morphine. Likewise, morphine tolerant rats were cross-tolerant to D-enkephalin. While the morphine tolerant rats demonstrated a marked abstinence syndrome when challenged with naloxone (10mg/kg, i.p.) no abstinence signs were observed in the D-enkephalin rats. The demonstration of tolerance and cross-tolerance between morphine and D-enkephalin suggests a similar mechanism of action, but the differential development of physical dependence may entail different mechanisms of receptor sensitivities for this effect. These findings of similarities and differences in the acute and chronic effects of D-enkephalin and morphine support the contention that heterogeneous opiate receptors may mediate their pharmacologic actions. 42 references. 004039 Toth, Jeno; Lajtha, Abel. Center for Neurochemistry, Rockland Research Institute, Ward's Island, NY 10035 **Drug-induced changes in the composition of the cerebral free amino acid pool.** Neurochemical Research. 6(1):3-12, 1981.

The effects of insulin, hydroxybutyrate, deoxypyridoxine, chlorpromazine, codeine, morphine, puromycin, and cycloheximide on the composition of free amino acids in Swiss mouse and Wistar rat brain were tested. Signficant changes in a number of amino acids were seen with most compounds tested. The largest change was in alanine, which was increased 50% by glucose and decreased 20-60% by various drugs. Histidine levels were increased by many drugs, but nonessential amino acids were mostly decreased. The pattern of changes in mouse brain differed somewhat from that in rat brain. Results indicate that changes in amino acid levels may contribute to the pharmacological action of many drugs. 28 references. (Author abstract modified)

004040 Tramposch, A.; Sangdee, C.; Franz, D. N.; Karler, R.; Turkanis, S. A. Dept. of Pharmacology, University of Utah College of Medicine, Salt Lake City, UT 84132 **Cannabinoid-induced enhancement and depression of cat monosynaptic reflexes.** Neuropharmacology. 20(6):617-621, 1981.

In a study of the mechanisms of the convulsant and anticonvulsant actions of delta9-tetrahydrocannabinol (THC) and cannabidiol (CBD), the effects of the cannabinoids were compared with those of phenytoin (PHT) on the spinal monosynaptic pathway of unanesthetized spinal cats. Small doses of THC enhanced pretetanic and posttetanic potentials, whereas PHT, CBD, and large doses of THC depressed the reflex. It is suggested that the excitatory influence on central synaptic transmission may contribute to the convulsant action of THC and that the depressant may account for the anticonvulsant action of cannabinoids. 25 references. 004041 Trinus, K. F.; Skryma, R. N. Institut fiziologii im. A. A. Bogomol'tsa AN SSSR, Kiev, USSR **/The excitatory effect of atropine on the neurons of the frog sympathetic ganglia./** Vozbuzhdayuscheye deystviye atropina na neyrony simpaticheskikh gangliyev lyagushki. Neyrofiziologiya. 12(1):101-103, 1980.

Depolarization, accompanied by an increase in membrane conductance which was produced by atropine was studied in frog sympathetic ganglion neurons after activation of the receptors with different cholinomimetics. Results show that atropine perfusion caused excitatory effects if perfusion with acetylcholine or with a mixture of suberildicholine and 5-methylfurmethide had been performed beforehand, activating both nicotinic and muscarinic receptors. After activation of nicotinic receptors with suberildicholine, or muscarinic receptors with 5-methylfurmethide, atropine caused no changes in the electric properties of the membrane. These results suggest that atropine, acting on receptors which have been changed after the action of agonists, can evoke their activation. (Journal abstract modified)

004042 Trotta, E. E.; Freire, G. L. Depto. de Fisiologia, Instituto Biomedico, Universidade Federale Fluminense, Rua Hernani Mello no. 101, Niteroi, 24-210, RJ, Brazil **Inhibition by caffeine of calcium uptake by brain microsomal vesicles.** Journal of Pharmacy and Pharmacology. 32(11):791-793, 1980.

Caffeine inhibited the rate of calcium uptake and the steady-state level of calcium accumulation in rabbit brain microsomal vesicles. Calcium uptake was inhibited 16, 33, and 50% by 5, 10, and 15mM concentrations of caffeine, respectively. Similarities between the effects of caffeine on the calcium pump in brain and muscle are discussed. Results suggest the central stimulatory effects of caffeine may be due to inhibition of calcium uptake by subcellular vesicles and consequent facilitation of transmitter release. 21 references.

Tbilisskiy gosudarstvennyy meditsinskiy institut, Tbilisi, USSR **/The effect of serotonin on the exosecretory action of the pancreas./** Vliyaniye serotonina na vneshnesekretornuyu deyatel'nost' podzheludochnoy zhelezy. Soobshcheniya Akademii Nauk Gruzinskoy SSR. 100(1):189-192, 1980.

The effect of serotonin on the exosecretory action of the dog pancreas was studied. Results show that: intramuscular administration of 0.1 to 1.0mg/kg of serotonin in adult dogs depresses the secretion of pancreatic juice, simultaneously reducing the alkalinity of the juice, and increasing diastase activity; serotonin strongly stimulated the secretion activity of the pancreas in puppies 3 to 4 months old. These results show that the action of serotonin on pancreatic secretion is caused by the excitation of the parasympathicus, since anticholinesterase substances increase the effect of serotonin. 10 references. 004044 Tucek, Stanislav; Dolezal, Vladimir; Sullivan, Ann C. Institute of Physiology, Czechoslovak Academy of Sciences, Videnska 1083, 14220 Prague, Czechoslovakia **Inhibition of the synthesis of acetylcholine in rat brain slices by (-)-hydroxycitrate and citrate.** Journal of Neurochemistry. 36(4):1331-1337, 1981.

The inhibition of synthesis of acetylcholine (ACh) in rat brain slices by (-)-hydroxycitrate and citrate is described. Slices of rat caudate nucleus were incubated in a solution of NaCl, KCl, MgCl2, NaH2PO4, NaHCO3, choline chloride, paraoxon, EGTA, and oxidizable substrates, and the inhibitory effects of (-)-hydroxycitrate and citrate on ACh synthesis were examined. The possibility is discussed that citrate alters the intracellular milieu in cholinergic neurons by chelating the intracellular Ca2 and decreases the supply of mitochondrial acetyl-CoA to the cytosol. The results with (-)-hydroxycitrate indicate that the cleavage of citrate by adenosine triphosphate citrate lyase is not responsible for the supply of more than about one third of the acetyl-CoA which is used for the synthesis of ACh when glucose or pyruvate are the main oxidizable substrates. This proportion may be even smaller, since (-)-hydroxycitrate possibly affects the synthesis of ACh from glucose and pyruvate by a mechanism similar to that of citrate, rather than by the inhibition of adenosine triphosphate citrate lyase. 29 references. 004045 Vaynshteyn, G. B.; Pinegin, L. Ye. Lab. regulyatsii mozgovogo krovoobrashcheniya, Institut evolyutsionnoy fiziologii i biokhimii im. I. M. Sechenova, AN SSSR, Leningrad, USSR **/The dynamics of systemic venous, arterial, and cerebrospinal fluid pressure under i.v. administration of polyethylene glycol./** Dinamika tsentral'nogo venoznogo, arterial'nogo i likvornogo davleniy pri vvedenii polietilenglikolya. Fiziologicheskiy Zhurnal SSSR imeni I. M. Sechenova. 66(9):1369-1375, 1980.

The dynamics of systemic venous, arterial, and cerebrospinal fluid (CSF) pressure under i.v. administration of polyethylene glycol was studied in cats. Polyethylene glycol was administered i.v. to 12 anesthetized fully grown cats via the left femoral vein at the rate of 0.2ml/kg/min. Arterial pressure was measured with a mercury pressure gauge via a catheter in the right femoral artery; systemic venous pressure with a water pressure gauge via a catheter leading from the right femoral vein to the upper vena cava; and CSF pressure with a needle in the major occipital cistern, connected to a water pressure gauge. Results show that arterial pressure increased by 20 to 30mm Hg, and systemic venous pressure increased from 80 to 100mm H2O. Within 30 minutes of the end of polyethylene glycol administration the hemodynamics returned to initial levels due to increased diuresis, but cistern CSF pressure decreased as a result of dehydration of the brain. This decrease was counteracted by the high venous and arterial pressure, but after normalization of hemodynamics, the CSF pressure was decreased by 90 to 100mm H2O from the initial level. 15 references. 004046 Velasco, Francisco; Velasco, Marcos; Romo, Ranulfo. Div. of Neurophysiology, Dept. of Scientific Research, National Medical Center, IMSS, P.O. Box 73-032, Mexico City, Mexico **Specific and non-specific multiple unit activities during pentylenetetrazol seizures. I. Animals with isole'.** Electroencephalography and Clinical Neurophysiology. 49(5-6):600-607, 1980.

The sequence of activation and deactivation of multiple unit activities (MUA) in the brainstem reticular formation and pyramidal tract was studied in relation to clinical seizures and EEG and electromyographic (EMG) tonic/clonic discharges induced by pentylenetetrazol (PTZ) in cats immobilized by high spinal transection (encephale isole). Threshold doses of PTZ (20mg/kg i.v.) produced a significant increse in mesencephalic and pontine MUA 3 seconds after the termination of PTZ injection and anticipated for 5 seconds the onset of EEG tonic/clonic discharges. The mesencephalic and pontine reticular MUA and EMG MUA showed a further increase at the onset of EEG and pyramidal tract tonic/clonic discharges. EEG spike activity and pyramidal tract MUA decreased significantly 16 seconds later, whereas mescencephalic and pontine MUA and EMG remained high. Results suggest that PTZ-induced seizures start in the brinstem reticular formation and propagate to muscles by at least two pathways, pyramidal and extrapyramidal. Inhibition of seizure activity may start at the cortical level. 19 references.

004047 Wallis, David; Nash, Hywel. Dept. of Physiology, University College, P.O. Box 78, Cardiff CF1 1XL, Wales **Relative activities of substances related to 5-hydroxytryptamine as depolarizing agents of superior cervical ganglion cells.** European Journal of Pharmacology. 70(3):381-392, 1981.

Membrane potential changes evoked by 5-hydroxytryptamine (5-HT) and related substances were recorded by the sucrose gap method from rabbit ganglia superfused with Krebs solution at 20 degrees celsius. Some 5-HT analogues evoked prolonged responses distinctly different from the rapid depolarization and repolarization characteristic of 5-HT, while other analogues were inactive. Compounds dimethylated or trimethylated at the side chain nitrogen atom were also able to activate nicotinic receptors. The optimal requirements for activating ganglionic 5-HT receptors were a hydroxyl group at position 5 on the indole nucleus and a side chain bearing an ethylamine amino group. Methyl substituents around the terminal nitrogen were well tolerated, and a quaternary nitrogen could increase activity at the 5-HT receptor. Substitution of a methyl group at carbon atom 2 of the indole nucleus reduced activity. 34 references. (Author abstract modified)

004048 Warsh, Jerry J.; Godse, Damodar D.; Li, Peter P.; Cheung, Siu W. Sec. of Biochemical Psychiatry, Clarke Institute of Psychiatry, University of Toronto, 250 College St., Toronto, Ontario M5T 1R8, Canada **Postmortem stability of brain 3-methoxy-4-hydroxyphenylethyleneglycol and 3,4-dihydroxyphenylethyleneglycol in the rat and mouse.** Journal of Neurochemistry. 36(3):902-907, 1981.

Gas chromatography/mass fragmentography was used to study the postmortem stability of brain 3-methoxy-4-hydroxyphenylethyleneglycol (MHPG) and 3,4-dihydroxphenylethyleneglycol (DHPG) in male Wistar rats and male Swiss-Webster mice. Two hours after death, significant decreases were seen in rat brain free DHPG (20%), total MHPG (21%), and total DHPG (11%) at 4 degrees C; free MHPG increased significantly (50%). At 21 degrees, rat brain total MHPG increased (15%) 2 hours after death, but decreased (15%) at 4 and 8 hours; free MHPG levels were increased. Brain total and conjugated DHPG levels showed little change, but free DHPG levels were reduced at all times. In mouse brain, no significant changes in free MHPG and DHPG were seen within 24 hours at 4 degrees; at 21 degrees, mouse brain DHPG levels decreased and MHPG levels increased. 26 references. (Author abstract modified)

004049 Wastek, Gregory J.; Lopez, J. Rafael; Richelson, Elliott. Richelson: Dept. of Pharmacology, Mayo Foundation, Rochester, MN 55901 **Demonstration of a muscarinic receptor-mediated cyclic GMP-dependent hyperpolarization of the membrane potential of mouse neuroblastoma cells using (3H)tetraphenylphosphonium.** Molecular Pharmacology. 19(1):15-20, 1981.

The lipophilic cation (3H)tetraphenylphosphonium ((3H)TPP) was used to measure the transmembrane potential of cultured mouse neuroblastoma cells (clone N1E-115) in suspension. These cells accumulated approximately twice as much (3H)TPP in low K phosphate buffered saline (PBS) as they did in high K PBS. Accumulation in both cases was time and temperature dependent. Addition of carbachol significantly increased net (3H)TPP accumulation within 1 minute. Atropine, but not d-tubocurarine or pyrilamine, prevented the increase in (3H)TPP accumulation. The data suggest that muscarinic receptor responses in these cells may be mediated by a hyperpolarization of the cells' transmembrane potential subsequent to an increase in intracellular cyclic GMP. 28 references. (Author abstract modified)

004050 Watanabe, Yasuhiro; Itoh, Tadao; Yoshida, Hiroshi. Dept. of Pharmacology I, Osaka University School of Medicine, Nakanoshima, Kita-ku, Osaka 530, Japan **Developmental change of beta-adrenergic receptors in rat brain.** Japanese Journal of Pharmacology. 30(3):287-291, 1980.

Beta-adrenergic receptor binding was studied in the whole brain (minus cerebellum) of 2 and 6-day-old Sprague-Dawley rats. The maximal binding capacity and dissociation constant for (-)-3H-dihydroalprenolol (DHA) in the synaptic membrane fraction (SMF) did not vary with age. However, since the yield of SMF from the 2-day-old rat brain was lower than that from 6-day-old brain, the total number of binding sites was reduced in 2-day-old rats. The inhibitory effects of l-isoproterenol on DHA binding to the SMF was greater in 6-day-old animals than in 2-day-old animals. It is suggested that developmental changes in beta-adrenoceptors may alter the expression of catecholamine sensitive adenylate cyclase activity in rat brain during development. 14 references. 004051 Watling, Keith J.; Dowling, John E. Watling: Biological Laboratories, Harvard University, Cambridge, MA 02138 **Dopaminergic mechanisms in the teleost retina. I. Dopamine-sensitive adenylate cyclase in homogenates of carp retina; effects of**

agonists, antagonists and ergots. Journal of Neurochemistry. 36(2):559-568, 1981.

A specific dopamine sensitive adenylate-cyclase was identified in homogenates of carp retina. Maximal stimulation by 100mcM dopamine produced a fivefold to tenfold increase in adenylate-cyclase; half maximal stimulation occurred at a concentration of 1mcM. Although l-noradrenaline and l-adrenaline both stimulated adenylate-cyclase activity, they were 10 times less potent than dopamine; l-phenylephrine and dl-isoprenaline were inactive. Apomorphine elicited partial stimulation, and various ergot alkaloids produced mixed agonist/antagonist responses. Dopamine stimulated adenylate-cyclase activity was potently antagonized by fluphenazine, alpha-flupenthixol, and alpha-piflutixol and to a lesser extent by haloperidol and spiperone. Metoclopramide, sulpiride, phentolamine, and propranolol did not antagonize the enzyme activity. The pharmacological profile of dopamine adenylate-cyclase in carp retina was similar to that for dopamine sensitive adenylate-cyclase in the mammalian CNS. 40 references. (Author abstract modified)

004052 Weiss, Benjamin; Prozialeck, Walter; Cimino, Mauro; Barnette, Mary Sellinger; Wallace, Thomas L. Dept. of Pharmacology, Medical College of Pennsylvania, Philadelphia, PA 19129 **Pharmacological regulation of calmodulin.** Annals of the New York Academy of Sciences. 356:319-345, 1980.

Evidence is reviewed that certain pharmacological agents can inhibit selectively the actions of calmodulin, the endogenous calcium binding protein that has been shown to regulate several biochemical and physiological processes. It is shown that this inhibition is caused by a selective calcium dependent binding of the drugs to calmodulin and that, of a large number of compounds studied, those having antispychotic activity display the hightest affinity for calmodulin. These studies suggest that many of the biochemical actions of these antipsychotics may be explained by a common mechanism: namely, selectively binding to and inhibiting the action of calmodulin. Preliminary results are presented from experiments which demonstrate that certain endogenous proteins, such as ACTH and beta-endorphin, that have been shown to alter behavior in animals also inhibit some actions of calmodulin. Overall, the results raise the possibility that calmodulin may be involved in behavioral processes, and that drugs known to alter behavior may produce their effects by interfering with the actions of calmodulin. 137 references.

004053 Wood, Paul L.; Stotland, M.; Richard, J. W.; Rackham, A. Dept. of Pharmacology, Merck Frosst Laboratories, C.P./P.O. Box 1005, Pointe Claire-Dorval, Quebec H9R 4P8 Canada **Actions of mu, kappa, sigma, delta and agonist/antagonist opiates on striatal dopaminergic function.** Journal of Pharmacology and Experimental Therapeutics. 215(3):697-703, 1980.

The development of a sensitive gas chromatographic/mass fragmentographic assay for simultaneous measurement of dihydroxyphenylacetic acid, homovanillic acid (HVA), dopamine (DA), and 3-methoxytyramine is described, and actions of specific opiate receptor agonists on dopaminergic function in the nigrostriatal pathway are discussed. In the rat, the mu-agonists morphine, etorphine, methadone, and phenazocine and the delta-agonist D-Ala2-D-Leu5 enkephalin all produced dose dependent elevations in the DA metabolites dihydroxyphenylacetic acid and HVA with no increase in 3-methoxytyramine. However, in the mouse, concomitant increases in HVA and 3-methoxytyramine were noted. The basis for this biochemical species difference in the coupling of intraneuronal metabolism and DA release remains to be determined. The epsilon-agonist, beta-endorphin, also elevated striatal dihydroxyphenylacetic acid and HVA indicating the possible coexistance of these receptors with mu-receptors and delta-receptors on nigrostriatal neurons. In contrast, experiments with the kappa-agonists ketazocine, ethylketazocine, and MR2034 indicate the absence of kappa-receptors on these neurons. Although the sigma-agonist SKF 10047 did alter DA metabolism, this action did not appear to involve opiate receptors. 60 references. (Author abstract modified)

004054 Woodman, O. L.; Rechtman, M. P.; Lang, W. J. Dept. of Pharmacology, University of Melbourne, Parkville, Victoria 3052, Australia **A comparison of the responses to some dopamine-receptor agonists and antagonists in the isolated perfused rat kidney.** Archives Internationales de Pharmacodynamie et de Therapie. 248(2):203-211, 1980.

Bromocriptine, 2,3,4,5-tetrahydro-7,8-dihydroxy-1-phenyl-1H-3-benzazepine (SK&F-38393), and apomorphine administered into Wistar rat kidneys perfused with physiological saline solution containing vasopressin and pretreated with an alpha-adrenoceptor antagonist produced vasodilator responses similar to those produced by dopamine. Responses to bromocriptine, SK&F-38393, and apomorphine were significantly reduced by the dopamine receptor antagonist ergometrine. Metoclopramide was an effective antagonist of dopamine, bromocriptine, SK&F-38393, and apomorphine. Apomorphine acted as a partial agonist on dopamine receptors in this preparation. Results are discussed in relation to the classification of dopamine receptor subtypes. 17 references. (Author abstract modified)

004055 Woodruff, G. N.; Freedman, S. B.; Poat, J. A. Dept. of Physiology and Pharmacology, University of Southampton, Bassett Crescent East, Southampton SO9 3TU, England **Why does sulpiride not block the effect of dopamine on the dopamine-sensitive adenylate cyclase?** Journal of Pharmacy and Pharmacology. 32(11):802-803, 1981.

The failure of sulpiride and domperidone to block the effect of dopamine on dopamine sensitive adenylate cyclase is discussed. It has been suggested that there are two types of dopamine receptors in the brain, a D1 receptor linked to adenylate cyclase and unaffected by sulpiride, and a D2 receptor blocked by sulpiride and not linked to adenylate cyclase. As an alternative explanation, it is suggested that the failure of sulpiride and domperidone to act as dopamine antagonists on adenylate cyclase may be due to their low lipid solubility and poor penetration into the brain. 14 references.

004056 Wu, P. H.; Phillis, J. W. Phillis: Dept. of Physiology, College of Medicine, University of Saskatchewan, Saskatoon, Saskatchewan, Canada S7N OWO **The effect of noradrenaline on Na-K transport in rat cerebral cortical slices.** European Journal of Pharmacology. 69(4):529-531, 1981.

Noradrenaline (NA) increased the efflux of sodium (22Na) from cortical slices by 79% and increased the influx of potassium (42K) by 83%. These effects were not associated with changes in 22Na influx or 42K efflux and were not the result of increased exchange of these ions across the plasma membrane. The effects of NA on 22Na efflux and 42K influx were antagonized by ouabain or propranolol. Results indicate that NA stimulates the active coupled transport of Na and K across plasma membranes in rat cerebral cortical slices and support the proposal that NA hyperpolarizes central neurons by stimulating a membrane sodium pump. 5 references.

004057 Yamaguchi, Isamu; Kopin, Irwin J. Kopin: Laboratory of Clinical Science, Building 10, Room 2D-46, NIMH, Bethesda, MD 20205 **Differential inhibition of alpha-1 and alpha-2 adrenoceptor-mediated pressor responses in pithed rats.** Journal of Pharmacology and Experimental Therapeutics. 214(2):275-281, 1980.

The relative potencies of alpha-adrenoceptor antagonists at presynaptic and postsynaptic receptors were assessed by comparing their effects on increments in plasma norepinephrine levels and blood pressure during stimulation of the sympathetic outflow from the spinal cord of pithed rats. Since increments in blood pressure are related to the logarithms of increases in plasma norepinephrine, the latter appear to reflect levels of the catecholaine at vascular alpha-receptors. Phenoxybenzamine, dibenamine, and chlorpromazine were found to block preferentially postsynaptic alpha-receptors. Phentolamine and tolazoline were nearly equipotent at presynaptic and postsynaptic receptors; mianserin and piperoxan were more potent inhibitors of presynaptic alpha-receptors. Phenoxybenzamine and dibenamine were much more effective in blocking the pressor responses to sympathetic stimulation than administered norepinephrine. The opposite was true of mianserin and piperoxan, whereas phentolamine appeared to be about equipotent in blocking the pressor responses to stimulation and norepinephrine. Results suggest that the pressor effects of administered norepinephrine is mediated by different receptors (alpha2) than is the pressor response to stimulation of the sympathetic outflow, which appears to be mediated by alpha1 type adrenoceptors. 25 references. 004058 Yeh, H. H.; Moises, H. C.; Waterhouse, B. D.; Woodward, D. J. Dept. of Cell Biology, University of Texas Health Science Center, 5323 Harry Hines Blvd., Dallas, TX 75235 **Modulatory interactions between norepinephrine and taurine, beta-alanine, gamma-aminobutyric acid and muscimol applied iontophoretically to cerebellar Purkinje cells.** Neuropharmacology. 20(6):549-560, 1981.

Iontophoretically applied norepinephrine (NE) consistently enhanced the GABA-induced inhibition of cerebellar Purkinje cells in female Sprague-Dawley rats, but had minimal and inconsistent effects on Purkinje cell inhibition induced by taurine or beta-alanine. NE also enhanced Purkinje cell inhibitory responses induced by muscimol, an agent that binds to GABA receptors but is not an effective substrate for GABA uptake. Continuous application of GABA at low in iontophoretic currents did not augment Purkinje cell inhibition induced by superimposed GABA pulses. Since the facilitation of GABA inhibition by NE independent of GABA uptake or presynaptic transmitter release, the phenomenon appears to be postsynaptic. 41 references. (Author abstract modified)

004059 Yeroukalis, D.; Alevizos, B.; Gatzonis, S.; Stefanis, C. Dept. of Psychiatry, Athens University Medical School, Eginition Hospital, 74, Vass. Sophias Str., Athens, Greece **The effect of propranolol and its isomers on Purkinje neurones in rat cerebellum.** Neuropharmacology. 20(4):319-321, 1981.

The effect of dl-propranolol and its isomers on noradrenaline (NA) and serotonin (5-HT) responses of Purkinje neurons in rat cerebellum was studied. NA depressed firing of Purkinje neurons, and propranolol isomers failed to alter this depression. The inhibitory response to 5-HT was antagonized by dl-propranolol and l-propranolol, but not by d-propranolol. Results suggest that a postsynaptic 5-HT blocking effect rather than beta-adrenergic blocking activity may account for the clinical effects of propranolol in schizophrenic patients. 10 references. 004060 Yokoi, Isao; Rose, Susan E.; Yanagihara, Takehiko. Yanagihara: Dept. of Neurology, Mayo Clinic, Rochester, MN **Benzodiazepine receptor: heterogeneity in rabbit brain.** Life Sciences. 28(14):1591-1595, 1981.

Binding characteristics of benzodiazepine receptors were studied with synaptosomal and microsomal membranes from rabbit brain in vitro utilizing (methyl-3H)diazepam. In synaptosomal membranes, both high and low affinity binding sites were identified with the dissociation constants (Kd) of 4.92 nM and 83.8 nM, respectively. However, only the high affinity site was identified with Kd of 3.96 nM with microsomal membranes. Benzodiazepine binding sites appear to include at least two subpopulations of receptors, one with high affinity and another with low affinity binding sites. 18 references. (Author abstract)

004061 Yonekawa, Wayne D.; Kupferberg, Harvey J.; Woodbury, Dixon M. Epilepsy Branch, Neurological Disorders Program, NINCDS, Bldg. 36, Rm. 5D-21, NIH, 9000 Rockville Pike, Bethesda, MD **Relationship between pentylenetetrazol-induced seizures and brain pentylenetetrazol levels in mice.** Journal of Pharmacology and Experimental Therapeutics. 214(3):589-593, 1980.

The relationship of the pentylenetetrazol (PTZ) induced seizure sequence of myoclonus, clonus, and hindlimb extension (TE) to brain PTZ levels was investigated, and the influence of route of administration on PTZ uptake and seizure development was examined. The critical brain PTZ level for onset of clonus ranged from 20mg/g to 50mg/g. Brain PTZ uptake was rapid after i.p. injection of PTZ. Uptake was slower after s.c. administration. TE onset did not appear to depend solely on brain PTZ levels since it sometimes occurred when brain PTZ levels were falling. Factors that could modulate the appearance of TE are discussed. 29 references. (Author abstract modified)

004062 Yoshizaki, Toshio; Tonda, Kanya. Shionogi Research Laboratories, Shionogi & Co., Ltd., Fukushima-ku, Osaka 553, Japan **Effects of tricyclic antidepressants on tetrabenazine-induced depletion of brain monoamines in rats. 1. Norepinephrine.** Japanese Journal of Pharmacology. 30(5):721-729, 1980.

The effects of tricyclic antidepressants on the tetrabenazine (TB)-induced depletion of brain norepinephrine (NE) was studied in male Sprague-Dawley rats. Pretreatment with desmethylimipramine (DMI, 25 to 100mg/kg), imipramine (IM, 25 to 100mg/kg), chlorimipramine (100mg/kg), maprotyrine (50mg/kg), amitriptyrine (50 to 100mg/kg), chlorpromazine (CPZ, 5 to 20mg/kg), and amphetamine sulfate (10mg/kg) enhanced the NE depletion observed 2 hours after 2mg/kg TB. Reserpine-induced depletion of NE was enhanced only by amphetamine and was suppressed by DMI, IM, and CPZ. In rats pretreated with pargyline, TB produced a decrease in brain NE and an increase in normetanephrine. Results suggest that tricyclic antidepressants enhance TB-induced brain NE depletion by blocking NE reuptake from the synaptic cleft. 31 references. (Author abstract modified)

004063 Zimmermann, H.; Bokor, J. T. Abt. fur Neurochemie, MPI Biophys. Chemie, Gottingen, West Germany **5'-Triphosphate recycles independently of acetylcholine in cholinergic synaptic vesicles.** Neuroscience Letters. 13:319-324, 1979.

The effect of hemicholinium-3 (HC-3) on vesicular contents in acetylcholine (ACh) and 5-triphosphate (ATP) and the vesicular incorporation of 14C-label derived from (14C)choline and 3H-label derived from (3H)adenosine was examined after low frequency stimulation of the Torpedo electric organ. HC-3 caused an increased depletion of vesicular ACh and blocked the incorporation of 14C-label. Contents in vesicular ATP and 3H-incorporation were identical with and without HC-3. HC-3 blocked the recovery of electrical response of the tissue after stimulation but did not cause a change in vesicle numbers. Findings suggest that synaptic vesicles continue to recycle ATP in the absence of recycling of ACh and that vesicular uptake and storage of the two components are not coupled to each other. 004064 Zouhar, A.; Mares, P.; Brozek, G. Dept. of Neurology, Faculty of Medicine, Purkyne University, Brno, Czechoslovakia **Electrocorticographic activity elicited by metrazol during ontogenesis in rats.** Archives Internationales de Pharmacodynamie et de Therapie. 248(2):280-288, 1980.

Electrocorticographic changes induced by i.p. injections of metrazol were studied in developing male Wistar rats. The initial paroxysmal signs varied according to age. Discharges of waves in the alpha and theta range were seen in 4 to 7-day-old rats, whereas spikes in the frontal area were observed in 11 to 20-day-old rats. The typical mature reaction (theta waves in the occipital area) was seen in rats aged 24 days and older. In 4 and 5-day-old rats, generalized seizures were manifested as slow waves only. A shift toward fast frequencies was observed with development. A substantial part of this shift took place before day 14, after which bilateral synchrony of long lasting discharges was present also. 20 references. (Author abstract modified)

04 MECHANISM OF ACTION: BEHAVIORAL

004065 Alander, T.; Grabowska-Anden, M.; Anden, N.-E. Anden: Dept. of Medical Pharmacology, Box 573, Biomedicum, S-751 23 Uppsala, Sweden **Physiological significance of dopamine autoreceptors as studied following their selective blockade by molindone.** Journal of Pharmacy and Pharmacology. 32(11):780-782, 1980.

Molindone was about four times more potent in blocking the presynaptic effects of apomorphine than in blocking its postsynaptic effects in male Sprague-Dawley rats. Molindone inhibited the effects of apomorphine on dopamine synthesis in a dose as low as 0.45mg/kg, but antagonized the effect of apomorphine on rotation only at doses of 2.75mg/kg or higher. Results are discussed in relation to the physiological role of dopamine autoreceptors. 13 references.

004066 Arnt, Jorn. H. Lundback and Co. A/S, Dept. of Pharmacology and Toxicology, Ottiliavej 7-9, DK-2500 Valby, Denmark **Hyperactivity following injection of a glutamate agonist and 6,7-ADTN into rat nucleus accumbens and its inhibition by THIP.** Life Sciences. 28(14):1597-1603, 1981.

The potent glutamate receptor agonist (R,S)-alpha-3-hydroxy-5-methyl-4-isoxazolepropionic acid (AMPA) was found to induce a dose related hyperactivity after bilateral injection of 0.025 to 0.5mcg into rat nucleus accumbens. The dopamine agonist 6,7-dihydroxy-1,2,3,4-tetrahydronaphthalene (6,7-ADTN) induced a similar effect. The hyperactivity induced by AMPA and 6,7-ADTN was antagonized by cis-Z-flupentixol. Reserpine plus alpha-methyltyrosine inhibited AMPA but not 6,7-ADTN-induced motility. Furthermore, AMPA and 6,7-ADTN-induced motility was antagonized by the GABA agonist THIP after systemic administration and intraaccumbens injection. Results suggest that glutamatergic mechanisms are important in regulation of locomotor activity by influencing mechanisms afferent to dopamine receptors. Both glutamate and dopamine systems are under inhibitory GABAergic control. 27 references. (Author abstract modified)

004067 Arushanyan, E. B.; Shishlyannikova, L. V. Kafedra farmakologii, Chitinskiy meditsinskiy institut, Chita, USSR **/The effect of small doses of haloperidol and clozapine on behavioral shifts in cats, arising after cessation of electrical stimulation of the caudate nucleus./** Vliyaniye malykh doz galoperidola i klozapina na povedencheskiye sdvigi u koshek, voznikayushchiye posle prekrashcheniya elektricheskoy stimulyatsii khvostatogo yadra. Farmakologiya i Toksikologiya. 43(4):364-368, 1980.

The effect of small doses of haloperidol and clozapine on behavioral shifts occurring after cessation of repeated low frequency electrical stimulation of the caudate nucleus head was studied in cats. Results show that haloperidol (0.03 to 0.06mg/kg) and clozapine (0.25mg/kg) facilitated the development of such behavioral shifts, and potentiated this effect. These results show that triggering of tonic inhibitory effects of the nucleus by means of neuroleptics can affect not only motor activity but also mental processes. 13 references. 004068 Ayvazashvili, I. M.; Iordanishvili, G. S.; Nikolaishvili, M. I. no address **/The effect of p-chlorophenylalanine on the distribution of biogenic amines in the brain, and on memory in rats./** Vliyaniye parakhlorfenilalanina na raspredeleniye biogennykh aminov v golovnom mozge i na pamyat' u krys. Soobshcheniya Akademii Nauk Gruzinskoy SSR. 100(1):185-188, 1980.

The effect of parachlorphenylalanine on the distribution of biogenic amines in the brain, and on memory was studied in rats. Results show that: the biochemical changes caused by parachlorphenylalanine, such as the decrease in the ratio of noradrenaline to serotonin in the anterior regions of the cerebral hemispheres and in the hippocampus, altered different types of memory; these changes facilitated the formation and maintenance of an emotional reaction of fear, suppressed the formation and manifestation of conditioned defense behavior, but had no effect on the reproduction and performance of previously elaborated and consolidated defense behavior. 7 references. (Journal abstract modified)

004069 Bell, Graham A.; Morgan, Ian G. Dept. of Behavioural Biology, Research School of Biological Sciences, Australian National University, Canberra ACT 2601, Australia **The effects of colchicine and vinblastine on memory in chicks.** Behavioural Brain Research. 2(3):301-322, 1981.

Colchicine, injected bilaterally into the forebrain of day old chicks at times before and after one trial avoidance learning, was found to produce transient amnesia for one to three hours after learning, that could not be accounted for as a perceptual or attentional defect. The amnesia was dose dependent and was produced only when injections occurred within a limited period before and after learning. Control birds injected with saline of lumicolchicine, a biologically inactive derivative of colchicine, showed normal retention. Vinblastine sulphate, which also interrupts microtubular networks and hence axonal flow, had no amnesic properties. During the amnesic period, there was no evidence of gross perturbation of brain function. It is suggested that the amnesic episode represents destruction of one of the stages of a multiple independent parallel process of memory consolidation. 50 references. (Author abstract modified)

004070 Beninger, Richard J.; Mason, Stephen T.; Phillips, Anthony G.; Fibiger, Hans C. Dept. of Psychology, University of British Columbia, Vancouver, BC, Canada V6T 1Y7 **The use of conditioned suppression to evaluate the nature of neuroleptic-induced avoidance deficits.** Journal of Pharmacology and Experimental Therapeutics. 213(3):623-627, 1980.

The effects of pimozide were studied in male Wistar rats given one way avoidance training in which each trial was initiated by a 10 second tone stimulus and terminated by a shuttle response during the tone (avoidance) or by a response during electric shock (escape). Rats treated with 0.5 or 1.0mg/kg i.p. pimozide failed to acquire the avoidance response, but escaped readily when shock was presented. The same rats were then given several sessions of food reinforced lever-pressing in a different apparatus with no drug treatment. Responding in this model decreased significantly when the tone that had signalled shock in the avoidance sessions was presented for a 1 minute period. This finding indicates that the pimozide treated rats had learned the asociation between the tone and shock, even though they had failed to acquire the avoidance response in the shuttlebox. It is suggested that the neuroleptic treated animals failed to avoid because of a deficit in the ability to initiate responses rather than a deficit in associative learning. 28 references. 004073 Bittner, Stephen E.; Wagner, George C.; Aigner, Thomas G.; Seiden, Lewis S. Seiden: Dept. of Pharmacology and Physiology, University of Chicago, 947 E. 58th St., Chicago, IL 60637 **Effects of a high-dose treatment of methamphetamine on caudate dopamine and anorexia in rats.** Pharmacology Biochemistry and Behavior. 14(4):481-486, 1981.

The effects of d-methamphetamine (MA) on the intake of sweetened condensed milk by male Sprague-Dawley rats were determined before and after treatment with 50mg/kg MA or saline twice daily for 4 days. Animals that were more sensitive to the anorexic effect of MA prior to the high dose treatment were more sensitive to the lethal effects of the high dose treatment. This treatment decreased brain dopamine for 6 months, but did not alter the anorexic or stereotypic behavior elicited by MA. Daily administration of 2.5mg/kg MA 15 minutes before presentation of milk produced tolerance to the drug's anorexic effect in both control and high dose treatment groups. After 4 to 5 weeks of repeated administration of 2.5mg/kg MA milk intake and bodyweight were higher in the control group than in treated rats. 14 references. (Author abstract modified)

004074 Bodnar, Richard J.; Merrigan, Kevin P.; Wallace, Margaret M. Dept. of Psychology, Queens College, CUNY, Flushing, NY 11367 **Analgesia following intraventricular administration of 2-deoxy-D-glucose.** Pharmacology Biochemistry and Behavior. 14(4):579-581, 1981.

Flinch/jump thresholds were studied in male Sprague-Dawley rats 30, 90, and 180 minutes after intraventricular injections of 3.5, 5.0, and 10.0mg/kg 2-deoxy-D-glucose (2-DG) and systemic injections of 350 or 500mg/kg 2-DG. Intraventricular 2-DG injections increased jump thresholds for up to 180 minutes across all test doses. Flinch thresholds also increased, but in a manner dissociated from jump thresholds. Animals with cannulae located near but not in the lateral ventricle displayed delayed analgesic effects. The magnitude of intraventricular 2-DG analgesia was not as great as that of the higher dose systemic injections. 15 references. (Author abstract modified)

004075 Borodkin, Yu. S.; Lapina, I. A.; Bul'on, V. V.; Hartmann, G.; Hahn, J.; Lissak, K. Lab. eksperimental'noy farmakologii, Otdel farmakologii, Institut eksperimental'noy meditsiny AMN SSSR, Leningrad, USSR **/The effect of propylnorantifein on behavioral reactions, adrenocortical activity, and energy metabolism in the animal brain./** Povedencheskiye reaktsii, adrenokortikal'naya aktivnost' i energeticheskiy obmen golovnogo mozga zhivotnykh pri deystvii propilnorantifeina. Farmakologiya i Toksikologiya. 43(4):356-360, 1980.

The effect of propylnorantifein on behavioral reactions, adrenocortical activity and energy metabolism in the rat brain was studied biochemically and by open-field, passive-avoidance, and self-stimulation of the medial bundle of the forebrain and raphe. Results show that: propylnorantifein (5mg/kg) decreased self-stimulation, changed the emotional memory in response to pain stimulation, and increased the concentration of corticosteroids in blood plasma; and for 3 hours after administration there was a reduced amount of glycogen in the brain tissue, and an increased level of creatine phosphate. Results also show that the blockade of alpha-adrenoceptors and beta-adrenoceptors, in particular, drastically reduced the action of the drug. These results suggest that propylnorantifein may activate the adenylate cyclase system in brain tissue. 8 references. (Journal abstract modified)

004076 Botticelli, Lawrence J.; Wurtman, Richard J. Wurtman: Laboratory of Neuroendocrine Regulation, Dept. of Nutrition and Food Sciences, MIT, Cambridge, MA 02139 **Choline reverses naloxone-induced decreases in hippocampal acetylcholine content and suppresses escape behavior in opiate-dependent rats.** Brain Research. 210(1-2):479-484, 1981.

The effects of exogenous choline (Ch) on naloxone precipitated opiate withdrawal were studied in male Sprague-Dawley rats. In morphine dependent rats, naloxone administration significantly decreased hippocampal acetylcholine (ACh) content. This ACh decrease was blocked by pretreatment with Ch. Ch also decreased the severity of the opiate abstinence syndrome: the median effective dose of naloxone required to precipitate escape behavior in morphine dependent rats was tripled by Ch pretreatment. Results suggest that by accelerating ACh synthesis, Ch increases presynaptic stores of ACh and sustains ACh release after opiate withdrawal. 26 references.

004077 Brady, Linda S.; Holtzman, Stephen G. Dept. of Pharmacology, Emory University School of Medicine, Atlanta, GA 30322 **Locomotor activity in morphine-dependent and post-dependent rats.** Pharmacology Biochemistry and Behavior. 14(3):361-370, 1981.

The effects of morphine and naloxone on the locomotor activity of morphine dependent, nondependent, and postdependent male CFE rats were tested. Locomotor activity of dependent and nondependent rats was increased by low doses of morphine and reduced by higher doses; both effects were antagonized by naloxone. Chronic morphine treatment produced marked tolerance to the depressant effect of high morphine doses, but not to the stimulant effect of low doses. Postdependent animals remained tolerant to the depressant effect of high doses of morphine. The development of tolerance to the depressant but not the stimulant effect of morphine in dependent and nondependent animals suggests that different neuronal substrates mediate morphine-induced stimulation and depression of locomotor activity. Abrupt or naloxone precipitated withdrawal generally disrupted locomotor activity in dependent rats. Naloxone also decreased activity in postdependent animals. Thus, chronic morphine administration produced long-lasting changes in the sensitivity of dependent and postdependent rats to the effects of morphine and naloxone on locomotor activity. 22 references. 004078 Brown, Janet; Handley, Sheila L. Handley: Pharmacological Laboratories, Dept. of Pharmacy, University of Aston, Birmingham B4 7ET, England **Effects on the pinna reflex of drugs acting at alpha-adrenoceptors.** Journal of Pharmacy and Pharmacology. 32(6):436-437, 1980.

The effects of alpha-adrenoceptor agonists and antagonists on the pinna reflex (head shaking in response to ear stimulation) were studied in male TO mice. The alpha2-adrenoceptor agonist clonidine, guanfacin, and guanabenz inhibited the pinna reflex in a dose dependent manner, but the alpha1-adrenoceptor agonists methoxamine and oxymetazoline were ineffective after subcutaneous administration. The inhibitory affects of the alpha2-adrenoceptor agonists were antagonized by the alpha2-adrenoceptor antagonists yohimbine and piperoxane, but not by the alpha1-adrenoceptor antagonist prazocin. 12 references.

004079 Cappeliez, P.; White, N. White: Dept. of Psychology, McGill University, 1205 Dr. Penfield Avenue, Montreal, Quebec, Canada **Lithium induces dose-related increases and decreases in activity levels in the rat.** Psychopharmacology. 73(1):34-38, 1981.

The effect of intraperitoneal lithium chloride on the activity levels of rats was measured by counting photocell interruptions in an open-field. Treatment with 0.15mEq/kg increased activity and 1.5mEq/kg decreased activity. In a second experiment, behavioral observations were added to the photocell counts of open-field activity, and the increase observed with 0.15mEq/kg LiCl in Experiment 1 was compared with the increase in open-field activity produced by 0.4g/kg ethanol. The two drugs produced similar increases in cell counts and walking, and similar decreases in sitting and sniffing. Lithium produced significantly more rearing and behavior directed at the cage than did ethanol. Following Johnson's hypothesis of lithium action, these findings are discussed in the context of lithium-induced changes in responsiveness to the environment. It is suggested that, at 0.15mEq/kg, lithium chloride might increase reactivity to the environment. 37 references. (Author abstract)

004080 Carey, Michael P.; Ross, John A.; Enns, Melvin P. Enns: Dept. of Psychology, St. Lawrence University, Canton, NY 13617 **Naloxone suppresses feeding and drinking but not wheel running in rats.** Pharmacology Biochemistry and Behavior. 14(4):569-571, 1981.

The effects of naloxone hydrochloride on wheel running and food and water intake were studied in male Long-Evans rats. The 3 hour food and water intake of nondeprived rats was suppressed by 10mg/kg naloxone but not by 1mg/kg. Neither dose of naloxone altered the number of wheel revolutions in food deprived or nondeprived animals. Results indicate that the suppressive effects of naloxone are specific to feeding and drinking. 14 references. (Author abstract modified)

004081 Carli, Giancarlo; Farabollini, Francesca; Fontani, Giuliano. Istituto di Fisiologia Umana, Universita di Siena, Via Laterina 8, I-53100 Siena, Italy **Effects of pain, morphine and naloxone on the duration of animal hypnosis.** Behavioural Brain Research. 2(3):373-385, 1981.

The effects of pain, morphine, and naloxone on the duration of animal hypnosis (tonic immobility) were investigated in rabbits. Long lasting irritative pain, produced within 15 minutes of formalin injection, potentiated the duration of hypnosis. Morphine, in the absence of painful stimuli, also potentiated hypnosis duration, and this effect was antagonized by naloxone. Naloxone reduced hypnosis duration, but only at high doses (15mg/kg). In a condition of irritative pain, the potentiation of hypnosis duration was abolished by naloxone (5mg/kg). Hypnosis response was abolished in six out of seven morphine tolerant rabbits, but prolonged pain restored the response. The hypothesis that an opioid mechanism may be activated during animal hypnosis is discussed. 63 references. (Author abstract modified)

004082 Caruso, Thomas P.; Larson, Dennis L.; Portoghese, P. S.; Takemori, A. E. Takemori: Dept. of Pharmacology, 3-260 Millard Hall, 435 Delaware St., S.E., University of Minnesota, Minneapolis, MI 55455 **Pharmacological studies with an alkylating narcotic agonist, chloroxymorphamine, and antagonist, chlornaltrexamine.** Journal of Pharmacology and Experimental Therapeutics. 213(3):539-544, 1980.

The binding of 3H-naltrexone to male Swiss-Webster mouse brain homogenates was irreversibly inhibited by chloroxymorphamine (COA) and chlormaltrexamine (CNA), which are the 6-bis(2-chloroethyl)amino derivatives of oxymorphone and naltrexone respectively. Intracerebroventricular (i.c.v.) administration of COA (4nmol) elicited analgesia that lasted four times longer than analgesia produced by an equimolar and equieffective dose of oxymorphone. Analgesia induced by COA could be reversed and blocked by naloxone. COA and CNA (i.c.v.) both antagonized morphine-induced analgesia for 3 days. Total specific binding of 3H-naltrexone was also significantly decreased for 3 days after treatment with CNA or COA. Results suggest that CNA and COA alkylate the opioid receptors to produce antagonist and agonist/antagonist effects, respectively. Results are discussed in relation to mechanisms of tolerance and dependence. 23 references. (Author abstract modified)

004083 Castellani, S.; Adams, P. M. Dept. of Psychiatry and Behavioral Sciences, University of Texas Medical Branch, Galveston, TX 77550 **Effects of dopaminergic drugs on phencyclidine-induced behavior in the rat.** Neuropharmacology. 20(4):371-374, 1981.

The effects of dopaminergic drugs on behavior induced by 2.0, 4.0, or 6.0mg/kg phencyclidine in male Fischer-344 rats were studied. Haloperidol (0.5mg/kg) inhibited phencyclidine-induced stereotypy and locomotor activity, but increased phencyclidine-induced ataxia. Apomorphine (0.2mg/kg) inhibited locomotor activity induced by 2.0mg/kg phencyclidine, but enhanced locomotor activity induced by the larger doses. Apomorphine also potentiated phencyclidine-induced stereotypy. Results indicate that dopaminergic mechanisms are involved in phencyclidine-induced behavior. 23 references. (Author abstract modified)

004084 Chau, Thuy T.; Harris, Louis S. Dept. of Pharmacology, Medical College of Virginia, MCV Station, Box 613, Richmond, VA 23298 **Comparative studies of the pharmacological effects of the d- and l-isomers of codeine.** Journal of Pharmacology and Experimental Therapeutics. 215(3):668-672, 1980.

Comparative studies of the pharmacological effects of the d-isomer and l-isomers of codeine are described. l-Codeine was active in the mouse tail flick test as well as in the hotplate test whether given p.o. or s.c. The d-isomer of codeine was inactive in both tests up to 100mg/kg, but caused hyperexcitability, convulsions, and ultimately death. Although l-codeine was more potent than d-codeine in inhibiting the cough reflex in the anesthetized cat, the d-isomer did have good activity. In these animals, l-codeine did not significantly affect the cardiovascular parameters at the doses tested, whereas d-codeine caused a significant but transient decrease in the blood pressure and heartrate. The specific and nonspecific properties of d-codeine and l-codeine were further delineated in the opiate receptor binding assay. l-Codeine inhibited the stereospecific binding of (3H)dihydromorphine in mouse brain homogenates at loser dosage than did d-codeine. 20 references. 004085 Chen, F. F.; Lin, M. T. Lin: Dept. of Physiology and Biophysics, N.D.M.C., P.O. Box 8244, Taipei, Taiwan 107 **Effects of dopamine, apomorphine, gamma-hydroxybutyric acid, haloperidol and pimozide on reflex bradycardia in rats.** Journal of Pharmacology and Experimental Therapeutics. 214(2):427-432, 1980.

The cardiovascular responses to i.v. doses of epinephrine were assessed in vehicle controlled, dopamine treated, apomorphine treated, GABA treated, haloperidol treated, and pimozide treated rats under urethan anesthesia. Previous exposure to several injections of epinephrine did not change the basal values of arterial pressure and heartrate. Dopaminergic transmission alterations in the brain influenced the reflex bradycardia in response to elevation in arterial pressure. Blockade of brain dopaminergic receptors with either haloperidol or pimozide significantly reduced reflex bradycardia. Either direct activation of central dopaminergic receptors with dopamine and apomorphine or indirect activation with GABA enhanced epinephrine-induced bradycardia. Results indicate that central dopamine systems play a role in the elaboration or modulation of reflex bradycardia. Specifically, brain dopamine appears to facilitate reflex bradycardia, since activation of dopamine systems facilitates and blockade inhibits reflex bradycardia. 27 references. (Author abstract modified)

004086 Clark, M. S. G.; Johnson, A. M.; McClelland, G. R.; Nelson, D. R. Beecham Pharmaceuticals Research Division, Harlow, Essex, England **Pharmacological and biochemical properties of BRL 14342, a novel potential antidepressant drug.** Neuropharmacology. 19(12):1207-1208, 1980.

Pharmacological and biochemical properties of BRL 14342, a novel potential antidepressant drug, are described. The results of animal studies indicate that BRL 14342 is a noradrenaline (NA) and 5-hydroxytryptamine (5-HT) uptake blocker with a low propensity to cause side-effect in vivo. Results also indicate that it should possess significant antidepressant activity with low sedative, anticholinergic, and cardiovascular side-effects. This, together with increased relative potency in tests predictive of therapeutic activity, indicates that BRL 14342 should have a larger margin of tolerance than imipramine. 9 references.

004087 Collier, Harry O. J.; Cuthbert, Nigel J.; Francis, David L. Research Dept., Miles Laboratories Limited, Stoke Poges, Slough, Berkshire, SL2 4LY, England **Character and meaning of quasi-morphine withdrawal phenomena elicited by methylxanthines.** Federation Proceedings. 40(5):1513-1518, 1981.

The character and meaning of quasimorphine withdrawal phenomena elicited by methylxanthines are described. 3-isobutyl-1-methylxanthine (IBMX), theophylline, caffeine, ICI 63197, and RO 201724 are cited as drugs that fulfill the criteria of quasimorphine withdrawal syndrome. It is concluded that these drugs act by inhibiting brain cyclic AMP phosphodiesterase, thus raising the level of cyclic AMP in appropriate neurons. These findings are consistent with the view that the molecular mechanism of opiate dependence is the hypertrophy of a neuronal cyclic AMP system in compensation for the inhibition by opiate of an adenylate cyclase. These studies suggest that: 1) very rapid tests for opiate activity and for addictive liability can be devised by use of IBMX; 2) opiates may be used clinically to counter poisoning by caffeine or theophylline; and 3) a relationship may exist between caffeine consumption and opiate addiction. 22 references. 004088 Colpaert, Francis C.; Niemegeers, Carlos J. E.; Janssen, Paul A. J. Dept. of Pharmacology, Janssen Pharmaceutica Research Laboratories, B-2340 Beerse, Belgium **Factors regulating drug cue sensitivity: limits of discriminability and the role of a progressively decreasing training dose in fentanyl-saline discrimination.** Journal of Pharmacology and Experimental Therapeutics. 212(3):474-480, 1980.

The roles of physiological sensitivity and of training dose in the apparent sensitivity of rats to the discriminative stimulus properties of the narcotic analgesic fentanyl were examined. Rats were trained to discriminate 0.04 mg/kg of fentanyl from saline in a two lever operant procedure and then were retrained on progressively lower doses of the training drug. Stimulus generalization experiments revealed: 1) that the slope of fentanyl's stimulus generalization gradient is relatively steep at training dose 0.04mg/kg and 0.02mg/kg, but may flatten as the training dose is lowered further; 2) that fentanyl's ED50 value for stimulus generalization is directly proportional to training dose; and 3) that the ED50 is an almost constant fraction of training dose at fentanyl training doses ranging from 0.04mg/ to 0.005mg/kg. It is concluded that training dose is a major determinant of the apparent sensitivity of rats to the discriminative stimulus properties of drugs. 24 references. (Author abstract modified)

004089 Commissaris, R. L.; Semeyn, D. R.; Moore, K. E.; Rech, R. H. Dept. of Psychiatry, Yale University School of Medicine, 34 Park St., New Haven, CT 06508 **The effects of 2,5-dimethoxy-4-methylamphetamine (DOM) on operant behavior: interactions with other neuroactive agents.** Communications in Psychopharmacology. 4(5):393-404, 1980.

The effects of 2,5-dimethoxy-4-methylamphetamine (DOM) and other stimulant and hallucinogenic agents on food reinforced, fixed-ratio operant responding were investigated. It is noted that hallucinogens produce a disruption of this operant responding characterized by long periods of nonresponding (pausing). On the other hand, central stimulant or depressant drugs produce slowed and erratic response rates not characterized by pausing. Coadministration of the hallucinogens d-lysergic acid diethylamide (LSD) and mescaline shifted to the left the dose response curve for the pausing produced by DOM. Coadministration of quipazine and m-chlorophenylpiperazine (MCPP) also shifted to the left the DOM dose response curve. Moreover, coadministration of cinanserin dramatically antagonized the pause producing effect of DOM, as evidenced by an approximately fourfold shift to the right in the dose response curve. Coadministration of the indirect dopamine agonist d-amphetamine or the neuroleptics haloperidol and chlorpromazine failed to alter the dose dependent pausing produced by DOM. These data suggest that the pause producing effects of DOM are related to serotonin agonistic actions of this agent and not to interactions with DA neurons in the brain. 19 references. 004090 Cooper, Steven J.; Burnett, Gary; Brown, Kenneth. Dept. of Psychology, University of Birmingham, Birmingham, B15 2TT England **Food preference following acute or chronic**

chlordiazepoxide administration: tolerance to an antineophobic action. Psychopharmacology. 73(1):70-74, 1981.

The two actions of chlordiazepoxide (CDP) on rats in a food preference test (first, a general appetite enhancing effect; and second, an antineophobic effect) were studied. Following acute injection of CDP, the rats changed from eating predominantly familiar food to a novel food. This may signify an antineophobic effect of CDP. However, following 10 days of treatment with CDP, the antineophobic effect was abolished and the choice of familiar food was enhanced. This could be an indication of a more general appetite enhancing effect. Hence, some form of tolerance may develop to CDP's effects over 10 days of treatment which selectively abolishes antineophobic action while leaving the appetite effect further enhanced. There were no indications of tolerance developing to the actions of CDP in animals familiarized with all the test foods before the preference test was run. Hence the presence of food novelty may be critical to the observation of some form of selective tolerance. 27 references. (Author abstract modified)

004091 Corner, M. A.; Mirmiran, M.; Bour. H. L. M. G.; Boer, G. J.; van de Poll, N. E.; van Oyen, H. G.; Uylings, H. B. M. Netherlands Institute for Brain Research, Amsterdam, The Netherlands **Does rapid-eye-movement sleep play a role in brain development?** Progress in Brain Research. 53:347-356, 1980.

The importance of REM sleep for normal brain development was studied in rats. Daily injections of chlorimipramine were used to suppress REM sleep in rat pups during postnatal weeks 2 and 3. No REM rebound was observed the week after the drug was discontinued. In adulthood, however, treated male rats showed a sizeable increase and intensification of REM sleep. Sexual performance was severely deficient, and open-field performance revealed an abnormally high level of anxiety. Postmortem brain examination revealed a selective enlargement of the hypothalamus in the treated males, along with reduced cell number in the cerebral cortex. In treated females, the hippocampus and cerebral cortex were clearly enlarged and accounted for a significantly higher total brain weight in the experimental group. It is suggested that disturbances in monoamine metabolism can drastically reduce REM sleep during infancy and lead to specific brain and behavior abnormalities in later life. 23 references.

004092 Costall, Brenda; Naylor, Robert J.; Nohria, Virinder. Postgraduate School of Studies in Pharmacology, University of Bradford, Bradford, BD7 1DP, England **Use of the intracerebral injection technique to elucidate mechanisms of apomorphine climbing and its antagonism in the mouse.** Psychopharmacology. 73(1):91-94, 1981.

Mechanisms of apomorphine climbing and its antagonisms were studied in the mouse using the intracerebral injection technique. Climbing behavior induced by peripherally administered apomorphine in the mouse was reduced by bilateral intraaccumbens fluphenazine, (and -) and (-) sulpiride, and by serotonin, but not by () sulpiride, dl-propranolol, phentolamine, atropine, or methysergide. A specific antagonism of climbing could not be shown when fluphenazine was injected into the striatum, hypothalamus, thalamus, reticular formation, frontal cortex, or cerebellum, but was apparent when a large dose of fluphenazine was placed below (but not above) the accumbens nucleus. 6-Hydroxydopamine denervation of the nucleus accumbens did not alter the climbing antagonism afforded by fluphenazine, although sulpiride was threefold more effective following denervation. The data indicate an accumbens involvement in the climbing phenomenon, that sulpiride more effectively antagonizes climbing after accumbens denervation, and that the presumed dopamine agonist/antagonist interaction in the accumbens, which controls climbing, may also involve serotonergic function. the studies emphasize the value of the intracerebral injection technique to an analysis of drug action in the mouse. 13 references. 004093 Cowan, Alan. Dept. of Pharmacology, Temple University School of Medicine, Philadelphia, PA 19140 **RX 336-M, a new chemical tool in the analysis of the quasi-morphine withdrawal syndrome.** Federation Proceedings. 40(5):1497-1501, 1981.

The pharmacological baselines that link disparate agents that induce wet dog shaking (RX 336-M, AG-3-5, Sgd 8473, thyrotropin releasing hormone (TRH), and sodium valproate) were studied using RX 336-M as the reference shake inducing compound. Peripheral administration of clonidine, haloperidol, d-lysergic acid diethylamide, or morphine suppressed chemically-induced shaking; naloxone had no marked effect. Cross-tolerance interactions were asymmetrical. In view of the unidirectional nature of the cross-tolerance relationships studied, it is concluded that AG-3-5, Sgd 8473, sodium valproate, and TRH initiate wet dog shaking through neural substrates that differ from the one(s) associated with RX 336-M. Nevertheless, all five compounds may eventually trigger a common shake inducing mechanism. 50 references. (Author abstract modified)

004094 Crabbe, J. C.; Young, E. R.; Janowsky, J.; Rigter, H. Medical Research Service, Veterans Administration Medical Center, Portland, OR 97201 **Pyrazole exacerbates handling-induced convulsions in mice.** Neuropharmacology. 20(6):605-609, 1981.

The severity of handling induced convulsions declined in male Swiss-Webster mice over 4 days of testing. Daily injections of pyrazole, an inhibitor of alcohol dehydrogenase, prevented the reduction in convulsions in handled mice. Pyrazole also exacerbated convulsions in mice at initial test sessions. The effects of pyrazole were dose related. 31 references. (Author abstract modified)

004095 Daniel, Stephen A.; Thompson, Travis. Institute of Environmental Medicine, New York University Medical Center, 550 First Avenue, New York, NY 10016 **Methadone-induced attenuation of the effects of delta9-tetrahydrocannabinol on temporal discrimination in pigeons.** Journal of Pharmacology and Experimental Therapeutics. 213(2):247-253, 1980.

Methadone-induced attentuation of the effects of delta9-tetrahydrocannabinol (delta9-THC) on temporal discrimination in pigeons was investigated. Pigeons responded under a discrete trial procedure in which they were required to peck one or two keys depending on the duration of conditional stimulus. Correct choices resulted in the intermittent presentation of food; incorrect choices resulted in a darkened chamber. Intermediate durations were also presented occasionally. Delta9-THC resulted in a dose dependent decrease in accuracy with the greater effect on long duration trials. Repeated methadone alone resulted in a decrease in accuracy only when the methadone dose was changed. High doses of methadone resulted in either a complete or partial attenuation of effects of THC on temporal discrimination accuracy as compared to a low methadone dose or THC alone. Results suggest the possibility of cross-tolerance or antagonism between methadone and THC. 45 references. (Author abstract modified)

004096 Das, M.; Ganguly, D. K.; Vedasiromoni, J. R. Div. of Pharmacology and Experimental Therapeutics, Indian Inst. of Experimental Med., 4, Raja S. C. Mullick Road, Calcutta-700 032, India **Anti-tremor action of C10Dichol, a peripheral acetylcholine synthesis inhibitor.** British Journal of Pharmacology. 71(1):349-353, 1980.

The antitremor action of decamethylene bis-(hydroxyethyl)-dimethylammonium bromide (C10Dichol), a peripheral acetylcholine synthesis inhibitor, was investigated. C10Dichol inhibited tremor induced by oxotremorine, nicotine, and physostigmine and afforded partial protection from physostigmine-induced mortality in mice. In nonparalyzing doses, C10Dichol antagonized the neuromuscular effects of oxotremorine, nicotine, and physostigmine. Pretreatment with C10Dichol did not prevent tremor and neuromuscular paralysis induced by harmine or arecoline. These findings indicate it may be possible to develop peripherally acting drugs for the treatment of Parkinson's disease. 26 references. (Author abstract modified)

004097 Davis, Hasker P.; Rosenzweig, Mark R.; Kinkade, Patrick T.; Bennett, Edward L. New York Hospital, Cornell Medical Center, Dept. of Neurology, 525 East 68th St., New York, NY 10021 **Effects of anisomycin on retention of the passive-avoidance habit as a function of age.** Experimental Aging Research. 7(1):33-44, 1981.

Three age groups of male Swiss albino CD-1 mice (2 to 3 months, 6 to 7 months, and 14 to 15 months) were treated with a 120mg/kg dose of the protein synthesis inhibitor anisomycin or with an equal volume of saline at various times before and after training (20 min pretraining and 0, 10, 30, or 180 min posttraining) in a shock motivated passive-avoidance task. Young and intermediate aged mice treated before or after training demonstrated impaired retention at a 7 day test, but retention was normal for Ss injected 10, 30, or 180 min posttraining. The older mice showed similar results with one exception: there is a reduction in the incorporation of (1-14C) leucine into the synaptosomal brain fraction of 12-month-old mice as compared to the 3-month-old mice. The prolonged gradient of retrograde amnesia demonstrated in older Ss could not be accounted for by impaired acquisition, impaired short-term memory, altered spontaneous locomotor activity, or differential inhibition of brain protein synthesis. 24 references. (Author abstract modified)

004098 Davis, John D.; Wirtshafter, David; Asin, Karen E.; Brief, Deborah. Psychology Dept., University of Illinois, Chicago, IL 60680 **Sustained intracerebroventricular infusion of brain fuels reduces body weight and food intake in rats.** Science. 212(4490):81-83, 1981.

The effects of long-term intracerebroventricular infusions of glucose, glycerol, and beta-hydroxybutyrate on both food intake and bodyweight of the rat were studied. A stabilization of bodyweight at a lower than normal level occurred. Among the glucose treated and glucerol treated animals this weight loss was caused in part by temporary hypophagia. Among the animals treated with beta-hydroxybutyrate the weight loss was unaccompanied by a reduction in food intake. The results are consistent with the view that the systems controlling food intake and bodyweight are sensitive to the availability of brain fuels. They are not consistent, however, with the view that these control systems monitor calories independently of their source. 21 references. (Author abstract modified)

004099 Davis, Kenneth L.; Rosenberg, Gordon S. Bronx V.A. Medical Center, 130 West Kingsbridge Road, Bronx, NY 10468 **Induction of behavioral supersensitivity to apomorphine by DFP treatment.** Life Sciences. 28(17)1953-1959, 1981.

The effect of diisoflurophosphate (DFP), a long-acting inhibitor of acetylcholinesterase, on apomorphine-induced climbing behavior, was tested in mice. Twelve hours following intraperitoneal administration of a single dose of DFP, animals demonstrated a significant increase in apomorphine-induced climbing behavior. This effect was not observed 24 hours following DFP pretreatment. Results suggest that acute administration of a cholinomimetic agent, may produce behavioral supersensitivity to dopamine agonists. 42 references. (Author abstract modified)

004100 Dawbarn, D.; Harmar, A. J.; Pycock, C. J. Dept. of Pharmacology, Medical School, University of Bristol, Bristol BS8 1TD, England **Intranigral injection of capsaicin enhances motor activity and depletes nigral 5-hydroxytryptamine but not substance P.** Neuropharmacology. 20(4):341-346, 1981.

Locomotor activity in female Porton rats was enhanced for up to 6 days after bilateral injections in the pars reticulata of the substantia nigra of 30mcg capsaicin dissolved in dimethyl sulphoxide (DMSO), compared to the activity of DMSO sham injected controls. Capsaicin also reduced the cataleptic effects of fluphenazine. Nigral concentrations of 5-hydroxytryptamine and 5-hydroxyindoleacetic acid were decreased and striatal and nucleus accumbens levels of dopamine metabolites were increased on days 1 and 3 after intranigral capsaicin injection. No changes in nigral substance-P content were observed after intranigral injection of capsaicin. 26 references. (Author abstract modified)

004101 De Lima, Thereza C. M.; Palermo-Neto, Joao. Laboratorio de Farmacologia, Universidade Federal de Santa Catarina, Rua: Ferreira Lima, 26 - Florianopolis, S.C. - CEP 88,000, Brazil **Effects of withdrawal from long-term diphenylhydantoin treatment on audiogenic and maximal electroshock-induced seizures in rats.** Acta Neurologica Scandinavica. 63(3):189-196, 1981.

The effects of diphenylhydantoin (DPH) withdrawal on rats' reactions to maximal electroshock and sound were investigated. Animals were more sensitive to convulsions elicited by maximal electroshock at 48 hours after drug removal and more sensitive to convulsions elicited by sound 72 hours after drug removal. Results of experiments with food deprived rats show that the cause of this sensitivity is not vitamin B6 deficiency. Results suggest that long-term DPH treatment might develop a central nervous system supersensitivity state. 29 references. (Author abstract modified)

004102 Dhumal, V. R.; Bhavsar, V. H. Pharmacology Dept., Government Medical College, Surat - 395 001, India **Antagonism of some central effects of d-tubocurarine by gamma-aminobutyric acid.** Archives Internationales de Pharmacodynamie et de Therapie. 248(1):148-153, 1980.

Intracerebroventricular (i.c.v.) administration of d-tubocurarine (dtc) to rats produced seizures which could be blocked by i.c.v. administration of GABA or i.p. administration of hydroxylamine. GABA was not effective after i.p. administration. Local application of dtc to the spinal cord of decerebrate dogs facilitated the scratch reflex, whereas GABA application inhibited the scratch reflex. It is concluded that the excitatory effects of dtc on the CNS may be due to inhibition of a naturally occurring inhibitory substance such as GABA or a closely related compound. 6 references. 004103 Donovick, Peter J.; Burright, Richard G.; Fanelli, Richard J.; Symchowicz, Beatrice; Ritz, Andrew. Dept. of Psychology, SUNY, Binghamton, NY 13901 **Cocaine and seizure protection in mice of varying brain weights.** Pharmacology Biochemistry and Behavior. 14(3):409-414, 1981.

The effects of cocaine on seizures were studied in mice genetically selected for different brain weights. Fuller low brain weight mice were more susceptible to seizures induced by transcorneal shock and exhibited more severe seizures than Fuller medium and high brain weight mice or mice of Binghamton Heterogeneous stock. Cocaine hydrochloride (5, 10, or 20mg/kg) provided protection against seizures in a dose dependent fashion, particularly in medium brain weight and Heterogeneous stock mice. Repeated daily doses of cocaine (10mg/kg) also decreased the severity of seizures induced by transcorneal shock. 23 references. (Author abstract modified)

004104 Dum, Jane; Blasig, Julia; Herz, Albert. Herz: Dept. of Neuropharmacology, Max-Planck-Institut fur Psychiatrie, Kraepelinstrasse 2, D-8000, Munchen 40, West Germany **Buprenorphine: demonstration of physical dependence liability.** European Journal of Pharmacology. 70(3):293-300, 1981.

Male Sprague-Dawley rats treated chronically with buprenorphine (0.5mg/kg twice daily for 4 days) developed complete tolerance to the antinociceptive effects of the drug, but showed only weak signs of withdrawal upon cessation of buprenorphine treatment or naloxone challenge. More intense withdrawal signs were observed when buprenorphine treatment was followed by substitution treatment with morphine. A single 10mg/kg injection of morphine 12 hours after the last buprenorphine injection enabled naloxone precipitation of withdrawal, even though naloxone did not precipitate withdrawal after this dose of morphine in naive rats. Results indicate that buprenorphine does induce limited dependence. The weakness of the withdrawal signs produced by buprenorphine in direct dependence tests is probably due to the slow dissociation of the drug from the receptor. 14 references. (Author abstract modified)

004105 Dumont, C.; Laurent, J.; Grandadam, A.; Boissier, J. R. Centre de Recherches Roussel-Uclaf, F-93230 Romainville, France **Anorectic properties of a new long acting serotonin uptake inhibitor.** Life Sciences. 28(17):1939-1945, 1981.

RU 25591 (6,7,8,9-tetrahydro N,N-dimethyl 5-(4-nitrophenyl) oxy 5H-benzocyclohepten 7-amine) cis, fumarate, a potent, selective and long-acting serotonin uptake inhibitor was examined for anorectic properties. It was found that RU 25591 reduced food intake in rats, dogs, and pigs. Kinetics in single dosed animals showed that the duration of RU 25591 food intake depression was shorter than in vivo serotonin uptake inhibition. In repeated dosing treatment, a progressive time related decrease in the inhibition of food consumption was observed which was more evident in pigs than in dogs. The anorectic activity of RU 25591 does not depend exclusively on its ability to block serotonin uptake. However, available biochemical results do not permit exact specification of its mechanism of action. 27 references. (Author abstract modified)

004106 Dykstra, Linda A. Dept. of Psychology 013A, University of North Carolina, Chapel Hill, NC 27514 **Discrimination of electric shock: effects of some opioid and nonopioid drugs.** Journal of Pharmcology and Experimental Therapeutics. 213(2):234-240, 1980.

The effects of some opioid analgesics (methadone, propoxyphene, pentazocine, cyclazocine and nalorphine) were examined on the discrimination of electric shock in squirrel monkeys. Discrimination of the presence of absence of shock was studied at two different shock intensities: 1) an intensity below which squirrel monkeys maintain a shock under schedules of shock titration; and 2) an intensity determined to be close to each monkey's discrimination threshold. Methadone, pentazocine, cyclazocine, and nalorphine but not propoxyphene decreased to the percentage of correct response at both shock intensities, without altering percentage of correct responses in the absence of shock. It appears that drug-induced alterations in the percentage of correct responses in the presence of shock are related to the physical properties of the shock, with lower intensities affected more than higher intensities. 36 references. 004107 Dzhaliashvili, T. A.; Akhalkatsi, R. G.; Iordanishvili, G. S.; Ayvazashvili, I. M. Institut fiziologii im. I. S. Beritashvili, Akademiya nauk GruzSSR, Tbilisi, USSR **/A study of the effect of neuropharmacological drugs on the functional activity of rat brain./** Issledovaniye vliyaniya neyrofarmakologicheskikh veshchestv na funktsional'nuyu aktivnost' golovnogo mozga krys. Ukrainskiy Biokhimicheskiy Zhurnal. 53(2):109-114, 1981.

The effect of neuropharmacological drugs on the functional activity of the rat brain was studied in relation to RNA synthesis and animal behavior. Phosphodiesterase, adenyl cyclase, and monoaminoxidase activity in glial cells was investigated. Results show that glial cells have high phosphodiesterase, adenyl cyclase and monoaminoxidase-A activity. The neuropharmacological drugs, reserpine and transamine, affect RNA synthesis in vivo, but have no effect in vitro. Transamine and reserpine accelerate the formation of the conditioned defensive reflex, but they strongly inhibit the reproduction of this reflex. 21 references. (Journal abstract)

004108 Elmazar, M. M. A.; Sullivan, F. M. Sullivan: Dept. of Pharmacology, Guy's Hospital Medical School, London SE1 9RT, England **Effect of prenatal phenytoin administration on brain tryptophan metabolism of rat offspring during the preweaning period.** Journal of Pharmacy and Pharmacology. 32(10):697-700, 1980.

Brain tryptophan metabolism was studied in offspring of Wistar rats treated with phenytoin (100mg/kg/day) on days 7 to 19 of pregnancy. Serum tryptophan and brain concentrations of tryptophan, 5-hydroxytryptamine, and 5-hydroxyindoleacetic acid were above control levels at 3 days of age, but not at 4, 15, or 21 days of age. The effect of prenatal phenytoin exposure was not apparent at 3 days of age in pups cross-fostered to control mothers at 2 days of age. Results suggest that the altered brain tryptophan metabolism observed in offspring of phenytoin treated rats was mediated through changes in lactation or nursing ability of the mothers. 21 references. 004109 Endroczi, E. Central Research Division, Postgraduate Medical School, Budapest, Hungary **ACTH-like peptides, pituitary-adrenocortical function and avoidance behavior.** Progress in Brain Research. 53:111-121, 1980.

The interactions of ACTH-like peptides (ALP), cholinomimetics, and opiates on corticotropin releasing hormone (CRH) secretory elements are reviewed. The role of noradrenergic and opiate receptor mechanisms in the behavioral effects of ALP are also discussed. Effects of dibutyryl cyclic GMP on CRH release and on behavior are described. Studies of pituitary/adrenocortical function indicate that cholinergic and opiate mechanisms are involved in activation of CRH neurosecretory elements. Data from studies of extinction of avoidance responses in rats indicate that ALP exert multiple action on cells with different receptive sites and that activation of brain noradrenergic systems is not necessarily coupled to extinction of conditioned responses. 34 references.

004110 Engel, Jorgen; Berggren, Ulf. no address **Effects of lithium on behaviour and central monoamines.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):133-143, 1980.

Biochemical and behavioral studies of the effects of acute lithium administration on central catecholamine mechanisms are described. Acute administration of lithium: 1) specifically suppressed a conditioned avoidance behavior in rats; 2) markedly reduced amphetamine-induced locomotor stimulation in mice; and 3) caused a significant reduction of catecholamine synthesis but not serotonin synthesis in rats. The finding that the administration of L-DOPA counteracts the behavioral effects of lithium indicates a causal relationship between the behavioral and biochemical effects of acute lithium administration and supports the contention that lithium may act by interfering with central catecholaminergic mechanisms. Taken together with previous findings, these data cast doubt upon the contention that lithium acts by directly inhibiting tyrosine hydroxylase. A panel discussion of these findings is appended. 21 references.

004111 Ervin, Gregory N.; Birkemo, Larry S.; Nemeroff, Charles B.; Prange, Arthur J., Jr. Biological Sciences Research Center, Dept. of Psychiatry, University of North Carolina, School of Medicine, Chapel Hill, NC 27514 **Neurotensin blocks certain amphetamine-induced behaviours.** Nature. 291(5810):73-76, 1981.

The behavioral effects of bilateral injections of either neurotensin (NT) or haloperidol (HA) into the nucleus accumbens of rats were investigated. Such injections markedly diminished the forward locomotion and rearing induced by a d-amphetamine (AM). Neither NT nor HA affected the insomnia or sniffing component of AM arousal. Isovolumetric intraaccumbens injections of artificial CSF or the endogenous decapeptide, luteinizing hormone releasing hormone (LHRH) did not affect AM behaviors. It is suggested that the observed effects of NT and HA in AM treated rats probably were not due to impaired motor function per se, since intraaccumbens injections of NT or HA neither altered forward locomotion or rearing in untreated rats placed in an open field nor a variety of reflex activities. In contrast, NT did not produce neuroleptic-like effects when injected into nucleus caudatus; HA blocked stereotyped sniffing, licking, biting, and head bobbing observed after AM, but NT did not. Since NT and dopamine are present in substantial quantities in the nucleus accumbens, it is suggested that NT may act in the nucleus accumbens to modulate dopaminergic function. 21 references. 004112 Fink, J. Stephen; Reis, Donald J. Reis: Lab. of Neurobiology, Dept. of Neurology, Cornell University Medical College, 1300 York Ave., New York, NY 10021 **Genetic variations in midbrain dopamine cell number: parallel with differences in responses to dopaminergic agonists and in naturalistic behaviors mediated by central dopaminergic systems. (Unpublished paper).** Research Report, NIMH Grant 5RO1-MH-33190, 1980. 36 p.

Mice of the BALB/cJ and CBA/J strains were compared with respect to the magnitude of the behavioral responses to two dopamine (DA) agonists with differing modes of action: amphetamine, a drug whose action is largely mediated by releasing DA presynaptically; and apomorphine, a drug whose behavioral actions are principally mediated by direct activation of DA receptors. The mice strains were examined for differences in spontaneous locomotion and exploration, both behaviors being dependent on DA systems. Since the locomotor effects of amphetamine and exploration are largely mediated by mesolimbic (A10) neurons, the activity of tyrosine hydroxylase (TH) was compared between strains in regions receiving that innervation. A variety of differences were noted between the strains, and the findings indicate genetic variations in the neurochemical parameters of neurotransmitter content, turnover, and biosynthetic enzyme activity correlated with behavior and drug response. The results raise the possibility that variations in numbers of neurons of a particular chemical class may be the common biological denominator which underlies genetically determined differences in the content of their neurotransmitters and/or their synthesizing enzymes. The findings may also have clinical relevance with respect to degenerative disorders of the CNS, such as Parkinson's disease. 39 references.

004113 Forster, Christine; Parkes, Janet; Cox, B. Dept. of Pharmacology, Materia Medica and Therapeutics, Manchester University Medical School, Manchester M13 9PT, England **Effects of olfactory bulbectomy and peripherally-induced anosmia on thermoregulation in the rat: susceptibility to antidepressant type drugs.** Journal of Pharmacy and Pharmacology. 32(9):630-634, 1980.

The mechanism underlying the thermoregulatory deficit in male Sprague-Dawley rats observed at low ambient temperatures after olfactory bulbectomy was studied. Rats made peripherally anosmic with zinc sulfate did not show a thermoregulatory deficit, which suggests the deficit observed after surgical ablation of the olfactory bulbs is not related to anosmia per se. The abnormal response to cold in bulbectomized animals was blocked by chronic daily administration of amitriptyline (10mg/kg), mianserin (10mg/kg), or the 5-hydroxytryptamine (5-HT) uptake inhibitor Org-6582 (10mg/kg) for 7 days. It is suggested that serotonergic mechanisms may be involved in the thermoregulatory deficit and other behavioral changes observed after olfactory bulbectomy. 16 references. 004114 Foster, John A.; Morrison, M.; Dean, S. J.; Hill, M.; Frenk, H. 23272 Strathern St., Canoga Park, CA 91304 **Naloxone suppresses food/water consumption in the deprived cat.** Pharmacology Biochemistry and Behavior. 14(3):419-421, 1981.

The opiate antagonist naloxone hydrochloride decreased food and water consumption in six drug naive cats. Food consumption during a 1 hour period after 23 hours of deprivation decreased significantly in all six cats in linear relationship to increasing dose (1mg/kg and 10mg/kg i.p.) of naloxone. Water consumption decreased below control in a linear relationship to increasing dose of naloxone for five of the six cats. These results, as well as behavioral signs (vomiting, vocalization, salivation, mydriasis, moderate catatonia, and hissing) occasionally exhibited by four of the cats, suggest that naloxone may induce malaise. 23 references. 004115 Fregnan, G. B.; Chieli, T. Divisione Ricerche Lusofarmaco, Via Carnia 26, I-20132 Milano, Italy **Classical neuroleptics and deconditioning activity after single or repeated treatments: role of different cerebral neurotransmitters.** Arzneimittel-Forschung. 30(11):1865-1870, 1980.

A dose dependent inhibition of conditioned avoidance response (CAR) was documented in trained rats after acute treatment with several neuroleptics: haloperidol; chlorpromazine (CPZ); fluanisone; and 4-p-fluorophenyl-5-N(N'-o-methoxyphenyl)piperazinoethyl-4-oxazolin-2-one(zoloperone, LR 511). The compounds differently affected the unconditioned escape response (UER); haloperidol and LR 511 were least active. Daily treatment with LR 511 or haloperidol for 7 to 16 days did not cause tolerance, and increased the effects of these drugs on CAR and on UER. This supersensitivity did not disappear after more than 30 days without neuroleptic treatment. The effects of acute neuroleptic administration in combination with other centrally active drugs are noted. The role of various neurotransmitters is discussed. 30 references. (Author abstract modified)

004116 Fregnan, G. B.; Porta, R. Divisione Ricerche, Lusofarmaco S.p.A., Via Carnia 26, I-20132 Milano, Italy **A comparison between some biochemical and behavioural effects produced by neuroleptics.** Arzneimittel-Forschung. 31(1):70-74, 1981.

The effect is discussed of a new neuroleptic drug, 4-p-fluorophenyl-5-N(N'-o-methoxy-phenyl)piperazinoethyl-4-oxazolin-2-one (LR 511), on homovanillic acid (HVA) levels of the corpus striatum (CS) and tuberculum olfactorium (TO) of rat brain.

Dopamine (DA) and noradrenaline (NA) levels were determined, and comparative evaluations were made between the conditioned avoidance response test and the catalepsy test. Acute administration of five neuroleptic drugs to rats produced a dose dependent increase in brain HVA which was of greater magnitude and of longer duration in the CS than in the TO. LR 511 appeared to be 5 to 10 times more potent than were fluanisone and clozapine, was as active as was chlorpromazine (CPZ), and was about twenty times less active than was haloperidol. Time course studies on DA turnover indicated that LR 511 at a moderate dosage has some similarities with clozapine (such as a lower difference between striatal and limbic tissues). All the neuroleptics inhibited the conditioned avoidance response and at their ED50s (confidential limits) on this parameter (excluding clozapine) caused an equal increment of the cerebral HVA level. At their ED50s on catalepsy, the neuroleptic drugs evoked HVA changes which varied according to the drug tested. Potent cataleptogenic agents either caused strong stimulation of the DA turnover in both brain structures (haloperidol and CPZ) or caused weak stimulation only in the CS (fluanisone). A poor cataleptogenic agent, such as LR 511, was accompanied by the highest HVA levels, and the noncataleptogenic clozapine at the dose of 40mg/kg increased the cerebral HVA levels. It is suggested that the blockade of DA receptors in brain of rodents by a novel drug cannot be considered as a positive prediction of therapeutic efficacy and of clinical potency even when classical neuroleptics are examined. 40 references. 004117 Fung, Yiu K.; Uretsky, Norman J. Uretsky: Div. of Pharmacology, Ohio State University, College of Pharmacy, Lloyd Parks Hall, 500 W. 12th Ave., Columbia, OH 43210 **The effect of dopamine uptake blocking agents on the amphetamine-induced circling behavior in mice with unilateral nigro-striatal lesions.** Journal of Pharmacology and Experimental Therapeutics. 214(3):651-656, 1980.

The effects of the dopamine (DA) uptake blocking agents, benztropine, cocaine, nomifensine, and mazindol, were studied on the amphetamine-induced circling behavior in mice that received a unilateral nigrostriatal lesion with 6-hydroxydopamine. When administered intrastriatally to these animals, none of the DA uptake inhibitors elicited net circling. However, they inhibited circling induced by amphetamine. In contrast, these agents had no effect on the circling produced by apomorphine in mice that received an electrolytic lesion destroying one striatum. In biochemical studies in vitro, all the DA uptake blocking agents inhibited the stimulatory effects of amphetamine on (3H)DA synthesis and release in mouse striatal slices. It is concluded that if the amount of (3H)DA released into the medium in vitro reflects the amount of DA released from nerve terminals in the striatum in vivo then the inhibitory effect of the uptake blocking agents and EGTA on (3H)DA synthesis and/or release induced by amphetamine could account for their inhibitory effects on amphetamine-induced circling. 36 references. (Author abstract modified)

004118 Gebhart, G. F.; Lorens, Stanley A. Dept. of Pharmacology, University of Iowa, Iowa City, IA 52242 **Attenuation of pethidine-induced antinociception by zimelidine, an inhibitor of 5-hydroxytryptamine reuptake.** British Journal of Pharmacology. 70(3):411-414, 1980.

Morphine and pethidine-induced antinociception was studied in the hot plate and tail flick tests in male Sprague-Dawley rats after selective inhibition of 5-hydroxytryptamine (5-HT) reuptake by fluoxetine or zimelidine. Pretreatment with fluoxetine or zimelidine potentiated the antinociceptive effect of 4.5mg/kg morphine (as base); zimelidine did not alter the effect of 3.0mg/kg morphine. Pethidine-induced antinociception was attenuated or prevented by pretreatment with zimelidine, but not fluoxetine. Results suggest that 5-HT is involved in the expression of morphine-induced analgesia and that morphine and pethidine have different modes of action. 12 references. (Author abstract modified)

004119 Goldberg, Steven R. NIDA, Addiction Research Center, P.O. Box 12390, Lexington, KY 40583 **Histamine as a punisher in squirrel monkeys: effects of pentobarbital, chlordiazepoxide and H1- and H2-receptor antagonists on behavior and cardiovascular responses.** Journal of Pharmacology and Experimental Therapeutics. 214(3):726-736, 1980.

The effects of pentobarbital, chlordiazepoxide, and H1 receptor and H2 receptor antagonists on behavior and cardiovascular responses were investigated in squirrel monkeys. Squirrel monkeys pressed a key under a two component, 30 response fixed-ratio schedule of food presentation. In both nonpunishment and punishment components, every 30th response resulted in food presentation. In the punishment component, the 11th and 22nd response in each 30 response fixed-ratio also produced a 200msec i.v. injection of 30mcg/kg to 100mcg/kg of histamine. This resulted in about an 80% suppression of responding in the punishment component. Behavior suppressed by histamine could be markedly increased by presession treatment with pentobarbital or chlordiazepoxide. Presession treatment with the H1 receptor antagonist, diphenhydramine, reversed the punishment effects of histamine, but enhanced the cardiovascular effects of histamine. In contrast, the H2 receptor antagonist, cimetidine, failed to reverse the punishment effects of histamine, but markedly attenuated the cardiovascular effects of histamine. 34 references. 004120 Goldstein, Menek; Lew, Jow Y.; Engel, Jorgen. Neurochemistry Laboratories, Dept. of Psychiatry, New York University Medical Center, New York, NY 10016 **Relevance of dopamine receptor binding studies for evaluation of antiparkinsonian drugs.** In: Hanin, I., Physico-chemical methodologies in psychiatric research. New York, Raven Press, 1980. 265 p. (p. 103-109).

The potencies of dopamine (DA) agonists in animal models of parkinsonism were compared with their binding affinities to DA receptors. Several antiparkinsonian agents had high binding affinities for DA receptors. In monkeys and rats, the antiparkinsonian potencies of a homologous series of ergoline derivatives correlated with their binding affinities to DA receptor agonist sites. Guanosine triphosphate inhibited the binding of ergolines to DA receptors, and its inhibitory potency was enhanced in the decorticated striatum. Specific binding to DA receptors in decorticate striatum may be a better index of DA agonist potency than binding in the intact striatum. 13 references.

004121 Goudie, Andrew J.; Demellweek, Colin. Psychology Dept., Liverpool University, P.O. Box 147, Liverpool L69 3BX, England **Naloxone fails to block amphetamine-induced anorexia and conditioned taste aversion.** Journal of Pharmacy and Pharmacology. 32(9):653-656, 1980.

Naloxone failed to antagonize anorexia or conditioned taste aversion induced by d-amphetamine in female albino rats. Naloxone also failed to show any direct effects on food intake. Since these findings are not consistent with some previous reports, it is concluded that naloxone antagonism of amphetamine is not a reliable method for studying the interaction of endorphins and catecholamines in the control of behavior. 28 references.

004122 Greenblatt, E. N.; Coupet, J.; Rauh, E.; Szucs-Myers, V. A. CNS Biology Dept., Medical Research Division, American Cyanamid Co., Lederle Laboratories, Pearl River, NY 10965 **Is dopamine antagonism a requisite of neuroleptic activity?** Archives Internationales de Pharmacodynamie et de Therapie. 248(1):105-119, 1980.

Although cis-5,6-dimethoxy-2-methyl-3-(2-(4-phenyl-1-piperazinyl)-ethyl)indolin e(DHO) exhibited a pharmacological profile characteristic of neuroleptic drugs in laboratory animals, it did not alter dopamine (DA) levels, DA turnover rate, or DA stimulated cyclase. DHO induced ptosis and catalepsy, decreased locomotor activity, antagonized amphetamine-induced lethality, and inhibited conditioned avoidance responses. It did not antagonize amphetamine-induced stereotyped behavior or apomorphine-induced gnawing, which are believed to be DA dependent behaviors. The agent decreased the level of norepinephrine in the forebrain. Results suggest that DA antagonism may not be a prerequisite for neuroleptic activity and that the DA hypothesis of schizophrenia may not be valid in all cases. 37 references. 004123 Griffiths, Roland R.; Wurster, Richard M.; Brady, Joseph V. Division of Behavioral Biology, Johns Hopkins University School of Medicine, 720 Rutland Ave., Baltimore, MD 21205 **Choice between food and heroin: effects of morphine, naloxone, and secobarbital.** Journal of the Experimental Analysis of Behavior. 35(3):335-351, 1981.

Baboons responded on a choice task in which discrete trials involved choosing between an intravenous injection of heroin or the availability of food pellets. An intertrial interval of 3 hours followed the completion of each trial. Typically, animals chose heroin on three or four trials a day and chose food on the remaining trials. Animals tended to space the selection of heroin rather than choosing heroin on consecutive trials. A series of single day experimental manipulations was undertaken. Manipulation of the heroin dose produced shifts in the relative frequency of choosing the drug option which were related inversely to dose. Manipulation of number of pellets per food trial produced little change in choice distribution. Noncontingent administration of morphine produced dose related decreases in relative frequency of heroin choice, and at higher doses noncontingent morphine administration decreased the number of trials completed. Noncontingent naloxone administration produced dose related increases in the relative frequency of heroin choices. Noncontingent administration of secobarbital had no effect and high doses reduced the number of trials completed per day. The results suggest that morphine and naloxone produce shifts in this choice behavior by selectively interacting with the reinforcing properties of the option involving heroin. 21 references. 004124 Grilly, David M. Dept. of Psychology, Cleveland State University, Cleveland, OH 44115 **A signal detection analysis of morphine effects on the response bias of rats in a two-shock discrimination task.** Life Sciences. 28(17):1883-1888, 1981.

Signal detection theory techniques were used to assess the extent to which morphine affects response bias of rats in a two choice shock discrimination task. The ratio of low shock (noise) to high shock (signal) trials was varied to produce different response biases prior to drug administration. Morphine significantly reduced signal sensitivity (d') under all three conditions without systematically affecting any of the measures of response bias assessed in this study. While consistent with most reports with respect to d', these results conflict with a few previous reports of morphine disrupting performance more when the discriminative stimulus is the presence of shock than when it is the absence of shock. 12 references. (Author abstract)

004125 Gugushvili, L. N.; Dzhafarli, M. T. no address **/The effect of thioproperazine on delayed reactions in lower monkeys./** Vliyaniye mazheptila na otsrochennyye reaktsii u nizshikh obez'yan. Soobshcheniya Akademii Nauk Gruzinskoy SSR. 99(3):681-684, 1980.

The effect of thioproperazine on short-term image memory in the pig-tailed macaque was studied by the delayed reaction method with restricted movement. Results show that: 0.01mg/kg of thioproperazine improved the ability to solve delayed reaction tasks for about 48 hours; in large doses it reduced this ability for 24 to 72 hours; 0.005mg/kg increased the percentage of correct delayed reactions for about 10 hours. These results support the view that moderate quantities of phenothiazines, adsorbed on the outer surface of the neuronal membranes as a result of conformational changes, can occupy such a position in the membrane pores that they significantly stabilize the presynaptic membrane. 9 references. (Journal abstract modified)

004126 Hallberg, Helene; Almgren, Olle; Engel, Jorgen; Jonason, Jan. Research Laboratories, AB Hassle, S-43183 Molndal, Sweden **Effects of propranolol on the locomotor stimulation induced by activation of postsynaptic catecholamine receptors.** Psychopharmacology. 72(3):227-231, 1981.

The effects of d-propranolol and dl-propranolol on the locomotor stimulation induced by apomorphine and clonidine in reserpinized male NMRI mice were studied in photocell activity chambers. Pretreatment with dl-propranolol prolonged the duration of apomorphine-induced locomotor stimulation without affecting the maximal level of activity. A similar tendency was seen after pretreatment with d-propranolol, which has much lower beta-receptor blocking activity. Clonidine potentiation of apomorphine-induced stimulation in reserpinized mice was reduced dose dependently by pretreatment with dl-propranolol, but not by the administration of d-propranolol. Results suggest that central beta-adrenoceptors are involved in the stimulation induced by apomorphine plus clonidine in reserpinized mice. 17 references. (Author abstract modified)

004127 Harris, R. Adron. Dept. of Pharmacology, University of Missouri School of Medicine, Columbia, MO 65212 **Interactions between narcotic agonists, partial agonists and antagonists evaluated by schedule-controlled behavior.** Journal of Pharmacology and Experimental Therapeutics. 213(3):497-503, 1980.

In male Long-Evans rats responding under a fixed-interval, 5 minute schedule of food presentation, morphine, butorphanol, cyclazocine, ketocyclazocine, ethylketocyclazocine, and N-allylnorphenazocine (SKF-10,047) decreased the average rate of responding in a dose dependent manner. The rate decreasing effects of morphine were markedly antagonized by naltrexone, whereas the effects of SKF-10,047 or high doses of cyclazocine were not antagonized by naltrexone or naloxone. Naltrexone and naloxone caused a moderate antagonism of the effects of butorphanol, ketocyclazocine, ethylketocyclazocine, and low doses of cyclazocine. The classification of these drugs into three groups on the basis of their interaction with the narcotic antagonists is consistent with the proposed existence of three distinct opiate receptor types (mu-receptors, kappa-receptors, and alpha-receptors). 24 references. 004128 Hayashi, Tetsu; Ohashi, Kyoichi; Tadokoro, Sakutaro. Behavior Research Institute, School of Medicine, Gunma University, Maebashi 371, Japan **Conditioned drug effects of d-amphetamine- and morphine-induced motor acceleration in mice: experimental approach for placebo effect.** Japanese Journal of Pharmacology. 30(1):93-100, 1980.

The effects of chronic treatment with 2.5mg/kg d-amphetamine sulfate or 10mg/kg morphine hydrochloride on ambulatory activity were studied in male ddG mice. Half of the animals were exposed to a flickering light (FL) after drug or saline administration. The motor accelerating effects of both drugs were enhanced with repeated administration. In mice treated with either drug 10 times, physiological saline injections elicited the motor acceleration effect for a short time, particularly in mice exposed to FL. This effect disappeared after repeated administration or saline solution for 6 days. The motor accelerating effect induced by saline appeared to be due to the association of conditioned stimuli (the FL and other environmental factors) and drug effects. 14 references. 004129 Heikkila, R. E.; Shapiro, B. S.; Duvoisin, R. C. Dept. of Neurology, College of Medicine and Dentistry of New Jersey, Rutgers Medical School, Piscataway, NJ 08854 **The relationship between loss of dopamine nerve terminals, striatal (3H)spiroperidol binding and rotational behavior in unilaterally 6-hydroxydopamine-lesioned rats.** Brain Research. 211(2):285-292, 1981.

Female Sprague-Dawley rats that showed significant rotational behavior in response to L-DOPA 5 weeks after unilateral 6-hydroxydopamine (6-OHDA) lesions had more specific 3H-spiroperidol binding in the lesioned striatum than in the nonlesioned striatum and had at least 90% destruction of dopamine (DA) terminals in the lesioned striatum. Animals that did not rotate in response to L-DOPA after unilateral 6-OHDA lesions had considerably less destruction of DA terminals and no significant increase in specific binding on the lesioned side. Results are discussed in relation to the response to L-DOPA of patients with Parkinson's disease. 9 references. (Author abstract modified)

004130 Heikkila, Richard E. Dept. of Neurology, College of Medicine and Dentistry of New Jersey, Rutgers Medical School, University Heights, Piscataway, NJ 08854 **Differential effects of several dopamine uptake inhibitors and releasing agents on locomotor activity in normal and in reserpinized mice.** Life Sciences. 28(17):1867-1873, 1981.

Several drugs that were potent dopamine uptake inhibitors in vitro (including GBR 13,069 and GBR 13,098, amfonelic acid, mazindol, Win 35,065 and Win 35,428) were found to cause large increases in locomotor activity in normal mice but not in reserpinized mice. Additionally, these drugs given to reserpinized mice prior to the dopamine releasing agent d-amphetamine, were able to prevent the normal increase in activity caused by d-amphetamine. The data demonstrate markedly different in vivo effects of dopamine uptake inhibitors and dopamine releasing agents. 11 references. (Author abstract)

004131 Helmeste, Daiga M.; Seeman, Philip; Coscina, Donald V. Seeman: Dept. of Pharmacology, University of Toronto, Toronto, Ontario, Canada M5S 1A8 **Relation between brain catecholamine receptors and dopaminergic stereotypy in rat strains.** European Journal of Pharmacology. 69(4):465-470, 1981.

A relation between D2 dopamine-neuroleptic receptor density and behavioral responsiveness to the dopamine agonist apomorphine was determined in rats. Apomorphine elicited significantly more stereotypy in male F344 rats than in male rats of the Buffalo (BUFF) strain. Studies of 3H-spiperone binding revealed the presence of 34% more D2-receptors in the striatum and 50% more D2-receptors in the olfactory tubercle of F344 rats than in BUFF rats. Alpha2-adrenoceptors in the frontal cortex were 20% higher in the F344 rats than in BUFF rats. Alpha1-adrenoceptors did not differ across strains. 28 references. (Author abstract modified)

004132 Herling, Seymore; Coale, Edward H., Jr.; Valentino, Rita J.; Hein, David W.; Woods, James H. M6311 Medical Science Building I, Dept. of Pharmacology, University of Michigan Medical School, Ann Arbor, MI 48109 **Narcotic discrimination in pigeons.** Journal of Pharmacology and Experimental Therapeutics. 214(1):139-146, 1980.

In White Carneaux pigeons trained to discriminate intramuscular injection of 10mg/kg morphine from saline in a keypeck task with food reward, codeine (32mg/kg) and the methionine enkephalin analogue FK-33824 (3.2mg/kg) produced stimulus control of behavior comparable to that of morphine. The kappa-agonists ketazocine (10mg/kg) and ethylketazocine (3.2mg/kg) and the N-furyl benzomorphans, UM-909 (10mg/kg) and UM-1072 (1.0mg/kg), produced morphine appropriate responding. Naltrexone (1.0mg/kg) completely antagonized the stimulus control of behavior exerted by morphine and ethylketazocine. The mixed narcotic agonists/antagonists cyclazocine and SKF-10,047 and the nonnarcotic drugs pentobarbital, dextrorphan, ketamine, UM-1046, and clonidine, produced predominantly saline appropriate responding. Pentazocine, nalorphine, and meperidine produced responding intermediate between those appropriate for morphine and for saline. Results are discussed in relation to discriminative effects of narcotic drugs in other species. 37 references. (Author abstract modified)

004133 Herling, Seymore; Woods, James H. M6311 Medical Science Building I, Dept. of Pharmacology, University of Michigan Medical School, Ann Arbor, MI 48109 **Chlorpromazine effects on cocaine-reinforced responding in rhesus monkeys: reciprocal modification of rate-altering effects of the drugs.** Journal of Pharmacology and Experimental Therapeutics. 214(2):354-361, 1980.

The effects of intramuscular injections of chlorpromazine were studied in rhesus monkeys whose lever-press responding was maintained under a second-order, fixed-interval, fixed-ratio schedule of food or cocaine reinforcement. When the dose per injection of cocaine was small, chlorpromazine produced similar dose related decreases in responding maintained by either cocaine or food. As the dose of cocaine was increased, the effects of chlorpromazine were attenuated, suggesting a dose related antagonism by self-injected cocaine of the rate decreasing effects of chlorpromazine. The behavioral effects of combinations of cocaine and chlorpromazine appear to involve a reciprocal antagonism of the rate modifying effects of the drugs. 25 references. (Author abstract modified)

004134 Herling, Seymore; Woods, James H. Dept. of Pharmacology, University of Michigan, Ann Arbor, MI 48109 **Discriminative stimulus effects of etorphine in rhesus monkeys.** Psychopharmacology. 72(3):265-267, 1981.

In two rhesus monkeys trained to discriminate etorphine (0.001mg/kg) from saline, administrations of etorphine (0.0001 to 0.0018mg/kg), meperidine (0.1 to 1.0mg/kg), morphine (0.1 to 3.2mg/kg), and codeine (0.3 to 3.2mg/kg) produced dose related increases in the percentage of responses on the etorphine appropriate lever. Ethylketazocine, pentazocine, and N-allylnormetazocine produced responses primarily on the saline appropriate lever. Results indicate that etorphine-like narcotics have discriminative stimulus effects in rhesus monkeys that can be distinguished from those of narcotics with nonmorphine-like actions. 15 references. 004135 Hodge, Gordon K.; Boyeson, Michael G.; Linn, Richard T. Dept. of Psychology, University of New Mexico, Albuquerque, NM 87131 **Dopaminergic agonists differentially affect open-field activity of rats with A10 lesions.** Psychopharmacology. 73(1):39-42, 1981.

The differential effects on open-field behavior of rats with A10 lesions caused by dopaminergic agonists (apomorphine, d-amphetamine, or methylphenidate) were studied. Bilateral radio frequency lesions of area A10 in rats failed to affect spontaneous open-field behavior over a 1 month postoperative period. When injected with 1mg/kg of apomorphine, however, experimental rats more than doubled their activity as compared to the response of sham operated control Ss. In contrast, no difference between the two groups of animals was observed in terms of increased activity following 3mg/kg of either d-amphetamine or methylphenidate. These results are consistent with previous work indicating the involvement of ventromedial mesencephalic dopamine somata in the control of locomotor activity. The data suggest, however, that systems in addition to the dopaminergic mesolimbic projection are responsible, in part, for the hyperactivity elicited by d-amphetamine or methylphenidate. 20 references. 004136 Holtzman, Stephen G. Dept. of Pharmacology, Emory University School of Medicine, Atlanta, GA 30322 **Phencyclidine-like discriminative effects of opioids in the rat.** Journal of Pharmacology and Experimental Therapeutics. 214(3):614-619, 1980.

Possible commonalities in the discriminative stimulus properties of phencyclidine (PCP) and opioids were investigated in rats trained to discriminate between i.p. injections of saline and 2.0mg/kg of PCP in a two choice, discrete trial avoidance paradigm. Tests of stimulus generalization were performed over an eightfold to 32fold range of doses with ketamine, a PCP analog, and eight opioids. Dose dependent and time dependent stimulus control of behavior comparable to that produced by 2.0mg/kg of PCP were produced by ketamine and the opioids cyclazocine, SKF 10,047, and dextrorphan. These drugs also produced orderly increases in responses during the interval between trials suggestive of a relationship between this effect and PCP-like stimulus control. In contrast, after ethylketocyclazocine, ketocyclazocine, pentazocine, and dextromethorphan trials were completed primarily on the saline appropriate lever and responding between trials did not change. Neither the PCP-like stimulus control of behavior nor the increased responding between trials produced by cyclazocine were prevented by pretreatment with naltrexone. These results provide further evidence that PCP and certain opioids share a common component of action that is probably mediated by neuronal substrates not usually associated with the activity of opioids. 35 references. 004137 Horton, Roger; Anlezark, Gill; Meldrum, Brian. Meldrum: Dept. of Neurology, Institute of Psychiatry, Denmark Hill, London SE5 8AF, England **Noradrenergic influences on sound-induced seizures.** Journal of Pharmacology and Experimental Theraeputics. 214(2):437-442, 1980.

Noradrenergic influences on sound-induced seizures were investigated. The preferential alpha2 noradrenergic agonists, clonidine, oxymetazoline, and UK 14,304 reduced the severity of audiogenic seizures in 19-day-old and 26-day-old DBA/2 mice. This protective effect could be diminished or reversed by alpha-2-noradrenergic antagonists such as yohimbine, piperoxan, or intracerebroventricular phentolamine. It is not reversed by the preferential alpha1 noradrenergic antagonist phenoxybenzamine. It is concluded that activation of a receptor pharmacologically similar to the peripheral alpha2 noradrenergic receptor protects against seizures in this epilepsy model. 49 references. (Author abstract modified)

004138 Igarashi, M.; Levy, J. K.; O-Uchi, T.; Homick, J. L. Dept. of Otorhinolaryngology and Communicative Sciences, Baylor College of Medicine, Houston, TX 77030 **Diazepam-induced ataxia in trotting squirrel monkeys.** Agressologie. 21(3):151-153, 1980.

The effect of diazepam on squirrel monkeys' gait was studied. Five squirrel monkeys who had been trained to trot on the center line of the squirrel monkey platform runway were injected with 2.0mg diazepam per kg of body weight. The platform test was repeated at 15 minutes, 1, 2, 3, 4, 5, and 24 hours after the injection. Results show that diazepam interfered with straight trotting by increasing lateral deviations. Because of diazepam's ability to produce ataxia, it is suggested that humans be cautious when performing motor tasks while under its influence. 9 references. (Journal abstract modified)

004139 Ikeda, Yasuo; Sasa, Masashi; Takaori, Shuji. Dept. of Pharmacology, Faculty of Medicine, Kyoto University, Sakyo-ku, Kyoto 606, Japan **Selective effect of ethanol on the vestibular nucleus neurons in the cat.** Japanese Journal of Pharmacology. 30(5):665-673, 1980.

The effects of ethanol on neuronal activities in the lateral vestibular nucleus (LVN) and spinal trigeminal nucleus (STN) were investigated in cats. The LVN neurons were classified as monosynaptic, polysynaptic-I, and polysynaptic-II on the basis of latency to the first spike elicited by orthodromic vestibular nerve stimulation and antidromic vestibulospinal tract stimulation. Ethanol (0.2 to 1.6g/kg i.v.) dose dependently suppressed the orthodromic spike generation of monosynaptic and polysynaptic-II neurons. Mean spike numbers of monosynaptic and polysynaptic-II neurons were significantly decreased by ethanol doses greater than 0.4g/kg, but the polysynaptic-I neuron was unaffected by up to 0.8g/kg ethanol. Spike generation of the STN relay neurons and the interneuron elicited by trigeminal nerve stimulation was also unaltered by up to 0.8g/kg ethanol. 22 references. (Author abstract modified)

004140 Isaacson, Robert L.; Lanthorn, Thomas H. Dept. of Psychology, State University of New York, Binghamton, NY 13901 **Hippocampal involvement in the pharmacologic induction of withdrawal-like behaviors.** Federation Proceedings. 40(5):1508-1512, 1981.

Studies of the hippocampal involvement in the pharmacologic induction of withdrawal-like behaviors are described. Intracerebroventricular injection of nontoxic doses of kainic acid in rats produced behaviors similar to morphine withdrawal. Lesion of CA3 and CA4 abolished this response to kainic acid. The differential effects of CA3 and CA4 lesions on effects of various agents causing withdrawal-like behavior and challenge by naloxone and morphine may indicate that two neural circuits exist through which withdrawal-like behaviors are evoked. The hippocampal circuit is not directly involved in dependence, but may modulate withdrawal. 29 references. (Author abstract modified)

004141 James, Thomas A.; Starr, Michael S. Starr: Dept. of Pharmacology, School of Pharmacy, 29-39 Brunswick Square, London WC1N 1AX, England **Rotational behaviour elicited by 5-HT in the rat: evidence for an inhibitory role of 5-HT in the substantia nigra and corpus striatum.** Journal of Pharmacy and Pharmacology. 32(3):196-200, 1980.

Unilateral intranigral microinjection of 5-hydroxytryptamine (5-HT) or 1-(1-((indol-3-yl)methyl)piperid-4-yl)-3-benzoylurea (Wy-25093), a selective inhibitor of 5-HT uptake, elicited ipsiversive circling and a fall in striatal dopamine (DA) turnover in male Wistar rats. Intranigral injection of methysergide or unilateral lesion of the raphe/nigral 5-HT pathway produced contraversive turning and increased DA turnover. Both types of behavior were accentuated by nialamide and attenuated by haloperiodol. Intracaudate injections of 5-HT or Wy-25093 provoked contraversive turning which was increased by nialamide and hyoscine, partially diminished by haloperidol, and antagonized by eserine. Intracaudate injections of methysergide-induced ipsiversive circling, which was potentiated by nialamide and eserine, depressed by hyoscine, and unaffected by haloperidol. Results suggest there is an inhibitory 5-HT/DA link in the substantia nigra and an inhibitory synapse between serotonergic and cholinergic neurons in the corpus striatum. 21 references. (Author abstract modified)

004142 Jarbe, T. U. C.; Sterner, U.; Hjerpe, C. University of Uppsala, Dept. of Psychology, P.O. Box 227, S-75104 Uppsala, Sweden **Conditioning of an interoceptive drug stimulus to different exteroceptive contexts.** Psychopharmacology. 73(1):23-26, 1981.

Two experiments showing that a pentobarbital versus saline discrimination can be differentially conditioned to different external contexts are described. In Experiment 1, rats differentiated two T-mazes (one water maze and one electrified maze). In Experiment 2, the external stimuli were the presence and absence of lights during training in the electrified T-maze. These experiments constitute the first examples where a single drug vs. nondrug discrimination has been conditioned to different external contexts requiring an opposite response pattern by the same animal. The data are in accordance with a stimulus interpretation of drug discrimination learning. 15 references. (Author abstract modified)

004143 Jensen, Robert A.; Messing, Rita B.; Spiehler, Vina R.; Martinez, Joe L., Jr.; Vasquez, Beatriz J.; McGaugh, James L. Dept. of Psychobiology, School of Biological Sciences, University of California, Irvine, CA 92717 **Memory, opiate receptors, and aging.** Peptides. 1(Suppl. 1):197-201, 1980.

Differences in retention of avoidance responses and in the opiate antagonist effect were investigated in young and F344 aged rats. Aged rats showed poorer retention of an inhibitory avoidance response, but showed better performance in an active avoidance response. The findings indicate that in some cases, the direction of the opiate antagonist effect created by naloxone administration depends upon age. With low footshock, naloxone either impairs or has no effect on retention in old Ss, but with high footshock, naloxone enhances the retention performance, indicating that age related changes in opioid systems may underly some behavioral differences between young and aged Ss. Opiate receptor bonding was then examined in vitro in various brain regions of young and old Ss. Analysis of dihydromorphine binding indicated that opiate receptor concentration in aged Ss is reduced in some brain regions, and that these changes are different in aged male and female Ss. Studies of in vivo bindings of opiate receptors yielded relationships between receptor changes and differences in response to footshock in the flinch jump test. It is concluded that age related alterations in brain opioid system may be involved in changes in learning and memory processes that occur with senescence. These results with animal models are seen as having relevance to studies of neural systems that may underly memory impairments in aged humans. 31 references. (Journal abstract modified)

004144 Jobe, Phillip C.; Ray, Tom B. Dept. of Pharmacology and Therapeutics, Louisiana State University School of Medicine, P. O. Box 33932, Shreveport, LA 71130 **Effects of norepinephrine and 5-hydroxytryptamine reuptake inhibitors on electrically-induced spinal cord seizures in rats.** Research Communications in Chemical Pathology and Pharmacology. 30(1):185-188, 1980.

In female Sprague-Dawley rats, the norepinephrine reuptake inhibitors nisoxetine and desipramine each exerted a suppressant effect on spinal cord seizures by decreasing the duration of tonic extension. In addition, desipramine increased the duration of tonic flexion and nisoxetine decreased the total duration of seizure. None of these seizure components was affected by citalopram, an inhibitor of 5-hydroxytryptamine reuptake. Results suggest that spinal cord noradrenergic neurons, but not serotonergic neurons, act as attenuators of convulsive activity. 10 references. (Author abstract modified)

004145 Jobe, Phillip C.; Woods, Thomas W.; Ray, Tom B. Dept. of Pharmacology and Therapeutics, Louisiana State University School of Medicine, Shreveport, LA 71130 **Effects of fluoxetine on electrically-induced spinal cord seizures in rats.** Research Communications in Chemical Pathology and Pharmacology. 30(1):189-192, 1980.

The effects of fluoxetine on electrically-induced spinal cord seizures were studied in female Sprague-Dawley rats. A 10mg/kg i.p. dose of fluoxetine had no effect on spinal cord seizures or on 5-hydroxytryptamine (5-HT) reuptake, measured by changes in 5-hydroxyindoleacetic acid (5-HIAA) content. However, a 20mg/kg dose significantly reduced 5-HIAA content without affecting seizure activity. Results indicate that 5-HT containing neurons in the spinal cord to do not modulate electrically-induced seizure activity. 5 references. (Author abstract modified)

004146 Jones, Jeffrey G.; Richter, Judith A. Dept. of Pharmacology, Indiana University School of Medicine, Indianapolis, IN 46223 **The site of action of naloxone in suppressing food and water intake in rats.** Life Sciences. 28(18):2055-2064, 1981.

The site of action of naloxone in suppressing food and water intake in rats was investigated by giving bilateral injections of 15mcg/rat of naloxone into the lateral ventricles of cannulated, food and water deprived rats. This treatment caused a significant decrease in food but not water intake. Equal doses of naloxone in the periphery did not produce behavioral changes. The data imply that naloxone exerts its effect on food intake at a central site. Subsequent experiments indicate that this central site of action is mediated by the vagus, and specifically by vagal efferents, since the effect was blocked by methylatropine. Results also suggest that naloxone's effect on water intake is mediated by a different mechanism than that involved with food intake. 39 references. (Author abstract modified)

004147 Joshi, Vinita V.; Balsara, Jehangir J.; Jadhav, Jagdish H.; Chandorkar, Arwind G. Dept. of Pharmacology, V. M. Medical College, Solapur (Maharashtra) I-413003, India **Effect of L-histidine and chlorcyclizine on apomorphine-induced climbing behaviour and methamphetamine stereotypy in mice.** European Journal of Pharmacology. 69(4):499-502, 1981.

Pretreatment with the histamine precursor L-histidine (850 and 1000mg/kg i.p.) or the H1-receptor blocker chlorcyclizine (25 and 50mg/kg i.p.) failed to modify apomorphine-induced climbing behavior in male albino mice. However, pretreatment with 850 or 1000mg/kg L-histidine antagonized stereotypy induced by methamphetamine. Pretreatment with 25mg/kg chlorcyclizine potentiated the methamphetamine stereotypy. 10 references. (Author abstract modified)

004148 Kamata, Katsuo; Okuyama, Shigeru; Kameyama, Tsutomu. Dept. of Chemical Pharmacology, Faculty of Pharmaceutical Sciences, Meijo University, Nagoya 468, Japan **Effects of analgesics and CNS-acting drugs on struggling following repetitive stimulation of the tail, and flexor reflex to a single stimulation of**

the sciatic nerve in rats. Japanese Journal of Pharmacology. 30(3):357-366, 1980.

The analgesic and muscle relaxant effects of several analgesics were evaluated in male Wistar rats. Struggling in response to repetitive stimulation of the tail was used as a measure of pain response, and the flexor reflex response to a single stimulation of the sciatic nerve was used as a measure of spinal reflex activity. The 50% inhibitory doses for struggling and flexor reflex were (in mg/kg i.p.): morphine, 3.30 and 6.60, respectively; codeine, 12.80 and 24.00; pentazocine, 7.80 and 12.20; indomethacin, 4.60 and no effect; aspirin, 94.00 and no effect; baclofen, 1.04 and 2.20; chlorpromazine, 2.45 and 0.75; diazepam, 0.45 and 0.86; and mephenesin, 36.00 and 32.00. 22 references. (Author abstract modified)

004149 Kamei, C.; Oka, M.; Masuda, Y.; Yoshida, K.; Shimizu, M. Shimizu: Dept. of Pharmacology, Research Laboratories, Dainippon Pharmaceutical Co., Ltd., Suita-Shi, Osaka 564, Japan **Effects of 3-sulfamoylmethyl-1,2-benzisoxazole (AD-810) and some antiepileptics on the kindled seizures in the neocortex, hippocampus and amygdala in rats.** Archives Internationales de Pharmacodynamie et de Therapie. 249(1):164-176, 1981.

The effects of 3-sulfamoylmethyl-1,2-benzisoxazole (AD-810) on kindled seizures in the neocortex, hippocampus, and amygdala of male Wistar rats were compared with those of clinically proven antiepileptics. Kindled seizures developed more rapidly in the amygdala than in the hippocampus and neocortex. Phenobarbital, carbamazepine, dipropylacetate, phenytoin, and diazepam depressed neocortical kindled seizures. Phenobarbital and carbamazepine depressed hippocampal kindled seizures, but phenytoin and diazepam had little effect. Phenobarbital and diazepam markedly depressed amygdaloid kindled seizures, but phenytoin, carbamazepine, and dipropylacetate had only weak effects. AD-810 resembled carbamazepine, showing a depressant effect on neocortical and hippocampal kindled seizures but not amygdaloid kindled seizures. 16 references. (Author abstract modified)

004150 Kanarek, Robin B.; Ho, Lap; Meade, Robert G. Dept. of Psychology, Tufts University, Medford, MA 02155 **Sustained decrease in fat consumption produced by amphetamine in rats maintained on a dietary self-selection regime.** Pharmacology Biochemistry and Behavior. 14(4):539-542, 1981.

Total daily caloric intake and dietary self-selection of protein, fat, and carbohydrate were examined in female Sprague-Dawley rats given d-amphetamine sulfate (0.5, 1.0, or 2.0mg/kg i.p.). Animals had access to nutrients for a 6 hour period each day, and food intakes were measured 2 hours after food presentation and at the end of the 6 hour period. Dose related decreases in caloric intakes in animals maintained on a standard laboratory diet were similar to those in rats maintained on the dietary self-selection regime. In the latter group, protein and carbohydrate intakes were suppressed by all three drug doses during the initial 2 hour measurement period but returned to control values by the end of the 6 hour period. Fat intake was initially suppressed by amphetamine and remained suppressed throughout the 6 hour measurement period. 14 references. (Author abstract modified)

004151 Karczmar, Alexander G.; Kindel, Gisela H. Dept. of Pharmacology and Therapeutics, Loyola University Medical Center, Maywood, IL 60153 **Acetylcholine turnover and aggression in related three strains of mice.** Progress in Neuro-Psychopharmacology. 5(1):35-48, 1981.

Brain acetylcholine (ACh) turnover and brain ACh and choline levels were determined in CF-1, C57BL/6 By, and Balb-c-By mice after mild footshock and isolation. Baseline levels of ACh and choline were lower in aggregated Balb-c-By mice than in the two other strains. ACh turnover in aggregated CF-1 mice was at least twice as high as that in the other two strains. The effects of shock, isolation, or shock combined with isolation on brain levels of ACh and choline were inconsistent. ACh turnover was significantly decreased by shock or isolation in CF-1 mice, but not in the other two strains. CF-1 mice were significantly more aggressive than the other two strains after isolation, shock, or both. Results are discussed in relation to the aggressive effect of muscarinic drugs and the antiaggressive effect of atropinic drugs. 38 references. (Author abstract modified)

004152 Katz, Jonathan L. Laboratory of Psychobiology, Dept. of Psychiatry, Harvard Medical School, 25 Shattuck Street, Boston, MA 02115 **Second-order schedules of intramuscular cocaine injection in the squirrel monkey: comparisons with food presentation and effects of d-amphetamine and promazine.** Journal of Pharmacology and Experimental Therapeutics. 212(3):405-411, 1980.

The effects of d-amphetamine and promazine on second-order schedules of intramuscular cocaine injection in the squirrel monkey were investigated. Squirrel monkeys pressed a key under second-order schedules of cocaine injection with a single i.m. injection at the end of a daily experimental session. A second group of squirrel monkeys responded under comparable schedules of food presentation. Under one schedule, each 10th response produced a 1 second visual stimulus; completion of the first fixed-ratio requirement after 30 minutes had elapsed produced the stimulus and either a cocaine injection or food presentation. Under another schedule, the first response after each 3 minutes had elapsed produced a 1 second visual stimulus; completion of the 10th fixed-interval requirement produced the stimulus and either a cocaine injection or food presentation. When saline was substituted for cocaine or when food presentations were omitted, response rates decreased; increasing the dose of cocaine or the amount of food beyond some minimum increased response rates. Administrations of d-amphetamine before sessions generally increased average response rates under both second-order schedules regardless of whether food or cocaine maintained responding. With cocaine injections confined to the end of the session, d-amphetamine and promazine affected cocaine maintained and food maintained responding in a similar manner. 34 references. (Author abstract modified)

004153 Katz, R. J. Mental Health Research Institute, Dept. of Psychiatry, University of Michigan Medical Center, Ann Arbor, MI 48109 **Possible muscarinic-cholinergic mediation of patterned aggressive reflexes in the cat.** Progress in Neuro-Psychopharmacology. 5(1):49-56, 1981.

In a study of cholinergic influences on attack behavior, patterned aggressive reflexes (head turning, biting, and paw striking) elicited by hypothalamic stimulation were examined in female cats. Cholinergic stimulation by intraventricular injection of arecoline facilitated the three reflexes, and cholinergic blockade by intraventricular injection of scopalamine inhibited the reflexes. Results suggest that cholinergic muscarinic receptors may mediate terminal (consummatory) behaviors in aggressive syndromes. 13 references. (Author abstract modified)

004154 Katz, R. J.; Schmaltz, K. Mental Health Research Institute, Dept. of Psychiatry, University Of Michigan Medical Center, Ann Arbor, MI 48109 **Reduction in opiate activation after chronic electroconvulsive shock -- possible role for endorphins in the behavioral effects of convulsive shock treatment. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-31588, 1980. 10 p.

To study the possible role of endorphins in the behavioral effects of convulsive shock treatment, group housed adult male Sprague-Dawley rats received a series of four exposures to shock therapy or equivalent handling without shock (sham treatment). Twenty four hours after the final treatment, Ss were given vehicle or one of two doses of morphine intraperitoneally, and motor activity was assessed by remote sensing for 60 minutes. A significant shift of the normal dose response curve towards the right was seen after electroshock. This may point to cross-tolerance between electroshock and opiates upon this behavioral measure. The results are consistent with the hypothesis that endorphins may mediate certain aspects of electroshock. Some biochemical aspects of depression and its treatment are considered. 13 references. (Author abstract modified)

004155 Katz, R. J.; Schmaltz, K. Mental Health Research Institute, Dept. of Psychiatry, University of Michigan Medical Center, Ann Arbor, MI 48109 **Behavioral interactions between opiate and antiepileptic drugs in the mouse.** Neuropharmacology. 20(4):375-379, 1981.

The effects of sodium valproate, trimethadione, and taurine on behavioral activation induced by opiate or opioid compounds were studied in male Swiss-Webster mice. Morphine-induced increases in activity were facilitated by sodium valproate and trimethadione, even though these drugs inhibited activity when given alone. Taurine had an inhibitory effect when given alone but did not interact with morphine. The effects of the three anticonvulsants on activation produced by central administration of D-ala2-leu-enkephalinamide were similar to their effects on responses to morphine. Results demonstrate a behavioral interaction between opiate and anticonvulsant drugs. 8 references. (Author abstract modified)

004156 Katz, R. J.; Schmaltz, K. Mental Health Research Institute, Dept. of Psychiatry, University of Michigan Medical Center, Ann Arbor, MI 48109 **Contribution of social factors to opiate-induced activation in the mouse.** Neuropharmacology. 20(4):381-383, 1981.

Adult male Swiss-Webster mice habituated singly or in groups of two, three, or four to test cages were injected with 25mg/kg or 50mg/kg morphine sulfate or vehicle. Morphine increased behavioral activity and induced stereotyped forward locomotion. This motor response was disproportionately enhanced by the presence of conspecifics. Results suggest that morphine-induced activation of grouped animals reflects individual activation responses as well as social factors. 8 references. (Author abstract modified)

004157 Kendall, D. A.; Fox, D. A.; Enna, S. J. Enna: Dept. of Neurobiology and Anatomy, University of Texas Medical School, P.O. Box 20708, Houston, TX 77025 **Effect of gamma-vinyl GABA on bicuculline-induced seizures.** Neuropharmacology. 20(4):351-355, 1981.

Male ICR mice were treated with the GABA transaminase inhibitor gamma-vinyl GABA (GVG) 4 or 24 hours before challenge with convulsant doses of picrotoxin, bicuculline, strychnine, or isoniazid. Brain GABA levels were 15 times higher than control 4 hours after 1500mg/kg GVG, and seizures induced by all the convulsants except bicuculline were attenuated significantly. In contrast, 24 hours after 1500mg/kg GVG when brain GABA was seven times higher than control, significant protection against bicuculline-induced seizures was observed while protection against the other agents had diminished greatly. Bicuculline-induced seizures were reduced 4 hours after a 1000mg/kg dose of GVG, which also yielded a sevenfold increase in brain GABA content. 19 references. (Author abstract modified)

004158 Kilpatrick, Ian C.; Starr, Michael S. Starr: Dept. of Pharmacology, School of Pharmacy, University of London, 29/39 Brunswick Square, London WC1N 1AX, England **Involvement of dopamine in circling responses to muscimol depends on intranigral site of injection.** European Journal of Pharmacology. 69(4):407-419, 1981.

The intensity, direction, and dopamine dependence of circling behavior were determined in male Wistar rats after stereotaxic injections of 40ng muscimol (in 0.2mcl over 3 minutes) into various regions of the substantia nigra (SN). Weak, haloperidol sensitive, ipsilateral postural or locomotor asymmetries were obtained from the rostral SN zona compacta (SNC), whereas robust, contraversive rotational behavior was elicited from the SN zona reticulata (SNR) and caudal SNC. Turning evoked from the central SNR was attenuated markedly by pretreatment with haloperidol (0.1mg/kg i.p.) or pimozide (0.25mg/kg i.p.) or 6-hydroxydopamine lesions of the nigrostriatal dopaminergic pathway. Turning elicited from the lateral and ventral positions of the SNR was weakened significantly and not susceptible to dopaminergic blockade. Lower circling rates were obtained when the SNR injections were made rapidly (in 30 seconds), in a large volume (0.5mcl), or at a supramaximal dose (400ng). 50 references. (Author abstract modified)

004159 Koek, Wouter; Slangen, Jef L. Dept. of Psychology, University of Utrecht, Sorbonnelaan 16, NL-3508 TB Utrecht, The Netherlands **Habituation of the the head-poke response: effects of an amphetamine-barbiturate mixture, PLG and fenfluramine.** Psychopharmacology. 72(3):251-256, 1981.

A mixture of amphetamine and amylobarbitone attenuated the habituation of exploratory behavior (head poke response) without influencing locomotion and rearing in male Wistar rats. The oxytocin fragment Pro-Leu-Gly-NH2 (PLG) increased locomotor activity without altering the course of habituation of the head poke response. The amphetamine/amylobarbitone mixture did not influence the stimulus specificity of habituation of the head poke response. Fenfluramine increased the effects of stimulus change on the head poke response without altering habituation of the response. Results indicate that exploration can be dissociated pharmacologically from locomotor activity and that habituation of exploratory behavior can be dissociated pharmacologically from stimulus specificity of habituation. 10 references. (Author abstract modified)

004160 Kornetsky, Conan; Esposito, Ralph U. Boston University School of Medicine, Division of Psychiatry, Laboratory of Behavioral Pharmacology, 80 E. Concord St., Boston, MA 02118 **Reward and detection thresholds for brain stimulation: dissociative effects of cocaine.** Brain Research. 209(2):496-500, 1981.

The effects of cocaine on both rewarding and detection thresholds for intracranial stimulation to the same brain sites in the same animals were determined. The drug caused a dissociation in effects on the two types of brain stimulation. Detection threshold was elevated at doses of cocaine that lowered the reward threshold. If it is assumed that the detection threshold represents a functionally significant measure of sensitivity, then these data may indicate that the action of the drug on reinforcement levels is mediated at a site(s) other than the locus of stimulation. These and other results argue against a simple relationship between localization of drug action and the site of electrode tips. 10 references. (Author abstract modified)

004161 Kryzhanovskiy, G. N.; Aliyev, M. N. Lab. obshchey patologii nervnoy sistemy, Institut obshchey patologii i patofiziologii AMN SSSR, Moskva, USSR **/The pathogenesis of stereotypic behavior./** K patogenezu stereotipnogo povedeniya.

Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(9):1347-1355, 1979.

The pathogenesis of stereotypic behavior was studied in rats using tetanus toxin, haloperidol, GABA, penicillin, picrotoxin, seduxen, aminalon, and lithium. Results show that the pathogenesis of stereotypic behavior is a chain process, consisting of a series of stages. The first stage is the disturbance of GABA inhibitory control over dopamine secretion from the terminals of dark substance dopaminergic neurons terminating in the caudate nuclei. The second is the disinhibition of the hyperactivity of the dopamine mechanism of the caudate nuclei. The third is a change in the activity of the cholinergic neurons of the caudate nuclei under the influence of dopamine. Stereotypic behavior can occur when corresponding changes take place in only the last two stages of this process. These results also show that the condition of the serotonin and noradrenaline neuromediator systems in the caudate nuclei can change stereotypic behavior in animals. 48 references.

004162 Kryzhanovskiy, G. N.; Aliyev, M. N. Lab. obshchey patologii nervnoy sistemy, Institut obshchey patologii i patologicheskoy fiziologii AMN SSSR, Moskva, USSR **/The complex specific pathogenetic therapy of the stereotypic behavior syndrome (an experimental study)./** Kompleksnaya spetsificheskaya patogeneticheskaya terapiya sindroma stereotipnogo povedeniya (eksperimental'noye issledovaniye). Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(2):225-231, 1980.

The pathogenetic treatment of the stereotypical behavior syndrome in rats is discussed based on the findings of a pharmacological study. This syndrome was reproduced by destroying GABAergic control over the dopamine system in both caudate nuclei through microinjections of tetanus toxin into the rostral part of the neostriatum. Combined administration of lithium chloride, diazepam, and haloperidol in doses producing the minimal effect when the drugs were used alone evokes long-term inhibition of practically all signs of the stereotypic behavior syndrome. The results are discussed with regard to the role of hyperactive determinant structures in CNS pathology. The effect of dopamine on stereotypical behavior in animals is due to its direct effect on the restoration of disturbed inhibitory mechanisms in the determinant structure, its effect on the level of the neurons forming mediator inputs to the caudate nuclei, and also its effect on the system of output from the determinant structure to the designation stations. Haloperidol prevents dopamine hyperactivity in stereotypical behavior, blocking the catecholamine receptors. Lithium suppresses the activity of the catecholaminergic systems. 32 references. 004163 Kryzhanovskiy, G. N.; Aliyev, M. N. Inst. of General Pathology and Pathological Physiology, Baltiyskaya 8, Moscow 125315, USSR **The stereotyped behavior syndrome: a new model and proposed therapy.** Pharmacology Biochemistry and Behavior. 14(3):273-281, 1981.

Bilateral microinjections of tetanus toxin (TT), penicillin, or picrotoxin into the rostral part of the caudate nucleus of male white rats (to induce local impairment of inhibitory GABAergic mechanisms) produced a stereotyped behavior syndrome. This syndrome was suppressed by haloperidol (i.p.) in a dose dependent manner. Stereotyped behavior induced by TT was suppressed by bilateral microinjection of GABA into the rostral part of the caudate nucleus. Lithium chloride and diazepam, administered i.p., were also able to suppress the stereotyped behavior syndrome. Combined application of lithium, diazepam, and haloperidol in minimally effective doses resulted in more complete and longer lasting supression of the syndrome than separate use of these drugs. 46 references. 004164 Kulkarni, S. K.; Arzi, A.; Kaul, P. N. Dept. of Pharmaceutical Sciences, Panjab University, Chandigarh-160014, India **Modification of drug-induced catatonia and tremors by quipazine in rats and mice.** Japanese Journal of Pharmacology. 30(2):129-135, 1980.

The serotonin agonist quipazine counteracted some of the drug-induced symptoms of pseudoparkinsonism in male Sprague-Dawley rats and Swiss-Webster mice. Quipazine prouced a dose dependent inhibition of the catatonia induced by perphenazine and partially blocked tremors induced by nicotine and tremorine. Harmine-induced tremors were potentiated by quipazine. Studies of the effects of quipazine combined with other antiparkinson agents such as scopolamine, diphenhydramine, and amatadine indicated that cholinergic, dopaminergic, and histaminergic receptors play an important role in the manifestation of parkinsonian symptoms. 24 references. 004165 Kuribara, Hisashi; Tadokoro, Sakutaro. Division for Behavior Analysis, Behavior Research Institute, School of Medicine, Gunma University, 3-39-22 Showa-machi, Maebashi 371, Japan **Schedule dependent change of punished responding after diazepam in rats.** Japanese Journal of Pharmacology. 30(2):264-268, 1980.

The effect of diazepam on conditioned response suppression was studied in male Wistar rats on a fixed-ratio 30 schedule of food or water reinforcement. Results indicated that diazepam specifically increased punished responding, without affecting discriminative ability. 13 references.

004166 Lazarova, M.; Roussinov, K.; Kleinrok, Z.; Rajtar, G. Institute of Physiology, Bulgarian Academy of Sciences, acad. G. Bonchev st. bl. 1, 1113 Sofia, Bulgaria **On some relationships between GABA-ergic and 5-HT-ergic mechanisms in pentylenetetrazol convulsive-seizure reactions.** Agressologie. 21(5):253-257, 1980.

The effect of various drugs in controlling pentylenetetrazol induced seizures in rats and the relationship between the GABA-ergic and 5-HT-ergic systems and these seizures were studied. Various doses of GABA, 5-HTP, aminooxyacetic acid (AOAA), para-chlorophenylalanine (PCPA), and di-n-propylacetate (DPA) were injected intraperitoneally before subcutaneous injection of 80mg/kg pentylenetetrazol (PTZ). Results show that in doses which markedly increase the brain level of GABA, DPA 250mg/kg, AOAA 20mg/kg, GABA 1000mg/kg, and 5-HTP 200mg/kg inhibited the seizure reactions, but PCPA increased the seizures. A combination of GABA, DPA, or AOAA with 5-HTP increased the inhibitory effect. GABA and GABA-ergic agents reverse the seizure increasing effect of PCPA. These results suggest that the GABA-ergic and 5-HT-ergic systems exert a synergic, inhibitory effect on the PTZ convulsive seizure reactions. Activation of the GABA-ergic system (by increasing the brain level of GABA) could functionally compensate the PCPA decreased activity of the 5-HT-ergic system. 23 references. 004167 Lerer, B.; Ebstein, R. P.; Felix, A.; Belmaker, R. H. Belmaker: Jerusalem Mental Health Center - Ezrath Nashim, P.O. Box 140, Jerusalem, Israel **Lithium amelioration of reserpine-induced hypoactivity in rats.** International Pharmacopsychiatry. 15(6):338-343, 1980.

The effects of lithium on hypoactivity induced by moderate and high doses of reserpine were studied in rats. Oral lithium pretreatment for 19 days significantly prevented the behavioral immobility induced by moderate doses of reserpine. High doses of reserpine overwhelmed the lithium effect. The data confirm previous results that lithium pretreatment can prevent the depressant effects of biogenic depletion in mammals, extend such findings from mice to rats, and show that the effect is unlikely to be a transient nonspecific lithium effect. Development of a simple and specific behavioral test of lithiumlike activity in animals could allow for screening and possible development of new lithiumlike compounds. 10 references. 004168 Loscher, W. Lab. of Pharmacology and Toxicology, School of Veterinary Medicine, Free University Berlin, Koserstrasse 20, D-1000 Berlin 33, West Germany **Anticonvulsant activity of metabolites of valproic acid.** Archives Internationales de Pharmacodynamie et de Therapie. 249(1):158-163, 1981.

The effects of eight metabolites of valproic acid (VPA) on the thresholds for maximal electroconvulsion and pentetrazole convulsions were tested in male NMRI mice. All the metabolites significantly elevated the convulsive thresholds, but none was as potent as VPA itself. Results suggest that VPA itself is responsible for more than 80% of the antiepileptic effect of chronic VPA therapy in humans. 10 references. (Author abstract modified)

004169 Lucot, James B.; Horwitz, Joel; Seiden, Lewis S. Seiden: Dept. of Pharmacological and Physiological Sciences, University of Chicago, 947 East 58th St., Chicago, IL 60637 **The effects of p-chloroamphetamine administration on locomotor activity and serotonin in neonatal and adult rats. (Unpublished paper).** Research Report, NIMH Grant 5K05-MH-10562, 1979. 31 p.

The effects of p-chloroamphetamine (PCA) administration on locomotor activity and serotonin were investigated in neonatal and adult rats to determine the nature of the behavioral consequences of this drug. Administration on days 9 or 12 of life heightened the peak in locomotor activity that normally occurs about day 15. Administration on day 12 also shifted the occurrence of the peak to a later age. Administration at later ages produced increases in locomotor activity when first measured on the day after the injection, but not thereafter. The increases in locomotor activity in pups were obtained after depletions of serotonin that produced no effects on locomotion in adults. In adults, a small decrease in locomotor activity resulted at the highest dose, and the decrease resulted from an enhancement of the normal decline in locomotor activity as the 1 hour session progressed. Pups were uniformly active throughout the session and PCA produced no effect on the distribution of activity. Administration to pups produced an age dependent decrease in serotonin levels, but administration on day 24 did not produce as great a permanent depletion as did administration in adults. Examination of the short-term effects in 12-day-old Ss revealed a large initial depletion of serotonin, followed by a rapid recovery in the brainstem and diencephalon and a more gradual recovery in the caudate and telecephalon. There was a good correspondence in adults between serotonin levels and locomotor activity. In pups, the correspondence was less clear. 23 references. (Author abstract modified)

004170 Lukas, Scott E.; Moreton, J. Edward; Khazan, Naim. Moreton: Dept. of Pharmacology and Toxicology, University of Maryland School of Pharmacy, 636 W. Lombard St., Baltimore, MD 21201 **Effects of levo-alpha-acetylmethadol (LAAM) on morphine self-administration in the rat.** Psychopharmacology. 73(1):12-16, 1981.

The effects of levo-alpha-acetylmethadol (LAAM) on morphine self-administration in the rat were investigated. Rats bearing cerebrocortical electrodes for recording EEG were rendered tolerant to and physically dependent on morphine and subsequently trained to self-administer morphine through a chronic intravenous cannula. Once morphine intake had stabilized, LAAM was administered noncontingently via a chronic intragastric (IG) cannula as a single daily dose of either 1mg/kg or 4mg/kg. These morphine self-administering rats were maintained on daily LAAM treatment for 12 consecutive days. Analysis of the patterns of lever pressing, morphine self-injections, and sleep/awake behavior revealed that daily IG administration of LAAM effectively suppressed morphine self-administration. The dose related reduction in morphine self-administration occurred in the absence of overt signs of narcotic withdrawal, behavioral toxicity, or disruption of sleep/awake behavior in these rats. Termination of LAAM maintenance resulted in a gradual return of lever pressing and morphine intake to preLAAM levels. 36 references. (Author abstract modified)

004171 Lyness, W. H.; Moore, K. E. Dept. of Pharmacology and Therapeutics, Texas Tech. University School of Medicine, Lubbock, TX 79430 **Destruction of 5-hydroxytryptaminergic neurons and the dynamics of dopamine in nucleus accumbens septi and other forebrain regions of the rat.** Neuropharmacology. 20(4):327-334, 1981.

The effects of 5,7-dihydroxytryptamine (5,7-DHT) induced destruction of 5-hydroxytryptamine (5-HT) neurons on spontaneous and drug stimulated locomotor activity were studied in male Sprague-Dawley rats. Injection of 5,7-DHT into the lateral cerebral ventricle of rats pretreated with desipramine reduced the levels of 5-HT but not norepinephrine or dopamine (DA) levels in the forebrain regions. Bilateral injections of 5,7-DHT into the nucleus accumbens septi (NAS) of desipramine pretreated rats selectively depleted 5-HT only from the NAS. In both groups of 5-HT depleted animals, exploratory locomotor activity and locomotor stimulation induced by d-amphetamine or apomorphine were enhanced. The behavioral changes observed after destruction of 5-HT nerve terminals were not associated with changes in the activity of the major ascending dopaminergic systems. 38 references. 004172 Marangos, Paul J.; Martino, Andrea M.; Paul, Steven M.; Skolnick, Philip. Clinical Psychobiology Branch, NIMH, Building 10, Room 4S239, 9000 Rockville Pike, Bethesda, MD 20205 **The benzodiazepines and inosine antagonize caffeine-induced seizures.** Psychopharmacology. 72(3):269-273, 1981.

The effects of benzodiazepines and purines on caffeine induced seizures were examined in male C3H/HEN mice. Seizures induced by caffeine were qualitatively indistinguishable from those induced by pentylenetetrazol (PTZ), and pretreatment with low doses of caffeine potentiated PTZ induced seizures. Benzodiazepines inhibited caffeine induced seizures with a rank order of potency that parallels their affinities for the CNS benzodiazepine receptor in vitro. Inosine, a purine that acts as a competitive inhibitor of 3H-diazepam binding in vitro, antagonized caffeine induced seizures; 7-methyl-inosine, a purine that lacks receptor binding inhibitory activity, had no effect on seizures. Results suggest that caffeine may exert some of its effects at the level of the benzodiazepine receptor and that purinergic modulation of benzodiazepine receptor status may be involved in seizure generation. 26 references. 004173 Marcais, Helene; Bonnet, Jean Jacques; Costentin, Jean. Lab. de Pharmacodynamie & Physiologie, UER de Medecine & Pharmacie de Rouen, Ave. de l'Universite, F-76800 Saint Etienne du Rouvray, France **Evidence for sedative effects of low doses of morphine in mice involving receptors insensitive to naloxone.** Life Sciences. 28(24):2737-2742, 1981.

Evidence for sedative effects of low doses of morphine in mice involving receptors insensitive to naloxone is described.

Low doses of morphine decrease in a dose dependent manner spontaneous climbing behavior in mice. This effect is not modified by administration of naloxone at doses up to 1.25mg/kg. These morphine doses do not modify the locomotor activity but, when they are associated with naloxone, an obvious inhibition occurs. In rats, a hyperactivity follows the akinesia produced by a morphine administration. This hyperactivity is changed into a significant hypokinesia when the animals are treated with naloxone. These results might reveal a dual effect of low doses of morphine, the excitatory effect of morphine being antagonized by naloxone whereas no action on the sedative effect is observed. 16 references. 004174 Mashkovskiy, M. D.; Andrejeva, N. I. Laboratory of Pharmacology, All-Union Chemical-Pharmaceutical Research Institute, Zubovskaya ul. 7, Moskva, USSR **Pharmacological properties of 2,3,3a,4,5,6-Hexahydro-8-methyl-1H-pyrazino(3,2,1-j,k) carbazol hydrochloride (pirlindole), a new antidepressant.** Arzneimittel-Forschung. 31(1):75-79, 1981.

The pharmacological properties are discussed of 2,3,3a,4,5,6-hexahydro-8-methyl-1H-pyrazino(3,2,1-j,k)carbazol hydrochloride (pirlindole), which is one of the more effective pyrazincindole derivatives that have been synthesized. Data are provided for the following experimental parameters concerning pirlindole: acute toxicity; antagonism to reserpine induced hypothermia and antagonism of tetrabenazine induced ptosis in mice; potentiation of d,l-amphetamine induced stereotyped behavior in rats; influence on L-dopa induced hypothermia and influence on apomorphine induced hypothermia in mice; potentiation of 5-HTP induced head twitch in mice; potentiation of tryptamine induced clonic seizures in the rat; effects on adrenaline, noradrenaline, tryptamine, and serotonin hypertensive response in anesthetized dogs; influence on oxotremorine induced hypothermia in mice; effect on barbiturate sleeping time in rats; effects on blood pressure of anesthetized cats; inhibition of MAO activity; and effect on noradrenaline uptake in the isolated rat's heart and on H77/77 uptake in noradrenaline neurons. Pirlindole was found to: antagonize the depressant effects of reserpine and tetrabenazine; potentiate the central effects of amphetamine and L-dopa; enhance the head twitch effect of 5-hydroxytryptophan; enhance the effects of noradrenaline, adrenaline, serotonin, and tyramine on blood pressure; enhance the hypertensive and tremor activities of tryptamine; inhibit the neuronal uptake of noradrenaline; and exert reversible, short lasting anti-MAO activity. Pirlindole does not possess anticholinergic activity, and clinical trials have shown pirlindole to be effective as an antidepressant drug. 20 references. (Journal abstract modified)

004175 McGuire, Patricia S.; Seiden, Lewis S. Seiden: University of Chicago, Dept. of Pharmacological and Physiological Sciences, 947 E. 58th St., Abbott Hall, Chicago, IL 60637 **The effects of tricyclic antidepressants on performance under a differential-reinforcement-of-low-rates schedule in rats.** Journal of Pharmacology and Experimental Therapeutics. 214(3):635-641, 1980.

The effects of tricyclic antidepressants on performance under a differential reinforcement of low rates schedule were investigated in rats. Doses of 2.5mg/kg to 10.0mg/kg of imipramine and desmethylimipramine decreased response rate and increased reinforcement rate. The interresponse time (IRT) distributions at these doses showed a suppression of IRTs shorter than 18 seconds and an increase in IRTs longer than 18 seconds. Higher doses of imipramine and desmethylimipramine decreased response rate as well as reinforcement rate. To determine whether the decrease in response rate and increase in reinforcement rate seen with imipramine and desmethylimipramine was related to their anticholinergic properties, scopolamine, a cholinergic blocking agent, was also tested. Unlike the other drugs, scopolamine increased response rate, decreased reinforcement rate, and increased IRTs shorter than 18 seconds. 33 references. (Author abstract modified)

004176 McKearney, James W. Worcester Foundation for Experimental Biology, Shrewsbury, MA 01545 **Individual differences in effects of tricyclic antidepressants and anticholinergic drugs on operant behavior in the squirrel monkey.** Life Sciences. 28(18):2049-2054, 1981.

Individual differences in the effects of tricyclic antidepressants and anticholinergic drugs on operant behavior in the squirrel monkey were investigated. Amitriptyline was the most potent of the drugs studied, and nortriptyline, imipramine, chlorimipramine, and desmethylimipramine produced increases at higher doses. There was a close correspondence between the effects of amitriptyline and those of atropine in individual Ss. The monkeys showing increases in responding with amitriptyline also showed the most marked increases with atropine, and those showing no increases with amitriptyline also showed no increases with atropine. Interindividual differences in the effects of acutely administered tricyclic antidepressant drugs may be mediated by differential sensitivities of the monkeys to the antimuscarinic properties of these drugs. 14 references. 004177 Messing, Rita B.; Jensen, Robert A.; Vasquez, Beatriz J.; Martinez, Joe L., Jr.; Spiehler, Vina R.; McGaugh, James L. Dept. of Psychobiology, University of California, Irvine, CA 92717 **Opiate modulation of memory. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-12526, 1980. 23 p.

Evidence is presented that endogenous opioid systems are involved in memory storage processes. Research indicates that retention performance of rats is changed following posttraining administration of morphine, naloxone, or naltrexone. The memory modulatory effects of these drugs occurred only within a narrow dosage range, suggesting that these effects are mediated by mu-receptors. Additional findings indicate that: 1) the qualitative effects of these drugs on memory are highly time dependent; 2) the drugs all improve retention performance when given in equally divided doses immediately and 30 minutes after training; 3) a single administration of morphine immediately posttraining or of naloxone 30 minutes after training impairs rentention performance; 4) the similar effects of an opiate agonist and opiate antagonist on memory may be due to their common action of displacing endogenous peptides from receptor sites; 5) the time dependence of the drug effects may be caused by drug interactions with endogenous neurohumors which change as a function of time after a stressful experience; and 6) alternatively, a single neurochemical manipulation may result in different functional effects if it occurs at different times in the process of memory consolidation. 30 references. 004178 Meyerson, Bengt J. Dept. of Medical Pharmacology, University of Uppsala, Biomedicum, Box 573, S-751 23 Uppsala, Sweden **Comparison of the effects of beta-endorphin and morphine on exploratory and socio-sexual behaviour in the male rat.** European Journal of Pharmacology. 69(4):453-463, 1981.

Intracerebral injection of 5mcg beta-endorphin or morphine in male Sprague-Dawley rats decreased exploratory activity and sociosexual approaches in tests with a sexually receptive female rat or a castrated male rat as stimulus object. At lower doses (0.5 to 1.0mcg), beta-endorphin had a selective inhibitory effect on copulatory behavior, but morphine caused general depression of both social and sexual behaviors. In contrast to morphine, beta-endorphin increased amicable social contacts at a dose (1mcg) that decreased sexual responses. Results suggest that beta-endorphin may influence mechanisms implicated in perception or interpretation of environmental stimuli and that morphine and beta-endorphin may act in different brain areas or on different receptors. 17 references. 004179 Minchin, R. F.; Ilett, K. F.; Madsen, B. W. Dept. of Pharmacology, University of Western Australia, Nedlands, Western Australia, 6009 Australia **Effect of desmethylimipramine on tissue distribution and anorectic activity of chlorphentermine in rats.** Life Sciences. 28(17)1931-1938, 1981.

The anorectic effect and tissue distribution of chlorphentermine (CP) have been measured in the presence and absence of desmethylimipramine (DMI) in rats, following the finding that DMI is a potent displacer of CP from lung tissue in vitro. CP decreased the rate of eating without affecting onset of eating. DMI caused dose related changes in CP induced anorexia; 5mg/kg DMI inhibited the effects of CP while 7.5mg/kg DMI caused potentiation of CP. DMI significantly decreased CP concentrations in lung tissue and increased concentrations in brain, liver, and blood for up to 4 hours after treatment, but did not affect kidney or skeletal muscle levels. The CP tissue concentration time profiles for liver, brain, and kidney were significantly different in the presence and absence of DMI, suggesting nonlinear kinetics, probably due to saturable tissue binding. Using a simple model to describe eating behavior, the increased anorexia was found to be linearly related to the higher brain levels of CP seen in the presence of DMI. 23 references. 004180 Montgomery, Tony; Willner, Paul. Willner: Dept. of Psychology, City of London Polytechnic, Old Castle Street, London E1 7NT, England **Effects of subchronic desmethylimipramine (DMI) treatment of the classically conditioned eyeblink response in rabbits.** Communications in Psychopharmacology. 4(6):519-525, 1980.

The effect of subchronic desmethylimipramine (DMI) treatment on classically conditioned eyeblink response was investigated in the rabbit. In the period following 2 weeks' treatment with this tricyclic antidepressant, rabbits were resistant to extinction of the conditioned eyeblink response. The effect was not seen during continued DMI treatment, or in animals with prior experience of extinction. Shock thresholds in DMI withdrawal did not differ from those of controls. DMI treatment did not affect initial acquisition of the response, but drugged animals did show increased responding on the first conditioning session following rest days or extinction sessions. The results extend previous observations of increased resistance to extinction of instrumental behavior in rats withdrawn from DMI. 10 references. (Author abstract modified)

004181 Morley, John E.; Levine, Allen S.; Prasad, Chandan. Neuroendocrine Research Laboratory, Minneapolis V.A. Medical Center, Minneapolis, MN 55417 **Histidyl-proline diketopiperazine decreases food intake in rats.** Brain Research. 210(1-2):475-478, 1981.

Intracerebroventricular administration of histidyl-proline diketopiperazine suppressed food intake during stress induced eating, during starvation induced eating, and over an 8 hour period of spontaneous eating in male Sprague-Dawley rats. Other cyclic piperazines failed to alter food ingestion. The suppressive effect of histidyl-proline diketopiperazine was antagonized by the enkephalin analogue D-ala-met-enkephalin. It is suggested that the two compounds may exert their mutually antagonistic effects on appetite regulation by modulation of dopamine metabolism. Histidyl-proline diketopiperazine may be the metabolically active compound responsible for the satiety observed after administration of thyrotropin releasing hormone. 19 references. (Author abstract modified)

004182 Moss, D. E.; Rogers, J. B.; Deutsch, J. A.; Salome, R. R. Dept. of Psychology, University of Texas, El Paso, TX 79968 **Time dependent changes in anterograde scopolamine-induced amnesia in rats.** Pharmacology Biochemistry and Behavior. 14(3):321-323, 1981.

Holtzman rats were trained on a Y-maze brightness discrimination task 20 minutes after i.p. injection of 2mg/kg scopolamine hydrobromide, an anticholinergic agent. Deficits in retention performance were seen 1 day and 2 weeks after training, but not at 4 or 6 weeks after training. Animals given the cholinesterase inhibitor physostigmine (0.5mg/kg) 20 minutes before retention testing also showed deficits at the first two test periods, but not at the latter two sessions. Scopolamine methyl nitrate did not induce amnesia, nor did scopolamine hydrobromide administered immediately after training. Results suggest that the presence of scopolamine in the CNS during training modifies the formation of the memory trace in such a way that memory is not available for recall for a period of weeks. 11 references. (Author abstract modified)

004183 Murphy, Michael R. Laboratory of Brain Evolution and Behavior, NIMH, Box 289, Poolesville, MD 20837 **Methadone reduces sexual performance and sexual motivation in the male Syrian golden hamster.** Pharmacology Biochemistry and Behavior. 14(4):561-567, 1981.

Methadone (1, 2, 4, 8, and 16mg/kg) caused a dose related decline in the sexual performance and sexual motivation of male Syrian golden hamsters. The debilitating effect of methadone was selective for sexual behavior, since a 16mg/kg dose completely eliminated sexual behavior without altering ambulatory activity. Naltrexone was able to prevent and reverse the effects of methadone. Results indicate that the male hamster is a good model for studies of opiate induced sexual dysfunction. These findings also support the hypothesis that endogenous opiates may be involved in the regulation of sexual behavior. 26 references. (Author abstract modified)

Shimizu: Research Laboratories, Dainippon Pharmaceutical Co., Ltd., 33-94 Enoki, 564 Suita/Osaka, Japan **Analgesic and other pharmacological activities of a new narcotic antagonist analgesic (-)-1-(3-methyl-2-butenyl)-4-(2-(3-hydroxyphenyl) 1 phenylethyl)-piperazine and its enantiomorph in experimental animals.** Journal of Pharmacy and Pharmacology. 32(9):635-642, 1980.

The stereoselectivity of 1-cyclohexyl-4-(2-(3-hydroxyphenyl)-1-phenylethyl)piperazine (I) and its 1-(3-methyl-2-butenyl) derivative (II) was demonstrated in laboratory animals. The S()-isomers of both compounds were analgesically more active than their R(-)-isomers or racemates and were 15 to 55 times as potent as morphine in ddN mice and Wistar rats. The R(-)-isomer of compound II showed analgesic potency comparable to that of pentazocine in mice, rats, and dogs and was nearly equipotent to pentazocine in reversing some actions of morphine. The amount of naloxone required to reverse the analgesic activity of the R(-)-II was about 10 times that required to antagonize the S()-isomers of compounds I and II, morphine, or pentazocine. The S()-isomers and racemates produced a Straub tail reaction and increased spontaneous locomotor activity in mice, but the R(-)-isomers did not. R(-)-II had no significant physical dependence liability in mice, rats, or rhesus monkeys and may be a useful narcotic antagonist analgesic. 57 references. (Author abstract modified)

004186 Namba, Mike M. Quock, Raymond M.; Malone, Marvin H. Physiology/Pharmacology Unit, School of Pharmacy, University of the Pacific, Stockton, CA 95211 **Effects of narcotic antagonists on L-dopa reversal of reserpine-induced catalepsy and blepharoptosis in mice.** Life Sciences. 28(14):1629-1636, 1981.

The effects of narcotic antagonists on L-DOPA reversal of reserpine induced catalepsy and blepharoptosis in mice were investigated. Reserpine induced catalepsy and blepharoptosis in mice which were readily reversed by the administration of L-DOPA. The administration of the pure narcotic antagonists naloxone and naltrexone significantly potentiated L-DOPA reversal of reserpine induced catalepsy. Lower doses of the narcotic antagonists did not significantly alter this reversal. The L-DOPA reversal of blepharoptosis was not significantly altered by either naloxone or naltrexone. These results indicate that while opiate receptors may be involved in L-DOPA reversl of catalepsy, they may not have a role in the alteration of blepharoptosis. 18 references. 004187 Nazzaro, J. M.; Seeger, T. F.; Gardner, E. L. Gardner: Dept. of Psychiatry, Forchheimer Bldg. G54, Albert Einstein College of Medicine, 1300 Morris Park Ave., Bronx, NY 10461 **Morphine differentially affects ventral tegmental and substantia nigra brain reward thresholds.** Pharmacology Biochemistry and Behavior. 14(3):325-331, 1981.

The effects of morphine and naloxone on intracranial self-stimulation (ICSS) were studied in male Sprague-Dawley rats with electrodes in the substantia nigra pars compacta (A-9) and the ventral tegmentum (A-10). ICSS thresholds of rats with electrodes in the A-9 nucleus were not altered by acute morphine (5.0mg/kg), but grew progressively larger with each day of morphine treatment. This threshold elevation was not reversed by naloxone given 0.5 hours after the final morphine treatment on day 5. Acute morphine significantly lowered ICSS thresholds in rats with A-10 electrodes, and tolerance to this facilitatory effect developed with chronic administration. Naloxone attenuated the lowering of ICSS threshold induced by opiate administration in animals with A-10 electrodes. Results suggest that opiates act specifically on brain systems subserving reward and reinforcement. They also suggest that the mesolimbic/mesocortical system may be involved in mediating the rewarding properties of morphine. 56 references. (Author abstract modified)

004188 Neff, N. H.; Gentleman, S.; Parenti, M.; Commissiong, J. W. Laboratory of Preclinical Pharmacology, NIMH, Saint Elizabeths Hospital, Washington, DC 20032 **Dopaminergic neurons of spinal cord: a possible site for the action of neuroleptic drugs.** In: Usdin, E., Enzymes and neurotransmitters in mental disease. Chichester, England, John Wiley & Sons, 1980. 650 p. (p. 37-43).

The role of dopaminergic neurons in the spinal cord in normal spinal mechanisms, spinal pathology, and response to drugs is discussed. Studies in rats indicate that some of the dopaminergic neurons in spinal cord originate in the substantia nigra and enter the cord uncrossed. One of the receptors for dopamine (DA) in spinal cord may be an adenylate cyclase system similar to the cyclase system of the striatum. After transection of the spinal cord, the DA/adenylate cyclase becomes supersensitive to DA. It is suggested that the dopaminergic system of spinal cord may be implicated in the motor disturbances of Parkinson's disease and in the dyskinesia induced by treatment with neuroleptic drugs. 10 references.

004189 Nicholson, A. N.; Wright, Catherine M. Royal Air Force Institute of Aviation Medicine, Farnborough, Hampshire, England **()-6-Fluorotryptophan, an inhibitor of tryptophan hydroxylase: sleep and wakefulness in the rat.** Neuropharmacology. 20(4):335-339, 1981.

Sleep and wakefulness were studied in male Wistar rats after i.p. injection of 100mg/kg 6-fluorotryptophan (6-FT), an inhibitor of brain tryptophan hydroxylase. Wakefulness increased and REM and non-REM sleep decreased for 3 hours after injection. The time course of these effects suggested that the activity of 6-FT may be related closely to the turnover of 5-hydroxytryptamine. 17 references. (Author abstract modified)

004190 Nikoletseas, Michael M. Deree, American College of Greece, P.O. Box 18, Aghia Paraskevi, Attiki, Greece **Activity and catch-up growth in hypothyroid rats.** Pharmacology Biochemistry and Behavior. 14(4):443-446, 1981.

Wheel activity and growth were examined in hypothyroid male Sprague-Dawley rats Hypothyroidism was induced by feeding young adult rats a chow diet supplemented with propylthiouracil (PTU, 0.1% by weight) for 43 days. The wheel activity of the PTU treated rats did not differ significantly from that of euthyroid controls fed ad lib, but was significantly lower than that of pair fed controls. Bodyweight was significantly lower than that of euthyroid ad lib fed controls. Active PTU rats weighed more than pair fed active rats, but nonactive PTU rats weighed less than nonactive pair fed controls. Bodyweight and tibia length of PTU treated rats 75 days after PTU was discontinued were significantly lower than those of euthyroid rats fed ad lib, but did not differ from that of pair fed animals. It is suggested that the growth arrest observed in early hypothyroidism is partially due to factors nonspecific to thyroxine absence, such as hypophagia. 27 references. (Author abstract modified)

004191 Nomura, Yasuyuki; Segawa, Tomio. Department of Pharmacology, Inst. of Pharmaceutical Sciences, Hiroshima University School of Medicine, Kasumi, Hiroshima 734, Japan **Developmental change in rearing response to atropine in rats treated with 6-hydroxydopa.** Japanese Journal of Pharmacology. 30(1):109-112, 1980.

Rearing responses to atropine were studied in developing Wistar rats treated with 6-OHDOPA at birth. Atropine stimulated rearing in 23-day-old control rats, but not in 15-day-old, 18-day-old, or 20-day-old animals. Neonatal treatment with 6-OHDOPA potentiated the atropine stimulation or rearing in 23-day-old rats, but did not alter the adult response to atropine. 14 references.

004192 Ohmori, Kenji; Yamanami, Sadayoshi; Shuto, Katsuichi; Marumo, Hirofuto. Pharmaceuticals Research Laboratory, Kyowa Hakko Kogyo Co. Ltd., 1188 Nagaizumicho, Shizuoka 411, Japan **Effect of sodium dipropylacetate on conflict behavior in rats.** Japanese Journal of Pharmacology. 30(6):925-927, 1980.

The effects of sodium propylacetate (DPA), diazepam, and diphenylhydantoin on conflict behavior in male Wistar rats were compared. The drugs were administered orally, and the 3 minute conflict schedule was alternated with a variable-interval schedule (VI-2) for 12 minutes. Both 50 and 400mg/kg DPA increased the response rate suppressed by punishment, but only the 400mg/kg dose decreased the response rate in the VI-2 component. Diazepam (10 and 20mg/kg) increased the response rate in the punished component by 18% and decreased the responser rate in the VI-2 component by 50%. Diphenylhydantoin (10mg/kg) had no effect on response rate in either component. 13 references.

004193 Oka, Makoto; Yamada, Kiyoko; Yoshida, Kouichi; Shimizu, Masanao. Dept. of Pharmacology, Research Laboratories, Dainippon Pharmaceutical Co. Ltd., Suita-shi, Osaka 564, Japan **Avoidance enhancement and discriminative response control by anxiolytics with drugs acting on the GABA system.** Japanese Journal of Pharmacology. 30(3):325-336, 1980.

Experiments in male STD-ddY mice and STD-Wistar rats suggested that avoidance enhancement and discriminative response control by anxiolytic drugs may be linked to the GABA system. Chlordiazepoxide, diazepam, chlorazepate, and meprobamate increased the active avoidance rate in poorly performing mice, but chlorpromazine, haloperidol, and nortriptyline had no such effect. The effect of diazepam was potentiated by GABA and aminooxyacetic acid (AOAA); antagonized by picrotoxin and thiosemicarbazide; and not markedly influenced by spiroperidol, alpha-methyltyrosine, phenoxybenzamine, and levallorphan. The effect of other anxiolytic drugs was also potentiated by AOAA and antagonized by picrotoxin. Biperiden, methamphetamine, caffeine, and morphine also enhanced avoidance performance, but this enhancement was not altered by AOAA. In rats trained to discriminate phenobarbital from saline in a milk reinforced, two lever operant procedure, diazepam produced a dose related phenobarbital lever selection which was potentiated by AOAA and antagonized by picrotoxin. Chlordiazepoxide, chlorazepate, and meprobamate also elicited responses on the phenobarbital lever, whereas haloperidol, nortriptyline, beperiden, methamphetamine, caffeine, and morphine produced saline appropriate responding. 34 references. 004194 Olds, M. E.; Fobes, James L.; Albert, V. Division of Biology 216-76, California Institute of Technology, Pasadena, CA 91125 **Catecholamine-serotonin interaction effects on activity in rats neonatally treated with 6-hydroxydopamine.** Psychopharmacology. 73(1):31-33, 1981.

The effect of increased central serotonergic levels on motor activity was investigated in rats neonatally treated with 6-hydroxydopamine (6-OHDA) in the lateral ventricles. Regional brain assays of monoamine levels in 90-day-old rats showed depletion of catecholamines, but not of serotonin, in the forebrain accompanied by a large elevation of norepinephrine, and minor elevation of serotonin, in the hindbrain. Measures of behavioral activity in adulthood were taken after treatment with saline, pargyline, L-tryptophan, or pargyline given 30 minutes before L-tryptophan. The combined treatment of pargyline plus L-tryptophan produced hyperactivity in controls and this effect was blocked in the 6-OHDA treated animals. These findings indicate that the serotonergic system is capable of influencing motor activity, but that this influence is blocked in animals permanently depleted of catecholamines in their terminal field regions. 19 references. 004195 Ondrusek, M. Gene; Kilts, Clinton D.; Frye, Gerald D.; Mailman, Richard B.; Mueller, Robert A.; Breese, George R. Breese: Child Development Institute, University of North Carolina, School of Medicine, Chapel Hill, NC 27514 **Behavioral and biochemical studies of the scopolamine-induced reversal of neuroleptic activity.** Psychopharmacology. 73(1):17-22, 1981.

Behavioral and biochemical studies of the scopolamine induced reversal of neuroleptic activity are described. Scopolamine reversed the reduction in avoidance responding caused by spiperone and antagonized the inhibitory effects of spiperone on the behavioral actions of d-amphetamine or apomorphine. Scopolamine induced locomotor activity was greater in 6-hydroxydopamine (6-OHDA) treated animals than in controls. The possibility that presynaptic dopaminergic function was the locus of the antagonisms of spiperone by scopolamine was examined using drug interaction studies in 6-OHDA treated rats. It is concluded that scopolamine can affect both presynaptic or postsynaptic events associated with dopaminergic function and that both may contribute to the reversal of the actions of spiperone. 37 references. 004196 Ostrowski, Nancy L.; Rowland, Neil; Foley, Teri L.; Nelson, Jeffrey L.; Reid, Larry D. Psychobiology Program, Dept. of Psychology, University of Pittsburgh, Pittsburgh, PA 15260 **Morphine antagonists and consummatory behaviors.** Pharmacology Biochemistry and Behavior. 14(4):549-559, 1981.

The effects of opiate antagonists on eating and drinking were studied in male Sprague-Dawley rats. Water intake was reduced by naloxone, nalorphine, and the active isomer of WIN-44,441, but not by the inactive isomer of WIN-44,441 or by an analogue of nalorphine that does not cross the blood-brain barrier. Naloxone suppressed drinking after procedures that induce osmotic, volemic, or hormonal thirst. Naloxone suppressed eating after procedures that induce glucoprivation, but did not alter eating elicited by tail pressure. Results indicate that opiate antagonists have stereospecific effects within the CNS and suggest that endorphins play a role in the organization of ingestive behavior after challenges to homeostasis. 38 references. 004197 Papadopoulos, Georges; Huston, Joseph P.; Nef, Barbara. Huston: Institute of Psychology III, University of Dusseldorf, Universitatsstrasse 1, D-4000 Dusseldorf, West Germany **The influence of unilateral 6-OH-dopamine lesions of the substantia nigra in the absence of the telencephalon.** Brain Research Bulletin. 6(2):165-170, 1981.

The influence of unilateral 6-hydroxydopamine (6-OHDA) lesions of the substantia nigra in the absence of the telencephalon on apomorphine and amphetamine induced turning behavior was investigated. Most detelencephalized animals exhibited spontaneous turning to the contralateral side, i.e., they no longer behaved like 6-OHDA-lesioned rats, but instead, acted like animals with nigral kainic acid or electrolytic lesions. Amphetamine increased general activity but no longer influenced turning. Apomorphine in doses of 2 to 3mg/kg completely suppressed all motility. In small doses, it reversed the spontaneous contraversive turning. This effect could be blocked by haloperidol pretreatment. High doses of haloperidol reversed the direction of circling from contraversive to ipsiversive. Arecoline induced tremor as in normal animals. Atropine did not affect turning, but increased activity level in the thalamic rats. 31 references. (Author abstract modified)

004198 Pasternak, Gavril W.; Childers, Steven R.; Snyder, Solomon H. Dept. of Neurology, Memorial Sloan-Kettering Cancer Center, 1275 York Avenue, New York, NY 10021 **Naloxazone, a long-acting opiate antagonist: effects on analgesia in intact animals and on opiate receptor binding in vitro.** Journal of Pharmacology and Experimental Therapeutics. 214(3):455-462, 1980.

The effects of naloxazone on analgesia in intact animals and on opiate receptor binding in vitro were investigated. Administration of naloxazone, a hydrazone derivative of naloxone, to intact mice produced a prolonged inhibition of in vitro

(3H)opiate binding lasting up to 3 days. The effect was selective since naloxazone treatment produced no changes in alpha or beta adrenergic muscarinic or benzodiazepine receptor binding, and the effects on opiate binding sites were not reproduced by nonnarcotic hydrazines. Blockade of high affinity sites by naloxazone produced an 11fold increase in the ED50 value for morphine analgesia at 24 hours with both tail flick and writhing assays. By contrast, naloxazone produced no change in the LD50 value for morphine. As high affinity binding returned to control levels over 3 days, the ED50 for morphine analgesia in naloxazone pretreated mice returned to control values. Accordingly, the analgetic, but not lethal, effects of morphine may be mediated by the high affinity subpopulation of opiate receptors. 33 references. (Author abstrct modified)

004199 Phillips, Anthony G.; McDonald, Angus C.; Wilkie, Donald M. Dept. of Psychology, University of British Columbia, Vancouver, British Columbia, Canada V6T 1W5 **Disruption of autoshaped responding to a signal of brain-stimulation reward by neuroleptic drugs.** Pharmacology Biochemistry and Behavior. 14(4):543-548, 1981.

The effects of haloperidol (0.05, 0.10, or 0.15mg/kg) and pimozide (0.15, 0.50, or 1.0mg/kg) on autoshaped responding to a signal (CS) of brain stimulation reward obtained from electrodes in the dopamine cell groups of the ventral tegmentum and adjacent substantia nigra were studied. After male Wistar rats acquired the approach to the CS, injections of pimozide or haloperidol prior to test sessions caused a significant dose related attenuation of the autoshaped approach. The drug effects did not appear to be due to direct action on sensory processes or orientation, since most of the responses after high doses of either drug occurred during the first 10 trials of 30 trial sessions. Autoshaped CS approaches declined gradually over three extinction sessions, in contrast to the rapid and sustained disruption observed during drug sessions. Results suggest that the neuroleptic induced suppression of autoshaped CS approach with brain stimulation reward cannot be attributed solely to a block of the reward process. It is suggested that neuroleptic drugs disrupt neural mechanisms by which signals of impending reward release preorganized response patterns. 38 references. (Author abstract modified)

004200 Piercey, Montford F.; Dobry, Peggy J. K.; Schroeder, Lawrence A.; Einspahr, Fred J. Upjohn Company, Kalamazoo, MI 49001 **Behavioral evidence that substance P may be a spinal cord sensory neurotransmitter.** Brain Research. 210(1-2):407-412, 1981.

Central administration of very small doses of substance-P (SP) elicited reciprocal hindlimb scratching syndromes in male CF-1 mice. SP was more potent and the onset of its effect was more rapid after intraspinal (i.s.) administration than after intracranial (i.c.) administration. After i.c. injections of radiolabeled SP, SP was recovered primarily from the brain; after i.s. injection, SP was recovered primarily from spinal cord. Correlation of the behavioral and distribution data indicated that the spinal cord is the only possible site responsible for the scratching syndrome elicited by i.s. SP. Results suggest that SP may act as a sensory neurotransmitter in the spinal cord. 39 references.

004201 Pilcher, C. W. T.; Jones, Sarah M. Dept. of Pharmacology, Faculty of Medicine, P.O. Box 24923, Kuwait, Arabian Gulf **Social crowding enhances aversiveness of naloxone in rats.** Pharmacology Biochemistry and Behavior. 14(3):299-303, 1981.

The aversiveness of naloxone was increased in male hooded rats by chronic environmental stress. All rats acquired aversions to flavored solutions that had been presented 15 minutes prior to systemic injection of naloxone, but the degree of conditioned aversion was greater in rats reared and maintained in crowded conditions. The increased aversiveness of naloxone in these rats was not attenuated by transfer from crowded conditions to individual housing 3 weeks prior to aversive conditioning. Results suggest that social interaction under conditions of chronic crowding induces a prolonged increase in the level of tonic activity in the endorphinergic system. 22 references. 004202 Poshivalov, Vladimir P. Dept. of Pharmacology, First Pavlov Medical Institute, Leningrad, 197089, USSR **The integrity of the social hierarchy in mice following administration of psychotropic drugs.** British Journal of Pharmacology. 70(3):367-373, 1980.

Male CC57W mice in small groups developed a despotic type of social hierarchy that was resistant to the effects of psychotropic drugs. A drug induced alteration in the level of aggression in a subordinate mouse in a group of three did not alter its social position. Chronic administration of diazepam, mescaline, or droperidol altered the level of aggression and sometimes resulted in an inversion of the social hierarchy when a competitive rival was present in the group; the rate of inversion varied with the type of preexisting social hierarchy. The ability of psychotropic drugs to maintain the inertia of the hierarchy may be a useful index of the drugs' ability to alter certain types of species specific behavior, such as aggression. 15 references. 004204 Raleigh, M. J.; Yuwiler, A.; Brammer, G. L.; McGuire, M. T.; Geller, E.; Flannery, J. W. Neurobiochemistry Lab. T-85, Brentwood V.A. Hospital, Wilshire and Sawtelle Blvds., Los Angeles, CA 90073 **Peripheral correlates of serotonergically-influenced behaviors in vervet monkeys (Cercopithecus aethiops sabaeus).** Psychopharmacology. 72(3):241-246, 1981.

The relationships between 12 behaviors and three peripheral markers of central serotonergic activity were studied in vervet monkeys. Plasma free and total tryptophan correlated positively with approach, heterogrooming, and eating behaviors and correlated inversely with avoidance and solitary behaviors. The level of whole blood serotonin correlated inversely with avoidance and solitary behaviors. Results suggest that free and total tryptophan levels more accurately reflect the central serotonergic activity influencing behavior in normal vervet monkeys than does the level of whole blood serotonin. 29 references. 004205 Reavill, C.; Jenner, P.; Leigh, N.; Marsden, C. D. University Dept. of Neurology, Institute of Psychiatry, Denmark Hill, London, SE5, England **The role of nigral projections to the**

thalamus in drug-induced circling behaviour in the rat. Life Sciences. 28(13):1457-1466, 1981.

The role of nigral projections to the thalamus in drug induced circling behavior in the rat was investigated. Unilateral injection of 6-hydroxydopamine (6-OHDA) into the ascending nigrostriatal pathway caused contraversive circling to apomorphine and ipsiversive circling to amphetamine, respectively. An electrolesion of the ventromedial thalamic nucleus on the same side as the 6-OHDA lesion reduced apomorphine induced circling, but not that to amphetamine. Bilateral electrolesions of the ventromedial thalamic nucleus reduced neither apomorphine nor amphetamine induced circling. Electrolytic lesions of the parafascicular thalamic nucleus did not reduce apomorphine or amphetamine induced circling in animals with a unilateral 6-OHDA lesion of the nigrostriatal pathway. Knife cuts rostral and dorsal to the substantia nigra did not attenuate circling induced by injection of muscimol into the substantia nigra. Circling due to activation of nigral output pathways can be mediated by descending nigro reticular pathways. 18 references. (Author abstract modified)

004206 Reddy Ramana, S. V.; Maderdrut, Jerome L.; Yaksh, Tony L. Yaksh: Neurosurgical Research, Mayo Foundation, Rochester, MN 55901 **Spinal cord pharmacology of adrenergic agonist-mediated antinociception.** Journal of Pharmacology and Experimental Therapeutics. 213(3):525-533, 1980.

Intrathecal administration of norepinephrine (NE) and alpha-adrenergic agonists to male Sprague-Dawley rats with chronic spinal catheters elevated the nociceptive threshold in a dose dependent manner in both the hot plate and tail flick tests. Intrathecal administration of the beta-agonist isoproterenol did not alter the nociceptive threshold. The intrathecal NE effect was antagonized by pretreatment with the alpha-antagonist phentolamine, but not by the beta-antagonist propranolol. The intrathecal NE effect was not antagonized by intrathecal administration of papaverine, bradykinin, or subconvulsive doses of picrotoxin or strychinine, or by i.p. administration of naloxone or methysergide. The nociceptive threshold was significantly decreased 1 week after intrathecal administration of 6-hydroxydopamine (6-OHDA), which depleted spinal cord NE by 85%. Intrathecal tyramine elevated the nociceptive threshold but this effect was diminished in rats pretreated with 6-OHDA. The tyramine effect was antagonized by phentolamine. The intrathecal NE effect was not potentiated by aminophylline. The relative potencies of alpha-adrenergic agonists and antagonists suggested that the antinociceptive effect of intrathecal alpha-agonists is a postsynaptic receptor interaction. 81 references. 004207 Richelle, Marc. University of Liege, Liege, Belgium **Same or different? An exploration of the behavioral effects of benzamides.** Revista Mexicana de Analisis de la Conducta. 6(2):137-155, 1980.

The behavioral effects of two benzamides (sulpiride and tiapride) were evaluated with emphasis on features that differentiate them from other drugs. Rats and cats were used, and performance was maintained by several aversive and positive reinforcement schedules. The benzamides did not simply fit into the classificatory frames of modern psychopharmacology, since several differences were evident with respect to the behavioral effects of well known compounds. The two benzamides exhibited behavioral effects on operant conditioned responses with a general trend for a depressing effect on rate of responding. Analysis of the results in various contingencies, however, did not allow classification as neuroleptics or major tranquilizers. A major difference was the contrasting resistance of learned behavior in some schedules as compared with sensitivity observed under other contingencies. 7 references. (Journal abstract modified)

004208 Ridley, R. M.; Haystead, T. A. J.; Baker, H. F. Division of Psychiatry, Clinical Research Centre, Watford Road, Harrow, HA1 3UJ, Middlesex, England **An analysis of visual object reversal learning in the marmoset after amphetamine and haloperidol.** Pharmacology Biochemistry and Behavior. 14(3):345-351, 1981.

The effect of amphetamine and haloperidol pretreatment on visual object reversal learning was assessed in the marmoset. Amphetamine induced perseverative responding demonstrated by high reversal learning scores and worse than chance performance in the early stages of reversal. This perseverative responding was prevented by pretreatment with haloperidol. Haloperidol, alone or in conjunction with amphetamine, caused a mild, nonperseverative impairment of reversal learning only. 24 references. (Author abstract)

004209 Ritzmann, R. F. Dept. of Physiology and Biophysics, University of Illinois Medical Center, Chicago, IL 60680 **Opiate dependence following acute injections of morphine and naloxone: the assessment of various withdrawal signs.** Pharmacology Biochemistry and Behavior. 14(4):575-577, 1981.

Injection of 100 to 150mg/kg naloxone 15 minutes after a single 50mg/kg injection of morphine induced a jumping response in male Swiss-Webster mice that was behaviorally similar to that observed during withdrawal from chronic morphine administration. The jumping response induced by acute morphine/naloxone administration was potentiated by atropine and attenuated by oxotremorine, which is consistent with the effects of these cholinergic drugs on jumping associated with morphine withdrawal. However, other symptoms associated with opiate withdrawal (hypothermia, weight loss, and diarrhea) were not produced by the acute injection of morphine and naloxone. It is suggested that this single injection paradigm is particular to the jumping response rather than a demonstration of rapid development of opiate dependence. 9 references. 004210 Rokosz-Pelc, Anna; Antkiewicz-Michaluk, Lucyna; Vetulani, Jerzy. Vetulani: Dept. of Biochemistry, Institute of Pharmacology, Polish Academy of Sciences, 31-343 Krakow, Poland **5-Hydroxytryptamine-like properties of m-chlorophenylpiperazine: comparison with quipazine.** Journal of Pharmacy and Pharmacology. 32(3):220-222, 1980.

The effects of m-chlorophenylpiperazine (CPP) and quipazine on central serotonergic and dopaminergic function were studied in male Wistar rats. Both compounds induced the serotonin syndrome (head twitches and hind limb abduction). However, quipazine also induced locomotor stimulation and stereotyped sniffing, while CPP induced sedation. Both drugs reduced the accumulation of 5-hydroxytryptamine (5-HTP) in brain after inhibition of cerebral decarboxylase; quipazine also induced a pronounced decrease in dopa accumulation, whereas the effect of CPP on dopa appeared to be secondary to its serotonergic effect. Cyproheptadine antagonized the depression of dopa accumulation induced by CPP, but only partially antagonized the dopa depression induced by quipazine. Results suggest that CPP stimulates the central serotonergic system without directly affecting the dopamine receptor. 11 references.

004211 Rommelspacher, Hans; Nanz, Christel; Borbe, Harald O.; Fehske, Klaus J.; Muller, Walter E.; Wollert, Uwe. Muller: Pharmakologisches Institut der Universitat Mainz, D-6500 Mainz, West Germany **Benzodiazepine antagonism by harmane**

and other beta-carbolines in vitro and in vivo. European Journal of Pharmacology. 70(3):409-416, 1981.

Antagonism of benzodiazepines by harmane and other beta-carbolines was studied in female Wistar rats in vivo and in vitro. Harmane was a competitive inhibitor of benzodiazepine receptor binding in vitro and convulsions induced by harmane were reversibly inhibited by diazepam. For some beta-carboline derivatives, a correlation was found between affinity for the benzodiazepine receptor in vitro and convulsive potency in vivo. Results suggest that harmane or a related beta-carboline may be an endogenous agonist of the benzodiazepine receptor. 29 references. (Author abstract modified)

004212 Roshchina, L. F. Lab. farmakologii, Vsesoyuznyy nauchno-issledovatel'skiy khimiko-farmatsevticheskiy institut im. S. Ordzhonikidze, Moskva, USSR **/The effect of the new antidepressant inkasan on the bioelectrical activity of the brain and on conditioned reflexes./** Vliyaniye novogo antidepressanta inkazana na bioelektricheskuyu aktivnost' mozga i uslovnyye refleksy. Farmakologiya i Toksikologiya. 43(4):349-352, 1980.

The effect of the new antidepressant inkasan (3-methyl-8-methoxy-3H,1,2,5,6-tetrahydropyrazino (1,2,3-ab)-beta-carboline hydrochloride) on the bioelectrical activity of the brain and on conditioned reflexes was studied in cats, rabbits, and rats. Results show that inkasan had an activating effect on the EEG of the cerebral cortex, midbrain reticular formation, and hippocampus. Results also show that small doses of inkasan facilitated conditioned avoidance reflexes in rats, while increased doses inhibited these reflexes. 9 references. (Journal abstract modified)

004213 Russell, B.; Yaksh, T. L. Dept. of Neurological Surgery, Mayo Foundation, Rochester, MN 55901 **Antagonism by phenoxybenzamine and pentazocine of the antinociceptive effects of morphine in the spinal cord.** Neuropharmacology. 20(6):575-579, 1981.

Intrathecal administration of 0.1 to 400mcg phenoxybenzamine (PBX) or 1 to 400mcg pentazocine had no effect on hotplate or tail flick responses or on locomotor behavior in male Sprague-Dawley rats. Pretreatment with small doses of PBX (1 to 10mcg) or pentazocine (10 to 30 mcg) antagonized the antinociceptive effects of a 15mcg dose of morphine, but not those of a 3mcg dose of morphine. Larger doses of PBX or pentazocine did not alter the effect of morphine. Phentolamine (1 to 200mcg) had no effect on the antinociceptive effects of intrathecal morphine. Results suggest that pentazocine and PBX can act as partial agonists of the spinal opiate receptor. 19 references. (Author abstract modified)

004214 Schechter, Martin D. Dept. of Pharmacology, Northeastern Ohio Universities, College of Medicine, Rootstown, OH 44272 **Rapid acquisition of a two-drug discrimination: time of day effect upon saline state.** Pharmacology Biochemistry and Behavior. 14(3):269-271, 1981.

Sprague-Dawley rats were rapidly trained to discriminate between 0.8mg/kg d-amphetamine and 6mg/kg pentobarbital in a two lever food motivated operant task by imposing the drug states from the earliest stage of training (at the initiation of shaping to lever-press). Once trained, rats were given each of the training drugs and were allowed to lever-press without reinforcement until 10 responses were made on the nonpreferred lever. On this extended schedule of responding in extinction, the amphetamine induced interoceptive cue produced perseverance equal to that produced by pentobarbital. The administration of saline produced significantly more pentobarbital appropriate responding than amphetamine appropriate responding when animals were tested in the daytime, but produced random responding when animals were tested at night. Results suggest that the arousal state of the rat, a nocturnal species, may differentially influence saline tests during the day and at night. 11 references. (Author abstract modified)

004215 Schlemmer, R. Francis, Jr.; Elder, Janice K.; Casper, Regina C.; Davis, John M. Illinois State Psychiatric Institute, Dept. of Research, 1601 West Taylor St., Chicago, IL 60612 **Clonidine-induced hyperphagia in monkeys: evidence for alpha2-noradrenergic receptor mediation.** Psychopharmacology. 73(1):99-100, 1981.

The mechanism of clonidine induced hyperphagia and weight gain in monkeys was studied in 11 stumptail macaques. Clonidine induced a significant increase in food intake over baseline levels and a significant weight gain after the 3-day treatment period. Both changes induced by clonidine were antagonized by the alpha-1-noradrenergic antagonist yohimbine, but not by prazosin, an alpha-1-noradrenergic antagonist. These results suggest that clonidine induced hyperphagia and weight gain in monkeys are mediated through alpha-2-noradrenergic receptors. 11 references. (Author abstract)

004216 Schonfeld, Amy Rothman; Glick, Stanley D. Dept. of Neurology, Albert Einstein College of Medicine, 1300 Morris Park Ave., Bronx, NY 10461 **Handling-induced seizures and rotational behavior in the Mongolian gerbil.** Pharmacology Biochemistry and Behavior. 14(4):507-516, 1981.

The relationship between sensory induced seizures, cerebral laterality (as measured by rotation), and nigrostriatal asymmetry was studied in female Mongolian gerbils. Seizure resistant gerbils made more spontaneous turns in a preferred direction than seizure sensitive animals. The antiepileptic drugs carbamazepine (10 to 20mg/kg), diazepam (16mg/kg), and pentobarbital (40mg/kg) strongly elicited rotational behavior; phenobarbital (20 to 40mg/kg) and ethosuximide (500mg/kg) potentiated rotation, but diphenylhydantoin and trimethadione were ineffective. The dopaminergic agonists amphetamine (4mg/kg) and apomorphine (16mg/kg) enhanced rotation at anticonvulsant doses, whereas the dopaminergic antagonist haloperidol reduced rotational behavior at a dose (1mg/kg) that exacerbates seizure activity. Surgical induction of nigrostriatal asymmetry had no significant effect on seizures. Results suggest that rotational behavior and seizure activity are inversely related and that the link between the two behaviors may be asymmetry in nigrostriatal dopaminergic systems. 49 references. (Author abstract modified)

004217 Severson, J. A.; Randall, P. K.; Finch, C. E. Andrus Gerontology Center, University of Southern California, Los Angeles, CA 90007 **Genotypic influences on striatal dopaminergic regulation in mice.** Brain Research. 210(1-2):201-215, 1981.

Genotypic influences on dopaminergic induced behaviors and striatal dopamine receptors were evaluated in CBA/J, C57BL/6J, and BALB/cJ male mice. Animals were tested for stereotypic responses to apomorphine, cataleptic responses to haloperidol, striatal dopamine receptor binding, dopamine levels and turnover, and responses to chronic treatment with haloperidol and bromocriptine. Results indicated that some striatal dopaminergic functions are impaired in CBA/J mice relative to the other two strains. The impaired supersensitivity responses to haloperidol in CBA/J mice were similar to those observed in aging rodents. 47 references. (Author abstract modified)

004218 Share, Norman N.; Rackham, Anita. Laboratoires Merck Sharp and Dohme-Chibret, B.P. 88, Route de Marsat, F-63203 Riom Cedex, France **Intracerebral substance P in mice: behavioral effects and narcotic agents.** Brain Research. 211(2):379-386, 1981.

A reciprocal hindlimb scratching response was induced in male Swiss mice by acute intracerebral injection of substance-P or the related undecapeptides physalaemin and eledoisin. This dose related response was not observed after injection of TRH, neurotensin, bradykinin, somatostatin, prostaglandins, dibutyryl cyclic AMP, or dibutyryl cyclic GMP. The response to intracerebral injection of substance-P was prevented by i.p. injection of analgesic narcotic agonists such as morphine in a stereospecific fashion, with a rank order of potency similar to that reported for analgesic activity and binding to opiate receptors in vitro. Narcotic agents with mixed agonist/antagonist activity were inactive. Naloxone potentiated the effect of substance-P and reversed the inhibition action of morphine. Results indicate that the reciprocal hindlimb scratching response to substance-P involves central nociceptive pathways. 26 references. (Author abstract modified)

004219 Shearman, Gary T.; Lal, Harbans. Lal: Dept. of Pharmacology, Texas College of Osteopathic Medicine, Camp Bowie at Montgomery, Fort Worth, TX 76107 **Discriminative stimulus properties of cocaine related to an anxiogenic action.** Progress in Neuro-Psychopharmacology. 5(1):57-63, 1981.

In male hooded Long-Evans rats trained to discriminate the anxiogenic action of pentylenetetrazol (20mg/kg i.p.) from saline, cocaine (20mg/kg) significantly generalized to the pentylenetetrazol discriminative stimulus. Diazepam (5mg/kg) and haloperidol (0.16 or 0.64mg/kg) did not generalize to the pentylenetetrazol cue. The discriminative stimuli produced by pentylenetetrazol and cocaine were antagonized by diazepam, but not by haloperidol. Results suggest that cocaine produces a discriminative stimulus that is related to its anxiogenic action. 27 references. (Author abstract modified)

004220 Sinclair, J. D.; Lindros, K. O. Research Laboratories, State Alcohol Monopoly (Alko), POB 350, SF-00101 Helsinki 10, Finland **Suppression of alcohol drinking with brain aldehyde dehydrogenase inhibition.** Pharmacology Biochemistry and Behavior. 14(3):377-383, 1981.

Calcium cyanamide, an aldehyde dehydrogenase (ALDH) inhibitor used in the treatment of alcoholism, suppressed voluntary consumption of ethanol by rats. Administration of a low dose of 4-methylpyrazole (4-MP) abolished acetaldehyde accumulation, but did not affect the suppression induced by cyanamide; 4-MP also failed to alter unsuppressed alcohol intake by Long-Evans rats or drinking by rats of the ANA strain developed for low levels of ethanol consumption. When given with cyanamide, 4-MP altered the development of the suppression. This effect was probably due to a decrease in the degree of brain ALDH inhibition, since a high cofrelation was found between brain ALDH activity and ethanol consumption. Results suggest that cyanamide suppresses alcohol drinking in the absence of acetaldehyde accumulation by some action related to direct inhibition of brain ALDH. 30 references. 004221 Skolnick, Phil; Paul, Steven; Crawley, Jacqueline; Rice, Kenner; Barker, Steven; Weber, Robert; Cain, Michael; Cook, James. Laboratory of Bioorganic Chemistry, NIAMDD, NIH, Bethesda, MD 20205 **3-Hydroxymethyl-beta-carboline antagonizes some pharmacologic actions of diazepam.** European Journal of Pharmacology. 69(4):525-527, 1981.

The anxiolytic and anticonvulsant effects of diazepam in male mice were significantly reduced by 3-hydroxymethyl-beta-carboline (3-HMC) at a dose (25mg/kg) that did not alter spontaneous motor activity or elicit other overt behavioral changes. Higher doses of 3-HMC (50 to 100mg/kg) also decreased spontaneous motor activity. Results suggest that endogenous tetrahydro-beta-carbolines may interact with benzodiazepine receptors in the brain. 5 references.

004222 Smith, Donald F. Psychopharmacology Research Unit, Psychiatric Hospital, DK-8240 Risskov, Denmark **Lithium and motor activity of animals: effects and possible mechanism of action.** International Pharmacopsychiatry. 15(4):197-217, 1980.

The effects of lithium on spontaneous activity, exploratory activity, hyperactivity and stereotypy induced by drugs, drug induced hypoactivity, and activity rhythms of animals are reviewed. Attention is given to the rationale for the studies, and the relation of research on motor activity in animals to the therapeutic and prophylactic actions of lithium against manic-depressive illness. The most consistent effects of lithium on motor activity of animals are found on exploratory activity, hyperactivity, and stereotypy induced by drugs that alter monoaminergic neurotransmission, and rhythmic activity driven by endogenous biological clocks. Suppressant effects of lithium on motor activity appear related to alterations in monoaminergic and cholingeric neurotransmission to actions of thyroid hormones, and to alterations in postsynaptic depolarization. Potentiating effects of lithium on activity seem to be due to alterations in the sensitivity of monoamine receptors. Some suggestions are made concerning further studies of interest to investigate the mechanisms of action of lithium on motor activity. 129 references. (Author abstract)

004223 Smith, Donald F. Psychopharmacology Research Unit, Aarhus University Institute of Psychiatry, Psychiatric Hospital, DK-8240 Risskov, Denmark **Central and peripheral effects of lithium on amphetamine-induced hyperactivity in rats.** Pharmacology Biochemistry and Behavior. 14(4):439-442, 1981.

The effects of central peripheral injections of 9.15M lithium chloride (LiCl) on open-field behavior and amphetamine induced hyperactivity in male Wistar rats were studied. Intracerebroventricular injections of LiCl (2x20mcl) did not alter open-field behavior, but antagonized amphetamine induced hyperactivity. Injection of 15ml/kg i.p. LiCl suppressed open-field activity, but did not influence the behavioral effects of amphetamine. 21 references. (Author abstract modified)

004224 Spealman, Roger D.; Katz, Jonathan L. Harvard Medical School, New England Regional Primate Research Center, One Pine Hill Drive, Southborough, MA 01772 **Some effects of clozapine on punished responding by mice and squirrel monkeys.** Journal of Pharmacology and Experimental Therapeutics. 212(3):435-440, 1980.

The behavioral effects of clozapine, a novel antipsychotic drug, on punished responding by mice and squirrel monkeys were investigated and compared with those of chlorpromazine and chlordiazepoxide. All Ss responded under a two component fixed-ratio schedule of food presentation in which responding in one component was suppressed (punished) by delivery of electric shock after every response. Although clozapine or chlordiazepoxide increased punished responding in both species, maximal increases in punished responding produced by clozapine were less than those produced by chlordiazepoxide in squirrel monkeys. The behavioral effects of clozapine differed qualitatively from those of the antipsychotic drug, chlorpromazine, and quantitatively from those of the antianxiety drug, chlordiazepoxide. 30 references. (Author abstract modified)

004225 Spealman, Roger D.; Kelleher, R. T. New England Regional Primate Research Center, One Pine Hill Drive, Southborough, MA 01772 **Behavioral effects of self-administered cocaine: responding maintained alternately by cocaine and electric**

shock in squirrel monkeys. Journal of Pharmacology and Experimental Therapeutics. 210(2):206-214, 1979.

Squirrel monkeys responded under a fixed-interval schedule of intravenous cocaine injection that alternated with a fixed-interval schedule of either presentation of electric shock or termination of a stimulus associated with electric shock. As the dose of cocaine was increased from 10 to 1000mcg/kg/injection, responding maintained by cocaine injection or alternatively by electric shock first increased and then decreased. The lowest doses of cocaine that reliably maintained self-administration often increased responding maintained by electric shock; the highest doses of cocaine that continued to maintain self-administration often decreased responding maintained by electric shock. When saline was substituted for cocaine, responding that had been maintained previously by cocaine injection occurred irregularly and at very low rates, whereas rates and patterns of responding maintained by electric shock were characteristic of fixed-interval schedules. When the fixed-interval schedule of cocaine injection was replaced by intravenous injections that occurred without regard to antecedent responding, the effects of cocaine on responding maintained by electric shock were found to be independent of the way in which cocaine was administered. 23 references. (Author abstract)

004226 Spirduso, Waneen W.; Abraham, Lawrence D.; Wolf, Michael D. Dept. of Physical and Health Education, University of Texas, College of Education, Austin, TX 78712 **Effects of chlorpromazine on escape and avoidance responses: a closer look.** Pharmacology Biochemistry and Behavior. 14(4):433-438, 1981.

The effects of chlorpromazine (CPZ) were evaluated in a response paradigm in which male Sprague-Dawley rats were systematically shaped over a period of days to initiate an extremely fast and consistent avoidance, consisting only of limb movements and requiring only milliseconds to complete. CPZ clearly impaired to animals' ability to initiate rapid avoidance movements. In contrast to findings in previous studies, CPZ also caused some impairment of escape responses. Results support the proposed involvement of dopamine in the initiation of voluntary movement. 23 references. (Author abstract modified)

004227 Stach, R.; Lazarova, M. B.; Kacz, D. Polish Academy of Science, Institute of Pharmacology, 12 Smetna St., 31343 Krakow, Poland **Serotonergic mechanism in seizures kindled from the rabbit amygdala.** Naunyn-Schmiedeberg's Archives of Pharmacology. 316(1):56-58, 1981.

The effects of serotonin receptor agonists and antagonists on seizures kindled from the rabbit amygdala were examined. The intensity of behavioral seizures and the duration of bioelectrical seizures were not altered by acute administration of agents that enhance serotonergic activity, including 5-hydroxytryptamine (5-HTP), quipazine, and femoxetine. Femoxetine (15mg/kg) and 5-HTP (25mg/kg) prolonged the duration of behavioral seizures. Chronic administration of 5-HTP had no effect on the development of kindled seizures. Acute administration of p-chlorophenylalanine (250mg/kg) reduced the intensity and shortened the duration of behavioral seizures, and chronic administration (80mg/kg) delayed the development of kindled seizures. Cyproheptadine shortened the duration of behavioral seizures. Results indicate that pharmacological inhibition of the serotonergic system attenuates and delays the development of seizures kindled from the amygdala, whereas pharmacological stimulation of this system has little or no enhancing effect. 18 references. (Author abstract modified)

004228 Stark, Paul; Dews, P. B. Lilly Research Laboratories, 307 E. McCarty St., Indianapolis, IN 46285 **Cannabinoids. I. Behavioral effects.** Journal of Pharmacology and Experimental Therapeutics. 214(1):124-130, 1980.

The effects of two new cannabinoids, nabilone and canbisol, were compared with those of delta9-tetrahydrocannabinol (THC) and chlordiazepoxide (CDZ) in behavioral tests in several species. The initial high activity of male Belaire Swiss mice in a photocell device was decreased by oral doses of 5 and 10mg/kg THC or 200mg/kg CDZ; 5 and 10mg/kg doses of nabilone and 2.5, 5.0, and 10.0mg/kg doses of canbisol decreased the initial high activity but increased subsequent low activity. In male Long-Evans rats, muricide and intracranial self-stimulation were slowed by THC, nabilone, and canbisol, but not by CDZ. The reactivity of rats with septal lesions was reduced by CDZ, nabilone and canbisol, but not by THC. Food consumption in rats was reduced only by nabilone and canbisol. Ataxia was induced in dogs by low i.v. doses of THC, nabilone, and canbisol; much higher doses were required when the drugs were given orally. In rhesus monkeys working under multiple fixed-ratio, fixed-interval schedules, CDZ increased responding at all doses studied, the three cannabinoids increased response rate at some doses but reduced or abolished responding at higher doses. Results indicate that nabilone and canbisol resemble CDZ in some tests and THC in others. 16 references. (Author abstract modified)

004229 Staunton, David A.; Wolfe, Barry B.; Groves, Philip M.; Molinoff, Perry B. Wolfe: Dept. of Pharmacology, University of Colorado Health Science Center, 4200 East Ninth Ave., Denver, CO 80262 **Dopamine receptor changes following destruction of the nigrostriatal pathway: lack of a relationship to rotational behavior.** Brain Research. 211(2):315-327, 1981.

The density of binding sites for (3H)spiperone in male Sprague-Dawley rat neostriatum increased gradually 2 to 3 weeks after unilateral 6-hydroxydopamine induced destruction of dopaminergic afferent neurons. The properties of the receptor labeled by (3H)spiperone were not altered by denervation. Dopamine sensitive adenylate-cyclase activity increased gradually in homogenates of the caudate ipsilateral to the lesion, compared to the contralateral side. Apomorphine induced pronounced circling in the lesioned animals, with maximal effect 3 days after the lesion. Since this effect clearly preceded receptor alterations in the striatum, the increase in the number of binding sites cannot account for the drug induced rotational behavior. 40 references. (Author abstract modified)

004230 Steinfels, George F.; Young, Gerald A. Young: Dept. of Pharmacology and Toxicology, University of Maryland School of Pharmacy, 636 West Lombard St., Baltimore, MD 21201 **Effects of narcotic abstinence on schedule-controlled behavior in dependent rats.** Pharmacology Biochemistry and Behavior. 14(3):393-395, 1981.

Female Sprague-Dawley rats trained to lever-press for food on a variable interval 1 minute schedule of reinforcement were made tolerant to and physically dependent on morphine or 1-alpha-acetylmethadol (LAAM). During the dependence state, behavioral tolerance was exhibited to the suppressant effect of morphine on lever-pressing, but not to the suppressant effect of LAAM. From day 4 to 12 after the morphine and LAAM injections were discontinued, mean lever-presses per session were significantly higher than predrug control values. Mean lever-presses per session were significantly higher during morphine abstinence than during LAAM abstinence. 20 references. (Author abstract modified)

004231 Sternberg, Debra B.; Gold, Paul E. Gold: Dept. of Psychology, Gilmer Hall, University of Virginia, Charlottesville, VA 22901 **Retrograde amnesia produced by electrical stimulation**

of the amygdala: attenuation with adrenergic antagonists. Brain Research. 211(1):59-65, 1981.

Subseizure electrical stimulation of the amygdala produced retrograde amnesia for a visual discrimination shock motivated task in male Sprague-Dawley rats. This amnesia was blocked by pretreatment with the alpha-adrenergic antagonist phenoxybenzamine or the beta-adrenergic antagonist propranolol. Results suggest that adrenergic mechanisms are involved in the production of retrograde amnesia. 36 references. (Author abstract modified)

004232 Stone, W. E.; Javid, M. J. Dept. of Physiology, University of Wisconsin Medical School, Madison, WI 53706 **Aminophylline and imidazole as convulsants.** Archives Internationales de Pharmacodynamie et de Therapie. 248(1):120-131, 1980.

The convulsive actions of aminophylline (APH) and imidazole (IDZ) were tested against a series of anticonvulsants in male Swiss mice. APH was significantly antagonized by phenobarbital and chlordiazepoxide, but antagonism by trimethadione was not significant. Ethosuximide, phenytoin, and aminooxyacetic acid (AOAA) potentiated APH. IDZ induced seizures were relatively refractory to anticonvulsants, but slight antagonism was seen, particularly after AOAA. Phenytoin potentiated IDZ induced seizures. Subconvulsive doses of APH and IDZ potentiated seizures induced by pentylenetetrazol and 3-mercaptopropionic acid. 35 references. (Author abstract modified)

004233 Stripling, Jeffrey S.; Hendricks, Curtis. Dept. of Psychology, University of Arkansas, Fayetteville, AR 72701 **Effect of cocaine and lidocaine on the expression of kindled seizures in the rat.** Pharmacology Biochemistry and Behavior. 14(3):397-403, 1981.

The effect of cocaine and lidocaine on the expression of kindled seizures was studied in male Long-Evans rats with electrodes implanted in the olfactory bulb, prepyriform cortex, or basolateral amygdala. Neither cocaine hydrochloride (20mg/kg i.p.) nor lidocaine hydrochloride (20mg/kg i.p.) significantly altered afterdischarge threshold. Both drugs significantly reduced the latency to clonus after stimulation, a measure presumably related to the propagation of afterdischarges from the site of stimulation to other brain areas. Both drugs also significantly reduced the behavioral response (rearing and falling) to stimulation. Cocaine significantly reduced afterdischarge duration, and lidocaine significantly reduced clonus intensity. Results indicate that cocaine has pronounced effects on the expression of seizure activity in the olfactory forebrain, some of which are due to its local anesthetic action. 39 references. 004234 Szechtman, Henry; Hershkowitz, Moshe; Simantov, Rabi. Dept. of Neurosciences, McMaster University, Hamilton, Ontario, Canada L8S 3Z5 **Sexual behavior decreases pain sensitivity and stimulates endogenous opioids in male rats.** European Journal of Pharmacology. 70(3):279-285, 1981.

In male Wistar rats, copulation had antinociceptive effects as measured by shock induced vocalization or hindlimb withdrawal to pinch. Prolonged mating reduced the content of endogenous opioids in midbrain, but not in hypothalamus or caudate nucleus. Opiate receptor antagonism by naloxone (4mg/kg) significantly extended the postejaculatory interval. Results indicate that mating is a biological stimulus for release of endogenous opioids, possibly to prevent intense sexual stimulation from becoming aversive and to increase its reward value. 35 references. (Author abstract modified)

004235 Tang, Maisy; Ahrendsen, Kim; Falk, John L. Psychology Building, Busch Campus, Rutgers University, New Brunswick, NJ 08903 **Barbiturate dependence and drug preference.** Pharmacology Biochemistry and Behavior. 14(3):405-408, 1981.

When male Holtzman rats were exposed to a daily 3 hour session of intermittent food delivery, they orally self-administered a substantial volume (35ml) of 1mg/ml sodium phenobarbital solution during the session. These periods of voluntary phenobarbital intake had no effect on 21 hour home cage barbiturate preference. Substitution of water for phenobarbital during the session after 7.5 weeks precipitated spontaneous withdrawal signs in some animals within 24 hours of drug withdrawal, but did not alter home cage barbiturate preference. Results suggest that physical dependence alone does not play a crucial role in the maintenance of drug intake behavior. 17 references. (Author abstract modified)

004236 Teal, Janice J.; Holtzman, Stephen G. Holtzman: Dept. of Pharmacology, Emory University School of Medicine, Atlanta, GA 30322 **Discriminative stimulus effects of cyclazocine in the rat.** Journal of Pharmacology and Experimental Therapeutics. 212(3):368-376, 1980.

The discriminative effects of cyclazocine were investigated in two groups of rats trained to discriminate between saline and either 0.3 or 1.0 mg/kg of cyclazocine with a two choice discrete trial avoidance paradigm. Cyclazocine engendered dose related cyclazocine appropriate responding in both groups of rats with the position of the dose/response curves along the abscissa reflecting the differences in training dose. The time course of the discriminative effects of cyclazocine was relatively short; drug appropriate responding began to decline from maximal levels within 1 hour of drug administration. These and other data suggest that the discriminative effects of cyclazocine are comprised of at least two major components: 1) a narcotic component which is antagonized by naltrexone but does not appear to be mediated through the same populations of opioid receptors as morphine; and 2) a nonnarcotic component, which is not antagonized by naltrexone but mimicked by ketamine and phencyclidine. 32 references. (Author abstract modified)

004237 Threatte, Rose M.; Fregly, Melvin J.; Connor, Thomas M.; Kikta, Dianne C. Fregly: Dept. of Physiology, Box J-274, JHMHC, University of Florida, College of Medicine, Gainesville, FL 32610 **L-5-hydroxytryptophan-induced drinking in rats: possible mechanisms for induction.** Pharmacology Biochemistry and Behavior. 14(3):385-391, 1981.

The beta-adrenergic antagonist propranolol (6mg/kg i.p.) and the angiotensin converting enzyme inhibitor captopril (35mg/kg i.p.) blocked the dipsogenic responses to subcutaneous injection of L-5-hydroxytryptophan (5-HTP, 25mg/kg) in female Sprague-Dawley rats. Clonidine (12.5 and 25mcg/kg i.p.), a central alpha-adrenergic agonist that inhibits renin release, attenuated drinking 1, 2, and 3 hours after 5-HTP. Haloperidol (150mcg/kg i.p.), a dopaminergic antagonist, also attenuated the dipsogenic response to 5-HTP. Incremental reductions in 5-HTP induced drinking were observed with increasing doses of spiroperidol (37.5 to 150mcg/kg i.p.), a potent dopaminergic antagonist. Results indicate that the dipsogenic response to 5-HTP is dependent on the renin/angiotensin system and on an intact dopaminergic pathway. 25 references. (Author abstract modified)

004238 Tseng, L. -F.; Wei, E. T.; Loh, H. H.; Li, Choh Hao. Dept. of Pharmacology and Toxicology, Medical College of Wisconsin, P.O. Box 26509, Milwaukee, WI 53226 **Beta-endorphin: central sites of analgesia, catalepsy and body temperature changes in rats.** Journal of Pharmacology and Experimental Therapeutics. 214(2):328-332, 1980.

Beta-endorphin was microinjected into rat brain to localize central sites associated with some of its pharmacologic effects, namely analgesic (inhibition of tail flick response), catalepsy, and changes in body temperature. Beta-endorphin produced analgesia and catalepsy when it was injected at low doses into the medial preoptic areas, nucleus accumbens, anterior hypothalamus, and the periaqueductal gray/4th ventricular spaces. Beta-endorphin had complex effects on body temperature. For example, when it was injected into the nucleus accumbens or preoptic area, low doses produced hyperthermia; higher doses produced hypothermia. The brain regions in which low doses of beta-endorphin elicit pharmacologic effects correspond to the anatomic areas in which the endogenous beta-endorphin system is distributed. Similar correspondence to the endogenous enkephalin system was not obtained. 31 references. (Author abstract modified)

004239 Tufik, Sergio. Depto. de Psicobiologia, Escola Paulista de Medecina, Rua Botucatu, 862, 04023 Sao Paulo, Brazil **Changes of response to dopaminergic drugs in rats submitted to REM-sleep deprivation.** Psychopharmacology. 72(3):257-260, 1981.

Apomorphine, piribedil, and bromocriptine elicited aggressive behavior in male Wistar rats deprived of REM sleep. The aggressive behavior elicited by apomorphine in REM deprived animals was enhanced by treatment with haloperidol 24 hours prior to the administration of apomorphine. Haloperidol injected 2 hours prior to apomorphine treatment blocked the aggressive behavior in rats subjected to REM sleep deprivation alone or REM deprivation plus 24 hour pretreatment with haloperidol. Results support the hypothesis that the exaggerated aggressiveness elicited by apomorphine in REM deprived rats is due to postsynaptic dopaminergic receptor supersensitivity. 23 references. (Author abstract modified)

004240 Turnbull, M. J.; Wheeler, H. Wheeler: I.C.I. Pharmaceuticals Division, Bioscience Dept., Mereside, Alderley Park, Macclesfield, Cheshire SK10 4TG, England **Some observations on the pharmacological activity of MIF (Pro-Leu-Gly-NH2).** Journal of Pharmacy and Pharmacology. 32(11):803-804, 1980.

Pro-Leu-Gly-NH2 (MIF, 100mg/kg) antagonized the cataleptic effect of haloperidol (10mg/kg) in mice. However, this antagonism was observed only when MIF was injected with haloperidol or 10 minutes before or after haloperidol. The brief duration of the MIF effect may account for previous failures to observe MIF antagonism of neuroleptic induced catalepsy. 5 references.

004241 Turski, Lechoslaw; Czuczwar, Stanislaw J.; Turski, Waldemar; Kleinrok, Zdzislaw. Dept. of Pharmacology, Institute of Clinical Pathology, Medical School, Jaczewskiego 8, 20-090 Lublin, Poland **Studies of carbachol-induced wet-dog shake behavior in rats.** Psychopharmacology. 73(1):81-83, 1981.

Intraventricular administration of carbachol chloride was found to evoke wet dog shakes (WDS) in rats in a dose related manner. WDS induced by carbachol at the dose of 20mcg were antagonized by scopolamine, atropine, cyproheptadine, morphine, clonidine, phentolamine, haloperidol, and L-5-hydroxytryptophan. Methergoline, propranolol, bicuculline, and aminooxyacetic acid had no effect on carbachol induced shaking behavior. Results show the existence of different types of shaking behavior, not exclusively related to the stimulation of central serotonin structures. 23 references. (Author abstract)

004242 Valentino, Rita J.; Smith, Charles B.; Woods, James H. Dept. of Pharmacology, University of North Carolina School of Medicine, Chapel Hill, NC 27514 **Physiological and behavioral approaches to the study of the quasi-morphine withdrawal syndrome.** Federation Proceedings. 40(5):1502-1507, 1981.

The effects of two benzazocines, UM-1037 and UM-1046, which produce a quasi morphine abstinence syndrome in normal rhesus monkeys, were characterized by the use of the isolated guinea-pig ileal preparation and by a drug discrimination procedure in pigeons. These benzazocines produce a contraction of the ileum isolated from narcotic naive guinea-pigs similar to the narcotic antagonist precipitated contraction of ilea isolated from morphine pretreated animals. This effect is suppressed by morphine, and the suppression is reversed by naloxone. The drug discrimination studies are also consistent with the involvement of cholinergic mechanisms in the behavioral effects produced by the benzazocines. The involvement of cholinergic pathways in the quasiabstinence syndrome produced by UM-1037 and UM-1046 suggests that similar pathways might be active during narcotic abstinence. 30 references. (Author abstract modified)

004243 Verberne, A. J. M.; Taylor, D. A.; Fennessy, M. R. Dept. of Pharmacology, University of Melbourne, Parkville, Victoria 3052, Australia **Attenuation of delta9-tetrahydrocannabinol-induced withdrawal-like behaviour by delta9-tetrahydrocannabinol.** Psychopharmacology. 73(1):97-98, 1981.

The effects of delta9-tetrahydrocannabinol (THC) and polyvinylpyrrolidone (PVP), the injection vehicle in which THC was suspended, on THC-induced withdrawal-like behaviour were compared. Different groups of rats were injected IV twice daily for up to 5 days with either THC, in doses increasing from 2mg/kg to 6mg/kg, or PVP. On day 6, an acute dose of 6mg/kg THC was given 30 min before IP clomipramine (15mg/kg). The total behavioral response, which included writhing, backward kicking, jumping, head shaking, and paw tremor, was attenuated in rats chronically treated with THC, but not in rats which received an acute dose of PVP. These results support the hypothesis that chronically administered THC produces a state of physical dependence in the rat. 15 references. (Author abstract modified)

004244 Verimer, Turkiz; Goodale, David B.; Long, John P.; Flynn, Jan R. Long: Dept. of Pharmacology, College of Medicine, University of Iowa, Iowa City, IA 52242 **Lithium effects on haloperidol-induced pre- and postsynaptic dopamine receptor supersensitivity.** Journal of Pharmacy and Pharmacology. 32(9):665-666, 1980.

Locomotor responses to apomorphine were studied in male Sprague-Dawley rats treated chronically with haloperidol, lithium, or both. A 0.016mg/kg dose of apomorphine was required for significant inhibition of locomotor activity in rats treated chronically with lithium or saline. Doses of 0.004mg/kg and 0.008mg/kg apomorphine significantly inhibited locomotor activity in rats treated chronically with haloperidol, suggesting that chronic haloperidol induced presynaptic dopamine receptor supersensitivity. Higher doses of apomorphine increased locomotor activity, indicating activation of supersensitive postsynaptic dopamine receptors. Presynaptic and postsynaptic supersensitivities to apomorphine were not apparent in rats treated chronically with both lithium and haloperidol. Results suggest that lithium blocks the development of supersensitivity in presynaptic and postsynaptic dopamine receptors, which may account for lithium's therapeutic effects in the treatment of manic-depressive disorders and tardive dyskinesia. 6 references.

004245 Wallnau, Larry B.; Bordash, Gerard D.; Corso, Philip, Jr. Dept. of Psychology, State University College, Brockport, NY 14420 **The effects of tryptophan and manipulations of serotonergic receptors on tonic immobility in chickens.** Pharmacology Biochemistry and Behavior. 14(4):463-468, 1981.

The effects of serotonergic manipulations on tonic immobility (TI) were studied in Production Red chickens. Systemic injections of tryptophan enhanced the duration of TI. Quipazine, a serotonin (5-HT) receptor agonist, and p-chloroamphetamine, a 5-HT releaser, antagonized the effect of tryptophan and reduced the duration of TI when given alone. Fenfluramine, which promotes 5-HT release, also reduced TI duration. Pretreatment with the 5-HT receptor blocker cinanserin prevented the attenuation of TI by quipazine. Results are discussed in relation to 5-HT receptor mechanisms and the raphe model of TI. 35 references. (Author abstract modified)

004246 Wallnau, Larry B.; Bordash, Gerard D.; Corso, Philip, Jr. Dept. of Psychology, State University College, Brockport, NY 14420 **Tonic immobility in domestic fowl: possible interaction of serotonergic and dopaminergic mechanisms.** Pharmacology Biochemistry and Behavior. 14(4):469-473, 1981.

The effects of serotonin (5-HT) and dopamine (DA) receptor manipulations on tonic immobility (TI) of Production Red Chickens was examined. TI in Production Red chickens was enhanced by the DA receptor blocker haloperidol, but this effect was reversed by fenfluramine, a 5-HT receptor agonist. Tryptophan enhanced TI, but this effect was prevented by apomorphine. Results suggest that serotonergic and dopaminergic systems interact with respect to TI. 45 references. 004247 Watanabe, Hirokazu; Nakano, Shigeyuki; Ogawa, Nobuya. Dept. of Pharmacology, Ehime University School of Medicine, Shigenobu-Cho, Onsen-Gun, Ehime-Ken, 791-02, Japan **Pharmacokinetic study of apomorphine-induced stereotypy in food deprived rats.** Pharmacology Biochemistry and Behavior. 14(4):493-496, 1981.

Apomorphine hydrochloride (10mg/kg) was administered subcutaneously to male Wistar rats with free access to food and water or deprived of food for 48 hours. Food deprivation tended to potentiate apomorphine induced stereotypy in the early stage after dosing, when plasma apomorphine concentrations were higher in food deprived rats than in ad lib controls. The potentiation of apomorphine induced stereotypy after food deprivation can be attributed in part to pharmacokinetic changes, but the exact mechanism of the effect is not yet known. 16 references. (Author abstract modified)

004248 Wei, E. T. School of Public Health, University of California, Berkeley, CA 94720 **Pharmacological aspects of shaking behavior produced by TRH, AG-3-5, and morphine withdrawal.** Federation Proceedings. 40(5):1491-1496, 1981.

Pharmacological aspects of shaking behavior produced by thyrotropin releasing hormone (TRH), AG-3-5 (1-(2-hydroxyphenyl)-4(3-nitrophenyl)-1,2,3,6-tetrahydropyrimidine-2-o ne), and morphine withdrawal are described. TRH, injected centrally at submicrogram doses, produced in nondependent, barbiturate anesthetized animals, shaking behavior identical in its general features to that of morphine withdrawal. AG-3-5, another chemical stimulant of shaking, produced specific sensations of cold in man by a peripheral site of action. Shaking movements elicited by a variety of stimuli were inhibited by central administration of nanomolar doses of drugs that act as agonists on opiate, muscarinic, and alpha-adrenergic receptors. These observations may provide information on: 1) the identity of substances in brain that, when released, provoke opiate withdrawal signs and symptoms; 2) the chemical nature of substances that stimulate peripheral cold receptors; and 3) the pharmacologic classification of centrally acting agents that attenuate withdrawal and produce antinociception. 32 references. 004249 Weiner, William J.; Carvey, Paul; Nausieda, Paul A.; Goetz, Christopher G.; Klawans, Harold L. Dept. of Neurological Sciences, Rush-Presbyterian St. Lukes Medical Center, 1725 W. Harrison Street, Chicago, IL 60612 **The effect of chronic levodopa on haloperidol induced behavioral supersensitivity in the guinea pig.** Life Sciences. 28(19):2173-2178, 1981.

Levodopa/carbidopa was administered chronically (21 days) to male Hartley guinea-pigs made behaviorally supersensitive by prior administration of haloperidol for 21 days. Animals that showed an increased behavioral response to apomorphine after chronic haloperidol were retested for apomorphine stereotypy after levodopa/carbidopa treatment. Chronic levodopa and chronic haloperidol control groups remained supersensitive to the behavioral effect of apomorphine, but responses to apomorphine in rats treated with levodopa and haloperidol returned to normal. Results suggest that levodopa may reverse dopaminergic supersensitivity induced by neuroleptic drugs and be a useful therapeutic agent in tardive dyskinesia. 35 references. 004250 White, Francis J.; Holohean, Alice M.; Appel, James B. Behavioral Pharmacology Laboratory, Dept. of Psychology, University of South Carolina, Columbia, SC 29208 **Lack of specificity of an animal behavior model for hallucinogenic drug action.** Pharmacology Biochemistry and Behavior. 14(3):339-343, 1981.

The frequency of limb flicking (LF) and abortive grooming (AG) was studied in cats treated with d-lysergic acid diethylamide (d-LSD), 0.01 to 0.16mg/kg) or a variety of related but nonhallucinogenic compounds. LF frequency was increased after d-LSD, lisuride, quipazine, and apomorphine. AG was increased after d-LSD, lisuride, and quipazine. Cocaine did not elicit either behavior. Results indicate that LF and AG in cats is not a reliable model of hallucinogenic drug action in humans. 43 references. (Author abstract modified)

004251 Williams, Evan F.; Rice, Kenner C.; Mattson, Mariena; Paul, Steven M.; Skolnick, Phil. Skolnick: Laboratory of Bioorganic Chemistry, NIAMDD, NIH, Building 4, Room 212, Bethesda, MD 20205 **In vivo effects of two novel alkylating benzodiazepine, irazepine and kenazepine,** Pharmacology Biochemistry and Behavior. 14(4):487-491, 1981.

Intracerebroventricular administration of the alkylating benzodiazepines irazepine or kenazepine (20nmol) resulted in complete protection against convulsant doses of pentylenetetrazole (PTZ) for at least 1 hour in NIH General Purpose mice. Significant protection against seizures was observed for at least 2 hours after irazepine and at least 4 hours after kenazepine. No anticonvulsant effects were detected after administration of the nonalkylating parent benzodiazepine Ro-7/1986 or diazepam (20 to 60nmol). Results suggest that alkylating benzodiazepines that bind to brain benzodiazepine receptors in a noncompetitive (covalent) manner in vitro can exert a long-lasting convulsant effect. 8 references. 004252 Willner, P.; Theodorou, A.; Montgomery, A. Psychology Dept., City of London Polytechnic, Old Castle St., London E1 7NT, England **Subchronic treatment with the tricyclic antidepressant DMI increases isolation-induced fighting in rats.** Pharmacology Biochemistry and Behavior. 14(4):475-479, 1981.

Individually housed male Lister hooded rats treated with desmethylimipramine (DMI, 20mg/kg for 7 days) were more likely than controls to attack an intruder rat placed in their home cage and were more likely than controls to submit when attacked by an intruder. These behavioral changes were not seen at lower doses of DMI. Similar results were obtained when a drugged animal and control were placed together in a neutral cage; in this paradigm, lower doses of DMI were effective if the period of drug treatment was increased or if 3 to 4 days of drug withdrawal preceded behavioral testing. A dose dependent resistance to handling developed during drug treatment, and drugged animals showed weight loss and decreased open-field activity. 45 references. (Author abstract modified)

004253 Woods, J. H. Dept. of Pharmacology, University of Michigan, Ann Arbor, MI 48104 **Narcotic-reinforced responding: a rapid evaluation procedure.** Drug and Alcohol Dependence. 5:223-230, 1980.

Rhesus monkeys were conditioned to lever-press for intravenous injections of codeine. The self-injection behavior was brought under the control of a schedule of drug delivery and access to the codeine schedule was made available twice each day. Subsequently, a variety of doses of codeine and saline were compared to the dose used to condition and maintain self-injection responding. Each change in drug condition was maintained for only a single experimental session. The procedure is recommended for rapid evaluation of drugs for their capacity to reinforce self-injection behavior. (Journal abstract)

004254 Woolf, Clifford J. Dept. of Physiology, Middlesex Hospital Medical School, London W1P 6DB, England **Intrathecal high dose morphine produces hyperalgesia in the rat.** Brain Research. 209(2):491-495, 1981.

Intrathecal microinjections of high doses of morphine in the rat were found to produce algesia, hyperalgesia, and hypersthesia as opposed to the analgesia found at lower doses. This hyperalgesia is not naloxone reversible and is only partially stereospecific. Morphine-3-glucuronide produces the hyperalgesia at low doses. This morphine hyperalgesia may be mediated by a class of receptors similar to that which produces opiate induced central excitation. The intrathecal morphine hyperalgesia is of some clinical interest because of its resemblance to conditions such as trigeminal neuralgia where innocuous stimuli can provoke paroxysmal attacks of pain. 18 references. 004255 Yakimovskiy, A. F. Lab. fiziologii vysshey nervnoy deyatel'nosti, Institut fiziologii im. I. P. Pavlova, AN SSSR, Leningrad, USSR **/Avoidance response in rats after injection of dopamine into the neostriatum./** Reaktsii izbeganiya u krys pri vvedenii dofamina v neostriatum. Fiziologicheskiy Zhurnal SSSR imeni I. M. Sechenova. 66(9):1312-1318, 1980.

Avoidance response after injection of dopamine into the neostriatum was studied in 39 white male rats. A conditioned avoidance reflex was developed in a chamber, half of which was dark and half of which was bright, using a metronome signal and electric shocks. Cannulas were implanted in the rostral region of the neostriatum in some of the animals and in the dorsal region in others. Tests were begun 4 to 5 days after implantation. Dopamine was administered in a physiological solution. In a control group only the solvent was administered. Results show that the avoidance response in rats is facilitated by the administration of 3mcg of dopamine in the dorsal area of the neostriatum. This suggests functional differentiation between the dorsal and ventral parts of the rat neostriatum, which probably is due to the dopaminergic nigrostriatal pathway. 20 references. 004256 Yamada, K.; Furukawa, T. Dept. of Pharmacology, School of Medicine, Fukuoka University, Fukuoka 814, Japan **Behavior of rats and mice administered active metabolites of fluphenazine, 7-hydroxy-fluphenazine and fluphenazine-sulfoxide.** Archives Internationales de Pharmacodynamie et de Therapie. 248(1):76-85, 1980.

The behavioral effects of 7-hydroxy-fluphenazine and fluphenazine-sulfoxide, the main metabolites of fluphenazine (FZ), were studied in male ddY mice and male Wistar rats. The metabolites inhibited open-field behavior and methamphetamine induced hyperactivity, lowered body temperature, and elicited catalepsy in mice, as did FZ enanthate, FZ decanoate, and FZ dihydrochloride. After intramuscular administration, the onset of action of FZ decanoate, FZ enanthate, and their metabolites was somewhat delayed, compared to findings with FZ dihydrochloride. The duration of action of FZ enanthate and FZ decanoate was longer than that of FZ dihydrochloride and metabolites. FZ metabolites decreased stereotypy induced by 4mg/kg i.p. apomorphine and yawning elicited by 0.25mg/kg apomorphine in rats. Results suggest that 7-hydroxy-FZ and FZ-sulfoxide exert their psychotropic actions by blocking presynaptic and postsynaptic dopamine receptors and that formation of active metabolites may affect the prolonged therapeutic action of depot type preparations of FZ. 22 references. (Author abstract modified)

004257 Yanaura, Saizo; Suzuki, Tsutomu; Kawai, Teiko. Dept. of Pharmacology, Hoshi College of Pharmacy, Shinagawa-ku, Tokyo 142, Japan **Eating behavior reveals rats' preference for morphine.** Japanese Journal of Pharmacology. 30(2):145-155, 1980.

An automatic food intake measuring apparatus (food intakometer) was used to study the eating behavior of morphine dependent male Sprague-Dawley rats. Morphine dependent rats approached both morphine admixed food and drug free food at the beginning of a choice trial, but preferred the morphine admixed diet. The eating time of morphine dependent rats was prolonged compared to that of naive rats; drug dependent animals ate morphine admixed food during the day as well as at night. When dependent rats were given morphine prior to the choice trial, consumption of morphine admixed food was inhibited in a dose dependent manner and consumption of the drug free diet was increased. When dependent rats were given access to drug free food for 1 hour before the choice trial, consumption of morphine admixed food was markedly enhanced. Results suggest that rats show drug seeking behavior and are able to control their required maintenance dose. 31 references. (Author abstract modified)

004258 Yanaura, Saizo; Uesugi, Jiro; Suzuki, Tsutomu; Kawai, Teiko. Dept. of Pharmacology, Hoshi College of Pharmacy, Shinagawa-ku, Tokyo 142, Japan **Oral self-administration of morphine in rats.** Japanese Journal of Pharmacology. 30(2):258-261, 1980.

Morphine self-administration was studied in male Wistar rats in an operant discrimination task. Results indicated that rats could discriminate between morphine admixed pellets and drug free pellets and that oral ingestion of morphine reinforced lever-pressing behavior. Despite changes in the fixed-ratio schedule, the animals obtained a relatively constant dose of morphine. This finding suggests that animals may have been ingesting a maintenance level dose of morphine. 10 references.

004259 Young, Gerald A.; Wolf, Daniel L.; Steinfels, George F.; Khazan, Naim. Dept. of Pharmacology and Toxicology, University of Maryland School of Pharmacy, 636 West Lombard St., Baltimore, MD 21201 **Morphine challenges in levo-alpha-acetylmethadol (LAAM) post-addict rats.** Life Sciences. 28(13):1523-1527, 1981.

The EEG and behavioral effects of morphine challenges in levo-alpha-acetylmethadol (LAAM) postaddict rats were investigated. LAAM postaddict rats and control Ss were challenged with 10mg/kg of morphine at 15 days, 1 month, 3 months, and 6 months postwithdrawal. In control rats, morphine challenges produced a biphasic response consisting of 60 to 90 minutes of EEG slow-wave bursts and behavioral depression followed by 60 to 90 minutes of EEG and behavioral arousal. In LAAM postaddict rats on day 15 of abstinence, morphine challenges produced primarily EEG and behavioral arousal for 2 or 3 hours with little or no depression. At 1 and 3 months, morphine challenges still produced more immediate and sustained EEG and behavioral arousal during the initial 2 hours than in control rats. At 6 months, their responses were identical to control rats. Results are indicative of protracted abstinence in LAAM postaddict rats, and are analogous to those previously reported for morphine postaddict rats. 19 references. (Author abstract modified)

004260 Young, Richard; Glennon, Richard A.; Rosecrans, John A. Dept. of Pharmaceutical Chemistry, Medical College of Virginia, Virginia Commonwealth University, Richmond, VA 23298 **Discriminative stimulus properties of the hallucinogenic agent DOM.** Communications in Psychopharmacology. 4(6):501-506, 1980.

Rats were trained to discriminate injections of the hallucinogenic agent, 2,5-dimethoxy-4-methyl-phenylisopropylamine (DOM, 1mg/kg) from saline in a two lever drug discrimination task. After the discrimination was learned, generalization of the DOM stimulus to 5-methoxy-N,N-dimethyltryptamine (5-OM DMT) was examined, as was the possible antagonism of the DOM cue response by the serotonin antagonist, pizotyline (BC-105). The results reveal that the DOM stimulus generalized to 5-OMe DMT, and that the stimulus response produced by DOM could be significantly attenuated by BC-105. It is concluded that the stimulus response of DOM and 5-OMe DMT may be mediated, at least in part, via a similar serotonergic mechanism. 7 references. (Author abstract modified)

004261 Zaikonnikova, I. V.; Val'dman, A. V.; Kozlovskaya, M. M.; Rzhevskaya, G. F. Kafedra farmakologii, Kazanskiy meditsinskiy institut im. S. V. Kurashova, Kazan', USSR **/The pharmacological characteristics of the tranquilizing effect of hydiphen./** Farmakologicheskaya kharakteristika trankviliziruyushchego deystviya gidifena. Farmakologiya i Toksikologiya. 43(4):334-338, 1980.

The pharmacological characteristics of the tranquilizing effect of hydiphen (hydrazide of diphenylphosphinylacetic acid), were studied in rats, mice, and cats. Results show that hydiphen depressed an aroused emotional state of fear and anxiety in the animals and reduced conflict in group interaction, but produced neither myorelaxation nor an increase in positive emotions. Results also show that the drug was not toxic, and had central N-cholinolytic, antiadrenergic, and antiserotoninergic effects. 13 references. (Journal abstract modified)

004262 Zimakova, I. Ye.; Kamburg, R. A.; Kirshin, S. V. Kafedra farmakologii, Kazanskiy meditsinskiy institut im. S. V. Kurashova, Kazan', USSR **/The effect of mebicar on the condition of animals under certain extreme circumstances./** Vliyaniye mebikara na sostoyaniye zhivotnykh pri nebotorykh ekstremal'nykh vozdeystviyakh. Farmakologiya i Toksikologiya. 43(4):368-371, 1980.

The effect of the new tranquilizer mebicar on the condition of rats and mice subjected to extreme stress and hypoxia was studied. Results show that: mebicar has a protective effect on some characteristics of body function under conditions of stress; the antihypoxic effect of the drug occurred with a dosage range of 100 to 1,000mg/kg, and compared favorably with the effect of sodium hydroxybutyrate; and mebicar did not affect the muscle tone, movement coordination, or working capacity of the animals. These results suggest that the normalizing effect of mebicar as a tranquilizer and antihypoxic agent may be related to its metabolic involvement. 18 references. (Journal abstract modified)

004263 Zuardi, A. W.; Finkelfarb, E.; Bueno, O. F. A.; Musty, R. E.; Karniol, I. G. Karniol: R. Jose Teodoro de Lima, 44, Bairro Cambui, CEP 13100, CAMPINAS-SP, Brazil **Characteristics of the stimulus produced by the mixture of cannabidiol with delta9-tetrahydrocannabinol.** Archives Internationales de Pharmacodynamie et de Therapie. 249(1)137-146, 1981.

Male Wistar rats trained to discriminate 5 mg/kg delta9-tetrahydrocannabinol (THC) from a control solution in a T-maze were tested for generalization to 2.5 and 1.25 mg/kg THC, 40 mg/kg cannabidol (CBD), and mixtures of 5 or 1.25mg/kg THC and 40mg/kg CBD. Doses of THC smaller than the training dose produced a progressive reduction in the number of correct responses and a decrease in running time. CBD increased running time, but did not mimic the discriminative stimulus of THC. Mixtures of CBD and THC produced THC appropriate responses only 50% of the time. Results suggest that stimultaneous administration of two cannabinoids produces a qualitative stimulus different from that produced by THC alone. 20 references. (Author abstract modified)

05 TOXICOLOGY AND SIDE EFFECTS

004264 Agrawal, A. K.; Seth, P. K.; Squibb, R. E.; Tilson, H. A.; Uphouse, L. L.; Bondy, Stephen C. Bondy: Laboratory of Behavioral and Neurological Toxicology, NIEHS, P.O. Box 12233, Research Triangle Park, NC 27709 **Neurotransmitter receptors in brain regions of acrylamide-treated rats. I: Effects of a single exposure to acrylamide.** Pharmacology Biochemistry and Behavior. 14(4):527-531, 1981.

A single oral dose of 25 or 50mg/kg acrylamide increased the level of striatal 3H-spiroperidol binding in 6-week-old male Fischer rats without altering glycine, serotonin, or muscarinic cholinergic binding. A large dose (100mg/kg) of acrylamide also elevated medullary glycine and frontal cortical serotonin binding. Pretreatment with a thiol blocker or a blocker of hepatic mixed function oxidase prevented the acrylamide-induced elevation of striatal spiroperidol binding, indicating the effect of acrylamide was due to a secondary metabolite. Apomorphine-induced motility was significantly attenuated by pretreatment with acrylamide, suggesting a change in the sensitivity of the dopamine receptor. 22 references. (Author abstract modified)

004265 Bondy, S. C.; Tilson, H. A.; Agrawal, A. K. Laboratory of Behavioral and Neurological Toxicology, NIEHS, P.O. Box 12233, Research Triangle Park, NC 27709 **Neurotransmitter receptors in brain regions of acrylamide-treated rats. II: Effects of extended exposure to acrylamide.** Pharmacology Biochemistry and Behavior. 14(4):533-537, 1981.

Administration of low doses of acrylamide (5 and 10mg/kg) to 6-week-old male Fischer rats over a 2 week period (total dose, 50 and 100mg/kg) enhanced striatal dopamine and muscarinic cholinergic receptor binding. High dose treatment (20mg/kg, given 10 times) also increased frontal cortical serotonin, medullary glycine, and cerebellar GABA receptor binding. These effects appeared to be reversible, since ligand binding in treated animals 1 week after the final acrylamide dose did not differ from control values. The increased muscarinic receptor activity appeared to be due to loss of striatal nonreceptor protein rather than increased binding, but the increased dopamine receptor binding appeared to be due to an increase in overall binding capacity. Behavioral responsiveness to apomorphine was decreased in rats treated with 10mg/kg acrylamide on 10 successive days, but this effect had dissipated within 8 days of the final acrylamide injection. 23 references. (Author abstract modified)

004266 Clanachan, A. S.; Marshall, R. J. Dept. of Pharmacology, University of Alberta, Edmonton, Alberta, Canada T6G 2H7 **Potentiation of the effects of adenosine on isolated cardiac and smooth muscle by diazepam.** British Journal of Pharmacology. 71(2):459-466, 1980.

The effects of diazepam on the negative inotropic action of adenosine in male Hartley guinea-pig atria and the adenosine mediated inhibition of neurotransmission in male Sprague-Dawley rat vas deferens were examined. Adenosine and 2-chloroadenosine produced concentration dependent inhibitions of responses of the isolated vas deferens to electrical field stimulation and concentration dependent decreases in isometric tension in the electrically driven isolated left atria. Diazepam had no direct effect on either preparation, but significantly potentiated the inhibitory action of adenosine on both tissues without altering the inhibitory effect of 2-chloroadenosine. The adenosine uptake inhibitors hydroxynitrobenzylthioguanosine (HNBTG) and dipyridamole potentiated the inhibitory action of adenosine in vas deferens, but not those of 2-chloroadenosine. Following adenosine uptake inhibition in rat vas deferens by HNBTG, diazepam failed to produce any significant additional potentiation of the inhibitory action of adenosine. It is concluded that potentiation of adenosine by diazepam may be due to inhibition of adenosine uptake. 38 references. (Author abstract modified)

004267 Gmerek, Debra E.; McCafferty, Mary R.; O'Neill, Kevin J.; Melamed, Brian R.; O'Neill, John J. O'Neill, J.: Dept. of Pharmacology, Temple University School of Medicine, 3420 N. Broad St., Philadelphia, PA 19140 **Effect of inorganic lead on rat brain mitochondrial respiration and energy production.** Journal of Neurochemistry. 36(3):1109-1113, 1981.

Toxicologically significant amounts of inorganic lead were added to male Sprague-Dawley rat brain mitochondrial preparations that did not contain ethylene-diaminetetraacetate or inorganic phosphate ions. The binding of lead to the mitochondria was measured by anodic stripping voltometry. In the presence of lead, the respiratory control ratios decreased, indicating a decrease in the degree of dependence of respiration on a phosphate acceptor. The amounts of adenosine triphosphate formed from adenosine diphosphate also decreased significantly in the presence of inorganic lead. 12 references. (Author abstract modified)

004268 Gordon, John H.; Diamond, Bruce I. Dept. of Pharmacology, University of Health Sciences/Chicago Medical School, Chicago, IL **Antagonism of dopamine supersensitivity by estrogen: neurochemical studies in an animal model of tardive dyskinesia.** Biological Psychiatry. 16(4):365-371, 1981.

Antagonism of dopamine supersensitivity by estrogen was investigated in a series of neurochemical studies in an animal model of tardive dyskinesia. The withdrawal from chronic haloperidol or estradiol benzoate (EB) treatment resulted in a behavioral supersensitivity to dopamine agonists in ovariectomized rats. On the other hand, the administration of EB during the withdrawal from haloperidol or the continuous treatment with EB attenuated or prevented the development of supersensitivity to dopamine agonists. The enhanced behavioral sensitivity to dopamine agonists was correlated with an increase in 3H-dopamine binding sites in striatal membranes. The administration of EB during the withdrawal from chronic haloperidol treatment or the continuous administration of EB decreased or prevented the proliferation of dopamine binding sites in the striatum that normally occurs upon withdrawal of these two substances. These results indicate that exogenous estrogens may modulate the number of dopamine receptors in the CNS, and, as such, may decrease the incidence and/or relieve the symptoms of tardive dyskinesia. 24 references. (Author abstract modified)

004269 Ho, C. C.; Ho, A. K. S. Laboratory of Neurochemistry and Neuropharmacology, Dept. of Basic Sciences, University of Illinois School of Medicine, Peoria, IL 61605 **Ethanol-sedative hypnotic interactions. in vitro studies on Na-K-activated adenosine triphosphatase.** Archives Internationales de Pharmacodynamie et de Therapie. 248(1):132-147, 1980.

Methaqualone and phenobarbital alone or in combination with ethanol caused a dose dependent inhibition of male Sprague-Dawley rat brain microsomal sodium and potassium activated adenosine triphosphatase (Na-K-ATPase) in vitro. The inhibitory effects were competitive with respect to K and uncompetitive with respect to magnesium (Mg) dependent ATP for phenobarbital alone or combined with ethanol. Methaqualone alone or combined with ethanol showed an uncompetitive type of inhibition with respect to Mg ATP. Dose dependent inhibition of brain Na-K-ATPase activity by disulfiram was independent of K and additive with ethanol. Pyrazole had no effect on brain Na-K-ATPase activity. Inhibition by methaqualone and phenobarbital appeared to depend on K and Na/K ratio in the reaction medium. The combined effects of ethanol and the other CNS depressants on brain Na-K-ATPase activity may contribute to their interaction toxicities. 37 references. (Author abstract modified)

004270 Imbs, Jean-Louis; Singer, Leonard; Danion, Jean-Marie; Schmidt, Mariette; Zawilslak, Richard. Institut de Pharmacologie et de Medecine experimentale, 11, rue Humann, F-67000 Strasbourg, France **Effects of indomethacin and methylprednisolone on renal elimination of lithium in the rat.** International Pharmacopsychiatry. 15(3):143-149, 1980.

The effects of human therapeutic doses of methylprednisolone and indomethacin on the urinary elimination of lithium, sodium, and phosphate in the rat were investigated. Wistar rats were given lithium chloride after treatment with indomethacin, methylprednisolone, or their solvents for 5 days. Lithium and creatinine clearance and urinary elimination of sodium and phosphate were determined. Indomethacin increased while methylprednisolone decreased the fractional tubular reabsorption of lithium. The quantity of lithium eliminated in the urine was correlated with the urinary elimination of sodium and phosphate. The effects of the anti-inflammatory drugs on renal elimination of lithium seems linked to their effects on proximal sodium reabsorption. Implications for human treatment are noted. 17 references. (Author abstract modified)

004271 Laties, Victor G.; Evans, Hugh L. Dept. of Radiation, Biology and Biophysics, University of Rochester Medical Center, Rochester, NY 14642 **Methylmercury-induced changes in operant discrimination by the pigeon.** Journal of Pharmacology and Experimental Therapeutics. 214(3):620-628, 1980.

Methylmercury-induced changes in operant discrimination by the pigeon were investigated. Pigeons were trained on a fixed consecutive number schedule of reinforcement, pecking eight or nine times on one key (a run) before making the single response on a second key that was reinforced if the number requirement had been met. Percentage of reinforcers earned and rate at which the birds pecked both decreased while variability of run length increased after enough methylmercury had been given to produce blood mercury concentrations between 13ppm and 27ppm. Some birds also showed consistent shortening of run length throughout the time of maximum poisoning. Because ataxia was a common accompaniment of the changes in operant behavior, other methods of producing ataxia were also studied in some birds. The pattern of changes induced with these methods did not match that observed after methylmercury. 26 references. (Author abstract modified)

004272 Lee, M. J.; Clement, J. G. Biomedical Section, Defence Research Establishment Suffield, Ralston, Alberta, TOJ 2NO Canada **Respiratory depression produced by diazepam in cats: effect of anaesthesia.** Archives Internationales de Pharmacodynamie et de Therapie. 248(2):289-293, 1980.

In adult cats anesthetized with chloralose, spontaneous respiration ceased within 3 minutes of injection of 0.37mg/kg diazepam into the left femoral vein. Mean arterial pressure fell from a control level of 99.4 mmHg to 32.5 mmHg. The animals recovered if artificial ventilation was initiated immediately. No respiratory depression was observed after i.v. administration of diazepam to cats anesthetized with ketamine. 12 references. (Author abstract modified)

004273 Levine, Seymour; Sowinski, Richard. Pathology Dept., New York Medical College, Westchester County Medical Center, Valhalla, NY 10595 **Lesions of amygdala, pyriform cortex and other brain structures due to dipiperidinoethane intoxication.** Journal of Neuropathology and Experimental Neurology. 39(1):56-64, 1980.

Single doses of dipiperidinoethane (DPE) produced symmetrical necrosis in pyriform cortex, amygdala, and other areas of gray matter in rats, mice, and gerbils. The necrosis was detectable in 10 hours and fully developed in 24 hours. Its distribution and severity were not influenced by carotid artery ligation. DPE was not a cumulative poison. There was a high degree of chemical specificity: neurotoxic activity was present in DPE derivatives modified by methylation of the two piperidine rings, but not in derivatives with different ring systems or different connecting chains. 18 references. (Author abstract modified)

004274 Matin, M. A.; Jaffery, F. N.; Siddiqui, R. A. Industrial Toxicology Research Centre, Post Box 80, Mahatma Gandhi Marg, Lucknow, Uttar Pradesh, India **A possible neurochemical basis of the central stimulatory effects of pp'DDT.** Journal of Neurochemistry. 36(3):1000-1005, 1981.

Oral administration of 600mg/kg 1,1,1-trichloro-2,2-bis(4'-chlorophenyl)ethane (pp'DDT) to male albino mice induced an increase in the concentration of free ammonia, a decrease in the level of GABA, and a reduction in the level of acetylcholine in the striatum. These changes were maximal 5 hours after administration, when the animals developed severe convulsions. The increase in free ammonia was not altered by drugs that abolished or reduced convulsions, such as phenobarbitone, prominal, and aminooxyacetic acid. Results suggest that pp'DDT produces stimulatory effects by increasing the concentration of ammonia, which may lower the GABA level. Changes in acetylcholine levels may be an effect of the pp'DDT-induced convulsions. 42 references. (Author abstract modified)

004275 Oktay, Sule; Onur, Rustu; Ilhan, Mustafa; Turker, R. Kazim. Turker: A. U. Tip Fakultesi, Farmakoloji Kursusu, Sihhiye, Ankara, Turkey **Potentiation of the morphine-induced respiratory rate depression by captopril.** European Journal of Pharmacology. 70(3):257-262, 1981.

Captopril, an angiotensin converting enzyme inhibitor potentiated the inhibitory effect of morphine on respiratory rate in adult albino mice. Respiratory frequency was significantly reduced by 10.0mg/kg morphine, but gradually returned to control level 2 hours after injection. No recovery was observed in the 3.5 hours after injection when 10.0mg/kg morphine was given together with captopril (0.1 and 1.0mg/kg) or after captopril pretreatment. The degree of respiratory depression in mice given 3.0mg/kg morphine after captopril pretreatment was equal to that observed after 10.0mgkg morphine alone. The possible inhibitory effect of captopril on enkephalin degrading enzymes is discussed. 20 references. (Author abstract modified)

004276 Raabe, Winfried A. Dept. of Neurology, V. A. Medical Center, Minneapolis, MN 55417 **Ammonia and disinhibition in cat motor cortex by ammonium acetate, monofluoroacetate and insulin-induced hypoglycemia.** Brain Research. 210(1-2):311-322, 1981.

Ammonia intoxication abolished the suppression of action potential generation by cortical postsynaptic inhibition by inactivating neuronal chloride ion (Cl-) extrusion in cats. The disinhibition by ammonia intoxication occurred when ammonia concentrations in cerebral cortex were increased to 320% of normal. Fluoroacetate poisoning and insulin-induced hypoglycemia also abolished suppression of action potential generation by cortical postsynaptic inhibition, but this disinhibition occurred prior to the increase in ammonia concentration associated with these conditions. Results indicate that toxic metabolic encephalopathies that increase cerebral ammonia concentrations beyond 320% of normal may produce a dysfunction in the CNS due to inactivation of neuronal Cl- extrusion, leading to ineffective cortical inhibition. However, in fluoroacetae poisoning and insulin-induced hypoglycemia, the increased ammonia concentrations in the CNS appear to have only a secondary role in initiating CNS dysfunction. 37 references. 004277 Rebert, Charles S. Neuroscience Laboratory, SRI International, Menlo Park, CA 94025 **The brain stem auditory evoked response as a tool in neuro-behavioral toxicology and medicine.** Progress in Brain Research. 54:458-462, 1980.

Brainstem auditory evoked responses (BAERs) were recorded in Fischer rats treated daily with misonidazole. The first component of the BAER was only slightly affected, indicating little effect on the peripheral transducer or eighth nerve. Later components increased in latency, indicating a significant effect on central tract conduction velocity. Results indicate that the BAER can be a valuable tool in neurobehavioral toxicology. 15 references.

004278 Shimomura, Kyoichi; Satoh, Yoshihiko; Mori, Jo. Research Laboratories, Fujisawa Pharmaceutical Co. Ltd., Yodogawa-ku, Osaka 532, Japan **Characteristic hyperpyrexia induced by LiCl and tranylcypromine in rats.** Japanese Journal of Pharmacology. 30(2):268-271, 1980.

The monoamine oxidase inhibitor tranylcypromine (TCP, 16mg/kg) induced hyperpyrexia in male Sprague-Dawley rats pretreated with lithium chloride (250mg/kg/day for 4 days), but not in those pretreated with 250mg/kg/day sodium chloride, potassium chloride, rubidium chloride, or cesium chloride. TCP also failed to induce hyperpyrexia in rats pretreated with chlorpromazine, haloperidol, fluphenazine, sulpiride, chlordiazepoxide, diazepam, imipramine, methamphetamine, tolazoline, phentolamine, propranolol, or cyproheptadine. A low incidence of hyperpyrexia was observed in rats given pargyline, iproniazid, or nialamide after pretreatment with lithium chloride. Results indicate that hyperpyrexia is induced specifically by the combination of lithium chloride and TCP. 5 references.

004279 Stainthorp, S. F.; Morton, A. K.; Pleuvry, B. J. Pleuvry: Dept. of Pharmacology, University of Manchester, Manchester, England **The effects of nefopam on blood acid-base status in the rabbit: interactions with morphine in the mouse and rabbit.** Journal of Pharmacy and Pharmacology. 32(10):689-692, 1980.

Nefopam, a nonnarcotic analgesic with antidepressant and central muscle relaxant activity, had only minor effects on the blood pH, carbon dioxide pressure (PC02), and standard bicarbonate of conscious half lop white rabbits. However, the increase in PC02 observed after combined administration of 2.5mg/kg nefopam and 1mg/kg morphine was greater than that observed after morphine alone. Nefopam also increased the antinociceptive and respiratory depressant effects of morphine in female Manchester mice. 13 references. (Author abstract modified)

004280 Stark, Paul; Dews, P. B. Lilly Research Laboratories, 307 E. McCarty St., Indianapolis, IN 46285 **Cannabinoids. II. Cardiovascular effects.** Journal of Pharmacology and Experimental Therapeutics. 214(1):131-138, 1980.

The cardiovascular effects of two new cannabinoids, nabilone and canbisol, were compared with those of chlordiazepoxide (CDZ) and delta9-tetrahydrocannabinol (THC) in several species. In rabbits, i.v. injections of THC, nabilone, and canbisol induced modest falls in blood pressure (BP) and heartrate (HR), but CDZ had no effect. In dogs, i.v. administration of THC and CDZ had no cardiovascular effects, but nabilone caused a modest, delayed increase in BP and canbisol induced modest hypotension. Repeated daily oral administration of canbisol (0.16mg/kg) to hypertensive rats decreased BP, with no sign of tolerance to this effect. In rhesus monkeys, 0.1mg/kg THC, 0.01mg/kg nabilone, and 0.003mg/kg canbisol i.v. caused modest falls in BP with little consistent change in HR; large doses of THC, nabilone, or canbisol produced sustained hypotension interrupted by dramatic periods of hypertension. CDZ had no cardiovascular effects except in massive doses (30 and 100mg/kg), which increased BP. It is suggested that the influence of cannabinoids on behavior and skeletal muscular activity contributes to their cardiovascular effects. 10 references. (Author abstract modified)

004281 Thurston, Jean Holowach; Hauhart, Richard E.; Dirgo, John A. Dept. of Pediatrics, St. Louis Children's Hospital, 500 S. Kingshighway Blvd., P.O. Box 14871, St. Louis, MO 63178 **Effects of a single therapeutic dose of glycerol on cerebral metabolism in the brains of young mice: possible increase in brain glucose transport and glucose utilization.** Journal of Neurochemistry. 36(3):830-838, 1981.

The effects of a single dose of glycerol (2g/kg i.p.) on brain carbohydrate and energy metabolism was studied in normal nursing weanling Swiss-Webster mice. Plasma glucose increased 33% and brain glucose increased 87%, suggesting increased transport of glucose from the blood to the brain. Increases in fructose-1,6-diphosphate, lactate, alpha-ketoglutarate, and malate suggested increased metabolic flux in the glycolytic pathway and Krebs citric acid cycle. These changes may be due to the effects of the hyperosmolar glycerol solution on the blood-brain barrier and on cerebral glucose utilization. 50 references. (Author abstract modified)

004282 Waddington, John L.: Gamble, Stephen J.; Bourne, Rachel C. Division of Psychiatry, M.R.C. Clinical Research Center, Watford Road, Harrow, Middlesex HA1 3UJ, England **Sequelae of 6 months continuous administration of cis(Z)- and trans(E)-flupenthixol in the rat.** European Journal of Pharmacology. 69(4):511-513, 1981.

Male Sprague-Dawley rats were treated continuously for 6 months with cis(Z)-flupenthixol or trans(E)-flupenthixol in the drinking water. Stereotypic responses to 0.15mg/kg apomorphine were enduringly and stereospecifically antagonized by cis(Z)-flupenthixol at 0.5 to 1.0mg/kg/day or 1.4 to 3.0mg/kg/day. Responses to 1.0mg/kg apomorphine were antagonized after 5 days of cis(Z)-flupenthixol (1.4 to 3.0mg/kg/day), but were enhanced after 6 months of neuroleptic treatment. Results indicate that dopamine dependent processes may be differentially sensitive to adaptation during extended neuroleptic treatment. 10 references. (Author abstract modified)

004283 Yasuhara, Hajime; Matsuo, Hiroyuki; Sakamoto, Koji; Ueda, Issaku. Dept. of Pharmacology, School of Medicine, Showa University, 1-5-8 Hatanodai, Shinagawa-ku, Tokyo 142, Japan **Mechanism of membrane stabilizing and lytic effects of tricyclic antidepressants.** Japanese Journal of Pharmacology. 30(3):397-401, 1980.

The membrane stabilizing and lytic effects of tricyclic antidepressants were studied in rat erythrocytes and hepatocytes. Chlorimipramine (CIM) had a membrane stabilizing effect on erythrocytes at low concentrations and a hemolytic effect at higher concentrations, which also caused marked, temperature dependent enzyme leakage from hepatic cells. Desipramine (DMI) and imipramine (IM) also had a membrane stabilizing action on erythrocytes and hepatocytes, but these effects were not as great as those of CIM. CIM damaged the liver plasma membrane when the tissue was exposed to temperatures of 20 to 25 degrees C, whereas IM and DMI stablized the plasma membrane at this temperature range and decreased enzyme leakage from cells. Results are discussed in relation to the hepatotoxicity of tricyclic antidepressant drugs. 15 references.

004284 Zbinden, G.; Ettlin, R.; Bachmann, E. Institut fur Toxikologie, ETH, Universitat Zurich, Schorenstrasse 16, CH-8603 Zurich, Switzerland **Electrocardiographic changes in rats during chronic treatment with antidepressant and neuroleptic drugs.** Arzneimittel-Forschung. 30(10):1709-1715, 1980.

Five antidepressants, three phenothiazines and five butyrophenone neuroleptics were administered to rats orally at maximally tolerated doses for 22 weeks. The electrocardiogram (EKG) was recorded weekly. In animals treated with antidepressants, quinidine-like changes of the atrioventricular and intraventricular conduction developed. There were also elevation of T-wave, and right rotation of the electrical axis. Dibenzepine had the least effect on the EKG. In the group of phenothiazines, chlorpromazine-induced tachycardia and thioridazine widening of the QRS complex. Prothipendyl had no effect. EKG changes induced by some of the butyrophenone derivatives were tachycardia and widening of the QRS complex. In rats treated with protryptiline the EKG changes were correlated with drug concentrations in serum and myocardial tissue. The studies provide a quantitative assessment of the cardiac effects of clinically proven psychotropic drugs. They will be useful as a baseline for preclinical evaluation of new derivatives. 30 references. (Author abstract)

06 METHODS DEVELOPMENT

004285 Bohlen, Peter; Neckers, Leonard M. Neuroendocrinology Laboratories, Salk Institute, San Diego, CA 92212 **High performance liquid chromatography in the neurosciences: methodology.** In: Hanin, I., Physico-chemical methodologies in psychiatric research. New York, Raven Press, 1980. 265 p. (p. 1-22).

The methodology of high pressure liquid chromatography (HPLC) is discussed in relation to the separation and detection of substances of interest to neuroscientists. The separation processes involved in HPLC and conventional liquid chromatography are compared. Ultraviolet, fluorescence, and electrochemical detectors commonly used in HPLC are described. Although HPLC is comparable to gas chromatography/mass spectrometry (GCMS) in resolving power and detection sensitivity, it is generally better studied than GCMS for the analysis of molecules of biological origin. Separation times are usually less than 1 hour with HPLC, and sample preparation prior to chromatography is minimal. 70 references.

004286 Buu, N. T.; Duhaime, J.; Savard, C.; Truong, L.; Kuchel, O. Clinical Research Institute, 110 Pine Ave. West, Montreal, Quebec, H2W 1R7, Canada **Presence of conjugated catecholamines in rat brain: a new method of analysis of catecholamine sulfates.** Journal of Neurochemistry. 36(2):769-772, 1981.

A new method of measuring catecholamine (CA) sulfate permitted its detection in Sprague-Dawley rat brain. CA sulfate was separated from free CA by alumina adsorption followed by passage through Dowex. The CA sulfate was then measured by radioenzymatic assay in the presence of a sulfatase. Sulfate esters of dopamine, norepinephrine, and epinephrine were detected in rat hypothalamus, striatum, and hippocampus by this method. 15 references. (Author abstract modified)

004287 Carroll, Marilyn E.; Santi, Peter A.; Rudell, Richard L. Psychiatry Research Unit, Mayo Box 392, University of Minnesota, Minneapolis, MN 55455 **A microcomputer system for the control of behavioral experiments.** Pharmacology Biochemistry and Behavior. 14(3):415-417, 1981.

A self-contained microcomputer control system is described for controlling and recording events from behavioral experiments using a low cost microcomputer (the Rockwell AIM-65) and the BASIC language. Features of the system include a printer, alphanumeric display, 4K RAM, 8K BASIC on read only memory, a cassette interface, a power supply, and a control interface. The control interface allows for 16 inputs and 16 ouputs and includes a real time clock and versatile machine language subroutines for controlling and recording real time events. The use of this microcomputer system to study oral drug self-administration in rhesus monkeys is described. 5 references. (Author abstract modified)

004288 Consroe, Paul; Fish, Barbara Schneiderman. Dept. of Pharmacology and Toxicology, University of Arizona College of Pharmacy, Tucson, AZ 85721 **Behavioral pharmacology of tetrahydrocannabinol convulsions in rabbits.** Communications in Psychopharmacology. 4(4):287-291, 1980.

The behavioral pharmacology of tetrahydrocannabinol (THC) convulsion in rabbits was studied in an inbred colony of TCH seizure susceptible rabbits. THC, the major psychoactive ingredient of marihuana, causes nonfatal convulsions in a selected line of genetically unique rabbits. Convulsions occur at a minimally effective dose of .05mg/kg, and they increase in severity with increasing doses. It is noted that these THC dose findings parallel those reported for THC-induced psychoactivity in humans. These rabbit/human correlates, coupled with the specificity of rabbit response to only the psychoactive cannabinoids, add validity to the THC seizure susceptible rabbit as an animal model that is reflective of the psychoactive component of cannabinoids. 10 references. 004289 Cowan, Alan. Dept. of Pharmacology, Temple University School of Medicine, Philadelphia, PA 19140 **Mini-Symposium: III. Simple in vivo tests that differentiate prototype agonists at opiate receptors.** Life Sciences. 28(14):1559-1570, 1981.

Benzomorphans that are prototype agonists at postulated opiate receptors in chronic spinal dogs have been compared using two easily quantifiable endpoints: 1) rat behavior in a Y-maze; and 2) seizure thresholds of rats exposed to flurothyl, a volatile convulsant. The sigma receptor agonists, cyclazocine and SK&F 10,047 (N-allylnormetazocine), caused naloxone insensitive behavioral arousal and bizarre behavior when rats were placed in the novel environment of a Y-maze; reverse tolerance was associated with multiple doses of cyclazocine. In contrast, phenazocine, ethylketocyclazocine and pentazocine elicited behavioral depression. In the seizure test, a consideration of qualitative effects, stereospecificity, interactions between key agonists and antagonists, and multiple dosing schedules has allowed benzomorphan agonists at mu, kappa, and sigma receptors to be grouped such that cyclazocine, phenazocine, ethylketocyclazocine and pentazocine are distinguishable from one another. It is suggested that both procedures are suitable components of a battery of standardized tests aimed at differentiating opiate receptors in vivo. 56 references. (Author abstract)

004290 Hanin, Israel; Shih, Tsung-Ming. Dept. of Psychiatry, University of Pittsburgh School of Medicine, Pittsburgh, PA 15261 **Gas chromatography, mass spectrometry, and combined gas chromatography-mass spectrometry.** In: Hanin, I., Physico-chemical methodologies in psychiatric research. New York, Raven Press, 1980. 265 p. (p. 111-154).

The basic principles of gas chromatography (GC) and mass spectrometry (MS) are reviewed, and the use of combined GC/MS to separate, identify, and quantify substances of biological origin is discussed. The steps involved in setting up a GC/MS assay for qualitative or quantitative analysis are outlined. Integration of GC/MS with other laboratory techniques in studies of neurotransmitter function in the CNS is discussed. The use of GC/MS to study the incorporation of labeled dietary choline into brain acetylcholine in mice is described. 30 references.

004291 Jindal, Satya P.; Lutz, Theresa; Vestergaard, Per. Rockland Research Institute, Orangeburg, NY 10962 **GLC-mass spectrometric determination of maprotiline and its major metabolite using stable isotope-labeled analog as internal standard.** Journal of Pharmaceutical Sciences. 69(6):684-687, 1980.

A quantitative GLC/mass spectrometric assay was developed for the determination of maprotiline and its major metabolite, desmethylmaprotiline, in animal and human plasma. The assay utilizes selective ion focusing to monitor, in a GLC effluent, the fragment ions and the base peaks of maprotiline and desmethylmaprotiline trifluoroacetamides generated by electron impact ionization. Maprotiline-d3 was the internal standard. The assay can measure 2 ng of maprotiline (and the metabolite)/ml of plasma with approximately 5% precision. The curves relating the amounts of maprotiline and the metabolite added versus the amounts experimentally found over a large concentration range were linear with nearly zero intercepts and slopes of approximately 0.99 and 0.98, respectively. The method was used to study the pharmacokinetic pattern of the drug in rabbits, as well as to analyze intact maprotiline and the metabolite in patients maintained on therapeutic doses of maprotiline. Assay specificity was confirmed by complete consistency of the mass spectra of maprotiline and desmethylmaprotiline with those of the authentic materials. 22 references. (Author abstract)

004292 Kuhar, Michael J. Johns Hopkins University School of Medicine, Baltimore, MD 21205 **Autoradiographic localization of drug and neurotransmitter receptors in the brain.** Trends in NeurOSciences. 4(3):60-64, 1981.

Through the combination and adaptation of various methodologies, radiohistochemical methods for autoradiographic light microscopic localization of drug and neurotransmitter receptors in the brain can be developed. These methods are valuable complements to other histochemical methods for mapping neurotransmitters; they provide a unique view of neuroanatomy, and they can be used to provide valuable new hypotheses about how drugs produce various effects. Interesting hot spots of receptor localizations have been observed in some sensory and limbic areas of the brain. Because most available methods are light microscopic, the development of ultrastructural methods will be a necessary and important extension of this field. 20 references. (Author abstract modified)

Dept. of Pharmacological and Physiological Sciences, University of Chicago, Chicago, IL 60637 **Specific in vivo binding of 77Br-p-bromospiroperidol in rat brain: a potential tool for gamma ray imaging.** Life Sciences. 28(17):1911-1916, 1981.

The binding of the gamma labeled neuroleptic, 77Br-p-bromospiroperidol, in the rat brain was examined in vivo. This binding parrallels the binding of 3H-spiroperidol, in that binding is especially high in dopaminergically innervated areas, is saturable, and is displaced by high doses of unlabeled spiroperidol. Thus, 77Br-p-bromospiroperidol is a suitable ligand for use in gamma ray imaging techniques for in vivo monitoring of receptor binding. 22 references. (Author abstract)

004294 McCaughran, J. A.; McGeer, E. G. Dept. of Psychiatry, University of British Columbia, 2255 Westbrook Mall, Vancouver, BC, Canada V6T 1W5 **Iontophoresis of kainic acid.** Neurochemical Research. 6(1):97-98, 1981.

Iontophoresis of kainic acid (KA), using a continuous, negative 1.5mcA ejection current, from a glass pipette about 30 mcm in diameter, filled with a 10mcM solution of KA in 10mM sodium chloride, produced small, spherical lesions around the pipette tip. The area of destruction increased with time of current flow. After neostriatal injections of KA, neuronal loss (measured by the percentage decrease in choline acetyltransferase activity in whole neostriatum) was correlated with length of current flow. 1 reference.

004295 Mori, Jo; Shimomura, Kyoichi; Saitoh, Ryo; Honda, Fumio. Research Laboratories, Fujisawa Pharmaceutical Co. Ltd., 2-6-1 Kashima, Yodogawa-ku, Osaka 532, Japan **A simple histochemical screening method for amine uptake.** Japanese Journal of Pharmacology. 30(5):679-687, 1980.

A simple nonradioisotopic histochemical technique provided good semiquantitative estimates of the selectivity and potency of drug inhibitory effects on amine uptake in noradrenaline (NA), 5-hydroxytryptamine (5-HT), and dopamine (DA) containing neurons. Uptake of NA, 5-HT, and 6-HT was studied in the filum terminale of reserpinized male Sprague-Dawley rats, and DA uptake was studied in sections of the caudate nucleus. Inhibitory patterns of representative uptake inhibitors obtained by this method are consistent with those previously obtained by biochemical methods. Data from studies of imipramine, desipramine, chlorimipramine, amitriptyline, chlorpromazine, haloperidol, pimozide, sulpiride, cyproheptadine, methysergide, tryptamine, and zimelidine are presented. 31 references. 004296 Neckers, Leonard M.; Bohlen, Peter. Laboratory of Clinical Psychopharmacology, NIMH, Saint Elizabeths Hospital, Washington, DC 20032 **High performance liquid chromatography in the neurosciences: applications.** In: Hanin, I., Physicochemical methodologies in psychiatric research. New York, Raven Press, 1980. 265 p. (p. 23-36).

The use of high pressure liquid chromatography (HPLC) in assays of biologically relevant compounds is reviewed. The use of HPLC in the assay of serotonin, its precursors, metabolites, and relevant enzymes is described. The applicability of HPLC to analyses of amino acids, determination of drug levels in biological fluids, and monitoring of catecholamine metabolism is discussed. The use of HPLC for the assay and positive identification of biologically active peptides is also described. 50 references.

004297 Porsius, A. J. Dept. of Pharmacy, Subdivision Pharmacotherapy, University of Amsterdam, Plantage Muidergracht 24, Amsterdam, The Netherlands **The simultaneous infusion of drugs via the left and right vertebral artery of the cat; a modified animal model for the study of possible central actions of drugs upon the lower brain stem.** Archives Internationales de Pharmacodynamie et de Therapie. 248(2):260-271, 1980.

A modified animal model for the administration of drugs via the vertebral arteries (v.a.) of the cat is described. Drugs are simultaneously infused into both the left and right v.a., thereby avoiding the asymmetrical distribution pattern seen when drugs are administered to the left v.a. alone. Drug concentrations and distribution in brain are comparable to those seen after i.v. administration, but only a fraction of the i.v. dose is required. It is concluded that the modified v.a. model is an appropriate method for testing possible central actions of drugs on the pontomedullary region. 7 references. (Author abstract modified)

004298 Postmes, Th. J.; Hukkelhoven, M.; van den Bogaard, A. E. J. M.; Halders, S. G.; Coenegracht, J. Isotope Dept., St. Annadal Hospital, Maastricht, The Netherlands **Passage through the blood-brain barrier of thyrotropin-releasing hormone encapsulated in liposomes.** Journal of Pharmacy and Pharmacology. 32(10):722-724, 1980.

The effect of liposomes on the passage across the blood-brain barrier by thyrotropin releasing hormone (TRH) was studied. In mice, brain uptake of TRH was greater after i.v. injection of labeled TRH encapsulated in liposomes than after injection of free TRH. In rabbits, body temperature was significantly elevated after injection of TRH liposomes, but not after free TRH. In both species, neutral liposomes were more effective than negative liposomes. Results indicate that liposomes containing TRH can enter the brain and suggest that liposomes may be used for transport of other neuropeptides across the blood-brain barrier. 11 references.

004299 Purves, Robert D. Dept. of Anatomy and Embryology, University College London, Gower St., London WC1E 6BT, England **The physics of iontophoretic pipettes.** Journal of Neuroscience Methods. 1(2):165-178, 1979.

In a theoretical study of the release of drugs from iontophoretic pipettes, it was predicted that in the steady-state, release becomes linear with current and independent of pipette geometry when the ejecting voltage exceeds 100mV. It was also predicted that release rises slowly during an ejecting pulse to approach its steady-state value and then falls abruptly after the pulse; this asymmetry of the release curve is greatly accentuated by prior application of a retaining current. Release from pipettes of large tip diameter and cylindrical bore, such as those generally used in the CNS, should be thousands of times slower than that from pipettes of small tip diameter and large taper angle. Experimental observations of the release of an ionized fluorescent compound, quinacrine, support these predictions. 26 references. (Author abstract modified)

004300 Simon, E. J.; Bonnet, K. A.; Crain, S. M.; Groth, J.; Hiller, J. M.; Smith, J. R. New York University Medical Center, New York, NY 10016 **Recent studies on interaction between opioid peptides and their receptors.** Advances in Biochemical Psychopharmacology. 22:335-346, 1980.

Studies concerning the possible heterogeneity of opiate receptors are described, and a recently developed opiate receptor/opioid peptide culture system is discussed. These and other studies provide strong support for the existence of at least two classes of receptors, with differential affinities for opiates and enkephalins. Preliminary evidence for a heterogeneity among mu receptors is noted. It is concluded that organotypic cultures of spinal cord and attached dorsal root ganglia provide a useful model system for the analysis of cellular mechanisms underlying both acute and chronic effects of opiates and of the functional significance of the opiate receptor/enkephalin system. 25 references.

004301 Tadano, Takeshi; Endo, Yasuo; Kisara, Kensuke. Dept. of Pharmacology, Tohoku College of Pharmacy, Sendai 983, Japan **A simple determination of serotonin, 5-hydroxyindoleacetic acid and 5-hydroxytryptophan decarboxylase activity in rat brain areas and parallel correlation among the levels.** Japanese Journal of Pharmacology. 30(3):347-356, 1980.

Small P-cellulose and DEAE-Sephadex columns were used to separate serotonin (5-HT) and 5-hydroxyindoleacetic acid (5-HIAA). Both substances were estimated fluormetrically by the reaction with o-phthalaldehyde. Recoveries of 5-HT and 5-HIAA were 80 and 71%, respectively. The complete separation of 5-hydroxytryptophan (5-HTP) from 5-HT made it possible to determine 5-HTP decarboxylase activity in male Wistar rat brain regions without using an isotope labeled substrate. Enzyme activities in discrete areas paralleled 5-HT levels, except in the striatum, where enzyme activity was markedly elevated. Levels of 5-HIAA also paralleled those of 5-HT. 32 references. (Author abstract modified)

004302 Takahashi, David M. Food and Drug Administration, 50 United Nations Plaza, San Francisco, CA 94102 **Rapid determination of chlorpromazine hydrochloride and two oxidation products in various pharmaceutical samples using high-performance liquid chromatography and fluorescence detection.** Journal of Pharmaceutical Sciences. 69(2):184-187, 1980.

A rapid, simple, and accurate high performance liquid chromatographic procedure using an amino bonded microparticulate column was developed for the determination of chlorpromazine hydrochloride and its two sulfoxide and sulfone oxidation products in commercially available pharmaceutical dosage preparations. Simultaneous identification and quantitation of the oxidation products in the presence of at least 100 times the amount of parent compound were achieved with selective fluorometric detection. Identification and quantitation of the parent compound were achieved by changing the fluorescence detection mode. A typical chromatographic run was complete within 15 minutes, and quantitation of the oxidation products at levels as low as 0.1mcg (0.1% contamination) was demonstrated. 13 references. (Author abstract modified)

004303 Warsh, Jerry J.; Godse, Damodar D.; Cheung, Siu W.; Li, Peter P. Sec. of Biochemical Psychiatry, Clarke Institute of Psychiatry, University of Toronto, 250 College St., Toronto, Ontario M5T 1R8, Canada **Rat brain and plasma norepinephrine glycol metabolites determined by gas chromatography-mass fragmentography.** Journal of Neurochemistry. 36(3):893-901, 1981.

A gas chromatographic/mass fragmentographic procedure was used for simultaneous quantitation of 3,4-dihydroxyphenylethyleneglycol (DHPG) and 3-methoxy-4-hydroxyphenylethyleneglycol (MHPG) in male Wistar rat and male Swiss-Webster mouse brain and plasma. Whole rat brain total and free DHPG concentrations were similar to total and free MHPG levels. Total DHPG concentrations exceeded total MHPG concentration in hypothalamus, midbrain, pons/medulla, and hippocampus. In other brain regions, levels of these metabolites were similar. In plasma, total DHPG levels were only 20% as high as MHPG levels. In mouse brain, DHPG and MHPG occurred almost entirely in free form. Total DHPG levels were only 50% as high as MHPG concentrations. Results suggest that DHPG formation and efflux may be more important than MHPG in the metabolic clearance of CNS norepinephrine in some species. 30 references. (Author abstract modified)

004304 Weeks, James R. Experimental Biology, Upjohn Company, Kalamazoo, MI 49001 **An improved pneumatic syringe for self-administration of drugs by rats.** Pharmacology Biochemistry and Behavior. 14(4):573-574, 1981.

An improved pneumatic syringe for self-administration of drugs by rats is described. A pneumatic cylinder operates the plunger of the microliter syringe and a three way valve switches the syringe between a solution reservoir and the animal. An electrically operated subminiature solenoid valve has been substituted for the mechanical valve previously used. The new design eliminates several components, making the device more compact and easier to use. 3 references. (Author abstract modified)

004305 Westerink, B. H. C.; Mulder, T. B. A. Pharmaceutical Lab., University of Groningen, Antonius Deusinglaan 2, 9713 AW Groningen, The Netherlands **Determination of picomole amounts of dopamine, noradrenaline, 3,4-dihydroxyphenylalanine, 3,4-dihydroxyphenylacetic acid, homovanillic acid, and 5-hydroxyindolacetic acid in nervous tissue after one-step purification on Sephadex G-10, using high.** Journal of Neurochemistry. 36(4):1449-1462, 1981.

A procedure for the determination of dopamine (DA), noradrenaline (NA), 3,4-dihydroxyphenylalanine (DOPA), 3,4-dihydroxyphenylacetic acid (DOPAC), homovanillic acid (HVA), and 5-hydroxyindolacetic acid (5-HIAA) in nervous tissue after one step purification on Sephadex G-10, using high performance liquid chromatography with a novel type of electrochemical detection, is described. The method is based on a rapidly performed isolation of DA, NA, DOPA, DOPAC, HVA, and 5-HIAA from one nervous tissue sample on small columns of Sephadex G-10, followed by reverse phase high performance liquid chromatography with electrochemical detection. A new type of electrochemical detector based on a rotating disk electrode (RDE) was used. The RDE was found to be a reliable and sensitive amperometric detector with several advantages over the currently used thin layer cells. Endogenous concentrations of DA, NA, DOPA, DOPAC, HVA, and 5-HIAA in eight rat brain regions is described. 26 references. (Author abstract modified)

CLINICAL PSYCHOPHARMACOLOGY

07 EARLY CLINICAL DRUG TRIALS

004306 Boyd, E. J. S.; Wormsley, K. G. Wormsley: Ninewells Hospital, Ninewells, Dundee DD1 9SY, Scotland **Inhibition of pentagastrin-stimulated and overnight gastric secretion by LM24056, a new phenothiazine-derived antisecretory drug.** Lancet. No. 8218:471-473, 1981.

The inhibition of pentagastrin stimulated and overnight gastric secretion by LM24056, a new phenothiazine derived antisecretory drug, is described. LM24056, a tricyclic drug, weakly inhibited pentagastrin stimulated gastric secretion but was a powerful inhibitor of nocturnal gastric secretion in five healthy volunteers. In 23 patients with duodenal ulcer, LM24056 at doses of 100mg, 200mg, and 300mg inhibited overnight acid output by 31%, 70%, and 81%, and overnight pepsin secretion by 15%, 50%, and 69%, respectively. In view of its gastric inhibitory effects, LM24056 warrants clinical evaluation in the treatment of peptic ulcer disease. 2 references. (Author abstract modified)

004307 Cassagnes, J.; Lamaison, D.; Palcoux, M. C.; Lusson, J. R.; Fanget, M.; Gachy, B.; Teyssoneyre, B.; Jallut, H. C.H.R. De Clermont-Fd, B.P. 69, F-63003 Clermont-Ferrand Cedex, France **/Treatment of unstable angina by diltiazem./** Traitement du syndrome de menace par le diltiazem. Therapie. 35(4):465-473, 1980.

The antianginal effect of diltiazem, a new calcium antagonist, was studied. Eighty seven patients, 24 with variant angina and 63 with common instable angina in which beta-blocking agents and/or amiodarone and/or perhixilline had failed to suppress symptoms of recurrent angina pectoris at rest, were given 180mg/day of diltiazem (later increased in some cases to as much as 360mg/day). Ss were followed for an average of 8 months. Results show persistent improvement in 78% of patients with variant and 65% of patients with common instable angina. Adverse side-effects were low. 28 references. (Journal abstract modified)

004308 Diricq, St.; Ansseau, M. Universite de Liege, Clinique Medico-Psychologique, Place du 20-Aout 7, Liege, Belgium. **/ Therapeutic news./** Actualites therapeutiques. Feuillets Psychiatriques de Liege. 12(1-2):1-26, 1979.

Several new psychotropic drugs are evaluated. The registered name, producing laboratory, international chemical denomination, formula, chemical class, usual dosage, principle indications, counterindications, and usual adverse side-effects are listed for each drug. The drugs evaluated include: the hypnotics flunitrazepam and triazolam; the psychorelaxants temazepam, camazepam, and clorazepate dipotassium; the neuroleptics melperone, pipotiazine, clopenthixol decanoate, tiapride, sultopride, and loxapine succinate; the antidepressants butriptyline, maprotiline, viloxazine, and mianserin; and pizotifen and Neurolithium. 9 references.

004309 Jovanovic, U. J.; Ott, H.; Heidrich, H.; Stephan, K.; Schratzer, M. University of Wurzburg, Psychiatric Clinic, Wurzburg, West Germany **Age-specific doses of lormetazepam as a night sedative in cases of chronic sleep disturbance.** Waking and Sleeping. 4(3):223-235, 1980.

Various doses of lormetazepam, a benzodiaze pinederivative, were examined to determine the optimal dosage for different age groups of outpatients with chronic sleep disturbance. Ss were 120 patients who were divided into a younger group (aged 20 to 55 years) and an older group (aged 56 to 85 years). Four different doses were given to each age group. A preplacebo week preceded the experiment 2 weeks, which were followed by a postplacebo week. No differences in effects between the different doses were observed with regard to sleep pattern variables (sleep latency, sleep duration, frequency of awakenings, sleep quality, and occurrence of bad dreams), with the exception of sleep quality which was better in the older group than in the younger group after 0.5mg. Considerable differences with regard to hangover feelings the next morning and small differences in side-effects were found. Findings indicate the 0.5mg dose is superior for the older group and the 1.0mg dose is recommended for the younger age group due to fewer side-effects. 12 references. (Author abstract modified)

004310 Shulgin, Alexander T.; Carter, Michael F. 1483 Shulgin Road, Lafayette, CA 94549 **N,N-diisopropyltryptamine (DIPT) and 5-methoxy-N,N-diisopropyltryptamine (5-MeO-DIPT). Two orally active tryptamine analogs with CNS activity.** Communications in Psychopharmacology. 4(5):363-369, 1980.

The synthesis and preliminary human psychopharmacology of two tryptamine analogs, N,N-diisopropyltryptamine (DIPT) and 5-methoxy-N,N-diisopropyltryptamine (5-MeO-DIPT), in which the basic amine function is sterically hindered is reported. Although these analogs are active in man only parenterally, it has been found that the N-isopropyl homologs of these two bases are both orally active and have human potency similar to their methyl counterparts. DIPT effects a passive and neutral psychotomimetic state, but one that embodies an unusual degree of auditory distortion, both in the pitch and the timbre of perceived sounds. 5-MeO-DIPT, on the other hand, produces a talkative and disinhibited state with easy emotional expression. 14 references. 08 DRUG TRIALS IN SCHIZOPHRENIA

004311 Alfredsson, Gunnel; Sedvall, Goran. Laboratory of Experimental Psychiatry, Dept. of Psychiatry, Karolinska Hospital, Karolinska Institute, S-104 07 Stockholm, Sweden **Protein binding of chlorpromazine in cerebrospinal fluid and serum.** International Pharmacopsychiatry. 15(5):261-269, 1980.

The binding of chlorpromazine to protein in human cerebrospinal fluid (CSF) was measured by equilibrium dialysis. In CSF from schizophrenic patients binding of chlorpromazine was found to vary by between 19 and 72%. There was no correlation between the degree of binding and the total amount of protein in the CSF. When chlorpromazine was equilibrated between CSF and serum in vitro almost the same distribution was found as obtained in vivo in drug treated patients. It is concluded that there is rapid equilibrium between chlorpromazine in body fluids in vivo, and that active transport of chlorpromazine between these body fluids is negligible. 12 references. (Author abstract modified)

004312 Beramendi, V.; Alpert, M.; Guimon, J.; Friedhoff, A.; Gutierrez, M. Facultad de Medicine, Universidad de Bilbao, Bilbao, Spain **/A controlled study of L-dopa in schizophrenia with reference to the theory of dopaminergic receptor hypersensitivity./** Estudio controlado de la L-dopa en la esquizofrenia con referencia a la teoria de la hipersensibilidad de los receptores dopaminergicos. Archivos de Neurobiologia. 63(2):107-124, 1980.

In a controlled study of the dopaminergic receptor hypersensitivity hypothesis in schizophrenia, 31 schizophrenic patients were assigned to one of three treatment groups: 12 received levodopa-carbidopa (maximum dosage 1500mg/day); 9 received haloperidol (maximum 20mg/day); and 10 received placebo. The group receiving L-dopa-carbidopa went through the 3 phases: 1) deterioration for 45 days; 2) adaptation for a month; and 3) improvement for 45 days in (5 of 10 clinical cases). Greatest improvement was found for the haloperidol group. Results suggest that deterioration of the clinical state after several weeks of high dosage L-dopa-carbidopa was less than would be predicted by the dopaminergic hypersensitivity hypothesis. Initial clinical deterioration produced by L-dopa appears to be owing more to a diffuse psychotoxic effect than to worsening of the schizophrenic symptomatology. 29 references. 004313 Berger, Philip A. Dept. of Psychiatry and Behavioral Sciences, Stanford University School of Medicine, Stanford, CA 94305 **Endorphins in psychopathology.** Research Report, NIMH Grant MH-30854, 1980. 20 p.

Research on the possible connections between endorphins and schizophrenia is reported which utilized three strategies: 1) measurement of the concentration of endorphins in biological fluids and spinal fluid of patients and control Ss; 2) administration of endorphin as an experimental treatment for schizophrenia; and 3) administration of the opiate and endorphin antagonist, naloxone. The data obtained from these studies is seen as indicating the tenuous and inconsistent connection between endorphins and schizophrenia. Patients did not seem to have elevated concentrations of beta-endorphin (beta-END) in spinal fluid, plasma, or dialysate. In 16 placebo controlled double-blind trials in chronic schizophrenics, high doses of intravenous naloxone produced significant decreases in hallucinations. beta-END injected intravenously also had pharmacological activity. Possible explanations for the contradictory findings are offered, ranging from basic biochemical to clinical hypotheses. The need for further research using the pure opiate antagonist, naloxone, is discussed. 56 references.

004314 Berger, Philip A.; Barchas, Jack D. Stanford University School of Medicine, Stanford, CA 94305 **Drugs and schizophrenia.** In: Melmon, K., Drug therapeutics: concepts for physicians. New York, Elsevier/North Holland, 1980. (p. 35-64).

The pharmacotherapy of schizophrenia and the biochemical hypotheses these treatments have generated are reviewed, as are the history of schizophrenia and the history of neuroleptics. The clinical syndrome of schizophrenia is delineated as is the efficacy of neuroleptic medication in its treatment. Neuroleptics have helped psychiatrists to become quantitative in the diagnosis and treatment of schizophrenia and have helped link psychiatry with the biological sciences. The dopamine hypothesis of neuroleptic drug action offers hope for the understanding of the biochemical basis of schizophrenia. Acetylcholine, GABA, and the endorphines may all play a role in schizophrenia, and future research may implicate neuroregulators not yet discovered. While the neuroleptics ameliorate schizophrenic symptoms they do not cure, and the patient may develop tardive dyskinesia or other side-effects. Thus, a better understanding of the multiple biochemical contributors to schizophrenia is needed and could facilitate the development of pharmacologic treatments for the disorder based on altering neurotransmitters other than dopamine or based on physiological mechanisms that do not involve chemical neurotransmitters. 68 references.

004315 Brosteanu, E. R.; Floru, L. University Psychiatric Clinic, Rhineland Regional Hospital, Dusseldorf, West Germany **Correlations between visual evoked potentials and psychopathological findings in schizophrenic patients under treatment with various psychopharmacological drugs.** In: Barber, C., Evoked potentials. Baltimore, MD, University Park Press, 1980. 614 p. (p. 549-556).

Two questions with regard to the study of the psychopathology of schizophrenic patients by the use of evoked potentials (EPs) were examined: 1) do certain symptoms or syndromes find expression in the EP findings at all and, if so, can there be a definite line drawn between such findings on the one hand and any individual deviations or the effect of psychopharmacological drugs and their side-effects on the other; and 2) is there a possibility of establishing, by means of the EP, a statistically validated predictability with regard to clinical responsiveness, particularly regarding clinical changes. Solely by analyzing the ratio of time or rather the shifting of the components, latency intervals, it was possible to establish that improvements or deteriorations of the different cardinal symptoms of the schizophrenic syndrome are in fact reflected in the course of the visual evoked potential findings. It is suggested that a simple and appropriate method of predicting relapses and their timely treatment can be developed from an analysis of slopes and principal factors of the EP latencies and the functional component groups. 6 references.

004316 Davis, Glenn C.; Buchsbaum, Monte S.; Bunney, William E., Jr. Dept. of Psychiatry, University of Tennessee School of Medicine, Memphis, TN 38104 **Alterations of evoked potentials link research in attention dysfunction to peptide response symptoms of schizophrenia.** Advances in Biochemical Psychopharmacology. 22:473-487, 1980.

Current research in the psychophysiology of attention dysfunction in schizophrenia and research studies proposing a pathological role for endorphins in schizophrenia are reviewed. Evoked potential studies are described which support the endorphin hypothesis of schizophrenia and link attention dysfunction to abnormal pain perception. Changes in the amplitude of a specific evoked potential component, the N120, form the basis of this linkage. Reduced N120 amplitudes in the visual and somatosensory modalities in schizophrenic Ss, the reversal of this with chronic naltrexone, and its simulation with morphine in normal volunteers are reported. 53 references. (Author abstract modified)

004317 Davis, Glenn C; Bunney, William E., Jr. Dept. of Psychiatry, University of Tennessee Center for Study of Health Sciences, Memphis, TN 38104 **Psychopathology and endorphins.** Advances in Biochemical Psychopharmacology. 22:455-463, 1980.

The roles of endorphins in psychiatric illness (particularly schizophrenia and depression) are reviewed. It is noted that suggestive evidence exists linking endorphins to the schizophrenic syndrome. Narcotic antagonists appear to slightly attenuate some symptoms; attentional performance is improved, and cerebrospinal fluid (CSF) opiate binding substances are reported elevated in a subgroup of patients. Fewer affectively ill patients have been studied, and little evidence has accumulated suggesting a relationship between symptoms of affective illness and endorphins. However, CSF endorphins appear elevated in some manic-depressive patients, and pain patients with depression have higher CSF endorphins than pain patients without depression. 42 references. 004318 Dotti, Andreai Lostia, Onofrio; Rubino, Ivo A.; Bersani, Giuseppe; Carilli, Luciana; Zorretta, Domenico. Istituto di Psichiatria, Universita di Roma, Viale Universita, 30, I-00185 Roma, Italy **The prolactin response in patients receiving neurolep-**

tic therapy. The effect of fluphenazine decanoate. Progress in Neuro-Psychopharmacology. 5(1):69-77, 1981.

Increases in plasma prolactin (PRL) induced by 50mg fluphenazine decanoate (FD) were studied in three groups of male schizophrenic patients. The increase in plasma PRL was higher in patients who had never been treated with neuroleptic drugs than in those who had been treated with neuroleptics for at least 2 years or in those who had discontinued neuroleptic therapy for at least 3 months after treatment for at least 1 year. The PRL response did not correlate with psychopathological changes and extrapyramidal side-effects and did not appear to be a useful tool in predicting appropriate FD dosage. 14 references. 004319 Duran, Eduardo; Schilkrut, Raul; Ercilla, Ramiro; Birkner, Rosa. Depto. de Psiquiatria y Salud Mental, Facultad de Medicina Sur, Universidad de Chile, Santiago, Chile **/Administration of flunitrazepam in electroconvulsive therapy./** Medicacion con flunitracepam en terapia electroconvulsivante. Acta Psiquiatrica y Psicologica de America Latina. 26(4):300-307, 1980.

Flunitrazepam, a benzodiazepine used as an anesthetic in major and minor surgery, was administered in 241 instances of electroconvulsive therapy (ECT) on 28 psychotic (primarily schizophrenic) patients. Results show that flunitrazepam induced deep sleep in 94.6% of the patients within 5 minutes. The required dosage was between 2 and 4mg. The drug did not inhibit the convulsion. There were no significant changes in pulse, arterial pressure, or respiration. Post-ECT agitation appeared in 0.82% of the subjects. Combined therapy with neuroleptics and lithium did not modify the effect of flunitrazepam. Increased tolerance did not develop after successive doses. The use of this drug avoids some of the problems associated with other anesthetics. Flunitrazepam should be used with older or high-risk patients who need ECT. 37 references. 004320 Elizur, A.; Levy, A.; Lahav, M.; Blum, I. Shalvata Psychiatric Center, Sackler School of Medicine, Tel Aviv University, Ramat Aviv, Israel **Preliminary trial of clonidine treatment in two patients suffering from chronic schizophrenia.** Communications in Psychopharmacology. 4(6):507-517, 1980.

Clonidine was administered to two schizophrenic patients in a preliminary single-blind study. The first patient, whose initial psychopathology was that of retardation, crying, and withdrawal, showed a marked worsening of his condition after the administration of 5mcg clonidine per os. His blood pressure rose to 170/120 and his pulse rate to 120/minute. He became tense, hostile, aggressive, and totally preoccupied with auditory hallucinations. In the other patient, whose initial symptoms were maniform, clonidine had a marked, but transitory, beneficial effect. The significance of the differential effect of clonidine treatment in the two patients is discussed. 22 references. (Author abstract)

004321 Emrich, H. M.; Hollt, V.; Bergmann, M.; Kissling, W.; Schmid, W.; Zerssen, D. V.; Herz, A. Max-Planck-Institut fur Psychiatrie, D-8000 Munchen 40, West Germany **Plasma levels of beta-endorphin under chronic neuroleptic treatment in schizophrenic patients: failure of naloxone to counteract curative effects of neuroleptic drugs.** Advances in Biochemical Psychopharmacology. 22:489-502, 1980.

Plasma levels of beta-endorphin were assessed in schizophrenic patients during chronic neuroleptic treatment, and the effects of the specific opiate antagonist naloxone on neuroleptic actions were evaluated. All patients were treated with cataleptogenic neuroleptic drugs (haloperidol, perphenazine, benperidol). Naloxone failed to counteract the antipsychotic action of cataleptogenic antischizophrenic therapy. It is concluded that the curative action of neuroleptics is apparently not exerted via an endorphinergic mechanism. Therefore, the activation of endorphins induced by cataleptogenic antischizophrenic drugs perhaps constitutes an epiphenomenon of the therapy and may not be the causative factor underlying the beneficial effects of neuroleptic therapy. 18 references.

004322 Emrich, H. M.; Zaudig, M.; Kissling, W.; Dirlich, G.; van Zerssen, D.; Herz, A. Max-Planck Institut for Psychiatrie, Kraepelinstrasse 10, D-8000 Munchen 40, West Germany **Des-tyrosyl-gamma-endorphin in schizophrenia: a double-blind trial in 13 patients.** Pharmakopsychiatrie Neuro-Psychopharmakologie. 13(5):290-298, 1980.

A double-blind placebo controlled cross-over investigation of the possible antipsychotic action of (des-Tyr1)-gamma-endorphin (DT-gamma-E), a nonopioid derivative of gamma-endorphin, was undertaken in 13 schizophrenic patients. The Ss were suffering from either chronic or acute, frequently relapsing schizophrenia and displayed persistent productive symptoms (hallucinations and acute delusions). Two successive double-blind injection treatment periods of 4 days followed 1 day of single-blind injection of placebo (4 days with i.m. injections of 2mg DT-gamma-E prededed 4 days of placebo injections or vice versa). Clinical data concerning each patient's age, sex, diagnosis, target symptoms, neuroleptic treatment, and the percentage of changes in symptomatology after treatment were analyzed. Psychopathological evaluation was performed twice daily by using the Inpatient Multidimensional Psychiatric Scale and an eight point scale for estimating the special target symptoms. Results indicate that the placebo and DT-gamma-E produce a reduction in symptomatology of an approximately equal magnitude, and the hypothesis of an antipsychotic efficacy of DT-gamma-E in treating chronic schizophrenic patients is not supported. In a subgroup of acute schizophrenic patients, some therapeutic action of DT-gamma-E was evidenced. 12 references. (Journal abstract modified)

004323 Gardos, George; Cole, Jonathan O.; LaBrie, Richard A. West-Ros-Park Mental Health Center, Cottage '1, 591 Morton St., Boston, MA 02124 **A twelve-year follow-up of the NIMH-PRB high dose chlorpromazine study of chronic schizophrenics -- implications for deinstitutionalization. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-32675, 1979. 51 p.

Results of a 12 year followup study of outcome in schizophrenics with established chronicity, a subject of particular interest in light of the controversy over their deinstitutionalization, are presented. Long-term outcome data, including repeated measures of symptoms and social adjustment were obtained from 124 patients who entered the drug phase of an original study on the use of chlorpromazine in the long-term management of the disorder. Measures included the Discharge Readiness Inventory, the Inpatient Multidimensional Psychiatric Scale, the Side Effects Checklist, and the Global Assessment Scale. At the 12 year followup, 90 of the 124 patients were contacted. The overall psychosocial adjustment in these Ss was disappointing. Outcome of the typical patient at followup was characterized as being markedly ill, receiving high doses of antipsychotic drugs, being unemployed, and showing poor social skills. Outcomes for patients placed in nursing homes were no better than for those remaining on hospital wards, while cooperative apartments seemed to be the best setting for these chronic mental patients. Family care patients occupied an intermediate position insofar as outcome was concerned. Particularly striking were the severe psychotic symptomatology, belligerence, poor social adjustment, and marked movement disorders, specifically restlessness, that were evidenced in the sampled Ss. 29 references.

004324 Goldstein, Allan L.; Rossio, Jeffrey; Kolyaskina, Galina I.; Emory, Lee E.; Overall, John E.; Thurman, Gary B.; Hatcher, Janelle. Dept. of Biochemistry, George Washington University School of Medicine, Washington, DC 20037 **Immunological components in schizophrenia.** In: Baxter, C., Perspectives in schizophrenia research. New York, Raven Press, 1980. 445 p. (p. 249-267).

Studies which would indicate that chlorpromazine (CPZ) by itself is a potent immunosuppressive agent, both in vitro and in vivo, in murine systems are summarized. The results of a clinical study, which indicate that a significant immunological imbalance exists in some patients with schizophrenia, are reported. These differences include abnormal lymphocyte responsiveness to selected mitogenic lectins and the presence in the serum of a cytotoxic factor(s) directed against murine thymocytes. The studies indicate that during a 28 day chemotherapy trial of CPZ there was a tendency towards normalization of T-cell responses and a significant decrease in serum cytotoxicity. Specific recommendations for new approaches to study immunologic and virologic components are presented, and questions which should be investigated to obtain information regarding the role of viruses and the immune system in the schizophrenic process are identified. A discussion of the paper follows. 38 references. (Author abstract modified)

004325 Gross, G.; Huber, G.; Schuttler, R. Huber: Universitats-Nervenklinik, D-5300 Bonn-Venusberg, West Germany /**The effect of long-term maintenance therapy on schizophrenic patients using somatotherapeutic measures.**/ Die Beeinflussung des Langzeitverlaufs schizophrener Krankheiten durch somatotherapeutische Massnahmen. Psychiatria Clinica. 13(3-4):179-192, 1980.

Evidence is presented in support of the effectiveness of long-term neuroleptic medication in schizophrenia, with emphasis on the great variability of course and outcome beyond the 3 year followup. Although some anamnestic and clinical progress was noted, it is contended that a reliable individual prognosis is not possible at disease onset. Initially phasic courses with complete remission of the early psychotic features are seen as possibly leading nevertheless to residual syndromes, while chronic persistent psychoses can demonstrate permanent remission. Observations are made on the favorable outcome following long-term treatment in some cases of catastrophic schizophrenia, the significantly less favorable outcome for patients whose disease began prior to the era of psychopharmacological drugs, and the more frequent occurrence of complete remission in patients with preacute and acute onsets of psychosis who received early treatment during the prodromal stage. The finding of a higher rate of patients with mixed residual states (at the expense of residual states) with long-term neurolepsy is seen as suggesting that long-term medication is responsible for the partially pharmacogenic change in symptomatology of schizophrenia insofar as it causes or favors a shift from the typical syndromes to the mixed residual states brought about by a potential reduction in symptoms. 29 references. (Journal abstract modified)

004326 Halperin, David A. 120 Central Park South, New York, NY 10019 Bulletin of the American Academy of Psychiatry and Law. 8(2):175-178, 1980.

A case report is presented which illustrates some of the difficulties which may arise in disclosure of information in accordance with the doctrine of informed consent. The doctrine stipulates that the physician must inform the patient of the consequences of a particular procedure and the side-effects of a particular medication. In the present case, a paranoid schizophrenic outpatient, maintained for 3 years on chlorpromazine, refrained from having children because of concerns about possible tetragenic side-effects of his medication. While the source of this misinformation was never pinpointed, the patient's misinterpretation of information about side-effects seemed to represent his general suspiciousness of the establishment in general. In this case the patient concealed his fantasies about medication from the treating physicians because of his treatment, such consent, was misinformed. Solutions to dilemmas involved in steering a course between underinformation and overexplication, and its possible negative effects, are outlined. 4 references.

004327 Hollister, Leo E.; Davis, Kenneth L.; Berger, Philip A. V.A. Medical Center, Palo Alto, CA 94304 **Apomorphine in schizophrenia.** Communications in Psychopharmacology. 4(4):277-281, 1980.

Studies of the utility of apomorphine in schizophrenia are described, and the idea of selective presynaptic receptor blockage as an approach to treating schizophrenia is discussed. Apomorphine in high doses given orally aggravated the psychotic symtoms of schizophrenic Ss, even though they continued treatment with previously effective doses of neuroleptics. At low doses, apomorphine failed to augment the beneficial effects of antispsychotic drugs. It is concluded that attempts to manage schizophrenia by selective blockade of presynaptic dopamine receptors may be difficult and may have limited clinical usefulness. 11 references. 004328 Husser, J. Rheinische Landesklinik Koln, Koln, West Germany /**The treatment of chronic schizophrenic patients: an interview with Dr. J. Husser.**/ Die Behandlung chronisch schizophrener Patienten. Neurologie und Psychiatrie fur die Praxis. 6(3):156-157, 160, 1980.

The treatment of chronic schizophrenic patients is discussed. The progress made in the pharmacological sector and the development of potent neuroleptics have led to more rapid rehabilitation of these patients and briefer inpatient stays in clinics. Nevertheless, chronic schizophrenic patients are reinstitutionalized. The solution lies in finding a reliable residual safeguard following remission of symptoms as well as in promoting patients as suitable halfway house residents to facilitate their reintegration into society. The usual outpatient practice is to combine administration of long-term neuroleptics with social therapy and psychotherapy.

004329 Kolakowska, Tamara; Fraser, Sheila; Franklin, Michael; Knox, Jean. University of Oxford, Dept. of Psychiatry, Littlemore Hospital Research Unit, Littlemore Hospital, Oxford OX4 4XN, England **Neuroendocrine tests during treatment with neuroleptic drugs: I. Plasma prolactin response to chlorpromazine challenge.** Psychopharmacology. 72(3):283-285, 1981.

Plasma prolactin (PRL) levels were measured after a challenge dose of chlorpromazine (CPZ, 50mg) in 21 schizophrenics during neuroleptic treatment. In eight patients on low daily doses of neuroleptics, the challenge dose of CPZ elicited a rise in PRL levels beyond that induced by neuroleptic treatment. The challenge dose produced no change in plasma PRL in some patients, but an increase in PRL could be induced by increasing the challenge dose or increasing the daily dose of neuroleptics. It is concluded that the PRL rise after 50mg CPZ may identify patients whose PRL response to current neuroleptic treatment is submaximal. However, the absence of a PRL increment after the challenge dose may not indicate exactly that the baseline level is already maximal. 9 references. (Author abstract modified)

004330 Krupenina, L. B.; Prokhorova, I. S. Moskovskiy NII psikhiatrii, Ministerstva zdravookhraneniya RSFSR, Moskva, USSR /**Clinical and biochemical correlations in abrupt discontinuation of psychopharmacotherapy.**/ Kliniko-biokhimicheskiye sootnosheniya pri odnomomentnoy otmene psikhofarmakoterapii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(3):406-412, 1981.

Clinical and biochemical correlations following abrupt discontinuation of psychopharmacotherapy were studied in 26 patients (20 to 60 years old) with periodic and simple schizophrenia with a duration of 1 to 15 years. All the patients had received intensive psychopharmacotherapy, but without sufficient effect. Pharmacotherapy was discontinued abruptly. Before and after discontinuation of pharmacotherapy, the levels of adrenaline, noradrenaline, serotonin, and acetylcholine in the blood were determined, as well as the content of adrenaline, noradrenaline, dopamine, and vinylmandelic, homovanillic, and 5-hydroxyindoleacetic acids in the urine. A control group of 20 healthy people also was examined. Results indicate that an individualized therapeutic approach to different variants of paroxysmal schizophrenia is necessary, since the metabolism of biogenic amines in patients with periodic and simple schizophrenia is different. 20 references. 004331 Ladisich, Walter. Forschungstelle fur Psychopathologie und Psychotherapie, Max-Planck-Gesellschaft, Kraepelinstrasse 10, D-8000 Munchen 40, West Germany **Effects of Althesin in psychotherapy of schizophrenics: preliminary report.** Acta Psychiatrica Belgica. 80(4):445-451, 1980.

The use of Althesin in conjunction with psychotherapy for schizophrenics is discussed. Six patients were injected with Althesin in subhypnotic dosage prior to psychotherapy. The schizophrenics were nonresponsive to neuroleptics and had not benefitted much from psychotherapy. An analysis of the speech content of the therapy session of two Ss with the Gottschalk-Gleser method indicated that there is reduced hostility during Althesin sessions. Anxiety, however, was influenced less by Althesin administration. Two Ss' self-rated scores on a well-being scale indicated a beneficial effect of Althesin. Negative feelings decreased and patients appeared to be more assertive. 10 references. (Journal abstract modified)

004332 Langer, G.; Puhringer, W. Psychiatrische Universitats-Klinik, Abt. fur Psychiatrie, A-1097 Wien, Austria **Haloperidol and droperidol treatment in schizophrenics: clinical application of the** Acta Psychiatrica Belgica. 80(5):574-583, 1980.

To examine the relationships among neuroleptic treatment using haloperidol or droperidol, plasma prolactin response, suppression of neuroleptic-induced prolactin evaluation by dopamine infusion, and psychopathological change, longitudinal studies were made of four schizophrenic patients. A constant infusion of dopamine hydrochloride in the dose range of 15mcg/mn to 60mcg/mn was found to suppress prolactin elevation due to high dose neuroleptic maintenance medication. When the phenomenon was further investigated in another schizophrenic patient, a high test/retest reliability reproducibility for dopamine's suppressive effect on neuroleptic-induced elevated prolactin levels was found. In most instances, droperidol sharply raised plasma prolactin levels; however, in two patients two infusions did not elevate prolactin concentration. Despite the very high neuroleptic potency of droperidol (100mg given intravenously), not every infusion ameliorated schizophrenic psychopathology. Results are discussed in terms of the relationship between treatment response and prolactin response. 7 references. (Author abstract modified)

004333 McEvoy, Joseph P.; Berney, Stuart; Wilson, William H.; Ban, Thomas A.; Guy, William. Tennessee Neuropsychiatric Institute, 1501 Murfreesboro Road, Nashville, TN 37217 **A double-blind comparison of three dosages of flutroline (CP-36,584) in the treatment of schizophrenia.** International Pharmacopsychiatry. 15(5):318-324, 1980.

Therapeutic and adverse effects of three dosages (1, 20, and 100mg daily) of flutroline, a new gamma-carboline with a preclinical pharmacological profile similar to active neuroleptic agents, were compared in a double-blind clinical trial in 25 newly admitted schizophrenic patients. Therapeutic effects and extrapyramidal signs were seen at the 20 and 100mg daily dosages, but not at the 1mg dosage. Serum prolactin levels were significantly elevated only at the 100mg daily dosage. It is noted that for some patients, the therapeutic dosage of flutroline may lie above 20mg daily. While patients who developed elevation of serum prolactin level were significantly more likely to develop extrapyramidal signs, neither the occurrence of elevations of serum prolactin level nor the occurrence of extrapyramidal signs were significantly related to therapeutic response. 5 references. 004334 Odejide, A. O. Dept. of Psychiatry, University College Hospital, Ibadan, Nigeria **Prevalence of persistent abnormal involuntary movements among patients in a Nigerian long-stay psychiatric unit.** International Pharmacopsychiatry. 15(5):292-300, 1980.

Patients in a Nigerian chronic psychiatric patients' unit (N=226) were examined for the evidence of abnormal involuntary movements. The disorder was found in 21 (9.3%) of the patients. The prevalence rate was higher among the females (14.5%) than among males (7%). All 21 patients had the diagnosis of schizophrenia. Also, they were found to be of an older age group than the total population. In comparison with a control group, the development of persistent abnormal involuntary movement was found not to be related to the daily dose of neuroleptic drugs administered or to the duration of the illness. It is concluded that the disorder is an idiosyncratic reaction. 22 references. (Author abstract modified)

004335 Panteleyeva, G. P.; Minsker, E. I.; Tsirkin, S. Yu.; Belyayev, B. S.; Lukanina, S. K. Institut psikhiatrii AMN SSSR, Moskva, USSR **/The use of clinical and pharmacokinetic criteria in forecasting the efficacy of therapy in schizophrenia./** Mesto klinicheskikh i farmakokineticheskikh parametrov v prognoze effektivnosti terapii shizofrenii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(5):748-754, 1980.

Clinical and pharmacokinetic criteria were developed to predict the efficacy of chlorpromazine in 25 patients with schizophrenia of different degrees of progression. Results show that the most informative clinical criteria were: the disease course, the structure of the prevalent syndrome, a relatively low level of negative personality changes, alternating affective disorders in the initial stage of the disease, and the development of the remental state after a single control dose of chlorpromazine. Results also show that the most informative pharmacokinetic criteria were the half-life of the drug and the penetration rate from the intestine into the blood. 11 references. 004336 Paykel, E. S. Dept. of Psychiatry, St. George's Hospital Medical School, London, S.W. 17, Australia **Psychopharmacological and social aspects of schizophrenia: recent developments.** Australian and New Zealand Journal of Psychiatry. 14(4):241-247, 1980.

Schizophrenia is considered with respect to pharmacological and psychosocial interactions. Substantial evidence is provided which suggests that biological factors, such as genetic and neurotransmitters, are involved in the etiology of schizophrenia, although their precise nature is uncertain. Environmental factors such as a possible virus contribution and early social conditions are considered, and studies of the recent social environment have been found to be most influential, especially those concerning life-even's proximate to relapse and the extreme sensitivity of the chronic schizophrenic to expressed emotion. It is suggested that social therapies and psychotherapies can provide only an additive benefit in conjunction with drugs. This provides a powerful argument for a combined approach. 53 references.

004337 Psaras, M.; Zissis, N. P.; Mouzakis, D.; Lyketsos, G. Zissis: 39, Mousson St., Pal. Phaleron, Athens, Greece **Mobilization of refractory chronic schizophrenics with haloperidol.** International Pharmacopsychiatry. 15(3):180-185, 1980.

Adequate high doses of haloperidol, averaging 100mg/day, were administered for 16 weeks to 24 chronic schizophrenics who were refractory to standerd antipsychotic treatment in an attempt to mobilize and release them from the hospital. At the end of the period, three patients were evaluated as able to leave the hospital, while 87% were subjectively evaluated as improved. High doses of haloperidol did not correlate with a higher incidence of unwanted effects. On the contrary, antiparkinson treatment was discontinued or decreased in 14 patients. It is concluded that nonresponsive chronic schizophrenics can profit from adequate high doses of haloperidol. 13 references. (Author abstract modified)

004338 Rao, V. A. Rama; Bailey, J.; Bishop, M.; Coppen, A. Coppen: MRC Neuropsychiatry Laboratory, West Park Hospital, Epsom, Surrey KT19 8PB, England **A clinical and pharmacodynamic evaluation of sulpiride.** Psychopharmacology. 73(1):77-80, 1981.

In a double-blind study, the therapeutic efficacy of sulpiride was compared to that of haloperidol, an established neuroleptic agent. A total of 30 female patients with a diagnosis of chronic schizophrenia were initially stablized on the dosage of haloperidol which produced optimum therapeutic response when given once or twice daily. The patients were then randomly allocated to receive either sulpiride or haloperidol over a period of 12 weeks. Plasma drug concentrations and prolactin levels were determined. Clinical effects were evaluated by Brief Psychiatric Rating Scale (BPRS), Wing Rating Scale, and Extrapyramidal Symptoms Rating Scale (EPS). A standardized side-effects checklist was used. Treatment with sulpiride was associated with a significant rise in plasma prolactin level, but paradoxically, these patients had significantly reduced extrapyramidal symptoms. No significant correlation was found between plasma sulpiride concentration and prolactin level or any of the clinical variables. Results confirm the antipsychotic activity of sulpiride. 23 references. (Author abstract modified)

004339 Shestakov, S. V. Kafedra psikhiatrii, Voronezhskiy meditsinskiy institut, Voronezh, USSR **/The use of sodium nucleinate in the treatment of schizophrenic patients./** Ispol'zovaniye nukleinata natriya v terapii bol'nykh shizofreniyey. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(5):623-627, 1979.

A total of 142 patients (80 men and 62 women, 19 to 60 years old) with progressive forms of schizophrenia with pronounced symptomatology were treated with sodium nucleinate and other substances. Most of the patients had been suffering from the illness for over 10 years. Sodium nucleinate alone was given to 17 of the patients; 85 received it along with psychotropic substances such as aminazine and trifluoperazine; and 40 received neuroleptics along with a therapeutically indifferent substance instead of nucleinate. The dynamics of some indices of nonspecific reactivity were observed during treatment. Yeast sodium nucleinate was found to promote a softening and reversal of some deficital symptoms, mainly in the emotional volitional sphere, and to decrease the threshold of sensitivity to neuroleptics. When remission occurred, the immunological indices returned to normal. 19 references. (Journal abstract modified)

004340 Smulevich, A. B.; Bosov, A. M.; Dubnitskaya, E. B.; Izmaylova, L. G. Insitut psikhiatrii AMN SSSR, Moskva, USSR **/The problem of psychopharmacotherapy of slowly progressive hypochondriacal schizophrenia./** K probleme psikofarmakoterapii maloprogredientnoy ipokhondricheskoy shizofrenii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(11):1583-1587, 1979.

The psychopharmacological aspect of nonpsychotic hypochondriacal conditions in schizophrenia was studied in 155 patients (from 20 to over 60 years old) who were treated in one institution between 1976 and 1978. All the Ss suffered from slowly progressive schizophrenia. In most of the cases (139) this disease was of uninterrupted course, and only in 16 cases was it an attack-like process. The Ss were divided into three groups: neurosis-like hypochondria, physical sensations (pains), and rigid hypochondria. Results show that neither coma therapy nor the use of large doses of neuroleptics significantly reduced psychopathological symptoms. However, positive results were achieved with a combination of tranquilizers and small doses of neuroleptics. 23 references.

004341 Steiner, S. Niederosterreichisches Landeskrankenhaus fur Psychiatrie und Neurologie, Hauptstrasse 2, A-3400 Klosterneuburg, Austria **/The effect of an intensive course of neuroleptic drugs on schizophrenic patients and their subsequent course following the cessation of all neuroleptic medication./** Beeinflussung schizophrener Erkrankungen durch eine neuroleptische Intensivbehandlung und der weitere Verlauf nach Absetzen jeder neuroleptischen Medikation. Psychiatria Clinica. 13(3-4):165-178, 1980.

A group of 229 patients with schizophrenic or other paranoid illnesses (9 patients) were treated for about 14 weeks with intramuscular or intravenous injections of fluphenazine decanoate, and their subsequent course was monitored after 3 years. During the first 2 weeks, three injections of 250mg were given, followed by slowly lowering dosages at three weekly intervals. Ss also received tablets of procyclidine and 100mg to 150mg of amitriptyline p.o. After the initial intensive phase, Ss received an average of 145mg i.m. every 3 weeks. The findings at the 3 year followup confirm those from an earlier assessment which showed the rapid onset and stability of remission, the absence of relapses among patients who continued treatment, and the relative freedom from relapses among patients who did not continue to receive neuroleptic medication. The suggestion that the initial high dosage medication would have deleterious effects on the personality, producing robot-like or zombie-like behavior, was not confirmed. 3 references. (Journal abstract modified)

004342 Tegeler, Joachim; Lehmann, Erlo. Rheinische Landesklinik, Psych. Klinik, Universitatslinik Dusseldorf, Bergische Landstrasse 2, D-4000 Dusseldorf 12, West Germany **A follow-up study of schizophrenic outpatients treated with depot-neuroleptics.** Progress in Neuro-Psychopharmacology. 5(1):79-90, 1981.

Data from 78 schizophrenic patient attending an outpatient clinic were used to compare the efficacy of long-acting neuroleptics and short acting medication. Over a 5 year period, the readmission rate and duration of inpatient stay were significantly lower during treatment with depot neuroleptics than during treatment with short acting drugs. Demograhic data and therapeutic conditions that may have influenced these results are discussed. 14 references. (Author abstract modified)

004343 Vardi, J.; Flechter, S.; Oberman, Z.; Segal, R.; Shogan, G.; Haker, O. Dept. of Neurology and Chemical Pathology, Medical School Tel Aviv University, Tel Aviv, Israel **Plasma dopamine beta hydroxylase activity in chronic schizophrenic patients tested with single dose of 2-bromo-alpha ergocriptine (Parlodel).** Encephale. 7(1):95-103, 1981.

Plasma dopamine beta hydroxylase (DBH) activity was measured in six chronic schizophrenic patients. The six Ss received 7.5mg of bromocriptine and blood samples were taken at regular intervals for 3 hours. Two control groups were used: a group of six schizophrenics who received no bromocriptine and a group of five normal individuals who received 7.5mg of bromocriptine. Results show a significant increase in DBH activity in the Ss compared to the control groups. This might be explained by hypersensitivity models of presynaptic and postsynaptic receptors, and of agonist and antagonist properties of bromocriptine when acting on these receptors. 33 references. (Journal abstract modified)

004344 Zander, K. J.; Fischer, B.; Zimmer, R.; Ackenheil, M. Ackenheil: Psychiatrische Klinik der Universitat Munchen, Nussbaumstrasse 7, D-8000 Munchen 2, West Germany **Long-term neuroleptic treatment of chronic schizophrenic patients: clinical and biochemical effects of withdrawal.** Psychopharmacology. 73(1):43-47, 1981.

Clinical and biochemical effects of withdrawal from long-term neuroleptic treatment were studied in 17 chronic schizophrenic patients under neuroleptic treatment for 13 years. A 30 day drug withdrawal resulted in early relapse of four patients, slight deterioration of five patients, and slight amelioration in eight patients. No incidents of neuroleptic symptoms such as tardive dyskinesia occurred. Prolactin in plasma and cerebrospinal fluid (CSF), not being elevated under chronic treatment, decreased significantly after 30 days of withdrawal. Homovanillic acid and 3-methoxy-4-hydroxyphenylglycol in CSF ranged normally and did not change during withdrawal. In contrast, plasma noradrenaline was elevated and decreased after drug discontinuation. No unequivocal relationship between biochemical and psychopathological features was found. 42 references. (Author abstract modified)

004345 Zisook, Sidney; Click, Maurice A., Jr. Dept. of Psychiatry and Behavioral Sciences, University of Texas Medical School, P.O. Box 20708, Houston, TX 77025 **Evaluations of loxapine succinate in the ambulatory treatment of acute schizophrenic episodes.** International Pharmacopsychiatry. 15(6):365-378, 1980.

The efficacy of loxapine succinate in treating acute schizophrenic episodes of outpatients was assesed with 138 acutely ill schirophrenic outpatients. The patients were treated with oral loxapine succinate for up to 4 weeks in nine open label studies, all of which shared an identical protocol. For most patients, a daily dose of 30mg to 80mg loxapine was observed to provide safe, effective, and relatively immediate symptomatic relief, and in most cases, it helped to keep acutely ill schizophrenic patients out of the hospital. Side-effects, which occurred in 95 patients, were mostly mild and controllable and consisted mainly of extrapyramidal effects. 56 references. (Author abstract modified)

09 DRUG TRIALS IN AFFECTIVE DISORDERS

004346 Al-Yassiri, M. M.; Bridges, P. K. Academic Unit for Clinical Psychopharmacology, Guy's Hospital Medical School, London SE1 9RT, England **Trazodone efficacy and safety in endogenous depression: a double blind comparison with imipramine.** Neuropharmacology. 19(12):1191-1193, 1980.

The efficacy and side-effects of trazodone and imipramine, given orally to a group of patients suffering from endogenous depression, were investigated in a double-blind study. Data from the 26 Ss in the 6 month study indicate that trazodone has antidepressant activity at least as potent as imipramine. Both drugs produced significant reduction in Wakefield Depression Scale and Hamilton Depression Scale scores. Trazodone seems to be well tolerated and to have less anticholinergic effects than imipramine. Dizziness and drowsiness are the main complaints of the patients on trazodone.

004347 Albarello, B. 1. Servizio Psichiatrico O. C. Borgo Trento, Vernona, Italy **/On the use of certain pharmacological categories in hysteria./** Sull'uso di alcune categorie di psicofarmaci nelle forme isteriche. Rivista di Neuropsichiatria e Scienze Affini. 26(2):103-113, 1980.

A biochemical interpretation of hysteria is proposed based on three case studies. In the first case, treatment of a 30-year-old woman with small dose of antidepressants was ineffective, and she returned to the clinic twice. She began to respond to average doses of tricyclic antidepressants, which improved her hysterical symptoms. A 23-year-old woman who rejected and would not care for her son showed little responsiveness to neuroleptic treatment. At her second admission, however, she was treated more successfully with increasing doses of antidepressants. Th third case involves a 54-year-old woman whose hysteria was induced by trauma and who recovered somewhat under a varied drug treatment program but was maintained on antidepressants alone. It is concluded that average doses of tricyclic antidepressants and small doses of benzodiazepines are most effective in the treatment of hysteria. Theories of hysteria are discussed. 17 references. (Journal abstract modified)

004348 Ananth, J.; Engelsmann, F.; Kiriakos, R. Allan Memorial Institute, Montreal, Quebec H3A 1A1, Canada **Evaluation of lithium response: psychometric findings.** Canadian Journal of Psychiatry. 25(2):151-154, 1980.

The usefulness of the MMPI in the prediction of lithium therapy response was investigated in 59 bipolar affective disorder patients, 39 of whom had no recurrences of manic-depressive illness and functioned at premorbid levels during 2 years of lithium treatment (responders) and 20 of whom had had psychotic episodes during this period despite adequate lithium serum levels (nonresponders). Nonresponders obtained higher scores on Psychopathic Deviate, Paranoid, and Mania Scales; while responders scored higher on the Hypochondriasis, Psychasthenia, and Social Introversion scales. Further work with pretreatment and posttreatment administration of the MMPI may provide additional and more definitive results. 5 references. (Author abstract modified)

004349 Asarch, Kenneth B.; Shih, Jean C.; Kulcsar, Agnes. School of Pharmacy, University of Southern California, 1985 Zonal Avenue, Los Angeles, CA 90033 **Decreased 3H-imipramine binding in depressed males and females.** Communications in Psychopharmacology. 4(5):425-432, 1980.

The high affinity binding of 3H-imipramine to platelet memberanes from 23 untreated depressed men and women and 16 normal men and women was studied. The maximal binding (Bmax) in the depressed groups, male as well as female, was signficiantly lower (20%) than in the normal groups, while the dissociation constants (Kd) were not significantly different. Neither Bmax nor Kd differed statistically between the sexes for either the depressed or normal subject groups. No significant correlations were found between age and either Bmax or Kd for any of the four S subgroups. A statistically significant correlation did exist, though, between the Bmax of all of the Ss and their respective dissociation constants. In addition, 3H-imipramine binding to platelet membranes remained unchanged during 2 weeks of daily therapy on the monoamine oxidase inhibitor, tranylcypromine. 9 references. (Author abstract)

004350 Ayd, Frank J, Jr. no address **Clinical depressions: diagnostic and therapeutic challenges.** Baltimore, Ayd Medical Communications, 1980. 228 p. $20.

A series of statements is presented by experienced clinicians on their concepts of depressions and their therapies. An overview of depression and its management is provided and covers the signs and symptoms of primary and secondary depression, depression in geriatric patients, alternatives to psychopharmacological methods, and techniques for initiating antidepressant drug therapy for outpatients. The overview is followed by a consideration of the social effects of depression, the depressed medical patient, and differentiating anxiety and depression. Depressive pseudodementia is covered as are the multiple facets of masked depression with an emphasis on the faciopsycho-myalgia syndrome. Acute chronic depression, the depressive personality, and a biopsychosocial model of depression are discussed. The postmarketing surveillance of maprotiline in Canada is included as an addendum.

004351 Ballus, C. Departamento de Psiquiatria y Psicologia Medica, Facultad de Medicina, Casanova 143, Barcelona 36, Spain **Pharmacotherapy for depression.** In: Kielholz, P., The general practitioner and his depressed patients. Bern, Switzerland, Hans Huber, 1981. 142 p. (p. 86-96).

Pharmacotherapeutic treatment of depression is discussed. Before treatment the depression must be classified nosologically as either psychogenic, endogenous, or somatogenic. Pharmacotherapy is primarily indicated in endogenous depressions, although they can play a role in psychogenic and somatogenic depressions. Selection of an appropriate antidepressant depends on phenomenological features and whether the clinical picture is predominantly characterized by depressive mood, anxious agitation, psychomotor retardation or functional disturbances. The antidepressants are classified as mood brightening, sedative anxiolytic, or drive enhancing. These include tricyclic antidepressants, tetracyclic antidepressants, antidepressants of other types, and monoamine oxidase inhibitors. The administration and dosage, side-effects, and contraindications of antidepressants are reviewed. 16 references.

004352 Baxter, Claude F.; Tachiki, Ken H.; Blaser, Steven M.; Bednar, Bryce R.; Gosenfeld, Lawrence F. Neurochemistry Laboratories, Sepulveda Veterans Administration Medical Center, Sepulveda, CA 91343 **Changes in blood plasma osmolality and status of mania.** Neurochemical Research. 6(1):47-53, 1981.

In hospitalized male manic patients, fluctuations in blood plasma osmolality over a period of months showed a significant inverse correlation with changes in mania rating scores. Successful treatment with lithium carbonate was correlated with increasing levels of plasma osmolality and with significant remission of manic symptoms. It is suggested that altered plasma osmolality is linked to changes in manic symptomatology through osmotically regulated metabolic changes in the CNS. 37 references. (Author abstract modified)

004353 Belmaker, Robert H. Jerusalem Mental Health Center, Ezrath Nashim, Jerusalem, Israel **Receptors, adenylate cyclase, depression, and lithium.** Biological Psychiatry. 16(4):333-350, 1981.

A clinical trial of the beta-2 adrenergic agonist, salbutamol (.25mg, intravenously) was conducted to test whether adrenergic receptor subsensitivity does occur during clinical antidepressant treatment. After 1 and 3 weeks oral salbutamol treatment, depression scores declined significantly in 11 depressed patients, while the plasma cyclic adenosine monophosphate (cAMP) response to intravenous salbutamol declined over 60%. The beta-adrenergic adenylate cyclase remained subsensitive 4 days after cessation of salbutamol therapy. Data are presented that lithium (Li), too, markedly reduces activity of beta-adrenergic adenylate cyclase in humans. The effect was evaluated by studying the effect of Li at therapeutic serum concentrations on plasma cAMP response to subcutaenous epinephrine. The Li effect is specific, since plasma cAMP response to glucagen was not inhibited. The plasma cyclic GMP response to subcutaneous epinephrine, suggested as a model for presynaptic alpha-noradrenergic mechanisms, is also partially inhibited by Li therapy. Since cAMP and cyclic GMP may be viewed as balancing substances, their interaction may provide a mechanism for Li's dual clinical effects in mania and depression. 60 references. (Author abstract modified)

004354 Bertoletti, Paolo. Ospedale S. Maria della Pieta, Roma, Italy **/Anxious-depressive syndrome. Clinical study of a new benzodiazepine, prazepam./** Sindromi ansioso-depressiva. Studio clinico su una nuova benzodiazepina, il prazepam. Lavoro Neuropsichiatrico. 66(3):53-59, 1980.

Twenty depressed patients between ages 25 and 40, whose illness was expressed in tension and other physical symptoms, were treated with prazepam (30 to 60mg, administered three times daily) for 3 months. Results show that patients' anxiety, tension, insomnia, and physical distress were reduced. Also, Ss' general condition and mood were improved. An undesirable sedative effect in three patients was eliminated by decreasing the dosage from 60 to 30mg daily. 8 references.

004355 Bogaert, M. G.; Rosseel, M. T.; Deberdt, R.; Vranckx, C. Heymans Institute of Pharmacology, University of Gent Medical School, De Pintelaan 135, B-9000 Gent, Belgium **Plasma levels of the cis- and trans-isomers of doxepin and desmethyldoxepin after administration of doxepin to patients.** Arzneimittel-Forschung. 31(1):113-115, 1981.

In depressed patients treated acutely or chronically with doxepin, a 15:85% mixture of cis-isomers and trans-isomers of N,N-dimethyldibenz(b,e)oxepin-delta11(6H)-3-propylamine, plasma levels of the cis-forms and trans-forms of doxepin and desmethyldoxepin were measured using a GLC method with a capillary column and a nitrogen detector. In two patients 50mg of doxepin were administered three times daily for 5 days, in nine patients plasma samples were taken every few days during the first weeks of treatment with 50mg t.i.d. of doxepin, and steady-state levels were obtained after 3 weeks of treatment in patients given 25mg t.i.d. of doxepin and in patients given 100mg of doxepin once daily. A gradual increase in the concentration of the products in the plasma was evident in the first days of doxepin administration. There is variation between patients in the steady-state concentrations of trans-doxepin and of cis-desmethyldoxepin and trans-desmethyldoxepin. cis-Doxepin levels always are very low. It is suggested that for studies of correlations between plasma levels and therapeutic and toxic effects of doxepin, the isomers of the parent compound and its metabolite should be measured separately. 8 references. (Journal abstract modified)

004356 Boutelle, W. E. V. A. Medical Center, Northampton, MA **Clinical response and blood levels in the treatment of depression with a new antidepressant drug, amoxapine.** Neuropharmacology. 19(12):1229-1231, 1980.

The divided dose regimen and the single daily dose administration of amoxapine were compared, and the relationship between clinical response and steady-state blood levels of amoxapine and its 8-OH metabolite in the treatment of depressed patients was assessed. Both divided dose and single daily dose administration of amoxapine were found almost equally effective in alleviating the depressed symptoms in various types of depressed patients. Overall incidences of adverse experiences were slightly different. Data concerning the correlation between clinical state and blood levels of amoxapine appear to support the original finding of Asberg, Cronholm Sjoqvist, and Tuck (1971). 5 references.

004357 Braccini, T.; Darcourt, G.; Corti, H.; Lapalus, P.; Lavagna, J.; Myquel, M. Hopital Pasteur, Service de Psychiatrie et de Psychologie medicale, F-06031 Nice Cedex, France **/Clinical significance of the erythroplasmatic ratio of lithium./** Signification clinique du rapport erythro-plasmatique du lithium. Acta Psychiatrica Belgica. 80(4):413-419, 1980.

Six hundred erythroplasmatic ratios of lithium in 67 Ss with affective disorders were studied. Ratio values during relapse phase were not significantly different than those values found during remission phases. The same was true for periods with neuroleptic treatment and phases without neuroleptic treatment. Ratio values were not noticeably modified by personality, sex, or the evolution of the disorder. However, the results indicate that the preventive effect of lithium is found primarily in Ss with high erythroplasmatic levels. 15 references. (Journal abstract modified)

004358 Briley, M. S.; Raisman, R.; Sechter, D.; Zarifian, E.; Langer, S. Z. Dept. of Biology Synthelabo LERS, 58, rue de la Glaciere, F-75013 Paris, France **(3H)-Imipramine binding in human platelets: a new biochemical parameter in depression.** Neuropharmacology. 19(12):1209-1210, 1980.

A preliminary study of (3H)imipramine binding sites in depressed patients is described, and the utility of (3H)imipramine binding in human platelets as a biochemical parameter in depression is discussed. Platelets of 16 untreated severely depressed women were found to possess significantly fewer binding sites than those of a control group of 21 normal women of the same ages. The affinity for (3H)imipramine was the same in the two groups. The possible relationship between this finding and mood is discussed. It is suggested that low platelet binding of (3H)imipramine may be an indication of a genetic predisposition to depression, thus remaining low even after the depression has passed. 10 references.

004359 Carroll, Bernard; Feinberg, Michael; Greden, John; Tarika, Janet; Albala, A.; Haskett, Roger; James, Norman; Kronfol, Ziad; Lohr, Naomi. Mental Health Research Institute, University of Michigan, Ann Arbor, MI 48109 **Standardization of the dexamethasone suppression test for the diagnosis of melancholia. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-28294, 1980.

A group of 368 psychiatric patients and 70 normal controls were studied with an overnight dexamethasone suppression test (DST) in order to standardize the test for the diagnosis of patients with melancholia (endogenous depression). Abnormal escape of plasma cortisol concentrations from suppression within 24 h after administration of dexamethasone occurred frequently in melancholic patients but rarely in other Ss. The optimal plasma cortisol criterion concentration above which a DST result may be considered abnormal, was 5mcg/dl. The optimal dose of dexamethasone was 1mg, which gave an overall test sensitivity double that obtained with a dexamethasone dose of 2mg, without loss of specificity. The most efficient schedule of blood sampling was the combination of samples obtained at 1,600 and 2,300 h postdexamethasone. These two blood samples detected 98% of the positive tests. The DST procedure identified melancholic Ss with a sensitivity of 67% and a specificity of 96%. The diagnostic confidence for melancholia of a positive DST result was 94%. Based on the plasma cortisol concentrations obtained only at 1,600 h postdexamethasone, there was no significant difference in the sensitivity observed among melancholic outpatients and inpatients. Abnormal DST results were not related significantly to age, sex, recent use of psychotropic drugs, or severity of depressive symptoms. It is concluded that there is extensive evidence which validates this practical test for the diagnosis of melancholia. 39 references. (Author abstract modified)

004360 Catlin, Don H.; Gorelick, David A.; Gerner, Robert H.; Hui, Ka Kit; Li, Choh Hao. Dept. of Pharmacology, University of California, Los Angeles, CA 90024 **Clinical effects of beta-endorphin infusions.** Advances in Biochemical Psychopharmacology. 22:465-472, 1980.

Clinical effects of beta-endorphin infusions were evaluated in eight depressed psychiatric inpatients and in four narcotic addicts maintained on methadone for at least 2 years. Intravenous administration of synthetic human beta-endorphin produces physiological and hormonal effects in man, with some suggestion of behavioral effects as well. These effects are pharmacological, rather than physiological ones, since they occurred at plasma concentrations several orders of magnitude greater than baseline levels of endogenous beta-endorphin. Results suggest that peripherally administered beta-endorphin may enter the CNS. It is suggested that beta-endorphin activates a different class of opiate receptors in man than it does in animals, and a different class than does morphine. 36 references. (Author abstract modified)

004361 Cazzullo, C. L.; Sacchetti, E.; Smeraldi, E. Institute of Clinical Psychiatry, University Medical School, Milan, Italy **Psychotropic drugs and their relationship with psychopathology of affective disorders.** Progress in Neurobiology. 3:25-38, 1979.

The relationship between the psychopathology of depressive behavior and the effectiveness of drugs affecting mood is discussed. Nonpsychological validation of diagnosis of primary affective disorders is considered. Predictability of the response to antidepressant drugs is covered. Factors involved in the effectiveness of long-term lithium treatment are examined. (Journal abstract modified)

004362 Checkley, S. A. no address **A neuroendocrine study of adrenoceptor function in endogenous depression.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):211-217, 1980.

Hormone responses to methylamphetamine were measured in patients with depressive illness and in control patients. The corticosteroid response to methylamphetamine was significantly less in 20 patients with endogenous depression than in six patients with reactive depression, eight patients with other functional psychoses, and 10 patients with other psychiatric illnesses. The same response was also less in 10 patients when they were depressed as compared to when they had recovered. In contrast, growth hormone responses to methylamphetamine were similar in all the groups which were tested. It is suggested that patients with endogenous depression have a defect at some central alpha-adrenoceptors. A panel discussion of these findings is appended. 27 references. 004363 Cookson, J. C.; Silverstone, T.; Besser, G. M.; Williams, S. Academic Unit of Human Psychopharmacology, Medical College of St. Bartholomew's Hospital, Ritson Road, London E8 1DF, England **Plasma corticosteriods in mania: the effects of pimozide.** Neuropharmacology. 19(12):1243-1244, 1980.

Plasma corticosteroid levels of six manic patients were monitored for 2 weeks to determine how abnormalities in these levels respond during treatment with pimozide. Venous blood samples were taken at 09:00, 18:00, and 24:00 hours on the day before medication started and on days 3, 7, and 14 of medication. Clinical state was assessed using the eight item rating scale of Pettersen, Fyro, and Sedvall (1973). The mean corticosteroid levels before treatment were raised outside the normal range, with blunting of the circadian rhythm. During the 2 week treatment period, clinical ratings and plasma corticosteroid levels reflected gradual improvement. The effectiveness of pimozide in lowering towards normal the raised corticosteroid levels of these patients, suggests that the mechanisms underlying the raised levels of mania differ at least in part from the mechanisms underlying the raised cortisol levels of patients with endogenous depression. 10 references.

004364 Coppen, A.; Wood, K. M. no address **Peripheral serotonergic and adrenergic responses in depression.** Acta Psychiatrica Scandinavica 61(Suppl. 280):21-28, 1980.

Peripheral serotonergic and adrenergic responses were investigated among depressed patients following a 6 week period of tricyclic antidepressant administration using three assessment procedures: 1) platelet serotonin (5-HT) uptake; 2) tyramine, noradrenaline, and phenylephrine dose/pressor response test; and 3) plasma concentration of amitriptyline and nortriptyline. The capacity of transport of 5-HT through the platelet membrane is reduced significantly in depressive patients. The concentration of amitriptyline in the plasma is related positively and significantly to the inhibition of uptake of 5-HT by blood platelets of depressed patients, but there is no significant correlation between platelet 5-HT uptake inhibition and clinical improvement. The phenylephrine, tyramine, and noradrenaline pressor tests all show a result that is consistent with increased sensitivity of the peripheral alpha-adrenoreceptors in patients with depression. All the tests indicate changes (decreases in sensitivity) resulting from the use of amitriptyline. A discussion of the findings is appended. 23 references.

004365 Faravelli, C.; Marchetti, G.; Benvenuti, P.; Cabras, P. L. Clinica Psichiatrica, Universita di Firenze, Firenze, Italy / **Lithium in the prophylaxis of recurrent affective disorders (effectiveness of low plasma levels and predictors to clinical response).**/ Il litio nella prevenzione delle turbe cicliche dell'affettivita (efficacia dei bassi livelli plasmatici e fattori di previsione dell'esito della terapia). Rivista di Patologia Nervosa e Mentale. 101(6):261-271, 1980.

Results are presented from treating 38 patients with recurrent affective disorder with lithium carbonate for a period of 3 to 8 years. Good response was observed in 24 Ss, who had a decrease of at least 50% in recurrences during the treatment period as compared with the period preceding it. This improvement was obtained in spite of the fact that plasma lithium was maintained within 0.40 to 0.80 mEq/l, a range lower than recommended. Ss whose plasma lithium fell below 0.40 had significantly increased relapses. No marked toxic effect was recorded. Some factors (bipolar illness, typical symptom pattern, and family history of affective disorder) were associated with a favorable outcome. The absence of these factors, however, did not predict a poor response in more than 40% of the cases. It is concluded that it is worthwhile to start a lithium treatment whenever a diagnosis of recurrent affective disorder is made. 19 references. (Journal abstract modified)

004366 Fink, Max. Dept. of Psychiatry and Behavioral Science, School of Medicine, State University of New York, Stony Brook, NY 11794 **Convulsive and drug therapies of depression.** Annual Review of Medicine: Selected Topics in the Clinical Sciences. 32:405-412, 1981.

Selected studies of convulsive and drug therapies of depression are reviewed, and the safety and efficacy of electroconvulsive therapy (ECT) are compared with those of antidepressant drugs. It is noted that antidepressant drugs and ECT are both effective therapies of endogenous depression, and some antidepressant and anxiolytic drugs may influence aspects of neurotic depression favorably. While ECT is clearly more effective than tricyclic antidepressants and monoamine oxidase inhibitors, the additional difficulty in administering ECT, the public image of its special hazards, and the ease of administering drug therapies make their use generally preferred. There are special conditions, however, such as the severity of illness, the risk of death by inanition or suicide, and medical complications (including pregnancy) that lead the prudent physician to recommend ECT. 71 references. (Author abstract modified)

004367 Gershon, Samuel; Goodnick, Paul J. Dept. of Psychiatry, Wayne State University, Detroit, MI 48202 **Lithium use in affective disorders.** Psychiatric Annals. 11(4):38-40, 42-43, 47-48, 53, 55-57, 1981.

The use of lithium in the treatment of affective disorders and of schizophrenia, and the side-effects associated with lithium therapy are discussed. Lithium has been shown to have a very specific effect on mania. Comparisons between lithium therapy and the use of chlorpromazine are reviewed. Chlorpromazine controls motor activity more rapidly, but total normalization occurs with lithium whereas return to normal motor activity is slower, less consistent, and less complete in patients receiving chlorpromazine. Lithium exerts a more complete and more specific effect on the entire range of behavior found in mania, bringing about a more complete recovery even though it is much slower in producing clinical results when first administered. Studies on the effectiveness of lithium as an antidepressant are reviewed. There are four schools of thought on the use of lithium in the treatment of schizophrenia: that lithium is actually harmful because of the possibility of toxicity to the central nervous system, that schizophrenic patients who respond to lithium are actually atypical manic-depressives, there is a subgroup of true schizophrenics who respond favorably to lithium, lithium may be useful when used in combination with another drug. Further research is needed to pinpoint the efficacy of lithium in treating recurrent mania, manifest depression, and schizophrenia, but the trend of investigation to date indicates that lithium may be useful in treating at least important subgroups of such patients. 54 references.

004368 Glassman, Alexander H. Dept. of Psychiatry, Columbia University College of Physicians and Surgeons, New York, NY 10032 **Blood-level measurements of tricyclic drugs as a diagnostic tool.** Psychiatric Annals. 11(4):14-15, 19-23, 1981.

The use of laboratory determinations of plasma levels of tricyclic drugs of patients under the care of a psychiatrist for depression is discussed. Studies using imipramine are reviewed. Individuals given identical dosages of tricyclic antidepressants can develop quite different plasma concentrations of the drug. Retrospective findings indicate that almost one out of every five patients 65 years of age or older receiving imipramine has an orthostatic hypotension that is serious enough to cause treatment to be altered or discontinued. Determinations of plasma levels of tricyclics can be useful for refractory patients, for patients with adverse reactions, and for patients with heart disorders. Plasma level determinations are useful to the clinician in determining a therapeutically effective dosage, in increasing clinical efficacy and in providing a better understanding of the drug's toxicity. 14 references.

004369 Goodnick, Paul J.; Fieve, Ronald R.; Meltzer, Herbert L.; Dunner, David L. Dept. of Psychiatry, Wayne State University, Veterans Administration Medical Center, Southfield and Outer Drive, Allen Park, MI 48101 **Lithium elimination half-life and duration of therapy.** Clinical Pharmacology and Therapeutics. 29(1):47-50, 1981.

The elimination half-life of lithium carbonate in red blood cells, plasma, and urine were measured in 30 patients hospitalized for primary affective disorder. The half-life values were lowest in patients on their initial course of lithium (1.12, 1.28, and 1.22 days for urine, plasma, and red blood cells, respectively). Patients on lithium for less than 1 year had intermediate values (1.85, 1.65, and 1.75 days), and those on lithium for more than 1 year had the longest values (2.40, 2.43, and 2.24 days). Results indicate that lithium may stimulate the production of an endogenous regulator of lithium efflux, which may be an important factor in planning long-term lithium prophylaxis. 27 references. (Author abstract modified)

004370 Gram, L. F. no address **Pharmacokinetics and clinical response to tricyclic antidepressants.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):169-180, 1980.

The status of clinical research in plasma monitoring of the tricyclic antidepressants is outlined, and methodological problems and diagnostic issues in plasma monitoring are discussed. It is noted that although plasma levels of tricyclic antidepressants are an important variable determining clinical effect, other variables, particularly diagnostic selection of patients, are equally important determinants of clinical outcome. Plasma level/effect relationships have been established reasonably well for only two tricyclic antidepressants, nortriptyline and imipramine. It is concluded that by having the various methodological factors better elucidated and by having more practical clinical data on plasma level monitoring available, it should be possible to conduct cost/benefit analyses that would permit proper recommendations for the more general use of plasma level monitoring of tricyclic antidepressants in future clinical practice. A panel discussion of this paper is appended. 31 references.

004371 Helmchen, H. Psychiatrischen Klinik der Freien Universitat, Berlin, Eschenallee 3, D-1000 Berlin 19, West Germany **Interactions between antidepressants and other drugs.** In: Kielholz, P., The general practitioner and his depressed patients. Bern, Switzerland, Hans Huber, 1981. 142 p. (p. 97-104).

Various forms of polypharmacy involving antidepressants are reviewed for three sets of circumstances: multimorbidity, long-term medication in normal subjects, and self-medication. The interactions between antidepressants and other drugs in cases of hypertension, cardiovascular disorders, and diabetes are discussed. The use of oral contraceptives and antidepressants are also considered. It is argued that complications due to polypharmacy arise under the following circumstances: 1) failure to use caution in adapting dosages to the blood concentrations required for therapeutic purposes; 2) failure to carefully observe and monitor the patient; and 3) failure to interrupt drug treatment frequently enough in order to reassess the clinical picture. 13 references.

004372 Holmberg, G. Psykiatriska kliniken, Danderyds Sjukhus, S-18203, Danderyd 3, Sweden **Long-term treatment for depression.** In: Kielholz, P., The general practitioner and his depressed patients. Bern, Switzerland, Hans Huber, 1981. 142 p. (p. 117-122).

Long-term use of prophylactic treatment for depression is discussed. The effectiveness of lithium has been documented; however, it can have side-effects such as renal lesions. Therefore, indications for lithium treatment should be well defined and well monitored. Thymoleptic agents, such as tricyclic agents, have also been used on a long-term basis. They are preferable to lithium in some cases where difficulty is encountered because of lithium's side-effects or difficulty in maintaining serum lithium levels. However, antidepressants also have side-effects which must be carefully monitored. 16 references.

004373 Itil, T. M.; Soldatos, C. no address **Clinical neurophysiological properties of antidepressants.** In: Hoffmeister, F., Handbook of experimental pharmacology, vol. 55/I. Berlin, West Germany, Springer-Verlag, 1980. (p. 437-469).

The clinical neurophysiological properties of antidepressants are reviewed. Quantitative analysis of scalp recorded EEGs demonstrates that the effects of antidepressants are dose and time related. The majority of classic antidepressants produces thymoleptic EEG reactions. These EEG alterations are characterized by an increase of very slow and very fast activities and a decrease of alpha-waves in the primary wave measurements of the computer analysis, and a decrease of slow and an increase of fast activities in the first derivative measurements. Compounds producing these changes are tricyclic antidepressants. Some antidepressants produce effects similar to those seen after psychostimulant compounds. These changes are characterized by an increase of alpha and slow beta-activities, and a decrease of slower and faster potentials in the primary wave measurements. The third group of compounds, some of them neuroleptics, produce slow-waves and some superimposed fast activities in EEG. The systematic changes in human EEG within a few hours of oral administration of a single dose of antidepressants suggest a specific type of biochemical alteration, probably in the reticular activating system of the brainstem. 90 references.

004374 Janowsky, David S.; Davis, John M. University of California, San Diego, CA 92037 **Cholinergic mechanisms in mania and depression: questions of specificity.** In: Belmaker, R., Mania: an evolving concept. Jamaica, NY, SP Medical and Scientific Books, 1980. 403 p.

The possible role of cholinergic factors in the regulation of affective disorders is reviewed and implications of research findings to the question of whether or not mania is a specific disease or a nonspecific cluster of symptoms are discussed. Studies using cholinesterase inhibitors, investigations of the effects of physostigmine and neostigmine, research on the mood depressant effects of physostigmine and the depressant effects of acetylcholine precursors, studies on the rebound effects in manics following physostigmine administration, and research on the antagonistic effects of methylphenidate and physostigmine and on the cholinergic and anticholinergic effects of psychotropic drugs are seen as indicating that shifting central adrenergic/cholinergic balance regulates affect in man. No support for a role for acetycholine in affect regulation was noted. Specificity studies in manic-depressives versus normals and affect disordered patients in general, as well as in mania versus schizophrenia, suggest that homeostatic mechanisms in the CNS of the manic-depressive patient may be faulty, and that an imbalance of adrenergic and cholinergic factors could explain the excessive activation and inhibition in these patients. They also suggest that mania and schizophrenia are symptom complexes that pharmacologically respond similarly, at least to adrenergic and cholinergic agents. 37 references.

004375 Kabes, J.; Dostal, T.; Nahunek, K.; Svestka, J.; Molcan, J.; Caplova, T.; Hynek, K.; Faltus, F.; Holland, R. P. C. Institute of Psychiatry, Praha, Czechoslovakia **Multicentre study with viloxazine (Vivalan) in depressed patients.** International Pharmacopsychiatry. 15(4):228-239, 1980.

The efficacy and side-effects of viloxazine (Vivalan) at doses of 100 to 300mg daily for 1 month were evaluated in 115 inpatients with moderate to severe depressive illness (including endogenous, involutional, and neurotic depression). Multicenter data for the 106 patients completing the trial indicate statistically significant improvement, as measured by the Hamilton Rating Scale, from day 3 of treatment onwards. Although many of these Ss had previously proven resistant to antidepressive treatment, the average response rate was 71%. Global assessment, similarly indicated early improvement, and 86% of the patients were considered improved by the end of the study period. Side-effects, primarily gastric disturbance, were generally mild and transient and did not prevent continuation of treatment. 13 references. (Author abstract modified)

004376 Kielholz, P.; Kelly, D.; Adams, C. Psychiatrischen Universitatsklinik, Wilhelm-Klein-Strasse 27, CH-4025 Basle, Switzerland **Guidelines on the diagnosis and treatment of depression.** In: Kielholz, P., The general practitioner and his depressed patients. Bern, Switzerland, Hans Huber, 1981. 142 p. (p. 123-133).

Guidelines for the general practitioner on the diagnosis and treatment of depression are presented. Diagnosis depends on obtaining a detailed history and conducting a thorough physical examination. Both the basic and accessory symptoms of the depressive syndrome are summarized. Characteristics of somatogenic depressions and endogenous depressions are cited. The use of pharmacotherapy in the treatment of depression is discussed. Specific aspects considered are selection of the appropriate antidepressant, the dosage and duration of antidepressive medication, parenteral treatment with antidepressants, and additional medication.

004377 Kline, N.; Sacks, W. no address **Treatment of depression with an MAO inhibitor followed by 5-HTP – an unfinished research project.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):233-241, 1980.

An unfinished study of the treatment of depression with a monoamine oxidase (MAO) inhibitor followed by 5-hydroxytryptophan (5-HTP) is described. Fifty nine patients with symptoms of depression were selected, regardless of whether depression was or was not the primary diagnosis. All patients were placed on an MAO inhibitor a minimum of 3 days before the 5-HTP injection. Over half of the patients showed at least some response within 24 hours to either 25mg or 50mg of 5-HTP. Upon more prolonged treatment in a conventional manner, the 14 patients showing no change and the six patients with partial improvement eventually responded favorably. A panel discussion of these results is appended. 27 references.

004378 Kolata, Gina Bari. no address **Clinical trial of psychotherapies is under way.** Science. 212(4493):432-433, 1981.

A National Institute of Mental Health multiinstitutional, clinical trial comparing drugs to two forms of psychotherapy in the treatment of depression is considered. The study is designed to develop a new understanding of psychotherapy by showing how and why it helps depressed people, if it does. Twenty seven therapists have been in training to participate in the study by learning a drug treatment regimen using imipramine, a tricyclic antidepressant, or a placebo, and cognitive behavioral therapy and interpersonal therapy. A total of 144 patients whose depression has been carefully documented will be randomly assigned to one of these four treatments. In addition, 35 patients will be assigned to a treatment as usual group, or referral to experienced therapists who will treat them as they treat their other depressed patients. The efficacy of the therapies will be determined by asking the patients and therapists whether the therapy relieved the patients' symptoms of depression and by conducting an independent clinical evaluation.

004379 Kulkarni, M. R.; Mulay, V. P. B. J. Medical College, Pune 411 001, India **Value of propanidid in electro convulsive therapy (comparison with thiopentone).** Indian Journal of Psychiatry. 22(4):371-374, 1980.

The role of propanidid in ECT was examined and compared with that of thiopentone in 40 patients suffering from psychotic disorders. Propanidid proved to have all the advantages of thiopentone and none of its disadvantages. Its short duration of action suits the short procedure of ECT. It is concluded that the use of propanidid will allow more ECTs to be given in outpatient departments and will help in reducing the patient load on the hospital staff. 7 references.

004380 Lange, Ehrig; Riedel, Christa; Konig, Liesbeth; Liefke, Tilo; Kursawe, Hubertus. Neurologisch-Psychiatrische Klinik, Medizinischen Akademie Democratic Republic **A comparative clinical trial with the tranquilizer trazodone and the tricyclic antidepressant clomipramine.** Klinische Vergleichsprufung Trazodone-Clomipramin. Psychiatrie, Neurologie und Medizinische Psychologie. 32(12):748-750, 1980.

Trazodone and clomipramine were compared for their antidepressant effects and side-effects. Forty patients in two East German cites were given between 200mg and 600mg of either drug over a 2 year period. The findings were evaluated with the Hamilton Depression Scale and the Zerssen Mood Scale. Trazodone was found to have no harmful side-effects, even in combination with other medications, including sedatives. Its primary effect is tranquilizing and anxiolytic, rather than mood improving or activity stimulating. However, clomipramine is more effective for endoreactive and neurotic depression as well as for intravenous treatment of severe depression. Although among nontricyclic antidepressants maprotiline is preferred to trazodone, trazodone's tremor inhibiting qualities in alcoholics warrant further study.

004381 Lideman, R. R.; Panteleyeva, G. P.; Tsutsul'kovskaya, M. Ya.; Vartanyan, F. Ye.; Belyayev, B. S. Institut psikhiatrii AMN SSSR, Moskva, USSR **/The effect of naloxone on the condition of patients with endogenous psychoses./** Vliyaniye naloksona na sostoyaniye bol'nykh endogennymi psikhozami. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(2):231-237, 1980.

The effect of naloxone (0.3mg/kg) on the intensity of hallucinations and manic disorders was studied in eight patients one with manic-depressive psychosis and seven with continuous and attack-like schizophrenia) using the double-blind control method. Results indicate the possibility that the endogenous ligands of opiate receptors play a role in the pathogenesis of endogenous mental illnesses, especially those which involve affective and schizoaffective psychoses. Results also show that the reactions of the Ss to naloxone were heterogeneous. These results suggest that further studies should be based on the selection of patients who are sensitive to naloxone. 13 references. (Journal abstract modified)

004382 Loeb, C.; Roccatagliata, G.; Albano, C.; Abbruzzese, G. Clinica Neurologica, Universita di Genova, Via A. De Toni, 5, I-16132 Genova, Italy **/Cerebrospinal fluid values of HVA and 5-HIAA in patients with endogenous depression during the course of treatment./** Valori liquorali di HVA e 5-HIAA in pazienti affetti da depressione endogena in corso di trattamento. Schweizer Archiv fur Neurologie, Neurochirurgie und Psychiatrie. 126(1):27-32, 1980.

Homovanillic acid (HVA) and 5-hydroxyindoleacetic acid (5-HIAA) were determined in the lumbar cerebrospinal fluid of 17 patients affected by endogenous depression. The modifications of the amine metabolites after treatment (tricyclics, bromocriptine, trazodone, electroconvulsive therapy) were not related to the specific therapy nor to the clinical improvement. In 11 patients, HVA and 5-HIAA showed opposite modifications. The possible role of interactions between dopaminergic and serotonergic systems in the pathogenesis of endogenous depression is discussed. 16 references. (Journal abstract)

004383 Mann, J. John; Friedman, Eitan; Georgotas, Anastase; Gershon, Samuel. Dept. of Psychiatry, Cornell University Medical College, 1300 York Avenue, New York, NY 10021 **The antidepressant effects of trazodone and inhibition of platelet serotonin reuptake.** Communications in Psychopharmacology. 4(4):293-301, 1980.

Trazodone was demonstrated to produce rapid in vivo inhibition of platelet serotonin reuptake in patients suffering from endogenous depression. This effect did not show significant correlation with clinical response, which took several days to occur. No significant direct correlation could be demonstrated between clinical response and reuptake inhibition although responders showed significantly greater serotonin reuptake inhibition than nonresponders, without a significant difference in trazodone plasma levels. It is suggested that if serotonin reuptake inhibition is related to the antidepressant action of trazodone, then it may be via secondary effects that take time to develop. 23 references. (Author abstract)

004384 Meco, Giuseppe; Casacchia, Massimo; Tardi, Marina; Aniello, Raffaele. 1. Clinical Neurologica, Universita di Roma, Roma, Italy **/Activity of bromazepam and lorazepam in neurotic depressions./** Ativita del bromazepam e del lorazepam nelle depressioni nevrotiche. Rivista di Psichiatria. 15(6):566-573, 1980.

Forty neurotic outpatients with depression, anxiety, and somatic symptoms were treated with 4.5mg to 18mg/day bromazepam or 2.5mg to 15mg/day lorazepam for 2 to 8 weeks (mean 4.6 weeks) in a double-blind randomized study. Assessment was based on the Hamilton Rating Scale for Depression. The clinical parameters were consistently improved by both drugs. Although bromazepam was slightly more effective in cases of depression, and lorazepam was slightly more effective in cases of anxiety, the difference in response to both drugs was negligible. It is concluded that benzodiazepines alone are suitable for patients suffering from depression and anxiety of neurotic origin. Results of various antidepressant studies are reviewed. 24 references. (Journal abstract modified)

004385 Montgomery, S. A.; Tiplady, B. Dept. of Academic Psychiatry, St. Mary's Hospital, Harrow Road, London, England **Single dose pharmacokinetic data on zimelidine in depressed patients.** Neuropharmacology. 19(12):1221-1222, 1980.

The single dose pharmacokinetics of zimelidine in depressed patients are described. The liquid chromatographic method of Westerlund, Nilsson, and Jaksch (1979) was used for determination of plasma levels of zimelidine and norzimelidine in 19 depressed patients. Results show that the pharmacokinetic profile in this group of depressed patients did not differ greatly from that seen in healthy volunteers. However, there appears to be a tendency for the half-lives to be longer and more variable in the patient group. Low intersubject variability of norzimelidine levels is noted. 6 references.

004386 Murphy, J. E.; Ankier, S. I. Clinical Research International Ltd., 435/437, Wellingborough Road, Northampton NN1 4EZ, England **An evaluation of trazodone in the treatment of depression.** Neuropharmacology. 19(12):1217-1218, 1980.

Two studies of the clinical efficacy in depression and tolerance for trazodone, a new antidepressant drug, are described. Both studies were double-blind group comparison, in which patients between 18 and 65 years presenting with a primary diagnosis of depression, with or without anxiety, were investigated. The duration of treatment was 8 weeks in the comparison with amitriptyline (n=112) and 4 weeks in the comparison with doxepin (n=101). Results show that the efficacy of trazodone with these general practice patients is comparable to both amitriptyline and doxepine, while side-effects are generally mild and transient.

004387 Nakanishi, K.; Hinoki, M.; Baron, J. B. Hinoki: Dept. of Otolaryngology, Faculty of Medicine, Kyoto University Sakyo Ku, Kyoto, Japan **/Studies on the treatment and diagnosis of neurotic vertigo from the viewpoint of neurootology: observation of balance test for analyzing neurotic vertigo."/** Etudes sur le traitement et le diagnostic des vertiges nevrotiques du point de vue de la neuro-otologie: observation sur les vertiges nevrotiques." Agressologie. 21(3):155-164, 1980.

The balance test for analyzing neurotic vertigo was used in 54 Ss, and the effects of cloxazolam in treating neurotic vertigo were studied. The Ss were mostly neurotic, although there were a few cases of epilepsy and depression. The Ss were given several standard balance tests as well as the balance test, which was created by the authors for analyzing neurotic vertigo. Results show that type-A ataxia exists in a large proportion of Ss with traumatic neurosis, but not in Ss with neurosis or depression. Cloxazolam was given to the Ss in doses of 3 to 6mg/day; depressed Ss also received amitriptyline. Results show that cloxazolam is useful in reducing vertigo in Ss with type-A ataxia, but is not very useful in treating neurotic Ss. In depressed patients cloxazolam did not give good results, but amitriptyline often did prove to be beneficial. 8 references.

004388 Okuma, Teruo; Inanaga, Kazutoyo; Otsuki, Saburo; Sarai, Keisuke; Takahashi, Ryo; Hazama, Hidefumi; Mori, Atsuyoshi; Watanabe, Shosuke. Dept. of Psychiatry, Tohoku University School of Medicine, 1-1, Seiryo-machi, Sendai, Japan **A preliminary double-blind study on the efficacy of carbamazepine in prophylaxis of manic-depressive illness.** Psychopharmacology. 73(1):95-96, 1981.

A preliminary double-blind controlled study on the prophylactic effect of carbamazepine on 22 recurrent manic-depressive psychotics using an inert placebo in 10 Ss is described. Carbamazepine in the dosage of 200 to 600mg was administered for 1 year. Among the 22 carbamazepine Ss, carbamazepine was found to be effective in 60% of cases, and inert placebo was found effective in 22% of cases. It is suggested that carbamazepine is a useful drug for the prophylaxis of manic-depressive illness. 6 references. (Author abstract)

004389 Ostroumova, L. I. Kafedra psikhiatrii, Kubanskiy meditsinskiy institut im. Krasnoy Armii, Krasnodar, USSR **/The nosological independence of involutional depression and its dynamics during psychopharmacotherapy./** K voprosu o nozologicheskom obosoblenii involyutsionnykh depressiy i osobennostyakh ikh dinamiki pri psikhofarmakoterapii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(9):1361-1366, 1979.

The nosological status of involutional depressions and the effects of psychopharmacotherapy on depression were studied in clinical and followup examinations of 92 patients (89 women and 3 men). A control group of 17 patients with late onset endogenous psychoses (schizophrenia) also was examined. During the study the Ss received various psychopharmacological substances, mostly combinations of antidepressants (imipramine or amitriptyline) with tranquilizers (including chlordiazepoxide) and neuroleptics. Results show that the systematic use of psychopharmacotherapy gradually reduces the severity of productive psychopathological disorders, and sometimes reduces depression to a neurosis-like level. 23 references.

004390 Panteleyeva, G. P.; Mikhaylova, N. M.; Belyayev, B. S. Vtoroye klinicheskoye otdeleniye, Institut psikhiatrii, AMN SSSR, Moskva, USSR **/Comparative characteristics of the prophylactic properties of short-term and long-acting lithium carbonate preparations in endogenous affective psychoses./** Sravnitel'naya kharakteristika profilakticheskikh svoystv karbonata litiya kratkovremennogo i retardirovannogo deystviya pri endogennykh affektivnykh psikhozakh. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(3):412-420, 1981.

Comparative characteristics of the prophylactic properties of short-term and long-acting lithium carbonate preparations in endogenous affective psychoses were studied in 53 patients (20 to 60 years old) with manic-depressive psychosis and schizophrenia. The duration of the disease in most of the Ss was 5 to 15 years. A group of 35 patients was examined in two stages. Results show that long-acting lithium carbonate preparations have an advantage over short-term preparations in preventing relapses of affective and schizoaffective psychoses because of their regular and even absorbability in the tissue. This affects both the quantitative and qualitative characteristics of the course of the disease. 21 references. (Journal abstract modified)

004391 Peselow, Eric D.; Dunner, David L.; Fieve, Ronald R.; Lautin, Andrew. 1322 East 84th Street, Brooklyn, NY 11236 **Prophylactic effect of lithium against depression in cyclothymic patients: a life-table analysis.** Comprehensive Psychiatry. 22(3):257-264, 1981.

A life table analysis was used to examine the prophylactic effect of lithium in the treatment of depression in a followup study of 64 bipolar or cyclothymic patients. Ss were studied until the occurrence of one of three outcomes: termination well, failure, or dropout. Of the 64 patients, 22 were followed for 2 years on lithium alone. Results reveal that lithium's effectiveness in preventing depressive episodes in cylcothymics seems less than with other affective subgroups when one measures the time to one depressive episode. There was a 35.2% to 47.3% probability of cyclothymics remaining free of a depressive episode after 1 year. The 50% probability of these patients remaining free of depressive episodes on lithium ranged from 8 to 11.54 months. The need for further study of the benefits of lithium maintenance therapy in cyclothymic patients is noted. 21 references.

004392 Petrie, W. M.; McEvoy, J. P.; Wilson, W. H.; Ban, T. A.; Guy, W. Tennessee Neuropsychiatric Institute, Clinical Research Service, Vanderbilt University, 1501 Murfreesboro Rd., Nashville, TN 37213 **Viloxazine in the treatment of depressive neurosis: a placebo and standard (imipramine) controlled clinical study.** International Pharmacopsychiatry. 15(3):193-196, 1980.

The therapeutics effect of viloxazine hydrochloride, a bicyclic drug with a pharmacologic profile similar to tricyclic antidepressants, were compared to those of imipramine or placebo in a 4 week double-blind trial with 33 depressive neurotic patients. Significant improvement was observed in all treatment groups. Imipramine exhibited significant improvement earlier in depressive symptoms, while viloxazine showed significant improvement earlier in anxious symptoms. The same frequency of treatment emergent symptoms occurred in the treatment groups. Premature termination as a consequence of adverse reactions was required in only one viloxazine and one placebo patient. 7 references. (Author abstract modified)

004393 Pickar, David; Lake, C. Raymond; Cohen, Robert M.; Jimerson, David C.; Murphy, Dennis L. Biological Psychiatry Branch, NIMH, Bethesda, MD 20205 **Alterations in noradrenergic function during clorgyline treatment.** Communications in Psychopharmacology. 4(5):379-386, 1980.

The effect of 4 weeks of treatment with the selective monoamine oxidase (MAO) type-A inhibitor, clorgyline, on noradrenergic function was assessed in depressed patients using steady-state intravenous tyramine pressor response tests and determinations of plasma norepinephrine (NE). During the pretreatment period: 1) the resting levels of plasma NE were correlated with tyramine sensitivity; 2) significant increases in plasma NE accompanied a steady-state rise in blood pressure; and 3) the magnitude of tyramine stimulated NE increases were highly correlated with pretreatment plasma NE levels. Clorgyline administration for 3 to 4 weeks was accompanied by: 1) large increases in pressor sensitivity to intravenous tyramine; 2) significant decreases in resting levels of plasma NE; 3) alterations in the relationship between plasma NE and tyramine sensitivity; and 4) a trend toward a reduction in the tyramine stimulated plasma NE release. A postulated clorgyline induced down regulation of presynaptic adrenergic activity is discussed with regard to the overall enhancement in tyramine pressor sensitivity produced by clorgyline. 33 references. 004394 Pierce, D. Psychiatric Clinic, East Glamorgan Hospital, Church Village, Pontypridd, Mid Glamorgan, Wales **A comparison of trazodone and dothiepin in depression.** Neuropharmacology. 19(12):1219-1220, 1980.

The efficacy of trazodone, a novel antidepressant drug, and dothiepin were compared for the long-term treatment of depressive illness. Forty one male and female patients between the ages of 20 to 65 years who had not suffered symptoms of depression for longer than 18 months received trazodone or dothiepin for 24 weeks. Patients were assessed at 1, 2, 4, 12, and 24 weeks using the Beck self-rating depression scale, a global rating of clinical state, Hamilton Depression Scale, and notation of any significant side-effects. Trazodone was equally effective as dothiepin, and appeared to have a more rapid onset of action.

004395 Pinder, R. M.; Blum, A.; Stulemeijer, S. M.; Barres, M.; Molczadzki, M.; Rigaud, A.; Charbaut, J.; Israel, L.; Kammerer, T. Organon International BV, Scientific Development Group, PO Box 20, 5340 BH Oss, The Netherlands **A double-blind multicentre trial comparing the efficacy and side-effects of mianserin and chlorimipramine in depressed in- and outpatients.** International Pharmacopsychiatry. 15(4):218-227, 1980.

Mianserin (60 mg daily) was compared to chlorimipramine (150mg daily) in the treatment of 145 depressed inpatients and outpatients in four centers. The trial was double-blind and fully randomized. Both drugs were effective antidepressants. No significant differences in efficacy could be demonstrated by means of the Hamilton Rating Scale for Depression, the Beck self-rating scale, or the clinical global impression, for both inpatients and outpatients. Hypotension, dry mouth, and tremor increased significantly more in outpatients after treatment with mianserin. No differences were found between the drugs for other side-effects. 13 references. (Author abstract)

004396 Poldinger, W.; Reinhardt, B. Kantonale Psychiatrische Klinik, CH-9500 Wil/St. Gallen, Switzerland **Neurotropic drugs as co-medication to psychotropics: combined administration of a neurotropic drug and a tetracyclic antidepressant.** International Pharmacopsychiatry. 15(3):137-142, 1980.

Interactions of EMD 21 657, an neurotropic drug used in the treatment of organic brain syndrome, and maprotiline were studied in 40 depressive outpatients. All Ss received daily doses of maprotiline; half also received EMD 21 657 during an initial treatment of 10 days. Ss receiving both drugs reported a faster onset of antidepressant action than controls; this earlier improvement was statistically significant for the target symptom obsessive rumination. Experimental Ss also showed less side-effects than controls, but the difference was not significant. 6 references. (Author abstract modified)

004397 Polimanti, S. Ospedale Civile A. Murri, Fermo (Ascoli Piceno), Italy **/Clinical results obtained with the use of Lysoneuro in depressive syndromes./** Risultati clinici ottenuti con l'impiego di lysoneuro nelle sindromi depressive. Rivista di Neuropsichiatria e Scienze Affini. 26(3):189-211, 1980.

The effects of Lysoneuro were studied in a double-blind controlled clinical trial. Sixty patients, half of them with the depressive neurotic syndrome and half of them with other depressive syndromes of varying severity and pathologic patterns, were given either Lysoneuro or a placebo in a balanced ratio. Patients were evaluated by psychiatric interview and by administration of the Middlesex Hospital Questionnaire. After day 30 of treatment, patients were categorized as cured, improved, or not improved. Lysoneuro proved effective in the depressive neurotic syndrome without other pharmacologic treatment. In the most severe depressions, such as the endogenous and endoreactive depressions, Lysoneuro proved a valuable adjutant to the basic pharmacological treatment. It is concluded that Lysoneuro is effective as a natural thymoleptic agent. 7 references. (Journal abstract modified)

004398 Post, Robert M.; Bunney, William E., Jr. Section on Psychobiology, Biological Psychiatry Branch, NIMH, 9000 Rockville Pike, Bethesda, MD 20205 **Progress in psychopharmacology.** Current Psychiatric Therapies. 19:69-87, 1980.

Data concerning the clinical subtypes of depressed patients who tend to respond better to antidepressant treatments and the preliminary efforts that have been made using biochemical markers (norepinephrine, serotonin, and dopamine) are reviewed. Attention also is directed to techniques for monitoring the adequacy of blood levels for lithium, neuroleptics, tricyclics, and monoamine oxidase inhibitors; possible modes of action of ECT; the responses of patients with recurrent affective episodes to treatment with either the tricyclic antidepressants or with lithium carbonate; the neuroleptics and dopaminergic mechanisms in the acute psychoses; dopamine receptor agonists in mania, schizophrenia, and Parkinson's disease; the action of carbamazepine as a temporal lobe/limbic anticonvulsant in affective illness; drug combination approaches; and polypeptide and endocrine approaches. 79 references.

004399 Ramseier, F.; Gastpar, M.; Girard, J. Gastpar: Psych. Univ. Klinik, Wilhelm Klein-Strasse 27, CH-4025 Basel, Switzerland **TSH, HGH, HPr, and cortisol response to TRH in depressed patients.** Acta Psychiatrica Belgica. 80(4):399-409, 1980.

Intravenous and oral stimulation with thyrotropin releasing hormone (TRH) in depressed patients was studied. Thyroid stimulating hormone (TSH), human growth hormone (HGH), prolactin (HPr), cortisol, triiodothyronine (T3), T4, and RT4 were measured in patients after an overnight fast, after injection of .2mg TRH, after 40mg oral administration of TRH and after 3 weeks of antidepressant treatment. Results seem to indicate that only endogenous depression shows a deficiency in pituitary response to TRH, and they confirm some previously established hormonal patterns such as low TSH response, no growth hormone (GH) stimulation, and normal prolactin. After antidepressant treatment more normal patterns emerged. It also appears that there is an earlier response to oral stimulation than to intravenous stimulation. 29 references. (Journal abstract modified)

004400 Rickels, Karl; Case, W. George; Diamond, Lenore. 203 Piersol Building, Hospital of the University of Pennsylvania, 3400 Spruce St., Philadelphia, PA 19104 **Relapse after short-term drug therapy in neurotic outpatients.** International Pharmacopsychiatry. 15(3):186-192, 1980.

A 6 month followup was carried out on 184 anxious and depressed neurotic outpatients who had reported improvement after controlled drug trials of several weeks duration. An astonishing relapse rate of 81% for anxious and 87% for depressed patients was found. Early as compared to late relapse was associated with more chronicity and less improvement at the end of the drug trials, while type of drug received did not affect relapse. Onset of relapse had no effect on help-seeking behavior. At the time of followup, nonrelapsed patients had lowest and untreated relapsed patients had highest symptom levels. It is concluded that short-term drug treatment alone does not represent sufficient therapy for chronic neurotic anxious or depressed outpatients. 10 references. (Author abstract)

004401 Rounsaville, Bruce J.; Klerman, Gerald L.; Weissman, Myrna M. Substance Abuse Treatment Unit, Connecticut Mental Health Center, 100 Park St., New Haven, CT 06511 **Do psychotherapy and pharmacotherapy for depression conflict? Empirical evidence from a clinical trial. (Unpublished paper).** Research Report, NIMH Grant R01-MH-26466, 1979. 31 p.

Six hypotheses about negative interactions between pharmacotherapy and psychotherapy were evaluated based on data derived from a clinical trial of psychotherapy and tricyclic antidepressants alone and in combination as treatment for 91 ambulatory depressives. Hypotheses regarding the negative effects of pharmacotherapy on psychotherapy include: 1) the negative placebo effect; 2) the view that drug-induced reduction of symptoms reduces the motive for continuing psychotherapy; 3) the view that pharmacotherapy undercuts psychological defenses; and 4) proposed deleterious effects of pharmacotherapy on psychotherapy expectations. The hypotheses relating to possible negative effects of psychotherapy on pharmacotherapy include the view that psychotherapy may be symptomatically disruptive, and a proposed biochemical replacement effect of drugs. None of the hypotheses were confirmed by a study of the process, outcome, and posttreatment behavior of depressed patients, and it is concluded that the combination of treatments is more effective than either treatment is alone. 15 references. (Author abstract modified)

004402 Rowan, P.; Paykel, E. S.; Parker, R. R.; West, E. Dept. of Psychiatry, St. George's Hospital Medical School, London SW17, England **Comparative effects of phenelzine and amitriptyline: a placebo controlled trial.** Neuropharmacology. 19(12):1223-1225, 1980.

Results of a double-blind comparison of phenelzine, amitriptyline, and a placebo in outpatient neurotic depressive Ss are reported. Data from the 131 patients completing the 6 week study indicate that both drugs showed significant effects at 2, 4, and 6 weeks. The two drugs appear to have closely similar effects (which are primarily antidepressant) on the core symptoms of depressed mood. Phenelzine may also have some weak antianxiety effects, although similarities are more striking than differences. 13 references.

004403 Rubin, Robert T.; Poland, Russell E.; Blodgett, A. L. Nelson; Winston, Robert A.; Forster, Bella; Carroll, Bernard J. Dept. of Psychiatry, Harbor-Univeristy of California at Los Angeles Medical Center, Torrance, CA 90509 **Cortisol dynamics and dexamethasone pharmacokinetics in primary endogenous depression: preliminary findings.** Research Report, NIMH Grant 5P01-MH-28380, 1980. 12 p.

Aspects of cortisol secretory dynamics in depression are discussed, including nocturnal hypersecretion, escape from dexamethasone suppression, and urinary free cortisol levels, and these hormone parameters are related to the severity of depressive symptomatology. The various cortisol parameters were correlated in the 15 patients with their Hamilton and Beck total depression scores. The correlations were of a low order, suggesting that there is no apparent relationship between the degree of cortisol secretory hyperactivity and the severity of depressive symptomatology. 18 references.

004404 Rybakowski, Janusz; Chlopocka-Wozniak, Maria; Kapelski, Zdzislaw. Katedra i Klinika Psychiatrii AM, ul. Szpitalna 27/33, 60-572 Poznan, Poland /**Clinical evaluation of the prophylactic effectiveness of prolonged lithium carbonate therapy in endogenous depressive syndromes.**/ Ocena kliniczna skutecznosci profilaktycznej dlugotrwalego stosowania weglanu litu u chorych z endogennymi zespolami depresyjnymi. Psychiatria Polska. 14(4):357-361, 1980.

The quantitative prophylactic effect of lithium carbonate was evaluated in 61 patients with bipolar affective illness who had been receiving lithium for a period of 1 to 8 years. The course of the illness and the number of hospitalizations in the periods prior to and during lithium therapy were compared for each patient. It was found that the overall number of recurrent phases and the number of psychiatric hospitalizations had decreased during lithium administration by 71% and 72%, respectively. A complete prophylactic effect (absence of morbid symptoms during lithium administration) was obtained in 44% of the patients, and a partial effect (decrease in the number of relapses by more than 50%), in 28% of the patients. It was also found that the prophylactic effect obtained in patients who had been on lithium for 1 to 3 years did not differ essentially from the effect obtained in those who had been receiving lithium for 4 to 8 years. 17 references. (Journal abstract modified)

004405 Sachar, Edward J.; Halbreich, Uriel; Asnis, Gregory; Nathan, R. Swami; Halpern, Frieda S. New York State Psychiatric Institute, 722 W. 168th St., New York, NY 10032 **Neuroendocrine disturbance in depression.** In: Brambilla, F., ed., Progress in psychoneuroendocrinology. New York, Elsevier/North Holland, 1980. 669 p. (p. 263-272).

Plasma cortisol samples were obtained every half hour over 24 hours in 24 unmedicated, hospitalized, endogenously depressed patients. Half of the patients were cortisol hypersecretors with flattened circadian cortisol patterns; the other 12 showed normal cortisol secretory patterns. Most of the hypersecretors were over 50 years of age. The 2mg dexamethasone test was positive in 6 of the 24 patients, 5 of which were hypersecretors; however, more than half of the hypersecretors were undetected by the dexamethasone test. Cortisol hypersecretion appeared to be responsible for the relative insulin resistance seen in 8 of 16 patients, but was not associated with the blunted thyroid stimulating hormone responses to thyrotophin releasing hormone noted in 11 of 21 patients. Dextroamphetamine (0.1mg/kg i.v.) rapidly suppressed cortisol to normal levels in depressed Ss, but it elicited cortisol release in healthy control Ss. Results suggest abnormal noradrenergic regulation of cortisol secretion in endogenous depressives. 11 references.

004406 Schatzberg, Alan F.; Orsulak, Paul J.; Rosenbaum, Alan H.; Maruta, Toshihiko; Kruger, Ellen R.; Cole, Jonathan O.; Schildkraut, Joseph J. Affective Disease Program, McLean Hospital, 115 Mill Street, Belmont, MA 02178 **Toward a biochemical classification of depressive disorders IV: pretreatment urinary MHPG levels as predictors of antidepressant response to imipramine.** Communications in Psychopharmacology. 4(5):441-445, 1980.

The hypothesis that patients with low pretreatment urinary 3-methoxy-4-hydroxyphenylglycol (MHPG) levels respond more favorably to treatment with imipramine than do patients with high MHPG levels was evaluated in a prospective study of 24 patients with major depressive disorders. A favorable response to treatment with imipramine was observed at 4 weeks in a significantly larger proportion of patients with pretreatment urinary MHPG levels lower than 1950 mcg/24 hours than in patients with MHPG levels greater than 1950 mcg/24 hours. Thus, these results support the notion that measurement of pretreatment urinary MHPG levels may provide a useful clinical laboratory test for assessing the likelihood of favorable response to imipramine. 21 references. 004407 Schlienger, J. L.; Kapfer, M. Th.; Singer, L.; Stephan, F. Serv. d'Endocrinologie et des Maladies de la Nutrition, Pavillon Leriche, Cent. Hospitalier Universitaire, F-67.005 Strasbourg Cedex, France /**Different effects of tricyclic and tetracyclic antidepressants on the release of TSH, prolactin, and growth hormone after administration of thyrostimulating releasing hormone in manic-depressives.**/ Effets differents d'antidepresseurs tricycliques (clomipramine et amitriptyline) et tetracyclique (maprotiline) sur la reponse de thyrostimuline, de prolactine et d'hormone somatotrope apres thyroliberine chez des patients atteints de psychose. Acta Psychiatrica Belgica. 80(5):584-599, 1980.

The hormonal alterations induced by tricyclic and tetracylic antidepressants were studied in patients with manic-depressive psychosis to ascertain the role of certain biogenic amines in the regulation of thyroid stimulating hormone (TSH), prolactin (PRL), and growth hormone (GH). The responsiveness of plasma TSH, PRL, and GH to synthetic thyrostimulating release hormone (TRH) was determined in 57 patients distributed in five groups according to treatment: 10 nontreated patients, 16 tricyclic (clomipramine and amitriptyline) treated patients, 6 patients treated with clomipramine in association with lithium, 6 tetracyclic (maprotiline) treated patients, and 19 patients treated with major neuroleptics. Basal plasma levels of TSH were normal in all patients. The TSH response to TRH (delta TSH) was blunted in nontreated patients. Delta TSH was normal in the patients treated with maprotiline or neuroleptics and increased in the group treated with tricyclic antidepressants in association with lithium. Basal plasma levels of PRL and PRL response to TRH (delta PRL) were decreased in women treated with tricyclic antidepressants, but remained normal using maprotiline. They were markedly increased in the neuroleptic group. No inadequate response of GH to TRH was noted. Results are discussed in terms of actions of antidepressants on brain monoamines. 25 references. 004408 Schou, Mogens. no address **Lithium treatment of manic-depressive illness. A practical guide.** Basel, S. Karger, 1980. 72 p. $14.50.

A practical guide to the management of manic-depressive illness with lithium salts is presented. A concise account is given of the main background information on affective illness and its treatment with lithium. A description of the features of manic-depressive illness and its treatment, the development of lithium therapy, practical management, undesirable effects, a prospective look at lithium, and do's and don'ts of lithium therapy are covered. A glossary is included.

004409 Sheard, M. H.; Marini, J. L. Yale University School of Medicine, New Haven, CT 06510 **Lithium and aggressive behavior.** In: Gershon, S., Lithium: controversies and unresolved issues. Amsterdam, Excerpta Medica, 1979. (p. 136-147).

A review of human clinical studies which indicates that lithium can inhibit overt aggressive behavior and calm angry affect is presented. The clinical characteristics of the lithium responsive S are delineated. A brief overview of possible mechanisms of action for lithium's antiaggressive effect suggests that toxic, placebo, motor, or sensory reaction time effects of lithium do not influence gross motor coordination. More research is indicated on endocrine effects and the possible genetic connections between manic-depressive illness, sociopathy, and hysterical character disorders. 32 references. (Author abstract)

004410 Ulrich, G. Abteilung fur Psychophysiologie, Freie Universitat Berlin, Nussbaumallee 32-38, D-1 Berlin 19, West Germany **/On the relationship between measures obtained by video analysis of nonverbal behavior and self-rating of mood./** Uber den Zusammenhang videoanalytisch gewonnener Masse des non-verbalen Verhaltens mit selbst eingeschatzter Befindlichkeit. Schweizer Archiv fur Neurologie, Neurochirurgie und Psychiatrie. 125(2):349-359, 1979.

The condition of 13 manic-depressive patients was assessed during a symptom free interval while under treatment with lithium and again after a 6 week placebo period. A behavioral analysis of videotaped interviews and a self-rating of mood were examined. Significant relationships were found between the relative duration of speech activity and the relative frequency of hand movements accompanying speech. Speech activity and hand movement parameters were related significantly to the mood dimensions of social affect and relation. It is noted that conventional scales have low sensitivity for the course evaluation of depression, while the behavioral procedure is sensitive even in the subclinical range. In addition, the behavioral procedure has a theoretical impact on the fundamental question of the physiological basis of manic-depressive illness. 22 references. (Journal abstract modified)

004411 Veith, Richard C.; Friedel, Robert O.; Bloom, Valerie; Bielski, Robert. Gerontology Research, Education and Clinical Center, V.A. Medical Center, GRECC 182 B, Seattle, WA 98108 **Electrocardiogram changes and plasma desipramine levels during treatment of depression.** Clinical Pharmacology and Therapeutics. 27(6):796-802, 1980.

Twenty six symptomatic Ss who met Research Diagnostic Criteria for major affective disorder and were free of cardiovascular disease were treated for 3 weeks with a fixed dosage schedule of desipramine (DMI) to a maximum of 200mg/day. An electrocardiogram (ECG) and DMI plasma level determinations were obtained before treatment and weekly thereafter. DMI levels during the trial ranged from 13.4 to 882.2ng/ml. DMI treatment was associated with increase in heartrate (p less than .001), prolongation of the PR (p less than .001), QRS (p less than ,001), and QTc intervals (p less than .001), and increase in T-wave amplitutde (p less than .001). Significant (p less than .001), but relatively weak, correlations were noted between DMI plasma levels and heartrate (r=.405), QRS interval (r=.346), QTc interval (r=.534), and T-wave amplitude (r=-.386). PR interval prolongation was independent of DMI levels (r=.171). DMI treatment induced no clinically significant ECG alterations or cardiovascular adverse effects. The relevance of DMI plasma level and the possible roles of other contributing factors in the production of these ECG changes are discussed. 28 references. (Author abstract)

004412 Walinder, J.; Carlsson, A.; Persson, R.; Wallin, L. no address **Potentiation of the effect of antidepressant drugs by tryptophan.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):243-249, 1980.

Potentiation of the effects of a bicyclic antidepressant drug, zimelidine, by concurrent administration of tryptophan was investigated in 24 patients suffering from endogenous depression. The combination of tryptophan with zimelidine did not enhance the antidepressive effect of zimelidine, as measured by rating scales of depressive/anxiety symptoms. The lack of potentiating effects of tryptophan might be explained by the fact that zimelidine is such a potent serotonin reuptake inhibitor that additional tryptophan does not mean any substantial increase in transmitter concentration at receptor sites. A panel discussion of these findings is appended. 8 references.

004413 Weissman, Myrna M. Depression Research Unit, Connecticut Mental Health Center, 904 Howard Ave., Suite 2A, New Haven, CT 06519 **Pharmacotherapy and psychotherapy for ambulatory depression: efficacy and choices.** Research Report, NIMH Grant 5R01-MH-26466, 1980. 25 p.

Research on the drugs and psychotherapy for treating depressed outpatients is reviewed, and an attempt is made to translate the evidence into clinical terms to guide the choice of treatment. It is suggested that the motivation for clinical trials of psychotherapy among ambulatory depressed patients is derived from three sources: epidemiology, economics of reimbursement, and the ethics of providing safe and effective care. Five therapies which have been used widely in treating depression (cognitive therapy, interpersonal psychotherapy, behavior therapy, marital therapy, and group therapy) are examined. Evidence for the efficacy of the five psychotherapies alone, in comparison, and in combination with drugs for the ambulatory depressed patient is summarized. It is concluded that the combined treatment approach generally is favored, but that there is great variability in patient and clinician preferences. Findings from research on the symptoms, social functioning, and diagnostic subtypes of depressed patients are reviewed to help guide the clinician's selection of an effective treatment. The need for multicenter collaborative trials to test the efficacy of several therapeutic conditions with and without drugs in large population samples is emphasized. 13 references.

004414 Wheatley, David. General Practitioner Research Group, Twickenham, England **Trazodone in depression.** International Pharmacopsychiatry. 15(4):240-246, 1980.

Three trials were conducted to evaluate the efficacy, side-effects, and dosage regimens of trazodone in the treatment of depression with or without anxiety. In the first two trials, dose comparisons were undertaken in 59 patients suffering mixed depression and anxiety with either predominating and 87 patients suffering from predominant depression with or without anxiety. While therapeutic effects were the same for once, twice, and three times daily dosage, once daily dosage produced drowsiness while the thrice daily dosage did not. However, the incidence of dizziness was nonsignificantly higher on the thrice a day regimen, relative to the other two dosage schedules. In the third trial (a double-blind comparison to the tricyclic antidepressant imipramine) antidepressant effects were similar, except at 6 weeks, when imipramine was significantly better than trazodone. There were no significant differences in relief of anxiety symptoms. 6 references. (Author abstract modified)

004415 Woggon, Brigitte. Psychiatrische Universitatsklinik Zurich, Forschungsdirektion, Postfach 68, CH-8029 Zurich, Switzerland **/Changes in psychopathologic symptoms during 20 days of treatment with antidepressants and neuroleptic drugs./**

Veranderungen der psychopathologischen Symptomatik wahrend 20tagiger antidepressiver oder neuroleptischer Behandlung. Psychiatria Clinica. 13(3-4):150-164, 1980.

In a retrospective study, 266 psychiatric patients treated with neuroleptics and 130 patients treated with antidepressants were divided into groups of responders and nonresponders following termination of therapy. The groups were compared with respect to psychopathological symptoms, as assessed by the AMP diagnostic system, on days 0, 5, 10, and 20 posttreatment. Responders and nonresponders showed significant differences in the target syndrome from day 5 onward, and these differences were also noted on day 20. Improvements found at several points of testing, expressed as a percentage of the overall improvement after 20 days, showed that the major part of the total improvement took place during the first 10 days of treatment. The statistically significant changes were examined for practical relevance by giving their declared variance as a proportion of the total variance. 15 references. (Journal abstract modified)

004416 Wysocki, Henryk; Rybakowski, Janusz; Wierusz-Wysocka, Bogna; Kapelski, Zdzislaw; Szajnerman, Zofia. Klinika Hematologii, Inst. Chorob Wewnetrznych, Akademia Medyczna, ul. Szkolna 8/12, 61-833 Poznan, Poland /**An attempt to assess the effect of lithium on the neutrophil leukocyte system in affective psychosis.**/ Proba oceny wplywu litu na uklad granulocytow obojetnochlonnych u chorych z psychozami afektywnymi. Psychiatria Polska. 14(4):363-367, 1980.

The neutrophil leukocyte system was examined in eight patients with affective psychosis prior to and 10 days after lithium carbonate therapy. The number of neutrophils in the peripheral blood was determined; a hydrocortisone test of the bone marrow reserve and an adrenaline test of the marginal pool were conducted. In all cases the number of neutrophils in the peripheral blood was found to have increased under the influence of lithium. In six cases a distinct increase in the reserve pools also was found, while the marginal pool was unmistakably reduced in all subjects. The obtained results show that the mechanism of action exerted by lithium on the neutrophil leukocyte system is more complex than has been thought to date. 6 references. (Journal abstract modified)

004417 Zaccara, G.; Ferrara, M.; Ardito, P. Clinica delle malattie nervose e mentali, Universita degli Studi di Firenze, Firenze, Italy /**Controlled clinical trial of nomifensine in the treatment of depression.**/ Studio clinico controllato della nomifensina nella terapia degli stati depressivi. Rivista di Patologia nervosa e mentale. C(3):111-120, 1979/80.

The therapeutic efficacy of nomifensine and nortriptyline was evaluated in a double-blind study of 29 patients suffering from various kinds of depression. The results of the first 15 days of treatment are discussed. The drugs were administered on a flexible dosage schedule, from 50 to 125mg/day in two to three separate doses. Hamilton's Depression Scale was administered before treatment and again on days 5, 10, and 15 of the study. Based on scores from Hamilton's Depression Scale and other measures the antidepressant effect of nomifensine was judged comparable to that of nortriptyline. No significant differences were noted in its range of action. No side-effects were detected in the dosages administered. 19 references. (Journal abstract modified)

004418 Zuckerman, Diana M.; Prusoff, Brigitte A.; Weissman, Myrna M.; Padian, Nancy S. Depression Research Unit, Dept. of Psychiatry, Yale University School of Medicine, New Haven, CT 06520 **Personality as a predictor of psychotherapy and pharmacotherapy outcome for depressed outpatients. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-26466, 1979.

Depressed outpatients were randomly assigned to one of four treatment groups (psychotherapy, pharmacotherapy, combined psychotherapy and pharmacotherapy, and nonscheduled treatment) in a double-blind, randomized clinical trial of personality as a predictor of outcome. Before treatment, Ss were assessed on three personality inventories (the Maudsley Personality Inventory, Frank's Mastery Scale, and the Buss-Durkee Guilt Scale) and four outcome scales (Hamilton Depression Scale, Raskin Depression Scale, Global Illness Scale, and Social Adjustment Self-Report). The Ss were reassessed on the outcome measures at termination (after 2 to 16 weeks of treatment) and 1 year later. The pretreatment personality scores were not significantly related to improved outcome scores at termination, either as a main effect or for the interaction with treatment group. However, low neuroticism and high extroversion on the Maudsley Inventory were associated with improved social adjustment 1 year later. Implications for theories and treatment of depression are discussed. 22 references. (Author abstract modified)

Maria della Pieta, Roma, Italy /**Prazepam: a new benzodiazepine for the treatment of anxious-depressive states.**/ Prazepam: un nuovo benzodiazepinico nel trattamento degli stati ansioso-depressivi. Rivista di Neuropsichiatria e Scienze Affini 26(3):135-138, 1980.

Twenty anxious-depressive patients characterized by neuroticism were treated with 20 to 90mg/day of prazepam for a period of 10 to 45 days. Changes over the course of treatment were rated by means of the Wechsler scale. Approximately 80% of the patients showed improvement in the first 2 weeks of treatment. Prazepam was well tolerated, and no treatment was suspended due to adverse reactions. Renal, heart, and liver functions were unimpaired, and blood values were not adversely affected. Prazepam is judged to be as efficacious as the other benzodiazepines for the treatment of depression and has the advantage of producing fewer side-effects. 5 references. (Journal abstract modified)

004420 Downing, Robert W.; Rickels, Karl. Psychopharmacology Research and Treatment Unit, Dept. of Psychiatry, University of Pennsylvania, Philadelphia, PA 19104 **Responders and nonresponders to chlordiazepoxide and placebo. A discriminant function analysis. (Unpublished paper).** Final Report, NIMH Grant 5R01-MH-31366, 1980. 11 p.

Data were obtained from 356 anxious outpatients treated with either chlordiazepoxide or placebo in 4 week long, double-blind drug trials and were analyzed to determine predictors of treatment response using extreme groups and discriminant function analysis. Symptom severity was assessed in terms of the scores from five factors (somatization, obsessive-compulsive, interpersonal sensitivity, depression, and anxiety). According to the Hopkins Symptom Checklist, chlordiazepoxide response was greater in younger female patients with lower levels of initial depression and a more favorable prognosis. Placebo response was greater in younger, Black, previously untreated patients, favorably drug treated patients, and in patients with lower initial somatization and depression. Discriminators that were found between drug and placebo response include age, previous drug treatment, race, and initial level of somatic symptomatology. 10 references. (Author abstract modified)

004421 Garzya, Giovanni. Div. Geriatrica, Ospedale Generale V. Fazzi, Lecce, Italy /**Clinical use of a new benzodiazepine, prazepam.**/ Impiego clinico di un nuovo benzodiazepinico, il prazepam. Lavoro Neuropsichiatrico. 66(3):27-31, 1980.

Thirty five patients (25 women and 10 men between ages 55 and 70), diagnosed as anxious and/or depressive, were treated with average doses of 20mg prazepam for 25 days. Symptoms improved after 2 weeks of treatment. Side-effects were negligible. Tables summarize the patients and their mental states prior to treatment, as well as the effects of prazepam. 6 references. (Journal abstract modified)

004422 Itoh, Hitoshi; Takahashi, Ryo; Miura, Sadanori. Dept. of Neuropsychiatry, Keio University, 35 Shinanomachi, Shinjukuku, Tokyo, Japan **Alprazolam, a new type anxiolytic in neurotic patients: a pilot study.** International Pharmacopsychiatry. 15(6):344-349, 1980.

The efficacy, safety, and optimal dosage of alprazolam, a new triazolobenzodiazepine anxiolytic agent, were investigated. Ss were 115 neurotic patients, who were treated with alprazolam for 4 weeks in an open label study The daily dose ranged from 0.4mg to 3.2mg, with an average of 1.4mg. A slight to remarkable improvement was experienced by 73% of Ss, and a particularly high improvement rate was observed in patients with initially severe sleep disturbances. No serious side-effects were noted. A comparison of the characteristics of insomniac and noninsomniac neurotic patients suggests that neurosis with insomnia might represent an acute or aggravated phase of the disease. The validity of the new Psychoneurotic Rating Scale, in comparison with the Hamilton Anxiety Rating Scale, is discussed. 11 references. (Author abstract modified)

004423 Johnstone, Eve C.; Bourne, Rachel C.; Crow, T. J.; Frith, C. D.; Gamble, S.; Lofthouse, R.; Owen, F.; Owens, D. G. C.; Robinson, J. Division of Psychiatry, Clinical Research Centre, Watford Road, Harrow, Middlesex HA1 3UJ, England **The relationships between clinical response, psychophysiological variables and plasma levels of amitriptyline and diazepam in neurotic outpatients.** Psychopharmacology. 72(3):233-240, 1981.

Substantial clinical improvement was observed in neurotic outpatients treated for 4 weeks with amitriptyline, diazepam, amitriptyline and diazepam, or placebo. No clear relationships among clinical change, psychophysiological change, and plasma drug levels were observed. There was no relationship found between plasma drug levels and cigarette smoking. It is concluded that neither the plasma levels of amitriptyline and diazepam nor changes in skin conductance responsivity offer a useful guide to the clinical response to drug treatment. 34 references. (Author abstract modified)

004424 Liebowitz, Michael R.; Klein, Donald F. Dept. of Psychiatry, College of Physicians and Surgeons, Columbia University, 722 West 168th St., New York, NY 10032 **Differential diagnosis and treatment of panic attacks and phobic states.** Annual Review of Medicine: Selected Topics in the Clinical Sciences. 32:583-599, 1981.

Recent developments in the differential diagnosis, pathophysiology, pharmacotherapy, and behavioral treatment of severe anxiety (panic) attacks and various phobic states are reviewed. A case of agoraphobia is presented in detail to illustrate clinical issues and to serve as a basis for discussing differential diagnosis. The presence or absence of spontaneous panic attacks has crucial implications for classifying phobic states. Data and speculations concerning the pathophysiology of agoraphobia, social phobia, and simple phobia are also presented. Systematic densensitization, flooding, and exposure in vivo are discussed. 46 references. (Author abstract modified)

004425 Mavissakalian, Matig; Barlow, David H. University of Pittsburgh School of Medicine, Pittsburgh, PA **Phobia: psychological and pharmacological treatment.** New York, Guilford, 1981. 256 p.

The literature on psychological and pharmacological treatment of phobias is reviewed with specific reference to current asessment procedures and therapy programs for specific phobias and agoraphobia. Treatments, which are among the most frequently used behavioral and cognitive behavioral therapies for the treatments of specific phobias, are detailed: ungraded in vivo exposure; graded in vivo exposure methods (participant modeling and reinforced practice); imagery based exposure methods (systematic desensitization and imaginal flooding); and cognitive behavioral treatment strategies (self-statement training). A case study illustrates how a recommended treatment program can be a combination of several treatment modalities. Future directions in the assessment and treatment of phobias are discussed: 1) research on the basis mechanisms of fear; 2) research on the mechanisms of action or active ingredients inherent in currently successful treatments; 3) research on refining existing procedures in the treatment of a variety of fears, particularly the delivery of these techniques; and 4) investigation of the use of pharmacological agents, most likely in combination with various psychotherapeutic interventions. 81 references.

004426 Olajossy, Marcin; Modrzewska, Romana. Klinika Psychiatrii AM, Abramowicka 2, 20-442 Lublin, Poland **/An evaluation of the usefulness of the acylase test in neuroleptic treatment./** Ocena przydatnosci stosowania testu acylazowego przy kuracjach neuroleptycznych. Psychiatria Polska. 14(5):471-474, 1980.

The activity of cobalt activated acylase was determined in 48 patients receiving neuroleptic treatment. Its value had been O i.u. before treatment in all patients. In the second week of treatment low values were found in eight patients despite maximum drug doses. In the fourth week of treatment the values of acylase increased despite considerable diminution of doses and exceeded 1 i.u. in 22 of the patients examined. The mean values of acylase activity did not differ significantly after 4 weeks of treatment in patients treated for the first time and in those who had been treated repeatedly. 8 references. 004427 Rifkin, Arthur; Klein, Donald F.; Dillon, Donald; Levitt, Morton. Dept. of Psychiatry, Mount Sinai Medical Center, One Gustave L. Levy Place, New York, NY 10029 **Blockade by imipramine or desipramine of panic induced by sodium lactate.** American Journal of Psychiatry. 138(5):676-677, 1981.

The effect of sodium lactate infusions on a group of nine Ss with panic disorder and on nine controls was investigated to test hypotheses that: 1) sodium lactate would cause panic in the experimental Ss and not in controls; and 2) tricyclic antidepressants (imipramine or desipramine) would prevent panic attacks during a second sodium lactate infusion in the six Ss whose spontaneous attack stopped during prior treatment with these drugs. The findings confirmed these hypotheses although caution is suggested in light of the preliminary nature of the study. 7 references.

004428 Scharbach, H. 9, rue de Gigant, F-44000 Nantes, France **/A double-blind trial: the use of oxprenolol and diazepam in anxiety./** Essai en double aveugle (oxprenolol/diazepam) dans l'anxiete. Encephale. 7(1):51-58, 1981.

The effectiveness of oxprenolol vs. diazepam in treating anxiety was studied in a double-blind experiment. Thirty six Ss suffering from somatic and/or psychological anxiety were given either 80mg of oxprenolol (19 Ss) or 5mg of diazepam (17 Ss) in 1 tablet daily at the beginning of the study. This dosage was increased to an average of three tablets daily. Effectiveness was measured on the basis of the Hamilton scale for anxiety and by the subjective evaluations of patient and physician. Results show equally good results on the basis of the subjective evaluations; statistically, however, oxprenolol is more effective than diazepam in treating anxiety. 12 references

004429 Semke, V. Ya. Kafedra psikhiatrii, Altayskiy meditsinskiy institut, Barnaul, USSR **/Possibilities of pathogenetic therapy of hysteria./** O vozmozhnostyakh patogeneticheskoy terapii isterii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(3):420-425, 1981.

Possibilities of pathogenetic therapy of hysteria were studied in 371 patients with hysteria and 180 patients with hysteriform disturbances. The Ss were examined clinicodynamically and neurophysiologically to determine the necessity for pathogenetic treatment in relation to the stage and degree of the emotional disturbances. In cases of an acute or subacute course of the disease, combinations of hypnosuggestive therapy with modified autogenic training were effective. For patients with a lingering course, combinations of psychotherapeutic and biological methods with the use of central cholinolytics (for relaxing the high tone of the cholinergic system), and psychostimulants and antidepressants (for strengthening the tone of the serotoninergic structures) were effective. In resistant cases, medicinal therapy with medium and high doses of atropine was effective. Results show that an individualized, staged complex approach to the treatment of hysteria which considers the age factor is the most effective. 21 references. (Journal abstract)

004430 Snyder, Scott. Dept. of Psychiatry, Baylor College of Medicine, Texas Medical Center, Houston, TX 77030 **The interaction of psychopharmacology and psychoanalysis in the borderline patient.** Psychiatric Quarterly. 52(4):240-250, 1980.

The interrelationships between the psychoanalytic and psychopharmacological perspectives are explored as they aid in unifying the concept and definition of the borderline personality. The major psychoanalytic conceptualizations of the borderline personality are reviewed, as is the use of medication response as an aid to diagnosis of the borderline. Four borderline subtypes are delineated, with a focus on the central role of affect in this disorder and implications for psychopharmacological treatment. The four subtypes include: 1) a group characterized by impulsive and negative behavior and hostile depression characterized by a reversal of vegetation signs; 2) a group of patients manifesting erratic behavior, marked by rebellion and overt anger, alternating with depression; 3) an affectless group, marked by extreme obsessional and schizoid styles; and 4) a group showing a clinging depression with diminished self-esteem and high anxiety (including panic attacks). Analogous diagnostic classifications of these groups (e.g., hysteroid dysphoric, emotionally unstable character disorder) are noted, and drug response of these groups is reviewed. It is suggested that analysis of medication response may aid in better delineating the syndrome. 51 references. (Author abstract modified)

11 DRUG TRIALS IN MISCELLANEOUS DIAGNOSTIC GROUPS

004431 Agnoli, A.; Ruggieri, S.; Falaschi, P.; Mearelli, S.; Del Roscio, S.; D'Urso, R.; Frajese, G. Clinica Neurologica, University of L'Aquila, I-67100 L'Aquila, Italy **Are the enkephalins involved in Parkinson's disease? Clinical and neuroendocrine responses to naloxone administration.** Advances in Biochemical Psychopharmacology. 22:511-521, 1980.

Clinical and neuroendocrine responses to naloxone administration were studied in parkinsonism patients, and research concerning the possible involvement of the enkephalins in Parkinson's disease is reviewed. Results indicate that 2mg of naloxone induces an inconsistent improvement in tremor, rigidity, and in the Webster Rating Scale score while bradikinesia shows a tendency to worsen. Moreover, these results are present only briefly (2 to 3 hours). However, the dosage of 8mg induces a constant improvement in the three symptoms, tremor in particular. Also, the overall clinical picture (Webster Rating Scale score) was much improved. Naloxone did not modify plasma prolactin levels in either of the two dosages. These data show that parkinsonism is not only a consequence of damage in the nigrostriatal system, but a consequence of alterations in the entire dopamine system. 34 references.

004432 Allen, Marcia Divoll; Greenblatt, David J.; Harmatz, Jerold S.; Shader, Richard I. Greenblatt: Division of Clinical Pharmacology, Box 1007, New England Medical Center, 171 Harrison Ave., Boston, MA 02111 **Desmethyldiazepam kinetics in the elderly after oral prazepam.** Clinical Pharmacology and Therapeutics. 28(2):196-202, 1980.

Desmethyldiazepam (DMDZ) kinetics were investigated in 15 young (22 to 42 years old) and 14 elderly (62 to 85 years old) Ss, administered single oral doses of 20mg prazepam. Plasma DMDZ concentrations were determined in venous blood samples drawn up to 9 days after the dose. Appearance in blood of DMDZ was slow, with peak plasma levels reached in an average of 10 to 20 hours. First-order DMDZ appearance was observed in only 17 Ss. Volume of distribution of total DMDZ (range, 1.33 to 6.31/kg) and of unbound DMDZ after correction for protein binding (range, 43 to 243l/kg) was larger in women than in men of all ages, and in the elderly as opposed to the young. Elimination half-life (range, 29 to 224 hours) rose with age in men (r=.66, p less than .01), but not in women (r=.02). Clearance of unbound DMDZ (range, 2.9 to 31.2ml/min/kg) was greater in women than in men of all ages, and declined with age in men (r=.40), but not in women (r=.06). As in the case of diazepam, age can influence DMDZ kinetics, but changes in drug disposition with age may differ between the sexes. 20 references. (Author abstract modified)

004433 Avrutskiy, G. Ya.; Laskova, N. B. Otdel psikhofarmakologii, Moskovskiy NII psikhiatrii Ministerstva zdravookhraneniya RSFSR, Moskva, USSR **/Some principles of differentiated metabolic drug treatment in comprehensive therapy of mental disorders./** Nekotoryye printsipy differentsirovannogo primeneniya preparatov metabolicheskoy terapii v kompleksnom lechenii psikhicheskikh zabolevaniy. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(8):1077-1083, 1979.

A study of 246 patients with schizophrenia, manic-depressive psychoses, and psychoorganic syndrome who were all treated with metabolic action drugs (piracetam, piriditol, and pantogam) elucidated the efficacy of these preparations in a comprehensive treatment of mental disorders. The desirability or necessity of including these drugs in a pharmacotherapy program is discussed in the light of clinical trials. During such trials, certain aspects of the clinical effects with each drug were examined, permitting a comparison of the pharmacological activity of piracetam, piriditol, and pantogam. It is recommended that these drugs be used only after careful evaluation of the mental state of the patient and the clinical profile of the drug. 29 references. (Journal abstract modified)

004434 Balakleyevskiy, A. I.; Mimyukova, T. A.; Vashenin, M. M.; Gayduk, F. M. Problemnaya lab. biokhimii neyrogormonov i regulyatsii obmena veshchestv, Minskiy meditsinskiy institut, Minsk, USSR **/Correction of the extrapyramidal neuroleptic syndrome by tryptophan and the time course of its content in the blood of patients./** Korrektsiya ekstrapiramidnogo neyrolepticheskogo sindroma triptofanom i dinamika yego soderzhaniya v krovi bol'nykh. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(2):95-97, 1981.

Correction of the extrapyramidal neuroleptic syndrome by tryptophan and the time course of its content in the blood were studied in 44 patients of both sexes (20 to 55 years old) with various forms of the syndrome, and in a control group of eight healthy people of both sexes (22 to 40 years old). The patients were divided into three groups according to the form of the syndrome affecting them. Group 1 consisted of 15 Ss with moderately severe akinetic hypertonic disorders; group 2 consisted of 21 Ss with chronic hyperkinetic hypertonic disorders; and group 3 consisted of eight Ss with chronic hyperkinetic disorders. Following the development of extrapyramidal syndrome the Ss were given 0.6g of tryptophan by mouth. The behavioral condition of the Ss was measured before and after the administration of tryptophan, and the tryptophan content of the blood was measured using the Yudenfrend method. Results show that tryptophan brought about an improvement in 73% of the patients in group 1, 52% of group 2, and 37% of group 3. 19 references. (Journal abstract modified)

004435 Benkert, O. Psychiatrische Klinik der Universitat Munchen, Nussbaumstrasse 7, D-8000, Munchen 2, West Germany **Pharmacotherapy of sexual impotence in the male.** Modern Problems of Pharmacopsychiatry. 15:158-173, 1980.

Drugs which have been prescribed in instances of sexual impotence in the male or whose effectiveness has been observed or experimentally tested are described. The substances fall into the following categories: 1) hormones (androgens, luteinizing hormone, releasing hormone, thyroid hormone, and thyrotropin releasing hormone); 2) drugs influencing biogenic amines (L-dopa, apomorphine, bromocriptine, PCPA, parachloromethylamphetamine, methysergide, and danitracen); 3) vasodilators (nitrites, oxytocin, and yohimbine); 4) psychopharmacological drugs (neuroleptics, antidepressants, lithium salts, tranquilizers); and 5) other psychotropoic drugs, such as aphrodisiacs. It is concluded that no pharmacotherapy for organically healthy patients with sexual impotence has been experimentally substantiated, and that physicians should avoid prescribing drugs for problems observed in their patients. Instead focus should be on organic causes, behavioral changes due to physiological aging, open communication between physician and patient, and psychotherapy and behavior therapy. 62 references.

004436 Boszormenyi, Zoltan. National Institute for Nervous and Mental Diseases, Mandula u. 36, H-1025, Budapest, Hungary **Pharmacological influence of sexual functions in adolescents.** Modern Problems of Pharmacopsychiatry. 15:131-144, 1980.

The occurrence of sexual dysfunction in adolescence is addressed and the influence of drug treatments on such disorders is discussed. It is contended that these syndromes are often related to primary endocrine or developmental defects, but that they also result from purely educational or psychological and emotional problems. Adolescents often have difficulty in seeking help, and psychotherapy in combination with anxiolytic agents as an adjunct to treatment is seen as being helpful. Benzodiazepines have proven especially effective. Since teenagers are dependent on the expectations of parents, it is suggested that administration of drugs should be fully understood by the involved family members. It is argued that the adolescent has less anxiety tolerance, fewer emotional brakes, less facility for elaborating symptoms or symbolic levels, and diminished capacities for postponement of impulsive gratifications, and that all of these factors are important in achieving effective results in combined psychotherapy and pharmacotherapy. 12 references.

004437 Breuning, Stephen E.; Ferguson, Donald G.; Cullari, Salvatore. Psychological and Research Services, Coldwater Regional Center for Developmental Disabilities, Coldwater, MI 49036 **Analysis of single-double blind procedures, maintenance of placebo effects, and drug-induced dyskinesia with mentally retarded persons.** Applied Research in Mental Retardation. 1(3/4):175-192, 1980.

The importance of reliability checks, placebo conditions, and double-blind conditions in assessing medication effects with 10 institutionalized mentally retarded Ss was examined. A procedure for discontinuing the use of placebo and double-blind conditions was explored, and all Ss received weekly assessments and 1 year followup of withdrawal and persistent dyskinesia. The results empirically demonstrate the importance of using reliability checks, placebo conditions, and double-blind conditions. The procedure for discontinuing placebo and double-blind conditions was effective, and is discussed in terms of ethical and practical issues concerning their use in institutions. Place effects were observed to last 12 or more weeks and are discussed in terms of being maintained via operant variables. Withdrawal dyskinesias were present in 9 of the 10 Ss and a 1.5 year followup showed persistent dyskinesias in 6 of the 10 Ss. Lip-mouth and tongue movements were the primary dyskinesias. 14 references. (Author abstract modified)

004438 Breuning, Stephen E.; O'Neill, Michael J.; Ferguson, Donald G. Psychological and Research Services, Coldwater Regional Center for Developmental Disabilities, Coldwater, MI 49036 **Comparison of psychotropic drug, response cost, and psychotropic drug plus response cost procedures for controlling institutionalized mentally retarded persons.** Applied Research in Mental Retardation. 1(3/4):253-268, 1980.

The effectiveness of psychotropic drugs, response cost, and psychotropic drug plus response cost procedures in controlling the inappropriate behaviors of 18 institutionalized mentally retarded Ss is discussed. Ss were randomly assigned to one of two sequences. Sequence 1 utilized 11 Ss and was drug, drug plus response cost, then response cost. Sequence 2 utilized seven Ss and was drug, placebo (no drug), the response cost. Ss and staff were blind to conditions and sequences. The results show that the frequencies of inappropriate behaviors were lowest during the response cost conditions. The drug, drug plus response, and placebo conditions resulted in similar frequencies of inappropriate behaviors. These frequencies were about 45% higher than those obtained during the response cost conditions. Withdrawal dyskinesias and symptoms were present in 13 of the 18 Ss, and a 1 year followup showed persistent dyskinesias present in 7 of the 18 Ss. Results are discussed in terms of drug/behavior interactions and legal and programmatic implications for habilitative training with mentally retarded persons. 19 references. (Author abstract modified)

004439 Cazzullo, C. L.; Altamura, A. C.; Cornaggia, C. M.; Canger, R.; Pruneri, C. Altamura: Depto. di Psichiatria Clinica, Universita di Milano, Padiglione Guardia II, Policlinico di Milano, I-20100 Milano, Italy **Therapeutic plasma levels of some anticonvulsants in focal epilepsy in relation to computerized axial tomography.** Encephale. 7(2):191-197, 1981.

Antiepileptic drug blood levels needed to control seizures were studied in 37 patients with established focal epilepsy. The patients examined by computerized axial tomography (CAT) were grouped according to whether they did or did not show evidence of an organic focal lesion in the brain. Statistical elaboration of the data revealed that CAT positive patients required significantly higher mean antiepileptic drug blood levels for clinical effectiveness than did CAT negative patients. Single drugs failed to produce control at any plasma level, necessitating recourse to multidrug regimes significantly more often in the CAT positive than in the CAT negative patient group. Possible reasons for the observed differences of therapeutic responses are discussed. 16 references. (Journal abstract modified)

004440 Chinaglia, L. Divisione Neurologica, Ospedale Civile Carretta, Montebelluna, Italy /**Pharmacokinetic study in man of the CH-757 preparation.**/ Studio farmacocinetico nell'uomo del preparato CH 757. Revista de Neuropsichiatria e Scienze Affini. 26(2):55-60, 1980.

The characteristics of the bioavailabilty of CH-757 (lormetazepam) in humans were studied. Eight patients between ages 40 and 63 who had been hospitalized with neurological disorders were selected. All patients received 5mg lormetazepam. Blood was drawn before and at 2, 4, 6, and 12 hours after treatment. Lormetazepam levels in blood and urine were monitored. Although the pharmacological effects lasted only 4 to 5 hours, the level of plasmatic CH-757 remained elevated for 8 to 12 hours. Seventy one percent of the drug was excreted in the urine within 72 hours. Lormetazepam is in large part transformed into a composite in the blood. It is presumed that urinary metabolism is also in large part composed of this composite. 2 references. (Journal abstract modified)

004441 Danner, Rolf. Dept. of Clinical Neurophysiology, Central University Hospital Kuopio, SF-70210 Kuopio 21, Finland / **Measurements of nerve conduction velocity during decreasing toxic diphenylhydantoin levels and the beginning of carbamazepine medication: a clinical neurophysiological report.**/ Messungen der Nervenleitgeschwindigkeit beim Abklingen einer Diphenylhydantoinintoxikation und wahrend des Beginns einer Carbamazepinmedikation: eine klinisch-neurophysiologische Dokumentation. Archiv fur Psychiatrie und Nervenkrankheiten. 229(3):267-272, 1981.

A clinical neurophysical report of an epileptic patient recovering from acute diphenylhydantoin toxicity is presented. Sensory and motor nerve conduction velocity was determined daily and at the beginning of administration of the anticonvulsant drug carbamazephine. A statistical correction which accounts for the influence of variable skin temperatures on the sensory nerve conduction velocity proved to be useful for measuring sural nerves. A significant correlation was found between the increasing sensory nerve conduction of the spinal nerves and the decreasing diphenylhydantoin levels. Decreasing conduction velocities in peripheral nerves during rising carbamazepine concentrations were observed. 22 references. (Journal abstract modified)

004442 Davis, Kenneth L.; Hollister, Leo E.; Stahl, Steven M.; Berger, Philip A. Hollister: Stanford University, Stanford, CA 94305 **Cholinomimetics in Huntington's disease.** Research Report, NIMH Grant MH-30854, 1980 5 p.

The use of physostigmine salicylate and choline chloride with Huntington's disease patients was investigated. Patients were administered intravenous propantheline bromide until the heartrate reached 100, at which time they were administered 4.0mg intravenous physostigmine. Choline chloride was administered gradually over 4 weeks for a maximum dose of 20gm per day in four divided doses, and within subject comparisons of choline chloride versus placebo periods were undertaken. Physiological and videotape monitoring indicated that physostigmine produced a significant decrease in choreic movements 30 minutes after the termination of the infusion in 9 of 10 patients. Of the nine patients who completed 12 weeks of choline chloride testing, seven had a significant decrease in their choreic movement frequencies. It is suggested that physostigmine and choline chloride increase brain acetylcholine activity by different mechanisms. It is concluded that although increasing brain acetylcholine activity is a potential treatment strategy for the choreic movements of Huntington's disease, neither physostigmine nor choline chloride can be considered a practical clinical treatment for the disease, since more potent cholinomimetics may be needed to more consistently reduce choreic movements. 7 references.

004443 Deisenhammer, E.; Sommer, R. Institut fur Klinische Neurophysiologie, Medizinisches Laboratorium, Wagner-Jauregg-Krankenhaus, Linz, Austria /**Serum concentration of anticonvulsants. Pharmacokinetic findings and their practical application.**/ Die Serumkonzentration der Antikonvulsiva. Pharmakokinetische Erkenntnisse und deren praktische Anwendung. Wiener Klinische Wochenschrift. 91:571-578, 1979.

The regular determination of serum concentrations of anticonvulsants and their contribution to pharmacokinesis are discussed. The measurement of serum concentrations makes possible the determination of actually available unbound, and therefore effective substances. It is indicated that the metabolism of these anticonvulsants varies, and the relationship between a given dosage and serum concentration suggests strong individual fluctuation. Through a variety of biological. changes, illnesses, and medication, the body metabolism can be altered, which can lead to a change in the serum concentration of the anticonvulsant. Results of research have shown that a therapeutic concentration area exists which should be taken as a statistical value. Only a specific concentration shows in a certain percentage of patients a reduction of attacks or freedom from attacks. Low concentrations have been used in harmless attacks with sufficient therapeutic effect, while high concentrations have been used in malignant attacks without sufficient effect. It is concluded that this method should be used for all problematical patients. Fifty percent of the patients who had shown no improvement before, showed an improvement or freedom from attacks when this method was used. (Journal abstract modified)

004444 Dement'yeva, N. F.; Yermolina, L. A.; Yezhkova, V. A.; Mozhayeva, Ye. G. no address /**Therapy and social adaptation of oligophrenics (review of the literature).**/ Terapiya i sotsial'naya adaptatsiya bol'nykh oligofreniyey (obzor literatury). Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(3):439-450, 1981.

Therapy and social adaptation of oligophrenics are discussed. Some therapeutic measures are directed towards activating individual mental functions (memory, attention, etc.) and towards pathogenetic treatment. Among the pharmacological substances used in the treatment of undifferentiated mental retardation and minimal brain dysfunction are psychostimulants. The study of these drugs seems to indicate that dopamine is related to this disorder. Neuroleptics help to control the behavior of patients but do not increase their work capacities. Metabolic therapy and biogenic stimulants have also been used with some success in children. Diet therapy and music therapy also have been tried. In connection with the study of the adaptive capabilities of the mentally retarded, studies have been done on interpersonal relations between such people, and between mentally retarded and normal people. It is concluded that the very pathological process of mental retardation is determined to a certain extent by the therapeutic approach to the patient. 136 references.

004445 Deniker, P.; Loo, H.; Zarifian, E.; Peron, P.; Benyacoub, A.; Roux, J. M.; Kamoun, A. Hospital Sainte-Anne, 1, rue Cabanis, F-75674 Paris Cedex 14, France /**A preliminary open study of the use of amineptine of the deficient syndrome of hebephrenics and of addicts during withdrawal.**/ Etude preliminaire en ouvert de l'amineptine sur le syndrome deficitaire des hebephrenes et des toxicomanes au decours du sevrage. Encephale. 7(1):59-64, 1981.

A preliminary study of the effects of amineptine on hebephrenics and addicts was conducted. Nine addicts and 10 hebephrenics received an average of 200mg/day of amineptine. Evaluation was made on the basis of clinical interviews and evaluation scales, self-evaluations, evidence of dependency, and side-effects. Results show improvement in six of the addicts and eight of the hebephrenics. Despite the preliminary nature of this study, it is concluded that amineptine is effective in treating syndromes marked by apragmatism, motor loss, and disinterest. In addition, pre-existing delirious ideas in schizophrenics are not reactivated and there seems to be no risk of drug dependency in addicts. 12 references.

004446 Ducreuzet; Moreau; Pelle. Service de Geriatrie du Centre Hospitalier de Versailles, Versailles, France /**Treatment of psychological and behavioral disturbances in mental deficiency with Duxil.**/ Troubles psycho-comportementaux de l'insuffisance cerebrale: leur traitement par Duxil. Revue de Geriatrie. 6(4):201-204, 1981.

The effectiveness of Duxil in treating mental deficiency in the elderly was studied. Thirty Ss, average age 77, were studied for 2 months. Ss received a placebo during the first month and Duxil during the second month. Ss evaluated themselves on the basis of 17 items which included mental efficiency, neurosensorial equilibrium, and psychoaffective behavior. Results show that after the first month, scores were the same as before treatment. After treatment with Duxil, overall scores improved by 36.5 percent. 1 reference.

004447 Emerson, Ronald; D'Souzas, Bernard J.; Vining, Eileen P.; Holden, Kenton R.; Mellits, E. David; Freeman, John M. Freeman: CMSC 601, Johns Hopkins Hospital, Baltimore, MD 21205 **Stopping medication in children with epilepsy.** New England Journal of Medicine. 304(19):1125-1129, 1981.

Anticonvulsant therapy was discontinued in 68 children with epilepsy who had had no seizures for 4 years, in an attempt to find the risk of relapse and the factors predictive of recurrence. In this population, the probability of remaining free of seizures for 4 years after discontinuation of medication was 69%. Children were more likely to have recurrent seizures if they were mentally retarded, if their seizures had begun before 2 years of age, if they had many generalized seizures before control, or if they had a definitely abnormal EEG before medication was discontinued. Multivariate analysis of variance shows that the best predictors of outcome were the EEG taken at cessation of medication and the number of seizures before control. It is concluded that in the normal child who has not had many seizures and whose EEG is normal or mildly abnormal, the risks of discontinuing medication after 4 seizure free years are acceptable. 13 references. 004448 Freedman, Daniel X. University of Chicago, Chicago, IL 60637 **LSD, psychotogenic procedures and brain neurohumors. (Unpublished paper).** Final Report, NIMH Grant RO1-MH-13186, 1980. 7 p.

The relationship between psychotogenic procedures and brain amines was investigated with emphasis on the psychopharmacology of indoleamine (especially lysergic acid diethylamide-LSD) and phenylethylamine hallucinogens and their effects of metabolism (binding, synthesis, storage, uptake, release, enzyme activity, compartmentation, and catabolism) of mouse and rat brain amines such as 5-hydroxytryptamine (5-HT), norepinephrine (NE), and dopamine. The experiments demonstrated an effect of LSD on brain 5-HT, LSD concentration and subcellular distribution, turnover of nonpsychotomimetic cogeners such as 2-bromo-LSD, and similar effects of phenylethylamine psychotomimetics on 5-HT concentrations were observed. The effects of stress on 5-HT and NE were demonstrated, as well as the enhancing effect of diminished concentration of 5-HT on the behavioral impact of LSD with reserpine or tetrabenazine pretreatment, after raphe lesions, or PCPA. The correlation of acute behavioral effects in the rat with the half-life of LSD was observed, which was followed by similar demonstration in man. Other findings included the correlation of LSD half-life and amine changes with acute biobehavioral effects and the uniquely high concentration of 5-HT in human pineal and in the blood of autistic and severely retarded children. 2 references.

004449 Gadow, Kenneth D. State University of New York, Stony Brook, NY 11790 **Drug therapy for hyperactivity: treatment procedures in natural settings.** In: Gadow, K., Psychosocial aspects of drug treatment for hyperactivity. Boulder, CO, Westview, 1979. 479 p. (p. 325-378).

Teachers and parents were surveyed to study referral and treatment practices with trainable mentally retarded (TMR) children and adolescents receiving pharmacotherapy for hyperactivity. Teachers completed a questionnaire in which they listed all children in their special education class who received psychotropic drugs during the current year, and described their experience with training in and problems with drug therapy. They then provided detailed information on their involvement in drug therapy. Parents were questioned about the drug regimen, school involvement in medical referral, and physician monitoring procedures. Pharmacotherapy for behavior disorders was relatively common in this sample. Teacher formal training in drug therapy was trivial. School involvement in treatment related procedures was far less than what is advocated by clinicians and researchers, and medical treatment monitoring procedures were not satisfactory. The data are seen as raising questions about the administration and storage of medication in school. 13 references. (Author abstract modified)

004450 Gagne, Pierre. 461 Argyle St., Sherbrooke, Quebec J1J 3H5, Canada **Treatment of sex offenders with medroxyprogesterone acetate.** American Journal of Psychiatry. 138(5):644-646, 1981.

A group of 48 male patients with long-standing histories of deviant sexual behavior received medroxyprogesterone acetate and milieu therapy for up to 12 months. Forty Ss responded positively, all within 3 weeks, with diminished frequency of sexual fantasies and arousal, decreased desire for deviant sexual behavior, increased control over sexual urges, and improvement in psychosocial functioning. Improvement in deviant sexual behavior and psychosocial functioning was maintained after treatment ended, and there was no evidence of permanent physiological changes. It is suggested that medroxyprogesterone acetate associated with counseling may be the treatment of choice for patients with long-term deviant sexual behavior, and the ethical issues involved in this approach are briefly discussed. 6 references. (Author abstract)

004451 Geormaneanu, Mircea; Voiculescu, Viorica. Paedriatic Clinic, 23 August Hospital, Bucharest, Rumania **Treatment of encopresis with imipramine.** Neurologie et Psychiatrie. 18(3):209-210, 1980.

Two case reports of treatment with imipramine of encopresis (involuntary passage of feces unrelated to organic deficit or illness, associated with maternal/child conflict) in 5-year-old and 6-year-old boys are presented. In both cases, imipramine (40 to 50mg/day) promoted rapid sphincter control. It is noted that amoug the commonest adverse effect of imipramine are urinary retention and constipation. It is suggested that these effects are related to the therapeutic action of imipramine in enuresis and encopresis. 1 reference.

004452 Gmur, M.; Uchtenhagen, A. no address /**Methadone treatment of heroin addicts in Switzerland.**/ Die Methadonbehandlung von Heroinabhangigen in der Schweiz. Therapiewoche. 30:1228-1235, 1980.

Methadone treatment combined with other methods of drug (i.e., heroin) treatment in Switzerland is discussed. Methadone is a promising drug when the dangers of misuse and abuse (i.e., involvement in the black market, incorrect diagnosis, and inappropriate treatment) are taken into account. Since deficiencies in stationary treatment for drug addiction are a fact, and ambulatory detoxification treatment has not indicated any notable success, methadone treatment is the recommended alternative. It is concluded that methadone treatment works well when the following guidelines are observed: 1) realistic success expectation, (i.e., drug freedom not the primary goal); 2) conflict free methadone treatment combined with caretaking and therapeutical measures; and 3) long-term treatment. (Journal abstract modified)

004453 Golinko, Barry E.; Rennick, Phillip M.; Lewis, Ronald F. Brookdale Hospital Medical Center, Dept. of Pediatrics, Comp Care Program, 9620 Church Ave., Brooklyn, NY 11212 **Predicting stimulant effectiveness in hyperactive children with a repeatable neuropsychological battery: a preliminary study.** Progress in Neuro-Psychopharmacology. 5(1):65-68, 1981.

The effects of d-amphetamine on performance on the Repeatable Cognitive/Perceptual/Motor neuopsychological test battery (RCPM) were studied in 14 hyperactive children. Results showed that 11 of the children performed better after d-amphetamine. High or low doses of d-amphetamine were effective in 10 of these children, but only the high dose was effective in one child. The use of the RCPM to titrate dosages quickly and to monitor dose effectiveness in long-term followup is discussed. 8 references. (Author abstract modified)

004454 Hechtman, Lily; Weiss, Gabrielle; Perlman, Terrye; Hopkins, Joyce; Wener, Albert. Dept. of Psychiatry, Montreal Children's Hospital, Montreal, Quebec, Canada **Hyperactives as young adults: prospective ten-year followup.** In: Gadow, K., Psychosocial aspects of drug treatment for hyperactivity. Boulder, CO, Westview, 1979. 479 p. (p. 417-442).

A 10 year followup study was conducted on 75 hyperactive Ss (never treated with stimulant drugs) and of 44 normal control Ss between 17 and 24 years old. The findings indicate that while hyperactive Ss continue to have varous difficulties in adjustment, only a small minority show severe psychopathology or serious antisocial behavior. Persisting problems center around continued impulsive traits, low self-esteem, and poor socialization skills. Hyperactive Ss had more court referrals within the 5 years preceding evaluation but were the same as controls within 1 year preceding evaluation. Extent of nonmedical drug use did not differ between groups, and physiological measures were not significantly different. Sequential EEGs of hyperactives taken over 10 years suggest that many readings become normal, and that this normalization takes place mainly in adolescence. A group of 17 Ss who had received chlorpromazine for 18 to 48 months were compared with a matched group of 21 Ss who had received no drug longer than 6 months. No differences were found on any measures of outcome. It is concluded that future treatment programs should focus on social skills, self-esteem, and impulsivity training. 24 references. 004455 Herrmann, W. M.; Beach, R. C. Dept. of Clinical Neuropsychopharmacology, Schering AG, Postfach 650311, D-1000 Berlin 65, West Germany **Pharmacotherapy for sexual offenders: review of the action of antiandrogens with special reference to their psychic effects.** Modern Problems of Pharmacopsychiatry. 15:182-194, 1980.

The effects of pharmacotherapy on the sexual behavior of sexual offenders are examined, with emphasis on the impact of antiandrogen therapy on sexual fantasy, preference, identity, and attitudes, as well as arousability to stimuli mediated by the CNS (e.g., visual stimuli). Six specific aspects of behavior that may be affected by drugs include sexual function, sexual behavior, sexual arousability, gender identity, preferences and attitudes, and sexual gratification. Associated behavioral changes with antiandrogen treatment include depression, a calming down effect (tranquilization), activity, and aggression. Mention is also made of experimental studies with cyproterone acetate. It is concluded that antiandrogen treatment may offer the only possible alternative to castration or lifelong imprisonment in some sex offenders, and that it has particular effects on functional sexuality, inhibition of sexuality, and sexual fantasy. 31 references.

004456 Hoes, M. J. A. J. M.; Colla, P.; Folgering, H. University of Nijmegen, Nijmegen, The Netherlands **Hyperventilation syndrome, treatment with L-tryptophan and pyridoxine; predictive values of xanthurenic acid excretion.** Journal of Orthomolecular Psychiatry. 10(1):7-15, 1981.

A case is made for the pathophysiological importance of the cerebral serotonergic neurons in the hyperventilation syndrome (HVS), whose function depends on the systemic L-tryptophan metabolism. The role of such metabolism was studied in 13 HVS patients via administration of pyridoxine 125mg t.i.d. and L-tryptophan 2g for 4 weeks. The syndrome is caused by stress and common features are increased respiration, anxiety, and occipito-cervical headache and muscular hypertonia. Treatment resulted in freedom from hyperventilation attacks in nine Ss, and extremes of xanthurenic acid excretion, an index of peripheral L-tryptophan metabolism, had disappeared. The findings indicate that the L-tryptophan metabolism is important in the pathophysiology of the HVS and that xanthurenic acid excretion discriminates responders from nonresponders to pyridoxine, L-tryptophan treatment. 42 references. (Author abstract modified)

004457 Hoffet, H. no address /**Clinical application of antiandrogens in psychiatry.**/ Die klinische Anwendung von Antiandrogenen in der Psychiatrie. Gynakologe. 13:33-43, 1980.

The application of antidanrogens, especially cyproterone acetate, to treat sexual deviations of men and resocialization of sexual delinquents is examined. These drugs have been infrequently used for treatment of women with psychosexual disturbances. The effective mechanism of antiandrogens on hormonal, central control of the sexual drive is analyzed thoroughly. Psychiatric effects and side-effects of antiandrogen administration are discussed; problems have surfaced on the medical/ethical level. Today it can be maintained with sufficient certainty that cyproterone acetate does not cause irreversible side-effectsion adult, male patients. If the patient absolutely wants cyproterone acetate, it may be used, but the decision belongs to experienced specialists who are able to take care of the patient psychologically. It is concluded that in intelligent and sensible patients, treatment with antiandrogens results occasionally in a psychic reconstruction. In more primitive patients, resocialization must first be tried through applied psychotherapy. (Journal abstract modified)

004458 Houillon, P.; Kitenge, A.; Jouannigot, R.; Lullien, L. no address /**Some therapeutic effects of Nootropyl.**/ Quelques effets therapeutiques du Nootropyl. Annales Medico-Psychologiques. 138(7):869-876, 1980.

Therapeutic effects of piracetam observed over a 10 year period are discussed. Under certain conditions piracetam acts as a neurotransmitter, and in certain cases it has a GABA-like effect. Cases histories of piracetam's use in cranial trauma, toxic syndromes, cerebral vasculopathies, and epilepsy are discussed. On the basis of these cases it is concluded that: piracetam acts equally on toxic vascular accidents and recent trauma; doses of 10g or more are necessary in cases of possible hypoxia; and best results are obtained in the terminal phases of several presenile dementias. A discussion of the physiological effects of piracetam follows the main article. 13 references.

004459 Indo, Toshikatsu; Ando, Kazuya. Dept. of Neurology, Gifu Prefectural Tajimi Hospital, Maehata-cho 5-161, Tajimi city, 507 Japan **Hyperventilation syndrome and beta receptor function -- clinical effect of beta blocker upon the syndrome.** Japanese Journal of Psychosomatic Medicine. 20(5):424-428, 1980.

In light of the previous observation of an increase in beta-receptor sensitivity and its proposed role in the pathogenesis of the hyperventilation syndrome (HVS), the preventive effects of beta-blocker administration were clinically examined. A daily dosage of 10mg or 15mg of bufetolol hydrochloride was used in 38 cases, while 29 other patients with intense anxiety were administered the same dosage in combination with antianxiety drugs over a period of several months. It was found that: 1) the frequency of attacks decreased significantly with each treatment method; 2) the decrease was more significant in the combination group; and 3) the intensity of attacks significantly decreased under each method, and the decrease was more significant in the combination group. It is concluded that it is necessary to suppress not only the sensitivity of beta-receptors (physical factors), but also anxiety (emotional factors) via the use of antianxiety drugs in the long-term management of hyperventilation syndrome. 11 references. 004460 Itil, T. M.; Akpinar, S.; Yardim, M.; Dayican, G. Division of Biological Psychiatry, Dept. of Psychiatry, New York Medical College, New York, NY 10029 **Effects of high dosage lisuride hydrogen maleate (LHM) in Parkinson syndrome.** In: Neurochemistry and clinical neurology. New York, Alan R. Liss, 1980.

An open, uncontrolled pilot study was conducted to determine whether high dosage lisuride hydrogen maleate (LHM, daily dosage of 100 to 100mcg with a mean of 462 to 619mcg) has any significant therapeutic effects in 11 patients with Parkinson syndrome treated for a period of 6 weeks. LHM is an isoergolenyl derivative with potent peripheral serotonin antagonist effects in addition to central alpha-adrenergic, antihistaminic, CNS, and central dopaminergic properties. According to the Global Impression rating scale, 8 of the 11 patients showed marked overall improvement, 2 showed moderate improvement, and 1 showed slight improvement. The most significant improvement was established in a variety of symptoms of Parkinson syndrome, as shown by serveral neurological and extrapyramidal symptom scales. The most dramatic improvement was seen in cog wheel rigidity, Parkinson tremor, Parkinson-like gait and posture, and masklike face. Patients also showed an improvement in memory recall and orientation. There were no systematic or noticeable laboratory abnormalities, electrocardiogram deviations, and/or clinical side-effects during LMH treatment.

004461 Izakson, Kh. A. Nevrologicheskoye otdeleniye, Tallinskiy gospital', Tallin, USSR **/The classification of sleep disorders and the treatment of various forms of somnambulism./** Rabochaya gruppirovka narusheniy sna i lecheniye razlichnykh form somnambulizma. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(9):1383-1387, 1979.

The classification of sleep disorders and the treatment of various forms of somnambulism were studied. Sleep disorders were differentiated as follows: sleep without any negative subjective or objective disturbances, predominantly subjective sleep disorders, and predominantly objective motor sleep disturbances (including sleepwalking due to various organic diseases of the CNS, and to neuroses and reactive states). One hundred Ss (16 to 20 years old) suffering from sleepwalking were treated using substances that decreased the duration of slow-wave sleep by increasing the duration of fast-wave sleep at night (proserine during the day and reserpine at night). Also used were chlorpromazine, imipramine, phenobarbital, meprobamate, magnesium sulfate, B-vitamins, chlordiazepoxide, electrosleep, prolonged transcerebral galvanization through the eyes, and physical exercise. Results indicate that a number of these methods have a promising future in the treatment of sleep disorders. 32 references.

004462 Johannessen, Svein. State Epilepsy Hospital, Sandvika, Norway **Aspects of pharmacological effects of antiepileptic drugs.** Acta Neurologica Scandinavica. 62(Suppl. 80):53-55, 1980.

Aspects of drug disposition that may have implications for studies of the pharmacological effects of antiepileptic drugs are briefly reviewed. The importance of measuring serum levels during chronic treatment of epileptic patients is considered and the occurrence of various influences at different stages such as absorption, protein binding, metabolism and excretion is considered. The risks of drug interactions with concomitant changes in drug serum levels are also mentioned.

004463 Jones, Mortyn T.; Gillham, Brian; Beckford, Ursula; Dornhorst, Anne; Abraham, Ralph R.; Seed, Mary; Wynn, Victor. Sherrington School of Physiology, St. Thomas's Hospital Medical School, London SE1 7EH, England **Effect of treatment with sodium valproate and diazepam on plasma corticotropin in Nelson's syndrome.** Lancet. No. 8231:1179-1181, 1981.

The effects of treatment with sodium valproate and diazepam on plasma adrenocorticotropic hormone (ACTH) was investigated in six patients with Nelson's syndrome. Initial high plasma ACTH concentrations were greatly reduced by 3 to 5 weeks' sodium valproate treatment (with and without diazepam). When treatment was stopped, ACTH concentrations returned to their previous levels. Diazepam did not add significantly to the effects of sodium valproate alone. Three patients reported a decrease in the severity and frequency of headaches while on sodium valproate. In five patients, abnormal skin pigmentation was reduced. It is suggested that sodium valproate raises GABA levels in the hypothalamus and that this is responsible for the reduction of ACTH secretion. The data are consistent with the hypothesis that Nelson's syndrome is a neuroendocrine disease caused by a deficiency in the hypothalamic GABAergic system. 13 references. (Author abstract modified)

004464 Kelly, D. Priory Hospital, Priory Lane, London S.W. 15, England **Clinical review of beta-blockers in anxiety.** Pharmakopsychiatrie Neuro-Psychopharmakologie. 13(5):259-266, 1980.

A clinical review of the use of beta-blockers, such as oxprenolol and propranolol, in treating anxiety is provided. Anxiety consists of: the subjective experience (due to the presence of a situation causing anxiety), avoidance behavior, and autonomic symptoms. Various theories are considered that highlight the psychic and somatic aspects of anxiety. Beta-adrenergic receptor blocking drugs have been used with success in treating everyday stress. The profile of symptoms (such as tachycardia, palpitations, and tremor) which are most likely to respond to beta-blockers are discussed as well as the drug's side-effects. Beta-blockade has been beneficial to patients with the hyperdynamic beta-adrenergic circulatory state, and to those in whom anxiety is associated with autonomic overreaction. The mode of action of beta-blockers is different from that of other anxiolytics, with which they can be combined, and beta-blocking drugs results in a reduction of symptoms, a decrease in pulse rate, and a stabilization of blood pressure and respiration. One of the benefits of beta-adrenergic blockade is that if it can produce symptomatic relief, the subject can as a result lose his anticipatory anxiety without the risk of sedation, habituation, or addiction. 21 references.

004465 Kent, Saul. no address **Assessing L-dopa therapy for Parkinson's.** Geriatrics. 36(4):34, 39-40, 43, 1981.

Treatment of Parkinson's disease with L-dopa or levodopa is examined and evaluated. The history of the use of L-dopa and discovery of means of maximizing the therapy by combination with dopadecarboxylase inhibitors is discussed. Research which showed no difference between sinemet and madopar as combination drugs for such maximized therapy is cited. Parkinson patients show initial gains on L-dopa therapy, but, although long-term studies show patient maintenance above baseline levels, a general decline is seen in patient's condition over time. Reasons for such regression are discussed. 10 references.

004466 Kral, V. A. University of Western Ontario, London, Ontario N6A 5A5, Canada **Psychopharmacotherapy of sexual disorders in the aged.** Modern Problems of Pharmacopsychiatry. 15:174-181, 1980.

Sexual difficulties presented at a geropsychiatric practice by aged men and women are discussed along with implications for psychopharmacotherapy. Sexual disorders in the male include impotence or fear of impending impotence, increases or decreases in sexual activity as a result of mental disorders (endogenous depression, mania, paranoid psychosis), and pedophilia. Female sexual disorders include psychological difficulties relating to menopause, side-effects of psychiatric disorders such as late paranoid psychoses, local and systemic diseases, and masked neurotic depression. It is suggested that psychopharmacological agents have proved of great help in treating sexual disorders in the elderly, but that most of the problems are of psychogenic origin and require psychotherapy as the treatment of choice. Minor tranquilizers or small dosages of antidepressants may accompany such treatment. Antidepressants, major tranquilizers, and lithium carbonate are indicated in cases of major psychiatric illness, and sexual disorders which form part of a dementing process are also easily controlled by drug medication, although the underlying brain process is usually not influenced by it. 13 references.

004467 Kreek, M. J.; Schecter, A. J.; Gutjahr, C. L.; Hecht, M. no address **Methadone use in patients with chronic renal disease.** Drug and Alcohol Dependence. 5:197-205, 1980.

Methadone disposition was studied in three patients receiving chronic methadone treatment and having chronic renal disease: one oliguric patient during peritoneal dialysis, one anuric patient on hemodialysis, and one patient following renal transplantation. In all three patients plasma levels of methadone remained within the desired therapeutic range (0.09 to 0.68mcg/ml) for the doses received (40 to 50mg/day). Elimination of methadone and its metabolites was almost exclusively by the fecal route in the anuric patient. Less than 1% of the daily dose was removed by peritoneal dialysis or hemodialysis. There was no laboratory or clinical evidence for accumulation of either methadone or its metabolites, suggesting that methadone is an appropriate narcotic to use in patients with renal disease. (Journal abstract)

004468 Krzyminski, Stefan. Szpital Psychiatryczny, woj. Zielonogorskie, 66-212 Ciborz, Poland **/Scopolamine in cholinolytic treatment./** Skopolamina w leczeniu cholinolitycznym. Psychiatria Polska. 14(6):635-640, 1980.

An overview of the literature on the use of scopolamine in cholinolytic treatment discusses the application of the drug in psychotherapy since 1949. It has been found that the drug acts negatively on the mechanism of memory and learning abilities. Contraindications for prescribing the drug are: fever; kidney, liver, and lung diseases; and diseases of the stomach and the duodenum. The drug is recommended in all schizophrenic syndromes, maniacal states of differentiated etiology, and paranoia. The use of scopolamine in cholinolytic treatment recommends itself through the simplicity of method, the facility of application, the rarity of complications, and the possibility of quick intervention through the application of physostigmine or galantamine. 22 references.

004469 Lambert, Nadine M.; Sandoval, Jonathan; Sassone, Dana M. University of California, Berkeley, CA 94720 **Prevalence of hyperactivity and related treatments among elementary school children.** In: Gadow, K., Psychosocial aspects of drug treatment for hyperactivity. Boulder, CO, Westview, 1979. 479 p. (p. 249-291).

Results are presented from a survey of a large representative sample of elementary school children in public and private schools to estimate the prevalence of hyperactivity and the incidence of cerebral stimulant use and other treatment modalities for hyperactivity. The ages at which children's problems were first noted and those at which help was initially sought were determined, as well as the number of professionals involved over time in the treatment process. The findings indicate, in contrast to media reports, that large numbers of children are forced to take amphetamines in order to stay in school, that stimulant medication is used rarely, and that it is only one of several possible interventions which are recommended or tried in individual cases. The data also do not support the view that there are more hyperactive children in the 1970s than there were in an earlier period. It is shown that once they are identified as hyperactive, they do not continue to be defined as hyperactive throughout the elementary school years, and that there is a dynamic interaction of the child with his environmental systems which may be modified successfully during treatment for hyperkinesis. 25 references.

004470 Lepage, D. no address **/Child psychopharmacology./** La psychopharmacologie chez l'enfant. Feuillets Psychiatriques de Liege. 12(1-2):27-47, 1979.

The indications for and limits of chemotherapy in child psychiatry are discussed. Chemotherapy has tended to hold a secondary place in child psychiatry because of resistance by doctors and because of the unknown long-term effects of various medicines. The use of chemotherapy implies a certain form of doctor-patient relationship which is best approached phenomenologically. Chemotherapy has been used in children with behavioral problems such as hyperkinesis and functional disorders such as stuttering, enuresis, and tics. It has also been used in cases of mental retardation and psychosis. A complete evaluation of the effectiveness of chemotherapy for children has not yet been made, although it has been found to be definitely effective in treating hyperkinesis and enuresis. 82 references.

004471 Markianos, M.; Hadjikonstantinou, M.; Sfagos, C. Athens University Medical School, Dept. of Psychiatry, Eginition Hospital, Vass. Sophias 74, Greece **Normal plasma dopamine-beta-hydroxylase in non-treated and treated Parkinson patients.** Acta Neurologica Scandinavica. 63(4):267-272, 1981.

Plasma dopamine-beta-hydroxylase activity (DBH) was estimated in 50 drug free Parkinson patients, 30 of whom had never been treated, in 26 patients treated chronically with L-Dopa, and in 44 controls. In disagreement with other reports, no differences were found among the groups and no change in the enzyme activity occurred after treatment, although urinary homovanillic acid increased 20 fold. Low DBH activities could not be attributed to the age of onset or duration of illness, main symptom, depression, autonomic disturbances, or duration of drug treatment. Findings indicate that patients with dementia associated with their illness showed low enzyme activities. 14 references. (Author abstract modified)

004472 Menia, Azzedine; Viaud, Pierre; Baron, Jean-Bernard. Dept. de posturographie, C.H.U., Sainte-Anne, l, rue Cabanis, F-75674 Paris Cedex 14, France **/Dose effect of D.E.A.E. on subjective problems, vertigo, ●depression,● asthenia, cephalalgia, and tonic postural activity problems recorded with statokinesimeter in postconcussional syndrome./** Effet-dose du D.E.A.E. sur les troubles subjectifs vertiges, ●depression●, asthenie, cephalees, et les troubles de l'activite tonique posturale enregistres au statokinesimetre, du syndrome post-commotionnel des traumatises craniens ou cranio-cerv. Psychologie Medicale. 12(10):2255-2263, 1980.

The effects of D.E.A.E. (cerebrol, an acetylcholine precursor) on disturbances resulting from head or whiplash injuries were studied. Twenty patients with such injuries were administered 1.5g or 3g daily of D.E.A.E. for a period of 20 days, and the following disturbances were measured: tonic postural activity problems, vertigo, asthenia, depression, and cephalalgia. Results indicate that the subjects who received 1.5g of D.E.A.E. demonstrated: 43% variation in the statokinesigram, 60% normalization of convergence, 50% normalization of index deviation, 44% improvement of cephalalgia, 50% improvement of vertigo, 48% improvement of asthenia, and 61% improvement of depression. The subjects who received 3g of D.E.A.E. did not show such good results. Minimal lesions of the cholinergic structure in the midbrain were believed to exist in the subjects. The danger of overdose in D.E.A.E. therapy is emphasized. 4 references. (Journal abstract modified)

004473 Morgan, David D.; Robinson, J. D.; Mendenhall, C. L. V.A. Medical Center, 3200 Vine St., Cincinnati, OH 45220 **Clinical pharmacokinetics of chlordiazepoxide in patients with alcoholic hepatitis.** European Journal of Clinical Pharmacology. 19(4):279-285, 1981.

The clearance of chlordiazepoxide (CDX) from the systemic circulation was studied in 20 human Ss, including 15 patients with alcoholic hepatitis and five normal volunteers. The half-life for the appearance of the drug in the systemic circulation was found to increase exponentially with age, and half-life was independent of the presence of alcoholic hepatitis. The metabolic clearance of CDX was significantly lower in the patients than in the normal Ss. Multiple regression analysis of the clearance data of the initial and followup studies show a significant correlation between clearance and the variables age, albumin, and lactate dehydrogenase. This relationship suggests that over a short period of time (where age can be considered constant) changes in albumin and lactate dehydrogenase could be potentially useful in predicting clearance changes in a single individual. 34 references. (Author abstract modified)

004474 no author. Office of Scientific and Health Reports, National Institute of Neurological and Communicative Disorders and Stroke, Bethesda, MD 20205 **Fact sheet: Tourette syndrome.** Bethesda, MD, NIH Pub. No. 80-2163, 1980. 1 p.

Brief information about the Gilles de la Tourette syndrome, a neurological disorder characterized by involuntary muscular movements, uncontrollable vocal sounds, and inappropriate words, is presented. These multiple tics usually begin when the patient is between 2 and 16 years old, and males are afflicted about three times more often than females. The disorder is thought to be caused by a chemical abnormality in the neurotransmitter system by which the brain regulates movement and behavior. Physicians have had some success treating Tourette syndrome patients with haloperidol, also known as Haldol, which suppresses symptoms for many patients, but does not cure the condition. Psychotherapy may help the patient cope with the disorder, and deal with the social and emotional problems that sometimes accompany it. Research being conducted on the disorder, the prognosis for patients, the best educational setting for patients, and the contribution of a voluntary advocacy organization are addressed.

004475 no author. no address **Asthma therapy may undercut kids at school.** Medical World News. 22(3):37, 41, 1981.

Research conducted at the National Jewish Hospital-National Asthma Center on the causes of learning problems in asthmatic children is reported. In a study of 94 asthmatic children ages 9 to 18-years-old, it was found that they did better on standard tests of memory and learning ability as the effects of corticosteroid medication wore off. The findings are regarded as preliminary and future research must compare these results with tests of nonasthmatic children taking steroids for other reasons.

004476 no author. no address **Levodopa: long-term impact on Parkinson's disease.** British Medical Journal. No. 6262:417-418, 1981.

Research concerning the long-term impact of levodopa treatment on Parkinson's disease is reviewed. It is noted that the initial response to levodopa in parkinsonism is markedly favorable in three quarters of patients. However, after 2 years of treatment, the proportion of patients who maintain the initial level of improvement decreases, and complications of the drug steadily increase. Two common problems are dyskinetic movements and on/off swings in performance. Psychiatric complications are the most serious side-effects of levodopa, often necessitating reduction or withdrawal of treatment. Suggestions for reducing side-effects are described. 8 references.

004477 Norman, Trevor R.; Burrows, Graham D.; Bianchi, Geoffery N.; Maguire, Kay P.; Wurm, Jeremy M. E. Dept. of Psychiatry, University of Melbourne, Parkville, Victoria 3052, Australia **Doxepin plasma levels and anxiolytic response.** International Pharmacopsychiatry. 15(4):247-252, 1980.

A study of 23 patients (16 females, 7 males), diagnosed as suffering from anxiety, was carried out using a flexible dosage regimen of doxepin. Hamilton Anxiety Rating Scale scores were assessed on days 0, 7, 14, and 21, and plasma doxepin and desmethyldoxepin concentrations were analyzed from blood samples taken on days 7, 14, and 21 of the trial. No simple correlation between the Hamilton score at day 21 and plasma doxepin concentration (rs=-.099, p greater than .05; n=19) or plasma desmethyldoxepin concentration (rs=.339, p greater than .05; n=19) was obtained. The sum of doxepin and desmethyldoxepin concentrations was not correlated with the Hamilton score at day 21 (rs=.276, p greater than .05; n=19). No correlation of doxepin, desmethyldoxepin, or total concentrations and Hamilton score was found on days 7 or 14 of the trial. 15 references. (Author abstract)

004478 Oosterveld, W. J. Vestibular Dept. of the O-R-L Clinic, Academic Hospital Wilhelmina Gasthuis, Eerste Helmerstraat 104, NL-1054 EG Amsterdam, The Netherlands **The efficacy of piracetam in vertigo: a double-blind study in patients with vertigo of central origin.** Arzneimittel-Forschung. 30(11):1947-1949, 1980.

The clinical efficacy of piracetam was assessed in 22 patients with vertigo of central origin (posttraumatic, psychogenic, ecileptogenic, and hypertensive vertigo were excluded). In a double-blind, switchback design, piracetam reduced symptoms significantly more than did placebo. Ss reported that piracetam affected vertigo, motility disturbances, and vitality, but it did not affect sleep. The effect of piracetam is explained by enhanced control of the cerebral cortex on subordinated vestibular centers. 16 references. (Author abstract modified)

004479 Pechadre, J. C.; Beudin, P.; Devoize, J. L.; Gibert, J. Lab. d'Electroencephalographie Clinique, Hotel-Dieu, Cntr. Hospitalier Regional, B.P. 69, F-63003 Clermont-Ferrand Cedex, France **/Antiepileptic effect of clobazam in Lennox-Gastaut syndrome./** Utilisation du clobazam comme anti-epileptique dans le syndrome de Lennox et Gastaut. Encephale. 7(2):181-190, 1981.

The antiepileptic effect of a special benzodiazepine (1,5-benzodiazepine or clobazam) on a homogeneous sample of 26 patients suffering from the epileptic encephalopathies syndrome was studied. Fifteen days after the beginning of the treatment 15 of the 26 patients (57%) were benefitting from the therapy. More than 1 year later, 10 patients (42%) were still being treated succesfully. The classical exhaustion side-effect from benzodiazepines seems marked at 1 and 6 months. Although watchfulness problems have been found approximately as often as with other benzodiazepines, it was apparent that these side-effects were less severe. The use of clobazam or nitrazepam brought about an improvement in the state of watchfulness. Four patients already receiving polychemotherapy experienced the classical intolerance phenomena. To avoid this problem, clinical surveillance during the first few days is recommended. Care should be taken when clobazam is used in conjunction with strong doses of dipropylacetic acid. 10 references. (Journal abstract modified)

004480 Philipp, M. Neuro-Psychiatrische Abteilung, Universitatsklinik Mainz, Mainz, West Germany **/Psychotic excitement in medical emergencies./** Psychotische Erregtheit im arztlichen Notfalldienst. Medizinische Welt. 30:1436-1438, 1979.

Several legal viewpoints and important pharmacological and psychotherapeutical measures taken in the treatment of psychotic excitement in medical emergencies are discussed. It is suggested that three substances, Neurocil, Haldol, and Valium, are sufficient to control all psychotic conditions of excitement in manias exhibited in katogenic and frenzied hallucinatory schizophrenias, and in exogenic psychoses. (Journal abstract modified)

004481 Rabending, G.; Fischer, W,; Arndt, R.; Bohl, I.; Bruckner, H.-J.; Cammann, G.; Du Chesne, H.-J.; Hobusch, D.; Knaape, H.-H. Nervenklinik des Bereiches Medizin, Ernst-Moritz-Arndt-Universitat, Ellernholzstrasse 1/2, DDR-22 Greifswald, German Democratic Republic **/Treatment of epilepsies with clonazepam (Antelepsin)./** Die Behandlung der Epilepsien mit Clonazepam (Antelepsin). Psychiatrie, Neurologie und Medizinische Psychologie. 31(8):472-482, 1979.

Clonazepam was tested in a total of 179 epileptic patients from eight institutions for a period of 180 days. One hundred sixty nine of the patients previously had been treated unsuccessfully with standard medication. Typical abcences and attacks of West syndrome and Lennox syndrome responded very well to treatment. Favorable effects also were produced in cases of partial or focal epilepsy. The most noticeable side-effect was fatigue, though balance disorders, sensations of dizziness, and muscular weakness also were reported. The frequency of side-effects decreased during the course of therapy. An EEG examination revealed a significant increase in beta-waves and a significant decrease in 3 Hz spike and wave complexes. (Journal abstract modified)

004482 Reisberg, Barry; Ferris, Steven H.; Gershon, Samuel. Geriatric Study and Treatment Program, Dept. of Psychiatry, N.Y.U Medical Center, 550 First Ave., New York, NY 10016 **An overview of pharmacologic treatment of cognitive decline in the aged.** American Journal of Psychiatry. 138(5):593-600, 1981.

The pharmacological treatment of cognitive decline/senile dementia in the aged is discussed, with emphasis on the most widely known substances for alleviating the mental and behavioral symptoms. These substances include: cerebral vasodilators, Gerovital H3, psychostimulants, nootropics, neuropeptides, and neurotransmitters. It is contended that the rationale for the choice of specific agents has shifted as conceptions on the origins of cognitive decline have changed, and that current knowledge indicates that most deterioration occurs independently of arteriosclerotic vascular changes. Substances currently being investigated for their effects on brain electrophysiology, in neurohumoral processes, or on central neurotransmitters, are seen as having promise. 96 references. (Author abstract modified)

004483 Renshaw, D. C. Dept. of Psychiatry, Sexual Dysfunction Clinic, Loyola University of Chicago, 2160 South First Ave., Maywood, IL 60153 **Pharmacotherapy and female sexuality.** Modern Problems of Pharmacopsychiatry. 15:145-157, 1980.

Common forms of female sexual dysfunction are discussed, along with implications for pharmacotherapy and sex therapy. These dysfunctions include: 1) no sexual desire (parasympathetic and higher brain center involvement); 2) primary or secondary anorgasmia (involvement of sympathetic and higher brain centers); 3) dyspareunia (involvement of local or higher centers); and 4) vaginismus (involvement of local or higher centers). The aphrodisiacs and medications that may be useful in enhancing sexual enjoyment or overcoming the dysfunctions include: alcohol, hormones, stimulants, antidepressants, tranquilizers, hypnotics and sedatives, lithium, L-dopa and PCPA, street drugs (marihuana, psychedelics, and narcotics), bromocryptine, and miscellaneous compounds (perfumes and placebos). Suggestions are made for carefully controlled research to investigate a variety of myths that have arisen from the drug culture and it is emphasized that psychological as well as physiological factors should be considered in addition to pharmacotherapy. 21 references.

004484 Schimmel, K. C. Kurklinik Kronprinz, Prien, West Germany **/The treatment of insomnia through homeopathy in a clinic./** Die Behandlung von Schlafstorungen mit Mitteln der Naturheilverfahren in einer Klinik. Physikalische Medizin und Rehabilitation. 20:549-552, 1979.

The treatment of insomnia through homeopathy in a clinic, and various causes of insomnia were examined. Originating from either organic or psychological influences, patients in a clinic were treated both physically and homeopathically. A number of homeopathic drugs are recommended. (Journal abstract modified)

004485 Shapiro, Arthur K.; Shapiro, Elaine. Tic and Tourette Laboratory and Clinic, Mount Sinai Medical School, 1 Gustave Levy Place, New York, NY 10029 **Do stimulants provoke, cause, or exacerbate tics and Tourette syndrome?** Comprehensive Psychiatry. 22(3):265-273, 1981.

The effects of stimulants on tics and Tourette syndrome (TS) were examined in a review of the literature and in a clinical study of patients with tics or TS. The literature provides virtually no evidence that stimulants cause or provoke TS, and inadequate evidence that stimulants in clinically appropriate doses can cause tics in previously asymptomatic patients or exacerbate tics in patients with preexisting tics or TS. Methylphenidate and haloperidol in combination did not increase tics in 42 patients treated for concomitant hyperactivity and TS, nor in most of the 62 TS patients treated with stimulants for various adverse effects of haloperidol. Although tics may increase in some patients at a dose of methylphenidate that simultaneously decreases lethargy, amotivation, and impaired cognition, there is no net gain in the therapeutic to toxic ratio, the effect is short lived, and potential benefits outweigh disadvantages. Observations fail to support the catecholamine hypothesis for tics and TS. 18 references. (Author abstract modified)

004486 Sobczyk, Piotr; Jena, Krystyna; Klir, Teresa. I Klinika Psychiatrii S1. AM, Grunwaldzka 48, 42-700 Lubliniec, Poland **/A comparative evaluation of the efficacy of some therapeutic methods used in delirium tremens./** Porownawcza ocena skutecznosci niektorych metod leczenia majaczenia drzennego. Psychiatria Polska. 14(5):481-486, 1980.

Therapeutic methods used from 1970 to 1971 and from 1977 to 1978 to treat patients with delirium tremens were compared. It was found that only neuroleptics and tranquilizers (chlordiazepoxide, diazepam, and chlormethiazol) were used alone or in combinations. The 3.8% mortality rate was not related to delirium tremens in 50% of the cases, but to severe somatic illnesses. No cases of death were noted in the group of patients receiving chlormethiazol orally, whereas the length of duration of delirium tremens did not appear to depend significantly on the kind of therapeutic method applied. 19 references. (Journal abstract modified)

004487 Sorel, L.; Mechler, L.; Harmant, J. Centre William Lennox, Ottignies, Louvain-la-Neuve, Belgium **/A comparative study of intravenous lorazepam and clonazepam in status epilepticus./** Etude comparative de l'injection intraveineuse de lorazepam et de clonazepam dans les etats de mal epileptique. Acta Neurologica Belgica. 80(6):368-379, 1980.

The use of lorazepam and clonazepam in treating epilepsy was compared. Sixty one Ss received a total of 129 injections of lorazepam (4 to 10mg) and/or clonazepam (1mg). Results show that lorazepam had very favorable results in three quarters of cases and significantly improved the EEG in both primary and secondary generalized epilepsy and in partial epilepsy, although results were somewhat better in secondary generalized epilepsy. Results with clonazepam were approximately the same, but lorazepam showed slightly better results for the EEG, and clonazepam showed slightly better results for clinical factors. The disadvantage of this treatment is decreased awareness with lorazepam (66% of cases) and with clonazepam (74% of cases). 12 references.

004488 Strandjord, R. E.; Aanderud, S.; Myking, O. L.; Johannessen, S. I. Dept. of Neurology, 5016 Haukeland Sykehus, Bergen, Norway **Influence of carbamazepine on serum thyroxine and triiodothyronine in patients with epilepsy.** Acta Neurologica Scandinavica. 63(2):111-121, 1981.

The influence of carbamazepine (CBZ) on serum thyroxine (T4) and triiodothyronine (T3) concentrations of patients with epilepsy was investigated. In 42 patients on long-term CBZ treatment, T4, free T4 index (FT4I), and T3 concentrations in serum were significantly lower than in control Ss, while T3 uptake (T3U) and thyrotropin (TSH) concentrations did not differ between patients and control Ss. In 12 patients starting on CBZ, mean T4, calculated FT4I, and thyroxine binding globulin (TBG) were reduced 1 to 5 months later compared to the initial levels. Thus, CBZ reduced thyroid hormones, TGB, and FT4I. A CBZ-induced increase in conversion and metabolism of the thyroid hormones could explain this effect. The normal T3U values and decreased concentrations of TBG make a competitive CBZ binding to TBG less probable. Although the thyroid hormone levels were found lowered in the patients, all remained clinically euthyroid during the period of the study. 19 references. (Author abstract modified)

004489 Su, C. Y.; Lin, C. S.; Peng, C.; Cheng, C. S.; Loh, H. H.; Li, C. H.; Way, E. L. Taipei Medical College, Taipei, Taiwan **Suppression of morphine abstinence in heroin addicts by beta-endorphin.** Advances in Biochemical Psychopharmacology. 22:503-509, 1980.

The effects of beta-endorphin on morphine abstinence in heroin addicts were assessed under conditions where physical dependence could be established and quantified. The effectiveness of beta-endorphin in attenuating morphine abstinence effects was clearly established on a double-blind basis in four Ss. Although a placebo response was noted, its effects were mild and transient. The potency of beta-endorphin per mg appears comparable to that of morphine, suggesting that on a molar basis, beta-endorphin is at least 10fold more potent than morphine. 11 references.

004490 Sundaram, Yamuna; Valmikinathan, K. Dept. of Neurochemistry, Institute of Neurology, Madras Medical College, Madras 600 003, India **Biochemical studies of human epileptics during anticonvulsant therapy.** Neurology India. 28(4):225-233, 1980.

Metabolic events in Indian epileptics on single doses or combinations of anticonvulsant drugs were investigated. Biochemical screening of 70 epileptics and a group of Ss suffering from neurological disorders indicate a greater incidence of single toxic side-effects than of multiple effects. The incidence of low phosphorus levels was noted following long-term therapy, wheras elevated alkaline phosphatase was observed in short-term therapy. It was also found that phenobarbital, alone, has a pronounced effect on alkaline phosphatase, as compared to dilantin. 13 references. (Author abstract modified)

004491 Suzuki, Jinichi. no address **A clinical evaluation of the effects of a new psychotropic agent, mexazolam (CS-386) on psychosomatic diseases and neurosis: a comparative study with oxazolam, using the double-blind method.** Japanese Journal of Psychosomatic Medicine. 20(4):301-316, 1980.

The effects of a new benzodiazepino oxazole agent, mexazolam, on the mental symptoms of anxiety, tension, and insomnia, and the physical symptoms of dizziness, nausea, chest pain, and dullness of the head were examined. Subjects were 165 patients with either psychosomatic diseases or various kinds of neuroses. The experiment was double-blind using oxazolam as a control. The rate of final global improvement was 75.6% in the cases using mexazolam and 63.8% in cases using oxazolam. Mexazolam showed marked effectiveness against essential hypertension and peptic ulcer and irritable colon and autonomic nervous dystonia. Anxiety neurosis and organ neurosis are considered suitable indications for mexazolam. Side-effects of drowsiness and giddiness were seen more frequently with mexazolam than in the control group. Findings indicate mexazolam is a more effective drug than oxazolam and its usefulness for psychosomatic disease and neurosis is confirmed. (Journal abstract modified)

004492 Wilkie, Frances L. Dept. of Psychiatry and Behavioral Sciences, School of Medicine, University of Washington, Seattle, WA 98195 **Blood pressure and cognitive functioning.** In: Haynes, S., Second conference on the epidemiology of aging. Washington, GPO, NIH Pub. No. 80-969, 1980. 387 p. (p. 105-126).

The effects upon cognitive functioning of antihypertensive drugs and other techniques used to lower blood pressure, differential rates of decline in performance as a function of blood pressure level, and possible underlying mechanisms accounting for the relationship between performance and blood pressure are considered, based on a review of the literature. The three general classes of antihypertensive agents include: diuretics, adrenergic nervous system inhibitors, and vasodilators. Some findings suggest that antihypertensive drugs (vasodilators) may enable hypertensives to maintain their level of cognitive functioning at least well as do their normotensive age peers. Research is cited concerning: the acute effects of lowering blood pressure upon psychomotor response speed using a serial reaction time task, the effect of propranolol on the performance of normotensive young individuals, side-effects of antihypertensive drugs, biofeedback training, and performance on intelligence tests of borderline high and high blood pressure Ss. The underlying mechanisms of cerebral blood flow and psychosocial stress which may affect performance of hypertensives are addressed. A discussion follows the text of the article. 72 references.

004493 Yesavage, Jerome A.; Tinklenberg, Jared R. Veterans Administration Medical Center, Palo Alto, CA 94304 **Single-case study of clinical response to high-dose ergot alkaloid treatment for dementia. Preliminary report.** Gerontology. 27(1,2):76-78, 1981.

A case history of senile dementia of the Alzheimer's type that was treated with dihydroergotoxine mesylate (DEM) is reported. The patient was a 68-year-old male who showed higher order intellectual deficits. There was no evidence of depression on psychological testing or rating scales and the patient failed to respond to trials of antidepressants and phenothiazines. The patient was evaluated frequently on the same outcome measures while drug dosage varied from 0 to 6 mg. Results show a significant drug effect. The optimal dosage of DEM and its mechanism of action are uncertain. It is possible that this patient suffers from a rare type of biochemically based dementia which is specific in its response to DEM. More information is needed on the pathophysiology of dementias and the efficacy of some of the treatments. 7 references.

004494 Zalejski, Stanislaw; Pakszys, Waldemar. Klinika Neurologii CKP WAM, Szaserow 128, 00-909 Warszawa, Poland / **The effect of diphenylhydantoin on EEG curves in epileptics.**/ Wplyw dwufenylhydantoiny (DPH) na zapis EEG u chorych na padaczke. Neurologia i Neurochirurgia Polska. 14(6):617-620, 1980.

Clinical and EEG investigations were performed, and the serum diphenylhydantoin (DPH) level was determined in a homogenous group of 32 hospitalized males aged 20 to 22. Spectrophotometric determination of the drug was found to be useful. The effect of the therapeutic DPH level on regression of abnormal EEG tracings was demonstrated to be statistically significant. Absence of improvement or exacerbation of EEG changes should arouse the suspicion that levels of 10 to 20mcg/ml of serum DPH have not been attained or have been exceeded. 17 references. 004495 Zysset, T.; Rudeberg, A.; Vassella, F.; Kupfer, A.; Bircher, Johannes. Bircher: Dept. of Clinical Pharmacology, University of Berne, Murtenstrasse 35, CH-3010 Berne, Switzerland **Phenytoin therapy for epileptic children: evaluation of salivary and plasma concentrations and of methods of assessing compliance.** Developmental Medicine and Child Neurology. 23(1):66-75, 1981.

Phenytoin concentrations in mixed saliva and parotid saliva from 22 children, from ages 6 to 15 who were receiving phenytoin therapy for epilepsy were compared with plasma levels from blood obtained at the same time. For mixed saliva, the saliva to plasma concentration ratio was .11 plus or minus .04 and in parotid saliva it was .10 plus or minus .06. Compliance was studied in 13 children, each receiving between three and seven different quantities of phenytoin. Clinical judgment about compliance agreed with the two laboratory measures. An analysis of the relationship between plasma concentration and dosage is proposed as a practical method of assessing compliance. 14 references. (Author abstract modified)

12 PSYCHOTOMIMETIC EVALUATION STUDIES

004496 Brooks, Alexander D. Rutgers Law School, 15 Washington Street, Newark, NJ 07102 **The constitutional right to refuse antipsychotic medications.** Bulletin of the American Academy of Psychiatry and Law. 8(2):179-221, 1980.

An overview of the constitutional right to refuse treatment with antipsychotic medication is presented. The legal grounds for the right to refuse are summarized, and issues relating to standards and procedures in medication refusal cases are discussed. Issues which must be addressed in considering whether courts should intervene and establish a limited constitutional right to refuse include: the benefits of medication; the costs of medications in terms of their side-effects, the nature and seriousness of side-effects; patient reactions to side-effects, including psychiatric reactions; the potential for abusive prescription practices; respect for patient autonomy; and patient competence to make treatment decisions. In the Rennie decision, the court recognized the right to refuse medication, but made it subject to two qualifications: the patient is not permitted to refuse if he is incompetent or if he is dangerous to himself or others. Difficulties in the interpretation of these two qualifications are considered, and procedural guidelines for determinations of competency and dangerousness/emergency are outlined. The use of the independent psychiatrist to review medication decisions, the role of the patient advocate, and the least restrictive alternative doctrine are discussed. The psychiatric reaction to the right to refuse medication and arguments against such a right also are considered. 116 references.

004497 Hofmann, Albert. no address **LSD: my problem child.** New York, McGraw-Hill, 1980. 210 p. $9.95.

The story of the discovery of lysergic acid diethylamide, LSD-25, and of events following its discovery are related by its originator. The psychotherapeutic uses of LSD are delineated, but its discoverer appears to be more interested in its use in terminal illness and as a stimulant to creativity. Accounts are provided of meetings with Timothy Leary, and of contact with Aldous Huxley who was injected with LSD in his dying hours. It is argued that what is needed today is a fundamental reexperience of the unity of all living things. The potential of LSD is posited, and the drug is envisioned as a sacred drug which, if used under suitable conditions, in medical practice and in conjunction with medication, might in the future make a wonder child of the problem child.

13 MECHANISM OF ACTION: PHYSIOLOGICAL, BIOCHEMICAL AND PHARMACOLOGICAL

004498 Adler, David S. University Hospital (H-765), University of California Medical Center, San Diego, CA 92103 **Use of plasma concentration determinations.** Clinical Toxicology. 14(2):147-150, 1979.

The use of phenytoin plasma levels in establishing the therapeutic regimen, adjusting therapy in the presence of drugs that may influence phenytoin disposition, assessing compliance, and validating suspected toxicity is discussed. Special requirements of patients with end stage renal disease or low albumin diseases are considered. The importance of the time of sampling is explained, and it is suggested that samples should generally be drawn at the end of the dosing interval, just prior to the next dose. 8 references.

004499 Arato, Mihaly. National Institute for Nervous and Mental Diseases, Budapest Pf 1, H-1281, Hungary **Promethazine and diazepam potentiate the haloperidol induced prolactin responses.** Communications in Psychopharmacology. 4(4):317-322, 1980.

The effect of promethazone, diazepam, and diethazine on haloperidol-induced prolactin response was investigated in a single dose study. These drugs are generally used for treatment of drug-induced extrapyramidal symptoms; i.e., they can anatgonize the effect of neuroleptics on nigrostriatal dopaminergic systems. Promethazine and diazepam significantly enhanced the haloperidol induced prolactin secretion. According to these results, these drugs potentiate the effect of haloperidol on hypothalamic/pituitary dopaminergic systems. This finding supports the view that differential regulatory mechanisms exist for various dopaminergic regions and/or for the regional specificity of the actions of promethazine and diazepam. Diethazine had no effect on haloperidol induced prolactin secretion. 14 references. (Author abstract modified)

004500 Becker, D.; Creutzfeldt, O. D.; Schwibbe, M.; Wuttke, W. Wuttke: Dept. of Neurobiology, Max-Planck-Institute for Biophysical Chemistry, Am Fassberg, D-34 Gottingen Nikolausberg, West Germany **Electrophysiological and psychological changes induced by steroid hormones in men and women.** Acta Psychiatrica Belgica. 80(5):674-697, 1980.

The effects of hormonal changes during the menstrual cycle and of oral contraceptives on the EEG, heartrate, and a number of performance tasks were investigated in 16 female subjects. Powerspectral analysis in the EEG revealed significantly increased alpha frequencies and heartrates during the luteal phase of the menstrual cycle whereas the mean theta frequency and power decreased. A number of psychological test variables, such as reaction time to a tone, to a flickering light, and to a color/tone sequence and the time to solve simple arithmetic problems were shorter at the periovulatory time. Another minimum was reached during the perimenstrual phase. The flicker/fusion frequency was higher during these two periods. No such effects were observed when the same Ss were treated with oral contraceptives. It is concluded that the phenomena observed during the luteal phase of the cycle may be the expression of a slight general arousal effect, possibly mediated by progesterone via the noradrenergic system. Results of a subsequent double-blind study are also reported in which 30 males were treated with a gestagenic compound, an estrogenic compound, an androgenic substance, or with placebo. Results show that only treatment with the progestational compound produced significant changes in the EEG and the performance tests. 15 references. (Author abstract modified)

004501 Boulenger, J.-Ph.; Zarifian, E. Zarifian: Centre Hospitalier Sainte-Anne, 1, rue Cabanis, F-75674 Paris Cedex 14, France **/Neuroleptic-tricyclic antidepressant combination: pharmacological aspects and therapeutic interest./** L'association neuroleptique-antidepresseur tricyclique: aspects pharmacologiques et interet therapeutique. Encephale. 7(1):5-28, 1981.

The use of neuroleptics in combination with tricyclic antidepressants is reviewed. Although different psychotropic drugs are frequently prescribed simultaneously, only a few studies have been done to verify the usefulness of this technique. Neuroleptics and tricyclic antidepressants appear to have opposite pharmacological and biochemical properties. However, controlled clinical trials have not demonstrated therapeutic antagonism between these two types of drugs. On the other hand, although pharmacokinetic data show that neuroleptics decrease the metabolism of tricyclic antidepressants, the therapeutic advantage of combining them has not been proved. Methodological issues raised by these studies are also discussed. 114 references. (Journal abstract modified)

004502 Bowers, Malcolm B., Jr.; Heninger, George R. Dept. of Psychiatry, Yale University School of Medicine, 25 Park St., New Haven, CT 06519 **Cerebrospinal fluid homovanillic acid patterns during neuroleptic treatment. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-28216, 1980. 14 p.

A group of 24 psychotic patients were studied at two points during continuous neuroleptic treatment. Thirteen patients showed a tolerance pattern with respect to cerebrospinal homovanillic acid following probenecid, while 11 showed a nontolerance pattern. Patients who developed tolerance had significantly fewer symptoms and Parkinsonian side-effects at about the fifth week of treatment. The findings have implications for other studies which indicate that tolerance patterns reflect a decrease in dopamine metabolites during chronic neuroleptic treatment, and that there may be regional brain differences in the development of this pattern during chronic treatment. 24 references. (Author abstract modified)

004503 Buvat, J.; Racadot, A.; Buvat-Herbaut, M.; Lemaire, A.; Gossati, P. Service d'Endocrinologie et de Diabetologie, Centre Hospitalier Universitaire de Lille, Ave. du Professeur Laguesse, F-59037 Lille, France **/Basal prolactinaemia and responses to TRH and sulpiride in different categories of male sexual dysfunctions./** Prolactinemie basale et reponses au TRH et au sulpiride dans diverses categories de dysfonctions sexuelles masculines. Acta Psychiatrica Belgica. 80(4):487-493, 1980.

Serum testosterone levels and serum prolactin levels in 435 sexually dysfunctioning males were studied. Prolactin response to 200mcg of thyrotropin releasing hormone (TRH) was studied in 41 cases, and prolactin response to sulpiride was studied in 38 cases. Results show that serum prolactin levels were excessively high in three cases of impotence and one case of anejaculation; prolactin was mildly increased in 3.7% of the cases of impotence and 17% of the cases of premature ejaculation. Mean prolactin level was lower in anejaculatory and impotent males than in normal males. Testosterone was lower in anejaculatory males than in normal males, impotent males, and premature ejaculators. The area under the curve for prolactin response to TRH was lower in anejaculatory and impotent males than in normal males and premature ejaculators. Prolactin response to sulpiride showed no difference from that of normal males. 10 references. (Journal abstract modified)

004504 Chasseaud, L. F.; Taylor, T.; Brodie, R. R. Dept. of Metabolism and Pharmacokinetics, Huntingdon Research Center, Huntingdon, England **Prazepam metabolism in female**

subjects. Journal of Pharmacy and Pharmacology. 32(9):652-653, 1980.

The metabolism of prazepam was studied in fasting female volunteers. The peak mean plasma concentration of the metabolite N-desalkylprazepam occurred 12 hours after drug administration, but plasma concentrations remained high for 5 to 24 hours and declined with a mean half-life of 107 hours. Neither prazepam nor N-desalkylprazepam were detected in 24 hour urine or any of the Ss above a detection limit of 2ng/ml; 3-hydroxyprazepam and oxazepam were present, almost totally conjugated. Results suggest that the major metabolic route of prazepam, like that of diazepam, is N-dealkylation followed by hydroxylation. 11 references.

004505 Dry, J.; Ardaillou, R.; Pradalier, A.; Isaac, R.; Piquet, V. Hopital Rothschild, Service de Medecine interne, Boulevard de Picpus 33, F-75012 Paris, France **/Hormonal stimulation after injection of thyrotrophin releasing factor (TRF) and 1-24 ACTH in patients following chronic treatment with neuroleptics: preliminary study./** Resultats des tests de stimulation par le facteur de liberation de la thyrostimuline (TRF) et par le fragment 1-24 de l'hormone corticotrope chez des sujets traites au long cours par des neuroleptiques: etude preliminaire. Acta Psychiatrica Belgica. 80(5):607-618, 1980.

Fifteen patients on neuroleptic treatment (haloperidol or phenothiazines) and 11 control patients were given thyrotropin releasing hormone (TRH) 250mcg and 1-24 ACTH. Thyroid stimulating hormone (TSH), T3, thyroxin, FT4, prolactin (PRL), and cortisol were measured. Before TRH injection, at baseline, TSH was higher and T3 was lower in the neuroleptics treated group than in the control group. These results suggest the occurrence of a biological hypothyroidism in the group with neuroleptics. PRL was also significantly increased. After TRH injection the response was not significantly different between the groups. Results show cortisol level was lower at baseline and after 1-24 ACTH injections in the groups with neuroleptics. 22 references. (Author abstract modified)

004506 Esler, Murray; Jackman, Graham; Leonard, Paul; Skews, Helen; Bobik, Alex; Korner, Paul. Baker Medical Research Institute, Commercial Road, Prahran 3181, Victoria, Australia **Effect of norepinephrine uptake blockers on norepinephrine kinetics.** Clinical Pharmacology and Therapeutics. 29(1):12-20, 1981.

Norepinephrine (NE) kinetics were studied in normal male Ss after a single 125mg oral dose of desipramine, a neuronal NE uptake blocker. Desipramine reduced plasma NE clearance by about 20% and reduced the rate of spillover of NE to plasma. Disappearance of tritiated NE from plasma after infusion to steady-state was biexponential, with half-times of 2.0 minutes for the rapid removal phase and 34 minutes for the second exponential. The half-time of the rapid removal phase was prolonged by desipramine. In patients with sympathetic nerves damaged by disease (idiopathic peripheral autonomic insufficiency), plasma NE clearance was slowed and the half-time of the rapid removal phase was lengthened. The selective extraneuronal NE uptake blocker, cortisol (500mg i.v.), had no effect in normal Ss on plasma NE clearance or rapid removal half-time. 31 references. (Author abstract modified)

004507 Fornaro, P.; Castrogiovanni, P.; Perossini, M. Clin. Psichiat., University of Pisa, Pisa, Italy **Electroretinography (ERG) as a tool of investigation in human psychopharmacology. Electroretinographic changes induced by a combination of carbi-dopa and levo-dopa.** Acta Neurologica. 2:293-299, 1980.

The electroretinographic (ERG) effects of a combination of levo-DOPA (250mg) and carbi-DOPA (25mg) given per os to 10 healthy male volunteers were studied. A significant decrease in the implicit time of the b-wave was observed 1 and 2 hours after drug administration, whereas an increase in the b-wave amplitude occurred at the same observation times. This increase appeared significant if compared with changes which occurred in a control group treated with diazepam 1 and 2 hours after drug administration. It is concluded that these results may be attributed to a facilitating effect on dopaminergic transmission in the retina. This hypothesis was strengthened by the finding in a previous study that haloperidol, which inhibits such transmission, decreases the b-wave amplitude. (Journal abstract)

004508 Forsman, Lennart. Dept. of Psychology, University of Stockholm, Box 6706, S-113 85 Stockholm, Sweden **Consistency in catecholamine excretion in laboratory and natural settings: correlational and variance components analyses.** Reports from the Department of Psychology, No. 556. Stockholm, University of Stockholm, 1979. 16 p.

Data from 44 healthy male Ss participating in two studies were used to evaluate the consistency of catecholamine excretion as well as changes in the excretion rate across different laboratory and natural situations spaced at intervals of a maximum of 3 months. Correlational analyses showed high consistency of adrenaline excretion under laboratory conditions standardized with regard to degree and kind of activity, regardless of the interval at which measures were taken. For noradrenaline, excretion consistency tended to decrease with increasing time interval. In nonstandardized natural situations the consistency of both amines was rather low. The analysis of various components showed that when situations were similar in terms of degree and kind of activity, the variance due to individuals was large in relation to that due to situations or subject/situation interaction. The variance due to situations was relatively low regardless of the subjects' activity level, whereas variance due to subject/situation interaction increased as the total variance component increased. 21 references. (Author abstract)

004509 Gawel, M. J.; Glover, Vivette; Burkitt, M.; Sandler, M.; Rose, F. Clifford. Dept. of Neurology, Charing Cross Hospital Medical School, London W6 8RF, England **The specific activity of platelet monoamine oxidase varies with platelet count during severe exercise and noradrenaline infusion.** Psychopharmacology. 72(3):275-277, 1981.

The effects of noradrenergic stimulation on platelet count and platelet monoamine oxidase (MAO) activity were studied in healthy male volunteers. Platelet count rose and then fell during severe exercise or noradrenaline infusion. Platelet MAO activity per unit protein rose and fell in parallel, and the correlation with platelet count was highly significant. The increase in specific MAO activity may be due to the release of a population of platelets with higher specific activity and the subsequent decrease in MAO activity may be due to their removal. 22 references. (Author abstract modified)

004510 Gloveli, T. B. Institut fiziologii im. I. S. Beritashvili, AN GruzSSR, Tbilisi, USSR **/The role of reticuloseptal inputs in the formation of different types of sensory reactions of the hippocampal neurons./** Rol' retikulo-septal'nogo vkhoda v formirovanii raznykh tipov sensornykh reaktsiy neyronov gippokampa. Soobshcheniya Akademii Nauk Gruzinskoy SSR. 100(3):661-664, 1980.

The role of reticulo septal inputs in the formation of various types of sensory reactions of the hippocampal neurons was studied in unanesthetized immobilized cats. The interruption of reticulo septal input by means of electrocoagulation of the medial septal nuclei, as well as by the intravenous injection of chlorpromazine, caused a depression of hippocampal electrical activity (theta-rhythm) and tonic reactions of single neurons. Unlike the effect of electrocoagulation of the medial septal nuclei, intravenous chlorpromazine also caused considerable reduction of spontaneous activity and complete depression of specific neural reactions. Thus, chlorpromazine is thought to have a direct influence on other brain structures, including the hippocampus. 15 references. (Journal abstract modified)

004511 Hanin, I.; Mallinger, A. G.; Kopp, U.; Himmelhoch, J. M.; Neil, J. F. Dept. of Psychiatry, Western Psychiatric Institute and Clinic, University of Pittsburgh School of Medicine, Pittsburgh, PA 15261 **Mechanism of lithium-included elevation in red blood cell choline content: an in vitro analysis.** Communications in Psychopharmacology. 4(5):345-355, 1980.

The mechanisms of lithium induced elevation in red blood cell choline (Ch) content were investigated in vitro using gas chromatographic mass spectrometry combined with stable isotope methodology. The influx of deuterated Ch, and simultaneous efflux of endogenous Ch were measured in washed red blood cells incubated in vitro, and the influence of various parameters on these fluxes was investigated. The effect of lithium on red blood cell Ch levels is gradual, and ultimately irreversible. Its primary site of action appears to be at the level of red blood cell membrane, via inhibition of Ch transport both into and out of the red blood cell. The elevation in red blood cell Ch of patients chronically treated with lithium may result from a continuous breakdown of membrane phospholipids to release free Ch, and a concurrent irreversible inhibition of efflux of the accumulated Ch. The potential significance of these findings is discussed. 42 references. (Author abstract modified)

004512 Herning, R. I.; Rosenbaum, R.; Jones, R. T. Langley Porter Neuropsychiatric Institute, University of California Medical Center, San Francisco, CA **Event-related potential changes with morphine in non-addicted humans.** In: Barber, C., Evoked potentials. Baltimore, MD, University Park Press, 1980. 614 p. (p. 531-534).

To determine whether opiates may have effects on cognitive, event-related potential components and the contingent negative variation (CNV), rather than on primary sensory components, 17 subjects with no history of illicit opiate use, no recent medical opiate use, and minimal other drug use participated in a 2 day experiment. On one day they received an injection of morphine sulphate and on the other day they received a saline injection. At least 1 day intervened between the 2 test days. Both the P300 and CNV effect occurred at 30 minutes after the morphine injection and no changes were seen thereafter. The effect of morphine on pupil diameter and subjective reports peaked at 60 and 90 minutes. It would appear that many psychoactive, abused drugs reduce the P300. The correlates of whatever processes the P300 represents may be what the drug user seeks to decrease. The increased CNV following 0.14mg/kg of morphine in subjects who have abnormal MMPI profiles requires further systematic study. 6 references.

004513 Herrick, C. E.; Harding, G. F. A. Neuropsychology Unit, Ophthalmic Optics Dept., University of Aston, Birmingham, England **The effect of sodium valproate on the photosensitive VEP.** In: Barber, C., Evoked potentials. Baltimore, MD, University Park Press, 1980. 614 p. (p. 539-547).

Two experiments were conducted to determine the effect of stimulus parameters on the photosensitive visual evoked potential (VEP) and whether the therapeutic value of sodium valproate on general convulsive responses similarly affected this evoked potential. Sodium valproate has been found to improve significantly generalized spontaneous and photically induced abnormalities, while localized, occipital abnormality was found to be particularly resistant to treatment. It is proposed that sodium valproate operates on nonspecific visual pathways other than the specific primary projection. 41 references.

004514 Hollister, L. E.; Jenden, D. J.; DoAmaral, J. R.; Barchas, J. D.; Davis, K. L.; Berger, P. A. V.A. Hospital, 3801 Miranda Ave., Palo Alto, CA 94304 **Pharmacokinetic studies with choline chloride: a preliminary report.** In: Davis, K., Brain acetylcholine and neuropsychiatric disease. New York, Plenum Press, 1979. (p. 533-539).

An attempt was made to determine the dosage of choline chloride that produced the highest sustained plasma choline concentration in a series of acute and chronic studies. Nine patients received an oral dose of 5g of choline chloride daily in one study. In the other study, eight patients received initially 1g of choline chloride four times per day for a total of a 4g per day increment, every 3 days. The results indicate that the oral administration of choline chloride increases plasma choline levels in a dose dependent manner. Data from single dose studies suggest that plasma choline levels do not start to fall off until 6 hours after administration. This offers a rationale for giving choline chloride in four oral doses. After chronic treatment, plasma choline levels diminished much more gradually than after the acute ingestion. Thus, it is suggested that after a period of treatment longer intervals between choline chloride doses might be possible, and a sustained elevation in plasma choline maintained. 20 references.

The effect of methionine on the Xq fragile site.** Research Report, NIMH Grant 1R03-MH-33321, 1980. 15 p.

The Xq-fragile site found in males having nonspecific X-linked mental retardation was studied by varying the chemical and physical parameters of leukocyte cultures. Methionine was shown to be required for marker expression in both medium 199 and MEM. Banding studies indicated that methionine does not function as a stabilizing factor for the fragile site on Xq. 17 references. (Author abstract)

004516 Humpel, Michael; Nieuweboer, Bob; Milius, Waltraud; Hanke, Heidrun; Wendt, Hans. Dept. Biodynamik, Schering AG, Mullerstrasse 170-178, D-1000 Berlin 65, West Germany **Kinetics and biotransformation of lormetazepam: II. Radioimmunologic determinations in plasma and urine of young and elderly subjects: first-pass effect.** Clinical Pharmacology and Therapeutics. 28(5):673-679, 1980.

The kinetics and biotransformation of a new benzodiazepine, lormetazepam, were investigated in young and elderly human Ss using a newly developed specific and sensitive radioimmunoassay. After intravenous injection, lormetazepam levels in plasma fell in three (alpha, beta, and gamma) dispositional phases, two of them (alpha, beta) mainly reflecting different distribution processes. The terminal (gamma) phase correlated well with the rate of renal elimination of glucuronides. Oral doses were completely absorbed with widely varying absorption half-lives amounting to an average of 0.67 hours. Dose dependent maximum plasma levels were reached in about 2 hours. Lormetazepam undergoes first pass metabolism of about 20% of an oral dose. Total clearance was in the range of 20ml/minute. There was a trend toward slower terminal disposition phase in elderly Ss. In younger Ss, the terminal phase absorption half-life was about 10 hours. Lormetazepam glucuronide peak plasma levels were reached by about 6 hours. Thereafter, the level fell in one (elimination) phase, with absorption half-life of 12 hours in young Ss and with a significantly different absorption half-life of

20 hours in the elderly Ss. Renal clearance was calculated as about 30 ml to 40 ml and did not show an age dependent difference. Recovery of lormetazepam glucuronide with urine amounted to 70% to 80% of the dose during 72 hours after intravenous injection in both age groups. 25 refernces. (Author abstract modified)

004517 Inotsume, Nobuo; Nakano, Masahiro. Pharmaceutical Division, Sumitomo Chemical Co., Osaka, Japan **Reversible ring-opening reactions of nimetazepam and nitrazepam in acidic media at body temperature.** Journal of Pharmaceutical Sciences. 69(11):1331-1334, 1980.

Hydrolytic reactions of nimetazepam and nitrazepam in acidic solution at body temperature were studied spectrophotometrically. The open ring compounds produced by hydrolysis were in equilibrium with the corresponding closed ring compounds (protonated nimetazepam and nitrazepam). Forward reaction rate constants of both drugs were greater than the rate constant of diazepam. In nimetazepam, the forward reaction rate constant was smaller than the reverse reaction rate constant; in nitrazepam, the reverse reaction rate constant was much smaller than the forward reaction rate constant, and possible amide bond cleavage was indicated. The activation energies of the forward and reverse reactions of nimetazepam and the forward reaction of nitrazepam were calculated from Arrhenius type plots, whereas no clear temperture dependency was observed in the reverse reaction rate constant of nitrazepam. The effect of Ph on these reactions also was examined. In addition the pKa values of nimetazepam and nitrazepam were calculated to be 2.53 and 2.77, respectively. 11 references. (Author abstract)

004518 Ishigooka, Jun; Tanaka, Kunio; Suzuki, Yasuyo; Katori, Makoto; Miura, Sadanori. Dept. of Psychiatry, Kitasato University School of Medicine, 1-15-1 Kitasato, Sagamihara 228, Kanagawa, Japan **Selective inhibitory effects of chlorpromazine and imipramine on platelet aggregation.** International Pharmacopsychiatry. 15(5):270-280, 1980.

The effects of chlorpromazine (CPZ) and imipramine (IMP) on platelet aggregation in vitro were investigated. Both CPZ and IMP inhibited epinephrine induced secondary aggregation in a dose dependent fashion and changed adenosine diphosphate (ADP) induced irreversible aggregation into a reversible response in human platelets. With rabbit platelets, CPZ (0.6 to 20mcM) and IMP (60 to 60mcM) showed a selective inhibitory effect on the aggregation by collagen, whereas, even at 200mcM, this effect was found neither in arachidonic acid (AA) induced aggregation nor in an ADP induced one. CPZ and IMP also inhibited human platelet aggregations induced by collagen, but not by AA. The antiaggregating action of CPZ and IMP was thought to be due to their inhibitory effects of AA liberation from platelet membranes, suggesting that they might inhibit participating enzymes (phospholipase A2, C, or lipase) or the process of the activation of the enzymes. 20 references. 004519 Itil, Turan M.; Soldatos, Constantin; Bozak, M.; Ramadanoglu, Emel; Dayican, Gulay; Morgan, V.; Menon, G. N. Division of Biological Psychiatry, N.Y. Medical College, New York, NY **CNS effects of ISF-2522, a new nootropic (a phase I safety and CNS efficacy study with quantitative pharmaco-EEG and pharmaco-psychology).** Current Therapeutic Research. 26(5):525-538, 1979.

The CNS effects of ISF-2522, a new nootropic, were investigated. A single rising dose tolerance study in humans indicated that this compound is safe up to 2400mg as a single dose. Quantitative pharmaco EEG data demonstrated significant CNS effects of ISF-2522 in humans as determined by the discrimination from placebo and by the linear time dose related effects. Computer data base has classified ISF-2522 as a psychostimulant, similar to dextroamphetamine and piracetam. Because of the similarities of the CNS effects with piracetam, psychostimulant nootropic properties of ISF-2522 were predicted. The CNS effective daily dose of ISF-2522 was estimated as 1200 to 2400mg. 25 references. (Author abstract modified)

004520 Jenden, D. J.; Jope, R. S.; Fraser, S. L. Dept. of Pharmacology, University of California, School of Medicine, Los Angeles, CA 90024 **A mechanism for the accumulation of choline in erythrocytes during treatment with lithium.** Communications in Psychopharmacology. 4(5):339-344, 1980.

The kinetics of isotopic exchange of choline (Ch) between erythrocytes and the medium in which they are suspended were examined during a 4 hour incubation at 37 degrees C using (2H4)Ch in the medium at a concentration similar to that in plasma. (2H4)Ch and (2HO)Ch in erythrocytes and medium were measured by gas chromatography mass spectrometry. A steady-state was experimentally verified. The kinetics of exchange closely obeyed a simple model from which it is possible to estimate influx and efflux of Ch in three normal human Ss. In all Ss there was a substantial net efflux of Ch, representing Ch released from phospholipids within the cells. It is proposed that the rise in erythrocyte Ch levels during treatment with lithium is due to the inability of Ch to escape as fast as it is released when the transport system is inhibited by lithium. 10 references. (Author abstract modified)

004521 Jope, Richard S.; Jenden, Donald J.; Ehrlich, Barbara E.; Diamond, Jared M.; Gosenfeld, Lawrence F. Dept. of Pharmacology, School of Medicine, University of California, Los Angeles, CA 90024 **Erythrocyte choline concentrations are elevated in manic patients.** Proceedings of the National Academy of Sciences of the United States. 77(10):38-41, 1980.

Observations that changes in the metabolism and membrane transport of choline may be important in certain neuropsychiatric diseases were investigated. It was found that the intracellular choline concentration in erythrocytes of manic patients who never had lithium therapy was three times the value for normal human Ss. Lithium therapy increased this value to 11 times normal, and the increase began within the first 2 days of lithium therapy. Plasma choline concentration was normal in untreated manic patients and did not change during lithium therapy. 14 references. (Author abstract modified)

004522 Kapetanovic, Izet M.; Kupferberg, Harvey J.; Porter, Roger J.; Theodore, William; Schulman, Elliott; Penry, J. Kiffin. Kupferberg: Epilepsy Branch, Bldg. 36, Rm. 5D-21, NIH, Bethesda, MD 20205 **Mechanism of valproate-phenobarbital interaction in epileptic patients.** Clinical Pharmacology and Therapeutics. 29(4):480-486, 1981.

The effects of valproate on the biodisposition of phenobarbital were examined. In epileptic patients on a phenobarbital regimen, the addition of valproate led to elevated plasma phenobarbital levels and increased urinary output of unchanged phenobarbital. There was no effect on urinary pH. The increase in plasma phenobarbital was paralleled by a prolonged phenobarbital elimination half-life, and the decrease in plasma phenobarbital clearance was paralleled by a decrease in phenobarbital elimination rate constant. Results suggest that valproate elevates plasma phenobarbital level by inhibiting phenobarbital metabolism. 15 references. (Author abstract modified)

004523 Killian, Grant Aram. University of Chicago **The effects of psychotropic medication on cognitive control measures. (Ph.D.**

dissertation). Dissertation Abstracts International. 42(1):377-B, 1981. (Not available from Univ. Microfilms), 1981.

To investigate the effects of psychotropic medication on cognitive control measures, a battery of cognitive control measures were administered to 34 schizophrenic and 26 depressed, nonmedicated inpatients after a drug free period. These experimental groups were then given appropriate psychotropic medication and 4 weeks later were retested for a second time. Results were compared with those for drug free normals and medicated schizophrenics and depressed inpatients. No significant differences were found as a function of the drug condition on cognitive control measures. Although all groups showed some improvement on all the individual cognitive measures, neither of the two experimental groups improved more than the comparison groups. Overall, depressed patients changed the most, schizophrenic patients changed the least, and normal subjects were in between. It is concluded that cognitive control measures in schizophrenia and depression seem recalcitrant to available psychotropic agents. (Journal abstract modified)

004524 Klotz, U.; Kangas, L.; Kanto, J. Dr. Margarete-Fischer-Bosch-Institut fur Klinische Pharmakologie, Auerbachstr. 112, D-7000 Stuttgart 50, West Germany **Clinical pharmacokinetics of benzodiazepines.** Progress in Pharmacology. 3(3):1-72, 1980.

Pharmacokinetic characteristics of clinically useful benzodiazepines are reviewed. Chlordiazepoxide, diazepam, desmethyldiazepam/clorazepate, oxazepam, lorazepam, medazepam, clonazepam, flunitrazepam, flurazepam, and nitrazepam are extensively metabolized, including dealkylation, hydroxylation, reduction, and conjugation reactions. With the exception of oxazepam and lorazepam, the metabolites are biologically active and will accumulate during multiple dosing with the parent drug. Absorption after oral administration is rapid and almost complete. With the exception of flurazepam, these drugs are highly bound to plasma proteins. Disposition can be impaired in elderly patients and in patients with liver disease. 471 references. (Author abstract modified)

004525 Klotz, U.; Schweizer, C. Dr. Margarete Fischer-Bosch-Institute of Clinical Pharmacology, Auerbachstr. 112, D-7000 Stuttgart 50, West Germany **Valproic acid in childhood epilepsy: anticonvulsive efficacy in relation to its plasma levels.** International Journal of Clinical Pharmacology, Therapy and Toxicology. 18(10):461-465, 1980.

Plasma levels of valproic acid were monitored for 2 years in 90 epileptic children. Of 34 patients treated with sodium valproate alone, complete seizure control was achieved in 82% with a mean plasma level of 65.1mcg/ml; the 6 patients whose seizures recurred appeared to be resistant to sodium valproate therapy, since their plasma levels were significantly higher (91.7mcg/ml) than those of the controlled patients. Of 14 children treated with valproate and phenobarbital, seizures were completely controlled in 64% with plasma levels of 54.6mcg/ml; valproate concentrations were lower (33.8mcg/ml) in the uncontrolled patients. Of 20 children treated with more than two anticonvulsants, complete seizure control was achieved in only 35%, with valproate plasma concentrations of 63.1mcg/ml. These findings suggest that 40 to 90mcg/ml may be an appropriate therapeutic range for sodium valproate. 16 references. (Author abstract modified)

004526 Krupenina, L. B.; Vinogradov, M. V. Lab. biokhimii i otdel psikhofarmakologii, Moskovskiy NII psikhiatrii, Ministerstvo zdravookhraneniya RSFSR, Moskva, USSR **/The state of the adrenergic and cholinergic systems in schizophrenic patients during psychpharmacotherapy./** Sostoyaniye adrenergicheskoy i kholinergicheskoy sistem u bol'nykh shizofreniyey v protsesse psikhofarmakoterapii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(5):737-745, 1980.

The state of catecholamine and acetylcholine metabolism in patients with recurrent, progressive attack like, and continuous forms of schizophrenia was studied during treatment with neuroleptics, and also in a control group. Dosages, duration of administration, and the course of the mental state were taken into consideration. In the schizophrenic Ss this system was different from that of the normal Ss; there was a correlation between the type of changes in catecholamine metabolism and the form of schizophrenia, prior to and during pharmacotherapy. 20 references. (Journal abstract modified)

004527 Kukwa, L. Ringstr. 13, D-8130 Starnberg, West Germany **/Pharmacological peculiarities of a benzodiazepine/ataractic drug and its therapeutic relevance: the special status of clorazepate dipotassium (Tranxilium)./** Pharmakologische Besonderheiten eines Benzodiazepin-Ataraktikums und deren therapeutische Relevanz: die Sonderstellung von Dikaliumclorazepat. Psycho: Neurologie und Psychiatrie fur die Praxis. 6(1):20,22,24,26-27, 1980.

The ataractic drug clorazepate dipotassium was examined for its therapeutic qualities. It caused a rapid and complete hydrolytic change in the stomach and intestines into N-desmethyldiazepam, a potent anxiolytic drug. Metabolic changes occurred under normal physiological conditions in the stomach and intestines. It is concluded that clorazepate dipotassium is a very useful drug for treating psychovegetative disturbances; it has few side-effects. It can be recommended for all psychic disturbances, but in particular it assures sound sleep and elevates the general mood. 14 references.

004528 Kuznetsova, V. I. Lab. patologicheskoy anatomiya TsNS, Moskovskiy NII psikhiatrii, Ministerstvo zdravookhraneniya RSFSR, Moskva, USSR **/Peculiarities of the cerebral pathomorphology of patients with schizophrenia treated with psychotropic drugs (pharmacological pathomorphosis)./** Osobennosti patomorfologii golovnogo mozga bol'nykh shizofreniyey lechennykh psikhotropnymi preparatami (k voprosu o lekarstvennom patomorfoze). Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(7):929-933, 1979.

Peculiarities of the pathomorphology of the brain of patients with schizophrenia who had been treated with psychotropic drugs were studied histologically. Results show that the use of psychopharmaceuticals to treat schizophrenic patients does not remove the characteristic neuronal pathology (shrinkage, atrophy, lipofuscin dystrophy, and cytolysis), but increases the metabolic processes in the intact nervous cells (increases the volume and basophilia in the cytoplasm, and enlarges the nuclei and nucleoli) and increases the glial activity (increases the amount of perineuronal satellites, general glia, and the glioneuronal index). 17 references. (Journal abstract modified)

004529 Lacko, L.; Wittke, B.; Lacko, I. Gustav-Embden-Zentrum der biologischen Chemie, Theodor-Stein-Kai 7, D-6000 Frankfurt/Main 70, West Germany **Interaction of chlorpromazine with the transport system of glucose in human erythrocytes.** Arzneimittel-Forschung. 30(11):1852-1855, 1980.

Characteristics of inhibition of the glucose uptake in human erythrocytes by chlorpromazine (CPZ) were investigated. It was found that CPZ is a strong inhibitor of glucose uptake in erythrocytes. The inhibition kinetics indicated that two molecules of CPZ can bind to the transport system and thus form two different CPZ complexes. The dissociation constants of both the CPZ complexes and the pH dependence and temperature dependence of the inhibition are described. 21 references. (Author abstract modified)

004530 Lavene, D.; Abriol, C.; Guerret, M.; Kiechel, J. R.; Lallemand, A.; Rulliere, R. Laboratoires Sandoz, 14, bd. Richelieu, F-92505 Rueil-Malmaison, France **/Pharmacokinetics of cloxazolam in man after single and multiple oral doses./** Etude pharmacocinetique du cloxazolam apres administration a dose unique et iterative chez l'homme. Therapie. 35(4):533-543, 1980.

The pharmacokinetics of cloxazolam, a 1,4 benzodiazepine anxiolytic, were studied. Seven subjects received a single 2mg and multiple (3 x 1mg daily) oral doses of cloxazolam for 9 days. Since after oral administration no measurable amounts of unchanged drug could be found in plasma, assays were performed on chloro-N-demethyl diazepam (CND), the main metabolite. CND in plasma samples was determined by electron capture gas liquid chromatography. After a single dose, CND was found in plasma only after a mean lag time of .9 hour and reached peak levels within 3 hours. Then CND was eliminated with an apparent biexponential pattern. In multiple dosage regimen, the plasma levels were determined the 6th, 8th, 9th days after initiation of therapy. The steady-state was almost reached after 8 days. There was a good correlation with a statistical significance between the observed plasma levels at steady-state with the predicted values, based on single dose parameters which indicated that the pharmacokinetics is linear, nonsaturable, reproducible from dosage to dosage and that chronic cloxazolam exposure has no apparent effect on its own metabolizing enzymes. 12 references. (Journal abstract modified)

004531 Lefebvre, J. Service d'Endocrinologie et Diabetologie, Universite de Lille, Rue du Professeur Laguesse 6, F-59037 Lille, France **Treatment of undernutrition and electrolyte disturbances in anorexia nervosa.** Acta Psychiatrica Belgica. 80(4):551-556, 1980.

Treatment of undernutrition and electrolyte disturbances in cases of anorexia nervosa is discussed. Treatment varies according to the amount of weight that has been lost, and depends on a precise evaluation of biological data, especially of electrolytes. Hypochloremie/hypokaliemic alcalosis is frequent and must be treated by isotonic saline perfusions until the plasma electrolytes return to normal. There are three methods of refeeding: oral, parenteral, and nasogastric tube feeding. The last method appears to be the most successful. Short-term treatment for slight undernutrition usually has good results. Long-term treatment for more serious cases, however, must be accompanied by psychological treatment. (Journal abstract modified)

004532 Lenehan, T.; Omer, L. M. O.; Darragh, A. Omer: F. Hoffman-La Roche & Co. Ltd., Dept. of Clinical Research and Development, Basle, Switzerland **Effects of Ro 11-2465, a new psychotropic agent on the uptake of serotonin by human platelets – in vitro determination of the IC50.** Archives Internationales de Pharmacodynamie et de Therapie. 249(1):147-152, 1981.

The effect of Ro-11-2465, a new psychotropic agent, on in vitro uptake of 3H-serotonin into human blood platelets was compared with the effects of commonly used antidepressants. The compounds inhibited serotonin uptake in a dose dependent manner. Ro-11-2465 was 6 times more potent than clomipramine and 14 times more potent than imipramine. Results suggest that Ro-11-2465 may have antidepressant properties. 11 references. (Author abstract modified)

004533 Loeb, C.; Roccatagliata, G.; Besio, G. Istituto di clinica neurologica, Universita di Genova, Via A. de Toni 5, I-16132 Genova, Italy **/Variations in urinary levels of 3-methoxy-4-hydroxyphenylglycol sulfate in patients with depressive syndromes./** Variazioni del livello urinario dell'MHPG nelle sindromi depressive. Schweizer Archiv fur Neurologie, Neurochirurgie und Psychiatrie. 125(2):337-348, 1979.

Changes in urinary levels of 3-methoxy-4-hydroxyphenylglycol (MHPG) in a group of patients affected by different forms of depressive illness were studied. No significant differences were noted related to age, diagnosis, or number and duration of episodes. Considering the group as a whole, a significant increase in MHPG urinary levels was noted following recovery, although the patients received different drugs (tricyclic antidepressants plus phenothiazine, trazodone, and monoamine oxidase inhibitors, IMAO). Specifically, recovered or improved patients treated with trazodone or IMAO showed a remarkable increase in MHPG urinary levels, whereas a decrease was evidenced in the group that received tricyclic antidepressants. 42 references. 004534 Mardh, Goran; Sjoquist, Birgitta; Anggard, Erik. Dept. of Alcohol and Drug Addiction Research, Karolinska Institutet, S-104 01 Stockholm, Sweden **Norepinephrine metabolism in man using deuterium labelling: 4-hydroxy-3-methoxymandelic acid.** Journal of Neurochemistry. 36(3):1181-1185, 1981.

Plasmak and urine levels of 4-hydroxy-3-methoxyphenylglycol (HMPG) and 4-hydroxy-3-methoxymandelic acid (HMMA) were determined in five healthy men after i.v. pulse doses of 4.3mcmol HMPG labeled with deuterium. About 40% of the injected amount of labeled HMPG was recovered in the urine as HMMA. Another 40% was eliminated as HMPG conjugates. Results indicate that HMPG formed from norepinephrine in the central or peripheral nervous system undergoes both conjugation and extensive oxidation. 23 references. (Author abstract modified)

004535 Mazzi, C.; Riva, L. P.; Morandi, G.; Mainini, E.; Martinelli, I.; Bertaccini, G. Dept. of Endocrinology, St. Anthony Hospital, I-21013 Gallarate, Italy **Drug-induced alterations of the hypothalamus-hypophysis axis.** Acta Psychiatrica Belgica. 80(5):619-637, 1980.

The effects of acute administration of cimetidine, nomifensine, and domperidone on patterns of growth hormone (GH), prolactin (PRL), and thyroid stimulating hormone (TSH) were studied. Subjects were normal, were patients with pituitary nonsecreting and PRL secreting adenomas, or were patients with amenorrhea-galactorrhea syndrome without evidence of adenoma. Cimetidine increased PRL secretion and reduced both GH and TSH secretions in healthy subjects; in patients with nonsecreting adenoma the variations of GH and TSH levels were absent. Nomifensine inhibited PRL secretion in healthy subjects, an inhibition which did not appear in patients with nonsecreting adenoma or with PRL secreting adenoma. In healthy subjects, the GH level rose significantly following nomifensine administration, but a smaller response was seen in the other subjects. Domperidone administration had an inconstant action on PRL level and did not affect GH and TSH secretions. The results confirm the influence which drugs employed in the therapy of nonendocrine diseases have on the function of the hypothalamus. The possibility of analyzing CNS output through secretion of pituitary hormones is suggested. 21 references. (Author abstract modified)

004536 Mel'nichuk, P. V.; Minich, L. N. Klinika nervnykh bolezney, Moskovskiy meditsinskiy institut imeni I. M. Sechenova, Moskva, USSR **/Problems of treating deforming myodystonia with L-DOPA, and prediction of its therapeutic effect./** Voprosy lecheniya i prognozirovaniya terapevticheskogo effekta preparata L-DOFA pri deformiruyushchey myshechnoy distonii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(8):1002-1006, 1979.

Clinicobiochemical examinations were performed on 55 patients suffering from various forms of deforming myodystonia. L-DOPA was administered in 47 cases. A correlation between therapeutic effect and the level of phenylacetylglutamine excretion was observed. Positive results of treatment with L-DOPA were noted in 36 patients (77%) who also had increased levels of phenylacetylglutamine excretion. Resistance to the drug was observed in cases where phenylacetylglutamine excretion did not exceed normal levels. The quantitative determination of phenylacetylglutamine in the urine can be used as a prognostic test of the therapeutic efficacy of L-DOPA in patients with deforming myodystonia. 18 references. (Journal abstract modified)

004537 Mellerup, Erling T.; Dam, Henrik; Plenge, Per; Rafaelsen, Ole J. Psychochemistry Institute, Rigshospitalet, University of Copenhagen, 9 Blegdamsvej, DK-2100 Copenhagen O, Denmark **Lithium effects on citrate metabolism in humans and rats.** Psychopharmacology. 73(1):75-76, 1981.

The effects of lithium on citrate metabolism in long-term lithium treated patients and experimental animals were investigated. Lithium treatment of manic-depressive patients was accompanied by decreased blood citrate, whereas lithium to rats led to increased blood citrate levels. The implications of these findings for urinary calcium excretion in lithium treated humans and animals are discussed. The low urinary calcium in lithium treated patients and the high urinary calcium in lithium treated rats may, at least partly, be explained by the low and high blood citrate levels in each species. 19 references. 004538 Meltzer, Herbert Y.; Busch, Daniel; Young, Michael; Tricou, Betty Jo; Nasr, Suhayl; Metz, John; Fang, Victor. Dept. of Psychiatry, Pritzker School of Medicine, University of Chicago, Chicago, IL 60615 **Prolactin and growth hormone studies in schizophrenic patients and normal controls.** In: Brambilla, F., ed., Progress in psychoneuroendocrinology. New York, Elsevier/North Holland, 1980. 669 p. (p. 283-294).

Prolactin (PRL) and growth hormone (GH) levels were studied in schizophrenic patients. Serum PRL levels were within normal limits in drug free chronic schizophrenic patients. Acute schizophrenics had slightly elevated PRL levels. The GH response to the dopamine agonist apomorphine was correlated with the duration of illness; apomorphine produced significantly smaller increases in GH in patients with longer duration of illness. Chronic L-DOPA administration diminished the GH response to apomorphine. The evidence suggests that the reduced GH response in schizophrenics may be the result of prolonged dopaminergic stimulation. Excessive dopaminergic stimulation also may account for the decreased PRL response to low doses of chlorpromazine in female chronic schizophrenics. 38 references.

004539 Merali, Z.; Lapierre, Y. D. University of Ottawa School of Medicine, 275 Nicholas St., Ottawa, Ontario K1N 9A9, Canada **Prolactin and neuroleptic drugs: a biochemical index of clinical response?** International Journal of Mental Health. 9(3-4):140-161, 1980/1981.

The relationship between serum prolactin levels and neuroleptic drugs is discussed. Neuroleptics have an inhibitory action on dopaminergic neurotransmission and thus mediate the disinhibition of prolactin secretion. Studies indicate that prolactin response is dose related. A clinical study is reported on the use of two neuroleptics, fluphenazine decanoate and pipothiazine palmitate, in 36 chronic schizophrenics. The results indicate that elevation of serum prolactin in response to pipothiazine was of a greater magnitude than that following administration of fluphenazine decanoate. Females were more sensitive to the neuroleptic induced disinhibition of prolactin release than were their male counterparts. In contrast to reports on short-acting neuroleptics, a ceiling effect on prolactin elevation was not observed when therapeutically effective dosages of long-acting preparations were used. An overall curvilinear relationship between symptoms and prolactin change was observed. The predicted negative relationship between clinical response and prolactin clearly was evident mainly in females on pipothiazine palmitate. 55 references. (Author abstract modified)

004540 Metz, John; Busch, Daniel A.; Meltzer, Herbert Y. Dept. of Psychiatry, University of Chicago, Chicago, IL 60637 **Des-tyrosine-gamma-endorphin: H-reflex response similar to neuroleptics.** Life Sciences. 28(18):2003-2008, 1981.

In a study of eight schizophrenic patients, des-tyrosine-gamma-endorphin was found to significantly reduce secondary facilitation of the H-reflex recovery curve. This result is similar to the effect found after treatment with classical neuroleptic medication. The effect is different from that produced by lithium carbonate or antidepressants. This suggests that des-tyrosine-gamma-endorphin and neuroleptics have a similar pharmacological action in man. 18 references. (Author abstract)

004541 Mitkevich, S. P.; Kolyaskina, G. I. Lab. obshchey patofiziologii, Institut psikhiatrii, AMN SSSR, Moskva, USSR /**The effect of chlorpromazine and mageptil on the proliferation of peripheral blood lymphocytes in cultivation with phytohemagglutinin.**/ Vliyaniye aminazina i mazheptila na proliferatsiyu limfotsitov perifericheskoy krovi v usloviyakh kul'tivirovaniya s fitogemagglyutininom. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(2):115-117, 1981.

The effect of chlorpromazine and mageptil on the proliferation of peripheral blood lymphocytes in cultivation with phytohemagglutinin was studied in healthy people. Peripheral blood lymphocytes were incubated with phytohemagglutinin (50mcg/ml), and with chlorpromazine or mageptil in the following concentrations: 0.001, 0.01, 0.1, 5, and 10mcg/ml. The following cultures were studied: lymphocytes with 20% autologous serum; lymphocytes with 20% autologous serum and phytohemagglutinin; and lymphocytes with 20% autologous serum, phytohemagglutinin, and chlorpromazine or mageptil. The cultures were incubated for 72 hours at a temperature of 37dgrees C entigrade. The rate of stimulation or inhibition of the lymphocytes was determined. Results show that chlorpromazine and mageptil, added in concentrations of 5mcg/ml, 10mcg/ml, respectively, inhibit the proliferation of phytohemagglutinin stimulated lymphocytes. 13 reference. (Journal abstract modified)

004542 Myllyla, V. V.; Heikkinen, E. R.; Hokkanen, E.; Vapaatalo, H. Dept. of Neurology, University of Oulu, SF-90220 Oulu 22, Finland **Cyclic nucleotides and the nervous system.** Progress in Pharmacology. 3(2):67-106, 1980.

The role of cyclic nucleotide in the nervous system is reviewed. Cyclic AMP and cyclic GMP are abundant in the mammalian brain and appear to have opposing influences on cellular function in most tissues studied. Cyclic nucleotides serve as intracellular mediators for many extracellular substances such as amine and polypeptide hormones that do not penetrate into cells. Cyclic AMP accumulation can be induced in animal brain by catecholamines, serotonin, histamine, anoxia, decapitation, electrical stimulation, trauma, and various drugs. Cyclic GMP appears to be associated with cholinergic, dopaminergic, and GABAergic transmission. Changes in cyclic nucleotide concentrations in extracellular space (plasma, CSF, and urine) may reflect alterations in brain metabolism. Epileptic attack, rapidly progressing CNS damage, severe acute cerebrovascular disorders, and tramatic brain injury are associated with increased cyclic AMP in human CSF. 86 references.

004543 Nikandrova, L. R. Institut gigiyeny truda i profzabolevaniy AMN SSSR, Moskva, USSR /**A comparative evaluation of the usefulness of psychophysiological tests during various levels of activation of the central nervous system.**/ Sravnitel'naya otsenka informativnosti psikhofiziologicheskikh testov pri raznykh urovnyakh aktivatsii tsentral'noy nervnoy sistemy. Gigiyena Truda i Professional'nyye Zabolevaniya. No. 7:29-33, 1980.

The usefulness of psychophysiological tests at various levels of activation of the CNS was studied comparatively in 14 tests on each of 12 male scientific workers (28 to 33 years old). Different levels of activation of the CNS were brought about by the administration of chlorpromazine in three different doses. Results show that a psychopharmacological model can be used to analyze comparatively the informative value of tests of mental work capability. These results indicate that, in order to evaluate the mental work capability of a given category of people, the most useful tests are tests of complex audiomotor reactions and long-term memory for figures. The usefulness of these tests increases with the load on those higher mental functions which are connected with productive thinking, and it depends on the adequacy of the test problem in relation to the structure of the mental activity. 14 references.

004544 Patterson, Terry; Venables, Peter H. Research Dept., Menninger Foundation, Box 829, Topeka, KS 66601 **Bilateral skin conductance and the pupillary light-dark reflex: manipulation by chlorpromazine, haloperidol, scopolamine, and placebo.** Psychopharmacology. 73(1):63-69, 1981.

The manipulation of bilateral skin conductance and the pupillary light/dark reflex by chlorpromazine, haloperidol, scopolamine, and placebo was investigated. Cholinergic blocking with scopolamine produces skin conductance orientating response (SCOR) nonresponding in normal Ss. This may be one of a number of causes for nonresponding in schizophrenic Ss. Blockade of dopamine with haloperidol produces an increase in amplitude and shortening of recovery time in the SCOR of normal Ss. This result closely resembles that of Nielsen and Peterson (1976) who found a similar pattern of responding in normal Ss who scored high on a scale of schizophrenism. These results, along with those for chlorpromazine and the pupillographic effects of the three drugs are discussed in terms of biochemical working hypotheses of schizophrenic subclassification. 20 references. 004545 Paxton, James W.; Donald, Roger A. Dept. of Pharmacology and Clinical Pharmacology, University of Auckland School of Medicine, Private Bag, Auckland, New Zealand **Concentrations and kinetics of carbamazepine in whole saliva, parotid saliva, serum ultrafiltrate, and serum.** Clinical Pharmacology and Therapeutics. 28(5):695-702, 1980.

Concentrations and kinetics of carbamazepine in whole saliva, parotid saliva, serum ultrafiltrate, and serum were investigated in six healthy Ss. Ss received a 400mg oral dose of carbamazepine (CBZ). CBZ concentrations were determined by enzyme immunoassay in whole saliva, serum, and serum ultrafiltrate over 82 hours. After 30 hours, the log concentration time plots declined linearly with similar elimination half-lifes in all three fluids. Although the mean ultrafiltrate curve was lower than the mean salivary curve, the area under the curve, volume of distribution, and total body clearance calculated from whole saliva and ultrafiltrate data were not different. The mean CBZ concentration ratios of whole saliva/total serum and ultrafiltrate/total serum of the individual Ss ranged from 19.6% to 34.7% and from 19.0% to 28.8%. Linear correlations were found between salivary CBZ concentrations and serum and ultrafiltrate concentrations. Whole salivary and uncontaminated parotid salivary CBZ concentrations were not different and were independent of volume of fluid produced, pH of saliva, and degree of stimulation. Results indicate that whole saliva may be a suitable medium for monitoring free concentrations of CBZ and may provide a noninvasive alternative to blood. 12 references. (Author abstract modified)

004546 Puzynski, Stanislaw; Bidzinski, Andrzej; Zaluska, Maria. Instytut Psychoneurologiczny, Al. Sobieskiego 1/9, 02-957 Warszawa, Poland /**The activity of erythrocyte catechol-o-methyltransferase in endogenous depressive syndromes.**/ Aktywnosc katechol-o-metylotransferazy erytrocytow w endogennych zespolach depresyjnych. Psychiatria Polska. 14(6):569-573, 1980.

The activity of catechol-o-methyltransferase (COMT) was examined in the erythrocytes of 31 normal individuals (16 men, 15 women) and 24 patients with endogenous depressive syndrome (7 men, 17 women). It was found that the activity of the enzyme was statistically significantly increased in women with endogenous depressive syndromes in comparison with normal women. No correlation was found between the activity of the enzyme and the intensity of axial depressive symptoms, nor did pharmacotherapy with amitriptyline or mianserin exert any significant influence on the activity of COMT. 15 references. (Journal abstract modified)

004547 Puzynski, Stanislaw; Hauptmann, Miroslawa; Zaluska, Maria. Instytut Psychoneurologiczny, Al. Sobieskiego 1/9, 02-957 Warszawa, Poland /**The activity of blood platelet monoamine oxidase in endogenous depression.**/ Aktywnosc MAO w plytkach osob z endogennym zespolem depresyjnym. Psychiatria Polska. 14(6):575-580, 1980.

The activity of blood platelet monoamine oxidase (MAO) was examined in 31 normal subjects (15 men, 16 women) and in 24 patients with endogenous depression (7 men, 17 women). The activity of the enzyme showed a statistically significant higher level in healthy women than in healthy men, and was significantly lower in an undifferentiated group of women with endogenous depression, particularly in women with bipolar affective illness. It was found that there was a correlation between the activity of the enzyme and the measure of disturbances in biological rhythms (r=0.533). An increase in monoamine oxidase activity was observed after a week of treatment with uniform dosages of amitriptyline or mianserin. In addition, during the clinical stage of improvement or remission of depressive symptoms, the activity of monoamine oxidase showed a statistically insignificant increase in comparison with the pretreatment activity of the enzyme. 22 references. (Journal abstract modified)

004548 Puzynski, Stanislaw; Rode, Anna; Zaluska, Maria. Instytut Psychoneurologiczny, Al. Sobieskiego 1/9, 02-957 Warszawa, Poland /**The activity of dopamine beta-hydroxylase in the plasma of patients with endogenous depressive syndromes.**/ Aktywnosc beta-hydroksylazy dopaminy w osoczu chorych z endogennymi zespolami depresyjnymi. Psychiatria Polska. 14(6):581-586, 1980.

A group of 26 patients with endogenous depressive syndromes (18 women and 8 men) ranging in age from 27 to 63 years were examined. Dopamine beta-hydroxylase (DBH) was measured before the beginning of treatment, during treatment with amitriptyline or mianserin, and in the period of improvement or total remission. A control group consisted of 30 healthy individuals ranging in age from 23 to 65 years (15 women and 15 men). The sex factor was found not to influence DBH activity either in the control group or in the group of patients with endogenous depression. Neither were there any statistically significant differences in the mean level of the enzyme between the group of healthy individuals and the group of patients with endogenous depression, nor between the nosologically differentiated subgroups of depressive patients. The antidepressant drugs used in therapy (amitriptyline and mianserin) had no significant influence on the initial DBH activity in the group of patients with endogenous depressive syndromes. 14 references. (Journal abstract modified)

004549 Rey, Alix C.; Buchsbaum, Monte S.; Post, Robert M. Section on Psychopharmacology, Maryland Psychiatric Research Center, Baltimore, MD **Apomorphine, haloperidol and the average evoked potentials in normal human volunteers.** Communications in Psychopharmacology. 4(4):327-334, 1980.

Somatosensory and visual evoked potentials were recorded in 15 normal volunteers given single doses of either apomorphine, haloperidol, or saline placebo on three separate days. Apomorphine and haloperidol reduced evoked potential amplitude for both somatosensory and visual systems. The evoked potential latency in the somatosensory system was significantly shortened by apomorphine and lengthened by haloperidol; similar trends were seen for visual evoked potentials. These results with dopamine agonists and antagonists suggest the sensitivity of evoked potentials either for the assessment of dopamine mechanisms or for some secondary effect of these drugs, such as one on the endorphin system. 26 references. (Author abstract modified)

004550 Rudorfer, Matthew V.; Young, Robert C. Young: New York Hospital/Cornell Medical Center, Westchester Division, 21 Bloomingdale Road, White Plains, NY 10605 **Anticholinergic effects and plasma desipramine levels.** Clinical Pharmacology and Therapeutics. 28(5):703-706, 1980.

Anticholinergic effects of the tricyclic antidepressant desipramine were studied in 12 outpatients. Salivation and pulse rate and subjective ratings of mouth dryness and palpitations were assessed before and during treatment with desipramine at a final daily dosage of 150mg. There were significant changes after 3 weeks of treatment in all parameters except ratings of palpitation. Ss with moderate or high plasma desipramine levels had more suppression of salivation than those with low levels. Changes in salivation and pulse did not correlate, nor did they correlate with subjective reports. 15 references. (Author abstract modified)

004551 Sasahara, Kunihiro; Nitanai, Takashi; Habara, Taeko; Morioka, Tadashi; Nakajima, Eiichi. Product Development Laboratories, Sankyo Company Ltd., 1-2-58, Hiromachi, Shinagawa, Tokyo, Japan **Dosage form design for improvement of bioavailability of levodopa III: influence of dose on pharmacokinetic behavior of levodopa in dogs and parkinsonian patients.** Journal of Pharmaceutical Sciences. 69(12):1374-1379, 1980.

The relationship between dose of levodopa and its pharmacokinetic behavior after i.v. and oral administration was investigated in dogs and in patients with Parkinson's disease. Six beagle dogs were given single i.v. doses of 2.4, 4.8, and 9.6mg/kg levodopa and single oral doses of 4.8, 9.6, and 19.2mg/kg in a crossover design. Three parkinsonian patients were given single oral doses of about 3.8, 7.7, and 15.4mg/kg levodopa. Plasma samples were analyzed for intact levodopa and total dopamine. The relationship between the area under the plasma concentration/time curve (AUC) of levodopa and the i.v. dose was linear in dogs. However, in both dogs and humans Ss, the relationship after oral doses was nonlinear, with the relative AUC increasing with increasing dose. 14 references. (Author abstract modified)

004552 Sellers, E. M.; Naranjo, C. A.; Giles, H. G.; Frecker, R. C.; Beeching, M. Addiction Research Foundation, 33 Russell St., Toronto, Ontario, M5S 2A1, Canada **Intravenous diazepam and oral ethanol interaction.** Clinical Pharmacology and Therapeutics. 28(5):638-645, 1980.

The mechanism of the interaction between ethanol and diazepam was investigated among six healthy male volunteer Ss. Ss were randomly assigned to each of two treatments: 1) diazepam (10mg i.v. over 20 minutes) preceded by 60 minutes with ethanol 0.7g/kg (diluted to 20%v/v) orally over 15 minutes and followed for 8 hours by ethanol 0.15g/kg to maintain the blood alcohol concentrations between 800 and 1,000mg/l; and 2) diazepam 10mg i.v. over 20 minutes. The area under the curve (AUC) for total diazepam increased in all Ss after ethanol. Since AUC of free diazepam also rose in all Ss and AUC of the metabolite N-desmethyldiazepam fell, there had been inhibition of hepatic intrinsic clearance of free drug. The susceptibility of individuals to inhibition of N-desmethylation by ethanol is qualitatively determined by total drug concentrations. Estimation of free diazepam concentration coupled with measurement of metabolite affords a qualitative and quantitative evaluation of the mechanisms of this interaction. 20 references. (Author abstract modified)

004553 Sicuteri, F.; Anselmi, B.; Del Bianco, P. L. Dept. of Clinical Pharmacology, University of Florence, I-50134 Florence, Italy **Dopamine and 5-HT supersensitivity in nonorganic central pain and in morphine abstinence: fortuitous or real analogy?** Advances in Biochemical Psychopharmacology. 22:523-533, 1980.

The roles of dopamine (DA) and serotonin (5-hydroxytryptamine, 5-HT) in nonorganic central pain and in morphine abstinence were investigated. An impressive supersensitivity (up to 1000fold) to DA and 5-HT of the smooth muscle (hand dorsal vein) was detected both in central panalgesia sufferers and in addicts during spontaneous or pharmacological abstinence. A 5-HT and dopamine supersensitivity of lesser intensity (10fold to 30fold) was found during migraine attacks. On these occasions, morphine-like factors in cerebrospinal fluid appear reduced or undetectable, reinforcing the chemical analogy between morphine abstinence and migraine attacks. Evidence of opiate receptors in the human vein is discussed; 5-HT venospasms, inhibited by morphine, promptly emerged when naloxone was inoculated locally. 24 references.

004554 Simpson, Michael; Parrott, Eugene L. Parrott: Division of Pharmaceutics, College of Pharmacy, University of Iowa, Iowa City, IA 52242 **Oral and rectal absorption of chloral hydrate and its betaine complex.** Journal of Pharmaceutical Sciences. 69(2):227-228, 1980.

Chloral hydrate and its betaine complex were administered orally and rectally to healthy male Ss, and urinary excretion of its metabolite trichloroacetic acid was determined. No significant difference was found between absorption of chloral hydrate and its betaine complex. For both chloral hydrate and its betaine complex, absorption was greater after oral administration than after rectal administration. 14 references. (Author abstract modified)

004555 Smith, M. T.; Eadie, M. J.; Brophy, T. O'Rourke. Dept. of Medicine, University of Queensland, Royal Brisbane Hospital, Brisbane, Australia **The pharmacokinetics of midazolam in man.** European Journal of Clinical Pharmacology. 19(4):271-278, 1981.

The pharmacokinetics of midazolam, a new water soluble benzodiazepine, were studied among six volunteers who were administered midazolam 5mg iv, 10mg oral solution, or 10mg oral tablet. Midazolam plasma concentrations were measured using an electron capture gas liquied chromatographic assay. After 5mg intravenous midazolam, Ss fell asleep within 1 to 2 minutes and continued to sleep for an average of 1.33 hours. After oral midazolam intake (solution or tablets), drowsiness appeared after an average of 0.38 hours and sleep continued for an average of 1.17 hours. The time to reach peak plasma midazolam concentrations did not differ for the two oral forms. The first pass effect, F, determined experimentally, indicated the substantial first pass metabolism of midazolam. The percentage of the midazolam dose excreted unchanged in urine in four Ss during the 0 to 8 hour urine collection interval was very small. 5 references. (Author abstract modified)

004556 Snyder, Scott; Karacan, Ismet; Salis, Patricia J. Portsmouth Psychiatric Center, Portsmouth, VA **Disulfiram and nocturnal penile tumescence in the chronic alcoholic.** Biological Psychiatry. 16(4):399-406, 1981.

Placebo or disulfiram was administered to 30 male, sober alcoholic inpatients in a random double-blind design in order to evaluate the effects of disulfiram on nocturnal penile tumescence. The amount and frequency of full erections were decreased in the cohort receiving disulfiram. Implications of these results for the role of norepinephrine in penile tumescence are discussed. 25 references. (Author abstract)

004557 Stephens, R.; Green, J.; Haycook, W.; Kilgore, M. Green: 2550 Park St., Jacksonville, FL 32204 **Electroencephalographic change in parkinsonian patients treated with levodopa-carbidopa.** Clinical Electroencephalography. 10(1):31-34, 1979.

EEG changes were studied in 21 parkinsonian patients treated initially with levodopa alone and then switched to levodopa/carbidopa combination therapy. No significant improvement was observed during the combination therapy. A slight increase in basic background frequencies was associated with the combination therapy, but the change was not significant. 23 references.

004558 Warren, James W., Jr.; Benmaman, Joseph D.; Wannamaker, Braxton B.; Levy, Rene H. College of Pharmacy, Medical University of South Carolina, 171 Ashley Avenue, Charleston, SC 29403 **Kinetics of a carbamazepine-ethosuximide interaction.** Clinical Pharmacology and Therapeutics. 28(5):646-651, 1980.

The kinetics of a carbamazepine/ethosuximide interaction were investigated. Six normal Ss took one 250mg ethosuximide capsule twice each day for 55 consecutive doses (study days 1 to 28) and one 200mg carbamazepine tablet each evening from study days 11 to 27. Plasma samples were collected on study days 10, 17, 21, and 28. Mean steady-state concentrations of ethosuximide declined by 17% from a preinduction (study day 10) level of 32.2mcg/ml to a postinduction level of 26.8mcg/ml on study day 28. Ethosuximide clearance increased between study days 10 and 28 from 0.664 l/hour to 0.800 l/hour. The time course of induction was analyzed using a kinetic induction theory. Ethosuximide half-life was lowered from 53.7 hours (before induction) to 44.6 hours (after induction); the difference between some Ss was large. These data indicate that ethosuximide disposition is altered by carbamazepine. 18 references. (Author abstract modified)

004559 Wode-Helgodt, Birgitta; Alfredsson, Gunnel. Dept. of Psychiatry, St. Goran's Hospital, S112 81 Stockholm, Sweden **Concentrations of chlorpromazine and two of its active metabolites in plasma and cerebrospinal fluid of psychotic patients treated with fixed drug doses.** Psychopharmacology. 73(1):55-62, 1981.

Concentrations of chlorpromazine and two of its active metabolites in plasma and cerebrospinal fluid (CSF) of schizophrenic patients treated with fixed drug doses were investigated. There was a significant correlation between the area under curve (AUC) for chlorpromazine (CPZ) in serum during 24 hour treatment and serum concentration at different fixed times of the day. The half-life for CPZ was found to be 8 to 33 hours. 7-OH-CPZ and nor1-CPZ disappeared at about the same rate as the parent compound. The concentration of both metabolites was less than 10 ng/ml after 36 hours. The levels of CPZ and metabolites presented a weak positive correlation to daily dose but not to dose calculated by mg/kg bodyweight. Older patients tend to have higher CPZ and metabolite levels. The dose effects are very similar in plasma and CSF and there is a significant correlation between CPZ levels in serum and CSF. CSF/plasma ratio for CPZ seems to be an individual factor possibly related to variations in protein binding in plasma and CSF. 28 references. (Author abstract modified)

14 MECHANISM OF ACTION: BEHAVIORAL

004560 Backwell, Barry; Peterson, George R.; Kuzma, Ronald J.; Hostetler, Russell M.; Adolphe, Allen B. Wright State University School of Medicine, Dayton, OH 45431 **The effect of five tricyclic antidepressants on salivary flow and mood in healthy volunteers.** Communications in Psychopharmacology. 4(4):255-261, 1980.

A double-blind, randomized, Latin-square design was used to study the effects of five tricyclic antidepressants on salivary flow and mood in 12 normal volunteers. Differences from baseline were measured 5 hours after administration of placebo or 100mg of drugs. Salivary flow was determined by change in weight of dental swabs placed in the mouth, and change in mood was determined by the Clyde Mood Scale. Analysis of variance revealed significant treatment effects for salivary flow and all six Clyde Mood factors. Amitriptyline produced most change in salivation and all Clyde Mood factors, followed by doxepine (salivation and four out of six clyde mood factors). Desipramine produced least change in salivation and all except one Clyde Mood factor. Imipramine and nortriptyline were intermediate and interchangeable in their effects. These results are consistent with those in a number of other studies in animals on a variety of central and peripheral tissues which show the widest separation in activity between amitriptyline and desipramine. The findings are discussed in relationship to structure/activity relationships, mechanism of action, and adverse effects of the tricyclic antidepressant drugs. 13 references. (Author abstract modified)

004561 Delwaide, P. J.; Devoitille, J. M.; Ylieff, M. Hopital de Baviere, University of Liege, Boulevard de la Constitution 66, B-4020 Liege, Belgium **Acute effect of drugs upon memory of patients with senile dementia.** Acta Psychiatrica Belgica. 80(5):748-754, 1980.

The effects of physostigmine, scopolamine, lysin-vasopressin, and piracetam on memory performance were investigated in senile demented patients. Subjects' memory performance was assessed using the Rey Auditory Verbal Learning Test. A decrease in memory performance was found with scopolamine which is attributed to a specific effect upon the cholinergic system involved in the memorization process. Piracetam improved memory in the Rey test, but the effect was transient and was followed by a reversed effect after 48 hours. Lysin-vasopressin significantly facilitated memorization. Results show no effect of physostigmine on memory performance. 14 references. (Author abstract modified)

004562 Denijs, E. L. Brink 4, NL-2211 BK Noordwijkerhout, The Netherlands **Clinical evaluation of bromperidol versus haloperidol in psychotic patients.** International Pharmacopsychiatry. 15(5):309-317, 1980.

The activity of bromperidol was compared to that of haloperidol, as an initial treatment on admission of psychotic patients. In general, patients reacted equally to both drugs, showing a marked improvement in most of the scored psychiatric elements. After 2 weeks, an improvement in the energy score was noticed for bromperidol, but not for haloperidol, which emphasizes the disinhibiting effect of bromperidol. Most frequent side-efects were tremor, parkinsonism, and acathisia. In view of the importance of more stimulating drugs favoring social reintegration of some chronic psychotics, it is suggested that long-term follow-up studies with oral bromperidol are indicated. 13 references. (Author abstract modified)

004563 Frowein, H. W. Centrale Directie der PTT, Afd. CASWO 1, Postbus 30000, NL-2500 GA Den Haag, The Netherlands **Selective effects of barbiturate and amphetamine on information processing and response execution.** Acta Psychologica. 47(2):105-115, 1981.

A group of 12 Ss carried out a choice reaction task with reaction time (RT) and movement time (MT) as response measures. Independent variables were drug treatment (amphetamine, barbiturate, placebo), visual stimulus degradation and S-R compatibility. Visual stimulus degradation and S-R compatibility showed additive effect on the RT but did not affect the MT. This confirms that stimulus encoding, response selection, and response execution represent independent processing stages. The two drugs had selective effects on the RT and the MT. Barbiturate had no effect on the MT but lengthened the RT, and this effect was additive with the effects of S-R compatibility but showed an interaction with the effects of stimulus degradation. Amphetamine shorted the MT, but had no significant main effect on the RT although interaction with the effect of S-R compatibility was significant. These results suggest that barbiturate affects stimulus encoding, whereas amphetamine affects response related processes. 27 references. (Author abstract modified)

004564 Gath, Isak; Bar-On, E.; Rogowski, Z.; Bental, E. Technicon-Israel Institute of Technology, Julius Silver Institute of Bio-Medical Engineering Sciences, Technicon City, Haifa 32,000, Israel **Computerized analysis of sleep recordings applied to drug evaluation: midazolam in normal subjects.** Clinical Pharmacology and Therapeutics. 2994):533-541, 1981.

Computer analysis of polygraphic sleep recordings was used to evaluate the effects of midazolam, a benzodiazepine hypnotic. Results revealed a slight intranight REM rebound during medication and a reduction of stage-4 sleep after withdrawal. The relative power of the delta frequency band did not alter during medication or withdrawal. 27 references. (Author abstract modified)

004565 Gershon, E. S.; Nurnberger, J. I.; Jimerson, D. C. Section on Psychogenetics, Biological Psychiatry Branch, NIMH, Bldg. 10, Rm. 3N218, 9000 Rockville Pike, Bethesda, MD 20205 **Sex, plasma prolactin and plasma 3-methoxy-4-hydroxyphenylglycol (MHPG) predict heritable d-amphetamine excitation in man. (Unpublished paper).** Bethesda, MD, NIMH, 1980. 9 p.

Behavioral responses to 0.3mg/kg i.v. d-amphetamine were studied in 13 monozygotic twin pairs using a double-blind randomized crossover design of active drug and placebo injections. Two independent behavioral responses, termed excitation and elation, were concordant in twin pairs and were reproducible within individuals. Elation was correlated with plasma amphetamine levels, but excitation was not. Higher excitation was predicted by male sex, lower predrug plasma prolactin, and higher predrug total plasma MHPG. Growth hormone response after amphetamine was greater in persons with higher excitation scores. All of the biological measures, but predrug prolactin were concordant in twin pairs. These data may imply higher activity of norepinephrine and dopamine in persons with high excitation response. Neurochemical differences between the sexes were implied also. 29 references (Author abstract)

004566 Griffiths, Roland R.; Bigelow, George E.; Liebson, Ira; Kaliszak, Julia E. Psychiatry, 623 Traylor, Johns Hopkins University School of Medicine, Baltimore, MD 21205 **Drug preference in humans: double-blind choice comparison of pentobarbital, diazepam and placebo.** Journal of Pharmacology and Experimental Therapeutics. 215(3):649-661, 1980.

In a residential hospital research ward, the effects of and preference for placebo and various oral doses of pentobarbital and diazepam were studied in volunteer human Ss with documented histories of sedative abuse. Drug free days alternated with drug administration days throughout the study. In Experiment 1, pentobarbital produced dose related increases in S rated and observer rated drug effects, and Ss generally chose higher pentobarbital doses over lower doses. Diazepam produced only modest elevations in drug effect ratings, and Ss did not consistently choose higher doses over lower doses. 400mg of pentobarbital and 200mg of diazepam produced Ss drug effect ratings and observer drug effect ratings of similar magnitude while placebo produced negligible effects. All Ss chose pentobarbital over placebo and diazepam over placebo on all occasions. All Ss chose pentobarbital over diazepam on the majority of choice trials. 42 references. 004567 Itil, Turan M.; Bozak, M.; Polvan, N.; Soldatos, C.; Shapiro, D. M.; Krynicki, V.; Morgan, V. Dept. of Psychiatry, New York Medical College, 150 White Plains Road, Tarrytown, NY **Effects of supidimide (CG-3033) on objective and subjective sleep parameters (a sleep laboratory study).** Current Therapeutic Research. 27(3):442-457, 1980.

The hypnotic effects of three dosage levels of supidimide (CG-3033), a compound related to thalidomide, were assessed in 10 insomniac adults in a double-blind sleep laboratory study. Placebo and flurazepam were control drugs. Active drugs did not statistically change the sleep stages, but they increased REM latency in comparison to placebo. Flurazepam and 200mg supidimide improved the quality of sleep as determined by subjective ratings. Computer analyzed EEG indicated that the mode of action supidimide is different from that of flurazepam. It is concluded that supidimide may have a potential value as a hypnotic which produces a sleep without any significant change in the structure of the all night sleep process as determined by EEG and REM measurements. In the dosages investigated in this study (up to 200mg), the sleep producing effects of supidimide were not associated with having hangover effects or ataxia. 33 references. (Author abstract)

004568 Johnson, Laverne C.; Spinweber, Cheryl L. Naval Health Research Center, San Diego, CA **Effects of a short-acting benzodiazepine on brain electrical activity during sleep.** Springfield, VA, NTIS, AD-A101 786/2, 1980. 17 p.

The effects of the short-acting benzodiazepine, triazolam, on EEG activity during sleep was assessed in poor sleepers. Twenty male Ss, mean age 21 plus or minus 2.37 years, participated in a screening night which preceded three placebo nights, six treatment nights, and two placebo withdrawal nights. During a double-blind treatment condition, 10 Ss received triazolam (0.5mg) and 10 Ss received placebo. In addition to rate/

min spindle count and number of delta half-waves/min, the auditory evoked response (AEP) was obtained on the last placebo baseline and on drug night 5. Ss receiving triazolam showed a significant increase in sleep spindles and a significant decrease in delta count during drug administration. Both values returned to baseline on the first withdrawal night. The AEP peak to trough amplitude was also significantly reduced during sleep by triazolam, but, as the time since drug ingestion increased, the amplitude of the AEP also increased. There was no difference in AEP amplitude between the two groups 5 hours postdrug ingestion. (Journal abstract modified)

004569 Lavie, P.; Wajsbort, J.; Youdim, M. B. H. Faculty of Medicine, Technion-Israel Institute of Technology, Haifa, Israel **Deprenyl does not cause insomnia in parkinsonian patients.** Communications in Psychopharmacology. 4(4):303-307, 1980.

The effects of deprenyl treatment on electrophysiological sleep parameters in parkinsonian patients were investigated. Deprenyl (10mg daily) was given to 10 parkinsonian patients treated with L-dopa. Whole night EEG, electrooculographic, and EMG recordings of each patient were analyzed to evaluate sleep structure before treatment and 14 days after treatment had begun. Deprenyl significantly shortened sleep latency without affecting any of the other sleep parameters. Since deprenyl inhibits platelet monoamine oxidase (MAO) activity by almost 100% in all patients, it can be concluded that suppression of MAO type-B activity does not adversely affect sleep structure. 16 references. (Author abstract modified)

004570 Loftus, Elisabeth F. no address **/Memory: the effects of alcohol and of marihuana./** Memoire: les effets de l'alcool et de la marijuana. Psychologie. No. 124:26-32, 1980.

Studies on the effects of marihuana and alcohol on short-term and long-term memory are reviewed. Studies on memory focus on three factors: short-term memory; the ability to transfer information from short-term to long-term memory; and the ability to retrieve information from the long-term memory bank. Experiments by Ben Jones show that alcohol has no effect on short-term memory, but does affect the transfer of information into the long-term memory bank. An experiment by Birnbaum and Parker shows no significant effect of alcohol on long-term memory. Experiments concerning alcoholic blackout show that the transfer from short-term to long-term memory is severely affected. Studies on the effects of marihuana on memory have shown that it affects both short-term memory, and the transfer from short-term to long-term memory.

004571 Mamelak, Mortimer; Webster, Peter. Sunnybrook Medical Centre, University of Toronto Clinic, 2075 Bayview Ave., Toronto, Ontario, Canada **Treatment of narcolepsy and sleep apnea with gammahydroxybutyrate: a clinical and polysomnographic case study.** Sleep. 4(1):105-111, 1981.

The use of gammahydroxybutyrate (GHB) for narcolepsy associated with central sleep apnea in a 53-year-old patient is discussed. The treatment relieved the major symptoms of narcolepsy and significantly decreased the number of apneic periods. GHB did not cause the prolonged and potentially fatal apneic periods associated with the use of other hypnotic agents. If GHB acts by promoting the integration of sleep then its stabilizing effect on respiration becomes understandable. Findings indicate that GHB can be used to advantage in the management of patients with narcolepsy/cataplexy and central type sleep apneas. 14 references. (Author abstract modified)

004572 Man'kovskiy, N. B.; Weinstock, A. B.; Malinovskaya, N. B. Otdeleniye vozrastnoy fiziologii i patologii nervnoy sistemy, Institut gerontologii AMN SSSR, Kiev, USSR **/Prospects for the treatment of postencephalitic parkinsonism with antilymphocytic immunoglobulin./** Perspektivy lecheniya postentsefaliticheskogo parkinsonizma antilimfotsitarnym immunoglobulinom. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(2):175-180, 1980.

The treatment of postencephalitic parkinsonism with antilymphocytic immunoglobulin (ALG) was studied in 25 patients (35 to 60 years old) and in a control group. Before treatment with ALG the Ss showed signs of the progression of extrapyramidal pathology. Previous treatment had been inadequate. Results show that the autoimmune mechanism plays an important role in the pathogenesis of postencephalitic parkinsonism. The use of ALG has a positive effect on the basic symptoms of the disease (impaired movement, trembling, and autonomic disturbances). Results also show that in some cases the use of ALG makes it possible to cease or significantly reduce doses of antiparkinsonism medications. 12 references.

004573 Maoz, B.; Durst, N. Psychiatry Dept., Soroka Medical Center, Beer Sheba, Israel **The effects of oestrogen therapy on the sex life of post-menopausal women.** Maturitas. 2:327-336, 1980.

The literature concerning sexual behavior around the time of menopause is reviewed, with emphasis on the effects of estrogen therapy on the sex lives of post menopausal women. A decline in sexual activity and satisfaction in women which is attributed to physiological changes is described. Data were obtained from 40 women who were treated with estrogens for 1 year. The effect of this treatment on sexual activity and satisfaction was compared to that of a group who had undergone partial estrogen treatment only. The results show that the former group experienced a reduction in symptoms such as hot flushes and depression, and the pain in sexual intercourse was removed. As a consequence of this improvement, coital activity and satisfaction were more gratifying in this group. The partially treated Ss in the second group showed a clear decline in sexual activity and satisfaction. 11 references. (Author abstract modified)

004574 Nicholson, A. N.; Stone, Barbara M. Royal Air Force Institute of Aviation Medicine, Farnborough, Hampshire, England **A synthetic ACTH4-9 analogue (Organon 2766) and sleep in healthy man.** Neuropharmacology. 19(12):1245-1246, 1980.

The effects of a synthetic ACTH4-9 analogue (Organon 2766) on sleep parameters were investigated in young adult males. Each of six Ss ingested 40mg, 80mg, and 120mg Organon 2766, 300mg caffeine, and matching placebos with water 20 minutes before retiring. Seven days separated each assessment, and the study was double-blind with treatments presented in random order. Organon 2766 in doses up to 120mg had no effect on the sleep process as indicated by conventional EEG techniques, although within this dose range (40mg) it has been reported to improve vigilance of Ss in a reaction time task. 9 references

004575 no author. Office on Smoking and Health, Public Health Service, U.S. Dept. of Health and Human Services, Rockville, MD 20857 **/The role of nicotine in the behavioral aspects of cigarette smoking./** Behavioral aspects. In: Surgeon Gen., The changing cigarette: health conseq. of smoking. Washington, GPO, DHHS Publication No. (PHS)81-50156, 1981. (p. 175-192).

It is recommended that research on lower tar and nicotine cigarettes should take the following steps in the future: 1) additional laboratory studies should be performed under controlled experimental conditions; 2) additional research should be conducted on compensatory smoking; and 3) both the biological and psychological factors involved in smoking should be investigated. Facilities and research cigarettes, which are needed to determine the behavioral aspects of smoking, are described. Research is reviewed which shows that: 1) nicotine appears to be the primary pharmacological reinforcer in tobacco, but other pharmacological and psychosocial factors also may contribute a reinforcing effect; 2) it appears that some smokers make compensatory adjustments in their smoking behavior with cigarettes of different yields that might increase the amounts of harmful substances entering the body; 3) additional information is needed on the role of lower tar and nicotine cigarettes in the initiation, maintenance, and cessation of smoking; and 4) the development of improved laboratory facilities is necessary for more tightly controlled behavioral research and smoking machine measurements that more closely simulate the practices of human smokers. 82 references.

004576 Nyhan, William L.; Johnson, Harold G.; Kaufman, Irving A.; Jones, Kenneth Lyons. Dept. of Pediatrics, University of California at San Diego, La Jolla, CA 92093 **Serotonergic approaches to the modification of behavior in the Lesch-Nyhan syndrome.** Applied Research in Mental Retardation. 1(1/2):25-40, 1980.

In a series of nine male patients with the Lesch-Nyhan syndrome, a pharmacologic attempt was made to alter the balance of biogenic amines in the central nervous system by increasing the level of serotonin. Patients were treated with 5-hydroxytryptophan in combination with a peripheral decarboxylase inhibitor carbidopa and with imipramine. Most patients had a striking alteration in self-mutilative behavior. However, within 1 to 3 months, each became tolerant and this pharmacologic effect could not be produced again even a year later. These observations suggest that the characteristic behavior of the patient with the Lesch-Nyhan syndrome is related to neurotransmitter balance, and that there may be ways to modify it. 19 references. 004577 Rosen, Alexander J.; Mueser, Kim T.; Sussman, Steve; Davis, John M. Psychology Department, University of Illinois at Chicago Circle, Chicago, IL 60680 **The effects of neuroleptic drugs on the social interactions of hospitalized psychotic patients.** Journal of Nervous and Mental Disease. 169(4):240-243, 1981.

The frequency of social interactions emitted by two groups of hospitalized psychotic patients was studied with a time sampling procedure during lunch periods in the ward dayroom. One group was treated with neuroleptic medication upon admission to the ward, and the other group was medicated after a 2-week to 3-week washout period. The data suggest that the principle effect of the medication is to produce a transient depression in social interaction frequency which returns to baseline with continued drug treatment. The results are supportive of previous research which indicated that the major impact of pharmacotherapy is on activity rather than social behaviors, and highlights the utility of including baseline measures to ensure adequate drug vs. control comparisons. 16 references. 004578 Rosenzweig, M. R.; Bennett, E. L.; Flood, J. F. Lawrence Berkeley Laboratory, University of California, Berkeley, CA 94720 **Pharmacological modulation of formation of long-term memory.** Springfield, VA, NTIS, LBL-11558, 1980. 12 p.

Biochemical processes that can modulate the formation of long-term memory, including the synthesis of proteins, are considered. Schemes of memory formation involving several stages have been proposed and specific mechanisms have been hypothesized to account for these stages. Evidence supporting the existence of such stages has been found. The hypothesis that protein synthesis is required for formation of memory has stimulated much research and several recent reviews. But many treatments and agents that have been found to affect the formation of memory cannot be incorporated directly into this sequence of presumed basic processes. While this and other reasons have led some investigators to question or even abandon the hypothesized basic sequence, other investigators have taken up the concept that modulatory as well as basic processes exist. That is, the processes required for formation and expression of memory take place within a complex bodily environment where other systems or processes can influence or modulate those that participate directly in the formation of memory. (Author abstract modified)

004579 Shutov, A. A.; Pleshkova, N. M.; Prostakova, T. I. Permskiy meditsinskiy institut na baze oblastnoy klinicheskoy bol'nitsy, Perm, USSR **/Correction of hormonal activity of the thyroid gland as a method of pathogenic therapy in a comprehensive treatment of patients with temporal epilepsy./** Korrektsiya gormonal'noy aktivnosti shchitovidnoy zhelezy kak metod patogeneticheskoy terapii v komplekse lecheniya bol'nykh visochnoy epilepsiyey. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(8):1016-1020. 1979.

Corrective therapy with thyroidin and diiodothyrosine of disturbed hormonal activity of the thyroid gland was carried out in 30 patients with temporal epilepsy. There was a favorable therapeutic effect within 1.5 years: the epileptic paroxysms either disappeared or their frequency was reduced; significant normalization of the EEG and iodine metabolism occurred; and improvement in the patients' mental state was observed. It is recommended that the comprehensive treatment of patients with temporal epilepsy include hormonal correction of thyroid gland activity. 3 references. (Journal abstract modified)

004580 Silverstone, T.; Fincham, Jill; Wells, B.; Kyriakides, Mary. Academic Unit of Human Psychopharmacology, Medical Colleges of St. Bartholomew's, London, England **The effect of the dopamine receptor blocking drug pimozide on the stimulant and anorectic actions of dextroamphetamine in man.** Neuropharmacology. 19(12):1235-1237, 1980.

The effects of the dopamine receptor blocking drug pimozide on the stimulant and anorectic actions of dextroamphetamine were investigated in eight healthy female Ss. A single 10mg oral dose of d-amphetamine caused a significant increase in ratings of arousal, and a decline in hunger. The effect of d-amphetamine on arousal was diminished by 2mg oral dose of pimozide administered 2 hours before the d-amphetamine was taken. It is concluded that dopamine mechanisms in the CNS are involved in the mediation of the stimulant effects of d-amphetamine in man, but not in the mediation of d-amphetamine-induced anorexia. 10 references.

004581 Singh, Vimal Kumari; Gupta, B. S. Dept. of Psychology, Institute of Advanced Studies, Meerut University, Meerut, India **Personality and drugs in visual figural aftereffects.** International Journal of Psychology. 16(1):35-44, 1981.

The effects of dexedrine and phenobarbitone on visual figural aftereffect (VFAE) were examined in 32 postgraduate Ss tested on the Maudsley Personality Inventory. Calcium tablets were used as placebos. Ss were tested repeatedly under each of the treatment conditions. The results indicated that: 1) extraverted Ss relative to introverted Ss have larger VFAEs; 2) the size of VFAE increases under the influence of phenobarbitone in all personality groups except high positive neuroticism/high extroversion and low neuroticism/low extroversion; and 3) interactions between drug treatments and personality variables in their effects on VFAE did not occur. 30 references. 004582 Stitzer, Maxine L.; Griffiths, Roland R.; Bigelow, George E.; Liebson, Ira. Dept. of Psychiatry, D-5-West, Baltimore City Hospitals, Baltimore, MD 21224 **Human social conversation: effects of ethanol, secobarbital and chlorpromazine.** Pharmacology Biochemistry and Behavior. 14(3):353-360, 1981.

Effects of oral ethanol, secobarbital, and chlorpromazine on human vocalization were studied in dyadic social situations, using repeated observations within subject pairs. Ethanol (1 to 6 oz of 95 proof) and secobarbital (30 to 300mg) produced dose related increases in vocalization by the S who received the active drug and had no systematic effects on the partner who received the placebo. Chlorpromazine (25 to 100mg) produced dose related decreases in vocalization by the S given the active drug and tended to decrease vocalization by the partner receiving the placebo. No consistent changes on the Addiction Research Center Inventory scales were obtained after ethanol or secobarbital, but chlorpromazine produced dose related increases on the Pentobarbital, Chlorpromazine, and Alcohol Group scale. It is concluded that quantitative measures of vocalization (converational speech) in a social context is a reliable and sensitive indicator of dose related drug effects. 27 references. 004583 Timsit-Berthier, M.; Mantanus, H.; Jacques, M. C.; Legros, J. J. Laboratoire de Neurophysiologie, Clinique et de Psychopathologie, Boulevard de la Constitution 153, B-4020 Liege, Belgium **/Use of lysine-vasopressin in the treatment of posttraumatic amnesia./** Utilite de la lysine-vasopressine dans le traitement de l'amnesie post-traumatique. Acta Psychiatrica Belgica. 80(5):728-747, 1980.

Seven subjects suffering from posttraumatic amnesia were treated with lysine-vasopressin as a nasal spray for 15 days (14 UI per day). All subjects (males, aged 20 to 63) previously presented a deficit for 3 years, did not follow any treatment, and did not hope for any improvement. Five subjects presented a real improvement, either immediately during the treatment, or some weeks after the treatment. Improvement was evidenced by psychological tests of attention and short-term visual retention and by electrophysiological measurements. Improvement was mainly on general activity, motivation, and capacity for social adaptation and was associated in four subjects with a marked increase in the level of neurophysine I. The mode of action of lysine-vasopressin is discussed in light of recent neurochemical and neurophysiological research. 19 references. (Author abstract modified)

004584 Tsygankov, B. D. Otdel terapii psikhozov, Moskovskiy NII psikhiatrii, Ministerstvo zdravookhraneniya RSFSR, Moskva, USSR **/A modified version of the simultaneous discontinuation of psychotropic drugs (combined with the administration of diuretics) as a method of halting prolonged attacks of schizophrenia./** Modifitsirovannyy variant odnomomentnoy otmeny psikhotropnykh sredstv (v sochetanii s priyemom diuretikov) kak metod obryvayushchey terapii zatyazhnykh pristupov shizofrenii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(5):754-759, 1980.

The sudden discontinuance of psychotropic drugs (combined with the administration of diuretics) as a method of halting prolonged attacks of schizophrenia was studied in 100 schizophrenic patients who were resistant to psychopharmacotherapy. The efficacy of intense psychopharmacotherapy was compared to the efficacy of the discontinuance therapy. Results show that the discontinuance therapy appeared to be the most effective and to have the fewest side-effects. 13 references. (Journal abstract modified)

004585 Waid, William M.; Orne, Emily Carota; Cook, Mary R.; Orne, Martin T. Institute of Pennsylvania Hospital, 111 North 49 Street, Philadelphia, PA 19139 **Meprobamate reduces accuracy of physiological detection of deception.** Science. 212(4490):71-73, 1981.

The effects of a tranquilizer, meprobamate, on polygraph test results were studied. Normal male Ss attempted to deceive an experimenter recording electrodermal, respiratory, and cardiovascular activity. Those who had ingested a placebo or nothing were detected with statistically significant frequency on the basis of their phasic electrodermal responses, which clearly distinguished them from truthful suspects. That was not the case with deceptive Ss who had ingested 400 milligrams of meprobamate, nor did the examiner detect which Ss had received the drug. 24 references. (Author abstract modified)

004586 Weisner, B.; Bernhardt, W. Bernhardt: Neurologische Universitatsklinik, Martinistrasse 52, D-2000 Hamburg 20, West Germany **Antiepileptic therapy with phenytoin: which is the optimum serum level?** European Neurology. 18(2):111-115, 1979.

The relationship between serum phenytoin level and anticonvulsant effects was studied in 114 patients suffering from generalized grand mal-seizures and treated only with phenytoin. The probability of attacks followed an exponential function of serum phenytoin. However, the high variability in responsiveness during serum phenytoin below 10mg/l suggested that the effective dose level must be determined separately and repeatedly for each patient. 19 references. (Author abstract modified)

004587 Wikler, Abraham. no address **Opioid dependence: mechanisms and treatment.** New York, Plenum, 1980. 225 p. L27.50.

Mechanisms and treatment of opioid dependency are examined in an extended review of the literature. Emphasis is placed on the neuropharmacological and behavioral aspects of dependence. It is proposed that relapse into drug dependence is a disease; factors contributing to relapse are considered. A long-lasting subtle abstinence syndrome, characterized by persistent conditioned autonomic responses is postulated. Elimination of this syndrome through extinction procedures is discussed.

15 TOXICOLOGY AND SIDE EFFECTS

004588 Ansell, G. B. Dept. of Pharmacology, University of Birmingham, Medical School, Birmingham B15 2TJ, England **The biochemical background to tardive dyskinesia.** Neuropharmacology. 20(4):311-317, 1981.

The treatment of tardive dyskinesia induced by long-term neuroleptic therapy is discussed. Since tardive dyskinesia is believed to be due to an imbalance in dopaminergic and cholinergic influences on the striatum, treatment of the disorder generally has involved blockade of excess striatal dopaminergic activity or enhancement of cholinergic activity in the same area. Recent clinical studies of neurological disorders such as Huntington's chorea and Alzheimer's disease have stimulated interest in the use of 2-dimethylaminoethanol, choline, and lecithin in the treatment of tardive dyskinesia. 65 references.

004589 Ansseau, M.; Diricq, St.; Grisar, Th.; Collard, J. Clinique Medico-Psychologique, Unite de Psychopharmacologie, Hopital universitaire de Baviere, B-4020 Liege, Belgium **Biochemical and neuroendocrine approaches to a malignant syndrome of neuroleptics.** Acta Psychiatrica Belgica. 80(5):600-606, 1980.

The case history is presented of a 20-year-old patient, hospitalized for depressive schizophrenia, who developed the malignant syndrome when treated with nomifensine plus pimozide. Clinical observations associated with the syndrome are noted and treatment is discussed. Results of the endocrine balance over the 2 week course of the illness suggest a hypothalamic perturbation involving an increase in the norepinephrine and dopamine proportions with a relative norepinephrine predominance. It is suggested that the malignant syndrome, which is normally attributed to a neuroleptic, may find its etiopathogeny in the association of a neuroleptic with an antidepressant. (Author abstract modified)

004590 Ayd, Frank J., Jr. 912 West Lake Avenue, Baltimore, MD 21210 **Neuroleptics and their side-effects.** Journal of Psychiatric Treatment and Evaluation. 1(2):25-27, 1979.

A review of the phenothiazine neuroleptics and their side-effects is presented. In order of milligram potency are the piperidines (thioridazine), the aliphatics (chlorpromazine), and the piperazines (fluphenazine). Low milligram potency neuroleptics such as fluphenazine are less likely to cause adverse effects and are more likely to be acceptable to the patient. Phenothiazines may cause a variety of sedative, autonomic, endocrine, dermatologic, ocular, hepatic, hematopoietic, and cardiovascular effects, as well as seizures and extrapyramidal reactions. The propensity to evoke these reactions depends on the chemical structure of the phenothiazine. Neuroleptic-induced extrapyramidal side-effects can be divided into early onset reactions such as akinesia, acute dyskinesia, akathisia, and parkinsonism, and late onset reactions of tardive dyskinesia.

004591 Bailey, David N. University of California, San Diego, La Jolla, CA 92093 **Chlorpromazine analysis in human plasma. (Unpublished paper).** Final Report, NIMH Grant 5R01-MH-30943, 1980. 15 p.

Methods were developed for analysis of chlorpromazine, phencyclidine, tricyclic antidepressants, meprobamate, and theophylline levels in human sera. The methods are applicable to therapeutic dosages and overdose concentrations. Gas and liquid chromatography with a nitrogen phosphorus detector and ultraviolet spectrophotometric procedures were used. Data are presented on the assay development, assay specifications, and application of the assay to patients receiving drug therapy and to Ss receiving emergency toxicology services. A profile of the average drug abuse patient was developed, and information was obtained on drugs ingested and the serum drug concentrations. Findings from separate hospitalizations were compared and characteristics of the typical repeating drug abuser were identified. 14 references.

004592 Berger, Philip A. Dept. of Psychiatry, Stanford University School of Medicine, Stanford, CA 94305 **Tardive dyskinesia: recent developments.** International Drug Therapy Newsletter. 15(5):17-20, 1980.

Recent developments in the diagnosis, neuropathology, and treatment of tardive dyskinesia (TD), the most troublesome complication limiting the use of maintenance neuroleptic therapy for psychiatric disorders, are reviewed. No unequivocal treatment for TD has been demonstrated, although ChCl, lecithin, deanol, low dose apomorphine, and high dose levodopa desensitization show promise. The suggestion that lithium salts may prevent the development of TD requires testing. The assumption that continuation of neuroleptic treatment invariably worsens TD has not been rigorously demonstrated. It is suggested that the clinician should probably discontinue neuroleptics in some cases of TD. The acute with schizophreniform psychosis is seen as possibly not needing the drugs after symptom resolution. Chronic hospitalized patients who are nonresponders or who are only minimally responsive might also be better off without neuroleptics. It is suggested that the clinician should continue neuroleptics but should discontinue anticholinergics in some patients for whom the return of psychosis is more detrimental than are TD symptoms, and that this judgment should be made by both physician and patient (who should confirm in writing his understanding of the relative risks). 138 references.

004593 Boldyrev, A. I.; Fleys, E. P.; Vayntrub, M. Ya. Klinika epilepsii, Moskovskiy NII psikhiatrii, Ministerstvo zdravookhraneniya RSFSR, Moskva, USSR /**Neurological complications due to the pharmacological treatment of epileptic patients.**/ Nevrologicheskiye oslozhneniya pri medikamentoznom lechenii bol'nykh epilepsiyey. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(6):738-741, 1979.

Neurological complications due to anticonvulsant treatment were analyzed in 48 epileptic patients. There were functional disturbances of the brainstem and cerebellar neuronal systems; disarticulation (apparently caused by pseudobulbar syndrome); and muscle relaxation (particularly in patients receiving benzodiazepines) connected with disturbances of the spinal reflex mechanisms. In 22 of the Ss there were symptoms of damage both to the CNS and the peripheral nerves. Results show that the onset of neurological complications is accompanied by a changed structure and increased frequency of epileptic seizures, and that residual signs of organic diseases are important diagnostically. 8 references. 004594 Braccini, T.; Coat, C.; Lavagna, J.; Myguel, M.; Dascourt, G. Service de Psychiatrie et de Psychologie Medicale, Hopital Dasteur, F-06031 Nice Cedex, France /**Neurological tolerance of lithium and psychotropic drugs in combination: 265 cases.**/ Tolerance neurologique de l'association lithium-psychotropes: a partir de 265 cures associatives. Encephale. 7(1):29-43, 1981.

Neurological tolerance for combined lithium/psychotropic drug treatment was studied retrospectively in 265 cases in 132 patients between 1971 and 1978. In comparison with other combinations, neurological tolerance is not increased when haloperidol is combined with lithium. However, the presence of cerebral lesions is a risk factor. One hundred seventeen cases of combined treatment were preceded by treatment with either lithium or a psychotropic drug. An analysis of these cases showed that cases of intolerance doubled when combination therapy was begun, and that the neurological effects increased in intensity. 15 references. 004595 Branchey, Marc H.; Branchey, Laure B.; Richardson, Mary Ann. Alcoholism Research and Treatment Center, V.A. Hospital, 130 West Kingsbridge Rd., Bronx, NY 10468 **Effects of neuroleptic adjustment on clinical condition and tardive dyskinesia in schizophrenic patients.** American Journal of Psychiatry. 138(5):608-612, 1981.

Attempts to decrease neuroleptic medication were made in 21 chronic schizophrenic patients in order to minimize the risks of tardive dyskinesia. Level of psychopathology and severity of dyskinetic symptoms were monitored while the neuroleptic was gradually decreased over 3 months and then discontinued. Only one patient relapsed during drug decrease, but 15 patients relapsed within 6 months after drug withdrawal. After relapse, medication was gradually increased. The doses needed to induce recovery were higher than those which had been sufficient to prevent relapse during gradual drug reduction. Dyskinetic symptoms were not significantly modified during drug reduction but increased significantly after drug discontinuation. 13 references. (Author abstract modified)

004596 Bron, Bernhard. Psychiatrische Universitatsklinik, v.-Siebold-Strasse 5, D-3400 Gottingen, West Germany /**Drug-induced psychosis and schizophrenia in adolescents.**/ Drogeninduzierte Psychose und Schizophrenie im Jugendalter. Schweizer Archiv fur Neurologie, Neurochirurgie und Psychiatrie. 126(1):179-197, 1980.

Among 233 young drug abusers with different drug-induced psychotic syndromes, there were 84 patients whose psychosis showed a character of its own. Their drug history and behavior, life history (including in some cases premorbib personality signs), psychotic diseases in their families, and psychopathological diagnosis showed statistically significant differences relative to other patients. The stage of development can be an especially relevant prepsychotic circumstance if it is influenced by drugs. There are a number of unanswered questions, for example, why do some patients with similar or equal prerequisites become drug abusers, while others have a psychosis having its own laws. The cause of drug-induced psychosis with its own laws among young people needs to be considered in several dimensions: effects of the drug, individual constitutional factors, specific personality factors, psychodynamic and reactive aspects in situations, and specific and typical developmental factors. Clinical observations show essential connections between drug effects and a psychosis having its own laws. 44 references. (Journal abstract modified)

004597 Burgess, C. D.; Turner, P. Dept. of Clinical Pharmacology, University of Southampton, Centre Block, Southampton General Hospital, Southampton S09 3TU, England **Cardiotoxicity of antidepressant drugs.** Neuropharmacology. 19(12):1195-1199, 1980.

The effects of different groups of antidepressant drugs on the cardiovascular system (CVS) are reviewed, and clinical implications of these CVS effects are discussed. In addition to the CVS effects of the tricyclic antidepressants, the effects of maprotiline, mianserin, monoamine oxidase inhibitors, lithium, nomifensine, and zimelidine are discussed. It is noted that serious cardiovascular complications do not occur frequently after therapeutic doses, but that after overdose, many of these agents may prove lethal. The more serious complications are more likely to occur in the aged and in those with cardiovascular disease. 63 references. (Author abstract modified)

004598 Carranza, J. University of Mississippi, Medical Center, 2500 North State Street, Jackson, MS 39216 **Long term use and abuse of benzodiazepines.** Pharmakopsychiatrie Neuro-Psychopharmakologie. 13(5):254-258, 1980.

The long-term use and abuse of benzodiazepines are discussed. The detrimental effect that lay publications, television, and the mass media has had on the pharmacotherapy of anxiety and depressive reactions with benzodiazepines is emphasized. A case study is provided of a patient who was suffering from anxiety attacks, agoraphobia, and fear of dying and was treated successfully with Librium for a long period, but who eventually refused Librium for fear of his possible addiction to the drug. In a review of the literature, few well documented cases of benzodiazepine dependence have been found. It is suggested that the seizures that are reported with withdrawal of benzodiazepines after long-term use is clinical evidence of the anticonvulsant effect of benzodiazepines and that this is not proof of a physical dependence. The withdrawal syndromes associated with high dosages of benzodiazepines might have a different neurochemical mechanism than that observed in alcohol and barbiturate withdrawal. 16 references.

004599 Chodera, A.; Cenajek, D.; Mazurek, K. Medical Academy Poznan, Dept. of Pharmacology, ul. Fredry 10, 61-701 Poznan, Poland **Interaction of p-chlorophenylalanine, mianserine and danitracen with amphetamine.** Arzneimittel-Forschung. 31(1):61-63, 1981.

Three antiserotonin compounds, p-chlorphenylalanine, mianserin, and danitracen, were investigated for their influence on amphetamine stereotype in correlation with concentration of this amine in blood serum and brain tissue. A positive correlation (decrease in stereotypy and in the concentration of amphetamine in serum and brain) was found only for danitracen. P-chlorphenylalanine and mianserin premedication decreased serum and brain tissue concentrations of amphetamine, but enhanced the amphetamine stereotypy effect. It is assumed that in the mixed pharmacodynamic/pharmacokinetic interaction in the case of mianserin and p-chlorphenylalanine the pharmacodynamic component (inhibition of the serotoninergic system in CNS) prevails, whereas in the case of danitracen the pharmacokinetic effect is superior. 10 references. (Journal abstract)

004600 Cohen, Martin; Dailey, George; Meshad, Michael; Renick, John; Kreisberg, Robert. Dept. of Psychiatry, University of Iowa, College of Medicine, Iowa City, IA 52242 **In normal young men acute dopaminergic blockade does not impair free water excretion following a standard water load.** Communications in Psychopharmacology. 4(4):323-326, 1980.

The hypothesis that water intoxication in psychiatric patients is a side-effect of the dopaminergic blockade of psychotropic medication was evaluated in nine healthy volunteer Ss. The administration of 1mg haloperidol intramuscularly produced markedly increased serum prolactin levels but had no effect on the ability of normal volunteers to excrete a water load. This is consistent with difficulties in demonstrating in man any effects on water and electrolyte metabolism of increasing endogenous levels of prolactin with thyroid releasing hormone stimulation. These results do not preclude the possibility that the effects of dopaminergic blockade might become manifest only over an extended time period. 11 references. (Author abstract modified)

004601 Cole, Jonathan O. Psychopharmacology Program, McLean Hospital, Belmont, MA 02178 **Prevention of tardive dyskinesia and other drug-related adverse effects.** In: Baxter, C., Perspectives in schizophrenia research. New York, Raven Press, 1980. 445 p. (p. 353-363).

The prevention of the side-effects of tardive dyskinesia (TD), agranulocytosis, and sudden death during antipsychotic (AP) drug treatment for schizophrenia is discussed. Important issues discussed include: 1) the exact relationship between drug exposure and the presence of TD; 2) drug holidays; 3) evaluation of low dose AP drug therapy; and 4) establishment of lowest effective maintenance dosage. Treatment of TD and some alternate drug therapies are considered. It is suggested that some of these problems warrent multihospital collaborative studies based on a single protocol while others are more appropriate for research units in single hospitals. A discussion of the paper follows. 30 references. (Author abstract modified)

004602 Dam, Mogens. University Dept. of Neurology, Hvidovre Hospital, Hvidovre, Denmark **/Various aspects of the effect of anticonvulsant drugs on memory./** Additional aspects. Acta Neurologica Scandinavica. 62(Suppl. 80):56-57, 1980.

Comments are made on several aspects of the effect of antiepileptic drugs on memory function. It is argued that many of the reactions may be caused by the disease itself or by a combination of the drug and epilepsy, and that there is a need for further investigations to ascertain definite drug-induced side-effects in such coumpounds, as phenytoin. Evidence is briefly reviewed on the psychotropic effects of carbamazepine, and it is concluded that the compound is neuropsychologically most useful in patients with below average intelligence who show signs of emotional disturbance.

004603 Davis, John M.; Janicak, Philip G.; Killian, Grant A. Illinois State Psychiatric Institute, Chicago, IL 60612 **Clinical strategies for antipsychotic drug treatment, tardive dyskinesia, and the training of research psychiatrists.** In: Baxter, C., Perspectives in schizophrenia research. New York, Raven Press, 1980. 445 p. (p. 365-383).

The issue of neuroleptic treatment and tardive dyskinesia is examined from the viewpoint of developing clinical research strategies to improve treatment and minimize side-effects. The problem of training psychiatrists in clinical research is discussed. Several suggestions including rare patient protocols, registries, and record keeping are discussed in the context of projects which are deemed feasible in both the state and federal systems of psychiatric care. Such a model could alleviate the critical shortage of psychiatrists trained in good clinical research. A discussion of the paper follows. 35 references. (Author abstract modified)

004604 Davis, Kenneth L.; Berger, Philip A.; Hollister, Leo E. Dept. of Psychiatry and Behavioral Sciences, Stanford University School of Medicine, Stanford, CA **Clinical and preclinical experience with choline chloride in Huntington's disease and tardive dyskinesia: unanswered questions.** In: Barbeau, A., Nutrition and brain. New York, Raven Press, 1979. v. 5. (p. 305-315).

A review is presented of preclinical and clinical research into the potential of choline chloride treatment of tardive dyskinesia and Huntington's disease. Investigations establishing the transitory efficacy of the acetylcholinesterase inhibitor, physostigmine, in several neuropsychiatric disorders, have stimulated further research aimed at discovering a safe, long acting oral cholinomimetic. Evidence in this area of study is reviewed, including that relating to: the effect of choline on central cholinergic activity; the efficacy of choline in treatment of tardive dyskinesia; the relationship between choline administration and plasma and cerebrospinal fluid choline levels; the mechanisms underlying the symptomatic improvement of tardive dyskinesia associated with increased cholinergic activity. Implications of these data are discussed with reference to the hypothesis that cholinomimetics inhibit nigrostriatal dopamine impulse flow. Possible long-term effects of choline treatment are discussed, and the need for further research is noted. (Author abstract modified)

004605 Deiser, Roland; Schindler, Raoul. Schindler: Psychiatrisches Krankenhaus der Stadt Wien, Baumgartner Hohe 1, A-1145 Wien, Austria /**The course of long-term treatment with fluphenazine decanoate (Dapotum-D).**/ Das Verlaufsbild langjähriger Behandlungen mit Fluphenazindekanoat (Dapotum D). Psychiatria Clinica. 13(3-4):193-205, 1980.

Data are provided on the course of long-term treatment of 76 psychiatric patients using fluphenazine decanoate. Objective and subjective tolerance following 5 years or more of treatment were compared in patients exhibiting continuous ambulatory adjustment, in those with continuous inpatient adjustment, and in those who withdrew from the drug or changed the medication after 5 years or more of permanent adjustment. A significant stabilization in the clinical picture and a good permanent compatibility (reduction in objective side-effects) were demonstrated. Complete withdrawal of permanent medication caused late dyskinesias and a tendency to slow remission in 36.9% of the patients. The latency of this development is seen as binding both physician and patient to the successful completion of therapy. 19 references. (Journal abstract modified)

004606 Deutsch, Stephen I.; Peselow, Eric D.; Banay-Schwartz, Miriam; Gershon, Samuel; Virgilio, Joanne; Fieve, Ronald R.; Rotrosen, John. Dept. of Psychiatry, New York University Medical Center, 550 First Ave., New York, NY 10016 **Effect of lithium on glycine levels in patients with affective disorders.** American Journal of Psychiatry. 138(5):683-684, 1981.

Evidence is reported in support of an abnormality in glycine regulation in RBCs from patients with bipolar depression. The findings suggest that this effect results from lithium treatment in affective disordered patients, and that the abnormality occurs only in bipolar patients and not in those with recurrent unipolar major depressive disorders. The possible mechanisms responsible for the observed increases in erythrocyte glycine are suggested, and it is concluded that further biochemical research should be conducted in light of glycine's role as a neurotransmitter. 10 references.

004607 Elsass, Peter; Mellerup, Erling T.; Rafaelsen, Ole J.; Theilgaard, Alice. Clinical Psychological Unit, Dept. of Psychiatry, Rigshospitalet, 9, Blegdamsveij, DK-2100 Copenhagen O, Denmark **Effect of lithium on reaction time – a study of diurnal variations.** Psychopharmacology. 72(3):279-282, 1981.

Continuous reaction time performance was measured in groups of manic-depressive patients treated with lithium, control manic-depressive patients treated with other drugs or no drugs, and normal controls. Reaction times in patients treated with lithium were slower than those of the normal and psychiatric controls. However, the effect of lithium on reaction times was weaker than that of diazepam sedation, organic brain damage, or hepatic encephalopathy. For all three groups, reaction times were slower in the morning than in the evening or at night. Slow reaction times at initial testing were correlated with relatively large variations over 24 hours for normal and psychiatric controls, but not for the patients treated with lithium. 18 references. 004608 Endo, Masaomi; Hirano, Masaharu; Nakamura, Ichiro; Kawai, Yoshiharu. Dept. of Neuropsychiatry, Toyama Medical and Pharmaceutical University, Faculty of Medicine, Toyama, Japan **The two survival cases of alpha-pattern coma caused by large amounts of hypnotics and neuroleptics.** Folia Psychiatrica et Neurologica Japonica. 34(4):451-458, 1980.

The EEGs of two men aged 42 and 63 who survived overdoses of hypnotic and neuroleptic drugs are described. The EEGs of the two Ss initially demonstrated alpha pattern coma. The prominent pattern of the EEG changes from the alpha to a theta pattern and subsequently into a low amplitude alpha pattern. The patients recovered from the suicide attempt without any residual neurological symptoms. These findings suggest that the outcome of alpha pattern coma induced by drug poisoning is favorable, and it is concluded that a longitudinal EEG recording should be performed as early as possible when the patient is in a comatose state. 22 references. (Author abstract modified)

004609 Fariello, Ruggero G. Clinical Neurophysiology, Dept. of Neurology, University of Wisconsin, 600 Highland Ave., Madison, WI 53792 **Epileptogenic properties of enflurane and their clinical interpretation.** Electroencephalography and Clinical Neurophysiology. 48(5):595-598, 1980.

Three cases of EEG changes induced by a single exposure to enflurane anesthesia are reported. In one patient, enflurane administered during a donor nephrectomy resulted in unexpected partial motor seizures; until the cause of the seizures was correctly identified, the patient was inappropriately treated with anticonvulsants. Two other patients suffered from partial, complex, and generalized seizures uncontrolled by medication. Epileptic foci delineated and activated by enflurane were surgically ablated, and the patients are now seizure free. These findings indicate that enflurane exposure may cause mistakes in clinical interpretation of the EEG and that enflurane may be a useful tool in identifying epileptic foci during corticography or depth electrode intraoperative recordings. 7 references.

004610 Fraser, H. F,; Gorodetzky, C. W.; Kay, D. C.; Yeh, S. Y.; Dewey, W. L. Division of Research, Addiction Research Center, National Institute of Drug Abuse, Lexington, KY **Possible influence of opioid normetabolites on the onset, magnitude and quality of the opioide abstinence syndrome.** Drug and Alcohol Dependence. 5:255-272, 1980.

Drug dependence is viewed as a dynamic state which may be altered with time respecting pattern, magnitude, and quality of physical dependence due in part to the interaction of the parent opioid with its normetabolites. The principal metabolites of acetylmethadol were noracetylmethadol and dinoracetylmethadol and they were found to be active morphine-like agonists. Their long half-life and accumulation in the plasma accounted for the delayed onset of abstinence after the acetylmethadol was withdrawn. The normetabolites of propoxyphene, norpropoxyphene, and dinorpropoxyphene were found to be very weak morpine-like agonists. Normeperidine was inactive as a morphine-like agonist and appeared to have a different action in that it primarily is a convulsant. Although the formation and accumulation of normeperidine may account partly for the characteristics of its abstinence syndrome, a dominant factor was found to be the disappearance of meperidine from blood plasma. In the case of normorphine, norcodeine, and norlevorphanol, the difficulties in direct addiction tests in man are discussed. Examination of the source of abstinence scores for subcutaneous normorphine oral norcodeine, oral codeine, oral morphine, subcutaneous morphine, and oral methadone suggested that these compounds may be divided into two categories: normorphine and norcodeine in one category, and methadone in the other. The relevance of these observations to comparative studies of opioid abuse is discussed. (Journal abstract modified)

004611 Freeman, H. L.; Soni, S. D.; Carpenter, L. Dept. of Psychiatry, University of Manchester School of Medicine, Hope Hospital, Salford M6 8HD, England **A controlled trial of oxypertine in tardive dyskinesia.** International Pharmacopsychiatry. 15(5):281-291, 1980.

The effects of oxypertine in treating tardive dyskinesia were investigated. The design was double-blind, placebo controlled, between patient, in 28 patients from whom previous medication was withdrawn, with 14 patients in each group. Treatment was for 4 weeks. Although more oxypertine patients improved than placebo, 71.4% versus 50%, the results did not reach statistical significance. A further study is planned to increase the overall number of patients in the study, and to lengthen treatment periods. It is concluded that the results already add further weight to the previously existing evidence that oxypertine is of therapeutic value in the management of tardive dyskinesia. 15 references. (Author abstract modified)

004612 Gelenberg, Alan J.; Wojcik, Joanne Doller; Growdon, John H. Dept. of Psychiatry, Harvard Medical School, Boston, MA 02114 **Lecithin for the treatment of tardive dyskinesia.** In: Barbeau, A., Nutrition and the brain. New York, Raven Press, 1979. Vol. 5. (p. 285-303).

The administration of exogenous choline or lecithin to increase CNS cholinergic tone in the treatment of tardive dyskinesia (TD) is discussed. Eight case histories illustrate patient reactions to choline and to lecithin. Lecithin appears to produce the same CNS effects observed with choline, while causing fewer adverse reactions. If lecithin is, in fact, an effective nontoxic agent to suppress the movements of TD, it could provide an acceptable solution until a less neurotoxic antipsychotic agent is found. Confirmation of the results will show that a dietary constituent can affect the levels of an important CNS neurotransmitter to a clinically useful degree, thus opening possibilities for greater understanding of neurophysiology and other medical therapies. 64 references.

004613 Gourevitch, M. Hopital de Maison-Blanche, 3, avenue Jean-Jaures, F-93330 Neuilly-sur-Marne, France **/Neuroleptic treatment as experienced by a psychiatrist./** Un traitement neuroleptique vecu par un psychiatre. Evolution Psychiatrique. 46(1):97-104, 1981.

A psychiatrist who suffered from acute delirious psychosis recounts her treatment with neuroleptic drugs. The first treatment consisted of the combined administration of haloperidol and chlorpromazine, and biperiden on an outpatient basis. This treatment induced serious physical and mental aberrations, and the patient herself stopped the treatment after 24 hours. When she was hospitalized, cyamemazine and haloperidol were prescribed and administered. Extrapyramidal side-effects were serious, but they diminished somewhat after the cyamemazine was discontinued. After being discharged, the patient took haloperidol and methotrimeprazine for 3 months. Memory lapses were frequent and serious. Altogether, the effects were serious and very disconcerting and continued beyond the period of treatment.

004614 Gualtieri, C. T.; Hawk, Barbara. Dept. of Child Psychiatry, North Carolina Memorial Hospital, Chapel Hill, NC 27514 **Tardive dyskinesia and other drug-induced movement disorders among handicapped children and youth.** Applied Research in Mental Retardation. 1(1/2):55-69, 1980.

The literature concerned with tardive dyskinesias and other movement disorders caused by chronic use of neuroleptics is reviewed, with emphasis on their occurrence in mentally retarded youth and children. What appears is a confusing array of anecdotal reports and uncontrolled studies, a heterogeneous array of children with a variety of diagnoses and movements, and a wide range of intercurrent problems and medications. Even if there were no such symptoms as tardive dyskinesia, extrapyramidal symptoms, or withdrawal emergent symptoms, caution would still be advisable in the application of neuroleptic drugs among young people. Effects on the child's general demeanor, level of alertness, personality, and learning patterns would mitigate against the use of these agents except in carefully chosen circumstances. 57 references. Clinique ophtalmologique universitaire, Hopital ophtalmique, 15, avenue de France, CH-1004 Lausanne, Switzerland **/Ophthalmological side-effects of lithium./** Les effets secondaires du lithium en ophtalmologie. Encephale. 7(2):123-128, 1981.

Ophthalmological side-effects of lithium are examined. One of the possible side-effects from psychotropic drugs, especially major tranquilizers, is ocular lesions (opacitus in the cornea and the lens). Ocular examination of 73 patients suffering from affective disorders and receiving lithium salts for several years showed no significant ocular lesions due to the medication. 16 references. (Journal abstract modified)

004616 Hollister, Leo E. Stanford University School of Medicine, Stanford, CA 94305 **Treatment of tardive dyskinesia.** Current Psychiatric Therapies. 19:89-97, 1980.

Tardive dyskinesia is considered in relation to clinical manifestations, prevalance, predisposing factors, differential diagnosis, pathogenesis, treatment, and prevention. Clinical manifestations are repetitive, involuntary, choreoathetoid movements that involve the mouth, lips, tongue, trunk, and extremities, which are not often evident until the patient has been treated for months or years with antipsychotic drugs. Two major modes of treatment become evident if the pathogenesis of tardive dyskinesia is viewed as presenting an imbalance between the dopaminergic and cholinergic systems in the striatum. One mode would be to reduce dopaminergic transmission and the other would be to increase cholinergic transmission. One might also try to increase GABAergic transmission. It is suggested that the uncertain outcome of tardive dyskinesia differs from the usual type of unwanted effect of a drug. 17 references.

004617 Hudson, Charles J. Dept. of Psychiatry, Mary Imogene Bassett Hospital, Cooperstown, NY 13326 **Tricyclic antidepressants and alcoholic blackouts.** Journal of Nervous and Mental Disease. 169(6):381-382, 1981.

Three brief case histories are presented of female patients who experienced blackouts after consuming alcohol, approximately 1 month after starting tricyclic antidepressants. Possible mechanisms for this interactive effect are considered with reference to the central cholinergic activity of tricyclic antidepressants and the increased blood-brain barrier permeability to alcohol found in previous animal research. 8 references. 004618 Ideshita, Hisato; Morita, Hironori; Yoshinaga, Junji; Sasaki, Takanobu; Hikiji, Akiyoshi. Dept. of Neurology, Hiroshima City Hospital, Hiroshima, Japan **A study on mental symptoms developed during the treatment of Parkinson's disease.** Brain and Nerve. 32(9):941-947, 1980.

Psychological symptoms of hallucinations, delusion, and/or delirious state were studied in Parkinson's disease patients. The symptoms occurred in 23 of 101 patients and tended to be highest in the Ss in their 60's. Hypertension and a history of depression were more frequently observed in Ss with psychological symptoms than in those without these symptoms. A mean daily dose of L-dopa for patients at the onset of psychological symptoms was less than was the mean daily maximum dose of L-dopa for Ss without psychological symptoms. Cases with cerebral atrophy had a tendency to develop psychological symptoms, as did those with an abnormal EEG. Cases with psychological symptoms were more often complicated by dyskinesia than were those without these symptoms. It is concluded that the incidence of psychological symptoms during the treatment of Parkison's disease is high in elderly patients who have experienced all or some of the following conditions: psychiatric illness, hypertension, cerebral atrophy, and abnormal EEG. 11 references. (Journal abstract modified)

004619 Itil, T. M.; Herkert, E.; Schneider, S. J.; Luhar, J.; Fredrickson, J. W.; Roffman, M. V.A. Medical Center, Montrose, NY **Baclofen in the treatment of tardive dyskinesia: open label study.** Acta Therapeutica. 6:315-323, 1980.

The effect of baclofen, a GABA derivative, was investigated in a group of schizophrenic patients with the distinct symptoms of tardive dyskinesia. Study was open without control compounds. In some patients, an obvious decrease in dyskinetic movements was observed. No effects of baclofen on psychopathology were noticed. 19 references. (Author abstract)

004620 Itil, Turan M.; Fredrickson, John W.; Schneider, Sid J.; Francis, Irene B.; Khan, Muzaffar M. F.D.R. V.A. Medical Center, Montrose, NY **Clopipazan (SKF-69634), a new neuroleptic essentially free of extrapyramidal liability: quantitative pharmaco-EEG and open label clinical trial.** Current Therapeutic Research. 27(5):719-730, 1980.

The results of a phase I single rising dose tolerance study of clopipazan (SKF-69634) with quantitative pharmaco-EEG (QPEEG) and an early phase II open pilot study are presented. QPEEG analyses revealed that it has systematic effects on human brain function in doses as low as 10mg. These QPEEG effects resembled those of known neuroleptics, but with less rapid onset and longer lasting effects. These results suggested that the compound should have neuroleptic properties, and accordingly it was tested in an uncontrolled, open label early phase II study with a group of hospitalized schizophrenics. Clopipazan was found to be a neuroleptic for some patients, without producing extrapyramidal side-effects. Tardive dyskinesia, present in some patients before treatment, improved slightly. No significant adverse reactions were observed. The potency and onset of the antipsychotic effect of clopipazan, however, was not as strong or as early as with some known neuroleptics. 13 references. 004621 Izrael', Ye. N. Klinika ekzogenno-organicheskikh psikhozov, Moskovskiy NII psikhiatrii, Ministerstvo zdravookhraneniya RSFSR, Moskva, USSR **/Mental disturbances in chronic manganese poisoning./** Psikhicheskiye narusheniya pri khronicheskoy margantsevoy intoksikatsii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(2):105-108, 1981.

Mental disturbances were studied in 35 patients with chronic manganese poisoning, who were examined between 1939 and 1956 in connection with occupational safety. The Ss were 21 men and 14 women (30 to 45 years old) who had been exposed to industrial pollution for periods ranging from less than 1 year to more than 20 years. The worst cases were those of workers who were involved in the processing of manganese ore, and who came into direct contact with manganese dust, the concentration of which was more than 10 times higher than permissible levels. The first symptoms of the disease appeared about 5 to 10 years after the first exposure. These were asthenia, followed by the development of extrapyramidal symptoms. Results show that chronic manganese poisoning led to permanent mental deficiency due to organic brain damage. 5 references. (Journal abstract modified)

004622 Jacquot, M.; Bottari, R. Hopital Sainte-Anne, 1, rue Cabanis, F-75014 Paris, France **/Manic state induced by salbutamol taken orally./** Etat maniaque ayant ete declenche par la prise orale de salbutamol. Encephale. 7(1):45-49, 1981.

A manic state induced by salbutamol taken orally is discussed. A 25-year-old man with no previous psychiatric history, but whose family had several cases of manic-depressive psychosis, exhibited typical manic symptoms after taking salbutamol, which had been prescribed for an asthmatic condition. Salbutamol is known to have a clear and intense action on the mood of endogenous psychotic depressive patients. It is suggested that a manic state can be induced by ingestion of salbutamol. 20 references. (Journal abstract modified)

004623 Jellinek, Theodore; Gardos, George; Cole, Jonathan O. Community Treatment Program, Herbert Lipton Community Mental Health Center, Nichols Rd., Fitchburg, MA 01420 **Adverse effects of antiparkinson drug withdrawal. (Unpublished paper).** Research Report, NIMH Grant 5R01-MH-32675, 1980. 20 p.

The behavioral, affective, and neurological effects of antiparkinson drug discontinuation in schizophrenic outpatients were investigated in a double-blind controlled study. Ss were evaluated at baseline and at 2 and 4 weeks. Nine of the 24 placebo patients terminated early because of adverse effects, while none of the eight controls did so. The placebo group demonstrated statistically significant increases at 2 weeks in lower extremity movement, motor agitation, hallucinations, and physical complaints. At 4 weeks, the placebo group scored significantly higher in depression. It is concluded that a sizeable proportion of chronic drug treated schizophrenics need antiparkinson drug treatment for clinical stability. 31 references. (Author abstract modified)

004624 Johnson, G. F. S. Dept. of Psychiatry, University of Sydney, Sydney, New South Wales, Australia 2006 **Tardive dyskinesia.** Australian and New Zealand Journal of Psychiatry. 14(4):261-263, 1980.

Tardive dyskinesia is discussed in terms of its symptoms, epidemiology, course, treatment, and prevention. The diagnosis of tardive dyskinesia depends on the presence of characteristic movements in a patient with a history of drug exposure. All the antipsychotic drugs may produce this syndrome and the duration of therapy appears critical with a minimum of 6 to 12 months required to produce abnormal movements. The incidence of tardive dyskinesia in patients varies from .5% to 40% depending on differences in definition of the syndrome, population studies, and neurological assessment techniques. Tardive dyskinesia, unlike other extrapyramidal symptoms, may be irreversible and there is no satisfactory treatment once it is established. Prevention is the only effective way of reducing the frequency of tardive dyskinesia. 8 references.

004625 Kiljan, Anna; Pietruszewska, Irena. Klinika Psychiatryczna AM, ul. Nowowiejska 27, 00-665 Warszawa, Poland / **Unwanted effects of lithium carbonate used in the prevention of relapses of affective illness.**/ Niepozadane dzialanie weglanu litu stosowanego w zapobieganiu nawrotom chorob afektywnych. Psychiatria Polska. 14(4):343-350, 1980.

Adverse lithium effects were analyzed in 83 outpatients (42 men and 41 women) who had been treated from 1968 to 1978. Of the patients receiving lithium carbonate, 50 were suffering from bipolar affective illness, 6 from unipolar affective illness, and 27 from schizoaffective psychosis. Adverse symptoms were observed in 25 subjects (30.12%). In six of these patients (1.26%) lithium administration had to be discontinued. It is concluded that lithium carbonate at doses stabilizing serum lithium concentration (approximately 0.7 eE/liter) is relatively well tolerated. Unwanted lithium effects occur more often in women than in men, and initiation of lithium therapy in women ages 50 to 55 years often brings about adverse effects. It has also been found that lithium combined with psychotropic drugs increases the likeliness of the occurrence of unwanted lithium effects. 20 references. (Journal abstract modified)

004626 Kinze, Wolfram; Prohl, Lothar; Brauer, Harald. Kinderneuropsychiatrische Abteilung, Bezirksfachkrankenhaus, Luckauer Strasse 17, DDR-7550 Lubben, German Democratic Republic /**On the question of parenchymal damage caused by long-term therapy with psychotropics in adolescence.**/ Zur Frage der Parenchymschaden durch langfristige Therapie mit Psychopharmaka im Jugendalter. Psychiatrie, Neurologie und Medizinische Psychologie. 32(12):716-722, 1980.

Parenchymal damage caused by long-term pharmcotherapy with psychotropic drugs in adolescents is examined. For 341 patients treated with psychotropic drugs over different time periods and with different dosages, laboratory tests were conducted to determine possible toxic effects and damage to the parenchyma of the liver, the kidneys, and the blood formation systems. Statistically determined differences in some liver functions and in the serum creatinine between treated and untreated patients were found, but no significant indication of direct toxic damage was evidenced. These deviations are considered to be of an allergic nature and to be caused by enzyme induction. 23 references. (Journal abstract modified)

004627 Kocher, R.; Hobi, V.; Linder, M.; Studer, K. Psychiatrische Universitatsklinik, Wilh.-Klein-Strasse 27, CH-4025 Basel, Switzerland /**On the therapy of neuroleptic induced tardive dyskinesia with dimethylaminoethanol (Deanol).**/ Zur therapie mit Dimethylaminoathanol (Deanol) bei neuroleptikainduzierten Spatdyskinesien. Schweizer Arhive fur Neurologie, Neurochirurgie und Psychiatrie. 126(1):103-109, 1980.

A double-blind cross-over study of 20 patients with tardive dyskinesia due to chronic use of neuroleptics showed no difference between efficacy of dimethylaminoethanol (Deanol, Deaner) and placebo. Several patients improved with dimethylaminoethanol, whereas several other patients showed increasing dyskinesia. The same phenomenon could be observed in the placebo group. Tolerance of the compound was very good. Results of an additional open study, however, suggest that the administration of dimethylaminoethanol may be tried so long as no other means are available to define those patients who will react favorably to this medication. 13 references. (Author abstract)

004628 Kuran, Wlodzimierz. Instytut Psychoneurologiczny, Sobieskiego 1/9, 02-957 Warszawa, Poland /**Contemporary problems in the pharmacological treatment of parkinsonism.**/ Wspolczesne problemy farmakologicznego leczenia parkinsonizmu. Neurologia i Neurochirurgia Polska. 14(4):427-435, 1980.

Contemporary problems in the pharmacological treatment of parkinsonism are discussed. The aim of the study was to establish the pathomechanism emerging as side-effects in levodopamine treatment and the introduction of drugs modifying or substituting levodopamine action in the treatment of parkinsonism. Dyskinesis appears as a side-effect in 40% to 65% of the cases treated with levodopamine. Several hypotheses suggest that dyskinesis results from the disturbance of neurotransmitters such as in the GABA system the serotonergic system, or cholinergic activity. A discussion of drugs used to counteract levodopamine side-effects suggests that levodopamine should not be used in cases with minimal symptoms. In these cases anticholinergic or amantadine drugs should be used, and levodopamine should be reserved for cases where the syndrome is strongly developed and very severe. 36 references.

004629 Kuran, Wlodzimierz. Klinika Diagnostyki i Terapii Chorob Neurologiczynch, Al. Sobieskiego 1/9, 02-957 Warszawa, Poland /**Present attempts at treating tardive dyskinesia.**/ Wspolczesne proby leczenia poznych dyskinez. Psychiatria Polska. 14(6):627-633, 1980.

A survey of literature on the present day attempts at treating tardive dyskinesia focuses on the fact that the etiology of the condition has not been clearly established. Several hypotheses are discussed on the pathomechanism of tardive dyskinesia explaining the condition as a dynamic disturbance of the balance of neurotransmitters, particularly those in striation. Approaches to treating the condition are discussed focusing on removing neuroleptics from treatment depending on the mental condition of the patient, substituting neuroleptics blocking dopaminergic receptors, prescribing drugs with an antagonistic effect in relation to dopamine, prescribing cholinergic drugs, drugs with GABAergic activity, agonistic dopamines, and drugs with anticholinergic action. An early diagnosis of the condition is encouraged in order to increase the chances of spontaneous remission. 40 references.

004630 Law, William, III; Petti, Theodore A.; Kazdin, Alan E. Petti: Western Psychiatric Institute and Clinic, 3811 O'Hara St., Pittsburgh, PA 15261 **Withdrawal symptoms after graduated cessation of imipramine in children.** American Journal of Psychiatry. 138(5):647-650, 1981.

In a systematic retrospective study, the charts of 22 depressed children on a clinical research unit were reviewed following withdrawal from high dose imipramine treatment. Significant withdrawal symptoms were found over seven symptom categories despite an average tapering period of 6.4 days. These results suggest that withdrawal symptoms in children may be much more prevalent and intense than previously recognized. 22 references. (Author abstract modified)

004631 Lawrence, R. C.; Lovering, E. G.; Poirier, M. A.; Watson, J. R. Lovering: Drug Research Laboratories, Health Protection Branch, Tunney's Pasture, Ottawa, Ontario K1A 0L2, Canada **Impurities in drugs V: meprobamate.** Journal of Pharmaceutical Sciences. 69(12):1444-1445, 1980.

One lot of meprobamate raw material and 28 lots of tablets were examined for impurities by thin layer chromatography (TLC). All lots contained di-(2-methyl-2-propyl-3-carbamoyloxypropyl) carbonate at levels that ranged between 0.1 and 1.0% of the total drug content. Nine lots also contained low levels of a second impurity (about 0.1%), and one lot also contained a third impurity (about 0.1%). Estimates of the two unidentified impurities were based on the assumption of a TLC response with furfural/hydrochloric acid spray equivalent to that of meprobamate. 7 references. 004632 Lechat, P.; Lagier, G.; Rouveix, B.; Fontagne, J.; Vincens, M. 15, Rue de l'Ecole-de-Medecine, F-75006 Paris, France **/Undesirable effects of medicines: a review of several publications issued from 1977-1979./** Effets indesirables des medicaments: releve de quelques publications parues en 1977-1979. Therapie. 35(4):483-517, 1980.

Undesirable side-effects of various medicines as evidenced in studies published from 1977-79 are reviewed. The first part of the article concerns known undesirable effects, and includes neuropsychological effects of amantadine, bismuth, chloral hydrate and cimetidine effects on the skin and blood; effects on the heart and blood pressure; and digestive, metabolic, and endocrinal effects. Dangerous combinations also are mentioned: tricyclic antidepressants combined with monoamine oxidase inhibitors; diazepam and tricyclic antidepressants; triacetyloleandomycin and estroprogestatives; and sodium valproate with antiepileptic drugs. Undersirable effects that seem to have appeared in the literature for the first time are cited; these include neuropsychological effects in migraine sufferers using aspirin. A list of products cited is included.

004633 Litvinova, N. M.; Bobritskaya, Z. M.; Gordiyenko, Zh. P.; Gorbatko, L. G. Khar'kovskiy NII nevrologii i psikhiatrii, Khar'kov, USSR **/Pathophysiological and morphological changes in the CNS during long-term administration of haloperidol./** Patofiziologicheskiye i morfologicheskiye izmeneniya v tsentral'noy nervnoy sisteme pri dlitel'nom vvedenii galoperidola. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 81(2):98-102, 1981.

Pathophysiological and morphological changes in the CNS during long-term administration of haloperidol were studied in white rats in relation to the capacity to develop conditioned reflex connections. The 79 animals were divided into 5 groups. Groups 1, 2 and 3 were given haloperidol (1mg/kg per day) for 3, 6, and 9 months respectively. Group 4 received increasing dosages (1 to 12mg/kg) during the course of a month until the appearance of extrapyramidal disorders. Group 5 was a control group. Motor defensive conditioned avoidance reflexes were developed, and the animals were then decapitated. Sections of the sensorimotor cortex and caudate nucleus (7mcm thick) were examined. Results show that in groups 1, 2, and 3 haloperidol caused function adaptive, dystrophical, and compensatory changes in the cytoplasm, nuclei, nucleoli, neurons, and glial cells of the somatosensory zone of the cortex and subcortical nodes. In group 4 haloperidol caused CNS damage and changed forms of compensation. Haloperidol did not significantly affect the cortical function of the formation of conditioned reflexes, but after 6 months it retarded the fixation of new conditioned reflexes. 7 references. (Journal abstract modified)

004634 Maksimowska, Maria. II Klinika Psychiatrii SL. AM, ul. Pyskowicka, 42-690 Tarnowskie Gory, Poland **/An unusual case of thioridazine and levomepromazine dependence./** Szczegolny pryzypadek uzaleznienia od tiorydazyny i tisercyny. Psychiatria Polska. 14(5):547-548, 1980.

An unusual case of thioridazine and levomepromazine dependence is described. The 49-year-old S reported to the clinic complaining of insomnia and oversensitivity. He had used thioridazine and levomepromazine for more than 1.5 years and also took 3 tablets of Pfeiffer's substance every other day. Although addiction to these drugs has not been noted, it must be taken into account when prescribing them, particularly to alcoholics and drug addicts. 7 references.

004635 Marriott, Peter; Pansa, Monika; Hiep, Albert. Melbourne Clinic, PO Box 194, Richmond 3121, Australia **Depot fluphenazine maintenance treatment and associated weight changes.** Comprehensive Psychiatry. 22(3):320-325, 1981.

The relationship between depot fluphenazine maintenance treatment and weight change was examined in 110 patients remaining on fluphenazine decanoate for 2 years of continuous treatment at the Melbourne Depot Neuroleptic Clinic. It was found that 74.5% of all patients maintained a stable weight, 14.5% gained over 3 pounds, and 10.9% decreased their weight by more than 3 pounds. It was not possible to demonstrate a relationship between weight gain and time in treatment or dosage level. Both antiparkinsonian and tricyclic antidepressant drugs may play a role in weight change: 42% of Ss in the weight loss group were prescribed antidepressants, as compared to 13% and 17% in the weight gain and no change group, respectively; almost all those in the weight gain group (94%) had been prescribed antiparkinsonian drugs at some point during the study, as compared to 58% and 61% of the weight loss and stable groups 12 references.

004636 Matsunaga, Fumiyasu; Akiyama, Akinori; Fujii, Isao. Health Service Center of Nagasaki University, Nagasaki City, Japan **Two cases of levels of serum CPK.** Kyushu Neuro-Psychiatry. 26(2):274-280, 1980.

Two cases of syndrome malin with high levels of serum creatine phosphokinase (CPK) were studied. The first case was a 28-year-old depressed female patient who was rushed to the hospital after taking 200mg of levomepromazine and 450mg of flurazepam in a suicide attempt. On her third day at the hospital the i.m. administration of chlorpromazine (50mg) caused a fever of 37.8 degrees C., sweating, finger tremor, and rigidity. Syndrome malin was suspected. The second case was a 32-year-old male who had received chlorpromazine for 1 day for catatonic schizophrenia. When chlorpromazine (170mg) was replaced by oxypertine (240mg) and pimozide (3mg), he suffered from hyperpyrexia, sweating, and rigidity. In both cases the condition improved when the drugs were discontinued and intravenous infusion was given. It is concluded that the early detection of prodromal symptoms and elevated serum CPK will help prevent syndrome malin caused by neuroleptics. 20 references. (Author abstract modified)

004637 Mattsson, Ake; Seltzer, Ronni L. Dept. of Psychiatry, New York University Medical Center, 550 First Ave., New

York, NY 10016 **MAOI-induced rapid cycling bipolar affective disorder in an adolescent.** American Journal of Psychiatry. 138(5):677-679, 1981.

The likely inducement of a rapid cycling bipolar disorder in an adolescent treated with a monoamine oxidase inhibitor (MAOI) for unipolar depression is reported. The case report strongly suggests such an inducement in Ss prone to affective illness due to pubertal (biological as well as adolescent reactive) factors. The symptoms seemed to be preciptated by administration of phenelzine and lithium carbonate proved effective in preventing further cycling after about 5 weeks of administration. The clinical characteristics are consistent with findings of rapid affective cycling induced by tricyclic antidepressants in five women. 8 references.

004638 Mauguiere, F.; Dalery, J.; de Villard, R.; Courjon, J. Service d'electroencephalographie, Hopital neurologique, 59, boulevard Pinal, F-69003 Lyon, France **Transient hyperkinesia after a single intravenous perfusion of diphenylhydantoin: report of a case associated with nontoxic plasma levels of diphenylhydantoin.** European Neurology. 18(2):116-123, 1979.

Transient hyperkinesia was observed in a 16-year-old epileptic, mentally retarded boy after a single i.v. perfusion of diphenylhydantoin (DPH). Serum DPH levels were not in the toxic range, and the usual symptoms of DPH intoxication (nystagmus and cerebellar dysfunction) were not present. Neuroradiological examination revealed no anatomical damage to the basal ganglia. Homovanillic acid (HVA) concentration in the cerebrospinal fluid was low, but 5-hydroxyindoleacetic acid (5-HIAA) concentration was normal 6 hours after the onset of choreothetosis. Both metabolites were within normal range 2 months later. Results are discussed in relation to cerebral monoamine metabolism in drug treated epileptic patients. 19 references. (Author abstract modified)

004639 McIntyre, Iain M.; Burrows, Graham D.; Norman, Trevor R.; Dumovic, Peter; Vohra, Jitu. Dept. of Psychiatry, University of Melbourne, Melbourne, Australia **Plasma nomifensine concentration: cardiological effects and clinical response.** International Pharmacopsychiatry. 15(6):325-333, 1980.

Cardiological effects of nomifensine were studied in 10 endogenously depressed inpatients receiving up to 200mg/day for 3 weeks. No significant cardiac effects were observed using His' bundle electrography and electrocardiography. Nine of the 10 patients showed a significant recovery from their depressive illness. Plasma nomifensine concentrations at day 22 were not correlated with clinical response, blood pressure, or electrocardiographic parameters. A negative correlation between A-H interval in the His' bundle electrogram and day 22 nomifensine concentration was observed. 25 references. (Author abstract)

004640 Mendis, N.; Pare, C. M. B.; Sandler, M.; Glover, Vivette; Stern, G. M. Sandler: Bernhard Baron Memorial Research Lab., Queen Charlotte's Maternity Hospital, London W6 OXG, England **Is the failure of (-)deprenyl, a selective monoamine oxidase B inhibitor, to alleviate depression related to freedom from the cheese effect?** Psychopharmacology. 73(1):87-90, 1981.

The selective monoamine oxidase (MAO) B inhibitor (-)deprenyl failed to produce any greater benefit than placebo in a limited double-blind trial conducted in depressive patients. Its relative freedom from the so called cheese effect was confirmed, however, in drug treated patients challenged IV with tyramine. There is evidence to suggest that this cheese effect, a facilitated tyramine-induced hypertensive response, is pharmacologically distinct from MAO inhibition proper. Thus, it is conceivable that its central counterpart, an enhanced noradrenaline release due to the access of traces of tyramine to the CNS, is a prerequisite for any therapeutic benefit obtainable with the MAO inhibitory drugs in general. 40 references. (Author abstract)

004641 Moore, David P. Dept. of Psychiatry, University of Louisville, Box 35070, Louisville, KY 40232 **A case of petit mal epilepsy aggravated by lithium.** American Journal of Psychiatry. 138(5):690-691, 1981.

A case report on the effect of lithium on the frequency of petit mal seizures is presented and the relevant literature is briefly reviewed. The case history demonstrates that lithium may dramatically increase such seizures and that it should be carefully monitored on an inpatient basis when given to an epileptic patient with an affective disorder. 6 references.

004642 Nachtman, V.; Nosek, I.; Polacek, J. Interni oddeleni nemocnice OUNZ, 509 01 Nova Paka, Czechoslovakia **/A case of acute agranulocytosis during treatment with clozapine./** Pripad akutni agranulocytozy v prubehu lecby clozapinem. Ceskoslovenska Psychiatrie. 76(6):393-398, 1980.

The case of a 47-year-old patient suffering from paranoid schizophrenia in whom the syndrome of acute agranulocytosis appeared after treatment with clozapine (Leponex) is considered. The syndrome appeared on the 26th day after administration of 8.75g of clozapine. The patient was being treated by other psychotherapeutic drugs as well, although no complications had occurred in the past. After the interruption of psychotherapeutic treatment on the 38th day of hospitalization, a decrease in neutrophils still continued, so that the lowest number was found on the 44th day of hospitalization. Normalization was achieved on the 51st day of hospitalization (10th day after the administration of prednisone). The need for regular blood analysis, which is the prerequisite for decreasing mortality from this serious complication, is emphasized. 4 references. (Journal abstract modified)

004643 Nagy, Brian R.; Dillman, Carl E., Jr. Elmira Medical Arts Center, Elmira, NY 14901 **Case report of unusual diazepam abstinence syndrome.** American Journal of Psychiatry. 138(5):694-695, 1981.

A case study is presented of the unusual diazepam abstinence syndrome, in which the diagnosis clearly seemed to be diazepam withdrawal but the symptoms lasted an extended period of time (30 days). The patient also initially became sleepy when diazepam was given rather than having a clearer sensorium, and the symptoms showed no clear cross-tolerance with pentobarbital. The findings should facilitate earlier diagnosis of this syndrome and may encourage drug therapy that is appropriate and adequate in dosage. 10 references.

004644 Olajossy, Marcin. Klinika Psychiatrii, Akademia Medyczna, Abramowicka 2, 20-442 Lublin, Poland **/Tardive dyskinesia: problems of pathogenesis, therapy, and prevention./** Pozne diskinezy: zagadnienia patogenezy, leczenia i zapobiegania. Psychiatria Polska. 14(6):621-625, 1980.

A survey of literature on the pathogenesis, therapy, and prevention of tardive dyskinesia focuses on its emergence during the prescription of high doses of neuroleptics. In addition the effect is also noted in cases of long-term treatment with L-dopa. It has been noted that a decisive majority of tardive dyskinesia cases are associated with schizophrenia. Among the factors that serve as determinants seem to be sex (women appear to be more susceptible), age (particularly after the age of 60), the dosage of the drug, the extent of organic damage, and changes in EEG readings. A prognosis is unavailable due to lack of objective data on tardive dyskinesia; however, it is suggested that patients should be carefully controlled with the emergence of the first symptoms. 30 references.

004645 Orr, Martha Lane. Rogosin Kidney Center, New York Hospital, New York, NY 10021 **Drugs and renal disease.** American Journal of Nursing. 81(5):969-971, 1981.

The principles guiding medication use in patients with seriously compromised renal function are discussed. These principles are based primarily on alterations in the absorption, distribution, metabolism, and excretion of drugs, alterations that are either directly or indirectly related to the renal impairment. The aim is to avoid or quickly counteract the toxic side-effects of such drugs as narcotics, barbiturates, and sedatives in uremic patients. Confounding problems include extra sensitivity to drugs among these patients, conflicting therapeutic requirements, and complications of dialysis.

004646 Petrie, William M. Dept. of Psychiatry, Vanderbilt University Medical School, Nashville, TN 37216 **Sexual effects of antidepressants and psychomotor stimulant drugs.** Modern Problems of Pharmacopsychiatry. 15:77-90, 1980.

Research on sexual dysfunction occurring in mental disorders as a result of treatment with antidepressant and stimulant drugs is reviewed. It is reported that such dysfunction is most common in depression and is manifested as a loss of sexual interest, impotence, and a decline in the frequency of intercourse. The antidepressant drugs have been demonstrated to improve sexual function, but to also have adverse effects as a result of interference with peripheral cholinergic and adrenergic function. MAO inhibitors have also been found to ameliorate depression related dysfunction, espcially by improving sperm count and sperm motility and by having a clinical effect in moderate oligospermia. Research on the stimulant drugs has indicated a wide variety of sexual effects, most dramatic of which is the increase in sexual arousal reported by many users. Increases in sexual activity and perversion have also been reported. Due to the high rate of predrug sexual aberration and the nonspecific nature of stimulant arousal, caution is urged in postulating a direct effect on sexuality by these compounds. 62 references.

004647 Reid, William H.; Arkfeld, Dean Francis. Nebraska Psychiatric Institute, 602 South 45th Street, Omaha, NE 68106 **Psychotropic medications and glaucoma.** Hillside Journal of Clinical Psychiatry. 2(2):217-221, 1980.

Studies investigating the relationship between psychotropic drugs and glaucoma are reviewed. The autonomic effects of psychotropics have been related to a potential for precipitating or exacerbating glaucoma. This is particularly true in the case of angle closure glaucoma. It is concluded that antiglaucoma medications and ophthalmological examinations can eliminate problems in almost all cases. 10 references.

004648 Rektor, L.; Blazek, J. PL KUNZ, Huskova 2, 600 00 Brno, Czechoslovakia **/Results of treatment by Modites depot in outpatients' wards in the South Moravian Region./** Vysledky liecby Moditenom depot v ambulanciach Juhomoravskeho kraja. Ceskoslovenska Psychiatrie. 76(6):369-375, 1980.

Results of depot fluphenazine treatment, especially with schizophrenic outpatients, in Czechoslovakia's South Moravian Region, were assessed in 1978. Based on 675 cases, it was found that an average of 40% of the patients returned to work, and there was a decline in relapses and rehospitalizations. The most frequent side-effects were Parkinson's syndrome manifested by akathisia, inhibition, and hypomimic activity. Dyskinesias were rarely observed. It is proposed that the frequent occurrence of extrapyramidal symptomatology is connected with individual tolerance and the added complication of medication with other neuroleptics. Parkinson's syndrome was successfully treated by antiparkinsonian drugs and only rarely required hospitalization or discontinuance of treatment. Prophylactic medication by antiparkinsonian medications is not recommended; however, the need for regular control of the patient by the attending physician or psychiatrist to determine other side-effects or psychotherapeutic or sociotherapeutic complications is noted. It is proposed that outpatient treatment with depot fluphenazine be continued by the Regional Institute of National Health in Brno as part of the psychiatric program. 10 references. (Journal abstract modified)

004649 Reynolds, Edward H. Institute of Psychiatry, De Crespigny Park, Denmark Hill, London, England **Anticonvulsants and mental symptoms.** Acta Neurologica Scandinavica. 62(Suppl. 80):46-52, 1980.

Evidence is reviewed which suggests that anticonvulsant drugs and their various metabolic effects, especially on a long-term basis, contribute significantly to psychological (mental) problems in epileptic patients. The effects of drugs such as phenobarbitone and phenytoin include impairment of drive, mood, concentration, and sociability. Current knowledge concerning mental function in epileptic patients is specifically reviewed in relation to blood levels of the various anticonvulsants and in relation to the metabolic consequences of chronic therapy, particularly folate deficiency, monoamine metabolism, and hormone metabolism. The need for continued research in this neglected field is emphasized. 27 references.

004650 Reynolds, Philip C.; Som, Constance W.; Herrmann, Paul W. Institute of Forensic Sciences, Oakland, CA 94609 **Loxapine fatalities.** Clinical Toxicology. 14(2):181-185, 1979.

Two cases of suicidal ingestion of the antipsychotic drug loxapine are reported. Investigations indicated that one patient may have ingested 2500mg loxapine. In the second patient, 2900mg loxapine were found in the stomach after death. 7 references.

004651 Roffman, M.; Cordasco, F.; Kling, A. Dept. of Psychiatry, CMDNJ-Rutgers Medical School, Piscataway, NJ **Apomorphine-induced stereotypy in mature and senescent rats following cessation of chronic haloperidol treatment.** Communications in Psychopharmacology. 4(4):283-286, 1980.

Apomorphine-induced stereotypy in mature and senescent rats was studied following cessation of chronic haloperidol treatment. After chronic haloperidol treatment, senescent rats exhibited significantly more apomorphine-induced stereotypy than did similar rats chronically treated with saline. The intensity of this stereotypy was less than that exhibited by mature rats that were chronically treated with haloperidol. Similarly, senescent rats chronically treated with saline exhibited less apomorphine-induced stereotypy than mature rats comparably treated. However, after chronic haloperidol, the percent change in stereotypy from respective control was greater for the senescent rats than the mature rats. These data suggest that senescent rats were more sensitive to the effects of chronic antipsychotic treatment than mature rats and support clinical observations of increased sensitivity of tardive dyskinesia in the elderly. 9 references. 004652 Rondot, P.; Bathien, N. Service de Neurologie, Faculte de Medecine Cochin-Port-Royal, Hopital Sainte-Anne, 1, rue Cabanis, Paris 14eme, France **/Abnormal movements induced by psychotropic drugs./** Mouvements anormaux induits par les medicaments psychotropes. Encephale. 5(1):41-48, 1979.

Abnormal movements that are related to various physiopathological mechanisms induced by psychotropic drugs are discussed. Blockage of dopaminergic receptors provokes neuroleptic parkinsonian tremor. Neuroleptic-induced tardive dyskinesia is similar to abnormal movements caused by L-Dopa. However, tardive dyskinesia is due to a hypersensibility of dopaminergic reactors which has a chemical effect on afferent impulses, while L-Dopa dyskinesia is probably related to altered responsiveness of these receptors due to an increase in dopaminergic receptor sensitivity. Antidepressants, particularly lithium, provoke tremor which is improved by beta-blockers; it is probably caused by abnormal sensitivity to beta-noradrenergic receptors. 17 references. 004653 Ruff, Robert L.; Kutt, Henn; Hafler, David. Dept. of Medicine, Div. of Neurology RG 20, University of Washington, Seattle, WA 98195 **Prolonged benzodiazepine coma.** New York State Journal of Medicine. 81(5):776-777, 1981.

A case of prolonged coma in a 48-year-old woman, following a suicidal overdose of flurazepam and chlordiazepoxide, is described. These agents belong to the benzodiazepines, a widely used class of drugs which rarely cause prolonged coma in drug overdose. The 10 day duration of the coma, the complete loss of cranial nerve reflexes, and the extreme cardiovascular and respiratory depression seen in this case reflect the magnitude of the patient's drug ingestion. The patient completely recovered. The importance of careful medical management of severe sedative-hypnotic overdose is discussed. 8 references. (Author abstract modified)

004654 Schubert, Daniel S. P. Dept. of Psychiatry, Cleveland Metropolitan General Hospital, 3395 Scranton Road, Cleveland, OH 44109 **Hostility production as a common feature of anti-anxiety agent action.** Journal of Psychiatric Treatment and Evaluation. 1(2):43, 1979.

A case is presented in which treatment of imipramine-induced anxiety with hydrozine (25 to 50mg given concomitantly with imipramine, three to four times daily) produced hostility. Hydrozine seems similar to the benzodiazepines in reducing anxiety, and similarly may produce hostility. Limbic cholinergic inhibition may account for the release of hostility found both with the antihistamine, hydrozine, and with some benzodiazepines. Considering the parallel action of these two anxiolytics, anxiety and hostility may reflect the same process in some patients: inward turned hostility may produce anxiety in some individuals and depression in others. The possible contributions of this induced hostility in psychotherapy are noted. 4 references.

004655 Scully, Robert E.; Galdabini, James J.; McNeely, Betty U. Massachusetts, General Hospital, Boston, MA 02114 **/The role of lithium in the production of interstitial nephritis: a case history./** Case 17-1981. New England Journal of Medicine. 304(17):1025-1032, 1981.

The case history of a 29-year-old man on lithium therapy for manic-depressive illness who suffered renal failure is reported. It is concluded that the patient had chronic interstitial nephritis. Although the lithium therapy may have contributed to the renal damage, it is found that the lesion is nonspecific and that a causal agent cannot be defined. Circumstantial evidence, however, suggests that lithium therapy was a factor. The need for careful study of patients on lithium therapy in whom renal insufficiency develops is pointed out. 48 references.

004656 Sethi, B. B.; Prakash, Rudra; Sharma, Mukul; Sahai, J. Dept. of Psychiatry, K. G.'s Medical College, Lucknow, India **Tricyclic anti-depressant induced mania.** Indian Journal of Psychiatry. 22(4):378-383, 1980.

Four cases of monopolar depression are reported in patients who developed manic features for the first time while on tricyclic antidepressant therapy. The phenomenon is viewed as tricyclic antidepressant-induced mania. The manic symptoms occurred late in therapy with moderate doses of tricyclic antidepressants (125 to 150mg per day) and were easily controlled with antipsychotic medication. Factors relating to age of patients, metabolic products of tricyclic an tidepressants, and central noradrenergic and dopaminergic systems are considered important and their role is discussed. 22 references. 004657 Shader, Richard I.; Elkins, Robert. Dept. of Psychiatry, Tufts Medical School, 171 Harrison Ave., Boston, MA 02111 **The effects of antianxiety and antipsychotic drugs on sexual behavior.** Modern Problems of Pharmacopsychiatry. 15:91-110, 1980.

Research on the effects of antianxiety and antipsychotic agents on human sexual behavior is reviewed, and possible mechanisms of action derived from animal studies are discussed. It is reported that little is known about the effects of these drugs on sexual feelings and behavior, and that potential adverse effects, as well as possible treatments, can be suggested. Findings are presented from studies of the manner in which the compounds may influence sexual behavior; effects on the CNS as well as the behavioral pharmacology; and the clinical features of these drugs. Since most of the anxioltyic sedatives prescribed currently are benzodiazepines, this class of minor tranquilizers is emphasized. Some information is also provided on antipsychotic agents such as the phenothiazines and on sedative hypnotics. Topics include the usefulness of the benzodiazepines in the disinhibition of sexual behavior in such conditions as erectile dysfunction; aspermia associated with use of antipsychotic drugs; the neuroleptic-induced Kluver-Bucy syndrome; the use of neuroleptics in treating sex offenders; ejaculatory problems caused by sedative hypnotics and anxiolytic agents; neuroleptic treatment of vaginismus; and systematic drug desensitization in the treatment of frigidity and other mixed sexual dysfunctions. 103 references.

004658 Shaywitz, Sally E.; Cohen, Donald J.; Shaywitz, Bennett A. Learning Disorders Unit, Dept. of Pediatrics, 333 Cedar St., New Haven, CT 06510 **Behavior and learning difficulties in children of normal intelligence born to alcoholic mothers.** Journal of Pediatrics. 96(6):978-982, 1980.

Children referred to a learning disorders unit of a hospital were evaluated for indications of prenatal exposure to ethanol. In a total population of 87 children, 15 were found to have a history of maternal heavy drinking during pregnancy. The 11 boys and 4 girls ranged in age from 6.5 to 18.5 years. Birthweights ranged from 1,580 to 3,150 gm, with a median weight of 2,213 gm. All growth measurements were affected. The children had a continuum of dysmorphic features of fetal alcohol syndrome (FAS), with an inverse relationship between age of presentation and intensity of dysmorphic features. All Ss had intelligence in the average range, yet experienced persistent academic failure. All shared problems of activity and attention regulation. The findings suggest a continuum of teratogenic effects of ethanol on the CNS. It is concluded that alcohol exposure in utero may be an important, preventable determinant of attention deficit syndromes in childhood. 20 references. (Author abstract modified)

004659 Siever, Larry J.; Cohen, Robert M.; Murphy, Dennis L. NIMH, Bldg. 10, Room 3D41, Bethesda, MD 20205 **Antidepressants and alpha2-adrenergic autoreceptor desensitization.** American Journal of Psychiatry. 138(5):681-682, 1981.

The hypothesis that antidepressant treatment alters alpha2-adrenergic responsivity in man was tested by administering clonidine before and after antidepressant medication to two Ss diagnosed as having major depressive illness. A decrease in the magnitude of the clonidine-induced blood pressure fall occurred after chronic, but not acute antidepressant treatment. This finding is the first data in man indicating that clonidine treatment involves a subsensitization of presynaptic alpha2-adrenergic autoreceptors. 9 references.

Aleksandrowska 159, 91-229 Lodz, Poland **/An evaluation of the antianxiety action and side-effects of propranolol./** Ocena skutecznosci przeciwlekowej i dzialan ubocznych propranololu. Psychiatria Polska. 14(5):475-480, 1980.

Propranolol was administered to 35 patients with anxiety neurosis and to 10 patients with chronic anxiety due to an underlying condition of encephalopathy to evaluate the efficacy of the drug in anxiety states of various etiology. The patients were subjected to a series of clinical and laboratory examinations aimed at giving the clearest possible objective picture of the dynamics of changes occurring during the morbid process. Propranolol was found to be an effective anxiolytic agent at relatively low dosages, and it also improved intellectual efficiency and memory. Side-effects were mild, infrequent, and easily controlled. 15 references. (Journal abstract modified)

004661 Swartz, Conrad Melton; Holkesvick, Reid. Dept. of Psychiatry, University of Iowa Hospitals and Clinics, 500 Newton Road, Iowa City, IA 52242 **Mitigating acute skin rashes and nausea from lithium.** Comprehensive Psychiatry. 22(3):301-305, 1981.

Five cases are presented in which side-effects of an acute skin reaction (in one patient) and nausea without high blood levels (in four patients) threatened to take precedence over lithium's therapeutic effects. In the first case, the allergic reaction was successfully treated with hydroxyzine. In the remaining cases, patients with nausea related side-effects could be classified as pH sensitive or lithium ion sensitive. Use of lithium citrate syrup giving many small doses, and the use of a sustained release lithium carbonate preparation are possible approaches to the management of nausea related side-effects. 5 references.

004662 Trimble, M. R. National Hospital for Nervous Diseases, Queen Square, London WC1N 3BG, England **New antidepressant drugs and the seizure threshold.** Neuropharmacology. 19(12):1227-1228, 1980.

Studies of the effects of new antidepressant drugs (mianserin, nomifensine, and maprotiline) on seizure threshold are reviewed. The evidence suggests that not all nonmonoamine oxidase inhibitor antidepressants lower the seizure threshold to the same degree. Nomifensine, of the drugs currently available, seems the least likely to do so and early clinical trials in patients with epilepsy suggest it is safe in this condition. 12 references.

004663 Vartanyan, F. Ye.; Gerchikov, L. I. World Health Organization, Geneva, Switzerland **/Side-effects and undesirable combinations of psychotropic medications./** Pobochnyye reaktsii i nezhelatel'nyye kombinatsii psikhotropnykh sredstv. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(2):289-292, 1980.

Side-effects and undesirable combinations of psychotropic medications are discussed. This subject has become more important because of the increased use of medications, sometimes without sufficient medical guidance and control. Undesirable side-effects include: general organic disorders, skin disorders, gastrointestinal disorders, functional disturbances of the CNS and peripheral nervous system, and mental disorders. The topics discussed include: changes in blood pH, disturbances of metabolism from medications, disturbances of urine excretion from medications, and biologically active compounds which have psychotropic properties when used in small doses. 20 references.

004664 Wahlin, Anders; Bucht, G.; von Knorring, L.; Smigan, L. Dept. of Internal Medicine, University Hospital of Umea, S-901 85 Umea, Sweden **Kidney function in patients with affective disorders with and without lithium therapy.** International Pharmacopsychiatry. 15(4):253-259, 1980.

The ability to concentrate urine was estimated in healthy volunteers, patients with affective disorders who had never received lithium, and lithium treated patients. Patients with affective disorders who had never received lithium were found to have significantly lower concentrating capacity than healthy volunteers. However, lithium treated patients had still lower concentrating capacity and differed significantly from both healthy volunteers and from patients who had never received lithium. Furthermore, in a subgroup of lithium treated patients investigated twice with an interval of 6 months, a progressive decrease in concentrating capacity was found, indicating the importance of lithium therapy. 11 references. 004668 Yassa, R.; Ananth, J. Douglas Hospital Centre, 6875 LaSalle Boulevard, Verdun, Quebec H4H 1R3, Canada **Lithium carbonate in the treatment of movement disorders. A critical review.** International Pharmacopsychiatry. 15(5):301-308, 1980.

The efficacy of lithium therapy in the treatment of tardive dyskinesia is reviewed. It is noted that most of the published papers on this topic are anecdotal and single case reports with contradictory results. The well designed studies indicate that lithium is useful in certain tardive dyskinesia patients and that the red blood cell lithium level may be related to the therapeutic response. Therefore, on the basis of the available information, it is concluded that routine clinical application of lithium in the treatment of tardive dyskinesia is not warranted. However, further evaluation of lithium in the treatment of tardive dyskinesia and identification of the responders are extremely useful. In addition, as suggested by animal studies, the prophylactic value of this agent against tardive dyskinesia is seen as needing exploration. 32 references. (Author abstract)

16 METHODS DEVELOPMENT

004669 Ashton, H.; Marsh, V. R.; Millman, J. E.; Rawlins, M. D.; Telford, R.; Thompson, J. W. Clinical Psychopharmacology Unit, Dept. of Pharmacological Sciences, University of Newcastle-upon-Tyne, Newcastle-upon-Tyne, England **The use of event-related slow potentials of the brain as an objective method to study the effects of centrally acting drugs.** In: Barber, C., Evoked potentials. Baltimore, MD, University Park Press, 1980. 614 p. (p. 535-538).

Evidence is presented to show that the event related slow potential (contingent negative variation, CNV) can be used as an objective test for measuring the effects of drugs on brain activity in man. The CNV is believed to be a measure of attention or arousal and is altered by a number of centrally acting drugs. The size of the CNV is consistently increased by stimulant drugs, for example, caffeine and pemoline, and decreased by depressant drugs, for example. nitrazepam and diazepam, in small doses which do not produce subjective effects. Cigarette smoking may increase or decrease the size of the CNV, or sometimes both. Nicotine has a biphasic dose related effect on the CNV. The CNV can be used as a sensitive, reproducible, quantitative, and objective test for studying the central effects of drugs in man and it is suggested that this method is a useful addition to those already available for the study of psychotropic drugs in animals and man. 10 references.

Adult Psychiatry Branch, Division of Special Mental Health Research, NIMH, St. Elizabeths Hospital, Washington, DC 20032 **Saliva benzodiazepine levels and clinical outcome in detoxifying alcoholic patients.** Communications in Psychopharmacology. 4(5):357-361, 1980.

Initial application of a recently developed saliva benzodiazepine radioreceptor assay was completed in a group (n=18) of detoxifying alcoholic patients who were treated with benzodiazepines. All patients were evaluated clinically by their treating psychiatrist at the initiation and completion of benzodiazepine treatment. Saliva benzodiazepine concentrations appeared to discriminate treatment responders from nonresponders in this sample. When separated into responder and nonresponder groups based on change of psychopathology scores, the two groups have differences in amount of benzodiazepine present in
saliva as well as divergent relationships of psychop
scores, benzodiazepine saliva, and benzodiazepine dosag
erences. (Author abstract modified)

triptyline and nortriptyline plasma levels monitoring. Pe
in clinical practice. Communications in Psychopharm
4(4):309-316, 1980.

One hundred and twenty depressed female inpatients, treated intramuscularly by different amitriptyline dosages, were studied to show the relationship between the plasma levels of amitriptyline and its metabolite nortriptyline, side-effects, and clinical responses. Data were analyzed in terms of dosage and clinical subgroups (neurotic, involutional, manic-depressive). The best therapeutic response occurred with 50mg/day dosage in the depressive neurosis and involutional melancholia groups, while comparable results were obtained in manic-depressive illness with 150mg/day dosage. As for plasma drug concentrations, the neurotic patients showed a more favorable response in the presence of lower amitriptyline and nortriptyline plasma levels. No significant differences were observed between mean plasma concentration of the responders and nonresponders. It is concluded that in some cases, plasma monitoring might prove helpful in clinical practice. 18 references. (Author abstract modified)

004676 Daiguji, Makoto; Meltzer, Herbert Y.; U'Prichard, David C. Dept. of Pharmacology, Northwestern Univesity School of Medicine, Chicago, IL 60611 **Human platelet alpha2-adrenergic receptors: labeling with 3H-yohimbine, a selective antagonist ligand.** Life Sciences. 28(24):2705-2717, 1981.

The high affinity labeling of human platelet alpha2-adrenergic receptors with 3H-yohimbine is reported, and the utility of 3H-yohimbine as an antagonist probe of platelet alpha2-adrenergic receptors is discussed. Binding was rapid and reversible at 25 degrees C. Both saturation and kinetic experiments indicated a single order of binding sites. The 3H-yohimbine site exhibited alpha2-receptor specificity: (-)-norepinephrine and (-)-isoproterenol were 4.8 and 330 times less potent than (-)-epinephrine; (-)-catecholamines were 17 to 35 times more potent than corresponding ()-catecholamines; the selective alphal-antagonist prazosin was 340 times less potent than yohimbine. Catecholamine agonists exhibited shallow curves in inhibiting 3H-yohimbine binding. 3H-yohimbine labeled fewer platelet sites than did 3H-dihydroergocryptine under identical conidtions, and may be a more specific and useful antagonist probe of platelet alpha2-receptors than 3H-dihydroergocryptine. 45 references. (Author abstract modified)

004677 Elton, R. A.; Tiplady, B. Medical Statistics and Computing Unit, University of Edinburgh, Edinburgh, Scotland **Mild, moderate, severe – the statistical analysis of short ordinal scales.** Neuropharmacology. 19(12):1239, 1980.

A modification of the (1946) Wilcoxon stratified sum of ranks test, which is designed for use with short ordinal scales such as those used for collecting side-effects, or the individual items from the Hamilton Rating Scale for depression, stratifying the data according to the initial (pretreatment) score on the scale, is presented. The test has two important advantages over an unstratified test: 1) it permits meaningful analysis of data where baseline levels differ markedly; and 2) it allows for the correlation of pretreatment and postreatment scores, which may lead to increase in power. 1 reference.

004678 Ghose, K. Lingfield Hospital School, St. Piers Lane, Lingfield, Surrey RH7 6PN, England **Sympathomimetic amines and tricyclic antidepressant drugs.** Neuropharmacology. 19(12):1251-1254, 1980.

The pharmacological effects of various sympathomimetic amines and tricyclic antidepressant drugs were studied by three different methods: pressor response test; pupil diameter; and hand vein diameter. The pressor response test was observed to be the most reliable reproducible, and relatively safe technique. Decreased tyramine sensitivity not only correlated with the plasma drug concentrations but also with other pharmacodynamic measurements. Measurements of pupil diameter and dorsal hand vein diameter to assess the mydriatic and venoconstrictor effects of drugs should be considered in patients with cardiovascular disorders where systemic pressor amines are contraindicated. 14 references.

New physicochemical methodologies in neuropsychiatric research are reviewed, including high performance liquid chromatography, radioimmunoassay, radioreceptor assays, gas chromatography/mass spectrometry, chromosome banding, and fibroblast cultures. The basic principles of each technique are outlined, and the advantages and disadvantages of the new techniques are considered in relation to alternative methods. Applications of each technique to problems in neuropsychiatry are described.

004680 Itil, Turan M. Center for Biological Psychiatry, V.A. Health Care Facility, Montrose, NY 10548 **Computer-analyzed eletroencephalogram to predict the therapeutic outcome in schizophrenia.** In: Baxter, C., Perspectives in schizophrenia research. New York, Raven Press, 1980. 445 p. (p. 61-80).

Specialized EEG investigations with child and adult schizophrenics, high-risk children, and antipsychotic (neuroleptic) drugs suggest that computer analyzed EEGs (CEEGs) can be used to predict the therapeutic outcome in schizophrenia, particularly when the modality is treatment by pharmaceuticals. Based on the test dose procedures which use CEEGs, it may be possible to tailor the type of the drug treatment and the dosage for each individual patient. A typical CEEG response of a schizophrenic patient to a neuroleptic compound indicates that this drug is adequately absorbed, properly metabolized, penetrated through the blood-brain barrier, and has noticeable effects on the brain function of the patient. The patients known to be resistent to neuroleptic drug treatments (therapy-refractory schizophrenics) do not show a typical neuroleptic response to a test dose neuroleptic. In contrast they show a response which is similar to that seen after psychostimulant administration in normal subjects. A discussion of the paper follows. 41 references. (Author abstract modified)

004681 Jatlow, Peter. Dept. of Laboratory Medicine, Yale-New Haven Hospital, 789 Howard Avenue, New Haven, CT 06504 **Therapeutic monitoring of plasma concentrations of tricyclic antidepressants: perspective of the clinical laboratory.** Archives of Pathology and Laboratory Medicine. 104:341-344, 1980.

Therapeutic monitoring of plasma concentrations of tricyclic antidepressants (TCAs) is reviewed in relation to the functioning of the clinical laboratory. It is noted that therapeutic ranges for plasma concentrations of the TCAs have not been established with the same degree of certainty as for other commonly monitored drugs, such as antiepileptic and cardioactive agents. Nevertheless, sufficient information is presently available to suggest that measurement of TCAs in appropriate circumstances can be helpful in managing the pharmacotherapy of depressed patients. Presently available techniques for measuring TCAs are time consuming and costly. Clinical research relevant to understanding the significance of plasma levels, as well as their actual clinical application, would benefit from the development of a reliable, relatively convenient, and inexpensive assay. 41 references. 004682 Javaid, Javaid I.; Pandey, Ghanshyam N.; Duslak, Barbara; Hu, Hsiang-Yun; Davis, John M. Illinois State Psychiatric

Institute, Dept. of Research, 1601 West Taylor Street, Chicago, IL 60612 **Measurement of neuroleptic concentrations by GLC and radioreceptor assay.** Communications in Psychopharmacology. 4(6):467-475, 1980.

Drug concentrations in plasma from patients treated with different neuroleptics were measured by fluorometric and gas liquid chromatographic (GLC) methods and compared with neuroleptic activity as measured by radioreceptor assay (RRA). After treatment with therapeutic doses of thioridazine the results obtained by spectrofluorometric assay and RRA correlated highly (r=.95, p less than .001). The butaperazine levels measured by GLC correlated significantly with RRA values (p less than .05), although the correlation was only fair (r=.64). The similar values obtained by two methods (RRA/GLC ratio=1.3) would suggest that butaperazine probably does not have many active metabolites. Similarly, there was a significant correlation (r=.62, p less than .01) for haloperidol levels in plasma, and the RRA/GLC ratio was 1.4. On the other hand, neuroleptic activity in plasma after treatment with fluphenazine and trifluoperazine was seven to eight times greater than the drug levels measured by GLC. The correlation between the two methods for fluphenazine was highly significant (r=.85, p less than .001) although there was no correlation for trifluoperazine. These results suggest that simultaneous use of GLC and RRA may be useful in studies of neuroleptics and their pharmacologically active metabolites. 14 references. (Author abstract)

004683 Jenden, Donald J. School of Medicine, University of California, Los Angeles, CA GC-MS/**stable isotopic analyses for deanol, choline, and their acetyl esters.** In: Klein, E., Stable isotopes. New York, Academic Press, 1979. (p. 403-410).

Rigorous GC-MS methods were developed for the analysis of deanol (N,N-dimethylaminoethanol) and choline in the same sample. Two basic approaches were used. The first employs extraction of deanol into chloroform from an aqueous solution adjusted to pH 11 with lithium hydroxide and saturated with lithium citrate to maximize the partition coefficient. The aqueous solution is then extracted with dipicrylamine to remove the choline and both fractions are analyzed. The second approach, best used in experimental studies, uses bis-(methyl-2H2)-deanol in place of labeled compound and analyzed with the same internal standards. Choline, deanol, and their O-acetates are quantitatively extracted into dichloromethane with dipicrylamine and may be simultaneously measured. These measurements remain compatible with the use of (ethylene-2H4)-choline as a kinetic tracer to measure rates of choline uptake and acetylation. These methods were used in a reinvestigation of the metabolism and effects of deanol on cholinergic mechanisms in rat brain, both in vivo and in vitro, and on choline uptake and acetylation in guinea-pig myenteric plexus. 40 references. 004684 Kawashima, Koichiro; Ishijima, Buichi; Yoshimizu, Nobuhiro; Sato, Fumiaki. Dept. of Pharmacology, Jichi Medical School, Minamikawachi-machi, Tochigi-ken 329-04, Japan **A comparison of radioimmunoassay with spectrophotometry for the determination of plasma diphenylhydantoin concentrations.** Japanese Journal of Pharmacology. 30(5):752-755, 1980.

The precision and accuracy of a new radioimmunoassay (RIA) for diphenylhydantoin (DPH) were evaluated. In samples obtained from 51 epileptic patients on DPH and phenobarbital for more than 1 month, DPH values determined by the RIA were significantly correlated with values obtained by spectrophotometry. DPH can be determined from a small volume of plasma without extraction for the RIA. 11 references.

004685 Koslow, Stephen H. Biologic Research Section, NIMH, Rockville, MD 20857 **A quantitative probe for biological psychiatry: selected ion monitoring.** In: Hanin, I., Physico-chemical methodologies in psychiatric research. New York, Raven Press, 1980. 265 p. (p. 155-170).

The use of selected in monitoring which combines the resolving power of gas chromatography (GC) with the sensitivity and specificity of mass spectrometry (MS), to measure endogenous and exogenous substances in animals and man is reviewed. With GC/MS, it is possible to measure levels of neurotransmitters and their metabolites in human cerebrospinal fluid and in discrete brain nuclei of animals. In psychiatry, GC/MS is used to measure plasma levels of drugs and their metabolites to determine when therapeutic levels have been attained. Future use of GC/MS with stable isotopes and with laser microprobes will facilitate studies of molecular mechanisms in situ and in vivo. Acceptance of GC/MS technology by the clinical sciences will aid in diagnosis, definition of disorders and their etiological mechanisms, and plasma drug level monitoring in pharmacotherapy. 56 references.

004686 Kragh-Sorensen, Per. no address **The use of clinical kinetic data in treatment with antidepressant drugs.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):157-167, 1980.

The use of clinical kinetic data in treatment with antidepressant drugs is discussed. It is claimed that determination of plasma levels of tricyclic antidepressants in contemporary clinical psychiatry is of value only for two drugs, nortriptyline (NT) and imipramine (IP). The therapeutic plasma concentration range defined for these two drugs is valid only for patients suffering from endogenous depression, and this type of depression represents only a minority of patients treated with tricyclic antidepressants. However, in this group of patients, the therapeutic effect of tricyclic antidepressants is usually most clearly drug related. The need for a better system for classification of depressive disorders is emphasized. A panel discussion of these topics is appended. 27 references.

004687 Mathis, Donald F.; Budd, Robert D. Rancho Los Amigos Hospital, Downey, CA 90242 **GLC/TLC analysis of codeine and morphine in urine via derivatization techniques.** Clinical Toxicology. 16(2):181-188, 1980.

A procedure for thin layer chromatographic (TLC) and gas/liquid chromatographic analysis of codeine and morphine derivatives in urine is described. The procedure can be used in cases where there is too much interference for TLC analysis as free drugs. Codeine and morphine can be detected without interference at concentrations as low as 0.3mcg/mL. 5 references. (Author abstract modified)

004688 Moss, W. W.; Posey, F. T.; Peterson, P. C. no address **A multivariate analysis of the infrared spectra of drugs of abuse.** Journal of Forensic Sciences. 25:304-313, 1980.

The infrared (IR) spectra of 15 drugs of abuse were analyzed for similarity by using techniques of numerical taxonomy. The study included six barbiturates (amorbarbital, barbital, butabarbital, phentobarbital, phenobarbital, and secobarbital), four amphetamine related compounds (amphetamine, ephedrine, metamphetamine, and phentermine), and five other drugs (cocaine, heroin, phencyclidine, phendimetrazine, and diazepam). Three character sets were based on increasing numbers (10, 24, and 36) of IR peaks. The cluster analysis, principal component analysis, and nonmetric multidimensional scaling elements of the program system NT-SYS were used to structure taxonomic distances between drugs. Best results were obtained from the 36 peak data set; ordination diagrams proved to be more visually informative than phenograms. Preliminary results from analysis of this set of drugs indicate that an expanded multivariate approach to drug classification may be useful. (Journal abstract)

004689 Paul, S. M.; Rehavi, M.; Hulihan, B.; Skolnick, P.; Goodwin, F. K. Clinical Psychobiology Branch, National Institute of Mental Health, 9000 Rockville Pike, Bethesda, MD 20205 **A rapid and sensitive radioreceptor assay for tertiary amine tricyclic antidepressants.** Communications in Psychopharmacology. 4(6):487-494, 1980.

A rapid and sensitive radioreceptor assay for tertiary amine tricyclic antidepressants is described. As psychotropic drugs, including the tricyclic antidepressants, are among the most commonly prescribed agents, and as careful monitoring of the plasma concentration of the parent drug and its pharmacologically active metabolites can be useful in monitoring compliance and in adjusting doses for therapeutic purposes, this method can prove useful in clinical management. The method has been applied to clinical samples from patients taking imipramine with good results. At present, the method is only capable of quantitating the parent tertiary amine tricyclic antidepressants. 6 references. (Author abstract modified)

004690 Pearce, Dan; Wiersema, Sandra; Kuo, Margaret; Emery, Carole. Forensic Science Services, Office of the Sheriff-Coroner, Santa Ana, CA 92702 **Simultaneous determination of morphine and codeine in blood by use of select ion monitoring and deuterated internal standards.** Clinical Toxicology. 14(2):161-168, 1979.

A select ion monitoring procedure for the simultaneous determination of morphine and codeine in blood is described. A gas chromatograph/mass spectrometer is coupled with a data system, and deuterated morphine and codeine are used as internal standards. Inclusion of morphine and codeine in a single analysis decreases sample preparation and analysis time. 14 references.

004691 Pittman, Kenneth A.; Smyth, Robert D.; Mayol, Robert F. Bristol Laboratories, Syracuse, NY 13201 **Serum levels of butorphanol by radioimmunoassay.** Journal of Pharmaceutical Sciences. 69(2):160-163, 1980.

A radioimmunoassay was developed for the analysis of butorphanol in human serum. The procedure involves extraction of serum with hexane containing 2% isoamyl alcohol, followed by evaporative solvent removal and radioimmunoassay of the reconstituted residue. The antibody significantly cross-reacts with unidentified butorphanol metabolites but not with the known metabolities, hydroxybutorphanol and norbutorphanol. Extraction eliminated interference from butorphanol metabolities normally present in serum. The antibody also cross-reacts with pentazocine and cyclazocine, but not with morphine, hydromorphine, oxymorphine, codeine, methadone, or meperidine. After i.v. administration of 2mg butorphanol tartrate to male volunteers, serum butorphanol levels declined biexponentially with an average terminal half-life of 2.7 hours. 18 references. (Author abstract modified)

004692 Reed, Dwight. Forensic Science Services, 550 N. Flower St., Room 201, P.O. Box 449, Santa Ana, CA 92702 **Comparison of spectrofluorometric and GC/MS procedures for the quantitation of morphine in blood and brain.** Clinical Toxicology. 14(2):169-180, 1979.

Morphine levels in blood and brain were determined postmortem by spectrofluorometry and by gas chromatography/mass spectrometry (GC/MS). In both blood and brain, morphine values obtained by spectrofluorometry were about one half those obtained by GC/MS. In 7 of 38 blood samples, morphine was detected by GC/MS but not by spectrofluorometry. In 2 of 55 blood samples analyzed before and after hydrolysis, morphine was detectable only after hydrolysis. 14 references.

004693 Robinson, Katherine; Rutterford, Mary G.; Smith, R. N. Smith: Metropolitan Police Forensic Science Laboratory, 109 Lambeth Road, London SE1 7LP, England **A sensitive benzodiazepine radioimmunoassay of broad specificity.** Journal of Pharmacy and Pharmacology. 32(11):773-777, 1980.

A benzodiazepine radioimmunoassay that can detect subtherapeutic levels of bromazepam, chlordiazepoxide, clobazam, demoxepam, desalkylflurazepam, desmethyldiazepam, diazepam, flunitrazepam, lorazepam, medazepam, nitrazepam, oxazepam, prazepam, temazepam, and triazolam, is described. The standard curve for diazepam has a concentration range of 0 to 2.5mg/ml. The assay requires a 75mcl sample and is particularly applicable to blood samples of forensic interest that may be hemolysed or decomposing. 27 references. (Author abstract modified)

004694 Smith, Robert C.; Vroulis, George; Misra, Chandra H.; Schoolar, Joseph; DeJohn, Charles; Korivi, Prabhavathy; Leelavathi, D. E.; Arzu, Dorita. Section of Biological Psychiatry, Texas Research Institute of Mental Sciences, 1300 Moursund, Houston, TX 77030 **Receptor techniques in the study of plasma levels of neuroleptics and antidepressant drugs.** Communications in Psychopharmacology. 4(6):451-465, 1980.

The relationship of gas liquid chromotography (GLC) to radioreceptor (RR) assay of neuroleptics and antidepressants was assessed in schizophrenic and depressed patients. There was a moderate but statistically significant relationship between GLC and RR assays of haloperidol, but no relationship between RR and GLC assays of nortriptyline. Preliminary analysis suggests that RR assays of haloperidol did not correlate with clinical response. RR assays of neuroleptics did significantly correlate with some side-effects of these medications. There was a significant positive correlation of RR plasma levels and subjective side-effects of haloperidol, and a significant negative correlation with tardive dyskinesia scores. RR assays of nortriptyline correlated significantly with cardiovascular side-effects of the medication in depressed patients. 11 references. (Author abstract)

004695 Vitaliano, Peter Paul; Prinz, Patricia; Vitiello, Michael V.; Olshan, Andrew; Roehrs, Timothy A. Dept. of Psychiatry and Behavioral Sciences, RP-10, University of Washington, Seattle, WA 98195 **On the use of repeated measures designs in psychopharmacology.** Psychopharmacology. 72(3):247-249, 1981.

The use of the repeated measures design in psychopharmacology is discussed. Since the test of equal means across repeated trials requires an assumption of compound symmetry that is often untenable, it can lead to erroneous interpretations. Three approaches that can minimize this bias are described based on data from a study of the effects of alcohol on growth hormone levels. 10 references. (Author abstract modified)

004696 Woggon, B.; Dittrich, A.; von Luckner, N.; Keller, W. Psychiatrische Universitatsklinik Zurich, Forschungsdirektion, Postfach 68, CH-8029 Zurich, Switzerland **/Study on the stability of the factorial structure of the AMP system during treatment./** Untersuchung zur Stabilitat der faktoriellen Struktur des AMP-Systems im Behandlungsverlauf. International Pharmacopsychiatry. 15(6):350-364, 1980.

The stability of the factorial structure of the AMP system was studied on days 0, 5, 10, and 20 of psychopharmacological treatments of 396 patients mainly suffering from endogenous psychoses. The analysis was based on a reduced item pool of 52 items, which occurred on day 20 in at least 10% of patients. For the nine factor solution the factorial structure was stable during treatment for the apathic, the hallucinatory-disintegrative, and the retarded-depressive syndromes as well as for the hostility syndrome. The other five AMP syndromes showed no stable structure during the treatment. On the other hand, the factorial structure of the two factor solution was found to be stable on days 0, 5, 10, and 20 without exception. These results should be considered when using the AMP system for the documentation of syndromes during the course of therapeutic trials. 21 references. (Author abstract)

004697 Adler, Martin W. Dept. of Pharmacology, Temple University School of Medicine, Philadelphia, PA 19140 **Mini-Symposium. I. The in vivo differentiation of opiate receptors: introduction.** Life Sciences. 28(14):1543-1545, 1981.

Trends in the research literature concerning in vivo differentiation of opiate receptors are outlined. It is noted that there now seems to be general acceptance of opiate receptor heterogeneity, although absolute proof is still lacking. Just as specific pharmacological antagonists were necessary to prove mulitple receptors in other systems, so are they necessary here. Representative examples of in vivo studies that have postulated multiple opiate receptors using a variety of tests and species are cited. The need for universally understood system of nomenclature for the opiate receptors is emphasized. 20 references.

004698 Albert, E. Psychiatrisches Landeskrankenhaus Eichberg, Eltville/Rhein, West Germany **/Senile dementia in its still guidable initial phase./** Die senile Demenz in ihrem noch lenkbaren Initialstadium. Neurologie und Psychiatrie fur die Praxis. 5:396-401, 1979.

Aspects for the treatment of senile dementia, which seems to be in its final phase and is merging into Alzheimer illness, are discussed. Acute, cardiac conditioned symptoms can often be observed at the beginning of senile dementia, and can be treated with Strophantin. Examples are given from cases which should not but do occur in modern nursing facilities. A particular clinical situation is reported exhibiting illogical thoughtforms, an expression which has been used in connection with schizophrenia. (Journal abstract modified)

004699 Avrutskiy, G. Ya. Otdel terapii i reabilitatsii, Moskovskiy institut psikhiatrii, Ministerstvo zdravookhraneniya RSFSR, Moskva, USSR **/Changes in the clinical picture and the course of psychoses during massive psychopharmacotherapy and the significance of these changes for improvements in psychiatric treatment./** Izmeneniya kliniki i techeniya psikhozov v itoge massovoy psikhofarmakoterapii i ikh znacheniye dlya sovershenstvovaniya lechebnoy pomoshchi. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 79(9):1387-1394, 1979.

Changes in the clinical picture and course of psychoses during massive psychopharmacotherapy are discussed in relation to the effects of these changes on improvement in psychiatric treatment. Significant changes in the clinical picture and course of psychoses, the predominance of reduced (outpatient) forms of psychoses, the therapeutic lability of psychopathological symptoms, and the necessity for a combination of medicinal and sociorehabilitational therapy have made it possible to change the emphasis from inpatient to outpatient treatment. It is concluded that outpatient therapy is desirable both because it is economical and because it makes possible the maximum use of the advantages of medicinal therapy, thereby making it possible to treat patients without removing them from their usual social and work environment. This sharply increases the effectiveness of the treatment. 35 references.

004700 Axelsson, R.; Ohman, R. no address **On monoaminergic interaction with behaviour-modifying peptide hormones.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):219-229, 1980.

The interaction between nervous and hormonal mechanisms at the hypothalamic and pituitary level is reviewed in relation to the neuroanatomical and biochemical characteristics of this region. A model is proposed for the dopamine regulation of prolactin, in which interindividual differences in sensitivity to neuroleptic drugs can be assessed. A possible method for prediction of optimal dosage of neuroleptic drugs is described together with a clinical study in which the prolactin response to treatment of psychotic patients with thioridazine is related to antipsychotic effect. A panel discussion of these topics is appended. 22 references.

004701 Ban, Thomas A. Psychiatry Dept., Vanderbilt University, Nashville, TN 37203 **Psychopharmacology for the aged.** Basel, Switzerland, S. Karger, 1980. 216 p. $23.50.

Recent research findings relevant to the clinical management of elderly patients manifesting mental or emotional disorders are reviewed in detail. Epidemiology, behavioral aspects, and possible prevention of aging are discussed. The psychopathology found in the elderly is outlined, as well as the pharmacology of all drugs commonly used in the treatment of these conditions. Pharmacokinetics, adverse effects, and drug interactions are described. A number of drugs being used to influence either cerebral blood flow or brain metabolism in the common chronic brain syndromes are discussed. Controversial questions about the use of drugs with euphoric properties in the treatment of demented and dying patients are considered. Over 1,400 references are included.

004702 Ban, Thomas A.; Wilson, William H.; McEvoy, Joseph P. Dept. of Psychiatry, Vanderbilt University, 1501 Murfreesboro Road, Nashville, TN 37217 **Amoxapine: a review of literature.** International Pharmacopsychiatry. 15(3):166-170, 1980.

The literature is reviewed on the new antidepressant amoxapine, a tricyclic dibenzoxazepine compound, the demethylated metabolite of the neuroleptic loxapine. In animal pharmacological studies, amoxapine has shown striking similarities to imipramine. In contrast to the prototype antidepressant drug, however, amoxapine does not interact with serotonin. In 10 uncontrolled clinical trials, amoxapine was shown to have antidepressant effects in the dosage range of 100 to 300mg/day. This was verified in 10 published standard, and placebo and standard controlled clinical studies in which amoxapine was superior to placebo and equal in overall therapeutic efficacy to imipramine and amitriptyline. Side-effects were similar to those of the reference drugs. 21 references. (Author abstract modified)

004703 Berger, Philip A.; Davis, Kenneth L.; Hollister, Leo E. Veterans Adminstration Hospital, Palo Alto, CA 94304 **Cholinomimetics in mania, schizophrenia, and memory disorders.** In: Barbeau, A., Nutrition and the brain. New York, Raven, 1979. v.5. (p. 425-441).

The use of cholinomimetics in manic psychosis, schizophrenia, and senile dementia is reviewed. Evidence is presented that short acting cholinomimetics, particularly the acetylcholinesterase inhibitor physostigmine, produce a transient reversal of the symptoms of mania. In addition, both short and longer acting cholinomimetics are sometimes reported to cause depression in Ss without mania. Taken together, these findings suggest that a relatively nontoxic, long acting, cholinomimetic-like choline or lecithin should be given a trial in patients with mania. Although neuroleptics were found to be superior to choline chloride in the treatment of schizophrenia, choline chloride was associated with modest improvement of some symptoms in most patients. Since manic patients may also respond to cholinomimetics, patients with schizoaffective schizophrenia, manic type, may be the best Ss for further trials of long acting cholinergic agents. Human studies with anticholinergics and cholinomimetics suggest that the long-term memory process of storage, and perhaps retrieval, can be improved by cholinomimetics. However, administration of variable dosages of choline chloride to Alzheimer's patients and normal elderly Ss with minor memory impairment have yielded inconclusive results. 105 references.

004704 Buckalew, L. W.; Ross, Sherman; Starr, B. James. Dept. of Psychology, Alabama A&M University, Normal, AL 35762 **Nonspecific factors in drug effects: placebo personality.** Psychological Reports. 48(1):3-8, 1981.

Evidence relating to personality correlates of responsivity to placebos is reviewed. It is concluded that a trait model of responsivity is largely unsubstantiated, and that other nonspecific factors of drug effects may be more influential in reactions to placebos. Evaluation of measures of response to placebos and methodological issues is needed. Potential neurochemical substrates for the action of placebos are suggested as being promising. 44 references. (Author abstract modified)

004705 Bunney, W. E., Jr.; Tallman, J. F. Section on Psychiatry, Biological Psychiatry Branch, NIMH, 9000 Rockville Pike, Bethesda, MD 20205 **New biological research relevant to anxiety.** Pharmakopsychiatrie Neuro-Psychopharmakologie. 13(5):273-276, 1980.

Through a review of new biological research with both animals and man of the physiology and mode of action of the most effective anxiolytic drugs (the benzodiazepines (BDZs)), a better understanding of anxiety is attempted. The following areas are discussed: the discovery of brain receptors for BDZs (these binding sites may mediate the pharmacological activity of the BDZs, the action of BDZ, the possible enhancement by BDZ of the inhibitory neurotransmitter GABA, the search for endogenous BDZ in the brain, the criteria for defining a BDZ receptor in the brain, and the possible role of the locus coeruleus in anxiety. Chlordiazepoxide and diazepam are the most widely used BDZs for treating anxiety. Four distinct behavioral properties of BDZ in man include: anticonvulsant, muscle relaxant, sedative/hypnotic, and anxiolytic (which may result from a combination of the former three properties). Evidence is provided that BDZ may produce alterations in the postsynaptic response to GABA, that BDZ modulates GABA mediated synapse events and potentiates GABAergic inhibition in the central nervous system. Potential applications of the discovery of a binding site for BDZ in the brain and research concerning piperoxane, an alpha-adrenergic blocker which increases anxiety, are discussed. 25 references.

004706 Bush, Patricia J. no address **Drugs, alcohol and sex.** New York, Richard Marek, 1980. 287 p. $12.95.

The influences of drugs and alcohol on sexual desire, performance, activity, and experience are described. The possibilities of affecting sex life through the use of aphrodisiacs, prescribed and over the counter medicines, oral contraceptives, and recreational drugs (alcohol, marihuana, cocaine, amphetamine, volatile inhalants, barbiturates, heroin, and psychedelics) are discussed. Drug effects on libido, on potency, on orgasm, on ejaculation, and on the reproductive system are presented in an appendix.

004707 Coppen, A.; Al-Yassiri, M. M.; Briley, M. S.; Burgess, C. E.; Clements-Jewery, S.; Davies, B.; Leonard, B. E.; Montgomery, S. no address **Do we need any more antidepressants?** Neuropharmacology. 19(12):1201-1206, 1980.

A roundtable discussion on the need for more antidepressants is presented. Topics discussed include: the need for more precise knowledge of the pathophysiology of depressive disorders; the relative efficacy of the first and second generation antidepressants; bridging the gap between animal studies and the clinical use of antidepressant drugs; the importance of side-effects for compliance; cross-cultural aspects of psychopharmacology; changes in receptor sensitivity; and prescription patterns of various antidepressants.

004708 Cowdry, Rex W.; Goodwin, Frederick K. Clinical Psychobiology Branch, NIMH, 9000 Rockville Pike, Building 10, Room 4S239, Bethesda, MD 20014 **Biological and physiological predictors of drug response. (Unpublished paper).** Bethesda, MD, NIMH, 1979. 65 p.

Research on biological drug response predictors in the major psychiatric syndromes is reviewed in the hope of establishing a more rational and integrated approach to pharmacologic treatment of mental disorders. A conceptual model for exploring interrelationships in psychobiology is described which emphasizes the three main spheres of information about an individual patient: clinical variables, biological findings, and pharmacologic response. An underlying biological current involving monoamine neurotransmitter mechanisms is identified in much of the research, and a pathogenetic model for psychiatric syndromes based on the amine hypothesis is described, along with the effects of pharmacologic agents on monoamine systems. Two types of biological predictors are identified (pretreatment factors and those that are made during treatment), and these are used to examine the following psychiatric conditions: 1) depression (including its endogenous/endogenomorphic occurrence), the unipolar/bipolar distinction, a typical depression and delusional depressions and its treatment with tricyclic antidepressants; 2) functional psychoses, especially schizophrenia and mania; 3) alcoholism; 4) aggressive behavior; and 5) hyperkinesis. 159 references.

004709 Cuche, H.; Deniker, P. Service Hospitalo-Universitaire de Sante Mentale et de Therapeutique, Hopital St. Anne, 1, rue Cabanis, F-75674 Paris Cedex 14, France **Psychiatric uses of beta-blockers.** Pharmakopsychiatrie Neuro-Psychopharmakologie. 13(5):267-272, 1980.

A review is presented of the psychiatric applications of beta-blockers, such as propanolol, pindolol, oxprenolol, and acebutolol. The main clinical trials and the principal side-effects of beta-blockers are discussed, and alpha agents and receptors and beta receptors and agents, which interact with the noradrenergic system, are considered. Psychopharmacological trials with beta-blockers are reported for treating patients with the following disorders: acute variegate porphyria, postpartum psychosis, severe psychosis (those experiencing excitation, manic depression, anxiety, hallucinations, withdrawal with tension, and affective disorders), schizophrenia, paranoid patients with a chronic delusional state, and alcoholism. Methodological problems are considered and longer double-blind clinical trials are recommended. The side-effects reported with beta-blockers are: neurological side-effects, sleep disorders, toxic symptoms, cardiovascular symptoms, depressive complications, and gastrointestinal problems. No long-term toxic effects of beta-blockers have been reported, and the administration of two doses/day with a slow increase of the daily dosage is believed to constitute a safe treatment method. The guides for monitoring beta-blockers in psychiatric therapy are pulse, blood pressure, and the patient's mental state. It is concluded that beta-blockers are the accepted treatment for anxiety with somatic symptoms. 34 references.

004710 Eisdorfer, Carl; Fann, William E. Dept. of Psychiatry and Behavioral Sciences, School of Medicine, University of Washington, Seattle, WA 98105 **Psychopharmacology of aging.** New York, SP Medical and Scientific Books, 1980. 271 p.

Research on the interaction between aging and psychoactive medication and its effect on adaptation is reviewed in support of the view that an understanding of drug use consequences, misuse, and abuse of drugs among the elderly is a salient issue for the scientist, clinical physician, and other health care professionals. Topics include: 1) sleep changes that occur with aging; 2) enzymatic changes in the aging brain and aspects of its pharmacological intervention with ergot compounds; 3) assessment of age related changes in learning and performance in the rat; 4) pathophysiology and experimental pharmacology in gerontological brain research; 5) the use of tricyclic antidepressant drugs in geriatric patients; 6) comparative stereology of capillaries in the cerebral cortex, with specific reference to drug effects; 7) qualitative studies in the cerebral cortex of elderly persons; 8) aging and the behavioral effects of dopamine agonists in rodents; 9) neurochemical changes in the aging human and nonhuman primate brain; 10) pharmacokinetics in geriatric psychopharmacology; and 11) the cyclic nucleotide system in the brain during development and aging.

004711 Fichter, M. M.; Wuschner-Stockheim, M. MPI Psychiatrie, Munchen, West Germany /**Anorexia nervosa. Symptoms, course and possibilities for treatment.**/ Die Pubertatsmagersucht. Symptomatik, Verlauf und Behandlungsmoglichkeiten. Padiatrische Praxis. 22:411-422, 1979.

Anorexia nervosa is discussed as a nosological unit, not as a special form of schizophrenia or depression. The symptomatology of anorexia nervosa is described in six groups of disturbances, with reference to psychological, social cultural, and physical factors. Prognostic moments such as the age of onset of illness, other neurotic symptoms, duration of illness, and expected course are analyzed. It is concluded that somatic methods such as electroshock, hormone treatment, anabolica, neuroleptic treatment, and prefrontal lobotomy, as well as psychoanalysis and behavioral therapy, are effective in treating anorexia nervosa patients. (Journal abstract modified)

004712 Freedman, A. M. Dept. of Psychiatry, New York Medical College, Valhalla, NY **Psychopharmacology and psychotherapy in the treatment of anxiety.** Pharmakopsychiatrie Neuro-Psychopharmakologie. 13(5):277-289, 1980.

Psychopharmacology and psychotherapy, the two modalities for the treatment of anxiety, are evaluated, and associated literature is reviewed. Difficulties are discussed with regard to defining and recognizing anxiety, which is a manifestation encountered in a heterogeneous group of syndromes or disorders that presents itself psychologically, somatically, and behaviorally. The following recommendations and conclusions are made: the development of the best treatment or combination of treatments appropriate for each specific case or group of cases is essential; controlled comparative studies indicate that patients receiving psychotherapy for anxiety symptoms do better than do controlled groups; no one method of psychotherapy has been found to be superior; pharmacotherapy alone in treating anxiety has been proven effective; combined therapy of pharmacological agents and psychotherapy appears to be superior to either modality alone; and critical research and expanded knowledge of both the existing modalities of treatment and the neurological considerations of anxiety are warranted. 50 references.

004713 Gadow, Kenneth D. State University of New York, Stony Brook, NY 11790 **Prevalence of drug treatment for hyperactivity and other childhood behavior disorders.** In: Gadow, K., Psychosocial aspects of drug treatment for hyperactivity. Boulder, CO, Westview, 1979. 479 p. (p. 13-76).

The results of drug prevalence studies in the treatment of hyperactivity and other childhood behavior disorders from six different geographic locations are discussed. The findings pertain to public and parochial schools and to special education classrooms, and are seen as important due to allegations that psychotropic drugs are prescribed indiscriminantly to large numbers of such children. Patterns of drug treatment (preferred drugs, dosage and schedule, polypharmacy, age at start of medication, and duration of treatment) are treated, along with psychosocial aspects of drug prevalence (interaction of rate and SES), national estimates of the extent of drug use, nondrug therapies, and methodological issues. 104 references. (Author abstract modified)

004714 Gadow, Kenneth D.; Loney, Jan. State University of New York, Stony Brook, NY 11790 **Psychosocial aspects of drug treatment for hyperactivity.** AAAS Selected Symposia Series. Boulder, CO, Westview, 1979. 479 p.

The pattern of drug and nondrug treatments for hyperactivity, as well as methodological problems encountered in evaluating treatment outcomes, is examined. Diagnostic, treatment, and outcome issues in hyperkinesis are emphasized. Specific topics include: the measurement of hyperactive behavior in children and adolescents; the effects of methylphenidate (Ritalin) as a stimulant drug, on symptoms; the degree of school, family, and medical involvement in drug therapy; and the status of hyperactive children as young adults.

004715 Gal, E. M. Dept. of Psychiatry, University of Iowa College of Medicine, Iowa City, IA 52240 **Cerebral fluoride in mania and the effect of lithium: a hypothesis.** Communications in Psychopharmacology. 4(5):405-409, 1980.

The hypothesis that the ratio between ionic and bound fluoride is genetically altered in certain target areas of the brain during manic episodes is discussed. According to this hypothesis, a shift in favor of the ionic fluoride results in increased cyclic AMP, intracellular Na, and prostaglandin E1 synthesis. The action of lithium in mania could be due to the conversion of the hydrophilic fluoride ion into the hydrophobic LiF or into a double lithium/fluoride/protein complex, thus releasing the inhibitory effects of ionic fluoride at active sites like membrane adenosine triphosphatase or adenyl cyclase. Empirical tests of this hypothesis are suggested. 15 references. (Author abstract modified)

004716 Gee, Susan. Reports and Statistics Service, Veterans Administration, Washington, DC **Psychiatric drug study. Part II. Mental Hygiene Clinic Survey, Day Treatment Center Survey, Day Hospital Survey.** Springfield, VA, NTIS, PB82-142563, 1980. 134 p.

The use of psychiatric drugs in three Veterans Administration (VA) outpatient treatment settings (mental hygiene clinics, day treatment centers, and day hospitals) is described in the second of three reports on the 1978 Psychiatric Drug Survey. No attempt is made to evaluate the ordering practices or the effectiveness of treatment. Correlation between diagnoses and drug orders is evaluated, and data on the distribution of antipsychotic, anxiolytic, antidepressant, antiparkinson, sedative hypnotic, and other drugs are analyzed. Additionally, the incidence of tardive dyskinesia and the types of drugs causing the syndrome are described. (Journal abstract modified)

004717 Guandalini, Andrea; Interlandi, Gaetano; Bricolo, Renato; Odorizzi, Franco; Frazingaro, Silvio. Ospedali Neuropsichiatrici Provinciali di Verona-Marzana, Verona-Marzana, Italy /**Psychotropic drugs and psychiatric hospital admissions in Verona, Italy.**/ Psicofarmaci e assistenza psichiatrica nel veronese. Lavoro Neuropsichiatrico. 66(3):103-115, 1980.

The effects of Law 180, which mandates deinstitutionalization and reorganization of Italy's hospitals for the mentally ill, are summarized in terms of patient admissions and drug use. Tables show the decline of both patient admissions and drug use over the period 1965 to 1977. The decrease in use of psychotropic drugs is deemed attributable to a more rational and selective policy, with resultant decrease in cost. In contrast, the cost of government subsidies and social assistance programs is on the rise. 8 references. (Journal abstract modified)

004718 Harrer, G. Landesnervenklinik, Salzburg, Austria / **Therapeutic treatment of insufficient performance in cerebrovascular diseases.**/ Zur Therapie der Leistungsinsuffizienz bei zerebrovaskularen Erkrankungen. Medizinische Welt. 30:1320-1323, 1979.

Therapy and rehabilitative effectiveness to remove paresis, coordinating disturbances, and brain pathological blackouts in cerebrovascular insufficiencies are examined. The treatment of psychic disorders exhibited by quick fatigue, no patience, and insufficient performance demand special observation. According to an old tradition, the first measure taken is usually to confine patients to bed; this confinement however leads to inactivity, and should be applied only on a strictly limited basis, since otherwise the well known consequences of calcium elimination in urine and an increase in nitrogen secretion can occur. Dependency and the tendency for regression result if the action radius diminishes. It is recommended that circulation promoting drugs, physical therapy, psychopharmacy, and pharmacotherapy be employed with regard to each specific case. (Journal abstract modified)

004719 Herling, Seymore; Woods, James H. Dept. of Pharmacology, University of Michigan, Ann Arbor, MI 48109 **Mini-Symposium. IV. Discriminative stimulus effects of narcotics: evidence for multiple receptor-mediated actions.** Life Sciences. 28(14):1571-1584, 1981.

Recent studies that have utilized drug discrimination techniques to analyze the actions of narcotic analgesics and related compounds are reviewed in relation to the hypothesis that multiple receptors mediate the effects of narcotics. Studies using squirrel monkeys, rhesus monkeys, and pigeons are reviewed, and the species generality of multiple receptor models of narcotic action is evaluated. Results of studies on the discriminative stimulus effects of narcotics in rats and monkeys are consistent with the hypothesis that multiple receptors (mu, kappa, sigma) mediate the effects of these compounds. However, in the pigeon, the discriminative stimulus effects of narcotics appear to fall into only two subsets (mu and kappa agonists vs. drugs that produce phencyclidine-like discriminative effects). 70 references.

004720 Kakegawa, Norio; Sengoku, Akira; Makino, Yoshimasa; Fujiwara, Tateki; Yagi, Kazuichi. National Epilepsy Center, Shizuoka Higashi Hospital, 886, Urushiyama, Shizuoka, Japan **Polypharmacy regimen as an exacerbating risk in therapy-resistant epileptic seizures and behavioral disorders.** Japanese Journal of Child and Adolescent Psychiatry. 21(5):310-320, 1980.

Eleven children with therapy resistant epileptic seizures of various types (in spite of a polypharmacy regimen of antiepileptic drugs) were studied under inpatient care. Blood concentrations of antiepileptic drugs were monitored along with EEGs while the number and frequency of the drug doses were reduced gradually toward monopharmacy. This resulted in considerable improvement of both seizure manifestations and behavioral disorders. Some findings were: 1) in 6.1 months, as a result of decreasing the number of drugs from an averag of 6.0 to 2.9 the frequency of seizures and EEG discharges decreased; 2) behavioral disorders caused by polypharmacy disappeared with the reduction of drugs; 3) no case showed an inverse relationship between clinical seizures and behavioral disorders or forced normalization on EEGs; 4) antiepileptic drug-induced effects of the central nervous system seemed to be unspecific in nature and depend on the total amount of drugs used. 15 references. 004721 Karczmar, Alexander G. Dept. of Pharmacology, Loyola University Medical Center, Maywood, IL 60153 **Drugs, transmitters and hormones, and mating behavior.** Modern Problems of Pharmacopsychiatry. 15:1-76, 1980.

Research on the neuropharmacology of mating behavior is reviewed, along with its immediate concomitants such as pertinent aspects of endocrinology and neuroanatomy. Emphasis is on the neuroanatomical and hormonal entities: the cortex, limbic system and the hypothalamic/hypophyseal axis on the one hand and the pituitary gland and gonads on the other. Topics include: 1) the neuroanatomical basis of mating (spinal and vascular aspects, cerebral mechanisms, effects of hypophyseal and pituitary hormones and of their interaction with neurotransmitters and drugs); 2) the general significance of hypothalamic hypophysiotropic regulatory peptides (HRPs); 3) steroidal (gonadal) hormones (feedback mechanisms, neurogenetic effects, and CNS mediated effects of the hormones on mating); 4) biorhythms and sexual activity; 5) drugs and sexual activity (including the compounds affecting monoamine activity and ovulation); and 5) aggression and sexual behavior. 356 references.

004722 Keller, William J. School of Pharmacy, Northeast Louisiana University, Monroe, LA 71209 **Catecholamine metabolism in a psychoactive cactus.** Clinical Toxicology. 16(2)233-243, 1980.

Catecholamine biosynthetic pathways in the Dona Ana cactus (Coryphantha macromeris) and its runyonii are discussed. Like peyote, Dona Ana produces and accumulates various methylated catecholamine derivatives, of which normacromerine is the most abundant. Epinephrine and norepinephrine occur naturally in the plant and serve as biosynthetic intermediates in normacromerine biosynthesis. Catecholamine precursors and derivatives have also been shown to be part of the metabolic pathway leading to the formation of normacromerine in Dona Ana. Comparison of catecholamine metabolism in humans and catecholamine metabolism leading to the formation of hallucinogenic agents in plants may suggest etiologies for certain types of mental illness. 37 references.

004723 Konig, Liesbeth; Lange, Ehrig. Medizinische Akademie Fetscherstrasse 74, DDR-8019 Dresden, German Democratic Republic /**Psychopharmacotherapy: the present state and the development of trends.**/ Psychopharmakotherapie: Stand und Entwicklungs tendenzen. Psychiatrie, Neurologie und Medizinische Psychologie. 31(10):597-605, 1979

The most common psychopharmaceuticals developed and introduced in recent years are listed, explained as to their functions, and discussed in context. The information given concentrates on the attempts to find antidepressants without cardiotoxic side-effects and psychoneuroleptics without extrapyramidal side-effects, as well as the development of long-acting or depot pharmaceuticals. The survey is restricted to psychotropics in the narrower sense, (with an antipsychotic action), and to pharmaceuticals that are produced in the German Democratic Republic or made available for clinical testing to the reporting clinic (Dresden). The report included tranquilizing substances only in special cases. (Journal abstract modified)

004724 Kristof, Miroslav. Simackova 5, 170 00 Praha 7, Czechoslovakia /**The prognosis of epilepsy and the strategy for**

terminating antiepileptic therapy./ Die Prognose der Epilepsie und die Taktik der Beendigung der antiepileptischen Therapie. Psychiatrie, Neurologie und Medizinische Psychologie. 31(8):449-457, 1979.

Basic concepts proposed by eminent epileptologists are discussed and supplemented by a specific analysis of 350 cases. On the basis of data reported in the literature and the results of personal investigations, concrete recommendations are made for the discontinuation of anticonvulsants in the treatment of epilepsy. An individual, multidimensional prognosis is considered mandatory. The pharmacotherapy of epilepsy and standards for evaluating anticonvulsant therapy are discussed. 18 references. 004725 Krogsgaard-Larsen, Povl. no address **Specific GABA receptor agonists and uptake inhibitors: design, development and structure-activity studies.** Chicago, Login Brothers, 1980. 195 p. $12.50.

Research on the neuropharmacology of selective GABA receptor agonists and GABA uptake inhibitors is reviewed. The role of GABA as an inhibitory transmitter and in the pathogenesis of neurological and psychiatric disorders is discussed. The use of GABA agonists, inhibitors of GABA metabolism, and GABA uptake inhibitors to increase GABA neurotransmission is reviewed. Methods used to assess GABAergic activity and selectivity are described.

004726 Leonard, B. E. Pharmacology Dept., University College, Galway, Republic of Ireland **Pharmacological properties of some generation" antidepressant drugs.** Neuropharmacology. 19(12):1175-1183, 1980.

Pharmacological properties of some second generation antidepressant drugs are described, and the clinical effects of first and second generation antidepressant drugs are compared. It is noted that the search for new antidepressant drugs has been stimulated by three main factors: 1) increasing biochemical evidence exists that some groups of depressed patients appear to show a primary abnormality in either noradrenaline (NA) or serotonin (5-HT) metabolism; 2) the discovery of drugs that show more specificity in their ability to modify either the NA or 5-HT systems; and 3) the need to produce drugs that are equally as effective as the classical tricyclic antidepressant drugs but which lack the side-effects of such drugs. It is claimed that the major clinical advantage of the second generation antidepressant drugs (nomifensine, trazadone, zimelidine, and mianserin) lies in the lack of cardiotoxicity and fewer anticholinergic side-effects rather than in improved efficacy in treating depression. 67 references.

004727 Lingjaerde, Odd. no address **Antidepressants and the serotonin uptake in platelets.** Acta Psychiatrica Scandinavica. 61(Suppl. 280):111-119, 1980.

Research concerning various aspects of the inhibitory effect of tricyclic antidepressants on serotonin uptake in platelets is reviewed. Issues discussed include: inhibitory effect on serotonin uptake in platelets vs. brain; the molecular mechanism of inhibition; inhibitory potency of different drugs; the correlation between dose and uptake inhibition; the therapeutic significance of the serotonin uptake inhibition; and serotonin uptake inhibition as a quantitative measure of antidepressant drug effect. It is concluded that the measurement of serotonin uptake inhibition in platelets has value as a research tool, while practical applicability as a guide to therapeutic is uncertain. A panel discussion of these topics is appended. 15 references.

004728 Martin, W. R. Dept. of Pharmacology, University of Kentucky, College of Medicine, Research Facility '2, MR-102, Lexington, KY 40536 **Mini-Symposium: II. Multiple opioid receptors. A little about their history and some implications related to evolution.** Life Sciences. 28(14):1547-1554, 1981.

Research studies leading to the notion of multiple opioid receptors are reviewed historically, and evolutionary implications of the notion of multiple opioid receptors and of the search for undiscovered opioid receptors are discussed. The concept that a drug could be an agonist, partial agonist, or competitive antagonist at three different receptors proved to be useful in explaining many of the differences between agonists and antagonists which had puzzled early investigators. The problems of whether there are natural agonists for all multiple opioid as well as other receptors, and whether there are potential transmitters for which there are no receptors are discussed in relation to the evolutionary potential of the human CNS. A system of receptor nomenclature is appended. 21 references.

004729 Mendelson, Wallace B.; Garnett, Debra; Gillin, J. Christian. Building 10, Room 3N224, National Institutes of Health, Bethesda, MD 20205 **Flurazepam-induced sleep apnea syndrome in a patient with insomnia and mild sleep-related respiratory changes.** Journal of Nervous and Mental Disease. 169(4):261-264, 1981.

Sleep EEG and respiratory measures were examined in a 38-year-old man with a long-standing history of insomnia and daytime sleepiness. He was found to have 7 to 18 primarily obstructive apneas per night on four baseline recordings, a finding not generally considered to be indicative of pathology. On the first two nights on which he received 30mg of the benzodiazepine hypnotic flurazepam, there were 22 and 100 apneas, and during the daytime he became extremely sleepy. Upon cessation of medication, his clinical condition improved, and the number of apneas decreased to 11 and 6 on withdrawal nights 4 and 6. Although respiratory depression is neither invariable nor unique to flurazepam, this case suggests that it may be a clinically significant problem with recommended oral doses in some individuals. 5 references. (Author abstract)

004730 Mills, Mark J. Massachusetts Dept. of Mental Health, 160 N. Washington St., Boston, MA 02114 **The rights of involuntary patients to refuse pharmacotherapy: what is reasonable?** Bulletin of the American Academy of Psychiatry and Law. 8(3):313-334, 1980.

The right of involuntary patients to refuse psychotropic medication is discussed by examining some problems raised by conflicting court decisions. It is argued that the traditional manner of treating psychiatrically ill, involuntary patients over their objections must give way to a new model in which psychiatrically determined incompetence is important. Under this model, a distinction is drawn between patients for whom the state has only a parens patriae interest and those for whom the state has some police power concern. The proposed system is designed to reallocate the present right to treatment and right to refuse treatment equities. The traditional mental commitment approach is thus altered to focus awareness onto the patient's capacity to consent. Ideally, such a system should increase psychiatric sensitivity to the perspective that what is best for the patient's illness is not necessarily best for the patient as a whole, and should reassure the mental health bar that psychiatrists are not interested in imposing treatment or acting as jailers. 92 references.

004731 Montgomery, S. A. Academic Dept. of Psychiatry, St. Mary's Hospital Medical School, St. Mary's Hospital, Harrow Road, London W9, England **Maprotiline, nomifensine, mianserin, zimelidine: a review of antidepressant efficacy in in-patients.** Neuropharmacology. 19(12):1185-1190, 1980.

Studies of the clinical efficacy of the second generation antidepressants maprotiline, nomifensine, mianserin, and zimelidine using depressed inpatients are reviewed. It is noted that the hospital inpatient trials have found maprotiline nomifensine, mianserin, and zimelidine to have the same order of antidepressant efficacy as the reference antidepressant drugs, imipramine and amitriptyline. It is noted that most of the inpatient studies are open to the criticism that they examined groups that were sometimes too small to conclude that there was no difference with the comparison drug. This methodological difficulty is exacerbated by the use of mixed, ill defined groups of depressed Ss. The advantages of the second generation antidepressants in terms of reduced side-effects and toxicity in overdose are generally well documented. 43 references.

004732 Morkovkin, V. M.; Kaplin, G. P.; Romel', T. E.; Guberman, A. S.; Mazurskiy, M. B. Moskovskaya gorodskaya klinicheskaya psikhiatricheskaya bol'nitsa No. 1 im. P. P. Kashchenko, Moskva, USSR **/The drug pathomorphosis of schizophrenia./** K voprosu o lekarstvennom patomorfoze shizofrenii. Zhurnal Nevropatologii i Psikhiatrii imeni S. S. Korsakova. 80(5):745-748, 1980.

The drug pathomorphosis of schizophrenia was studied by comparing the case histories of more than 4,000 patients admitted to one psychiatric hospital in Moscow in 1951 and 1974. The clinical pictures in the preneuroleptic period and under conditions of polypharmacotherapy were compared. Results show that: the history of schizophrenia under conditions of polypharmacotherapy has changed; in polypharmacotherapy there has been an increase in attack-like forms of schizophrenia, and a decrease in continuous forms; irrespective of the character of the progress of schizophrenia there has been a significant decrease in severe catatonic conditions, delusional excitation, and pronounced stuporous states, and an increase in depressions. 22 references. (Journal abstract modified)

004733 Nestoros, J. N. Dept. of Anaesthesia Research, McGill University, 3655 Drummond St., Montreal, Quebec H3G 1Y6, Canada **Benzodiazepines in schizophrenia: a need for reassessment.** International Pharmacopsychiatry. 15(3):171-179, 1980.

Fourteen controlled clinical studies that have attempted to evaluate the usefulness of benzodiazepines in the treatment of schizophrenic patients are reviewed. Research strategies covered include: 1) comparison of benzodiazepine and placebo treatments; 2) comparison of benzodiazepine and standard neuroleptic treatments; 3) comparison of benzodiazepine, placebo, and standard neuroleptic treatments; and 4) comparison of the effect of adding a benzodiazepine to the standard neuroleptic medication to the effect of adding a placebo. It is concluded that the doses used were probably too small and inadequate to induce an ameliorating effect. However, benzodiazepines may be promising candidates for antipsychotic drugs since, by facilitating GABAergic neurotransmission, they diminish dopaminergic neurotransmission. Although higher doses will probably cause dependence, reversible addiction to benzodiazepines may be a better alternative for some subgroups of schizophrenics than the uncertain, but irreversible side-effects of traditional neuroleptics. 46 references. (Author abstract modified)

004734 Nielsen, Jorgen Achton; Biorn-Henriksen, Torben; Nielsen, Johannes. Institute of Psychiatric Demography, Psychiatric Hospital, DK-8240 Risskov, Denmark **Psychiatric illness and use of psychotropic drugs in the geographically delimited population of Samso, Denmark.** Acta Psychiatrica Scandinavica. 62(Supplementum 285):97-102, 1980.

The relationship between use of psychotropic drugs and the presence of mental illness was investigated on the island of Samso, Denmark during the 1 year period from October 1976 to September 1977. Ninteen percent of the females and 11% of the males living on the island received one or more psychotropic drugs. The amounts of psychotropic drugs prescribed averaged 18 defined daily dose (DDD) per male and 32 DDD per female. Fifty two percent of all the psychotropic drugs prescribed were given to patients with psychiatric illnesses, 18% to patients who previously had a mental illness, and 31% to people who had never been mentally ill. The amount of psychotropic drugs prescribed on Samso was one half of that prescribed in the rest of Aarhus county, due to a lower prescription rate for minor tranquillizers, hypnotics, and sedatives. 9 references. (Author abstract modified)

004735 no author. no address **Drug concentrations in neuropsychiatry.** Ciba Foundation Symposium No 74. Amsterdam, Excerpta Medica, 1980. 266 p. $45.75.

The proceedings of a symposium on plasma drug levels in psychiatry and neurology are presented. Of particular concern is the clinical value of monitoring plasma concentrations. Plasma levels are generally agreed to be important for lithium and anticonvulsants, of little value for sedative hypnotics and antipsychotic drugs, and of value in selected situations for antidepressants. The complexity and difficulties of interpretation of plasma levels in psychiatric disorders is discussed. The designated therapeutic range must be adjusted for each individual based on clinical assessment, as the therapeutic range may overlap the toxic range. The lack of quality control in some laboratories, and its consequences for the clinician are also discussed.

004736 no author. U.S. General Accounting Office, 441 G St., NW, Washington, DC 20548 **Problems remain in reviews of Medicaid-financed drug therapy in nursing homes.** Washington, GAO Report No. HRD-80-56, 1980. 87 p.

Problems facing pharmacists and registered nurses who perform monthly reviews of the drugs taken by Medicaid nursing home patients were assessed. Randomly selected nursing homes in Georgia, Iowa, Kansas, Massachusetts, Texas, and California were visited, state and federal officials were interviewed, and records and the research literature were reviewed. Based on the findings, it is suggested that medication review has not been totally effective and that pharmacists and registered nurses need ready access to a single source containing authoritative information on commonly used drugs and also a clear definition of the scope of these reviews. FDA approved drug labeling is the most widely available and widely used source of drug information; however, labeling often does not contain enough information about the proper monitoring and use of the drug. Recommendations to the Department of Health and Human Services concerning the dissemination of drug information and a medication review methodology, as well as other issues, are offered.

004737 Richelson, Elliott. Dept. of Psychiatry, Mayo Foundation, Rochester, MN 55901 **Psychotherapeutic drugs, histamine H1 and muscarinic acetylcholine receptors.** In: Yamamura, Psychopharm. and biochem. of neurotransmitter receptors. Amsterdam, Elsevier North Holland, 1980. (p. 263-277).

The interactions of psychotherapeutic drugs with histamine-H1 and muscarinic acetylcholine receptors were studied to provide a basis for understanding some of the drugs' side-effects. Methods of assay of histamine-H1 and muscarinic acetylcholine receptors are outlined. Characteristics of histamine-H1 and muscarinic acetylcholine receptors of mouse neuroblastoma cells are described, suggesting functional and structural similarities between histamine-H1 and muscarinic acetylcholine receptors. Equilibrium dissociation constants were found for histamine-H1 and muscarinic acetylcholine receptors and a variety of psychotherapeutic drugs: antidepressants, antipsychotics, antihistaminics, and anticholinergics. One of the most interesting results is the finding of exceedingly high affinities of doxepin and amitriptyline for the histamine-H1 receptor. The results are discussed with regard to mechanism of action and side-effects of psychotherapeutic drugs. 53 references.

004738 Richens, Alan. Dept. of Clinical Pharmacology, St. Bartholomew's Hospital Medical College, London, England **Pharmacokinetics of anticonvulsant drugs.** Acta Neurologica Scandinavica. 62(Suppl. 80):40-45, 1980.

Pharmacokinetic aspects of anticonvulsant drugs which must be considered when treating epileptic patients are discussed. Specific information is presented on protein binding in anticonvulsants, protein binding interactions, and tolerance. Findings from research of folic acid treatment in epilepsy are briefly reviewed. It is concluded that an understanding of the drug handling mechanisms of the body is fundamental to a critical study the effects of drugs on the human central nervous system.

004739 Schoolar, Joseph C.; Claghorn, James L. no address **The kinetics of psychiatric drugs.** New York, Bruner/Mazel, 1979. 324 p. $19.50.

The current understanding of the usual metabolic and kinetic patterns of commonly used psychotropic drugs and their implications for treatment are examined in 16 papers presented to the 11th Annual Symposium of the Texas Research Institute of Mental Sciences, held in 1978. An overview is provided, and presentations are grouped into preclinical and clinical studies, studies with special populations (antiepileptic drugs in children, the elderly, and drug interactions). Implications for future clinical research are also examined. Focus is on biological considerations pertaining to drug action; and presentations touch on the treatment of schizophrenia, depression, manic-depressive disorder, and anxiety. Approaches to maintaining the treatment course by radioimmunoassay techniques and plasma levels are also discussed. Special considerations in the psychopharmacological management of the geriatric patient are presented.

004740 Scott, A. K.; Hawksworth, Gabrielle M. Dept. of Therapeutics and Clinical Pharmacology, University of Aberdeen, Aberdeen AB9 2ZD, Scotland **Clinical pharmacology: drug absorption.** British Medical Journal. No. 6262:462-463, 1981.

The absorption from the gastrointestinal tract of drugs used in the treatment of mental and other disorders is described, and implications for therapy are described. Absorption factors discussed include: drug formulation; gastric motility; food and fluid volume; disease; age; route of administration; and drug/drug interactions. It is concluded that many interacting factors contribute to interindividual differences in drug absorption, and that most of these affect the rate but not the extent of absorption and are important only when an immediate therapeutic effect is required. When pronounced interindividual differences in therapeutic response have been noted, these are mainly attributed to differences in metabolism or excretion, rather than absorption.

004741 Seeman, Philip. Pharmacology Dept., University of Toronto, Toronto, Canada **Brain dopamine receptors.** Pharmacological Reviews. 32(3):229-313, 1980.

The role of brain dopamine receptors as sites of neuroleptic action is reviewed. Behavioral and biochemical effects of neuroleptics are discussed in relation to the dopamine hypothesis of schizophrenia. The binding of tritiated ligands to dopamine receptors is described and differences between the D2-receptor and D1 and D3 dopaminergic sites are explained. Dopaminergic autoreceptors are discussed in relation to Parkinson's disease and the presynaptic and postsynaptic actions of apomorphine, neuroleptics, bromocriptine, and various dopamine agonists. The role of dopaminergic supersensitivity in schizophrenia, long-term neuroleptic therapy, tardive dyskinesia, and aging is considered. Directions for future research are outlined and the importance of isolating the D2-receptor is emphasized. 1278 references.

004742 Sharer, David R.; Petit, Ed. 720 Kipling '200, Lakewood, CO 80215 **Using drug holidays for chronic outpatients.** Hospital & Community Psychiatry. 32(6):420-421, 1981.

The use of a 2 day a week drug holiday from oral antipsychotic medication was evaluated in an initial sample of 27 experimental and 28 control chronically psychotic outpatients. Of the 15 patients who completed the 5 month program, 8 were in the holiday group and 7 were in the control group. For both groups, levels of self-reported and psychiatrist reported feeling and functioning were roughly the same. The holiday group's average scores increased for two of the ratings, while the control group's scores increased for all four. Despite limitations of the study, findings suggest that a 2 day a week holiday from oral antipsychotic drugs for an average period of 3.75 months did not interfere with patients' functioning. 8 references.

004743 Sholevar, G. Pirooz; Benson, Ronald M.; Blinder, Barton J. no address **Emotional disorders in children and adolescents: medical and psychological approaches to treatment.** New York, SP Medical & Scientific Books, 1980. 710 p. $60.00.

Introductory essays on disorders of children and adolescents are presented in six sections. The section on individual psychotherapy includes chapters on behavior modification and pharmacotherapy. Family therapy, group therapy, and milieu therapies are discussed in section two. A third section describes the treatment of special age groups in preschool, latency age, and adolescent categories. A fourth section on the treatment of psychosomatic disorders is followed by a fifth section on the treatment of special disorders including psychotic disorders, minimal brain dysfunction, learning disabilities, and drug abuse. A final section discusses preventative and psychotherapeutic interventions in child psychiatry.

004744 Snyder, Solomon; Goleman, Daniel; (Delorme, Marie-Raymonde, translator). Johns Hopkins University, School of Medicine, N. Wolfe St, Baltimore, MD 21205 **/The chemistry of the brain divulges its secrets./** La chimie du cerveau livre ses secrets. Psychologie. No. 130:28-34, 36, 1980.

An interview with Solomon Snyder, psychiatrist and pharmacologist well known for his work on neuromediators, is presented. Snyder's research into the brain's neuromediators has led to the possibility of developing super painkillers or memory pills. Now it is possible to determine a certain substance's receptors and to produce drugs which act on these areas alone. Although past research has been somewhat haphazard, future research can be conducted more systematically. 3 references.

004745 Strickland, Rosemary; Alston, JoAnne; Davidson, Jonathan. John Umstead Hospital, Butner, NC 27509 **The negative influence of families on compliance.** Hospital & Community Psychiatry. 32(5):349-350, 1981.

The negative influence of families on medication compliance of mental outpatients is illustrated in two case reports. Although the literature provides much evidence that family support can aid compliance, there are some indications that family members can also deter it. In the first case, a previously dependent and timid patient became more assertive at home following successful antidepressant treatment. This resulted in opposition to treatment from her husband and daughter, and the subsequent discontinuation of her medication. This was satisfactorily resolved through appropriate family counseling. In the second case, a depressed patient who become less dependent on her sister after treatment, was convinced by the sister that the medication was causing jaundice; the patient subsequently abandoned treatment and symptoms reemerged after several weeks. The family dynamics in these two cases are discussed in terms of the caretaker's perceptions of the rights and responsibilities of the sick role. 4 references.

004746 Sulser, Fridolin; Mobley, Philip L. Vanderbilt University School of Medicine, Nashville, TN 37217 **Down regulation of noradrenergic receptor function by antidepressant drugs: functional significance and distinction from antipsychotic drugs.** (Unpublished paper). Research Report, NIMH Grant 5R01-MH-29228, 1979. 8 p.

The effects of tricyclic antidepressants and of MAO inhibitors on catecholaminergic neurons in brain are reported, with emphasis on down regulation of noradrenergic receptor function by these compounds. Data are summarized which show that most, if not all, antidepressant drugs and electroconvulsive shock treatment cause a down regulation of the norepinephrine (NE) receptor coupled adenylate-cyclase system when administered chronically. This down regulation generally, but not invariably, is linked to reduction of the density of beta-adrenergic receptors. Since psychotropic drugs which can precipitate depressive illness change the sensitivity of this noradrenergic receptor system in the opposite direction, the results not only provide a further dimension of regulatory control of specific biological response, but also a scientific basis for formulation of a functional receptor pathology of affective and possibley other psychiatric disorders. 27 references. (Author abstract modified)

004747 Tennent, T. G. no address **Current trends in treatment in psychiatry.** London, Pitman Medical Publishing Company, 1980. 258 p.

The proceedings are reported for a British conference for consultant psychiatrists on current trends in treatment. Behavior therapy, neuropharmacology and psychopharmacology, medical treatment of schizophrenia, treatment of depression, sex therapy, and psychotherapy are covered. For each topic, a main comprehensive paper and two commentaries addressing the biases of the main paper are presented.

004748 Vencovsky, E.; Dobias, J. Dukelska 69, 305 99 Plzen, Czechoslovakia **/Notes on pharmacotherapy of functional psychoses./** Poznamky k farmakoterapii funkcnich psychoz. Ceskoslovenska Psychiatrie. 75(2):81-86, 1979.

The contribution of psychotherapeutic drugs to the treatment of functional psychoses is examined. It is suggested that psychopharmacotherapy has humanized psychiatric treatment, facilitated the compensation of mental disease, enabled useful contact with mental patients, and aided in their rehabilitation and resocialization. It is contended that in many instances psychopharmacotherapy restores mental patients to their former occupations and prevents the development of psychiatric invalidism. Pharmacotherapy is seen as taking its place along with two other basic approaches, psychotherapy and sociotherapy, as an integral component of treatment programs for mental patients. (Journal abstract modified)

004749 Vinar, O. K ovcinu 1519, 182 00 Praha 8-Kobylisy, Czechoslovakia **/Neuroleptics in 1979./** Neuroleptika v roce 1979. Ceskoslovenska Psychiatrie. 76(6):384-392, 1980.

Findings published in 1979 concerning the clinical use of neuroleptics are reviewed. It is concluded that there is a discrepancy between the results of controled experiments and clinical practice, and that treatment is conducted by combinations of drugs and also by insulin comas, although research has proved the superiority of monotherapy with one neuroleptic. Incisive neuroleptics for restless patients and sedative neuroleptics for apathetic patients are appropriate treatment according to some research results. The following developments are noted: haloperidol is replacing chlorpromazine as the drug of choice; the new preparations trebenzomine and clopimozid show clinical potential; dysphoria and tachycardia are predictors of adverse therapeutic effect, and dysphoria is deepened by combination with antiparkinsonian drugs; and chronic (tardive) dyskinesias are seldom persevering (irreversible). The existence of a mental syndrome due to the hypersensitivity of dopaminergic neurons in the limbic system is being considered: it is a syndrome analogous to chronic dyskinesias based on the same disorder in the striatum. Additionally, maintenance treatment currently is being studied with greater care; of decisive importance is the drug case history, appraisal of the activity of the process, and appraisal of the emotional atmosphere of the patient's family. 45 references. 004750 Weiss, Benjamin; Prozialeck, Walter; Cimino, Mauro. Dept. of Pharmacology, Medical College of Pennsylvania, Philadelphia, PA 19129 **Acute and chronic effects of psychoactive drugs on adrenergic receptors and calmodulin.** In: Hamet, P., Advances in cyclic nucleotide research. New York, Raven Press, 1980. v. 12. (p. 213-225).

Studies are reviewed showing that antipsychotic compounds selectively bind to calmodulin, that this binding may explain several of their biochemical actions, and that acute and chronic treatment may produce different effects. The effects that psychoactive compounds have on those biochemical mechanisms of brain influence the metabolism of cyclic nucleotides depend on whether the drugs are administered acutely or chronically. For example, antipsychotic agents acutely block the action of catecholamines on the adrenergic receptor/adenylate cyclase complex, thereby preventing the catecholamine-induced rise in cyclic AMP. But with long-term treatment, corresponding more closely to clinical use, the drugs appear to produce a compensatory increase in these catecholamine receptors. Repeated stimulation of adrenergic receptors with compounds that block the uptake of catecholamines, such as antidepressants, produces a decrease in the number of these receptors and concomitant subsensitivity to the effects of catecholamines on the formation of cyclic AMP. This is in contrast to their acute actions which result in a potentiation of the action of catecholamines. Clinically effective antipsychotic drugs also bind to an endogenous calcium dependent protein, calmodulin, found in high concentrations in the CNS. The binding can explain several of their biochemical actions and suggests that some of the pharmacological and clinical effects of these drugs may also be explained by a common mechanism. The specificity with which antipsychotic drugs bind to calmodulin suggests the possibility of searching for new and clinically more effective antipsychotic drugs based on their selective binding to calmodulin. 52 references. (Author abstract modified)

004751 Weiss, Benjamin; Wallace, Thomas L. no address **Mechanisms and pharmacological implications of altering calmodulin activity.** In: Cheung, W. Y., Calcium and cell function. New York, Academic Press, 1980. Vol. 1. (p. 329-379).

Studies are reviewed covering the distribution and biochemical actions of calmodulin, alteration of calmodulin activity by antipsychotic drugs and other substances, and calmodulin's role in the action of antipsychotic drugs. Calmodulin is an ubiquitous, calcium binding protein that regulates the activity of several calcium dependent enzymes, including specific forms of phosphodiesterase, adenylate-cyclase, and ATPase. A number of endogenous and exogenous substances have been shown to alter calmodulin's activity. The exogenous agents have in common the ability to inhibit the calmodulin-induced activation of phosphodiesterase, adenylate-cyclase, and ATPase, and many produce effects that are characteristic of antipsychotic agents. The specific mechanism by which antipsychotic drugs block the action of calmodulin apparently is by a direct, calcium dependent binding to calmodulin. This proposition is supported by the demonstration that the ability of drugs to bind calmodulin is directly related to their effectiveness in inhibiting calmodulin dependent enzymes. The binding of drugs is saturable and of high affinity and is relatively specific for agents having clinical antipsychotic activity, suggesting that calmodulin may function as an endogenous receptor for antipsychotics. A number of endogenous substances have also been found which bind to and inhibit the action of calmodulin, raising the possibility that there may be endogenous ligands in brain which function as endogenous psychotogens or endogenous antipsychotic materials. 209 references. 004752 Wender, Paul H.; Klein, Donald F. University of Utah College of Medicine 50 North Medical Dr., Salt Lake City, Utah 84132 **The promise of biological psychiatry.** Psychology Today. 15(2):25-28, 31-34, 36, 39-41, 1981.

Advances in biological psychiatry are reviewed. While Freudian theory dominated the practice of psychiatry in the first half of the century, recent advances in research provide evidence that biological functions are central to mental illness and that much of the now entrenched psychodynamic theory is irrelevant or even misleading. Evidence for biological predisposing or etiological factors in both severe and milder forms of mental illness is cited. A review of psychopharmacological research into drug specificity is then presented; and two case studies are reported, one of panic attacks, the other of depression and low self-esteem, in which states not responsive to psychotherapy showed dramatic improvement with appropriate drug therapy. Further evidence for a biological basis for a variety of mental disorders is then examined including psychopharmacological and twin adoption studies. Also examined briefly is research into biochemical concomitants of various disorders. Major psychological sources of unhappiness are delineated; and attitudes toward biological theory and factors in public resistance to medical treatment of psychiatric disorders are discussed.

SUBJECT INDEX

[The Subject Index is machine generated. Keywords in the titles of abstracts appear alphabetically in the the left hand margin, under each keyword is a list of titles in which the keyword appears. The spelling of words in the titles of abstracts has not been changed; hence, two spellings of the same word may appear in this index — for example, BEHAVIOR and BEHAVIOUR.]

ABILITY

THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE. 003933 04-03

ABNORMAL

PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08

ABNORMAL MOVEMENTS INDUCED BY PSYCHOTROPIC-DRUGS. 004652 04-15

ABNORMALITIES

METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT. 003905 04-03

ABRUPT

CLINICAL AND BIOCHEMICAL-CORRELATIONS IN ABRUPT DISCONTINUATION OF PSYCHOPHARMACOTHERAPY. 004330 04-08

ABSORPTION

ORAL AND RECTAL ABSORPTION OF CHLORAL-HYDRATE AND ITS BETAINE COMPLEX. 004554 04-13

CLINICAL-PHARMACOLOGY: DRUG ABSORPTION. 004740 04-17

ABSTINENCE

EFFECTS OF NARCOTIC ABSTINENCE ON SCHEDULE-CONTROLLED BEHAVIOR IN DEPENDENT RATS. 004230 04-04

SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11

DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

ABSTINENCE-SYNDROME

POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME. 004610 04-15

CASE-REPORT OF UNUSUAL DIAZEPAM ABSTINENCE-SYNDROME. 004643 04-15

ABUNDANT

THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004028 04-03

ABUSE

LONG-TERM USE AND ABUSE OF BENZODIAZEPINES. 004598 04-15

A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE. 004688 04-16

ACCELERATION

CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

ACCLIMATIZATION

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

ACCUMULATION

INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03

HALOTHANE ACCUMULATION IN RAT-BRAIN AND LIVER. 003774 04-03

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-03

ACCUMULATION OF AMANTADINE BY ISOLATED CHROMAFFIN GRANULES. 003866 04-03

THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03

A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM. 004520 04-13

ACCURACY

MEPROBAMATE REDUCES ACCURACY OF PHYSIOLOGICAL DETECTION OF DECEPTION. 004585 04-14

ACETONE

SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02

ACETYLCHOLINE

MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS. 003744 04-03

COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS. 003758 04-03

OXOTREMORINE DOES NOT ENHANCE ACETYLCHOLINE RELEASE FROM RAT DIAPHRAGM PREPARATIONS. 003819 04-03

ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN. 003820 04-03

PRESYNAPTIC REGULATION OF THE RELEASE OF ACETYLCHOLINE BY 5 HYDROXYTRYPTAMINE. 003843 04-03

INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03

ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE. 003863 04-03

THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT. 003897 04-03

THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS. 003924 04-03

ACETYLCHOLINE AND CHOLINE-ACETYLTRANSFERASE. 003930 04-03

CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES. 003937 04-03

EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 003969 04-03

INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE. 004044 04-03

5' TRIPHOSPHATE RECYCLES INDEPENDENTLY OF ACETYLCHOLINE IN CHOLINERGIC SYNAPTIC VESICLES. 004063 04-03

CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS. 004076 04-04

ANTITREMOR ACTION OF C10DICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR. 004096 04-04

ACETYLCHOLINE TURNOVER AND AGGRESSION IN RELATED THREE STRAINS OF MICE. 004151 04-04

ACETYLCHOLINE-INDUCED

ACETYLCHOLINE-INDUCED MODULATION OF HIPPOCAMPAL PYRAMIDAL NEURONS. 003728 04-03

ACETYLCHOLINE-RECEPTORS

PSYCHOTHERAPEUTIC-DRUGS, HISTAMINE H1-RECEPTORS AND MUSCARINIC ACETYLCHOLINE-RECEPTORS. 004737 04-17

ACETYLCHOLINESTERASE

INHIBITION OF AMINOPEPTIDASE AND ACETYLCHOLINESTERASE BY PUROMYCIN AND PUROMYCIN ANALOGS. 003835 04-03

INSEPARABILITY OF ACETYLCHOLINESTERASE AND NERVE EXCITATION. 003875 04-03

ACETYLESTERS
GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS. 004683 04-16

ACETYLMETHADOL
EFFECTS OF LEVO ALPHA ACETYLMETHADOL (LAAM) ON MORPHINE SELF-ADMINISTRATION IN THE RAT. 004170 04-04
MORPHINE CHALLENGES IN LEVO ALPHA ACETYLMETHADOL (LAAM) POSTADDICT RATS. 004259 04-04

ACH-RECEPTOR
IMMUNODETECTION OF ACH-RECEPTOR IN THE CNS. (UNPUBLISHED PAPER). 003670 04-01
5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS. 003710 04-03

ACID
PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN. 003671 04-01
IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03
THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT: INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT. 004279 04-05

ACIDIC
REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE. 004517 04-13

ACQUISITION
EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL. 003883 04-03
RAPID ACQUISITION OF A TWO-DRUG DISCRIMINATION: TIME OF DAY EFFECT UPON SALINE STATE. 004214 04-04

ACRYLAMIDE
NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE. 004264 04-05
NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. II: EFFECTS OF EXTENDED EXPOSURE TO ACRYLAMIDE. 004265 04-05

ACTH-LIKE
ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR. 004109 04-04

ACTH1-24
HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

ACTH4-9
A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN. 004574 04-14

ACTIVATED
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03

ACTIVATION
DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02
AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION. 003917 04-03
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY. 004018 04-03
INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03
EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS. 004126 04-04
REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK -- POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER). 004154 04-04
CONTRIBUTION OF SOCIAL FACTORS TO OPIATE-INDUCED ACTIVATION IN THE MOUSE. 004156 04-04
A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM. 004543 04-13

ACYLASE
AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT. 004426 04-10

ACYLCYANAMIDES
ACYLCYANAMIDES, ACYLUREA, AND VARIOUS SUBSTITUTED ARYLALLOPHANATES; EFFECT ON THE CNS. 003689 04-02

ACYLUREA
ACYLCYANAMIDES, ACYLUREA, AND VARIOUS SUBSTITUTED ARYLALLOPHANATES; EFFECT ON THE CNS. 003689 04-02

ADAPTATION
THERAPY AND SOCIAL ADAPTATION OF OLIGOPHRENICS (REVIEW OF THE LITERATURE). 004444 04-11

ADDICTS
A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL. 004445 04-11
METHADONE TREATMENT OF HEROIN ADDICTS IN SWITZERLAND. 004452 04-11
SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11

ADENOSINE
EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FROM RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST. 003864 04-03
THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH. 003882 04-03
ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03
EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 003969 04-03
POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM. 004266 04-05

ADENOSINE-DEAMINASE
ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03

ADENOSINE-RECEPTORS
ADENOSINE-RECEPTORS IN THE CENTRAL-NERVOUS-SYSTEM: RELATIONSHIP TO THE CENTRAL-ACTIONS OF METHYLXANTHINES. 003766 04-03

ADENOSINE-TRIPHOSPHATASE
ETHANOL SEDATIVE HYPNOTIC-INTERACTIONS: IN VITRO STUDIES ON NA-K-ACTIVATED ADENOSINE-TRIPHOSPHATASE. 004269 04-05

ADENOSINE-TRIPHOSPHATE
4 AMINOPYRIDINE BLOCKADE OF NEURONAL DEPRESSANT RESPONSES TO ADENOSINE-TRIPHOSPHATE. 003963 04-03

ADENOSYL-L-METHIONINE
DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE. 004019 04-03

ADENYLATE-CYCLASE
STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02
STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE. 003718 04-03
DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD. 003800 04-03
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03

WHY DOES SULPIRIDE NOT BLOCK THE EFFECT OF DOPAMINE ON THE DOPAMINE-SENSITIVE ADENYLATE-CYCLASE? 004055 04-03

RECEPTORS, ADENYLATE-CYCLASE, DEPRESSION, AND LITHIUM. 004353 04-09

ADHESION

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES -- ARE THEY CELL ADHESION MOLECULES? 003724 04-03

ADMINISTRATIONS

EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (REDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT. 003703 04-02

ADMISSIONS

PSYCHOTROPIC-DRUGS AND PSYCHIATRIC-HOSPITAL ADMISSIONS IN VERONA, ITALY. 004717 04-17

ADOLESCENCE

ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE. 004626 04-15

ADOLESCENT

MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN ADOLESCENT. 004637 04-15

ADOLESCENTS

PHARMACOLOGICAL INFLUENCE OF SEXUAL-FUNCTIONS IN ADOLESCENTS. 004436 04-11

DRUG-INDUCED PSYCHOSIS AND SCHIZOPHRENIA IN ADOLESCENTS. 004596 04-15

EMOTIONAL-DISORDERS IN CHILDREN AND ADOLESCENTS: MEDICAL AND PSYCHOLOGICAL APPROACHES TO TREATMENT. 004743 04-17

ADRENAL-MEDULLA

EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC AXON TERMINALS IN THE MOUSE ADRENAL-MEDULLA. 003916 04-03

ADRENERGIC

ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS. 003801 04-03

NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS. 003842 04-03

SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC INTERACTION. 003887 04-03

THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS. 003900 04-03

SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION. 004206 04-04

RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS. 004231 04-04

PERIPHERAL SEROTONERGIC AND ADRENERGIC RESPONSES IN DEPRESSION. 004364 04-09

THE STATE OF THE ADRENERGIC AND CHOLINERGIC SYSTEMS IN SCHIZOPHRENIC-PATIENTS DURING PSYCHPHARMACOTHERAPY. 004526 04-13

ADRENERGIC-RECEPTORS

ACUTE AND CHRONIC EFFECTS OF PSYCHOACTIVE-DRUGS ON ADRENERGIC-RECEPTORS AND CALMODULIN. 004750 04-17

ADRENOCEPTOR

A NEUROENDOCRINE-STUDY OF ADRENOCEPTOR FUNCTION IN ENDOGENOUS DEPRESSION. 004362 04-09

ADRENOCORTICAL

THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY-METABOLISM IN THE ANIMAL BRAIN. 004075 04-04

ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR. 004109 04-04

ADTN

HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04

ADULT

THE EFFECTS OF P CHLOROAMPHETAMINE ADMINISTRATION ON LOCOMOTOR-ACTIVITY AND SEROTONIN IN NEONATAL AND ADULT RATS. (UNPUBLISHED PAPER). 004169 04-04

ADULTS

HYPERACTIVES AS YOUNG ADULTS: PROSPECTIVE TEN-YEAR FOLLOWUP. 004454 04-11

ADVERSE-EFFECTS

PREVENTION OF TARDIVE-DYSKINESIA AND OTHER DRUG RELATED ADVERSE-EFFECTS. 004601 04-15

ADVERSE-EFFECTS OF ANTIPARKINSON-DRUG WITHDRAWAL (UNPUBLISHED PAPER). 004623 04-15

AFFECTIVE-DISORDER

MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN ADOLESCENT. 004637 04-15

AFFECTIVE-DISORDERS

PSYCHOTROPIC-DRUGS AND THEIR RELATIONSHIP WITH PSYCHOPATHOLOGY OF AFFECTIVE-DISORDERS. 004361 04-09

LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09

LITHIUM USE IN AFFECTIVE-DISORDERS. 004367 04-09

EFFECT OF LITHIUM ON GLYCINE LEVELS IN PATIENTS WITH AFFECTIVE-DISORDERS. 004606 04-15

KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY. 004664 04-15

AFFECTIVE-ILLNESS

UNWANTED EFFECTS OF LITHIUM-CARBONATE USED IN THE PREVENTION OF RELAPSES OF AFFECTIVE-ILLNESS. 004625 04-15

AFFECTIVE-PSYCHOSES

COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09

AFFECTIVE-PSYCHOSIS

AN ATTEMPT TO ASSESS THE EFFECT OF LITHIUM ON THE NEUTROPHIL LEUKOCYTE SYSTEM IN AFFECTIVE-PSYCHOSIS. 004416 04-09

AFFERENTS

SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

AFFINITY

EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING. 003702 04-02

AFTERDISCHARGES

THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

AFTEREFFECTS

PERSONALITY AND DRUGS IN VISUAL FIGURAL AFTEREFFECTS. 004581 04-14

AG-3-5

PHARMACOLOGICAL-ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04

AGE

PIRACETAM ACTIVITY MAY DIFFER ACCORDING TO THE AGE OF THE RECIPIENT MOUSE. 003705 04-02

EFFECTS OF AGE ON DOPAMINERGIC-SUPERSENSITIVITY INDUCED BY CHRONIC FLUPHENAZINE. 003940 04-03

EFFECTS OF ANIMAL AGE AND PHENOBARBITAL ON RAT LIVER GLUCOSE-6-PHOSPHATASE ACTIVITY. 003997 04-03

EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE. 004097 04-04

AGE-DEPENDENT

AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03

AGE-SPECIFIC

AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07

AGED
ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003936 04-03
PSYCHOPHARMACOTHERAPY OF SEXUAL-DISORDERS IN THE AGED. 004466 04-11
AN OVERVIEW OF PHARMACOLOGIC-TREATMENT OF COGNITIVE DECLINE IN THE AGED. 004482 04-11
PSYCHOPHARMACOLOGY FOR THE AGED. 004701 04-17

AGENT
SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT. 003701 04-02
DISCRIMINATIVE-STIMULUS PROPERTIES OF THE HALLUCINOGENIC AGENT DOM. 004260 04-04

AGENTS
SYNTHESIS OF PHENYLURETHANS OF 1,2 DIALKYL-4-PYRAZOLIDINOLS AS ANTICONVULSANT AGENTS. 003695 04-02
DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE. 004130 04-04
INTRACEREBRAL SUBSTANCE-P IN MICE: BEHAVIORAL-EFFECTS AND NARCOTIC AGENTS. 004218 04-04

AGGRAVATED
A CASE OF PETIT-MAL EPILEPSY AGGRAVATED BY LITHIUM. 004641 04-15

AGGREGATION
SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION. 004518 04-13

AGGRESSION
ACETYLCHOLINE TURNOVER AND AGGRESSION IN RELATED THREE STRAINS OF MICE. 004151 04-04

AGGRESSIVE
POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT. 004153 04-04

AGGRESSIVE-BEHAVIOR
LITHIUM AND AGGRESSIVE-BEHAVIOR. 004409 04-09

AGING
THE PSYCHOBIOLOGY OF AGING. 003861 04-03
MEMORY, OPIATE-RECEPTORS, AND AGING. 004143 04-04
PSYCHOPHARMACOLOGY OF AGING. 004710 04-17

AGONIST
MORPHICEPTIN (NH4-TYR-PRO-PHE-PRO-CONH2): A POTENT AND SPECIFIC AGONIST FOR MORPHINE MU-RECEPTORS. 003746 04-03
RESPONSE OF STRIATONIGRAL SUBSTANCE-P SYSTEMS TO A DOPAMINE-RECEPTOR AGONIST AND ANTAGONIST. 003826 04-03
ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE. 003879 04-03
BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA. 003954 04-03
ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004053 04-03
HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04
PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE. 004082 04-04

AGONIST-MEDIATED
SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION. 004206 04-04

AGONISTS
INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03
A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY. 004054 04-03
GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04
INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR. 004127 04-04
DOPAMINERGIC AGONISTS DIFFERENTIALLY AFFECT OPEN-FIELD ACTIVITY OF RATS WITH A10 LESIONS. 004135 04-04
MINI-SYMPOSIUM: III. SIMPLE IN VIVO TESTS THAT DIFFERENTIATE PROTOTYPE AGONISTS AT OPIATE-RECEPTORS. 004289 04-06
SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES. 004725 04-17

AGRANULOCYTOSIS
A CASE OF ACUTE AGRANULOCYTOSIS DURING TREATMENT WITH CLOZAPINE. 004642 04-15

ALANINE
MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS. 004058 04-03

ALA2-METHIONINE-ENKEPHALINAMIDE
ELECTROENCEPHALOGRAPHIC AND BEHAVIORAL-TOLERANCE TO AND CROSS-TOLERANCE BETWEEN D ALA2-METHIONINE-ENKEPHALINAMIDE AND MORPHINE IN THE RAT. 004038 04-03

ALCOHOL
SUPPRESSION OF ALCOHOL DRINKING WITH BRAIN ALDEHYDE-DEHYDROGENASE INHIBITION. 004220 04-04
MEMORY: THE EFFECTS OF ALCOHOL AND OF MARIHUANA. 004570 04-14
DRUGS, ALCOHOL AND SEX. 004706 04-17

ALCOHOLIC
CLINICAL PHARMACOKINETICS OF CHLORDIAZEPOXIDE IN PATIENTS WITH ALCOHOLIC HEPATITIS. 004473 04-11
DISULFIRAM AND NOCTURNAL PENILE-TUMESCENCE IN THE CHRONIC ALCOHOLIC. 004556 04-13
TRICYCLIC-ANTIDEPRESSANTS AND ALCOHOLIC BLACKOUTS. 004617 04-15
BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS. 004658 04-15

ALCOHOLIC-PATIENTS
SALIVA BENZODIAZEPINE LEVELS AND CLINICAL OUTCOME IN DETOXIFYING ALCOHOLIC-PATIENTS. 004671 04-16

ALDEHYDE-DEHYDROGENASE
SUPPRESSION OF ALCOHOL DRINKING WITH BRAIN ALDEHYDE-DEHYDROGENASE INHIBITION. 004220 04-04

ALIMENTARY
INHIBITION OF MONOAMINE-OXIDASE BY FURAZOLIDONE IN THE CHICKEN AND THE INFLUENCE OF THE ALIMENTARY FLORA THEREON. 003711 04-03

ALKALOID
HYPERTHERMIC-RESPONSE TO (-) CATHINONE, AN ALKALOID OF CATHA-EDULIS (KHAT). 003694 04-02
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HIGH-DOSE ERGOT ALKALOID TREATMENT FOR DEMENTIA. PRELIMINARY REPORT. 004493 04-11

ALKYLATING
PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE. 004082 04-04
IN VIVO EFFECTS OF TWO NOVEL ALKYLATING BENZODIAZEPINE, IRAZEPINE AND KENAZEPINE. 004251 04-04

ALPHA-ADRENERGIC

FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02

EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND CYCLIC-AMP IN FED MICE. 003946 04-03

ALPHA-ADRENERGIC-RECEPTORS

CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS. 003823 04-03

ALPHA-ADRENOCEPTOR

POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03

PRESYNAPTIC AND POSTSYNAPTIC ALPHA-ADRENOCEPTOR ANTAGONISM BY NEUROLEPTICS IN VIVO. 003966 04-03

ALPHA-ADRENOCEPTORS

PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE. 003777 04-03

EFFECTS ON THE PINNA-REFLEX OF DRUGS ACTING AT ALPHA-ADRENOCEPTORS. 004078 04-04

ALPHA-PATTERN

THE TWO SURVIVAL CASES OF ALPHA-PATTERN COMA CAUSED BY LARGE AMOUNTS OF HYPNOTICA AND NEUROLEPTICA. 004608 04-15

ALPHA1-ADRENOCEPTOR

DIFFERENTIAL INHIBITION OF ALPHA1-ADRENOCEPTOR AND ALPHA2-ADRENOCEPTOR MEDIATED PRESSOR RESPONSES IN PITHED RATS. 004057 04-03

ALPHA1-ADRENOCEPTORS

THE DOPAMINE-RECEPTOR ANTAGONIST DOMPERIDONE IS ALSO A COMPETITIVE ANTAGONIST AT ALPHA1-ADRENOCEPTORS. 003785 04-03

REGULATION OF ALPHA1-ADRENOCEPTORS IN THE CEREBRAL CORTEX OF THE RAT BY THYROID-HORMONES. 003816 04-03

ALPHA1-ADRENOCEPTORS AND ALPHA2-ADRENOCEPTORS IN RAT-CEREBRAL-CORTEX: EFFECT OF FRONTAL LOBOTOMY. 003944 04-03

ALPHA2-ADRENERGIC-AUTORECEPTOR

ANTIDEPRESSANTS AND ALPHA2-ADRENERGIC-AUTORECEPTOR DESENSITIZATION. 004659 04-15

ALPHA2-ADRENERGIC-RECEPTORS

HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND. 004676 04-16

ALPHA2-ADRENOCEPTOR

DIFFERENTIAL INHIBITION OF ALPHA1-ADRENOCEPTOR AND ALPHA2-ADRENOCEPTOR MEDIATED PRESSOR RESPONSES IN PITHED RATS. 004057 04-03

ALPHA2-ADRENOCEPTORS

ALPHA1-ADRENOCEPTORS AND ALPHA2-ADRENOCEPTORS IN RAT-CEREBRAL-CORTEX: EFFECT OF FRONTAL LOBOTOMY. 003944 04-03

ALPHA2-ADRENORECEPTORS

ALPHA2-ADRENORECEPTORS IN RAT-BRAIN ARE DECREASED AFTER LONG-TERM TRICYCLIC-ANTIDEPRESSANT DRUG-TREATMENT. 004008 04-03

ALPHA2-NORADRENERGIC-RECEPTOR

MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS. 003992 04-03

CLONIDINE-INDUCED HYPERPHAGIA IN MONKEYS: EVIDENCE FOR ALPHA2-NORADRENERGIC-RECEPTOR MEDIATION. 004215 04-04

ALPRAZOLAM

ALPRAZOLAM, A NEW TYPE ANXIOLYTIC IN NEUROTIC-PATIENTS: A PILOT-STUDY. 004422 04-10

ALTERATION

QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03

STRESS-MODULATED ALTERATION OF BRAIN BIOGENIC-AMINES IN THE RAT: EFFECTS OF L TRYPTOPHAN. 003978 04-03

ALTERATIONS

ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN. 003820 04-03

ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003936 04-03

ALTERATIONS IN GAMMA AMINOBUTYRIC-ACID-RECEPTOR SENSITIVITY FOLLOWING ACUTE AND CHRONIC ETHANOL TREATMENTS. 004037 04-03

ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA. 004316 04-08

ALTERATIONS IN NORADRENERGIC FUNCTION DURING CLORGYLINE TREATMENT. 004393 04-09

DRUG-INDUCED ALTERATIONS OF THE HYPOTHALAMUS HYPOPHYSIS AXIS. 004535 04-13

ALTERING

CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS. 004133 04-04

MECHANISMS AND PHARMACOLOGICAL IMPLICATIONS OF ALTERING CALMODULIN ACTIVITY. 004751 04-17

ALTHESIN

EFFECTS OF ALTHESIN IN PSYCHOTHERAPY OF SCHIZOPHRENICS: PRELIMINARY REPORT. 004331 04-08

AMANITIN

RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). 003998 04-03

AMANTADINE

COMPARATIVE-EFFECTS OF AMANTADINE AND AMFONELIC-ACID ON DOPAMINE METABOLISM IN RAT-BRAIN. 003796 04-03

ACCUMULATION OF AMANTADINE BY ISOLATED CHROMAFFIN GRANULES. 003866 04-03

AMBIENT

THE EFFECTS OF THEOPHYLLINE AND CAFFEINE ON THERMOREGULATORY FUNCTIONS OF RATS AT DIFFERENT AMBIENT TEMPERATURES. 003907 04-03

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

AMBULATORY

EVALUATIONS OF LOXAPINE-SUCCINATE IN THE AMBULATORY TREATMENT OF ACUTE SCHIZOPHRENIC-EPISODES. 004345 04-08

PHARMACOTHERAPY AND PSYCHOTHERAPY FOR AMBULATORY DEPRESSION: EFFICACY AND CHOICES. 004413 04-09

AMELIORATION

LITHIUM AMELIORATION OF RESERPINE-INDUCED HYPOACTIVITY IN RATS. 004167 04-04

AMFONELIC-ACID

COMPARATIVE-EFFECTS OF AMANTADINE AND AMFONELIC-ACID ON DOPAMINE METABOLISM IN RAT-BRAIN. 003796 04-03

AMINE

NONCOMPETITIVE AMINE UPTAKE INHIBITION BY THE NEW ANTIDEPRESSANT PRIDEFINE. 003771 04-03

AMINE UPTAKE INHIBITORS: CRITERIA OF SELECTIVITY. 003921 04-03

THE INTERACTION OF AMINE LOCAL ANESTHETICS WITH MUSCARINIC-RECEPTORS. 004031 04-03

A SIMPLE HISTOCHEMICAL SCREENING METHOD FOR AMINE UPTAKE. 004295 04-06

A RAPID AND SENSITIVE RADIORECEPTOR ASSAY FOR TERTIARY AMINE TRICYCLIC-ANTIDEPRESSANTS. 004689 04-16

AMINE-OXIDASE

CU-AMINE-OXIDASES: STUDIES RELATED TO THE MECHANISM-OF-ACTION OF BOVINE PLASMA AMINE-OXIDASE (UNPUBLISHED PAPER). 003680 04-01

AMINEPTINE

A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL.
004445 04-11

AMINES

REGULATION OF BIOGENESIS OF PSYCHOTOMIMETIC AMINES. (UNPUBLISHED PAPER).
003818 04-03

EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT.
003870 04-03

AMINO-ACID

BACLOFEN: STEREOSELECTIVE INHIBITION OF EXCITANT AMINO-ACID RELEASE.
003867 04-03

CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT.
003961 04-03

DRUG-INDUCED CHANGES IN THE COMPOSITION OF THE CEREBRAL FREE AMINO-ACID POOL.
004039 04-03

AMINOBUTYRIC-ACID

CENTRAL HYPOTENSIVE-EFFECT OF GAMMA AMINOBUTYRIC-ACID IN ANESTHETIZED DOGS.
003772 04-03

A STUDY OF GAMMA AMINOBUTYRIC-ACID UPTAKE IN NORMAL AND DOWNS-SYNDROME PLATELETS.
003787 04-03

THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC-ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY.
003880 04-03

CHANGES IN GAMMA AMINOBUTYRIC-ACID SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA.
003891 04-03

STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES.
003973 04-03

STUDIES ON GAMMA AMINOBUTYRIC-ACID TRANSPORT IN COBALT EXPERIMENTAL EPILEPSY IN THE RAT.
003990 04-03

MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS.
004058 04-03

ANTAGONISM OF SOME CENTRAL-EFFECTS OF D TUBOCURARINE BY GAMMA AMINOBUTYRIC-ACID.
004102 04-04

AMINOBUTYRIC-ACID-RECEPTOR

BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA.
003954 04-03

THE EFFECTS OF ACUTE AND CHRONIC ETHANOL ADMINISTRATION AND ITS WITHDRAWAL ON GAMMA AMINOBUTYRIC-ACID-RECEPTOR BINDING IN RAT-BRAIN.
004035 04-03

ALTERATIONS IN GAMMA AMINOBUTYRIC-ACID-RECEPTOR SENSITIVITY FOLLOWING ACUTE AND CHRONIC ETHANOL TREATMENTS.
004037 04-03

AMINOBUTYRIC-ACID-TRANSAMINASE

THE INACTIVATION OF GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE IN DISSOCIATED NEURONAL CULTURES FROM SPINAL-CORD.
003980 04-03

AMINOPEPTIDASE

INHIBITION OF AMINOPEPTIDASE AND ACETYLCHOLINESTERASE BY PUROMYCIN AND PUROMYCIN ANALOGS.
003835 04-03

AMINOPHYLLINE

AMINOPHYLLINE AND IMIDAZOLE AS CONVULSANTS.
004232 04-04

AMINOPYRIDINE

ACTION OF 4 AMINOPYRIDINE ON THE CEREBRAL CIRCULATION.
003781 04-03

4 AMINOPYRIDINE BLOCKADE OF NEURONAL DEPRESSANT RESPONSES TO ADENOSINE-TRIPHOSPHATE.
003963 04-03

AMINOPYRINE

INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS.
004022 04-03

AMITRIPTYLINE

INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN.
003756 04-03

DRUG-INTERACTIONS OF AMITRIPTYLINE AND NORTRIPTYLINE WITH WARFARIN IN THE RAT.
003912 04-03

REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE.
003964 04-03

COMPARATIVE-EFFECTS OF PHENELZINE AND AMITRIPTYLINE: A PLACEBO-CONTROLLED-TRIAL.
004402 04-09

THE RELATIONSHIPS BETWEEN CLINICAL-RESPONSE, PSYCHOPHYSIOLOGICAL-VARIABLES AND PLASMA LEVELS OF AMITRIPTYLINE AND DIAZEPAM IN NEUROTIC-OUTPATIENTS.
004423 04-10

AMITRIPTYLINE AND NORTRIPTYLINE PLASMA LEVELS MONITORING. PERSPECTIVE IN CLINICAL-PRACTICE.
004675 04-16

AMITRIPTYLINE-HYDROCHLORIDE

NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS.
003654 04-01

SIMULTANEOUS HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHIC-DETERMINATION OF AMITRIPTYLINE-HYDROCHLORIDE IN TWO-COMPONENT TABLET FORMULATIONS.
004673 04-16

AMMONIA

AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA.
004276 04-05

AMMONIUM-ACETATE

AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA.
004276 04-05

AMNESIA

TIME-DEPENDENT CHANGES IN ANTEROGRADE SCOPOLAMINE-INDUCED AMNESIA IN RATS.
004182 04-04

RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS.
004231 04-04

USE OF LYSINE-VASOPRESSIN IN THE TREATMENT OF POSTTRAUMATIC AMNESIA.
004583 04-14

AMOXAPINE

CLINICAL-RESPONSE AND BLOOD LEVELS IN THE TREATMENT OF DEPRESSION WITH A NEW ANTIDEPRESSANT-DRUG, AMOXAPINE.
004356 04-09

AMOXAPINE: A REVIEW OF LITERATURE.
004702 04-17

AMP

STUDY ON THE STABILITY OF THE FACTORIAL STRUCTURE OF THE AMP SYSTEM DURING TREATMENT.
004696 04-16

AMPHETAMINE

EFFECT OF AMPHETAMINE ON THE METABOLISM AND INCORPORATION OF (3H) THYMIDINE INTO DNA OF DEVELOPING RAT-BRAIN.
003729 04-03

UNIT ACTIVITY IN MEDIAL THALAMUS: COMPARATIVE-EFFECTS OF CAFFEINE AND AMPHETAMINE.
003752 04-03

EFFECTS OF ACUTE AND CHRONIC AMPHETAMINE TREATMENT ON PURKINJE NEURON DISCHARGE IN RAT CEREBELLUM.
003793 04-03

EFFECT OF AMPHETAMINE ON PLASMA CORTICOSTERONE IN THE CONSCIOUS RAT.
003888 04-03

EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER).
003960 04-03

SUSTAINED DECREASE IN FAT CONSUMPTION PRODUCED BY AMPHETAMINE IN RATS MAINTAINED ON A DIETARY SELF-SELECTION REGIME.
004150 04-04

HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE.
004159 04-04

AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL.
004208 04-04

SELECTIVE EFFECTS OF BARBITURATE AND AMPHETAMINE ON INFORMATION-PROCESSING AND RESPONSE EXECUTION.
004563 04-14

INTERACTION OF P CHLOROPHENYLALANINE, MIANSERINE AND DANITRACEN WITH AMPHETAMINE.
004599 04-15

AMPHETAMINE-INDUCED

NEUROTENSIN BLOCKS CERTAIN AMPHETAMINE-INDUCED BEHAVIOURS. 004111 04-04

THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS. 004117 04-04

NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND CONDITIONED TASTE-AVERSION. 004121 04-04

CENTRAL AND PERIPHERAL EFFECTS OF LITHIUM ON AMPHETAMINE-INDUCED HYPERACTIVITY IN RATS. 004223 04-04

AMYGDALA

OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003798 04-03

EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810) AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS. 004149 04-04

SEROTONERGIC MECHANISM IN SEIZURES KINDLED FROM THE RABBIT AMYGDALA. 004227 04-04

RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS. 004231 04-04

LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004273 04-05

ANALGESIA

ANALGESIA FOLLOWING INTRAVENTRICULAR ADMINISTRATION OF 2 DEOXY-D-GLUCOSE. 004074 04-04

NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO. 004198 04-04

BETA ENDORPHIN: CENTRAL SITES OF ANALGESIA, CATALEPSY AND BODY-TEMPERATURE CHANGES IN RATS. 004238 04-04

ANALGESIC

COMPARATIVE ANALGESIC, BEHAVIORAL, AND DEPENDENCE PROPERTIES OF MORPHINE AND O METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONEOXIME HCL. 003707 04-02

ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS. 004185 04-04

ANALGESICS

BLOCKADE BY L LYSINE OF NONNARCOTIC ANALGESICS. 003857 04-03

EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

ANALOG

HIGH-AFFINITY BINDING-SITES FOR A SOMATOSTATIN-28 ANALOG IN RAT-BRAIN. 003985 04-03

GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06

ANALOGS

SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN ANALOGS WITH DISULFIDE BRIDGES. 003655 04-01

SYNTHESIS AND PHARMACOLOGICAL-STUDY OF SOME ENKEPHALIN ANALOGS IN RELATION TO THE PLURALITY OF OPIATE-RECEPTORS. 003682 04-02

CENTRALLY ACTIVE N SUBSTITUTED ANALOGS OF 3,4 METHYLENEDIOXYPHENYLISOPROPYLAMINE (3,4 METHYLENEDIOXYAMPHETAMINE). 003683 04-02

INHIBITION OF AMINOPEPTIDASE AND ACETYLCHOLINESTERASE BY PUROMYCIN AND PUROMYCIN ANALOGS. 003835 04-03

OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03

N,N DIISOPROPYLTRYPTAMINE (DIPT) AND 5 METHOXYDIISOPROPYLTRYPTAMINE (5 MEO-DIPT). TWO ORALLY ACTIVE TRYPTAMINE ANALOGS WITH CNS ACTIVITY. 004310 04-07

ANALOGUE

BIOLOGICAL EVALUATION OF A TRH ANALOGUE WITH A MODIFIED PROLINE RESIDUE. 003662 04-01

INTERACTIONS BETWEEN A MONOFLUORINATED ANALOGUE OF P CHLOROAMPHETAMINE AND 5 HYDROXYTRYPTAMINE IN BRAIN. 003719 04-03

A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN. 004574 04-14

ANALOGUES

SYNTHESIS AND BIOCHEMICAL AND PHARMACOLOGIC PROPERTIES OF ANALOGUES AND DERIVATIVES OF P CHLOROPHENYLALANINE. 003691 04-02

EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN. 003794 04-03

IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03

ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE. 003863 04-03

ANALYSES

CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13

GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS. 004683 04-16

ANALYSIS

FURTHER ANALYSIS OF THE MECHANISMS OF ACTION OF BATRACHOTOXIN ON THE MEMBRANE OF MYELINATED NERVE. 003884 04-03

RX-336-M, A NEW CHEMICAL TOOL IN THE ANALYSIS OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004093 04-04

AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL. 004208 04-04

PRESENCE OF CONJUGATED CATECHOLAMINES IN RAT-BRAIN: A NEW METHOD OF ANALYSIS OF CATECHOLAMINE-SULFATES. 004286 04-06

PROPHYLACTIC-EFFECT OF LITHIUM AGAINST DEPRESSION IN CYCLOTHYMIC-PATIENTS: A LIFE-TABLE ANALYSIS. 004391 04-09

RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER). 004420 04-10

ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11

MECHANISM OF LITHIUM INCLUDED ELEVATION IN RED-BLOOD-CELL CHOLINE CONTENT: AN IN VITRO ANALYSIS. 004511 04-13

COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14

CHLORPROMAZINE ANALYSIS IN HUMAN PLASMA. (UNPUBLISHED PAPER). 004591 04-15

MILD, MODERATE, SEVERE -- THE STATISTICAL ANALYSIS OF SHORT ORDINAL SCALES. 004677 04-16

GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004687 04-16

A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE. 004688 04-16

ANALYZING

STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09

ANESTHESIA

CHANGES IN GAMMA AMINOBUTYRIC-ACID SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA. 003891 04-03

RESPIRATORY DEPRESSION PRODUCED BY DIAZEPAM IN CATS: EFFECT OF ANESTHESIA. 004272 04-05

ANESTHETICS
ANESTHETICS AND THE HABENULO-INTERPEDUNCULAR SYSTEM: SELECTIVE SPARING OF METABOLIC ACTIVITY.
003833 04-03
THE INTERACTION OF AMINE LOCAL ANESTHETICS WITH MUSCARINIC-RECEPTORS.
004031 04-03

ANESTHETIZED
CENTRAL HYPOTENSIVE-EFFECT OF GAMMA AMINOBUTYRIC-ACID IN ANESTHETIZED DOGS.
003772 04-03
PRESSOR EFFECTS OF ELECTRICAL-STIMULATION OF THE DORSAL AND MEDIAN RAPHE NUCLEI IN ANESTHETIZED RATS.
003892 04-03

ANGINA
TREATMENT OF UNSTABLE ANGINA BY DILTIAZEM.
004307 04-07

ANGIOTENSIN-II
NEURONAL SENSITIVITY OF SOME BRAIN REGIONS TO ANGIOTENSIN-II IN RABBITS.
003716 04-03
CENTRAL-EFFECTS OF ANGIOTENSIN-II IN WATER AND SALINE LOADED RATS.
003845 04-03

ANIMAL
EFFECTS OF ANIMAL AGE AND PHENOBARBITAL ON RAT LIVER GLUCOSE-6-PHOSPHATASE ACTIVITY.
003997 04-03
THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN.
004075 04-04
EFFECTS OF PAIN, MORPHINE AND NALOXONE ON THE DURATION OF ANIMAL HYPNOSIS.
004081 04-04
LACK OF SPECIFICITY OF AN ANIMAL BEHAVIOR MODEL FOR HALLUCINOGENIC DRUG ACTION.
004250 04-04

ANIMAL-MODEL
ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN: NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-DYSKINESIA.
004268 04-05
THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM.
004297 04-06

ANIMALS
SPECIFIC AND NONSPECIFIC MULTIPLE UNIT ACTIVITIES DURING PENTYLENETETRAZOL SEIZURES. I. ANIMALS WITH ENCEPHALE ISOLE.
004046 04-03
ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS.
004185 04-04
NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO.
004198 04-04
LITHIUM AND MOTOR-ACTIVITY OF ANIMALS: EFFECTS AND POSSIBLE MECHANISM-OF-ACTION.
004222 04-04
THE EFFECT OF MEBICAR ON THE CONDITION OF ANIMALS UNDER CERTAIN EXTREME CIRCUMSTANCES.
004262 04-04

ANISOMYCIN
EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE.
004097 04-04

ANORECTIC-ACTIONS
THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE IN MAN.
004580 04-14

ANORECTIC-ACTIVITY
EFFECT OF DESMETHYLIMIPRAMINE ON TISSUE DISTRIBUTION AND ANORECTIC-ACTIVITY OF CHLORPHENTERMINE IN RATS.
004179 04-04

ANORECTIC-PROPERTIES
ANORECTIC-PROPERTIES OF A NEW LONG ACTING SEROTONIN UPTAKE INHIBITOR.
004105 04-04

ANOREXIA
EFFECTS OF A HIGH-DOSE TREATMENT OF METHAMPHETAMINE ON CAUDATE DOPAMINE AND ANOREXIA IN RATS.
004073 04-04
NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND CONDITIONED TASTE-AVERSION.
004121 04-04

ANOREXIA-NERVOSA
TREATMENT OF UNDERNUTRITION AND ELECTROLYTE-DISTUR
ANOREXIA-NERVOSA.
00
ANOREXIA-NERVOSA: SYMPTOMS, COURSE AND POSSIBILITI
TREATMENT.
00

ANOSMIA
EFFECTS OF OLFACTORY-BULBECTOMY AND PERIPHERALLY-IND
ANOSMIA ON THERMOREGULATION IN THE RAT: SUSCEPTIB
ANTIDEPRESSANT-DRUGS.
00

ANTAGONISM
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND
DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE
ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICA
INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003
ANTAGONISM OF ETHANOL-INDUCED DECREASE IN LH BY P
CHLOROPHENYLALANINE: LACK OF CORRELATION WITH ALTE
SEROTONERGIC MECHANISMS.
003
PRESYNAPTIC AND POSTSYNAPTIC ALPHA-ADRENOCEPTOR ANT
BY NEUROLEPTICS IN VIVO.
0039
USE OF THE INTRACEREBRAL INJECTION TECHNIQUE TO ELUCIDA
MECHANISMS OF APOMORPHINE CLIMBING AND ITS ANTAGO
THE MOUSE.
0040
ANTAGONISM OF SOME CENTRAL-EFFECTS OF D TUBOCURARINE
GAMMA AMINOBUTYRIC-ACID.
0041
IS DOPAMINE ANTAGONISM A REQUISITE OF NEUROLEPTIC ACTI
0041
BENZODIAZEPINE ANTAGONISM BY HARMANE AND OTHER BETA
CARBOLINES IN VITRO AND IN VIVO.
0042
ANTAGONISM BY PHENOXYBENZAMINE AND PENTAZOCINE OF T
ANTINOCICEPTIVE-EFFECTS OF MORPHINE IN THE SPINAL-CORD
0042
ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN:
NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-
DYSKINESIA.
00426

ANTAGONIST
THE DOPAMINE-RECEPTOR ANTAGONIST DOMPERIDONE IS ALSO A
COMPETITIVE ANTAGONIST AT ALPHA1-ADRENOCEPTORS.
00378
RESPONSE OF STRIATONIGRAL SUBSTANCE-P SYSTEMS TO A DOPA
RECEPTOR AGONIST AND ANTAGONIST.
00382
ISOMERIZATION OF THE MUSCARINIC-RECEPTOR ANTAGONIST COM
00386
EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FRO
RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST
00386
ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGON
OPIATES ON STRIATAL DOPAMINERGIC FUNCTION.
004053
PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC
AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST,
CHLORNALTREXAMINE.
004082
ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW
NARCOTIC ANTAGONIST ANALGESIC (-) 1 3
METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND
ENANTIOMORPH IN EXPERIMENTAL ANIMALS.
004185
NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON
ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BIND
IN VITRO.
004198
HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH
YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND.
004676

ANTAGONISTS
PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS.
003869
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE
SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETIN
EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS.
004051
A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY.
004054

HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR. 004127 04-04

EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE. 004186 04-04

MORPHINE ANTAGONISTS AND CONSUMMATORY BEHAVIORS. 004196 04-04

RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS. 004231 04-04

ANTAGONIZE

THE BENZODIAZEPINES AND INOSINE ANTAGONIZE CAFFEINE-INDUCED SEIZURES. 004172 04-04

ANTAGONIZED

EFFECTS OF 5 HYDROXYTRYPTAMINE ON CENTRAL NEURONES ANTAGONIZED BY BICUCULLINE AND PICROTOXIN. 003931 04-03

ANTAGONIZES

A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION. 003851 04-03

3 HYDROXYMETHYL-BETA-CARBOLINE ANTAGONIZES SOME PHARMACOLOGIC ACTIONS OF DIAZEPAM. 004221 04-04

ANTELEPSIN

TREATMENT OF EPILEPSIES WITH CLONAZEPAM (ANTELEPSIN). 004481 04-11

ANTERIOR

ROLE OF THE ANTERIOR PITUITARY GABA-RECEPTOR IN THE CONTROL OF PROLACTIN RELEASE. 003809 04-03

EFFECTS OF CAFFEINE ON ANTERIOR PITUITARY AND THYROID-FUNCTION IN THE RAT. 004014 04-03

ANTEROGRADE

TIME-DEPENDENT CHANGES IN ANTEROGRADE SCOPOLAMINE-INDUCED AMNESIA IN RATS. 004182 04-04

ANTI-DELTA9-TETRAHYDROCANNABINOL

IN VIVO AND IN VITRO PROPERTIES OF ANTI-DELTA9-TETRAHYDROCANNABINOL ANTIBODY. 003751 04-03

ANTIANDROGENS

PHARMACOTHERAPY FOR SEXUAL-OFFENDERS: REVIEW OF THE ACTION OF ANTIANDROGENS WITH SPECIAL REFERENCE TO THEIR PSYCHIC-EFFECTS. 004455 04-11

CLINICAL APPLICATION OF ANTIANDROGENS IN PSYCHIATRY. 004457 04-11

ANTIANXIETY

PHARMACOLOGY OF 1 DICHLOROBENZYL-TETRAHYDROPYRIMIDONE, A NOVEL ANTIDEPRESSANT COMPOUND WITH ANTIANXIETY ACTIVITY. 003688 04-02

THE EFFECTS OF ANTIANXIETY AND ANTIPSYCHOTIC-DRUGS ON SEXUAL-BEHAVIOR. 004657 04-15

AN EVALUATION OF THE ANTIANXIETY ACTION AND SIDE-EFFECTS OF PROPRANOLOL. 004660 04-15

ANTIANXIETY-AGENT

HOSTILITY PRODUCTION AS A COMMON FEATURE OF ANTIANXIETY-AGENT ACTION. 004654 04-15

ANTIBODY

IN VIVO AND IN VITRO PROPERTIES OF ANTI-DELTA9-TETRAHYDROCANNABINOL ANTIBODY. 003751 04-03

ANTICHOLINERGIC-DRUGS

INDIVIDUAL DIFFERENCES IN EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND ANTICHOLINERGIC-DRUGS ON OPERANT-BEHAVIOR IN THE SQUIRREL-MONKEY. 004176 04-04

ANTICHOLINERGIC-EFFECTS

ANTICHOLINERGIC-EFFECTS AND PLASMA DESIPRAMINE LEVELS. 004550 04-13

ANTICONFLICT

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

ANTICONVULSANT

SYNTHESIS OF PHENYLURETHANS OF 1,2 DIALKYL-4-PYRAZOLIDINOLS AS ANTICONVULSANT AGENTS. 003695 04-02

ANTICONVULSANT PROPERTIES OF SELECTED PYRROLOPYRIMIDINEDIONES AND INTERMEDIATES. 003700 04-02

THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC-ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY. 003880 04-03

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

ANTICONVULSANT ACTIVITY OF METABOLITES OF VALPROIC-ACID. 004168 04-04

BIOCHEMICAL-STUDIES OF HUMAN EPILEPTICS DURING ANTICONVULSANT THERAPY. 004490 04-11

ANTICONVULSANT-DRUGS

CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT. 003961 04-03

VARIOUS ASPECTS OF THE EFFECT OF ANTICONVULSANT-DRUGS ON MEMORY. 004602 04-15

PHARMACOKINETICS OF ANTICONVULSANT-DRUGS. 004738 04-17

ANTICONVULSANTS

SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02

GUANYLATE-CYCLASE -- CYCLIC-GMP IN MOUSE CEREBRAL-CORTEX AND CEREBELLUM: MODIFICATION BY ANTICONVULSANTS. 003956 04-03

THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004439 04-11

SERUM CONCENTRATION OF ANTICONVULSANTS: PHARMACOKINETIC FINDINGS AND THEIR PRACTICAL APPLICATION. 004443 04-11

ANTICONVULSANTS AND MENTAL-SYMPTOMS. 004649 04-15

ANTICONVULSIVE

VALPROIC-ACID IN CHILDHOOD-EPILEPSY: ANTICONVULSIVE EFFICACY IN RELATION TO ITS PLASMA LEVELS. 004525 04-13

ANTIDEPRESSANT

SYNTHESIS AND STRUCTURE-ACTIVITY RELATIONSHIP OF A PYRIMIDOPYRIMIDINE DERIVATIVE WITH ANTIDEPRESSANT ACTIVITY. 003653 04-01

PHARMACOLOGY OF 1 DICHLOROBENZYL-TETRAHYDROPYRIMIDONE, A NOVEL ANTIDEPRESSANT COMPOUND WITH ANTIANXIETY ACTIVITY. 003688 04-02

SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03

NONCOMPETITIVE AMINE UPTAKE INHIBITION BY THE NEW ANTIDEPRESSANT PRIDEFINE. 003771 04-03

REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE. 003964 04-03

PHARMACOLOGICAL-PROPERTIES OF 2,3,3A,4,5,6 HEXAHYDROMETHYL-1H-PYRAZINOCARBAZOL-HCL (PIRLINDOLE), A NEW ANTIDEPRESSANT. 004174 04-04

THE EFFECT OF THE NEW ANTIDEPRESSANT INKASAN ON THE BIOELECTRICAL-ACTIVITY OF THE BRAIN AND ON CONDITIONED REFLEXES. 004212 04-04

ELECTROCARDIOGRAPHIC-CHANGES IN RATS DURING CHRONIC-TREATMENT WITH ANTIDEPRESSANT AND NEUROLEPTIC-DRUGS. 004284 04-05

THE ANTIDEPRESSANT EFFECTS OF TRAZODONE AND INHIBITION OF PLATELET SEROTONIN REUPTAKE. 004383 04-09

TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09

MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17

ANTIDEPRESSANT-DRUG

FLUVOXAMINE AS AN ANTIDEPRESSANT-DRUG. 003775 04-03

THE PHARMACOLOGICAL PROFILE OF LOFEPRAMINE, A NEW ANTIDEPRESSANT-DRUG. 004006 04-03

PHARMACOLOGICAL AND BIOCHEMICAL-PROPERTIES OF BRL-14342, A NOVEL POTENTIAL ANTIDEPRESSANT-DRUG. 004086 04-04

CLINICAL-RESPONSE AND BLOOD LEVELS IN THE TREATMENT OF DEPRESSION WITH A NEW ANTIDEPRESSANT-DRUG, AMOXAPINE. 004356 04-09

ANTIDEPRESSANT-DRUGS

EFFECTS OF ANTIDEPRESSANT-DRUGS ON DIFFERENT RECEPTORS IN THE BRAIN. 003824 04-03

DIFFERENTIAL-EFFECTS OF ELECTROCONVULSIVE-SHOCK AND ANTIDEPRESSANT-DRUGS ON SEROTONIN2-RECEPTORS IN RAT-BRAIN. 003878 04-03

EFFECTS OF OLFACTORY-BULBECTOMY AND PERIPHERALLY-INDUCED ANOSMIA ON THERMOREGULATION IN THE RAT: SUSCEPTIBILITY TO ANTIDEPRESSANT-DRUGS. 004113 04-04

POTENTIATION OF THE EFFECT OF ANTIDEPRESSANT-DRUGS BY TRYPTOPHAN. 004412 04-09

CARDIOTOXICITY OF ANTIDEPRESSANT-DRUGS. 004597 04-15

NEW ANTIDEPRESSANT-DRUGS AND THE SEIZURE THRESHOLD. 004662 04-15

THE USE OF CLINICAL KINETIC DATA IN TREATMENT WITH ANTIDEPRESSANT-DRUGS. 004686 04-16

RECEPTOR TECHNIQUES IN THE STUDY OF PLASMA LEVELS OF NEUROLEPTICS AND ANTIDEPRESSANT-DRUGS. 004694 04-16

PHARMACOLOGICAL-PROPERTIES OF SOME SECOND-GENERATION ANTIDEPRESSANT-DRUGS. 004726 04-17

DOWN REGULATION OF NORADRENERGIC-RECEPTOR FUNCTION BY ANTIDEPRESSANT-DRUGS: FUNCTIONAL SIGNIFICANCE AND DISTINCTION FROM ANTIPSYCHOTIC-DRUGS. (UNPUBLISHED PAPER). 004746 04-17

ANTIDEPRESSANTS

THE EFFECTS OF ANTIDEPRESSANTS ON THE RETENTION AND METABOLISM OF (3H) NOREPINEPHRINE IN RAT-BRAIN SLICES. 003763 04-03

STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. 003852 04-03

THE EFFECT OF ANTIDEPRESSANTS ON THE HYPOTENSIVE-EFFECT OF CLOFELIN IN RATS. 003934 04-03

ON THE KINETICS OF IMIPRAMINE AND RELATED ANTIDEPRESSANTS. 003945 04-03

INTERACTIONS BETWEEN ANTIDEPRESSANTS AND OTHER DRUGS. 004371 04-09

CLINICAL NEUROPHYSIOLOGICAL PROPERTIES OF ANTIDEPRESSANTS. 004373 04-09

CHANGES IN PSYCHOPATHOLOGIC SYMPTOMS DURING 20 DAYS OF TREATMENT WITH ANTIDEPRESSANTS AND NEUROLEPTIC-DRUGS. 004415 04-09

SEXUAL-EFFECTS OF ANTIDEPRESSANTS AND PSYCHOMOTOR STIMULANT-DRUGS. 004646 04-15

ANTIDEPRESSANTS AND ALPHA2-ADRENERGIC-AUTORECEPTOR DESENSITIZATION. 004659 04-15

DO WE NEED ANY MORE ANTIDEPRESSANTS? 004707 04-17

ANTIDEPRESSANTS AND THE SEROTONIN UPTAKE IN PLATELETS. 004727 04-17

ANTIDOPAMINERGIC

ANTIDOPAMINERGIC EFFECT OF ESTROGENS AT THE STRIATAL LEVEL. 003789 04-03

ANTIDOPAMINERGIC PROPERTIES OF YOHIMBINE. 003995 04-03

ANTIEPILEPTIC

ANTIEPILEPTIC THERAPY WITH PHENYTOIN: WHICH IS THE OPTIMUM SERUM LEVEL? 004586 04-14

THE PROGNOSIS OF EPILEPSY AND THE STRATEGY FOR TERMINATING ANTIEPILEPTIC THERAPY. 004724 04-17

ANTIEPILEPTIC-DRUGS

BEHAVIORAL-INTERACTIONS BETWEEN OPIATE AND ANTIEPILEPTIC-DRUGS IN THE MOUSE. 004155 04-04

ASPECTS OF PHARMACOLOGICAL-EFFECTS OF ANTIEPILEPTIC-DRUGS. 004462 04-11

ANTIEPILEPTIC-EFFECT

ANTIEPILEPTIC-EFFECT OF CLOBAZAM IN LENNOX-GASTAUT-SYNDROME. 004479 04-11

ANTIEPILEPTICS

EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810' AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS. 004149 04-04

ANTIHYPERTENSIVE

DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS. 004025 04-03

ANTILYMPHOCYTIC

PROSPECTS FOR THE TREATMENT OF POSTENCEPHALITIC PARKINSONISM WITH ANTILYMPHOCYTIC IMMUNOGLOBULIN. 004572 04-14

ANTINEOPHOBIC

FOOD PREFERENCE FOLLOWING ACUTE OR CHRONIC CHLORDIAZEPOXIDE ADMINISTRATION: TOLERANCE TO AN ANTINEOPHOBIC ACTION. 004090 04-04

ANTINOCICEPTION

ATTENUATION OF PETHIDINE-INDUCED ANTINOCICEPTION BY ZIMELIDINE, AN INHIBITOR OF 5 HYDROXYTRYPTAMINE REUPTAKE. 004118 04-04

SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION. 004206 04-04

ANTINOCICEPTIVE-EFFECTS

A REEVALUATION OF THE NEUROCHEMICAL-EFFECTS AND ANTINOCICEPTIVE-EFFECTS OF INTRATHECAL CAPSAICIN IN THE RAT. 004184 04-04

ANTAGONISM BY PHENOXYBENZAMINE AND PENTAZOCINE OF THE ANTINOCICEPTIVE-EFFECTS OF MORPHINE IN THE SPINAL-CORD. 004213 04-04

ANTIPARKINSON-DRUG

ADVERSE-EFFECTS OF ANTIPARKINSON-DRUG WITHDRAWAL. (UNPUBLISHED PAPER). 004623 04-15

ANTIPARKINSONIAN-DRUGS

RELEVANCE OF DOPAMINE-RECEPTOR BINDING STUDIES FOR EVALUATION OF ANTIPARKINSONIAN-DRUGS. 004120 04-04

ANTIPSYCHOTIC

PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03

ANTIPSYCHOTIC-DRUG

CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS. 004603 04-15

ANTIPSYCHOTIC-DRUGS

THE EFFECTS OF ANTIANXIETY AND ANTIPSYCHOTIC-DRUGS ON SEXUAL-BEHAVIOR. 004657 04-15

DOWN REGULATION OF NORADRENERGIC-RECEPTOR FUNCTION BY ANTIDEPRESSANT-DRUGS: FUNCTIONAL SIGNIFICANCE AND DISTINCTION FROM ANTIPSYCHOTIC-DRUGS. (UNPUBLISHED PAPER). 004746 04-17

ANTIPSYCHOTIC-MEDICATIONS

THE CONSTITUTIONAL RIGHT-TO-REFUSE ANTIPSYCHOTIC-MEDICATIONS. 004496 04-12

ANTISECRETORY

INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG. 004306 04-07

ANTITREMOR

ANTITREMOR ACTION OF C10DICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR. 004096 04-04

ANTIWITHDRAWAL

CLONIDINE AND THE PRIMATE LOCUS-COERULEUS: EVIDENCE SUGGESTING ANXIOLYTIC AND ANTIWITHDRAWAL EFFECTS. (UNPUBLISHED PAPER). 003982 04-03

ANXIETY

A DOUBLE-BLIND TRIAL: THE USE OF OXPRENOLOL AND DIAZEPAM IN ANXIETY. 004428 04-10

CLINICAL-REVIEW OF BETA-BLOCKERS IN ANXIETY. 004464 04-11

NEW BIOLOGICAL RESEARCH RELEVANT TO ANXIETY. 004705 04-17

PSYCHOPHARMACOLOGY AND PSYCHOTHERAPY IN THE TREATMENT OF ANXIETY. 004712 04-17

ANXIOGENIC

DISCRIMINATIVE-STIMULUS PROPERTIES OF COCAINE RELATED TO AN ANXIOGENIC ACTION. 004219 04-04

ANXIOLYTIC
CLONIDINE AND THE PRIMATE LOCUS-COERULEUS: EVIDENCE SUGGESTING ANXIOLYTIC AND ANTIWITHDRAWAL EFFECTS. (UNPUBLISHED PAPER). 003982 04-03
ALPRAZOLAM, A NEW TYPE ANXIOLYTIC IN NEUROTIC-PATIENTS: A PILOT-STUDY. 004422 04-10
DOXEPIN PLASMA LEVELS AND ANXIOLYTIC RESPONSE. 004477 04-11

ANXIOLYTIC-ACTIVITY
DIAZEPAM ANXIOLYTIC-ACTIVITY IN HIPPOCAMPUS. 003743 04-03

ANXIOLYTICS
AVOIDANCE ENHANCEMENT AND DISCRIMINATIVE RESPONSE CONTROL BY ANXIOLYTICS WITH DRUGS ACTING ON THE GABA SYSTEM. 004193 04-04

ANXIOUS-DEPRESSIVE
PRAZEPAM: A NEW BENZODIAZEPINE FOR THE TREATMENT OF ANXIOUS-DEPRESSIVE STATES. 004419 04-10

ANXIOUS-DEPRESSIVE-SYNDROME
ANXIOUS-DEPRESSIVE-SYNDROME. CLINICAL-STUDY OF A NEW BENZODIAZEPINE, PRAZEPAM. 004354 04-09

APLYSIA
EFFECTS OF BARBITURATES ON INHIBITORY AND EXCITATORY RESPONSES TO APPLIED NEUROTRANSMITTERS IN APLYSIA. 003762 04-03

APLYSIA-CALIFORNICA
DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003806 04-03

APOMORPHINE
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03
PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE. 003749 04-03
PHARMACOLOGICAL DIFFERENCE OF L-DOPA, APOMORPHINE, AND BROMOCRIPTINE AGAINST METOCLOPRAMIDE. 003790 04-03
EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL AND PIMOZIDE ON REFLEX BRADYCARDIA IN RATS. 004085 04-04
USE OF THE INTRACEREBRAL INJECTION TECHNIQUE TO ELUCIDATE MECHANISMS OF APOMORPHINE CLIMBING AND ITS ANTAGONISM IN THE MOUSE. 004092 04-04
INDUCTION OF BEHAVIORAL-SUPERSENSITIVITY TO APOMORPHINE BY DFP TREATMENT. 004099 04-04
APOMORPHINE IN SCHIZOPHRENIA. 004327 04-08
APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS. 004549 04-13

APOMORPHINE-INDUCED
EFFECT OF L HISTIDINE AND CHLORCYCLIZINE ON APOMORPHINE-INDUCED CLIMBING-BEHAVIOUR AND METHAMPHETAMINE STEREOTYPY IN MICE. 004147 04-04
PHARMACOKINETIC-STUDY OF APOMORPHINE-INDUCED STEREOTYPY IN FOOD DEPRIVED RATS. 004247 04-04
APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT. 004651 04-15

APROTIC
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

ARTERIAL
H2-RECEPTORS MEDIATE INCREASES IN PERMEABILITY OF THE BLOOD-BRAIN-BARRIER DURING ARTERIAL HISTAMINE INFUSION. 003817 04-03
THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL. 004045 04-03

ARTERY
THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

ARYLALLOPHANATES
ACYLCYANAMIDES, ACYLUREA, AND VARIOUS SUBSTITUTED ARYLALLOPHANATES: EFFECT ON THE CNS. 003689 04-02

ASCORBATE
INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE. 003876 04-03

ASPARTATE
L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03

ASSAY
A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003663 04-01
TISSUE CHOLINE STUDIED USING A SIMPLE CHEMICAL ASSAY. 003828 04-03
MEASUREMENT OF NEUROLEPTIC CONCENTRATIONS BY GLC AND RADIORECEPTOR ASSAY. 004682 04-16
A RAPID AND SENSITIVE RADIORECEPTOR ASSAY FOR TERTIARY AMINE TRICYCLIC-ANTIDEPRESSANTS. 004689 04-16

ASSESSMENT
PHARMACOLOGICAL-BASES OF PSYCHONEUROENDOCRINOLOGY: PRECLINICAL ASSESSMENT OF CLINICAL FACTS. 003735 04-03
OPIATE-DEPENDENCE FOLLOWING ACUTE INJECTIONS OF MORPHINE AND NALOXONE: THE ASSESSMENT OF VARIOUS WITHDRAWAL SIGNS. 004209 04-04

ASTHENIA
DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

ASTHMA
ASTHMA THERAPY MAY UNDERCUT KIDS AT SCHOOL. 004475 04-11

ASTROCYTES
BENZODIAZEPINE-RECEPTORS ON PRIMARY CULTURES OF MOUSE ASTROCYTES. 004029 04-03

ASTROGLIAL
DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. 003836 04-03

ATARACTIC-DRUG
PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM). 004[illegible]27 04-13

ATAXIA
DIAZEPAM-INDUCED ATAXIA IN TROTTING SQUIRREL-MONKEYS. 004138 04-04

ATROPINE
THE EXCITATORY EFFECT OF ATROPINE ON THE NEURONS OF THE FROG SYMPATHETIC GANGLIA. 004041 04-03
DEVELOPMENTAL-CHANGE IN REARING RESPONSE TO ATROPINE IN RATS TREATED WITH 6 HYDROXYDOPA. 004191 04-04

ATTACKS
DIFFERENTIAL DIAGNOSIS AND TREATMENT OF PANIC ATTACKS AND PHOBIC-STATES. 004424 04-10
A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA. 004584 04-14

ATTEMPTS
PRESENT ATTEMPTS AT TREATING TARDIVE-DYSKINESIA. 004629 04-15

ATTENTION-DYSFUNCTION
ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA. 004316 04-08

ATTENUATE
PHENOXYBENZAMINE AND BROMOCRIPTINE ATTENUATE NEED FOR REM SLEEP IN RATS. 004203 04-04

ATYPICAL
THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE.
003906 04-03

AUDIOGENIC-SEIZURE
EFFECT OF RO-4-1284 ON AUDIOGENIC-SEIZURE SUSCEPTIBILITY AND INTENSITY IN EPILEPSY-PRONE RATS.
003865 04-03

AUDIOGENIC-SEIZURES
EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS.
004101 04-04

AUDITORY
THE BRAINSTEM AUDITORY EVOKED-RESPONSE AS A TOOL IN NEUROBEHAVIORAL TOXICOLOGY AND MEDICINE.
004277 04-05

AUGMENTING
INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS.
004022 04-03

AUTONOMIC
THE EFFECTS OF ALPHA AND BETA NEUROTOXINS FROM THE VENOMS OF VARIOUS SNAKES ON TRANSMISSION IN AUTONOMIC GANGLIA.
003750 04-03

AUTORADIOGRAPHIC
AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3.4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN.
003941 04-03

AUTORADIOGRAPHIC LOCALIZATION OF DRUG AND NEUROTRANSMITTER-RECEPTORS IN THE BRAIN.
004292 04-06

AUTOSHAPED
DISRUPTION OF AUTOSHAPED RESPONDING TO A SIGNAL OF BRAIN-STIMULATION REWARD BY NEUROLEPTIC-DRUGS.
004199 04-04

AVERAGE
APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS.
004549 04-13

AVERMECTIN-B1A
STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES.
003973 04-03

IN VITRO MODULATION BY AVERMECTIN-B1A OF THE GABA/ BENZODIAZEPINE-RECEPTOR COMPLEX OF RAT-CEREBELLUM.
004023 04-03

AVERSIVENESS
SOCIAL CROWDING ENHANCES AVERSIVENESS OF NALOXONE IN RATS.
004201 04-04

AVOIDANCE
AVOIDANCE ENHANCEMENT AND DISCRIMINATIVE RESPONSE CONTROL BY ANXIOLYTICS WITH DRUGS ACTING ON THE GABA SYSTEM.
004193 04-04

EFFECTS OF CHLORPROMAZINE ON ESCAPE AND AVOIDANCE RESPONSES: A CLOSER LOOK.
004226 04-04

AVOIDANCE RESPONSE IN RATS AFTER INJECTION OF DOPAMINE INTO THE NEOSTRIATUM.
004255 04-04

AVOIDANCE-BEHAVIOR
ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR.
004109 04-04

AVOIDANCE-DEFICITS
THE USE OF CONDITIONED SUPPRESSION TO EVALUATE THE NATURE OF NEUROLEPTIC-INDUCED AVOIDANCE-DEFICITS.
004070 04-04

AXIAL
THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY.
004439 04-11

AXIS
DRUG-INDUCED ALTERATIONS OF THE HYPOTHALAMUS HYPOPHYSIS AXIS.
004535 04-13

AXON
EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC AXON TERMINALS IN THE MOUSE ADRENAL-MEDULLA.
003916 04-03

AXONAL
PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT.
003734 04-03

STUDIES ON AXONAL TRANSPORT IN DOPAMINERGIC NEURONS: EFFECT OF NEUROPHARMACOLOGIC LESIONS.
003858 04-03

RESERPINE EFFECT ON THE AXONAL TRANSPORT OF DOPAMINE-BETA-HYDROXYLASE AND TYROSINE-HYDROXYLASE IN RAT-BRAIN.
003904 04-03

AZETIDINYLBUTYNYL
SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT.
003701 04-02

A10
DOPAMINERGIC AGONISTS DIFFERENTIALLY AFFECT OPEN-FIELD ACTIVITY OF RATS WITH A10 LESIONS.
004135 04-04

BACKGROUND
THE BIOCHEMICAL BACKGROUND TO TARDIVE-DYSKINESIA.
004588 04-15

BACLOFEN
3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN.
003839 04-03

BACLOFEN: STEREOSELECTIVE INHIBITION OF EXCITANT AMINO-ACID RELEASE.
003867 04-03

CENTRAL CARDIOVASCULAR-EFFECTS AND BIOCHEMICAL-EFFECTS OF BACLOFEN IN THE CONSCIOUS RAT.
003965 04-03

BACLOFEN IN THE TREATMENT OF TARDIVE-DYSKINESIA: OPEN LABEL STUDY.
004619 04-15

BARBITAL
EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL.
003883 04-03

BARBITURATE
NEUTRALIZATION OF THE EFFECT OF DELTA9 TETRAHYDROCANNABINOL ON BARBITURATE SLEEPING-TIME BY SPECIFIC ACTIVE IMMUNIZATION.
003803 04-03

HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE.
004159 04-04

SELECTIVE EFFECTS OF BARBITURATE AND AMPHETAMINE ON INFORMATION-PROCESSING AND RESPONSE EXECUTION.
004563 04-14

BARBITURATE-DEPENDENCE
BARBITURATE-DEPENDENCE AND DRUG PREFERENCE.
004235 04-04

BARBITURATES
EFFECTS OF BARBITURATES ON INHIBITORY AND EXCITATORY RESPONSES TO APPLIED NEUROTRANSMITTERS IN APLYSIA.
003762 04-03

SOME BARBITURATES ENHANCE THE EFFECT OF MUSCIMOL ON DOPAMINE TURNOVER IN THE RAT RETINA.
003873 04-03

INTERACTION OF STEREOISOMERS OF BARBITURATES WITH (3H)ALPHA DIHYDROPICROTOXININ BINDING-SITES.
004036 04-03

SEPARATION OF BARBITURATES USING REVERSE PHASE THIN-LAYER-CHROMATOGRAPHY.
004670 04-16

BASAL
SELECTIVE MODIFICATION BY OPIATES OF NEURONAL ACTIVITY OF THE MEDIAL BASAL HYPOTHALAMUS.
003773 04-03

BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS.
004503 04-13

BATRACHOTOXIN
FURTHER ANALYSIS OF THE MECHANISMS OF ACTION OF BATRACHOTOXIN ON THE MEMBRANE OF MYELINATED NERVE.
003884 04-03

BED
CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED.
003911 04-03

BEHAVIOR
EFFECTS OF NORCOCAINE AND SOME NORCOCAINE DERIVATIVES ON SCHEDULE-CONTROLLED BEHAVIOR OF PIGEONS AND SQUIRREL-MONKEYS.
004012 04-03

EFFECTS OF DOPAMINERGIC DRUGS ON PHENCYCLIDINE-INDUCED BEHAVIOR IN THE RAT.
004083 04-04

HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE.
004119 04-04

INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR
004127 04-04

EFFECTS OF NARCOTIC ABSTINENCE ON SCHEDULE-CONTROLLED BEHAVIOR IN DEPENDENT RATS.
004230 04-04

STUDIES OF CARBACHOL-INDUCED WET-DOG-SHAKE BEHAVIOR IN RATS.
004241 04-04

LACK OF SPECIFICITY OF AN ANIMAL BEHAVIOR MODEL FOR HALLUCINOGENIC DRUG ACTION.
004250 04-04

BEHAVIOR OF RATS AND MICE ADMINISTERED ACTIVE METABOLITES OF FLUPHENAZINE, 7 HYDROXYFLUPHENAZINE AND FLUPHENAZINE-SULFOXIDE.
004256 04-04

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS.
004551 04-13

SEROTONERGIC APPROACHES TO THE MODIFICATION OF BEHAVIOR IN THE LESCH-NYHANS-SYNDROME.
004576 04-14

BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS.
004658 04-15

BEHAVIOR-DISORDERS

PREVALENCE OF DRUG-TREATMENT FOR HYPERACTIVITY AND OTHER CHILDHOOD BEHAVIOR-DISORDERS.
004713 04-17

BEHAVIORAL

A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY.
003677 04-01

DOM AND RELATED 2,5 DIMETHOXY-4-ALKYLPHENYLISOPROPYLAMINES: BEHAVIORAL AND SEROTONIN-RECEPTOR PROPERTIES.
003690 04-02

COMPARATIVE ANALGESIC, BEHAVIORAL, AND DEPENDENCE PROPERTIES OF MORPHINE AND O METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONEOXIME HCL.
003707 04-02

BEHAVIORAL AND REGIONAL NEUROCHEMICAL SEQUELAE OF HIPPOCAMPAL DESTRUCTION IN THE RAT.
003721 04-03

THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS.
004067 04-04

BEHAVIORAL AND BIOCHEMICAL-STUDIES OF THE SCOPOLAMINE-INDUCED REVERSAL OF NEUROLEPTIC ACTIVITY.
004195 04-04

PHYSIOLOGICAL AND BEHAVIORAL APPROACHES TO THE STUDY OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME.
004242 04-04

A MICROCOMPUTER SYSTEM FOR THE CONTROL OF BEHAVIORAL EXPERIMENTS.
004287 04-06

BEHAVIORAL-ASPECTS

THE ROLE OF NICOTINE IN THE BEHAVIORAL-ASPECTS OF CIGARETTE SMOKING.
004575 04-14

BEHAVIORAL-DISORDERS

POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS.
004720 04-17

BEHAVIORAL-EFFECTS

THE BEHAVIORAL-EFFECTS OF D-AMPHETAMINE ALONE AND IN COMBINATION WITH ACUTE AND CHRONIC MORPHINE TREATMENTS IN RATS.
003915 04-03

A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS.
004007 04-03

REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK — POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER).
004154 04-04

SAME OR DIFFERENT? AN EXPLORATION OF THE BEHAVIORAL-EFFECTS OF BENZAMIDES.
004207 04-04

INTRACEREBRAL SUBSTANCE-P IN MICE: BEHAVIORAL-EFFECTS AND NARCOTIC AGENTS.
004218 04-04

BEHAVIORAL-EFFECTS OF SELF-ADMINISTERED COCAINE: RESPONDING MAINTAINED ALTERNATELY BY COCAINE AND ELECTRIC-SHOCK IN SQUIRREL-MONKEYS.
004225 04-04

CANNABINOIDS. I. BEHAVIORAL-EFFECTS.
004228 04-04

BEHAVIORAL-EVIDENCE

BEHAVIORAL-EVIDENCE THAT SUBSTANCE-P MAY BE A SPINAL-CORD SENSORY NEUROTRANSMITTER.
004200 04-04

BEHAVIORAL-INTERACTIONS

BEHAVIORAL-INTERACTIONS BETWEEN OPIATE AND ANTIEPILEPTIC-DRUGS IN THE MOUSE.
004155 04-04

BEHAVIORAL-PHARMACOLOGY

BEHAVIORAL-PHARMACOLOGY OF TETRAHYDROCANNABINOL CONVULSIONS IN RABBITS.
004288 04-06

BEHAVIORAL-REACTIONS

THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN.
004075 04-04

BEHAVIORAL-SUPERSENSITIVITY

INDUCTION OF BEHAVIORAL-SUPERSENSITIVITY TO APOMORPHINE BY DFP TREATMENT.
004099 04-04

THE EFFECT OF CHRONIC LEVODOPA ON HALOPERIDOL-INDUCED BEHAVIORAL-SUPERSENSITIVITY IN THE GUINEA-PIG.
004249 04-04

BEHAVIORAL-TOLERANCE

ELECTROENCEPHALOGRAPHIC AND BEHAVIORAL-TOLERANCE TO AND CROSS-TOLERANCE BETWEEN D ALA2-METHIONINE-ENKEPHALINAMIDE AND MORPHINE IN THE RAT.
004038 04-03

BEHAVIORS

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER).
004112 04-04

HIPPOCAMPAL INVOLVEMENT IN THE PHARMACOLOGIC INDUCTION OF WITHDRAWAL-LIKE BEHAVIORS.
004140 04-04

MORPHINE ANTAGONISTS AND CONSUMMATORY BEHAVIORS.
004196 04-04

PERIPHERAL-CORRELATES OF SEROTONERGICALLY-INFLUENCED BEHAVIORS IN VERVET-MONKEYS (CERCOPITHECUS-AETHIOPS-SABAEUS).
004204 04-04

BEHAVIOUR

EFFECTS OF LITHIUM ON BEHAVIOUR AND CENTRAL MONOAMINES.
004110 04-04

ATTENUATION OF DELTA9 TETRAHYDROCANNABINOL-INDUCED WITHDRAWAL-LIKE BEHAVIOUR BY DELTA9 TETRAHYDROCANNABINOL.
004243 04-04

ON MONOAMINERGIC-INTERACTION WITH BEHAVIOUR MODIFYING PEPTIDE-HORMONES.
004700 04-17

BEHAVIOURAL

BEHAVIOURAL AND NEUROCHEMICAL PROPERTIES OF 1 1 INDOL-3-YLMETHYLPIPERID-4-YL-3-BENZOYLUREA (WY-25093) IN RODENTS.
003686 04-02

BEHAVIOURAL-EFFECTS

A COMPARISON BETWEEN SOME BIOCHEMICAL-EFFECTS AND BEHAVIOURAL-EFFECTS PRODUCED BY NEUROLEPTICS.
004116 04-04

BEHAVIOURS

NEUROTENSIN BLOCKS CERTAIN AMPHETAMINE-INDUCED BEHAVIOURS.
004111 04-04

BENZAMIDE

COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT.
003928 04-03

BENZAMIDES

SAME OR DIFFERENT? AN EXPLORATION OF THE BEHAVIORAL-EFFECTS OF BENZAMIDES.
004207 04-04

BENZILATE

QUINUCLIDINYL BENZILATE BINDING IN HOUSEFLY HEADS AND RAT-BRAIN.
003868 04-03

BENZODIAZEPINE

BENZODIAZEPINE ANTAGONISM BY HARMANE AND OTHER BETA CARBOLINES IN VITRO AND IN VIVO.
004211 04-04

IN VIVO EFFECTS OF TWO NOVEL ALKYLATING BENZODIAZEPINE, IRAZEPINE AND KENAZEPINE.
004251 04-04

ANXIOUS-DEPRESSIVE-SYNDROME: CLINICAL-STUDY OF A NEW BENZODIAZEPINE, PRAZEPAM.
004354 04-09

PRAZEPAM: A NEW BENZODIAZEPINE FOR THE TREATMENT OF ANXIOUS-DEPRESSIVE STATES. 004419 04-10

CLINICAL USE OF A NEW BENZODIAZEPINE: PRAZEPAM. 004421 04-10

PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM). 004527 04-13

EFFECTS OF A SHORT-ACTING BENZODIAZEPINE ON BRAIN ELECTRICAL-ACTIVITY DURING SLEEP. 004568 04-14

PROLONGED BENZODIAZEPINE COMA. 004653 04-15

SALIVA BENZODIAZEPINE LEVELS AND CLINICAL OUTCOME IN DETOXIFYING ALCOHOLIC-PATIENTS. 004671 04-16

A SENSITIVE BENZODIAZEPINE RADIOIMMUNOASSAY OF BROAD SPECIFICITY. 004693 04-16

BENZODIAZEPINE-LIKE

PHARMACOLOGY OF 2 O CHLOROBENZOYL-CHLORO-METHYL-NA-GLYCYLGLYCINANILIDE HYDRATE (45-0088-S), A COMPOUND WITH BENZODIAZEPINE-LIKE PROPERTIES. 003692 04-02

BENZODIAZEPINE-RECEPTOR

A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION. 003251 04-03

IN VITRO MODULATION BY AVERMECTIN-B1A OF THE GABA/BENZODIAZEPINE-RECEPTOR COMPLEX OF RAT-CEREBELLUM. 004023 04-03

BENZODIAZEPINE-RECEPTOR: HETEROGENEITY IN RABBIT BRAIN. 004060 04-03

BENZODIAZEPINE-RECEPTORS

BRAIN BENZODIAZEPINE-RECEPTORS AND THEIR RAPID CHANGES AFTER SEIZURES IN THE MONGOLIAN-GERBIL. 003717 04-03

NEURONAL LOCALISATION OF BENZODIAZEPINE-RECEPTORS IN CEREBELLUM. 003739 04-03

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES. 004002 04-03

BENZODIAZEPINE-RECEPTORS: EFFECT OF TISSUE PREINCUBATION AT 37 DEGREES C. 004013 04-03

BENZODIAZEPINE-RECEPTORS ON PRIMARY CULTURES OF MOUSE ASTROCYTES. 004029 04-03

BENZODIAZEPINES

THE BENZODIAZEPINES AND INOSINE ANTAGONIZE CAFFEINE-INDUCED SEIZURES. 004172 04-04

CLINICAL PHARMACOKINETICS OF BENZODIAZEPINES. 004524 04-13

LONG-TERM USE AND ABUSE OF BENZODIAZEPINES. 004598 04-15

BENZODIAZEPINES IN SCHIZOPHRENIA: A NEED FOR REASSESSMENT. 004733 04-17

BENZYL

ON-COLUMN GAS-CHROMATOGRAPHIC-SYNTHESIS OF 1,3 DIALYKYL (C=1-10), BENZYL, AND CYCLOHEXYLBARBITURATE DERIVATIVES. 003656 04-01

BENZYLTETRAHYDROPYRIMIDONES

1 SUBSTITUTED BENZYLTETRAHYDROPYRIMIDONES: A SERIES WITH STIMULANT AND DEPRESSANT ACTIVITIES. 003687 04-02

BETA-ADRENERGIC

FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02

BETA-ADRENERGIC INFLUENCE ON CARDIAC DYNAMICS DURING SHOCK-AVOIDANCE IN DOGS. 003813 04-03

EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND CYCLIC-AMP IN FED MICE. 003946 04-03

RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). 003998 04-03

BETA-ADRENERGIC-RECEPTORS

DEVELOPMENTAL-CHANGE OF BETA-ADRENERGIC-RECEPTORS IN RAT-BRAIN. 004050 04-03

BETA-BLOCKERS

CLINICAL-REVIEW OF BETA-BLOCKERS IN ANXIETY. 004464 04-11

PSYCHIATRIC USES OF BETA-BLOCKERS. 004709 04-17

BETA-RECEPTOR

HYPERVENTILATION-SYNDROME AND BETA-RECEPTOR FUNCTION -- CLINICAL-EFFECT OF BETA BLOCKER UPON THE SYNDROME. 004459 04-11

BETAINE

ORAL AND RECTAL ABSORPTION OF CHLORAL-HYDRATE AND ITS BETAINE COMPLEX. 004554 04-13

BICHEMICAL-EFFECTS

LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BICHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08

BICUCULLINE

SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN. 003839 04-03

EFFECTS OF 5 HYDROXYTRYPTAMINE ON CENTRAL NEURONES ANTAGONIZED BY BICUCULLINE AND PICROTOXIN. 003931 04-03

BICUCULLINE-INDUCED

BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS. 003736 04-03

EFFECT OF GAMMA VINYL-GABA ON BICUCULLINE-INDUCED SEIZURES. 004157 04-04

BIND

3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN. 003839 04-03

BINDING

EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING. 003702 04-02

EFFECT OF CHRONIC SULPIRIDE ON STRIATAL SPIPERONE BINDING. 003720 04-03

PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT. 003734 04-03

INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03

EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN. 003794 04-03

COMPARISON OF THE BINDING CHARACTERISTICS OF TRITIATED OPIATES AND OPIOID-PEPTIDES. 003802 04-03

CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS. 003823 04-03

SPECIFIC, HIGH-AFFINITY (3H)ETHYLKETOCYCLAZOCINE BINDING IN RAT CENTRAL-NERVOUS-SYSTEM: LACK OF EVIDENCE FOR KAPPA-RECEPTORS. 003840 04-03

REGIONAL CHANGES IN (3H)DIAZEPAM BINDING IN THE BRAINS OF MICE AFTER REMOVAL OF THE OLFACTORY-BULBS. 003844 04-03

IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03

QUINUCLIDINYL BENZILATE BINDING IN HOUSEFLY HEADS AND RAT-BRAIN. 003868 04-03

INCREASED MESOLIMBIC DOPAMINE BINDING FOLLOWING CHRONIC HALOPERIDOL TREATMENT. 003872 04-03

OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES. 003902 04-03

THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE. 003906 04-03

EFFECTS OF HALOPEMIDE ON GABA-RECEPTOR BINDING, UPTAKE AND RELEASE. 003913 04-03

ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003936 04-03

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03

BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA. 003954 04-03

REGIONAL DISTRIBUTION OF (3H)IMIPRAMINE BINDING IN RAT-BRAIN. 003955 04-03

DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET? 003962 04-03

MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS. 003992 04-03

L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03

DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES. 004003 04-03

CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS. 004032 04-03

THE EFFECTS OF ACUTE AND CHRONIC ETHANOL ADMINISTRATION AND ITS WITHDRAWAL ON GAMMA AMINOBUTYRIC-ACID-RECEPTOR BINDING IN RAT-BRAIN. 004035 04-03

RELEVANCE OF DOPAMINE-RECEPTOR BINDING STUDIES FOR EVALUATION OF ANTIPARKINSONIAN-DRUGS. 004120 04-04

THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO. 004198 04-04

SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING. 004293 04-06

PROTEIN BINDING OF CHLORPROMAZINE IN CEREBROSPINAL-FLUID AND SERUM. 004311 04-08

DECREASED 3H IMIPRAMINE BINDING IN DEPRESSED MALES AND FEMALES. 004349 04-09

(3H) IMIPRAMINE BINDING IN HUMAN PLATELETS: A NEW BIOCHEMICAL-PARAMETER IN DEPRESSION. 004358 04-09

BINDING-ACTIVITY

SYNTHESIS AND GABA-RECEPTOR BINDING-ACTIVITY OF TWO FLUOROAMINOMETHYLPHENOLS. 003693 04-02

BINDING-SITES

CHARACTERIZATION OF TWO (3H)GLUTAMATE BINDING-SITES IN RAT HIPPOCAMPAL MEMBRANES. 003726 04-03

INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE. 003876 04-03

HIGH-AFFINITY BINDING-SITES FOR A SOMATOSTATIN-28 ANALOG IN RAT-BRAIN. 003985 04-03

L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03

INTERACTION OF STEREOISOMERS OF BARBITURATES WITH (3H)ALPHA DIHYDROPICROTOXININ BINDING-SITES. 004036 04-03

BIOAVAILABILITY

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004551 04-13

BIOCHEMICAL

BIOCHEMICAL AND IMMUNOLOGICAL PROPERTIES OF THE MOUSE BRAIN ENOLASES PURIFIED BY A SIMPLE METHOD. 003668 04-01

FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02

SYNTHESIS AND BIOCHEMICAL AND PHARMACOLOGIC PROPERTIES OF ANALOGUES AND DERIVATIVES OF P CHLOROPHENYLALANINE. 003691 04-02

BIOCHEMICAL INVESTIGATIONS INTO THE MODE OF ACTION OF TRAZODONE. 003753 04-03

THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE. 003958 04-03

TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09

PROLACTIN AND NEUROLEPTIC-DRUGS: A BIOCHEMICAL INDEX OF CLINICAL-RESPONSE? 004539 04-13

THE BIOCHEMICAL BACKGROUND TO TARDIVE-DYSKINESIA. 004588 04-15

BIOCHEMICAL AND NEUROENDOCRINE APPROACHES TO A MALIGNANT-SYNDROME OF NEUROLEPTIC. 004589 04-15

BIOCHEMICAL-CORRELATIONS

CLINICAL AND BIOCHEMICAL-CORRELATIONS IN ABRUPT DISCONTINUATION OF PSYCHOPHARMACOTHERAPY. 004330 04-08

BIOCHEMICAL-EFFECTS

CENTRAL CARDIOVASCULAR-EFFECTS AND BIOCHEMICAL-EFFECTS OF BACLOFEN IN THE CONSCIOUS RAT. 003965 04-03

A COMPARISON BETWEEN SOME BIOCHEMICAL-EFFECTS AND BEHAVIOURAL-EFFECTS PRODUCED BY NEUROLEPTICS. 004116 04-04

BIOCHEMICAL-PARAMETER

(3H) IMIPRAMINE BINDING IN HUMAN PLATELETS: A NEW BIOCHEMICAL-PARAMETER IN DEPRESSION. 004358 04-09

BIOCHEMICAL-PROPERTIES

PHARMACOLOGICAL AND BIOCHEMICAL-PROPERTIES OF BRL-14342, A NOVEL POTENTIAL ANTIDEPRESSANT-DRUG. 004086 04-04

BIOCHEMICAL-STUDIES

BEHAVIORAL AND BIOCHEMICAL-STUDIES OF THE SCOPOLAMINE-INDUCED REVERSAL OF NEUROLEPTIC ACTIVITY. 004195 04-04

BIOCHEMICAL-STUDIES OF HUMAN EPILEPTICS DURING ANTICONVULSANT THERAPY. 004490 04-11

BIOELECTRICAL-ACTIVITY

THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL-ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN. 003994 04-03

THE EFFECT OF THE NEW ANTIDEPRESSANT INKASAN ON THE BIOELECTRICAL-ACTIVITY OF THE BRAIN AND ON CONDITIONED REFLEXES. 004212 04-04

BIOGENESIS

REGULATION OF BIOGENESIS OF PSYCHOTOMIMETIC AMINES. (UNPUBLISHED PAPER). 003818 04-03

BIOGENIC-AMINE

A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003663 04-01

BIOGENIC-AMINES

EFFECT OF LOW-DOSE LITHIUM ADMINISTRATION AND SUBSEQUENT WITHDRAWAL ON BIOGENIC-AMINES IN RAT-BRAIN. 003708 04-03

STRESS-MODULATED ALTERATION OF BRAIN BIOGENIC-AMINES IN THE RAT: EFFECTS OF L TRYPTOPHAN. 003978 04-03

THE EFFECT OF P CHLOROPHENYLALANINE ON THE DISTRIBUTION OF BIOGENIC-AMINES IN THE BRAIN, AND ON MEMORY IN RATS. 004068 04-04

BIOLOGICAL

BIOLOGICAL EVALUATION OF A TRH ANALOGUE WITH A MODIFIED PROLINE RESIDUE. 003662 04-01

PREPARATION AND BIOLOGICAL ACTIONS OF N 2,2,2 TRIFLUOROETHYL-DIHYDROXYPHENYLETHYLAMINE. 003697 04-02

NEW BIOLOGICAL RESEARCH RELEVANT TO ANXIETY. 004705 04-17

BIOLOGICAL AND PHYSIOLOGICAL PREDICTORS OF DRUG RESPONSE
(UNPUBLISHED PAPER)

BIOLOGICAL-ACTIVITY 004708 04-17
SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN
ANALOGS WITH DISULFIDE BRIDGES

BIOLOGICAL-PSYCHIATRY 003655 04-01
A QUANTITATIVE PROBE FOR BIOLOGICAL-PSYCHIATRY SELECTED ION-
MONITORING

THE PROMISE OF BIOLOGICAL-PSYCHIATRY 004685 04-16

BIOPTERIN 004752 04-17
THE INFLUENCE OF D-AMPHETAMINE ON RAT-BRAIN STRIATAL REDUCED
BIOPTERIN CONCENTRATION

BIOSYNTHESIS 003922 04-03
LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO
BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM
INTERMEDIATE/POSTERIOR LOBES OF PITUITARY

BIOTRANSFORMATION 003846 04-03
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM. II.
RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF
YOUNG AND ELDERLY SUBJECTS FIRST-PASS EFFECT.

BIPHASIC 004516 04-13
APPARENT SEROTONERGIC MODULATION OF THE DOSE-DEPENDENT
BIPHASIC RESPONSE OF NEOSTRIATAL NEURONS PRODUCED BY D-
AMPHETAMINE.

BIPOLAR 003981 04-03
MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN
ADOLESCENT.

BLACKOUTS 004637 04-15
TRICYCLIC-ANTIDEPRESSANTS AND ALCOHOLIC BLACKOUTS.

BLEPHAROPTOSIS 004617 04-15
EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF
RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE.

BLOCK 004186 04-04
WHY DOES SULPIRIDE NOT BLOCK THE EFFECT OF DOPAMINE ON THE
DOPAMINE-SENSITIVE ADENYLATE-CYCLASE?

NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND 004055 04-03
CONDITIONED TASTE-AVERSION.

BLOCKADE 004121 04-04
BLOCKADE BY L LYSINE OF NONNARCOTIC ANALGESICS.

ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN 003857 04-03
ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-
DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL
UPTAKE.

THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE 003879 04-03
REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS.

4 AMINOPYRIDINE BLOCKADE OF NEURONAL DEPRESSANT RESPONSES TO 003900 04-03
ADENOSINE-TRIPHOSPHATE.

RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE 003963 04-03
OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-
ADRENERGIC STIMULATION. (UNPUBLISHED PAPER).

PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C- 003998 04-03
GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-
CHANNEL BLOCKADE.

PHYSIOLOGICAL SIGNIFICANCE OF DOPAMINE-AUTORECEPTORS AS 004020 04-03
STUDIED FOLLOWING THEIR SELECTIVE BLOCKADE BY MOLINDONE.

BLOCKADE BY IMIPRAMINE OR DESIPRAMINE OF PANIC-INDUCED BY 004065 04-04
SODIUM-LACTATE.

IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT 004427 04-10
IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER
LOAD.

BLOCKER 004600 04-15
HYPERVENTILATION-SYNDROME AND BETA-RECEPTOR FUNCTION --
CLINICAL-EFFECT OF BETA BLOCKER UPON THE SYNDROME.

BLOCKERS 004459 04-11
EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON
CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND
CYCLIC-AMP IN FED MICE.

003946 04-03

EFFECT OF NOREPINEPHRINE UPTAKE BLOCKERS ON NOREPINEPHRINE
KINETICS.

BLOCKING-AGENTS 004506 04-13
ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON
THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS.

THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE 003801 04-03
AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH
UNILATERAL NIGROSTRIATAL LESIONS.

BLOCKING-DRUG 004117 04-04
THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON
THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE
IN MAN.

BLOCKS 004580 04-14
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN
NEURONS.

NEUROTENSIN BLOCKS CERTAIN AMPHETAMINE-INDUCED BEHAVIOURS. 003834 04-03

BLOOD 004111 04-04
SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN
INDIRECT ADRENERGIC CHOLINERGIC INTERACTION.

EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE- 003887 04-03
PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC
BUNDLE IN THE RAT.

THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT: 003910 04-03
INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT.

CHANGES IN BLOOD PLASMA OSMOLALITY AND STATES OF MANIA. 004279 04-05

CLINICAL-RESPONSE AND BLOOD LEVELS IN THE TREATMENT OF 004352 04-09
DEPRESSION WITH A NEW ANTIDEPRESSANT-DRUG, AMOXAPINE.

BLOOD LEVEL MEASUREMENTS OF TRICYCLIC DRUGS AS A DIAGNOSTIC 004356 04-09
TOOL.

CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY 004368 04-09
TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD
OF PATIENTS.

THE EFFECT OF CHLORPROMAZINE AND MAGEPTIL ON THE 004434 04-11
PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION
WITH PHYTOHEMAGGLUTININ.

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD 004541 04-13
BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL
STANDARDS.

COMPARISON OF SPECTROFLUOROMETRIC AND GAS- 004690 04-16
CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE
QUANTITATION OF MORPHINE IN BLOOD AND BRAIN.

BLOOD-BRAIN-BARRIER 004692 04-16
INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND
OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER.

H2-RECEPTORS MEDIATE INCREASES IN PERMEABILITY OF THE BLOOD- 003669 04-01
BRAIN-BARRIER DURING ARTERIAL HISTAMINE INFUSION.

PASSAGE THROUGH THE BLOOD-BRAIN-BARRIER OF THYROTROPIN- 003817 04-03
RELEASING-HORMONE ENCAPSULATED IN LIPOSOMES.

BLOOD-PLATELET 004298 04-06
THE ACTIVITY OF BLOOD-PLATELET MONOAMINE-OXIDASE IN
ENDOGENOUS DEPRESSION.

BLOOD-PLATELETS 004547 04-13
LIBERATION OF CATECHOLAMINES AND 5 HYDROXYTRYPTAMINE FROM
HUMAN BLOOD-PLATELETS.

BLOOD-PRESSURE 003967 04-03
BLOOD-PRESSURE AND COGNITIVE FUNCTIONING.

BODY-TEMPERATURE 004492 04-11
THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC
MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-
EXCHANGE DURING EXTREME COOLING.

BETA ENDORPHIN: CENTRAL SITES OF ANALGESIA, CATALEPSY AND 004016 04-03
BODY-TEMPERATURE CHANGES IN RATS.

REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND 004238 04-04
NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE.

004517 04-13

BODY-WEIGHT

SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS.
004098 04-04

BONDS

COMT-A AND COMT-B: CATALYTIC DIFFERENCES AND ROLE OF DISULFIDE BONDS.
003927 04-03

BORDERLINE-PATIENT

THE INTERACTION OF PSYCHOPHARMACOLOGY AND PSYCHOANALYSIS IN THE BORDERLINE-PATIENT.
004430 04-10

BORN

BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS.
004658 04-15

BOVINE

PHYSICAL AND KINETIC PROPERTIES OF CHOLINE-ACETYL-TRANSFERASE FROM RAT AND BOVINE BRAIN.
003676 04-01

CU-AMINE-OXIDASES: STUDIES RELATED TO THE MECHANISM-OF-ACTION OF BOVINE PLASMA AMINE-OXIDASE (UNPUBLISHED PAPER).
003680 04-01

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION.
003948 04-03

BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA.
003954 04-03

ELECTROPHYSIOLOGICAL-EFFECTS OF IMIPRAMINE ON BOVINE VENTRICULAR-MUSCLE AND PURKINJE-FIBRES.
003988 04-03

DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES.
004003 04-03

BRADYCARDIA

MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS.
0037[illegible]4 04-03

EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL AND PIMOZIDE ON REFLEX BRADYCARDIA IN RATS.
004085 04-04

BRAIN

BIOCHEMICAL AND IMMUNOLOGICAL PROPERTIES OF THE MOUSE BRAIN ENOLASES PURIFIED BY A SIMPLE METHOD.
003668 04-01

INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER.
003669 04-01

PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN.
003671 04-01

A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION.
003674 04-01

PHYSICAL AND KINETIC PROPERTIES OF CHOLINE-ACETYL-TRANSFERASE FROM RAT AND BOVINE BRAIN.
003676 04-01

A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY.
003677 04-01

NEURONAL SENSITIVITY OF SOME BRAIN REGIONS TO ANGIOTENSIN-II IN RABBITS.
003716 04-03

BRAIN BENZODIAZEPINE-RECEPTORS AND THEIR RAPID CHANGES AFTER SEIZURES IN THE MONGOLIAN-GERBIL.
003717 04-03

INTERACTIONS BETWEEN A MONOFLUORINATED ANALOGUE OF P CHLOROAMPHETAMINE AND 5 HYDROXYTRYPTAMINE IN BRAIN.
003719 04-03

EFFECT OF ALPHA METHYLPHENYLALANINE AND PHENYLALANINE ON BRAIN POLYRIBOSOMES AND PROTEIN SYNTHESIS.
003733 04-03

BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS.
003736 04-03

MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS.
003744 04-03

EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON SUBSEQUENT PROTEIN SYNTHESIS IN A CELL-FREE SYSTEM DERIVED FROM BRAIN.
003761 04-03

SOLUBILIZATION OF NEUROLEPTIC/DOPAMINE-RECEPTORS OF HUMAN BRAIN STRIATUM.
003767 04-03

DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE.
003792 04-03

OPPOSITE EFFECTS OF NALOXONE ON SUBSTANCE-P-INDUCED IN BRAIN DOPA SYNTHESIS AND IN LOCOMOTOR-ACTIVITY IN RATS.
003799 04-03

EFFECTS OF ANTIDEPRESSANT-DRUGS ON DIFFERENT RECEPTORS IN THE BRAIN.
003824 04-03

COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN.
003831 04-03

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO.
003832 04-03

PHARMACOLOGIC MANIPULATION OF BRAIN AND PITUITARY ENDORPHIN CONTENT AND RELEASE.
003837 04-03

COMPARATIVE-EFFECTS OF SUBSTITUTED PHENYLETHYLAMINES ON BRAIN SEROTONERGIC MECHANISMS.
003854 04-03

ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE.
003863 04-03

EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT.
003870 04-03

THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH.
003882 04-03

OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES.
003902 04-03

EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS.
003914 04-03

EFFECT OF DIAZEPAM ON STRESS-INDUCED CHANGES IN BRAIN HISTAMINE.
003932 04-03

THE EFFECT OF PRENATAL EXPOSURE TO ETHANOL OR OPIATES ON BRAIN CATECHOLAMINE ACTIVITY.
003939 04-03

AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN.
003941 04-03

EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP.
003952 04-03

CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT.
003961 04-03

DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET?
003962 04-03

STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES.
003973 04-03

STRESS-MODULATED ALTERATION OF BRAIN BIOGENIC-AMINES IN THE RAT: EFFECTS OF L TRYPTOPHAN.
003978 04-03

EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN.
003983 04-03

PROPERTIES OF A CDP-DIGLYCERIDE-HYDROLASE FROM GUINEA-PIG BRAIN.
003987 04-03

EFFECT OF PRENATAL NEUROLEPTIC TREATMENT ON MEMBRANE RECEPTOR DEVELOPMENT IN THE BRAIN.
003989 04-03

THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN.
003994 04-03

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES. 004002 04-03

THE ROLE OF OPIATE-RECEPTORS OF DIFFERENT BRAIN REGIONS IN DETERMINING THE EMOTIONAL REACTIONS OF RATS. 004017 04-03

OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES. 004024 04-03

EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. 004026 04-03

INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES. 004042 04-03

POSTMORTEM STABILITY OF BRAIN 3 METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL AND 3,4 DIHYDROXYPHENYLETHYLENEGLYCOL IN THE RAT AND MOUSE. 004048 04-03

BENZODIAZEPINE-RECEPTOR: HETEROGENEITY IN RABBIT BRAIN. 004060 04-03

RELATIONSHIP BETWEEN PENTYLENETETRAZOL-INDUCED SEIZURES AND BRAIN PENTYLENETETRAZOL LEVELS IN MICE. 004061 04-03

EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON TETRABENAZINE-INDUCED DEPLETION OF BRAIN MONOAMINES IN RATS. 1. NOREPINEPHRINE. 004062 04-03

THE EFFECT OF P CHLOROPHENYLALANINE ON THE DISTRIBUTION OF BIOGENIC-AMINES IN THE BRAIN, AND ON MEMORY IN RATS. 004068 04-04

THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN. 004075 04-04

DOES RAPID-EYE-MOVEMENT SLEEP PLAY A ROLE IN BRAIN DEVELOPMENT? 004091 04-04

SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS. 004098 04-04

COCAINE AND SEIZURE PROTECTION IN MICE OF VARYING BRAIN WEIGHTS. 004103 04-04

EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD. 004108 04-04

RELATION BETWEEN BRAIN CATECHOLAMINE-RECEPTORS AND DOPAMINERGIC STEREOTYPY IN RAT STRAINS. 004131 04-04

MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04

THE EFFECT OF THE NEW ANTIDEPRESSANT INKASAN ON THE BIOELECTRICAL-ACTIVITY OF THE BRAIN AND ON CONDITIONED REFLEXES. 004212 04-04

SUPPRESSION OF ALCOHOL DRINKING WITH BRAIN ALDEHYDE-DEHYDROGENASE INHIBITION. 004220 04-04

NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE. 004264 04-05

NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. II: EFFECTS OF EXTENDED EXPOSURE TO ACRYLAMIDE. 004265 04-05

LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004273 04-05

EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05

AUTORADIOGRAPHIC LOCALIZATION OF DRUG AND NEUROTRANSMITTER-RECEPTORS IN THE BRAIN. 004292 04-06

LSD, PSYCHOTOGENIC PROCEDURES AND BRAIN NEUROHUMORS. (UNPUBLISHED PAPER). 004448 04-11

EFFECTS OF A SHORT-ACTING BENZODIAZEPINE ON BRAIN ELECTRICAL-ACTIVITY DURING SLEEP. 004568 04-14

THE USE OF EVENT-RELATED SLOW POTENTIALS OF THE BRAIN AS AN OBJECTIVE METHOD TO STUDY THE EFFECTS OF CENTRALLY ACTING DRUGS. 004669 04-16

COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004692 04-16

BRAIN DOPAMINE-RECEPTORS. 004741 04-17

BRAIN-MONOAMINES

EFFECT OF NEONATAL HYDROCORTISONE TREATMENT ON BRAIN-MONOAMINES IN DEVELOPING RATS. 003893 04-03

BRAIN-STIMULATION

REWARD AND DETECTION THRESHOLDS FOR BRAIN-STIMULATION: DISSOCIATIVE-EFFECTS OF COCAINE. 004160 04-04

DISRUPTION OF AUTOSHAPED RESPONDING TO A SIGNAL OF BRAIN-STIMULATION REWARD BY NEUROLEPTIC-DRUGS. 004199 04-04

BRAINS

REGIONAL CHANGES IN (3H)DIAZEPAM BINDING IN THE BRAINS OF MICE AFTER REMOVAL OF THE OLFACTORY-BULBS. 003844 04-03

EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05

BRAINSTEM

DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS. 003947 04-03

THE BRAINSTEM AUDITORY EVOKED-RESPONSE AS A TOOL IN NEUROBEHAVIORAL TOXICOLOGY AND MEDICINE. 004277 04-05

THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT: A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

BRIDGES

SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN ANALOGS WITH DISULFIDE BRIDGES. 003655 04-01

BRL-14342

PHARMACOLOGICAL AND BIOCHEMICAL-PROPERTIES OF BRL-14342, A NOVEL POTENTIAL ANTIDEPRESSANT-DRUG. 004086 04-04

BROMAZEPAM

ACTIVITY OF BROMAZEPAM AND LORAZEPAM IN NEUROTIC DEPRESSIONS. 004384 04-09

BROMO-ALPHA-ERGOCRIPTINE

PLASMA DOPAMINE-BETA-HYDROXYLASE ACTIVITY IN CHRONIC SCHIZOPHRENIC-PATIENTS TESTED WITH SINGLE-DOSE OF 2 BROMO-ALPHA-ERGOCRIPTINE (PARLODEL). 004343 04-08

BROMOCRIPTINE

PHARMACOLOGICAL DIFFERENCE OF L-DOPA, APOMORPHINE, AND BROMOCRIPTINE AGAINST METOCLOPRAMIDE. 003790 04-03

INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03

PHENOXYBENZAMINE AND BROMOCRIPTINE ATTENUATE NEED FOR REM SLEEP IN RATS. 004203 04-04

BROMOSPIROPERIDOL

SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING. 004293 04-06

BROMPERIDOL

CLINICAL-EVALUATION OF BROMPERIDOL VERSUS HALOPERIDOL IN PSYCHOTIC-PATIENTS. 004562 04-14

BULLFROG

5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS. 003710 04-03

BUMETANIDE

THE EFFECT OF FRUSEMIDE PIRETANIDE AND BUMETANIDE ON COCHLEAR SUCCINIC-DEHYDROGENASE. 003757 04-03

BUNDLE

EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT. 003910 04-03

BUNGAROTOXIN
ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN. 003830 04-03

BUPRENORPHINE
BUPRENORPHINE: DEMONSTRATION OF PHYSICAL-DEPENDENCE LIABILITY. 004104 04-04

BURST-FIRING
DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003806 04-03

BUTORPHANOL
SERUM LEVELS OF BUTORPHANOL BY RADIOIMMUNOASSAY. 004691 04-16

C-GMP
INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-02
PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03

CACTUS
CATECHOLAMINE METABOLISM IN A PSYCHOACTIVE CACTUS. 004722 04-17

CAFFEINE
UNIT ACTIVITY IN MEDIAL THALAMUS: COMPARATIVE-EFFECTS OF CAFFEINE AND AMPHETAMINE. 003752 04-03
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN NEURONS. 003834 04-03
EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FROM RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST. 003844 04-03
THE EFFECTS OF THEOPHYLLINE AND CAFFEINE ON THERMOREGULATORY FUNCTIONS OF RATS AT DIFFERENT AMBIENT TEMPERATURES. 003907 04-03
EFFECTS OF CAFFEINE ON ANTERIOR PITUITARY AND THYROID-FUNCTION IN THE RAT. 004014 04-03
INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES. 004042 04-03

CAFFEINE-INDUCED
THE BENZODIAZEPINES AND INOSINE ANTAGONIZE CAFFEINE-INDUCED SEIZURES. 004172 04-04

CALCIUM
BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS. 003736 04-03
INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 003783 04-03
INHIBITION OF SYNAPTOSOMAL CALCIUM UPTAKE BY ETHANOL. 003827 04-03
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03
INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES. 004042 04-03

CALCIUM-CHANNEL
PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03

CALF
THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE. 003906 04-03

CALMODULIN
PHARMACOLOGICAL REGULATION OF CALMODULIN. 004052 04-03
ACUTE AND CHRONIC EFFECTS OF PSYCHOACTIVE-DRUGS ON ADRENERGIC-RECEPTORS AND CALMODULIN. 004750 04-17
MECHANISMS AND PHARMACOLOGICAL IMPLICATIONS OF ALTERING CALMODULIN ACTIVITY. 004751 04-17

CANINE
CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED. 003911 04-03

CANNABIDIOL
EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS. [illegible] 04-03
CHARACTERISTICS OF THE STIMULUS PRODUCED BY THE MIXTURE OF CANNABIDIOL WITH DELTA9 TETRAHYDROCANNABINOL. [illegible] 04-04

CANNABINOID-INDUCED
CANNABINOID-INDUCED ENHANCEMENT AND DEPRESSION OF CAT MONOSYNAPTIC REFLEXES. 004040 04-03

CANNABINOIDS
EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES. 003970 04-03
CANNABINOIDS. I. BEHAVIORAL-EFFECTS. 004228 04-04
CANNABINOIDS. II. CARDIOVASCULAR-EFFECTS. 004280 04-06

CAPILLARY
THE EFFECT OF DIBENZAZEPINES (TRICYCLIC-ANTIDEPRESSANTS) ON CEREBRAL CAPILLARY PERMEABILITY IN THE RAT IN VIVO. 003974 04-03

CAPSAICIN
INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04
A REEVALUATION OF THE NEUROCHEMICAL-EFFECTS AND ANTINOCICEPTIVE-EFFECTS OF INTRATHECAL CAPSAICIN IN THE RAT. 004184 04-04

CAPTOPRIL
POTENTIATION OF THE MORPHINE-INDUCED RESPIRATORY RATE DEPRESSION BY CAPTOPRIL. 004275 04-05

CARBACHOL
EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT. 003951 04-03

CARBACHOL-INDUCED
STUDIES OF CARBACHOL-INDUCED WET-DOG-SHAKE BEHAVIOR IN RATS. 004241 04-04

CARBAMAZEPINE
A PRELIMINARY DOUBLE-BLIND STUDY ON THE EFFICACY OF CARBAMAZEPINE IN PROPHYLAXIS OF MANIC-DEPRESSIVE-ILLNESS. 004388 04-09
MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11
INFLUENCE OF CARBAMAZEPINE ON SERUM THYROXINE AND TRIIODOTHYRONINE IN PATIENTS WITH EPILEPSY. [illegible] 04-11
CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM. 004545 04-13

CARBAMAZEPINE-ETHOSUXIMIDE
KINETICS OF A CARBAMAZEPINE-ETHOSUXIMIDE INTERACTION. [illegible] 04-13

CARBIDOPA
ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA. [illegible] 04-13
ELECTROENCEPHALOGRAPHIC CHANGE IN PARKINSONIAN-PATIENTS TREATED WITH LEVODOPA CARBIDOPA. [illegible] 04-13

CARBOLINES
BENZODIAZEPINE ANTAGONISM BY HARMANE AND OTHER BETA CARBOLINES IN VITRO AND IN VIVO. 004211 04-04

CARDIAC
BETA-ADRENERGIC INFLUENCE ON CARDIAC DYNAMICS DURING SHOCK-AVOIDANCE IN DOGS. [illegible] 04-03

CARDIAC-MUSCLE
POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM. [illegible] 04-03

CARDIOLOGICAL
PLASMA NORTRIPTYLINE CONCENTRATION, CARDIOLOGICAL EFFECTS AND CLINICAL-RESPONSE. [illegible] 04-13

CARDIOTOXICITY
CARDIOTOXICITY OF ANTIDEPRESSANT-DRUGS. [illegible] 04-13

CARDIOVASCULAR
HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

CARDIOVASCULAR-EFFECTS
POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03

CENTRAL CARDIOVASCULAR-EFFECTS AND BIOCHEMICAL-EFFECTS OF BACLOFEN IN THE CONSCIOUS RAT. 003965 04-03

CANNABINOIDS. II. CARDIOVASCULAR-EFFECTS. 004280 04-05

CARNITINE
THE UPTAKE OF CARNITINE BY SLICES OF RAT-CEREBRAL-CORTEX. 003853 04-03

CARP
STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-03

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03

CASE
AN UNUSUAL CASE OF THIORIDAZINE AND LEVOMEPROMAZINE DEPENDENCE. 004634 04-15

TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

A CASE OF PETIT-MAL EPILEPSY AGGRAVATED BY LITHIUM. 004641 04-15

A CASE OF ACUTE AGRANULOCYTOSIS DURING TREATMENT WITH CLOZAPINE. 004642 04-15

CASE-HISTORY
THE ROLE OF LITHIUM IN THE PRODUCTION OF INTERSTITIAL NEPHRITIS: A CASE-HISTORY. 004655 04-15

CASE-REPORT
CASE-REPORT OF UNUSUAL DIAZEPAM ABSTINENCE-SYNDROME. 004643 04-15

CASE-STUDY
TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY. 004571 04-14

CASES
AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07

NEUROLOGICAL TOLERANCE OF LITHIUM AND PSYCHOTROPIC-DRUGS IN COMBINATION: 265 CASES. 004594 04-15

THE TWO SURVIVAL CASES OF ALPHA-PATTERN COMA CAUSED BY LARGE AMOUNTS OF HYPNOTICA AND NEUROLEPTICA. 004608 04-15

TWO CASES OF FORM-FRUSTE-DU-SYNDROME-MALIN WITH HIGH-LEVELS OF SERUM CPK. 004636 04-15

CASOMORPHINS
OPIOID ACTIVITIES OF BETA CASOMORPHINS. 003740 04-03

CAT
EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (REDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT. 003703 04-02

PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE. 003777 04-03

THE EFFECT OF NOOTROPIL ON THE TRANSCALLOSAL AND PRIMARY EVOKED-RESPONSES OF THE CAT CEREBRAL-CORTEX. 003780 04-03

INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03

AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN. 003941 04-03

IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA. 004011 04-03

CANNABINOID-INDUCED ENHANCEMENT AND DEPRESSION OF CAT MONOSYNAPTIC REFLEXES. 004040 04-03

NALOXONE SUPPRESSES FOOD/WATER CONSUMPTION IN THE DEPRIVED CAT. 004114 04-04

SELECTIVE EFFECT OF ETHANOL ON THE VESTIBULAR NUCLEUS NEURONS IN THE CAT. 004139 04-04

POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT. 004153 04-04

AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA. 004276 04-05

THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

CATABOLISM
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES. 004009 04-03

CATALEPSY
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY. 004018 04-03

EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE. 004186 04-04

BETA ENDORPHIN: CENTRAL SITES OF ANALGESIA, CATALEPSY AND BODY-TEMPERATURE CHANGES IN RATS. 004238 04-04

CATALEPTIC-EFFECTS
THE EFFECTS OF PEPTIDES ON TOLERANCE TO THE CATALEPTIC-EFFECTS AND HYPOTHERMIC-EFFECTS OF MORPHINE IN THE RAT. 004072 04-04

CATALYTIC
COMT-A AND COMT-B: CATALYTIC DIFFERENCES AND ROLE OF DISULFIDE BONDS. 003927 04-03

CATATONIA
MODIFICATION OF DRUG-INDUCED CATATONIA AND TREMORS BY QUIPAZINE IN RATS AND MICE. 004164 04-04

CATCH-UP
ACTIVITY AND CATCH-UP GROWTH IN HYPOTHYROID RATS. 004190 04-04

CATECHOL-O-METHYLTRANSFERASE
THE ACTIVITY OF ERYTHROCYTE CATECHOL-O-METHYLTRANSFERASE IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004546 04-13

CATECHOLAMINE
CATECHOLAMINE TURNOVER IN RAT-CEREBRAL-CORTEX AND CAUDATE FOLLOWING REPEATED TREATMENT WITH DIHYDROERGOTOXINE. 003765 04-03

CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP. 003769 04-03

CATECHOLAMINE SYNTHESIS REGULATION IN HYPOTHALAMIC SYNAPTOSOMES. (UNPUBLISHED PAPER). 003829 04-03

CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03

THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS. 003900 04-03

THE EFFECT OF PRENATAL EXPOSURE TO ETHANOL OR OPIATES ON BRAIN CATECHOLAMINE ACTIVITY. 003939 04-03

CATECHOLAMINE MODULATION OF ENKEPHALIN-INDUCED ELECTROPHYSIOLOGICAL RESPONSES IN CEREBRAL-CORTEX. 003957 04-03

EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES. 003970 04-03

EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. [illegible] 04-03

CATECHOLAMINE SEROTONIN INTERACTION EFFECTS ON ACTIVITY IN RATS NEONATALLY TREATED WITH 6 HYDROXYDOPAMINE. 004194 04-04

CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13

CATECHOLAMINE METABOLISM IN A PSYCHOACTIVE CACTUS. 004720 04-17

CATECHOLAMINE-RECEPTORS

EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS. 004126 04-04

RELATION BETWEEN BRAIN CATECHOLAMINE-RECEPTORS AND DOPAMINERGIC STEREOTYPY IN RAT STRAINS. 004161 04-04

CATECHOLAMINE-SULFATES

PRESENCE OF CONJUGATED CATECHOLAMINES IN RAT-BRAIN: A NEW METHOD OF ANALYSIS OF CATECHOLAMINE-SULFATES. 004286 04-06

CATECHOLAMINES

THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH. 003882 04-03

LIBERATION OF CATECHOLAMINES AND 5 HYDROXYTRYPTAMINE FROM HUMAN BLOOD-PLATELETS. 003967 04-03

HYPOTENSION ALTERS THE RELEASE OF CATECHOLAMINES IN THE HYPOTHALAMUS OF THE CONSCIOUS RABBIT. 003968 04-03

PRESENCE OF CONJUGATED CATECHOLAMINES IN RAT-BRAIN: A NEW METHOD OF ANALYSIS OF CATECHOLAMINE-SULFATES. 004286 04-06

CATECHOLIC

EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT. 003870 04-03

CATEGORIES

ON THE USE OF CERTAIN PHARMACOLOGICAL CATEGORIES IN HYSTERIA. 004347 04-09

BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS. 004503 04-13

CATHA-EDULIS

HYPERTHERMIC-RESPONSE TO (-) CATHINONE, AN ALKALOID OF CATHA-EDULIS (KHAT). 003694 04-02

CATHINONE

HYPERTHERMIC-RESPONSE TO (-) CATHINONE, AN ALKALOID OF CATHA-EDULIS (KHAT). 003694 04-02

CATION

CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS. 004032 04-03

CATIONS

SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE. 003673 04-01

CATS

DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02

THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS. 004067 04-04

RESPIRATORY DEPRESSION PRODUCED BY DIAZEPAM IN CATS: EFFECT OF ANESTHESIA. 004272 04-05

CAUDATE

DOPAMINE METABOLITES IN CAUDATE AND CORTEX AFTER LITHIUM AND HALOPERIDOL. (UNPUBLISHED PAPER). 003738 04-03

CATECHOLAMINE TURNOVER IN RAT-CEREBRAL-CORTEX AND CAUDATE FOLLOWING REPEATED TREATMENT WITH DIHYDROERGOTOXINE. 003765 04-03

THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE. [illegible] 04-03

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. [illegible] 04-03

EFFECTS OF A HIGH-DOSE TREATMENT OF METHAMPHETAMINE ON CAUDATE DOPAMINE AND ANOREXIA IN RATS. [illegible] 04-04

CAUDATE-NUCLEUS

THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS. [illegible] 04-04

CAUDATE-PUTAMEN

EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT. [illegible]

CDP-DIGLYCERIDE-HYDROLASE

PROPERTIES OF A CDP-DIGLYCERIDE-HYDROLASE FROM GUINEA-PIG BRAIN. 003987 04-03

CELL

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOLDS AND CHICK TISSUES -- ARE THEY CELL ADHESION MOLECULES? [illegible] 04-03

DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003806 04-03

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

CELL-CULTURES

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES. [illegible]

CELL-FREE

EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON SUBSEQUENT PROTEIN SYNTHESIS IN A CELL-FREE SYSTEM DERIVED FROM BRAIN. 003761 04-03

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003822 04-03

CELLS

5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS. [illegible] 04-03

INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. [illegible] 04-03

CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS. [illegible] 04-03

DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. [illegible] 04-03

OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03

RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). [illegible] 04-03

PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. [illegible] 04-03

DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. [illegible] 04-03

RELATIVE ACTIVITIES OF SUBSTANCES RELATED TO 5 HYDROXYTRYPTAMINE AS DEPOLARIZING-AGENTS OF SUPERIOR CERVICAL GANGLION CELLS. [illegible] 04-03

DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. [illegible] 04-03

CENTER

SATIETY CENTER [illegible]. (UNPUBLISHED PAPER). [illegible]

CENTRAL
SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03
CENTRAL HYPOTENSIVE-EFFECT OF GAMMA AMINOBUTYRIC-ACID IN ANESTHETIZED DOGS. 003772 04-03
POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03
OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003798 04-03
CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT. 003899 04-03
EFFECTS OF 5 HYDROXYTRYPTAMINE ON CENTRAL NEURONES ANTAGONIZED BY BICUCULLINE AND PICROTOXIN. 003931 04-03
CENTRAL CARDIOVASCULAR-EFFECTS AND BIOCHEMICAL-EFFECTS OF BACLOFEN IN THE CONSCIOUS RAT. 003965 04-03
OPIATE SYSTEM INFLUENCES CENTRAL RESPIRATORY CHEMOSENSORS. 003971 04-03
EFFECT OF IMIPRAMINE ON CENTRAL 5 HYDROXYTRYPTAMINE TURNOVER AND METABOLISM IN RATS. 003999 04-03
EFFECTS OF LITHIUM ON BEHAVIOUR AND CENTRAL MONOAMINES. 004110 04-04
GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04
CENTRAL AND PERIPHERAL EFFECTS OF LITHIUM ON AMPHETAMINE-INDUCED HYPERACTIVITY IN RATS. 004223 04-04
BETA ENDORPHIN: CENTRAL SITES OF ANALGESIA, CATALEPSY AND BODY-TEMPERATURE CHANGES IN RATS. 004238 04-04
A POSSIBLE NEUROCHEMICAL BASIS OF THE CENTRAL STIMULATORY EFFECTS OF PP'DDT. 004274 04-05
THE EFFICACY OF PIRACETAM IN VERTIGO: A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN. 004478 04-11
DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

CENTRAL-ACTIONS
ADENOSINE-RECEPTORS IN THE CENTRAL-NERVOUS-SYSTEM: RELATIONSHIP TO THE CENTRAL-ACTIONS OF METHYLXANTHINES. 003766 04-03
THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

CENTRAL-EFFECTS
CENTRAL-EFFECTS OF ANGIOTENSIN-II IN WATER AND SALINE LOADED RATS. 003845 04-03
ANTAGONISM OF SOME CENTRAL-EFFECTS OF D TUBOCURARINE BY GAMMA AMINOBUTYRIC-ACID. 004102 04-04

CENTRAL-NERVOUS-SYSTEM
ADENOSINE-RECEPTORS IN THE CENTRAL-NERVOUS-SYSTEM: RELATIONSHIP TO THE CENTRAL-ACTIONS OF METHYLXANTHINES. 003766 04-03
SPECIFIC, HIGH-AFFINITY (3H)ETHYLKETOCYCLAZOCINE BINDING IN RAT CENTRAL-NERVOUS-SYSTEM: LACK OF EVIDENCE FOR KAPPA-RECEPTORS. 003840 04-03
THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE. 003933 04-03
KINETIC STUDIES ON THE ENTRY OF D-AMPHETAMINE INTO THE CENTRAL-NERVOUS-SYSTEM: I. CEREBROSPINAL-FLUID. 004005 04-03
A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM. 004543 04-13

CEPHALALGIA
DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

CERCOPITHECUS-AETHIOPS-SABAEUS
PERIPHERAL-CORRELATES OF SEROTONERGICALLY-INFLUENCED BEHAVIORS IN VERVET-MONKEYS (CERCOPITHECUS-AETHIOPS-SABAEUS). 004204 04-04

CEREBELLAR
EFFECTS OF PHENYTOIN ON MOUSE CEREBELLAR 5 HYDROXYTRYPTAMINE AND NOREPINEPHRINE. 003795 04-03
ACTION OF DRUGS ON THE CEREBELLAR ELECTRICAL-ACTIVITIES. 003804 04-03
IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03
MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS. 004058 04-03

CEREBELLUM
THE EFFECTS OF LITHIUM ON MYOINOSITOL LEVELS IN LAYERS OF FRONTAL-CEREBRAL-CORTEX, IN CEREBELLUM, AND IN CORPUS-CALLOSUM OF THE RAT. 003712 04-03
NEURONAL LOCALISATION OF BENZODIAZEPINE-RECEPTORS IN CEREBELLUM. 003739 04-03
EFFECTS OF ACUTE AND CHRONIC AMPHETAMINE TREATMENT ON PURKINJE NEURON DISCHARGE IN RAT CEREBELLUM. 003793 04-03
ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM. 003926 04-03
GUANYLATE-CYCLASE -- CYCLIC-GMP IN MOUSE CEREBRAL-CORTEX AND CEREBELLUM: MODIFICATION BY ANTICONVULSANTS. 003956 04-03
THE EFFECT OF PROPRANOLOL AND ITS ISOMERS ON PURKINJE NEURONES IN RAT CEREBELLUM. 004059 04-03

CEREBRAL
ACTION OF 4 AMINOPYRIDINE ON THE CEREBRAL CIRCULATION. 003781 04-03
REGULATION OF ALPHA1-ADRENOCEPTORS IN THE CEREBRAL CORTEX OF THE RAT BY THYROID-HORMONES. 003816 04-03
NA-GAMMA-HYDROXYBUTYRATE IN CEREBRAL PROTECTION DURING SEVERE HYPOXEMIA IN THE RAT. 003895 04-03
ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003936 04-03
THE EFFECT OF DIBENZAZEPINES (TRICYCLIC-ANTIDEPRESSANTS) ON CEREBRAL CAPILLARY PERMEABILITY IN THE RAT IN VIVO. 003974 04-03
DRUG-INDUCED CHANGES IN THE COMPOSITION OF THE CEREBRAL FREE AMINO-ACID POOL. 004039 04-03
CLASSICAL NEUROLEPTICS AND DECONDITIONING ACTIVITY AFTER SINGLE OR REPEATED TREATMENTS: ROLE OF DIFFERENT CEREBRAL NEUROTRANSMITTERS. 004115 04-04
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05
PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13
CEREBRAL FLUORIDE IN MANIA AND THE EFFECT OF LITHIUM: A HYPOTHESIS. 004715 04-17

CEREBRAL-CORTEX
THE EFFECT OF NOOTROPIL ON THE TRANSCALLOSAL AND PRIMARY EVOKED-RESPONSES OF THE CAT CEREBRAL-CORTEX. 003780 04-03
STIMULATION OF FRUCTOSEBIPHOSPHATASE ACTIVITY AND SYNTHESIS IN THE CEREBRAL-CORTEX OF RATS SUBMITTED TO THE CONVULSANT METHIONINE-SULFOXIMINE. 003838 04-03
THE EFFECT OF PSYCHOSTIMULANTS ON CHANGES IN THE EXCITABILITY OF THE VISUAL CEREBRAL-CORTEX. 003919 04-03
GUANYLATE-CYCLASE -- CYCLIC-GMP IN MOUSE CEREBRAL-CORTEX AND CEREBELLUM: MODIFICATION BY ANTICONVULSANTS. 003956 04-03

CATECHOLAMINE MODULATION OF [illegible] ELECTROPHYSIOLOGICAL RESPONSES IN CEREBRAL-CORTEX.
003957 04-03
CEREBROCORTICAL
THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS.
004010 04-03
CEREBROSPINAL-FLUID
A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID.
003663 04-01
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL.
003725 04-03
KINETIC STUDIES ON THE ENTRY OF D-AMPHETAMINE INTO THE CENTRAL-NERVOUS-SYSTEM: I. CEREBROSPINAL-FLUID.
004005 04-03
THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL.
004045 04-03
PROTEIN BINDING OF CHLORPROMAZINE IN CEREBROSPINAL-FLUID AND SERUM.
004311 04-08
CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT.
004382 04-09
CEREBROSPINAL-FLUID HOMOVANILLIC-ACID PATTERNS DURING NEUROLEPTIC TREATMENT. (UNPUBLISHED PAPER).
004502 04-13
CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC PATIENTS TREATED WITH FIXED DRUG DOSES.
004539 04-13
CEREBROVASCULAR-DISEASES
THERAPEUTIC TREATMENT OF INSUFFICIENT PERFORMANCE IN CEREBROVASCULAR-DISEASES.
004718 04-17
CESIUM
DISTRIBUTION OF CESIUM IN THE ORGANISM AND ITS EFFECT ON THE NUCLEOTIDE METABOLISM ENZYMES.
003696 04-02
CESSATION
THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS.
004067 04-04
THE EFFECT OF AN INTENSIVE COURSE OF NEUROLEPTIC-DRUGS ON SCHIZOPHRENIC-PATIENTS AND THEIR SUBSEQUENT COURSE FOLLOWING THE CESSATION OF ALL NEUROLEPTIC-MEDICATION.
004341 04-08
WITHDRAWAL SYMPTOMS AFTER GRADUATED CESSATION OF IMIPRAMINE IN CHILDREN.
004630 04-15
APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT.
004651 04-15
CH-757
PHARMACOKINETIC-STUDY IN MAN OF THE CH-757 PREPARATION.
004440 04-11
CHALLENGE
NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE.
004329 04-08
CHALLENGES
MORPHINE CHALLENGES IN LEVO ALPHA ACETYLMETHADOL (LAAM) POSTADDICT RATS.
004259 04-04
CLINICAL DEPRESSIONS: DIAGNOSTIC AND THERAPEUTIC CHALLENGES.
004390 04-09
CHANGE
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS.
003971 04-03
SCHEDULE DEPENDENT CHANGE IN PUNISHED-RESPONDING AFTER DIAZEPAM IN RATS.
004146 04-04
ELECTROENCEPHALOGRAPHIC CHANGE IN PARKINSONIAN-PATIENTS TREATED WITH LEVODOPA CARBIDOPA.
004537 04-13
CHANGES
BRAIN BENZODIAZEPINE-RECEPTORS AND THEIR RAPID CHANGES AFTER SEIZURES IN THE MONGOLIAN-GERBIL.
003717 04-03
ETHANOL-INDUCED CHANGES IN CYCLIC-GUANOSINE-MONOPHOSPHATE METABOLISM IN MOUSE VESTIBULAR NUCLEI.
003784 04-03
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS.
003807 04-03
REGIONAL CHANGES IN [illegible] BINDING IN THE BRAINS OF MICE AFTER REMOVAL OF THE OLFACTORY-BULBS.
[illegible] 04-03
CHANGES IN GAMMA-AMINOBUTYRIC-ACID SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA.
003891 04-03
THE EFFECT OF PSYCHOSTIMULANTS ON CHANGES IN THE EXCITABILITY OF THE VISUAL-CEREBRAL-CORTEX.
003917 04-03
EFFECT OF DIAZEPAM ON STRESS-INDUCED CHANGES IN BRAIN HISTAMINE.
003932 04-03
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT.
003961 04-03
THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES.
003964 04-03
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION.
[illegible]
DRUG-INDUCED CHANGES IN THE COMPOSITION OF THE CEREBRAL FREE AMINO-ACID POOL.
004087 04-03
TIME-DEPENDENT CHANGES IN ANTEROGRADE SCOPOLAMINE-INDUCED AMNESIA IN RATS.
004102 04-04
DOPAMINE-RECEPTOR CHANGES FOLLOWING DESTRUCTION OF THE NIGROSTRIATAL PATHWAY: LACK OF A RELATIONSHIP TO ROTATIONAL-BEHAVIOR.
004220 04-04
BETA ENDORPHIN: CENTRAL SITES OF ANALGESIA, CATALEPSY AND BODY-TEMPERATURE CHANGES IN RATS.
004228 04-04
CHANGES OF RESPONSE TO DOPAMINERGIC DRUGS IN RATS SUBMITTED TO REM-SLEEP DEPRIVATION.
004239 04-04
METHYLMERCURY-INDUCED CHANGES IN OPERANT DISCRIMINATION BY THE PIGEON.
004271 04-06
CHANGES IN BLOOD PLASMA OSMOLALITY AND STATES OF MANIA.
004392 04-09
CHANGES IN PSYCHOPATHOLOGIC SYMPTOMS DURING 20 DAYS OF TREATMENT WITH ANTIDEPRESSANTS AND NEUROLEPTIC-DRUGS.
004415 04-09
ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN.
004500 04-13
EVENT-RELATED POTENTIAL CHANGES WITH MORPHINE IN NONADDICTED HUMANS.
004512 04-13
PATHOPHYSIOLOGICAL AND MORPHOLOGICAL CHANGES IN THE CNS DURING LONG-TERM ADMINISTRATION OF HALOPERIDOL.
[illegible] 04-15
DEPOT FLUPHENAZINE MAINTENANCE-TREATMENT AND ASSOCIATED WEIGHT CHANGES.
[illegible] 04-15
CHANGES IN THE ELECTROENCEPHALOGRAM AND THE COURSE OF PSYCHOSES DURING MASSIVE PSYCHOPHARMACOTHERAPY AND THE SIGNIFICANCE OF THESE CHANGES FOR IMPROVEMENTS IN PSYCHIATRIC-TREATMENT.
004697 04-17
FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES.
[illegible]
CHARACTER
CHARACTER AND MEANING OF QUASI-MORPHINE WITHDRAWAL PHENOMENA ELICITED BY METHYLXANTHINES.
[illegible]
CHARACTERISTIC
CHARACTERISTIC HYPERTHERMIA INDUCED BY [illegible] AND TRANYLCYPROMINE IN RATS.
[illegible]
CHARACTERISTICS
COMPARISON OF THE BINDING CHARACTERISTICS OF TRITIATED-OPIATES AND OPIOID-PEPTIDES.
[illegible]

CHARACTERISTICS OF THE INHIBITION OF RAT-BRAIN MONOAMINE-OXIDASE IN VITRO BY MD780515. 003874 04-03

THE PHARMACOLOGICAL CHARACTERISTICS OF THE TRANQUILIZING EFFECT OF HYDIPHEN. 004261 04-04

CHARACTERISTICS OF THE STIMULUS PRODUCED BY THE MIXTURE OF CANNABIDIOL WITH DELTA9 TETRAHYDROCANNABINOL. 004263 04-04

COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09

CHARACTERIZATION

DOPAMINE-RECEPTOR PURIFICATION AND CHARACTERIZATION. (UNPUBLISHED PAPER). 003661 04-01

PURIFICATION AND CHARACTERIZATION OF RAT PHEOCHROMOCYTOMA DOPAMINE-BETA-HYDROXYLASE. 003664 04-01

CHARACTERIZATION OF THE BASIC PROTEINS FROM RODENT PERIPHERAL-NERVOUS-SYSTEM MYELIN. 003665 04-01

CHARACTERIZATION OF TWO (3H)GLUTAMATE BINDING-SITES IN RAT HIPPOCAMPAL MEMBRANES. 003726 04-03

CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS. 003823 04-03

CHARACTERIZATION OF ENKEPHALIN RELEASE FROM RAT STRIATUM. 003909 04-03

CHEESE

IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT? 004640 04-15

CHEMICAL

TISSUE CHOLINE STUDIED USING A SIMPLE CHEMICAL ASSAY. 003828 04-03

CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03

RX-336-M, A NEW CHEMICAL TOOL IN THE ANALYSIS OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004093 04-04

CHEMICALLY-INDUCED

SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS. 003859 04-03

CHEMOSENSORS

OPIATE SYSTEM INFLUENCES CENTRAL RESPIRATORY CHEMOSENSORS. 003971 04-03

CHICK

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES – ARE THEY CELL ADHESION MOLECULES? 003724 04-03

EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP. 003952 04-03

CHICKEN

INHIBITION OF MONOAMINE-OXIDASE BY FURAZOLIDONE IN THE CHICKEN AND THE INFLUENCE OF THE ALIMENTARY FLORA THEREON. 003711 04-03

CHICKENS

THE EFFECTS OF TRYPTOPHAN AND MANIPULATIONS OF SEROTONERGIC-RECEPTORS ON TONIC IMMOBILITY IN CHICKENS. 004245 04-04

CHICKS

THE EFFECTS OF COLCHICINE AND VINBLASTINE ON MEMORY IN CHICKS. 004069 04-04

CHILD

CHILD PSYCHOPHARMACOLOGY. 004470 04-11

LSD: MY PROBLEM CHILD. 004497 04-12

CHILDHOOD

PREVALENCE OF DRUG-TREATMENT FOR HYPERACTIVITY AND OTHER CHILDHOOD BEHAVIOR-DISORDERS. 004713 04-17

CHILDHOOD-EPILEPSY

VALPROIC-ACID IN CHILDHOOD-EPILEPSY: ANTICONVULSIVE EFFICACY IN RELATION TO ITS PLASMA LEVELS. 004525 04-13

CHILDREN

STOPPING MEDICATION IN CHILDREN WITH EPILEPSY. 004447 04-11

PREVALENCE OF HYPERACTIVITY AND RELATED TREATMENTS AMONG ELEMENTARY SCHOOL CHILDREN. 004469 04-11

TARDIVE-DYSKINESIA AND OTHER DRUG-INDUCED MOVEMENT-DISORDERS AMONG HANDICAPPED CHILDREN AND YOUTH. 004614 04-15

WITHDRAWAL SYMPTOMS AFTER GRADUATED CESSATION OF IMIPRAMINE IN CHILDREN. 004630 04-15

BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS. 004658 04-15

EMOTIONAL-DISORDERS IN CHILDREN AND ADOLESCENTS: MEDICAL AND PSYCHOLOGICAL APPROACHES TO TREATMENT. 004743 04-17

CHLORAL-HYDRATE

ORAL AND RECTAL ABSORPTION OF CHLORAL-HYDRATE AND ITS BETAINE COMPLEX. 004554 04-13

CHLORCYCLIZINE

EFFECT OF L HISTIDINE AND CHLORCYCLIZINE ON APOMORPHINE-INDUCED CLIMBING-BEHAVIOUR AND METHAMPHETAMINE STEREOTYPY IN MICE. 004147 04-04

CHLORDIAZEPOXIDE

FOOD PREFERENCE FOLLOWING ACUTE OR CHRONIC CHLORDIAZEPOXIDE ADMINISTRATION: TOLERANCE TO AN ANTINEOPHOBIC ACTION. 004090 04-04

HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER). 004420 04-10

CLINICAL PHARMACOKINETICS OF CHLORDIAZEPOXIDE IN PATIENTS WITH ALCOHOLIC HEPATITIS. 004473 04-11

CHLORDIAZEPOXIDE-HYDROCHLORIDE

NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

CHLORIMIPRAMINE

A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09

CHLORNALTREXAMINE

PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE. 004082 04-04

CHLOROAMPHETAMINE

INTERACTIONS BETWEEN A MONOFLUORINATED ANALOGUE OF P CHLOROAMPHETAMINE AND 5 HYDROXYTRYPTAMINE IN BRAIN. 003719 04-03

THE EFFECTS OF P CHLOROAMPHETAMINE ADMINISTRATION ON LOCOMOTOR-ACTIVITY AND SEROTONIN IN NEONATAL AND ADULT RATS. (UNPUBLISHED PAPER). 004169 04-04

CHLOROBENZOYL-CHLORO-METHYL-NA-GLYCYLGLYCINANILIDE

PHARMACOLOGY OF 2 O CHLOROBENZOYL-CHLORO-METHYL-NA-GLYCYLGLYCINANILIDE HYDRATE (45-0088-S), A COMPOUND WITH BENZODIAZEPINE-LIKE PROPERTIES. 003692 04-02

CHLOROPHENYLALANINE

SYNTHESIS AND BIOCHEMICAL AND PHARMACOLOGIC PROPERTIES OF ANALOGUES AND DERIVATIVES OF P CHLOROPHENYLALANINE. 003691 04-02

DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02

ANTAGONISM OF ETHANOL-INDUCED DECREASE IN LH BY P CHLOROPHENYLALANINE: LACK OF CORRELATION WITH ALTERED SEROTONERGIC MECHANISMS. 003748 04-03

EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL. 003883 04-03

THE EFFECT OF P CHLOROPHENYLALANINE ON THE DISTRIBUTION OF BIOGENIC-AMINES IN THE BRAIN, AND ON MEMORY IN RATS. 004088 04-04

INTERACTION OF P CHLOROPHENYLALANINE, MIANSERINE AND DANITRACEN WITH AMPHETAMINE. 004599 04-15

CHLOROPHENYLPIPERAZINE
5 HYDROXYTRYPTAMINE-LIKE PROPERTIES OF M-CHLOROPHENYLPIPERAZINE: COMPARISON WITH QUIPAZINE.
004210 04-04
CHLOROXYMORPHAMINE
PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE.
004[illegible] 04-04
CHLORPHENTERMINE
EFFECT OF DESMETHYLIMIPRAMINE ON TISSUE DISTRIBUTION AND ANORECTIC-ACTIVITY OF CHLORPHENTERMINE IN RATS.
004179 04-04
CHLORPROMAZINE
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003731 04-03
THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS.
003[illegible] 04-03
INHIBITION OF LYSOSOMAL LIPASES BY CHLORPROMAZINE: A POSSIBLE MECHANISMS OF STABILIZATION.
003[illegible] 04-03
INTERACTIONS BETWEEN CHLORPROMAZINE AND SOME OF ITS METABOLITES.
00[illegible] 04-03
CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS.
004133 04-04
EFFECTS OF CHLORPROMAZINE ON ESCAPE AND AVOIDANCE RESPONSES: A CLOSER LOOK.
004226 04-04
PROTEIN BINDING OF CHLORPROMAZINE IN CEREBROSPINAL-FLUID AND SERUM.
004311 04-08
A TWELVE-YEAR FOLLOWUP OF THE NIMH-PRB HIGH-DOSE CHLORPROMAZINE STUDY OF CHRONIC SCHIZOPHRENICS -- IMPLICATIONS FOR DEINSTITUTIONALIZATION. (UNPUBLISHED PAPER).
004323 04-08
NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE.
004329 04-08
SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION.
004518 04-13
INTERACTION OF CHLORPROMAZINE WITH THE TRANSPORT SYSTEM OF GLUCOSE IN HUMAN ERYTHROCYTES.
004529 04-13
THE EFFECT OF CHLORPROMAZINE AND MAGEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ.
004541 04-13
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO.
004544 04-13
CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES.
004[illegible] 04-13
HUMAN SOCIAL CONVERSATION: EFFECTS OF ETHANOL, SECOBARBITAL AND CHLORPROMAZINE.
004[illegible] 04-14
CHLORPROMAZINE ANALYSIS IN HUMAN PLASMA. (UNPUBLISHED PAPER).
004[illegible] 04-15
CHLORPROMAZINE-HCL
RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION.
004[illegible] 04-06
CHLORPROMAZINE-[illegible]
EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND CYCLIC-AMP IN FED MICE.
003[illegible] 04-03
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY.
004[illegible] 04-0[illegible]
CHOICE
CHOICE BETWEEN FOOD AND HEROIN: EFFECTS OF MORPHINE, NALOXONE, AND SECOBARBITAL.
004[illegible] 04-04

DRUG PREFERENCE IN PRIMATES: [illegible] COMPONENTS OF PENTOBARBITAL, DIAZEPAM AND PLACEBO.
004[illegible] 04-14
CHOICES
PHARMACOTHERAPY AND PSYCHOTHERAPY FOR AMBULATORY DEPRESSION: EFFICACY AND CHOICES.
00[illegible] 04-[illegible]
CHOLECYSTOKININ
NEWLY SYNTHESIZED CHOLECYSTOKININ IN SUBCELLULAR FRACTIONS OF THE RAT-BRAIN.
00[illegible] 04-01
CHOLECYSTOKININ-OCTAPEPTIDE
INTRAVENTRICULAR CHOLECYSTOKININ-OCTAPEPTIDE PRODUCES HYPERGLYCEMIA IN RATS.
00[illegible] 04-0[illegible]
CHOLERA-TOXIN
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS.
00[illegible] 04-0[illegible]
CHOLINE
ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXINE.
00[illegible] 04-03
TISSUE CHOLINE STUDIED USING A SIMPLE CHEMICAL ASSAY.
00[illegible] 04-03
EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS.
003[illegible] 04-03
THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS.
00[illegible] 04-03
CNS EFFECTS OF CHOLINE ADMINISTRATION: EVIDENCE FOR TEMPORAL DEPENDENCE.
00[illegible] 04-03
THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES.
00[illegible] 04-03
CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS.
00[illegible] 04-04
MECHANISM OF LITHIUM INCLUDED ELEVATION IN RED-BLOOD-CELL CHOLINE CONTENT: AN IN VITRO ANALYSIS.
004511 04-13
A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM.
004[illegible] 04-13
ERYTHROCYTE CHOLINE CONCENTRATIONS ARE ELEVATED IN MANIC-PATIENTS.
00[illegible] 04-13
GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR [illegible], CHOLINE, AND THEIR ACETYLESTERS.
00[illegible] 04-16
CHOLINE-ACETYL-TRANSFERASE
PHYSICAL AND KINETIC PROPERTIES OF CHOLINE-ACETYL-TRANSFERASE FROM RAT AND BOVINE BRAIN.
003676 04-01
CHOLINE-ACETYLTRANSFERASE
ACETYLCHOLINE AND CHOLINE-ACETYLTRANSFERASE.
00[illegible] 04-0[illegible]
CHOLINE-CHLORIDE
PHARMACOKINETIC-STUDIES WITH CHOLINE-CHLORIDE: A PRELIMINARY REPORT.
004514 04-13
CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE [illegible] IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS.
00[illegible] 04-11
CHOLINERGIC
THE EFFECT OF CHOLINERGIC SUBSTANCES ON [illegible] RESPONSES IN SPECIFIC NUCLEI OF THE THALAMUS.
00[illegible] 04-0[illegible]
[illegible] RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS.
00[illegible] 04-0[illegible]
SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC [illegible].
00[illegible] 04-0[illegible]
EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC [illegible] TERMINALS IN THE MOUSE ADRENAL-MEDULLA.
00[illegible] 04-0[illegible]
5' [illegible] [illegible] [illegible] IN [illegible] CHOLINERGIC SYNAPTIC VESICLES.
00[illegible] 04-0[illegible]

POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT. 004153 04-04

CHOLINERGIC MECHANISMS IN MANIA AND DEPRESSION: QUESTIONS OF SPECIFICITY. 004374 04-09

THE STATE OF THE ADRENERGIC AND CHOLINERGIC SYSTEMS IN SCHIZOPHRENIC-PATIENTS DURING PSYCHPHARMACOTHERAPY. 004526 04-13

CHOLINOLYTIC
SCOPOLAMINE IN CHOLINOLYTIC TREATMENT. 004468 04-11

CHOLINOMIMETICS
CHOLINOMIMETICS IN HUNTINGTONS-DISEASE. 004442 04-11

CHOLINOMIMETICS IN MANIA, SCHIZOPHRENIA, AND MEMORY-DISORDERS. 004703 04-17

CHROMAFFIN
ACCUMULATION OF AMANTADINE BY ISOLATED CHROMAFFIN GRANULES. 003866 04-03

CHROMATOGRAPHY
GAS-CHROMATOGRAPHY, MASS-SPECTROMETRY, AND COMBINED CHROMATOGRAPHY MASS-SPECTROMETRY. 004290 04-06

CHROMOSOMES
FRAGILE SITES IN HUMAN CHROMOSOMES I. THE EFFECT OF METHIONINE ON THE XQ-FRAGILE-SITE. 004515 04-13

CHRONIC-OUTPATIENTS
USING DRUG-HOLIDAYS FOR CHRONIC-OUTPATIENTS. 004742 04-17

CHRONIC-TREATMENT
SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03

REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE. 003964 04-03

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES. 004002 04-03

EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. 004026 04-03

ELECTROCARDIOGRAPHIC-CHANGES IN RATS DURING CHRONIC-TREATMENT WITH ANTIDEPRESSANT AND NEUROLEPTIC-DRUGS. 004284 04-05

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

CIGARETTE
THE ROLE OF NICOTINE IN THE BEHAVIORAL-ASPECTS OF CIGARETTE SMOKING. 004575 04-14

CIRCADIAN-VARIATION
CIRCADIAN-VARIATION OF CYCLIC-AMP IN THE RAT PINEAL-GLAND. 003938 04-03

CIRCLING
INVOLVEMENT OF DOPAMINE IN CIRCLING RESPONSES TO MUSCIMOL DEPENDS ON INTRANIGRAL SITE OF INJECTION. 004158 04-04

CIRCLING-BEHAVIOR
THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS. 004117 04-04

CIRCLING-BEHAVIOUR
THE ROLE OF NIGRAL PROJECTIONS TO THE THALAMUS IN DRUG-INDUCED CIRCLING-BEHAVIOUR IN THE RAT. 004205 04-04

CIRCULATION
ACTION OF 4 AMINOPYRIDINE ON THE CEREBRAL CIRCULATION. 003781 04-03

CIRCUMSTANCES
THE EFFECT OF MEBICAR ON THE CONDITION OF ANIMALS UNDER CERTAIN EXTREME CIRCUMSTANCES. 004262 04-04

CIS-ISOMERS
PLASMA LEVELS OF THE CIS-ISOMERS AND TRANS-ISOMERS OF DOXEPIN AND DESMETHYLDOXEPIN AFTER ADMINISTRATION OF DOXEPIN TO PATIENTS. 004355 04-09

CITRATE
INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE. 004044 04-03

LITHIUM EFFECTS ON CITRATE METABOLISM IN HUMANS AND RATS. 004537 04-13

CLASSICALLY
EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

CLASSIFICATION
TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09

THE CLASSIFICATION OF SLEEP-DISORDERS AND THE TREATMENT OF VARIOUS FORMS OF SOMNAMBULISM. 004461 04-11

CLEBOPRIDE
COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03

CLIMBING
USE OF THE INTRACEREBRAL INJECTION TECHNIQUE TO ELUCIDATE MECHANISMAS OF APOMORPHINE CLIMBING AND ITS ANTAGONISM IN THE MOUSE. 004092 04-04

CLIMBING-BEHAVIOUR
EFFECT OF L HISTIDINE AND CHLORCYCLIZINE ON APOMORPHINE-INDUCED CLIMBING-BEHAVIOUR AND METHAMPHETAMINE STEREOTYPY IN MICE. 004147 04-04

CLINIC
THE TREATMENT OF INSOMNIA THROUGH HOMEOPATHY IN A CLINIC. 004484 04-11

CLINICAL
PHARMACOLOGICAL-BASES OF PSYCHONEUROENDOCRINOLOGY: PRECLINICAL ASSESSMENT OF CLINICAL FACTS. 003735 04-03

PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03

THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH. 003882 04-03

CLINICAL AND BIOCHEMICAL-CORRELATIONS IN ABRUPT DISCONTINUATION OF PSYCHOPHARMACOTHERAPY. 004330 04-08

HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004332 04-08

THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08

A CLINICAL AND PHARMACODYNAMIC EVALUATION OF SULPIRIDE. 004338 04-08

LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BICHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08

CLINICAL DEPRESSIONS: DIAGNOSTIC AND THERAPEUTIC CHALLENGES. 004350 04-09

CLINICAL SIGNIFICANCE OF THE ERYTHROPLASMATIC RATIO OF LITHIUM. 004357 04-09

CLINICAL NEUROPHYSIOLOGICAL PROPERTIES OF ANTIDEPRESSANTS. 004373 04-09

CLINICAL RESULTS OBTAINED WITH THE USE OF LYSONEURO IN DEPRESSIVE-SYNDROMES. 004397 04-09

CLINICAL USE OF A NEW BENZODIAZEPINE, PRAZEPAM. 004421 04-10

ARE THE ENKEPHALINS INVOLVED IN PARKINSONS-DISEASE? CLINICAL AND NEUROENDOCRINE RESPONSES TO NALOXONE ADMINISTRATION. 004431 04-11

MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

CLINICAL APPLICATION OF ANTIANDROGENS IN PSYCHIATRY. 004457 04-11

CLINICAL PHARMACOKINETICS OF CHLORDIAZEPOXIDE IN PATIENTS WITH ALCOHOLIC HEPATITIS. 004473 04-11

CLINICAL PHARMACOKINETICS OF BENZODIAZEPINES. 004524 04-13

TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA-HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY.
004571 04-14
EFFECTS OF NEUROLEPTIC ADJUSTMENT ON CLINICAL CONDITION AND TARDIVE-DYSKINESIA IN SCHIZOPHRENIC-PATIENTS.
004595 04-15
CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS.
004600 04-15
CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE-CHLORIDE IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS.
004604 04-15
EPILEPTOGENIC PROPERTIES OF ENFLURANE AND THEIR CLINICAL INTERPRETATION.
004609 04-15
ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT.
004666 04-15
SALIVA BENZODIAZEPINE LEVELS AND CLINICAL OUTCOME IN DETOXIFYING ALCOHOLIC-PATIENTS.
004671 04-16
THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY.
004681 04-16
THE USE OF CLINICAL KINETIC DATA IN TREATMENT WITH ANTIDEPRESSANT-DRUGS.
004686 04-16

CLINICAL-EFFECT
HYPERVENTILATION-SYNDROME AND BETA-RECEPTOR FUNCTION — CLINICAL-EFFECT OF BETA BLOCKER UPON THE SYNDROME.
004459 04-11

CLINICAL-EFFECTS
CLINICAL-EFFECTS OF BETA ENDORPHIN INFUSIONS.
004340 04-09

CLINICAL-EVALUATION
CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES.
004404 04-09
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD.
004491 04-11
CLINICAL-EVALUATION OF BROMPERIDOL VERSUS HALOPERIDOL IN PSYCHOTIC-PATIENTS.
004562 04-14

CLINICAL-PHARMACOLOGY
CLINICAL-PHARMACOLOGY: DRUG ABSORPTION.
004740 04-17

CLINICAL-PICTURE
CHANGES IN THE CLINICAL-PICTURE AND THE COURSE OF PSYCHOSES DURING MASSIVE PSYCHOPHARMACOTHERAPY AND THE SIGNIFICANCE OF THESE CHANGES FOR IMPROVEMENTS IN PSYCHIATRIC-TREATMENT.
004699 04-17

CLINICAL-PRACTICE
AMITRIPTYLINE AND NORTRIPTYLINE PLASMA LEVELS MONITORING: PERSPECTIVE IN CLINICAL-PRACTICE.
004675 04-16

CLINICAL-RESPONSE
CLINICAL-RESPONSE AND BLOOD LEVELS IN THE TREATMENT OF DEPRESSION WITH A NEW ANTIDEPRESSANT-DRUG, AMOXAPINE.
004356 04-09
LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE).
004365 04-09
PHARMACOKINETICS AND CLINICAL-RESPONSE TO TRICYCLIC-ANTIDEPRESSANTS.
004370 04-09
THE RELATIONSHIPS BETWEEN CLINICAL-RESPONSE, PSYCHOPHYSIOLOGICAL-VARIABLES AND PLASMA LEVELS OF AMITRIPTYLINE AND DIAZEPAM IN NEUROTIC-OUTPATIENTS.
[illegible] 04-10
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HYDERGINE ERGOT ALKALOID TREATMENT FOR DEMENTIA: PRELIMINARY REPORT.
[illegible] 04-11
PROLACTIN AND NEUROLEPTIC-DRUGS: A BIOCHEMICAL INDEX OF CLINICAL-RESPONSE?
[illegible] 04-15
PLASMA NOMIFENSINE CONCENTRATIONS: CARDIOLOGICAL EFFECTS AND CLINICAL-RESPONSE.
[illegible] 04-15

CLINICAL-REVIEW
CLINICAL-REVIEW OF BETA-BLOCKERS IN ANXIETY.
004464 04-11

CLINICAL-STUDY
ANXIOUS-DEPRESSIVE-SYNDROME: CLINICAL-STUDY OF A NEW BENZODIAZEPINE, PRAZEPAM.
[illegible] 04-09
VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY.
[illegible] 04-09

CLINICAL-TRIAL
CLINICAL-TRIAL OF PSYCHOTHERAPIES IS UNDER WAY.
[illegible] 04-09
A COMPARATIVE CLINICAL-TRIAL WITH THE TRANQUILIZER TRAZODONE AND THE TRICYCLIC-ANTIDEPRESSANT CLOMIPRAMINE.
[illegible] 04-09
DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER).
[illegible] 04-09
CONTROLLED CLINICAL-TRIAL OF MIANSERIN IN THE TREATMENT OF DEPRESSION.
004417 04-09
CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOLOGY AND OPEN LABEL CLINICAL-TRIAL.
[illegible] 04-13

CLOBAZAM
ANTIEPILEPTIC-EFFECT OF CLOBAZAM IN LENNOX-GASTAUT-SYNDROME.
004479 04-11

CLOFELIN
THE EFFECT OF ANTIDEPRESSANTS ON THE HYPOTENSIVE-EFFECT OF CLOFELIN IN RATS.
[illegible] 04-03

CLOMIPRAMINE
A COMPARATIVE CLINICAL-TRIAL WITH THE TRANQUILIZER TRAZODONE AND THE TRICYCLIC-ANTIDEPRESSANT CLOMIPRAMINE.
[illegible] 04-09

CLONAZEPAM
TREATMENT OF EPILEPSIES WITH CLONAZEPAM (ANTELEPSIN).
[illegible] 04-11
A COMPARATIVE-STUDY OF INTRAVENOUS LORAZEPAM AND CLONAZEPAM IN STATUS-EPILEPTICUS.
[illegible] 04-11

CLONIDINE
THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE.
[illegible] 04-03
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS.
[illegible] 04-03
CLONIDINE AND THE PRIMATE LOCUS-COERULEUS: EVIDENCE SUGGESTING ANXIOLYTIC AND ANTIWITHDRAWAL EFFECTS. (UNPUBLISHED PAPER).
[illegible] 04-03
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY [3H]CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS.
[illegible] 04-03
PRELIMINARY TRIAL OF CLONIDINE TREATMENT IN TWO PATIENTS SUFFERING FROM CHRONIC SCHIZOPHRENIA.
[illegible]

CLONIDINE-INDUCED
CLONIDINE-INDUCED HYPERPHAGIA IN MONKEYS: EVIDENCE FOR ALPHA2-NORADRENERGIC-RECEPTOR MEDIATION.
[illegible] 04-04

CLOPIPAZAN
CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOLOGY AND OPEN LABEL CLINICAL-TRIAL.
[illegible]

CLORAZEPATE-DIPOTASSIUM
PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM).
[illegible]

CLORGYLINE
ALTERATIONS IN NORADRENERGIC FUNCTION DURING CLORGYLINE TREATMENT.
[illegible]

CLOXAZOLAM
PHARMACOKINETICS OF CLOXAZOLAM IN MAN AFTER SINGLE AND MULTIPLE ORAL DOSES.
[illegible]

CLOZAPINE
THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS.
[illegible]

SOME EFFECTS OF CLOZAPINE ON PUNISHED-RESPONDING BY MICE AND SQUIRREL-MONKEYS. 004224 04-04

A CASE OF ACUTE AGRANULOCYTOSIS DURING TREATMENT WITH CLOZAPINE. 004642 04-15

CNS

IMMUNODETECTION OF ACH-RECEPTOR IN THE CNS. (UNPUBLISHED PAPER). 003670 04-01

ACYLCYANAMIDES, ACYLUREA, AND-VARIOUS SUBSTITUTED ARYLALLOPHANATES; EFFECT ON THE CNS. 003689 04-02

CNS EFFECTS OF CHOLINE ADMINISTRATION: EVIDENCE FOR TEMPORAL DEPENDENCE. 003996 04-03

THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

N,N DIISOPROPYLTRYPTAMINE (DIPT) AND 5 METHOXYDIISOPROPYLTRYPTAMINE (5 MEO-DIPT). TWO ORALLY ACTIVE TRYPTAMINE ANALOGS WITH CNS ACTIVITY. 004310 04-07

CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY). 004519 04-13

PATHOPHYSIOLOGICAL AND MORPHOLOGICAL CHANGES IN THE CNS DURING LONG-TERM ADMINISTRATION OF HALOPERIDOL. 004633 04-15

CNS-ACTING

EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

COBALT

STUDIES ON GAMMA AMINOBUTYRIC-ACID TRANSPORT IN COBALT EXPERIMENTAL EPILEPSY IN THE RAT. 003990 04-03

COCAINE

THE EFFECTS OF ELECTRIC-SHOCK ON RESPONDING MAINTAINED BY COCAINE IN RHESUS-MONKEYS. 004071 04-04

COCAINE AND SEIZURE PROTECTION IN MICE OF VARYING BRAIN WEIGHTS. 004103 04-04

SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

REWARD AND DETECTION THRESHOLDS FOR BRAIN-STIMULATION: DISSOCIATIVE-EFFECTS OF COCAINE. 004160 04-04

DISCRIMINATIVE-STIMULUS PROPERTIES OF COCAINE RELATED TO AN ANXIOGENIC ACTION. 004219 04-04

BEHAVIORAL-EFFECTS OF SELF-ADMINISTERED COCAINE: RESPONDING MAINTAINED ALTERNATELY BY COCAINE AND ELECTRIC-SHOCK IN SQUIRREL-MONKEYS. 004225 04-04

EFFECT OF COCAINE AND LIDOCAINE ON THE EXPRESSION OF KINDLED SEIZURES IN THE RAT. 004233 04-04

COCAINE-REINFORCED

CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS. 004133 04-04

COCHLEAR

THE EFFECT OF FRUSEMIDE PIRETANIDE AND BUMETANIDE ON COCHLEAR SUCCINIC-DEHYDROGENASE. 003757 04-03

CODEINE

COMPARATIVE-STUDIES OF THE PHARMACOLOGICAL-EFFECTS OF THE D-ISOMERS AND L-ISOMERS OF CODEINE. 004084 04-04

GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004687 04-16

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

COGNITIVE

AN OVERVIEW OF PHARMACOLOGIC-TREATMENT OF COGNITIVE DECLINE IN THE AGED. 004482 04-11

BLOOD-PRESSURE AND COGNITIVE FUNCTIONING. 004492 04-11

THE EFFECTS OF PSYCHOTROPIC-MEDICATION ON COGNITIVE CONTROL MEASURES. (PH.D. DISSERTATION). 004523 04-13

COLCHICINE

THE EFFECTS OF COLCHICINE AND VINBLASTINE ON MEMORY IN CHICKS. 004069 04-04

COLD

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

COMA

THE TWO SURVIVAL CASES OF ALPHA-PATTERN COMA CAUSED BY LARGE AMOUNTS OF HYPNOTICA AND NEUROLEPTICA. 004608 04-15

PROLONGED BENZODIAZEPINE COMA. 004653 04-15

COMBINATION

THE BEHAVIORAL-EFFECTS OF D-AMPHETAMINE ALONE AND IN COMBINATION WITH ACUTE AND CHRONIC MORPHINE TREATMENTS IN RATS. 003915 04-03

INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03

NEUROLEPTIC TRICYCLIC-ANTIDEPRESSANT COMBINATION: PHARMACOLOGICAL-ASPECTS AND THERAPEUTIC INTEREST. 004501 04-13

ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA. 004507 04-13

NEUROLOGICAL TOLERANCE OF LITHIUM AND PSYCHOTROPIC-DRUGS IN COMBINATION: 265 CASES. 004594 04-15

COMBINATIONS

NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

SIDE-EFFECTS AND UNDESIRABLE COMBINATIONS OF PSYCHOTROPIC-MEDICATIONS. 004663 04-15

COMBINED

GAS-CHROMATOGRAPHY, MASS-SPECTROMETRY, AND COMBINED CHROMATOGRAPHY MASS-SPECTROMETRY. 004290 04-06

NEUROTROPIC-DRUGS AS COMEDICATION TO PSYCHOTROPICS: COMBINED ADMINISTRATION OF A NEUROTROPIC-DRUG AND A TETRACYCLIC-ANTIDEPRESSANT. 004396 04-09

A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA. 004584 04-14

COMEDICATION

NEUROTROPIC-DRUGS AS COMEDICATION TO PSYCHOTROPICS: COMBINED ADMINISTRATION OF A NEUROTROPIC-DRUG AND A TETRACYCLIC-ANTIDEPRESSANT. 004396 04-09

COMPARATIVE

COMPARATIVE ANALGESIC, BEHAVIORAL, AND DEPENDENCE PROPERTIES OF MORPHINE AND O METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONEOXIME HCL. 003707 04-02

A COMPARATIVE CLINICAL-TRIAL WITH THE TRANQUILIZER TRAZODONE AND THE TRICYCLIC-ANTIDEPRESSANT CLOMIPRAMINE. 004380 04-09

COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09

A COMPARATIVE EVALUATION OF THE EFFICACY OF SOME THERAPEUTIC METHODS USED IN DELIRIUM-TREMENS. 004486 04-11

A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM. 004543 04-13

COMPARATIVE-EFFECTS

UNIT ACTIVITY IN MEDIAL THALAMUS: COMPARATIVE-EFFECTS OF CAFFEINE AND AMPHETAMINE. 003752 04-03

COMPARATIVE-EFFECTS OF AMANTADINE AND AMFONELIC-ACID ON DOPAMINE METABOLISM IN RAT-BRAIN. 003796 04-03

COMPARATIVE-EFFECTS OF SUBSTITUTED PHENYLETHYLAMINES ON BRAIN SEROTONERGIC MECHANISMS. 003854 04-03

COMPARATIVE-EFFECTS OF PHENELZINE AND AMITRIPTYLINE: A PLACEBO-CONTROLLED-TRIAL. 004402 04-09

COMPARATIVE-STUDIES

COMPARATIVE-STUDIES OF THE PHARMACOLOGICAL-EFFECTS OF THE D-ISOMERS AND L-ISOMERS OF CODEINE. 004084 04-04

COMPARATIVE-STUDY

A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLIA OF SEVERAL SPECIES. 003779 04-02

A COMPARATIVE-STUDY OF INTRAVENOUS LORAZEPAM AND CLONAZEPAM IN STATUS-EPILEPTICUS. 004487 04-11

A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD. 004491 04-11

COMPARING

A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09

COMPARISON

QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03

PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE. 003749 04-03

COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS. 003758 04-03

COMPARISON OF THE BINDING CHARACTERISTICS OF TRITIATED OPIATES AND OPIOID-PEPTIDES. 003802 04-03

COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN. 003831 04-03

COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03

IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03

L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03

A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY. 004054 04-03

A COMPARISON BETWEEN SOME BIOCHEMICAL-EFFECTS AND BEHAVIOURAL-EFFECTS PRODUCED BY NEUROLEPTICS. 004116 04-04

COMPARISON OF THE EFFECTS OF BETA ENDORPHIN AND MORPHINE ON EXPLORATORY-BEHAVIOUR AND SOCIOSEXUAL-BEHAVIOUR IN THE MALE RAT. 004178 04-04

5 HYDROXYTRYPTAMINE-LIKE PROPERTIES OF M CHLOROPHENYLPIPERAZINE: COMPARISON WITH QUIPAZINE. 004210 04-04

A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004323 04-08

TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09

VALUE OF PROPANIDID IN ELECTROCONVULSIVE-THERAPY (COMPARISON WITH THIOPENTONE). 004379 04-09

A COMPARISON OF TRAZODONE AND DOTHIEPIN IN DEPRESSION. 004394 04-09

COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS. 004436 04-11

DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO. 004566 04-16

A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004584 04-16

COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004592 04-16

COMPARISONS

SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004132 04-04

COMPETITIVE

THE DOPAMINE-RECEPTOR ANTAGONIST DOMPERIDONE IS ALSO A COMPETITIVE ANTAGONIST AT ALPHA1-ADRENOCEPTORS. 003763 04-03

COMPLIANCE

PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004475 04-11

THE NEGATIVE INFLUENCE OF FAMILIES ON COMPLIANCE. 004745 04-17

COMPOSITION

DRUG-INDUCED CHANGES IN THE COMPOSITION OF THE CEREBRAL FREE AMINO-ACID POOL. 004001 04-03

COMPREHENSIVE

SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS. 004453 04-11

CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

COMPUTER-ANALYZED

COMPUTER-ANALYZED ELECTROENCEPHALOGRAM TO PREDICT THE THERAPEUTIC OUTCOME IN SCHIZOPHRENIA. 004683 04-16

COMPUTERIZED

THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004439 04-11

COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14

COMT-A

COMT-A AND COMT-B: CATALYTIC DIFFERENCES AND ROLE OF DISULFIDE BONDS. 003937 04-03

COMT-B

COMT-A AND COMT-B: CATALYTIC DIFFERENCES AND ROLE OF DISULFIDE BONDS. 003937 04-03

CONCENTRATION

EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT. 003870 04-03

ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE. 003879 04-03

THE INFLUENCE OF D-AMPHETAMINE ON RAT-BRAIN STRIATAL REDUCED BIOPTERIN CONCENTRATION. 003922 04-03

SERUM CONCENTRATION OF ANTICONVULSANTS, PHARMACOKINETIC FINDINGS AND THEIR PRACTICAL APPLICATION. [illegible]

USE OF PLASMA CONCENTRATION DETERMINATIONS. [illegible]

PLASMA NORTRIPTYLINE CONCENTRATION: CARDIOVASCULAR EFFECTS AND CLINICAL-RESPONSE. [illegible]

CONCENTRATIONS

CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS. 003731 04-03

BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS. [illegible]

EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP. 003952 04-03

PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11

ERYTHROCYTE CHOLINE CONCENTRATIONS ARE ELEVATED IN MANIC-PATIENTS. 004521 04-13

CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM. 004545 04-13

CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004559 04-13

THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY. 004681 04-16

MEASUREMENT OF NEUROLEPTIC CONCENTRATIONS BY GLC AND RADIORECEPTOR ASSAY. 004682 04-16

A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004684 04-16

DRUG CONCENTRATIONS IN NEUROPSYCHIATRY. 004735 04-17

CONDENSATION
SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02

CONDITIONED
THE USE OF CONDITIONED SUPPRESSION TO EVALUATE THE NATURE OF NEUROLEPTIC-INDUCED AVOIDANCE-DEFICITS. 004070 04-04

NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND CONDITIONED TASTE-AVERSION. 004121 04-04

CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

THE EFFECT OF THE NEW ANTIDEPRESSANT INKASAN ON THE BIOELECTRICAL-ACTIVITY OF THE BRAIN AND ON CONDITIONED REFLEXES. 004212 04-04

CONDITIONING
OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003798 04-03

CONDITIONING OF AN INTEROCEPTIVE DRUG STIMULUS TO DIFFERENT EXTEROCEPTIVE CONTEXTS. 004142 04-04

CONDUCTANCE
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13

CONDUCTION
MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

CONFIRMATION
MASS SCREENING AND CONFIRMATION OF DIAZEPAM IN URINE BY EMIT THIN-LAYER-CHROMATOGRAPHY. 004672 04-16

CONFLICT
DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER). 004401 04-09

CONFLICT-BEHAVIOR
EFFECT OF SODIUM-DIPROPYLACETATE ON CONFLICT-BEHAVIOR IN RATS. 004192 04-04

CONFORMATIONALLY
EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN. 003794 04-03

CONJUGATED
PRESENCE OF CONJUGATED CATECHOLAMINES IN RAT-BRAIN: A NEW METHOD OF ANALYSIS OF CATECHOLAMINE-SULFATES. 004286 04-06

CONSCIOUS
VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03

MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS. 003744 04-03

EFFECT OF AMPHETAMINE ON PLASMA CORTICOSTERONE IN THE CONSCIOUS RAT. 003888 04-03

CENTRAL CARDIOVASCULAR-EFFECTS AND BIOCHEMICAL-EFFECTS OF BACLOFEN IN THE CONSCIOUS RAT. 003965 04-03

HYPOTENSION ALTERS THE RELEASE OF CATECHOLAMINES IN THE HYPOTHALAMUS OF THE CONSCIOUS RABBIT. 003968 04-03

CONSENT
MISINFORMED CONSENT. 004326 04-08

CONSEQUENCES
THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE. 003958 04-03

CONSISTENCY
CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13

CONSISTENT
CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED. 003911 04-03

CONSTITUTIONAL
THE CONSTITUTIONAL RIGHT-TO-REFUSE ANTIPSYCHOTIC-MEDICATIONS. 004496 04-12

CONSUMMATORY
MORPHINE ANTAGONISTS AND CONSUMMATORY BEHAVIORS. 004196 04-04

CONTEMPORARY
CONTEMPORARY PROBLEMS IN THE PHARMACOLOGICAL-TREATMENT OF PARKINSONISM. 004628 04-15

CONTEXTS
CONDITIONING OF AN INTEROCEPTIVE DRUG STIMULUS TO DIFFERENT EXTEROCEPTIVE CONTEXTS. 004142 04-04

CONTRIBUTION
CONTRIBUTION OF SOCIAL FACTORS TO OPIATE-INDUCED ACTIVATION IN THE MOUSE. 004156 04-04

CONTROL
ROLE OF THE ANTERIOR PITUITARY GABA-RECEPTOR IN THE CONTROL OF PROLACTIN RELEASE. 003809 04-03

NEUROTRANSMITTER CONTROL OF HYPOTHALAMIC PITUITARY THYROID-FUNCTION IN RATS. 003942 04-03

IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA. 004011 04-03

AVOIDANCE ENHANCEMENT AND DISCRIMINATIVE RESPONSE CONTROL BY ANXIOLYTICS WITH DRUGS ACTING ON THE GABA SYSTEM. 004193 04-04

A MICROCOMPUTER SYSTEM FOR THE CONTROL OF BEHAVIORAL EXPERIMENTS. 004287 04-06

THE EFFECTS OF PSYCHOTROPIC-MEDICATION ON COGNITIVE CONTROL MEASURES. (PH.D. DISSERTATION). 004523 04-13

CONTROLLED
MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03

VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY. 004392 04-09

CONTROLLED CLINICAL-TRIAL OF NOMIFENSINE IN THE TREATMENT OF DEPRESSION. 004417 04-09

CONTROLLED-STUDY
A CONTROLLED-STUDY OF L-DOPA IN SCHIZOPHRENIA WITH REFERENCE TO THE THEORY OF DOPAMINERGIC-RECEPTOR HYPERSENSITIVITY. 004312 04-08

CONTROLLED-TRIAL
A CONTROLLED-TRIAL OF OXYPERTINE IN TARDIVE-DYSKINESIA. 004611 04-15

CONTROLLING
COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS. 004438 04-11

CONTROLS
5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS. 003710 04-03
PROLACTIN AND GROWTH-HORMONE STUDIES IN SCHIZOPHRENIC-PATIENTS AND NORMAL CONTROLS. 004538 04-13

CONVERGENT
CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03

CONVERSATION
HUMAN SOCIAL CONVERSATION: EFFECTS OF ETHANOL, SECOBARBITAL AND CHLORPROMAZINE. 004582 04-14

CONVULSANT
STIMULATION OF FRUCTOSEBIPHOSPHATASE ACTIVITY AND SYNTHESIS IN THE CEREBRAL-CORTEX OF RATS SUBMITTED TO THE CONVULSANT METHIONINE-SULFOXIMINE. 003838 04-03

CONVULSANTS
AMINOPHYLLINE AND IMIDAZOLE AS CONVULSANTS. 004232 04-04

CONVULSIONS
BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS. 003736 04-03
PYRAZOLE EXACERBATES HANDLING-INDUCED CONVULSIONS IN MICE. 004094 04-04
BEHAVIORAL-PHARMACOLOGY OF TETRAHYDROCANNABINOL CONVULSIONS IN RABBITS. 004288 04-06

CONVULSIVE
CONVULSIVE AND DRUG-THERAPIES OF DEPRESSION. 004366 04-09

CONVULSIVE-SEIZURE
ON SOME RELATIONSHIPS BETWEEN GABAERGIC AND 5 HT-ERGIC MECHANISMAS IN PENTYLENETETRAZOL CONVULSIVE-SEIZURE REACTIONS. 004166 04-04

CONVULSIVE-SHOCK-TREATMENT
REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK — POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER). 004154 04-04

COOLING
THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING. 004016 04-03

CORD
DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD. 003800 04-03

CORE
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

CORPUS-CALLOSUM
THE EFFECTS OF LITHIUM ON MYOINOSITOL LEVELS IN LAYERS OF FRONTAL-CEREBRAL-CORTEX, IN CEREBELLUM, AND IN CORPUS-CALLOSUM OF THE RAT. 003712 04-03

CORPUS-STRIATUM
ROTATIONAL-BEHAVIOUR ELICITED BY 5 HT IN THE RAT: EVIDENCE FOR AN INHIBITORY ROLE OF 5 HT IN THE SUBSTANTIA-NIGRA AND CORPUS-STRIATUM. 004141 04-04

CORRECTION
CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD OF PATIENTS. 004434 04-11
CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004379 04-14

CORRELATION
ANTAGONISM OF ETHANOL-INDUCED DECREASE IN LH BY P CHLOROPHENYLALANINE: LACK OF CORRELATION WITH ALTERED SEROTONERGIC MECHANISMS. 003748 04-03
A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS. [illegible]

CORRELATIONAL
CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. [illegible] 04-13

CORRELATIONS
CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES. 003937 04-03
CORRELATIONS BETWEEN VISUAL-EVOKED-POTENTIALS AND PSYCHOPATHOLOGICAL-FINDINGS IN SCHIZOPHRENIC-PATIENTS UNDER TREATMENT WITH VARIOUS PSYCHOPHARMACOLOGICAL-DRUGS. 004815 04-08

CORTEX
DOPAMINE METABOLITES IN CAUDATE AND CORTEX AFTER [illegible] AND HALOPERIDOL. (UNPUBLISHED PAPER). 003738 04-03
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03
REGULATION OF ALPHA1-ADRENOCEPTORS IN THE CEREBRAL CORTEX OF THE RAT BY THYROID-HORMONES. 003816 04-03
THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES. 003984 04-03
THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL-ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN. 003994 04-03
LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004873 04-03

CORTICAL
THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS. 003713 04-03
THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS. 003788 04-03
INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03
CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES. 003937 04-03

CORTICOSTEROIDS
PLASMA CORTICOSTEROIDS IN MANIA: THE EFFECTS OF PIMOZIDE. 004383 04-09

CORTICOSTERONE
EFFECT OF AMPHETAMINE ON PLASMA CORTICOSTERONE IN THE CONSCIOUS RAT. 003808 04-03

CORTICOTROPIN
EFFECT OF TREATMENT WITH SODIUM-VALPROATE AND DIAZEPAM ON PLASMA CORTICOTROPIN IN NELSONS-SYNDROME. 004463 04-11

CORTISOL
TSH, HGH, HPR, AND CORTISOL RESPONSE TO TRH IN DEPRESSED-PATIENTS. 004399 04-09
CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004408 04-09

COST
COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS. 004438 04-11

COUNT
THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION. [illegible] 04-13

COUNTERACT
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004201 04-08

CP-36584
A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004333 04-08

CPK
TWO CASES OF FORM-FRUSTE-DU-SYNDROME-MALIN WITH HIGH-LEVELS OF SERUM CPK. 004636 04-15

CRITERIA
AMINE UPTAKE INHIBITORS: CRITERIA OF SELECTIVITY. 003921 04-03
THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08

CROSS-TOLERANCE
ELECTROENCEPHALOGRAPHIC AND BEHAVIORAL-TOLERANCE TO AND CROSS-TOLERANCE BETWEEN D ALA2-METHIONINE-ENKEPHALINAMIDE AND MORPHINE IN THE RAT. 004038 04-03

CROWDING
SOCIAL CROWDING ENHANCES AVERSIVENESS OF NALOXONE IN RATS. 004201 04-04

CU-AMINE-OXIDASES
CU-AMINE-OXIDASES: STUDIES RELATED TO THE MECHANISM-OF-ACTION OF BOVINE PLASMA AMINE-OXIDASE (UNPUBLISHED PAPER). 003680 04-01

CUE
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04

CULTIVATION
THE EFFECT OF CHLORPROMAZINE AND MAGEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ. 004541 04-13

CULTURES
DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. 003836 04-03
THE INACTIVATION OF GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE IN DISSOCIATED NEURONAL CULTURES FROM SPINAL-CORD. 003980 04-03
BENZODIAZEPINE-RECEPTORS ON PRIMARY CULTURES OF MOUSE ASTROCYTES. 004029 04-03

CURATIVE
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08

CURVES
THE EFFECT OF DIPHENYLHYDANTOIN ON EEG CURVES IN EPILEPTICS. 004494 04-11

CUTANEOUS
MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03

CYCLAZOCINE
DISCRIMINATIVE-STIMULUS EFFECTS OF CYCLAZOCINE IN THE RAT. 004236 04-04

CYCLE
EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (REDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT. 003703 04-02

CYCLIC
THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES. 003984 04-03

CYCLIC-AMP
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-03
DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. 003836 04-03
CIRCADIAN-VARIATION OF CYCLIC-AMP IN THE RAT PINEAL-GLAND. 003938 04-03
EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND CYCLIC-AMP IN FED MICE. 003946 04-03
ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03
EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP. 003952 04-03
THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

CYCLIC-AMP-PHOSPHODIESTERASE
RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). 003998 04-03

CYCLIC-GMP
INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 003783 04-03
GUANYLATE-CYCLASE – CYCLIC-GMP IN MOUSE CEREBRAL-CORTEX AND CEREBELLUM: MODIFICATION BY ANTICONVULSANTS. 003956 04-03
DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 004030 04-03

CYCLIC-GMP-DEPENDENT
DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. 004049 04-03

CYCLIC-GUANOSINE-MONOPHOSPHATE
PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03

CYCLIC-GUANOSINE-PHOSPHATE
ETHANOL-INDUCED CHANGES IN CYCLIC-GUANOSINE-PHOSPHATE METABOLISM IN MOUSE VESTIBULAR REGION. 003784 04-03

CYCLIC-NUCLEOTIDES
CYCLIC-NUCLEOTIDES AND THE NERVOUS-SYSTEM. 004542 04-13

CYCLING
MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN ADOLESCENT. 004637 04-15

CYCLOHEXYLBARBITURATE
ON-COLUMN GAS-CHROMATOGRAPHIC-SYNTHESIS OF 1,3 DIALYKYL (C=1-10), BENZYL, AND CYCLOHEXYLBARBITURATE DERIVATIVES. 003656 04-01

CYCLOPROPYLMETHYL
STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

CYCLOTHYMIC-PATIENTS
PROPHYLACTIC-EFFECT OF LITHIUM AGAINST DEPRESSION IN CYCLOTHYMIC-PATIENTS: A LIFE-TABLE ANALYSIS. 004391 04-09

CYPROHEPTADINE
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03

CYTOPLASMIC
THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS. 003953 04-03

CYTOSKELETAL
SYNTHESIS OF CYTOSKELETAL PROTEINS IN BULK ISOLATED NEURONAL PERIKARYA. 003672 04-01

C10DICHOL
ANTITREMOR ACTION OF C10DICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR. 004096 04-04

C6-GLIOMA
RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). 003998 04-03

D-AMPHETAMINE
MYOINOSITOL TURNOVER IN THE INTACT RAT-BRAIN; INCREASED PRODUCTION AFTER D-AMPHETAMINE. 003723 04-03

THE BEHAVIORAL-EFFECTS OF D-AMPHETAMINE ALONE AND IN COMBINATION WITH ACUTE AND CHRONIC MORPHINE TREATMENTS IN RATS.
003915 04-03
THE INFLUENCE OF D-AMPHETAMINE ON RAT-BRAIN STRIATAL REDUCED BIOPTERIN CONCENTRATION.
003922 04-03
APPARENT SEROTONERGIC MODULATION OF THE DOSE-DEPENDENT BIPHASIC RESPONSE OF NEOSTRIATAL NEURONS PRODUCED BY D-AMPHETAMINE.
003981 04-03
KINETIC STUDIES ON THE ENTRY OF D-AMPHETAMINE INTO THE CENTRAL-NERVOUS-SYSTEM: I. CEREBROSPINAL-FLUID.
[illegible] 04-03
SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE.
004152 04-04
SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER).
004565 04-14

D-AMPHETAMINE-INDUCED
CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT.
004128 04-04

D-ISOMERS
COMPARATIVE-STUDIES OF THE PHARMACOLOGICAL-EFFECTS OF THE D-ISOMERS AND L-ISOMERS OF CODEINE.
004084 04-04

D-1
INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE.
003876 04-03

D-2
INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE.
003876 04-03

DAMAGE
ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE.
004626 04-15

DANITRACEN
INTERACTION OF P CHLOROPHENYLALANINE, MIANSERINE AND DANITRACEN WITH AMPHETAMINE.
004599 04-15

DARK
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO.
004544 04-13

DATA
SINGLE-DOSE PHARMACOKINETIC DATA ON ZIMELIDINE IN DEPRESSED-PATIENTS.
004385 04-09
THE USE OF CLINICAL KINETIC DATA IN TREATMENT WITH ANTIDEPRESSANT-DRUGS.
004686 04-16

DAY-HOSPITAL
PSYCHIATRIC-DRUG-STUDY. PART II. MENTAL-HYGIENE-CLINIC SURVEY, DAY-TREATMENT-CENTER SURVEY, DAY-HOSPITAL SURVEY.
004716 04-17

DAY-TREATMENT-CENTER
PSYCHIATRIC-DRUG-STUDY. PART II. MENTAL-HYGIENE-CLINIC SURVEY, DAY-TREATMENT-CENTER SURVEY, DAY-HOSPITAL SURVEY.
004716 04-17

DDT
A POSSIBLE NEUROCHEMICAL BASIS OF THE CENTRAL STIMULATORY EFFECTS OF PP'DDT.
004274 04-05

DEAE
DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME.
004472 04-11

DEANOL
ON THE THERAPY OF NEUROLEPTIC-INDUCED TARDIVE-DYSKINESIA WITH DIMETHYLAMINOETHANOL (DEANOL).
004627 04-15
GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS.
004683 04-16

DEATH
THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH.
003882 04-03

DECEPTION
MEPROBAMATE REDUCES ACCURACY OF PHYSIOLOGICAL DETECTION OF DECEPTION.
[illegible] 04-14

DECONDITIONING
CLASSICAL NEUROLEPTICS AND DECONDITIONING ACTIVITY AFTER SINGLE OR REPEATED TREATMENTS: ROLE OF DIFFERENT CEREBRAL NEUROTRANSMITTERS.
004115 04-04

DECREASING
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION.
004088 04-04
MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT.
004441 04-11

DEFICIENT
A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL.
004445 04-11

DEFORMING
PROBLEMS OF TREATING DEFORMING MYODYSTONIA WITH L-DOPA, AND PREDICTION OF ITS THERAPEUTIC EFFECT.
004536 04-13

DEINSTITUTIONALIZATION
A TWELVE-YEAR FOLLOWUP OF THE NIMH-PRB HIGH-DOSE CHLORPROMAZINE STUDY OF CHRONIC SCHIZOPHRENICS -- IMPLICATIONS FOR DEINSTITUTIONALIZATION. (UNPUBLISHED PAPER).
004323 04-08

DELAYED
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN NEURONS.
003834 04-03
THE EFFECT OF THIOPROPERAZINE ON DELAYED REACTIONS IN LOWER MONKEYS.
004125 04-04

DELIMITED
PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK.
004734 04-17

DELIRIUM-TREMENS
A COMPARATIVE EVALUATION OF THE EFFICACY OF SOME THERAPEUTIC METHODS USED IN DELIRIUM-TREMENS.
004486 04-11

DELTA-FORMS
INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES.
003737 04-03

DEMENTIA
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HIGH-DOSE ERGOT ALKALOID TREATMENT FOR DEMENTIA. PRELIMINARY REPORT.
[illegible] 04-11

DEMONSTRATION
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL.
003725 04-03
DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM.
[illegible] 04-03
BUPRENORPHINE. DEMONSTRATION OF PHYSICAL-DEPENDENCE LIABILITY.
004104 04-04

DENERVATION
DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION.
003722 04-03

DENMARK
PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK.
004734 04-17

DEOXY-D-GLUCOSE
ANALGESIA FOLLOWING INTRAVENTRICULAR ADMINISTRATION OF 2 DEOXY-D-GLUCOSE.
[illegible] 04-04

DEPENDENCE
COMPARATIVE ANALGESIC, BEHAVIORAL, AND DEPENDENCE PROPERTIES OF MORPHINE AND O METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONE HCL.
[illegible] 04-02

GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE. 003786 04-03

CNS EFFECTS OF CHOLINE ADMINISTRATION: EVIDENCE FOR TEMPORAL DEPENDENCE. 003996 04-03

OPIOID DEPENDENCE: MECHANISMS AND TREATMENT. 004587 04-14

AN UNUSUAL CASE OF THIORIDAZINE AND LEVOMEPROMAZINE DEPENDENCE. 004634 04-15

DEPENDENT

THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC-ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY. 003880 04-03

SCHEDULE DEPENDENT CHANGE OF PUNISHED-RESPONDING AFTER DIAZEPAM IN RATS. 004165 04-04

EFFECTS OF NARCOTIC ABSTINENCE ON SCHEDULE-CONTROLLED BEHAVIOR IN DEPENDENT RATS. 004230 04-04

DEPENDS

INVOLVEMENT OF DOPAMINE IN CIRCLING RESPONSES TO MUSCIMOL DEPENDS ON INTRANIGRAL SITE OF INJECTION. 004158 04-04

DEPLETES

INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04

DEPLETION

EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON TETRABENAZINE-INDUCED DEPLETION OF BRAIN MONOAMINES IN RATS. 1. NOREPINEPHRINE. 004062 04-03

DEPOLARIZING-AGENTS

RELATIVE ACTIVITIES OF SUBSTANCES RELATED TO 5 HYDROXYTRYPTAMINE AS DEPOLARIZING-AGENTS OF SUPERIOR CERVICAL GANGLION CELLS. 004047 04-03

DEPOT

A FOLLOWUP STUDY OF SCHIZOPHRENIC-OUTPATIENTS TREATED WITH DEPOT NEUROLEPTICS. 004342 04-08

DEPOT FLUPHENAZINE MAINTENANCE-TREATMENT AND ASSOCIATED WEIGHT CHANGES. 004535 04-15

RESULTS OF TREATMENT BY MODITEN DEPOT IN OUTPATIENTS-WARDS IN THE SOUTH MORAVIAN REGION. 004648 04-15

DEPRENYL

DEPRENYL DOES NOT CAUSE INSOMNIA IN PARKINSONIAN-PATIENTS. 004569 04-14

IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT? 004640 04-15

DEPRESSANT

1 SUBSTITUTED BENZYLTETRAHYDROPYRIMIDONES: A SERIES WITH STIMULANT AND DEPRESSANT ACTIVITIES. 003687 04-02

4 AMINOPYRIDINE BLOCKADE OF NEURONAL DEPRESSANT RESPONSES TO ADENOSINE-TRIPHOSPHATE. 003963 04-03

DEPRESSANTS

THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

DEPRESSED

DECREASED 3H IMIPRAMINE BINDING IN DEPRESSED MALES AND FEMALES. 004349 04-09

DEPRESSED-INPATIENTS

A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09

DEPRESSED-OUTPATIENTS

A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09

PERSONALITY AS A PREDICTOR OF PSYCHOTHERAPY AND PHARMACOTHERAPY-OUTCOME FOR DEPRESSED-OUTPATIENTS. (UNPUBLISHED PAPER). 004418 04-09

DEPRESSED-PATIENTS

MULTICENTRE-STUDY WITH VILOXAZINE (VIVALAN) IN DEPRESSED-PATIENTS. 004375 04-09

SINGLE-DOSE PHARMACOKINETIC DATA ON ZIMELIDINE IN DEPRESSED-PATIENTS. 004385 04-09

TSH, HGH, HPR, AND CORTISOL RESPONSE TO TRH IN DEPRESSED-PATIENTS. 004399 04-09

DEPRESSES

MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03

AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION. 003917 04-03

DEPRESSION

SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX. 004015 04-03

CANNABINOID-INDUCED ENHANCEMENT AND DEPRESSION OF CAT MONOSYNAPTIC REFLEXES. 004040 04-03

RESPIRATORY DEPRESSION PRODUCED BY DIAZEPAM IN CATS: EFFECT OF ANESTHESIA. 004272 04-05

POTENTIATION OF THE MORPHINE-INDUCED RESPIRATORY RATE DEPRESSION BY CAPTOPRIL. 004275 04-05

TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09

PHARMACOTHERAPY FOR DEPRESSION. 004351 04-09

RECEPTORS, ADENYLATE-CYCLASE, DEPRESSION, AND LITHIUM. 004353 04-09

CLINICAL-RESPONSE AND BLOOD LEVELS IN THE TREATMENT OF DEPRESSION WITH A NEW ANTIDEPRESSANT-DRUG, AMOXAPINE. 004356 04-09

(3H) IMIPRAMINE BINDING IN HUMAN PLATELETS: A NEW BIOCHEMICAL-PARAMETER IN DEPRESSION. 004358 04-09

A NEUROENDOCRINE-STUDY OF ADRENOCEPTOR FUNCTION IN ENDOGENOUS DEPRESSION. 004362 04-09

PERIPHERAL SEROTONERGIC AND ADRENERGIC RESPONSES IN DEPRESSION. 004364 04-09

CONVULSIVE AND DRUG-THERAPIES OF DEPRESSION. 004366 04-09

LONG-TERM-TREATMENT FOR DEPRESSION. 004372 04-09

CHOLINERGIC MECHANISMS IN MANIA AND DEPRESSION: QUESTIONS OF SPECIFICITY. 004374 04-09

GUIDELINES ON THE DIAGNOSIS AND TREATMENT OF DEPRESSION. 004376 04-09

TREATMENT OF DEPRESSION WITH AN MAO-INHIBITOR FOLLOWED BY 5 HTP – AN UNFINISHED RESEARCH PROJECT. 004377 04-09

CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT. 004382 04-09

AN EVALUATION OF TRAZODONE IN THE TREATMENT OF DEPRESSION. 004386 04-09

THE NOSOLOGICAL INDEPENDENCE OF INVOLUTIONAL DEPRESSION AND ITS DYNAMICS DURING PSYCHOPHARMACOTHERAPY. 004389 04-09

PROPHYLACTIC-EFFECT OF LITHIUM AGAINST DEPRESSION IN CYCLOTHYMIC-PATIENTS: A LIFE-TABLE ANALYSIS. 004391 04-09

A COMPARISON OF TRAZODONE AND DOTHIEPIN IN DEPRESSION. 004394 04-09

DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER). 004401 04-09

CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004403 04-09

NEUROENDOCRINE DISTURBANCE IN DEPRESSION. 004405 04-09

ELECTROCARDIOGRAM-CHANGES AND PLASMA DESIPRAMINE LEVELS DURING TREATMENT OF DEPRESSION. 004411 04-09

PHARMACOTHERAPY AND PSYCHOTHERAPY FOR AMBULATORY DEPRESSION: EFFICACY AND CHOICES. 004413 04-09

TRAZODONE IN DEPRESSION. 004414 04-09

CONTROLLED CLINICAL-TRIAL OF NOMIFENSINE IN THE TREATMENT OF DEPRESSION. 004417 04-09

DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

THE ACTIVITY OF BLOOD-PLATELET MONOAMINE-OXIDASE IN ENDOGENOUS DEPRESSION. 004547 04-13

IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT? 004640 04-15

DEPRESSIONS

CLINICAL DEPRESSIONS: DIAGNOSTIC AND THERAPEUTIC CHALLENGES. 004330 04-09

ACTIVITY OF BROMAZEPAM AND LORAZEPAM IN NEUROTIC DEPRESSIONS. 004384 04-09

DEPRESSIVE-DISORDERS

TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09

DEPRESSIVE-NEUROSIS

VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY. 004392 04-09

DEPRESSIVE-SYNDROMES

CLINICAL RESULTS OBTAINED WITH THE USE OF LYSONEURO IN DEPRESSIVE-SYNDROMES. 004397 04-09

CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004404 04-09

VARIATIONS IN URINARY LEVELS OF 3 METHOXY-4-HYDROXYPHENYLGLYCOL-SULFATE IN PATIENTS WITH DEPRESSIVE-SYNDROMES. 004533 04-13

THE ACTIVITY OF ERYTHROCYTE CATECHOL-O-METHYLTRANSFERASE IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004546 04-13

THE ACTIVITY OF DOPAMINE-BETA-HYDROXYLASE IN THE PLASMA OF PATIENTS WITH ENDOGENOUS DEPRESSIVE-SYNDROMES. 004548 04-13

DEPRIVATION

CHANGES OF RESPONSE TO DOPAMINERGIC DRUGS IN RATS SUBMITTED TO REM SLEEP DEPRIVATION. 004239 04-04

DEPRIVED

NALOXONE SUPPRESSES FOOD/WATER CONSUMPTION IN THE DEPRIVED CAT. 004114 04-04

PHARMACOKINETIC-STUDY OF APOMORPHINE-INDUCED STEREOTYPY IN FOOD DEPRIVED RATS. 004347 04-04

DERIVATIVE

SYNTHESIS AND STRUCTURE-ACTIVITY RELATIONSHIP OF A PYRIMIDOPYRIMIDINE DERIVATIVE WITH ANTIDEPRESSANT ACTIVITY. 003653 04-01

A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION. 003851 04-03

DERIVATIVES

ON-COLUMN GAS-CHROMATOGRAPHIC-SYNTHESIS OF 1,3 DIALKYL (C=1-10), BENZYL, AND CYCLOHEXYLBARBITURATE DERIVATIVES. 003656 04-01

GAS-CHROMATOGRAPHIC-PROPERTIES OF 1,3 DIALKYLBARBITURATE DERIVATIVES. 003658 04-01

SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE. 003673 04-01

SYNTHESIS AND BIOCHEMICAL AND PHARMACOLOGIC PROPERTIES OF ANALOGUES AND DERIVATIVES OF P CHLOROPHENYLALANINE. 003691 04-02

SYNTHESIS AND PHARMACOLOGICAL ACTIVITY OF SOME 2 AMINO-3-ALKYLTHIAZOLINE DERIVATIVES. [illegible] 04-02

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). [illegible] 04-03

EFFECTS OF NORCOCAINE AND SOME NORCOCAINE DERIVATIVES ON SCHEDULE-CONTROLLED BEHAVIOR OF PIGEONS AND SQUIRREL-MONKEYS. 004013 [illegible]

DERIVATIZATION

GC/TLC ANALYSES OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. [illegible] 04-16

DES-TYROSINE-GAMMA-ENDORPHIN

DES-TYROSINE-GAMMA-ENDORPHIN: H-REFLEX RESPONSE SIMILAR TO NEUROLEPTICS. [illegible] 04-13

DES-TYROSYL-GAMMA-ENDORPHIN

DES-TYROSYL-GAMMA-ENDORPHIN IN SCHIZOPHRENIA: A DOUBLE-BLIND TRIAL IN 13 PATIENTS. [illegible] 04-08

DESENSITIZATION

INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. [illegible] 04-02

DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. [illegible] 04-03

ANTIDEPRESSANTS AND ALPHA2-ADRENERGIC-AUTORECEPTOR DESENSITIZATION. [illegible] 04-18

DESIGN

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004501 04-13

SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES. 004725 04-17

DESIGNS

ON THE USE OF REPEATED MEASURES DESIGNS IN PSYCHOPHARMACOLOGY. 004695 04-16

DESIPRAMINE

ELECTROCARDIOGRAM-CHANGES AND PLASMA DESIPRAMINE LEVELS DURING TREATMENT OF DEPRESSION. 004411 04-09

BLOCKADE BY IMIPRAMINE OR DESIPRAMINE OF PANIC-INDUCED BY SODIUM-LACTATE. 004427 04-10

ANTICHOLINERGIC-EFFECTS AND PLASMA DESIPRAMINE LEVELS. 004500 04-12

DESMETHYLDIAZEPAM

DESMETHYLDIAZEPAM KINETICS IN THE ELDERLY AFTER ORAL PRAZEPAM. 004402 04-11

DESMETHYLDOXEPIN

PLASMA LEVELS OF THE CIS-ISOMERS AND TRANS-ISOMERS OF DOXEPIN AND DESMETHYLDOXEPIN AFTER ADMINISTRATION OF DOXEPIN TO PATIENTS. [illegible] 04-09

DESMETHYLIMIPRAMINE

EFFECT OF DESMETHYLIMIPRAMINE ON TISSUE DISTRIBUTION AND ANOREXIC-ACTIVITY OF CHLORPHENTERMINE IN RATS. [illegible] 04-04

EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

DESTRUCTION

BEHAVIORAL AND REGIONAL NEUROCHEMICAL SEQUELAE OF HIPPOCAMPAL DESTRUCTION IN THE RAT. 003721 04-02

SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS. 003899 04-03

THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING. 004016 04-05

DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT. 004171 04-06

DOPAMINE-RECEPTOR CHANGES FOLLOWING DESTRUCTION OF THE NIGROSTRIATAL PATHWAY: LACK OF A RELATIONSHIP TO ROTATIONAL-BEHAVIOR. [illegible] 04-04

DETECTION

A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION. 003674 04-01

REWARD AND DETECTION THRESHOLDS FOR BRAIN-STIMULATION: DISSOCIATIVE-EFFECTS OF COCAINE. 004160 04-04

RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-

PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION. 004302 04-06

MEPROBAMATE REDUCES ACCURACY OF PHYSIOLOGICAL DETECTION OF DECEPTION. 004585 04-14

DETERMINATION

A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION. 003674 04-01

A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS. 004301 04-06

RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION. 004302 04-06

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06

EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS – IN VITRO DETERMINATION OF THE IC50. 004532 04-13

A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004684 04-16

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

DETERMINATIONS

USE OF PLASMA CONCENTRATION DETERMINATIONS. 004498 04-13

KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13

DETOXIFYING

SALIVA BENZODIAZEPINE LEVELS AND CLINICAL OUTCOME IN DETOXIFYING ALCOHOLIC-PATIENTS. 004671 04-16

DEUTERATED

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

DEUTERIUM

NOREPINEPHRINE METABOLISM IN MAN USING DEUTERIUM LABELLING: 4 HYDROXY-3-METHOXYMANDELIC-ACID. 004534 04-13

DEVELOPED

A STUDY ON MENTAL-SYMPTOMS DEVELOPED DURING THE TREATMENT OF PARKINSONS-DISEASE. 004618 04-15

DEVELOPING

EFFECT OF AMPHETAMINE ON THE METABOLISM AND INCORPORATION OF (3H) THYMIDINE INTO DNA OF DEVELOPING RAT-BRAIN. 003729 04-03

THE EFFECTS OF CHRONIC METHYLPHENIDATE TREATMENT ON GROWTH AND ENDOCRINE FUNCTION IN THE DEVELOPING RAT. 003811 04-03

EFFECT OF NEONATAL HYDROCORTISONE TREATMENT ON BRAIN-MONOAMINES IN DEVELOPING RATS. 003893 04-03

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES. 004002 04-03

DEVELOPMENT

NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03

CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT. 003899 04-03

EFFECT OF PRENATAL NEUROLEPTIC TREATMENT ON MEMBRANE RECEPTOR DEVELOPMENT IN THE BRAIN. 003989 04-03

ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

DOES RAPID-EYE-MOVEMENT SLEEP PLAY A ROLE IN BRAIN DEVELOPMENT? 004091 04-04

DEVELOPMENT OF PSYCHOPHARMACOLOGY. 004467 04-15

PSYCHOPHARMACOTHERAPY: THE PRESENT STATE AND THE DEVELOPMENT OF TRENDS. 004723 04-17

SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES. 004725 04-17

DEVELOPMENTAL-CHANGE

DEVELOPMENTAL-CHANGE OF BETA-ADRENERGIC-RECEPTORS IN RAT-BRAIN. 004050 04-03

DEVELOPMENTAL-CHANGE IN REARING RESPONSE TO ATROPINE IN RATS TREATED WITH 6 HYDROXYDOPA. 004191 04-04

DEVELOPMENTALLY

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES – ARE THEY CELL ADHESION MOLECULES? 003724 04-03

DEXAMETHASONE

CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004403 04-09

DEXAMETHASONE-SUPPRESSION-TEST

STANDARDIZATION OF THE DEXAMETHASONE-SUPPRESSION-TEST FOR THE DIAGNOSIS OF MELANCHOLIA. (UNPUBLISHED PAPER). 004359 04-09

DEXTROAMPHETAMINE

THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE IN MAN. 004580 04-14

DFP

INDUCTION OF BEHAVIORAL-SUPERSENSITIVITY TO APOMORPHINE BY DFP TREATMENT. 004099 04-04

DIAGNOSIS

STANDARDIZATION OF THE DEXAMETHASONE-SUPPRESSION-TEST FOR THE DIAGNOSIS OF MELANCHOLIA. (UNPUBLISHED PAPER). 004359 04-09

GUIDELINES ON THE DIAGNOSIS AND TREATMENT OF DEPRESSION. 004376 04-09

STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09

DIFFERENTIAL DIAGNOSIS AND TREATMENT OF PANIC ATTACKS AND PHOBIC-STATES. 004424 04-10

DIAGNOSTIC

CLINICAL DEPRESSIONS: DIAGNOSTIC AND THERAPEUTIC CHALLENGES. 004350 04-09

BLOOD LEVEL MEASUREMENTS OF TRICYCLIC DRUGS AS A DIAGNOSTIC TOOL. 004368 04-09

DIALKYL-4-PYRAZOLIDINOLS

SYNTHESIS OF PHENYLURETHANS OF 1,2 DIALKYL-4-PYRAZOLIDINOLS AS ANTICONVULSANT AGENTS. 003695 04-02

DIALKYLBARBITURATE

GAS-CHROMATOGRAPHIC-PROPERTIES OF 1,3 DIALKYLBARBITURATE DERIVATIVES. 003658 04-01

DIALYKYL

ON-COLUMN GAS-CHROMATOGRAPHIC-SYNTHESIS OF 1,3 DIALYKYL (C=1-10), BENZYL, AND CYCLOHEXYLBARBITURATE DERIVATIVES. 003656 04-01

DIAPHRAGM

OXOTREMORINE DOES NOT ENHANCE ACETYLCHOLINE RELEASE FROM RAT DIAPHRAGM PREPARATIONS. 003819 04-03

DIAZEPAM

DIAZEPAM ANXIOLYTIC-ACTIVITY IN HIPPOCAMPUS. 003743 04-03

INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03

REGIONAL CHANGES IN (3H)DIAZEPAM BINDING IN THE BRAINS OF MICE AFTER REMOVAL OF THE OLFACTORY-BULBS. 003844 04-03

EFFECT OF DIAZEPAM ON STRESS-INDUCED CHANGES IN BRAIN HISTAMINE. 003932 04-03

THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES. 003984 04-03

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES.
004032 04-03

SCHEDULE DEPENDENT CHANGE OF PUNISHED-RESPONDING AFTER DIAZEPAM IN RATS.
004165 04-04

3 HYDROXYMETHYL-BETA-CARBOLINE ANTAGONIZES SOME PHARMACOLOGIC ACTIONS OF DIAZEPAM.
004221 04-04

POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED-CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM.
004266 04-05

RESPIRATORY DEPRESSION PRODUCED BY DIAZEPAM IN CATS: EFFECT OF ANESTHESIA.
004272 04-05

THE RELATIONSHIPS BETWEEN CLINICAL-RESPONSE, PSYCHOPHYSIOLOGICAL-VARIABLES AND PLASMA LEVELS OF AMITRIPTYLINE AND DIAZEPAM IN NEUROTIC-OUTPATIENTS.
004423 04-10

A DOUBLE-BLIND TRIAL: THE USE OF OXPRENOLOL AND DIAZEPAM IN ANXIETY.
004428 04-10

EFFECT OF TREATMENT WITH SODIUM-VALPROATE AND DIAZEPAM ON PLASMA CORTICOTROPIN IN NELSONS-SYNDROME.
004463 04-11

PROMETHAZINE AND DIAZEPAM POTENTIATE THE HALOPERIDOL-INDUCED PROLACTIN RESPONSES.
004497 04-13

INTRAVENOUS DIAZEPAM AND ORAL ETHANOL INTERACTION.
004552 04-13

DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO.
004566 04-14

CASE-REPORT OF UNUSUAL DIAZEPAM ABSTINENCE-SYNDROME.
004643 04-15

MASS SCREENING AND CONFIRMATION OF DIAZEPAM IN URINE BY EMIT THIN-LAYER-CHROMATOGRAPHY.
004672 04-16

DIAZEPAM-INDUCED
DIAZEPAM-INDUCED ATAXIA IN TROTTING SQUIRREL-MONKEYS.
004138 04-04

DIBENZAZEPINES
THE EFFECT OF DIBENZAZEPINES (TRICYCLIC-ANTIDEPRESSANTS) ON CEREBRAL CAPILLARY PERMEABILITY IN THE RAT IN VIVO.
003974 04-03

DIBUTYRYL-CYCLIC-AMP
CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP.
003769 04-03

DICHLOROBENZYL-TETRAHYDROPYRIMIDONE
PHARMACOLOGY OF 1 DICHLOROBENZYL-TETRAHYDROPYRIMIDONE, A NOVEL ANTIDEPRESSANT COMPOUND WITH ANTIANXIETY ACTIVITY.
003688 04-02

DIETARY
DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS.
004025 04-03

SUSTAINED DECREASE IN FAT CONSUMPTION PRODUCED BY AMPHETAMINE IN RATS MAINTAINED ON A DIETARY SELF-SELECTION REGIME.
004150 04-04

DIFFERENCE
PHARMACOLOGICAL DIFFERENCE OF L-DOPA, APOMORPHINE, AND BROMOCRIPTINE AGAINST METOCLOPRAMIDE.
003790 04-03

DIFFERENCES
COMT-A AND COMT-B: CATALYTIC DIFFERENCES AND ROLE OF DISULFIDE BONDS.
003727 04-03

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER).
004112 04-04

INDIVIDUAL DIFFERENCES IN EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND ANTICHOLINERGIC-DRUGS ON OPERANT-BEHAVIOR IN THE SQUIRREL-MONKEY.
004176 04-04

DIFFERENTIAL
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO.
003741 04-03

DIFFERENTIAL TOLERANCE TO THE EFFECTS OF MORPHINE ON EVOKED ACTIVITY IN THE HIPPOCAMPAL SLICE.
003780 04-03

ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE.
[illegible] 04-03

DIFFERENTIAL INHIBITION OF ALPHA1-ADRENOCEPTOR AND ALPHA2-ADRENOCEPTOR MEDIATED PRESSOR RESPONSES IN PITHED RATS.
004057 04-03

DIFFERENTIAL DIAGNOSIS AND TREATMENT OF PANIC ATTACKS AND PHOBIC-STATES.
004484 04-10

DIFFERENTIAL-EFFECTS
DIFFERENTIAL-EFFECTS OF ELECTROCONVULSIVE-SHOCK AND ANTIDEPRESSANT-DRUGS ON SEROTONIN2-RECEPTORS IN RAT-BRAIN.
003878 04-03

DIFFERENTIAL-EFFECTS OF PENTOBARBITAL AND ETHER ON THE SYNAPTIC TRANSMISSION OF THE HIPPOCAMPAL-CA1-REGION IN THE RAT.
003908 04-03

DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS.
003947 04-03

DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE.
004130 04-04

DIFFERENTIAL-REINFORCEMENT-OF-LOW-RATES
THE EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON PERFORMANCE UNDER A DIFFERENTIAL-REINFORCEMENT-OF-LOW-RATES SCHEDULE IN RATS.
004176 04-04

DIFFERENTIATE
MINI-SYMPOSIUM. III. SIMPLE IN VIVO TESTS THAT DIFFERENTIATE PROTOTYPE AGONISTS AT OPIATE-RECEPTORS.
[illegible] 04-06

DIFFERENTIATED
SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS.
[illegible] 04-11

DIFFERENTIATES
CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS.
[illegible] 04-03

DIFFERENTIATION
PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE.
003777 04-03

MINI-SYMPOSIUM. I. THE IN VIVO DIFFERENTIATION OF OPIATE-RECEPTORS: INTRODUCTION.
004697 04-17

DIHYDROCAPSAICIN
EXCITATORY EFFECTS OF DIHYDROCAPSAICIN ON NOCICEPTIVE NEURONS IN THE MEDIAL THALAMUS.
003714 04-03

DIHYDROERGOCRYPTINE
CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS.
[illegible] 04-03

DIHYDROERGOTOXINE
EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (HYDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT.
[illegible] 04-02

CATECHOLAMINE TURNOVER IN RAT-CEREBRAL-CORTEX AND CAUDATE FOLLOWING REPEATED TREATMENT WITH DIHYDROERGOTOXINE.
[illegible] 04-03

DIHYDROMORPHINE
ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS.
[illegible] 04-03

DIHYDROPICROTOXININ
INTERACTION OF STEREOISOMERS OF BARBITURATES WITH (3H)ALPHA DIHYDROPICROTOXININ BINDING-SITES.
[illegible] 04-03

DIHYDROXYNOMIFENSINE
EFFECTS OF 3',4' DIHYDROXYNOMIFENSINE ON THE DOPAMINE VASCULAR RECEPTOR.
[illegible] 04-03

DIHYDROXYPHENYLACETIC-ACID
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE.
[illegible] 04-03

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLEACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HPLC.
[illegible] 04-03

DIHYDROXYPHENYLALANINE
AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN. 003941 04-03

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06

DIHYDROXYPHENYLETHYLENEGLYCOL
POSTMORTEM STABILITY OF BRAIN 3 METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL AND 3,4 DIHYDROXYPHENYLETHYLENEGLYCOL IN THE RAT AND MOUSE. 004048 04-03

DIHYDROXYTRYPTAMINE
DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION. 003722 04-03

DIISOPROPYLTRYPTAMINE
N,N DIISOPROPYLTRYPTAMINE (DIPT) AND 5 METHOXYDIISOPROPYLTRYPTAMINE (5 MEO-DIPT). TWO ORALLY ACTIVE TRYPTAMINE ANALOGS WITH CNS ACTIVITY. 004310 04-07

DIKETOPIPERAZINE
HISTIDYL-PROLINE DIKETOPIPERAZINE DECREASES FOOD INTAKE IN RATS. 004181 04-04

DILATION
CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED. 003911 04-03

DILTIAZEM
TREATMENT OF UNSTABLE ANGINA BY DILTIAZEM. 004307 04-07

DIMETHOXY-4-ALKYLPHENYLISOPROPYLAMINES
DOM AND RELATED 2,5 DIMETHOXY-4-ALKYLPHENYLISOPROPYLAMINES: BEHAVIORAL AND SEROTONIN-RECEPTOR PROPERTIES. 003690 04-02

DIMETHOXY-4-METHYLAMPHETAMINE
THE EFFECTS OF 2,5 DIMETHOXY-4-METHYLAMPHETAMINE (DOM) ON OPERANT-BEHAVIOR: INTERACTIONS WITH OTHER NEUROACTIVE-AGENTS. 004089 04-04

DIPHENYLHYDANTOIN
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT. 003961 04-03

EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS. 004101 04-04

MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

THE EFFECT OF DIPHENYLHYDANTOIN ON EEG CURVES IN EPILEPTICS. 004494 04-11

TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004684 04-16

DIPIPERIDINOETHANE
LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004273 04-05

DIPOLAR
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

DISCHARGE
EFFECTS OF ACUTE AND CHRONIC AMPHETAMINE TREATMENT ON PURKINJE NEURON DISCHARGE IN RAT CEREBELLUM. 003793 04-03

EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT. 003951 04-03

DISCONTINUATION
CLINICAL AND BIOCHEMICAL-CORRELATIONS IN ABRUPT DISCONTINUATION OF PSYCHOPHARMACOTHERAPY. 004330 04-08

A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA. 004584 04-14

DISCRIMINABILITY
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04

DISCRIMINANT
RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER). 004420 04-10

DISCRIMINATION
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04

METHADONE-INDUCED ATTENUATION OF THE EFFECTS OF DELTA9 TETRAHYDROCANNABINOL ON TEMPORAL DISCRIMINATION IN PIGEONS. 004095 04-04

DISCRIMINATION OF ELECTRIC-SHOCK: EFFECTS OF SOME OPIOID AND NONOPIOID DRUGS. 004106 04-04

A SIGNAL-DETECTION-ANALYSIS OF MORPHINE EFFECTS ON THE RESPONSE BIAS OF RATS IN A TWO-SHOCK DISCRIMINATION TASK. 004124 04-04

NARCOTIC DISCRIMINATION IN PIGEONS. 004132 04-04

RAPID ACQUISITION OF A TWO-DRUG DISCRIMINATION: TIME OF DAY EFFECT UPON SALINE STATE. 004214 04-04

METHYLMERCURY-INDUCED CHANGES IN OPERANT DISCRIMINATION BY THE PIGEON. 004271 04-05

DISCRIMINATIVE
PHENCYCLIDINE-LIKE DISCRIMINATIVE EFFECTS OF OPIOIDS IN THE RAT. 004136 04-04

AVOIDANCE ENHANCEMENT AND DISCRIMINATIVE RESPONSE CONTROL BY ANXIOLYTICS WITH DRUGS ACTING ON THE GABA SYSTEM. 004193 04-04

DISCRIMINATIVE-STIMULUS
DISCRIMINATIVE-STIMULUS EFFECTS OF ETORPHINE IN RHESUS-MONKEYS. 004134 04-04

DISCRIMINATIVE-STIMULUS PROPERTIES OF COCAINE RELATED TO AN ANXIOGENIC ACTION. 004219 04-04

DISCRIMINATIVE-STIMULUS EFFECTS OF CYCLAZOCINE IN THE RAT. 004236 04-04

DISCRIMINATIVE-STIMULUS PROPERTIES OF THE HALLUCINOGENIC AGENT DOM. 004260 04-04

MINI-SYMPOSIUM. IV. DISCRIMINATIVE-STIMULUS EFFECTS OF NARCOTICS: EVIDENCE FOR MULTIPLE RECEPTOR-MEDIATED ACTIONS. 004719 04-17

DISINHIBITION
AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA. 004276 04-05

DISPOSITION
DISPOSITION OF METHADONE IN THE OVINE MATERNAL FETAL UNIT. 004027 04-03

DISRUPTION
DISRUPTION OF AUTOSHAPED RESPONDING TO A SIGNAL OF BRAIN-STIMULATION REWARD BY NEUROLEPTIC-DRUGS. 004199 04-04

DISSOCIATION
MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

DISSOCIATIVE-EFFECTS
REWARD AND DETECTION THRESHOLDS FOR BRAIN-STIMULATION: DISSOCIATIVE-EFFECTS OF COCAINE. 004160 04-04

DISTRIBUTION
DISTRIBUTION OF CESIUM IN THE ORGANISM AND ITS EFFECT ON THE NUCLEOTIDE METABOLISM ENZYMES. 003696 04-02

AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN. 003941 04-03

REGIONAL DISTRIBUTION OF CHLORIMIPRAMINE BINDING IN RAT-BRAIN.
003855 04-02
THE EFFECT OF P CHLOROPHENYLALANINE ON THE DISTRIBUTION OF BIOGENIC-AMINES IN THE BRAIN, AND ON IMMUNITY IN RATS.
004230 04-04
EFFECT OF DESMETHYLIMIPRAMINE ON TISSUE DISTRIBUTION AND ANOREXIC-ACTIVITY OF CHLORPHENTERMINE IN RATS.
004179 04-04
DISTURBANCE
NEUROENDOCRINE DISTURBANCE IN DEPRESSION.
004405 04-09
DISTURBED
DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS?
003704 04-02
DISULFIDE
SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN ANALOGS WITH DISULFIDE BRIDGES.
003655 04-01
COMT-A AND COMT-B: CATALYTIC DIFFERENCES AND ROLE OF DISULFIDE BONDS.
003937 04-03
DISULFIRAM
DISULFIRAM AND NOCTURNAL PENILE-TUMESCENCE IN THE CHRONIC ALCOHOLIC.
004536 04-13
DIURETICS
A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA.
004384 04-14
DIURNAL
EFFECT OF LITHIUM ON REACTION-TIME — A STUDY OF DIURNAL VARIATIONS.
004607 04-15
DIVALENT-CATIONS
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS.
003992 04-03
DMI
EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS.
004180 04-04
SUBCHRONIC-TREATMENT WITH THE TRICYCLIC-ANTIDEPRESSANT DMI INCREASES ISOLATION-INDUCED FIGHTING IN RATS.
004252 04-04
DNA
EFFECT OF AMPHETAMINE ON THE METABOLISM AND INCORPORATION OF (3H) THYMIDINE INTO DNA OF DEVELOPING RAT-BRAIN.
003739 04-03
DNA-DEPENDENT
PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-III FROM RAT-BRAIN NUCLEI.
003679 04-01
DOCA-SALT
CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT.
003899 04-03
DOG
INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN.
003736 04-02
DOGS
CENTRAL HYPOTENSIVE-EFFECT OF GAMMA AMINOBUTYRIC-ACID IN ANESTHETIZED DOGS.
003772 04-03
BETA-ADRENERGIC INFLUENCE ON CARDIAC DYNAMICS DURING SHOCK-AVOIDANCE IN DOGS.
003813 04-03
EFFECT OF MORPHINE AND NALOXONE ON LEU-ENKEPHALIN-LIKE IMMUNOREACTIVITY IN DOGS.
[illegible] 04-03
DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS.
004681 04-13
DOM
DOM AND RELATED 2,5 DIMETHOXY-4-ALKYLPHENYLISOPROPYLAMINES: BEHAVIORAL AND SEROTONIN-RECEPTOR PROPERTIES.
[illegible] 04-03
THE EFFECTS OF 2,5 DIMETHOXY-4-METHYLAMPHETAMINE (DOM) ON OPERANT-BEHAVIOR: INTERACTIONS WITH OTHER NEUROACTIVE-AGENTS.
[illegible] 04-04
DISCRIMINATIVE-STIMULUS PROPERTIES OF THE HALLUCINOGENIC AGENT DOM.
004260 04-04
[illegible]
[illegible] IN DOMESTIC FOWL. [illegible] OF [illegible] AND [illegible].
[illegible] 04-04
DOMPERIDONE
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003721 04-03
THE DOPAMINE-RECEPTOR ANTAGONIST DOMPERIDONE IS ALSO A COMPETITIVE ANTAGONIST AT ALPHA1-ADRENOCEPTORS.
[illegible] 04-03
DOPA
OPPOSITE EFFECTS OF NALOXONE ON SUBSTANCE-P-INDUCED [illegible] IN BRAIN DOPA SYNTHESIS AND IN LOCOMOTOR-ACTIVITY IN RATS.
[illegible] 04-03
DOPAC
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE.
[illegible] 04-03
DOPAMINE
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003721 04-03
DOPAMINE METABOLITES IN CAUDATE AND CORTEX AFTER LITHIUM AND HALOPERIDOL. (UNPUBLISHED PAPER).
003728 04-03
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO.
003741 04-03
GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE.
[illegible] 04-03
THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS.
[illegible] 04-03
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE.
[illegible] 04-03
COMPARATIVE-EFFECTS OF AMANTADINE AND AMPHETAMINE-AND [illegible] ON DOPAMINE METABOLISM IN RAT-BRAIN.
[illegible] 04-03
DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP.
[illegible] 04-03
PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS.
[illegible] 04-03
INCREASED MESOLIMBIC DOPAMINE BINDING FOLLOWING CHRONIC HALOPERIDOL TREATMENT.
[illegible] 04-03
SOME BARBITURATES ENHANCE THE EFFECT OF MUSCIMOL ON DOPAMINE TURNOVER IN THE RAT RETINA.
[illegible] 04-03
[illegible] OF DOPAMINE D-1 AND D-2 BINDING-SITES IN [illegible] TISSUE BY [illegible].
[illegible] 04-03
EFFECTS OF [illegible] ON THE DOPAMINE VASCULAR RECEPTOR.
[illegible] 04-03
[illegible] EFFECTS ON DOPAMINE SYNTHESIS: STRUCTURE-ACTIVITY RELATIONSHIPS. (UNPUBLISHED PAPER).
[illegible] 04-03
EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER).
[illegible] 04-03
WHY DOES SULPIRIDE NOT BLOCK THE EFFECT OF DOPAMINE ON THE DOPAMINE-SENSITIVE ADENYLATE-CYCLASE?
[illegible] 04-03
EFFECTS OF A LONG-TERM TREATMENT OF [illegible] ON CEREBRAL DOPAMINE AND [illegible] IN RATS.
[illegible] 04-04
EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL, AND [illegible] ON [illegible] IN RATS.
[illegible] 04-04
GENETIC VARIATIONS IN [illegible] DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND

IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS. 004117 04-04

IS DOPAMINE ANTAGONISM A REQUISITE OF NEUROLEPTIC ACTIVITY? 004122 04-04

THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE. 004130 04-04

INVOLVEMENT OF DOPAMINE IN CIRCLING RESPONSES TO MUSCIMOL DEPENDS ON INTRANIGRAL SITE OF INJECTION. 004158 04-04

DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT. 004171 04-04

AVOIDANCE RESPONSE IN RATS AFTER INJECTION OF DOPAMINE INTO THE NEOSTRIATUM. 004255 04-04

ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN: NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-DYSKINESIA. 004268 04-05

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06

DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

DOPAMINE-ACTIVATED

DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD. 003800 04-03

DOPAMINE-AUTORECEPTORS

PHYSIOLOGICAL SIGNIFICANCE OF DOPAMINE-AUTORECEPTORS AS STUDIED FOLLOWING THEIR SELECTIVE BLOCKADE BY MOLINDONE. 004065 04-04

DOPAMINE-BETA-HYDROXYLASE

PURIFICATION AND CHARACTERIZATION OF RAT PHEOCHROMOCYTOMA DOPAMINE-BETA-HYDROXYLASE. 003664 04-01

REDUCTION IN THE LEVEL OF IMMUNOTITRATABLE DOPAMINE-BETA-HYDROXYLASE AFTER CHRONIC ADMINISTRATION OF L-DOPA OR ALPHA METHYLDOPA. 003764 04-03

RESERPINE EFFECT ON THE AXONAL TRANSPORT OF DOPAMINE-BETA-HYDROXYLASE AND TYROSINE-HYDROXYLASE IN RAT-BRAIN. 003904 04-03

PLASMA DOPAMINE-BETA-HYDROXYLASE ACTIVITY IN CHRONIC SCHIZOPHRENIC-PATIENTS TESTED WITH SINGLE-DOSE OF 2 BROMO-ALPHA-ERGOCRIPTINE (PARLODEL). 004343 04-08

NORMAL PLASMA DOPAMINE-BETA-HYDROXYLASE IN NONTREATED AND TREATED PARKINSON-PATIENTS. 004471 04-11

THE ACTIVITY OF DOPAMINE-BETA-HYDROXYLASE IN THE PLASMA OF PATIENTS WITH ENDOGENOUS DEPRESSIVE-SYNDROMES. 004548 04-13

DOPAMINE-DEPENDENT

DOPAMINE-DEPENDENT HYPERACTIVITY IN THE FOLLOWING MANIPULATION OF GABA MECHANISMS IN THE REGION OF THE NUCLEUS-ACCUMBENS. 003976 04-03

DOPAMINE-INDUCED

CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED. 003911 04-03

EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP. 003952 04-03

DOPAMINE-RECEPTOR

THE DOPAMINE-RECEPTOR: ISOLATION, PURIFICATION AND REGULATION. 003660 04-01

DOPAMINE-RECEPTOR PURIFICATION AND CHARACTERIZATION. (UNPUBLISHED PAPER). 003661 04-01

THE DOPAMINE-RECEPTOR ANTAGONIST DOMPERIDONE IS ALSO A COMPETITIVE ANTAGONIST AT ALPHA1-ADRENOCEPTORS. 003785 04-03

RESPONSE OF STRIATONIGRAL SUBSTANCE-P SYSTEMS TO A DOPAMINE-RECEPTOR AGONIST AND ANTAGONIST. 003826 04-03

THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE. 003958 04-03

DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES. 004003 04-03

A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY. 004054 04-03

RELEVANCE OF DOPAMINE-RECEPTOR BINDING STUDIES FOR EVALUATION OF ANTIPARKINSONIAN-DRUGS. 004120 04-04

DOPAMINE-RECEPTOR CHANGES FOLLOWING DESTRUCTION OF THE NIGROSTRIATAL PATHWAY: LACK OF A RELATIONSHIP TO ROTATIONAL-BEHAVIOR. 004229 04-04

LITHIUM EFFECTS ON HALOPERIDOL-INDUCED PRESYNAPTIC AND POSTSYNAPTIC DOPAMINE-RECEPTOR SUPERSENSITIVITY. 004244 04-04

THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE IN MAN. 004580 04-14

DOPAMINE-RECEPTORS

PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03

SOLUBILIZATION OF NEUROLEPTIC/DOPAMINE-RECEPTORS OF HUMAN BRAIN STRIATUM. 003767 04-03

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03

MODULATION OF DOPAMINE-RECEPTORS BY OPIATES. (UNPUBLISHED PAPER). 003949 04-03

CHRONIC NEUROLEPTIC TREATMENT SPECIFICALLY ALTERS THE NUMBER OF DOPAMINE-RECEPTORS IN RAT-BRAIN. 004033 04-03

BRAIN DOPAMINE-RECEPTORS. 004741 04-17

DOPAMINE-SENSITIVE

STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE. 003718 04-03

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03

WHY DOES SULPIRIDE NOT BLOCK THE EFFECT OF DOPAMINE ON THE DOPAMINE-SENSITIVE ADENYLATE-CYCLASE? 004055 04-03

DOPAMINERGIC

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-0

RELATIONSHIP BETWEEN THE PRESENCE OF DOPAMINERGIC NEURONS AND GABA-RECEPTORS IN SUBSTANTIA-NIGRA: EFFECTS OF LESIONS. 003797 04-0

INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDI AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-0

STUDIES ON AXONAL TRANSPORT IN DOPAMINERGIC NEURONS: EFFECT OF NEUROPHARMACOLOGIC LESIONS. 003858 04-0

CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-0

CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT. 003899 04-0

EFFECTS OF METHAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT. 002910 04-03

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004801 04-03

ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004253 04-03

EFFECTS OF DOPAMINERGIC DRUGS ON PHENCYCLIDINE-INDUCED BEHAVIOR IN THE RAT. 004093 04-04

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

RELATION BETWEEN BRAIN CATECHOLAMINE-RECEPTORS AND DOPAMINERGIC STEREOTYPY IN RAT STRAINS. 004131 04-04

DOPAMINERGIC AGONISTS DIFFERENTIALLY AFFECT OPEN-FIELD ACTIVITY OF RATS WITH A10 LESIONS. 004135 04-04

DOPAMINERGIC NEURONS OF SPINAL-CORD: A POSSIBLE SITE FOR THE ACTION OF NEUROLEPTIC-DRUGS. 004188 04-04

GENOTYPIC INFLUENCES ON STRIATAL DOPAMINERGIC REGULATION IN MICE. 004217 04-04

CHANGES OF RESPONSE TO DOPAMINERGIC DRUGS IN RATS SUBMITTED TO REM SLEEP DEPRIVATION. 004239 04-04

TONIC IMMOBILITY IN DOMESTIC FOWL: POSSIBLE INTERACTION OF SEROTONERGIC AND DOPAMINERGIC MECHANISMS. 004246 04-04

IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15

DOPAMINERGIC-RECEPTOR

A CONTROLLED-STUDY OF L-DOPA IN SCHIZOPHRENIA WITH REFERENCE TO THE THEORY OF DOPAMINERGIC-RECEPTOR HYPERSENSITIVITY. 004312 04-08

DOPAMINERGIC-RECEPTORS

EVIDENCE FOR THERMOREGULATORY DOPAMINERGIC-RECEPTORS LOCATED IN THE PREOPTICUS-MEDIALIS-NUCLEUS OF THE RAT HYPOTHALAMUS. 003754 04-03

EFFECTS OF ACUTE AND CHRONIC ADMINISTRATION OF PHENCYCLIDINE ON DOPAMINERGIC-RECEPTORS IN RAT STRIATUM. 003901 04-03

DOPAMINERGIC-SUPERSENSITIVITY

EFFECTS OF AGE ON DOPAMINERGIC-SUPERSENSITIVITY INDUCED BY CHRONIC FLUPHENAZINE. 003940 04-03

DOPAMINERGIC-SYSTEMS

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

DORSAL-HORN

SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03

DOSAGE

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004051 04-13

DOSAGES

A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004333 04-08

DOSE

FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004090 04-04

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004051 04-13

DOSE-DEPENDENT

APPARENT SEROTONERGIC MODULATION OF THE DOSE-DEPENDENT BIPHASIC RESPONSE OF NEOSTRIATAL NEURONS PRODUCED BY D-AMPHETAMINE. 003783 04-03

DOSE-EFFECT

DOSE-EFFECT OF CDAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN PSYCHOVEGETATIVE-SYNDROME. 004472 04-11

DOSE-RELATED

LITHIUM INDUCES DOSE-RELATED INCREASES AND DECREASES IN ACTIVITY LEVELS IN THE RAT. 004079 04-04

DOSE-RESPONSE

DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003808 04-03

DOSES

LONG-TERM EFFECTS OF MULTIPLE DOSES OF METHAMPHETAMINE ON TRYPTOPHAN-HYDROXYLASE AND TYROSINE-HYDROXYLASE ACTIVITY IN RAT-BRAIN. 003830 04-03

THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS. 004087 04-04

AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07

PHARMACOKINETICS OF CLOXAZOLAM IN MAN AFTER SINGLE AND MULTIPLE ORAL DOSES. 004520 04-13

CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004539 04-13

DOTHIEPIN

A COMPARISON OF TRAZODONE AND DOTHIEPIN IN DEPRESSION. 004294 04-09

DOUBLE-BLIND

DES-TYROSYL-GAMMA-ENDORPHIN IN SCHIZOPHRENIA: A DOUBLE-BLIND TRIAL IN 13-PATIENTS. 004322 04-08

A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004333 04-08

TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09

A PRELIMINARY DOUBLE-BLIND STUDY ON THE EFFICACY OF CARBAMAZEPINE IN PROPHYLAXIS OF MANIC-DEPRESSIVE-ILLNESS. 004366 04-09

A DOUBLE-BLIND MULTICENTRIC-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004373 04-09

A DOUBLE-BLIND TRIAL: THE USE OF [illegible] AND DIAZEPAM IN ANXIETY. 004435 04-10

ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004467 04-11

THE EFFICACY OF PIRACETAM IN VERTIGO. A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN. 004470 04-11

A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD. 004481 04-11

DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO. 004563 04-14

DOWNS-SYNDROME

A STUDY OF GAMMA AMINOBUTYRIC-ACID UPTAKE IN NORMAL AND DOWNS-SYNDROME PLATELETS. [illegible] 04-03

DOXEPIN

DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. [illegible] 04-03

PLASMA LEVELS OF THE CIS-ISOMERS AND TRANS-ISOMERS OF DOXEPIN AND DESMETHYLDOXEPIN AFTER ADMINISTRATION OF DOXEPIN TO PATIENTS. 004355 04-09

DOXEPIN PLASMA LEVELS AND ANXIOLYTIC RESPONSE. 004477 04-11

DRINKING

HALOXONE SUPPRESSES FEEDING AND DRINKING BUT NOT WHEEL RUNNING IN RATS. 004080 04-04

SUPPRESSION OF ALCOHOL DRINKING WITH BRAIN ALDEHYDE-DEHYDROGENASE INHIBITION. 004220 04-04

L 5 HYDROXYTRYPTOPHAN-INDUCED DRINKING IN RATS: POSSIBLE MECHANISMS FOR INDUCTION. 004237 04-04

DROPERIDOL

HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004332 04-08

DRUG

QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03

AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03

FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04

CONDITIONING OF AN INTEROCEPTIVE DRUG STIMULUS TO DIFFERENT EXTEROCEPTIVE CONTEXTS. 004142 04-04

BARBITURATE-DEPENDENCE AND DRUG PREFERENCE. 004235 04-04

LACK OF SPECIFICITY OF AN ANIMAL BEHAVIOR MODEL FOR HALLUCINOGENIC DRUG ACTION. 004250 04-04

AUTORADIOGRAPHIC LOCALIZATION OF DRUG AND NEUROTRANSMITTER-RECEPTORS IN THE BRAIN. 004292 04-06

INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG. 004306 04-07

CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004559 04-13

COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14

DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO. 004566 04-14

PREVENTION OF TARDIVE-DYSKINESIA AND OTHER DRUG RELATED ADVERSE-EFFECTS. 004601 04-15

BIOLOGICAL AND PHYSIOLOGICAL PREDICTORS OF DRUG RESPONSE. (UNPUBLISHED PAPER). 004708 04-17

THE DRUG PATHOMORPHOSIS OF SCHIZOPHRENIA. 004732 04-17

DRUG CONCENTRATIONS IN NEUROPSYCHIATRY. 004735 04-17

CLINICAL-PHARMACOLOGY: DRUG ABSORPTION. 004740 04-17

DRUG-EFFECTS

CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

NONSPECIFIC FACTORS IN DRUG-EFFECTS: PLACEBO PERSONALITY. 004704 04-17

DRUG-HOLIDAYS

USING DRUG-HOLIDAYS FOR CHRONIC-OUTPATIENTS. 004742 04-17

DRUG-INDUCED

DRUG-INDUCED CHANGES IN THE COMPOSITION OF THE CEREBRAL FREE AMINO-ACID POOL. 004039 04-03

MODIFICATION OF DRUG-INDUCED CATATONIA AND TREMORS BY QUIPAZINE IN RATS AND MICE. 004164 04-04

THE ROLE OF NIGRAL PROJECTIONS TO THE THALAMUS IN DRUG-INDUCED CIRCLING-BEHAVIOUR IN THE RAT. 004205 04-04

ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11

DRUG-INDUCED ALTERATIONS OF THE HYPOTHALAMUS HYPOPHYSIS AXIS. 004535 04-13

DRUG-INDUCED PSYCHOSIS AND SCHIZOPHRENIA IN ADOLESCENTS. 004596 04-15

TARDIVE-DYSKINESIA AND OTHER DRUG-INDUCED MOVEMENT-DISORDERS AMONG HANDICAPPED CHILDREN AND YOUTH. 004614 04-15

DRUG-INTERACTIONS

DRUG-INTERACTIONS OF AMITRIPTYLINE AND NORTRIPTYLINE WITH WARFARIN IN THE RAT. 003912 04-03

DRUG-THERAPIES

CONVULSIVE AND DRUG-THERAPIES OF DEPRESSION. 004366 04-09

DRUG-THERAPY

RELAPSE AFTER SHORT-TERM DRUG-THERAPY IN NEUROTIC-OUTPATIENTS. 004400 04-09

DRUG-THERAPY FOR HYPERACTIVITY: TREATMENT PROCEDURES IN NATURAL SETTINGS. 004449 04-11

PROBLEMS REMAIN IN REVIEWS OF MEDICAID FINANCED DRUG-THERAPY IN NURSING-HOMES. 004736 04-17

DRUG-TREATMENT

ALPHA2-ADRENORECEPTORS IN RAT-BRAIN ARE DECREASED AFTER LONG-TERM TRICYCLIC-ANTIDEPRESSANT DRUG-TREATMENT. 004008 04-03

SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS. 004433 04-11

PREVALENCE OF DRUG-TREATMENT FOR HYPERACTIVITY AND OTHER CHILDHOOD BEHAVIOR-DISORDERS. 004713 04-17

PSYCHOSOCIAL-ASPECTS OF DRUG-TREATMENT FOR HYPERACTIVITY. 004714 04-17

DRUGS

INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03

ACTION OF DRUGS ON THE CEREBELLAR ELECTRICAL-ACTIVITIES. 003804 04-03

COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03

EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. 004026 04-03

EFFECTS ON THE PINNA-REFLEX OF DRUGS ACTING AT ALPHA-ADRENOCEPTORS. 004078 04-04

EFFECTS OF DOPAMINERGIC DRUGS ON PHENCYCLIDINE-INDUCED BEHAVIOR IN THE RAT. 004083 04-04

DISCRIMINATION OF ELECTRIC-SHOCK: EFFECTS OF SOME OPIOID AND NONOPIOID DRUGS. 004106 04-04

A STUDY OF THE EFFECT OF NEUROPHARMACOLOGICAL DRUGS ON THE FUNCTIONAL ACTIVITY OF RAT-BRAIN. 004107 04-0

CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS. 004133 04-0

EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-0

AVOIDANCE ENHANCEMENT AND DISCRIMINATIVE RESPONSE CONTROL BY ANXIOLYTICS WITH DRUGS ACTING ON THE GABA SYSTEM. 004193 04-0

CHANGES OF RESPONSE TO DOPAMINERGIC DRUGS IN RATS SUBMITTED TO REM SLEEP DEPRIVATION. 004239 04-0

THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT: A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-0

AN IMPROVED PNEUMATIC SYRINGE FOR SELF-ADMINISTRATION OF DRUGS BY RATS. 004304 04

DRUGS AND SCHIZOPHRENIA. 004314 04-08
BLOOD LEVEL MEASUREMENTS OF TRICYCLIC DRUGS AS A DIAGNOSTIC TOOL. 004048 04-09
INTERACTIONS BETWEEN ANTIDEPRESSANTS AND OTHER DRUGS. 004371 04-09
ACUTE EFFECT OF DRUGS UPON MEMORY OF PATIENTS WITH SENILE-DEMENTIA. 004561 04-14
PERSONALITY AND DRUGS IN VISUAL FIGURAL AFTEREFFECTS. 004581 04-14
IMPURITIES IN DRUGS V: MEPROBAMATE. 004631 04-15
DRUGS AND RENAL-DISEASE. 004645 04-15
THE USE OF EVENT-RELATED SLOW POTENTIALS OF THE BRAIN AS AN OBJECTIVE METHOD TO STUDY THE EFFECTS OF CENTRALLY ACTING DRUGS. 004669 04-16
SYMPATHOMIMETIC-AMINES AND TRICYCLIC-ANTIDEPRESSANT DRUGS. 004678 04-16
A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE. 004688 04-16
DRUGS, ALCOHOL AND SEX. 004706 04-17
DRUGS, TRANSMITTERS AND HORMONES, AND MATING-BEHAVIOR. 004721 04-17
DURATION
EFFECTS OF PAIN, MORPHINE AND NALOXONE ON THE DURATION OF ANIMAL HYPNOSIS. 004081 04-04
LITHIUM ELIMINATION HALF-LIFE AND DURATION OF THERAPY. 004369 04-09
DYNAMICS
BETA-ADRENERGIC INFLUENCE ON CARDIAC DYNAMICS DURING SHOCK-AVOIDANCE IN DOGS. 003813 04-03
THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL. 004045 04-03
DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT. 004171 04-04
THE NOSOLOGICAL INDEPENDENCE OF INVOLUTIONAL DEPRESSION AND ITS DYNAMICS DURING PSYCHOPHARMACOTHERAPY. 004389 04-09
CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004403 04-09
DYSKINESIA
ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004487 04-11
EATING-BEHAVIOR
EATING-BEHAVIOR REVEALS RATS PREFERENCE FOR MORPHINE. 004257 04-04
EEG
INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03
THE EFFECT OF DIPHENYLHYDANTOIN ON EEG CURVES IN EPILEPTICS. 004494 04-11
EFFECTIVENESS
LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09
CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004404 04-09
EFFICACY
THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08
TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09
A PRELIMINARY DOUBLE-BLIND STUDY ON THE EFFICACY OF CARBAMAZEPINE IN PROPHYLAXIS OF MANIC-DEPRESSIVE-ILLNESS. 004388 04-09
A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09
PHARMACOTHERAPY AND PSYCHOTHERAPY FOR AMBULATORY DEPRESSION: EFFICACY AND CHOICES. 004413 04-09
THE EFFICACY OF PIRACETAM IN VERTIGO, A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN. 004470 04-11
A COMPARATIVE EVALUATION OF THE EFFICACY OF SOME THERAPEUTIC METHODS USED IN DELIRIUM-TREMENS. 004486 04-11
CNS EFFECTS OF BE-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACO-EEG AND PHARMACOPSYCHOLOGY). 004519 04-13
VALPROIC-ACID IN CHILDHOOD-EPILEPSY: ANTICONVULSIVE EFFICACY IN RELATION TO ITS PLASMA LEVELS. 004525 04-13
MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17
EFFLUX
EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 003969 04-03
ELDERLY
DESMETHYLDIAZEPAM KINETICS IN THE ELDERLY AFTER ORAL PRAZEPAM. 004432 04-11
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM. II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13
ELECTRIC-SHOCK
THE EFFECTS OF ELECTRIC-SHOCK ON RESPONDING MAINTAINED BY COCAINE IN RHESUS-MONKEYS. 004071 04-04
DISCRIMINATION OF ELECTRIC-SHOCK: EFFECTS OF SOME OPIOID AND NONOPIOID DRUGS. 004106 04-04
BEHAVIORAL-EFFECTS OF SELF-ADMINISTERED COCAINE: RESPONDING MAINTAINED ALTERNATELY BY COCAINE AND ELECTRIC-SHOCK IN SQUIRREL-MONKEYS. 004225 04-04
ELECTRICAL-ACTIVITIES
ACTION OF DRUGS ON THE CEREBELLAR ELECTRICAL-ACTIVITIES. 003804 04-03
ELECTRICAL-ACTIVITY
EFFECTS OF ENKEPHALIN, MORPHINE, AND NALOXONE ON THE ELECTRICAL-ACTIVITY OF THE IN VITRO HIPPOCAMPAL SLICE PREPARATION. 003918 04-03
EFFECTS OF A SHORT-ACTING BENZODIAZEPINE ON BRAIN ELECTRICAL-ACTIVITY DURING SLEEP. 004548 04-14
ELECTRICAL-STIMULATION
THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003883 04-03
PRESSOR EFFECTS OF ELECTRICAL-STIMULATION OF THE DORSAL AND MEDIAN RAPHE NUCLEI IN ANESTHETIZED RATS. 003892 04-03
THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS. 004067 04-04
RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS. 004231 04-04
ELECTRICALLY-INDUCED
EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004144 04-04
EFFECTS OF [illegible] ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004145 04-04
ELECTROCARDIOGRAM-CHANGES
ELECTROCARDIOGRAM-CHANGES AND PLASMA IMIPRAMINE LEVELS DURING TREATMENT OF DEPRESSION. 004411 04-09
ELECTROCARDIOGRAPHIC-CHANGES
ELECTROCARDIOGRAPHIC-CHANGES IN RATS DURING CHRONIC-TREATMENT WITH ANTIDEPRESSANT AND NEUROLEPTIC-DRUGS. 004284 04-08

ELECTROCHEMICAL
A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION. 003674 04-01

ELECTROCONVULSIVE-SHOCK
BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS. 003736 04-03
DIFFERENTIAL-EFFECTS OF ELECTROCONVULSIVE-SHOCK AND ANTIDEPRESSANT-DRUGS ON SEROTONIN2-RECEPTORS IN RAT-BRAIN. 003878 04-03
REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK — POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER). 004154 04-04

ELECTROCONVULSIVE-THERAPY
ADMINISTRATION OF FLUNITRAZEPAM IN ELECTROCONVULSIVE-THERAPY. 004319 04-08
VALUE OF PROPANIDID IN ELECTROCONVULSIVE-THERAPY (COMPARISON WITH THIOPENTONE). 004379 04-09

ELECTROCORTICOGRAPHIC
ELECTROCORTICOGRAPHIC ACTIVITY ELICITED BY METRAZOL DURING ONTOGENESIS IN RATS. 004064 04-03

ELECTROENCEPHALOGRAPHIC
ELECTROENCEPHALOGRAPHIC AND BEHAVIORAL-TOLERANCE TO AND CROSS-TOLERANCE BETWEEN D ALA2-METHIONINE-ENKEPHALINAMIDE AND MORPHINE IN THE RAT. 004038 04-03
ELECTROENCEPHALOGRAPHIC CHANGE IN PARKINSONIAN-PATIENTS TREATED WITH LEVODOPA CARBIDOPA. 004557 04-13

ELECTROLYTE-DISTURBANCES
TREATMENT OF UNDERNUTRITION AND ELECTROLYTE-DISTURBANCES IN ANOREXIA-NERVOSA. 004531 04-13

ELECTROLYTIC
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03

ELECTROPHYSIOLOGICAL
ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM. 003926 04-03
AN ELECTROPHYSIOLOGICAL MODEL OF GABA-MEDIATED NEUROTRANSMISSION. 003929 04-03
CATECHOLAMINE MODULATION OF ENKEPHALIN-INDUCED ELECTROPHYSIOLOGICAL RESPONSES IN CEREBRAL-CORTEX. 003957 04-03
ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN. 004500 04-13

ELECTROPHYSIOLOGICAL-EFFECTS
ELECTROPHYSIOLOGICAL-EFFECTS OF IMIPRAMINE ON BOVINE VENTRICULAR-MUSCLE AND PURKINJE-FIBRES. 003988 04-03

ELECTRORETINOGRAM
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS. 003807 04-03

ELECTRORETINOGRAPHIC-CHANGES
ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA. 004507 04-13

ELECTRORETINOGRAPHY
ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA. 004507 04-13

ELECTROSHOCK-INDUCED
EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS. 004101 04-04

ELEMENTARY
PREVALENCE OF HYPERACTIVITY AND RELATED TREATMENTS AMONG ELEMENTARY SCHOOL CHILDREN. 004469 04-11

ELETROENCEPHALOGRAM
COMPUTER-ANALYZED ELETROENCEPHALOGRAM TO PREDICT THE THERAPEUTIC OUTCOME IN SCHIZOPHRENIA. 004680 04-16

ELIMINATION
EFFECTS OF INDOMETHACIN AND METHYLPREDNISOLONE ON RENAL ELIMINATION OF LITHIUM IN THE RAT. 004270 04-05
LITHIUM ELIMINATION HALF-LIFE AND DURATION OF THERAPY. 004369 04-09

EMBRYONIC
NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03

EMIT
MASS SCREENING AND CONFIRMATION OF DIAZEPAM IN URINE BY EMIT THIN-LAYER-CHROMATOGRAPHY. 004672 04-16

EMOTIONAL
THE ROLE OF OPIATE-RECEPTORS OF DIFFERENT BRAIN REGIONS IN DETERMINING THE EMOTIONAL REACTIONS OF RATS. 004017 04-03

EMOTIONAL-DISORDERS
EMOTIONAL-DISORDERS IN CHILDREN AND ADOLESCENTS: MEDICAL AND PSYCHOLOGICAL APPROACHES TO TREATMENT. 004743 04-17

EMPIRICAL
DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER). 004401 04-09

ENANTIOMERS
STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

ENANTIOMORPH
ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS. 004185 04-04

ENCAPSULATED
PASSAGE THROUGH THE BLOOD-BRAIN-BARRIER OF THYROTROPIN-RELEASING-HORMONE ENCAPSULATED IN LIPOSOMES. 004298 04-06

ENCEPHALE
SPECIFIC AND NONSPECIFIC MULTIPLE UNIT ACTIVITIES DURING PENTYLENETETRAZOL SEIZURES. I. ANIMALS WITH ENCEPHALE ISOLE. 004046 04-03

ENCOPRESIS
TREATMENT OF ENCOPRESIS WITH IMIPRAMINE. 004451 04-11

ENDOCRINE
THE EFFECTS OF CHRONIC METHYLPHENIDATE TREATMENT ON GROWTH AND ENDOCRINE FUNCTION IN THE DEVELOPING RAT. 003811 04-03

ENDOGENOUS
INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03
POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03
SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS. 004234 04-04
TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09
A NEUROENDOCRINE-STUDY OF ADRENOCEPTOR FUNCTION IN ENDOGENOUS DEPRESSION. 004362 04-09
THE EFFECT OF NALOXONE ON THE CONDITION OF PATIENTS WITH ENDOGENOUS PSYCHOSES. 004381 04-09
CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT. 004382 04-09
COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09
CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004403 04-09

CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004404 04-09
THE ACTIVITY OF ERYTHROCYTE CATECHOL-O-METHYLTRANSFERASE IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004546 04-13
THE ACTIVITY OF BLOOD-PLATELET MONOAMINE-OXIDASE IN ENDOGENOUS DEPRESSION. 004547 04-13
THE ACTIVITY OF DOPAMINE-BETA-HYDROXYLASE IN THE PLASMA OF PATIENTS WITH ENDOGENOUS DEPRESSIVE-SYNDROMES. 004548 04-13

ENDORPHIN
SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN ANALOGS WITH DISULFIDE BRIDGES. 003658 04-01
VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03
PHARMACOLOGIC MANIPULATION OF BRAIN AND PITUITARY ENDORPHIN CONTENT AND RELEASE. 003837 04-03
LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03
COMPARISON OF THE EFFECTS OF BETA ENDORPHIN AND MORPHINE ON EXPLORATORY-BEHAVIOUR AND SOCIOSEXUAL-BEHAVIOUR IN THE MALE RAT. 004178 04-04
BETA ENDORPHIN: CENTRAL SITES OF ANALGESIA, CATALEPSY AND BODY-TEMPERATURE CHANGES IN RATS. 004238 04-04
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08
CLINICAL-EFFECTS OF BETA ENDORPHIN INFUSIONS. 004360 04-09
SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11

ENDORPHINS
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03
REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK — POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER). 004154 04-04
ENDORPHINS IN PSYCHOPATHOLOGY. 004313 04-08
PSYCHOPATHOLOGY AND ENDORPHINS. 004317 04-08

ENERGY
THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN. 004075 04-04
EFFECT OF INORGANIC LEAD ON RAT-BRAIN MITOCHONDRIAL RESPIRATION AND ENERGY PRODUCTION. 004267 04-05

ENFLURANE
EPILEPTOGENIC PROPERTIES OF ENFLURANE AND THEIR CLINICAL INTERPRETATION. 004609 04-15

ENKEPHALIN
SYNTHESIS AND PHARMACOLOGICAL-STUDY OF SOME ENKEPHALIN ANALOGS IN RELATION TO THE PLURALITY OF OPIATE-RECEPTORS. 003682 04-02
INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03
ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE. 003863 04-03
CHARACTERIZATION OF ENKEPHALIN RELEASE FROM RAT STRIATUM. 003909 04-03
EFFECTS OF ENKEPHALIN, MORPHINE, AND NALOXONE ON THE ELECTRICAL-ACTIVITY OF THE IN VITRO HIPPOCAMPAL SLICE PREPARATION. 003918 04-03

ENKEPHALIN-INDUCED
CATECHOLAMINE MODULATION OF ENKEPHALIN-INDUCED ELECTROPHYSIOLOGICAL RESPONSES IN CEREBRAL-CORTEX. [illegible] 04-03

ENKEPHALINS
POTENT TETRAPEPTIDE ENKEPHALINS. [illegible] 04-02
SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX. 004015 04-03
ARE THE ENKEPHALINS INVOLVED IN PARKINSONS-DISEASE? CLINICAL AND NEUROENDOCRINE RESPONSES TO NALOXONE ADMINISTRATION. 004431 04-11

ENOLASES
BIOCHEMICAL AND IMMUNOLOGICAL PROPERTIES OF THE MOUSE BRAIN ENOLASES PURIFIED BY A SIMPLE METHOD. 003668 04-01

ENRICHMENT
DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03

ENTER
THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE. 003733 04-03

ENTRY
KINETIC STUDIES ON THE ENTRY OF D-AMPHETAMINE INTO THE CENTRAL-NERVOUS-SYSTEM: I. CEREBROSPINAL-FLUID. 004200 04-03

ENZYMATIC
AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03

ENZYMES
REGIONAL AND SUBCELLULAR LOCALIZATION IN RAT-BRAIN OF THE ENZYMES THAT CAN SYNTHESIZE GAMMA HYDROXYBUTYRIC-ACID. 003675 04-01
DISTRIBUTION OF CESIUM IN THE ORGANISM AND ITS EFFECT ON THE NUCLEOTIDE METABOLISM ENZYMES. 003696 04-02
CHANGES IN GAMMA AMINOBUTYRIC-ACID SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA. 003891 04-03
THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT. 003897 04-03
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS. 003947 04-03
OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES. 004024 04-03

EPENDYMINS
A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY. 003677 04-01

EPILEPSIES
TREATMENT OF EPILEPSIES WITH CLONAZEPAM (ANTILEPSIN). [illegible] 04-11

EPILEPSY
STUDIES ON GAMMA AMINOBUTYRIC-ACID TRANSPORT IN COBALT EXPERIMENTAL EPILEPSY IN THE RAT. [illegible] 04-03
THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004439 04-11
STOPPING MEDICATION IN CHILDREN WITH EPILEPSY. [illegible] 04-11
INFLUENCE OF CARBAMAZEPINE ON SERUM THYROXINE AND TRIIODOTHYRONINE IN PATIENTS WITH EPILEPSY. 004488 04-11
CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14
A CASE OF PETIT-MAL EPILEPSY AGGRAVATED BY LITHIUM. 004641 04-15
THE PROGNOSIS OF EPILEPSY AND THE STRATEGY FOR [illegible] ANTIEPILEPTIC THERAPY. [illegible] 04-17

EPILEPSY-PRONE
EFFECT OF RO-4-1284 ON AUDIOGENIC-SEIZURE SUSCEPTIBILITY AND INTENSITY IN EPILEPSY-PRONE RATS. 003865 04-03

EPILEPTIC-CHILDREN
PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11

EPILEPTIC-FOCUS
THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES. 003984 04-03

EPILEPTIC-PATIENTS
MECHANISM OF VALPROATE PHENOBARBITAL INTERACTION IN EPILEPTIC-PATIENTS. 004522 04-13
NEUROLOGICAL-COMPLICATIONS DUE TO THE PHARMACOLOGICAL-TREATMENT OF EPILEPTIC-PATIENTS. 004593 04-15

EPILEPTIC-SEIZURES
POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS. 004720 04-17

EPILEPTICS
BIOCHEMICAL-STUDIES OF HUMAN EPILEPTICS DURING ANTICONVULSANT THERAPY. 004490 04-11
THE EFFECT OF DIPHENYLHYDANTOIN ON EEG CURVES IN EPILEPTICS. 004494 04-11

EPILEPTOGENIC
EPILEPTOGENIC PROPERTIES OF ENFLURANE AND THEIR CLINICAL INTERPRETATION. 004609 04-15

EPINEPHRINE
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS. 003947 04-03

ERGOT
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HIGH-DOSE ERGOT ALKALOID TREATMENT FOR DEMENTIA. PRELIMINARY REPORT. 004493 04-11

ERGOTS
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03

ERYTHROCYTE
ERYTHROCYTE CHOLINE CONCENTRATIONS ARE ELEVATED IN MANIC-PATIENTS. 004521 04-13
THE ACTIVITY OF ERYTHROCYTE CATECHOL-O-METHYLTRANSFERASE IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004546 04-13

ERYTHROCYTES
A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM. 004520 04-13
INTERACTION OF CHLORPROMAZINE WITH THE TRANSPORT SYSTEM OF GLUCOSE IN HUMAN ERYTHROCYTES. 004529 04-13

ERYTHROPLASMATIC
CLINICAL SIGNIFICANCE OF THE ERYTHROPLASMATIC RATIO OF LITHIUM. 004357 04-09

ESCAPE
EFFECTS OF CHLORPROMAZINE ON ESCAPE AND AVOIDANCE RESPONSES: A CLOSER LOOK. 004226 04-04

ESCAPE-BEHAVIOR
CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS. 004076 04-04

ESSENTIALLY
CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

ESTROGEN
ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN: NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-DYSKINESIA. 004268 04-05
THE EFFECTS OF ESTROGEN THERAPY ON THE SEX-LIFE OF POSTMENOPAUSAL-WOMEN. 004573 04-14

ESTROGENS
ANTIDOPAMINERGIC EFFECT OF ESTROGENS AT THE STRIATAL LEVEL. 003789 04-03

ETHANOL
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03
INHIBITION OF SYNAPTOSOMAL CALCIUM UPTAKE BY ETHANOL. 003827 04-03
EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL. 003883 04-03
THE EFFECT OF PRENATAL EXPOSURE TO ETHANOL OR OPIATES ON BRAIN CATECHOLAMINE ACTIVITY. 003939 04-03
EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 003969 04-03
EFFECTS OF ETHANOL ADMINISTRATION AND WITHDRAWAL ON NEUROTRANSMITTER-RECEPTOR SYSTEMS IN C57 MICE. 003979 04-03
THE EFFECTS OF ACUTE AND CHRONIC ETHANOL ADMINISTRATION AND ITS WITHDRAWAL ON GAMMA AMINOBUTYRIC-ACID-RECEPTOR BINDING IN RAT-BRAIN. 004035 04-03
ALTERATIONS IN GAMMA AMINOBUTYRIC-ACID-RECEPTOR SENSITIVITY FOLLOWING ACUTE AND CHRONIC ETHANOL TREATMENTS. 004037 04-03
SELECTIVE EFFECT OF ETHANOL ON THE VESTIBULAR NUCLEUS NEURONS IN THE CAT. 004139 04-04
ETHANOL SEDATIVE HYPNOTIC-INTERACTIONS: IN VITRO STUDIES ON NA-K-ACTIVATED ADENOSINE-TRIPHOSPHATASE. 004269 04-05
INTRAVENOUS DIAZEPAM AND ORAL ETHANOL INTERACTION. 004552 04-13
HUMAN SOCIAL CONVERSATION: EFFECTS OF ETHANOL, SECOBARBITAL AND CHLORPROMAZINE. 004582 04-14

ETHANOL-INDUCED
ANTAGONISM OF ETHANOL-INDUCED DECREASE IN LH BY P CHLOROPHENYLALANINE: LACK OF CORRELATION WITH ALTERED SEROTONERGIC MECHANISMS. 003748 04-03
ETHANOL-INDUCED CHANGES IN CYCLIC-GUANOSINE-PHOSPHATE METABOLISM IN MOUSE VESTIBULAR REGION. 003784 04-03

ETHER
DIFFERENTIAL-EFFECTS OF PENTOBARBITAL AND ETHER ON THE SYNAPTIC TRANSMISSION OF THE HIPPOCAMPAL-CA1-REGION IN THE RAT. 003903 04-03

ETHOSUXIMIDE
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT. 003961 04-03

ETHYLKETOCYCLAZOCINE
SPECIFIC, HIGH-AFFINITY (3H)ETHYLKETOCYCLAZOCINE BINDING IN RAT CENTRAL-NERVOUS-SYSTEM: LACK OF EVIDENCE FOR KAPPA-RECEPTORS. 003840 04-03

ETORPHINE
DISCRIMINATIVE-STIMULUS EFFECTS OF ETORPHINE IN RHESUS-MONKEYS. 004134 04-04

EVALUATE
THE USE OF CONDITIONED SUPPRESSION TO EVALUATE THE NATURE OF NEUROLEPTIC-INDUCED AVOIDANCE-DEFICITS. 004070 04-04

EVALUATED
INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR. 004127 04-04

EVALUATION
BIOLOGICAL EVALUATION OF A TRH ANALOGUE WITH A MODIFIED PROLINE RESIDUE. 003662 04-01
FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-0
OPIATE MECHANISMS: EVALUATION OF RESEARCH INVOLVING NEURONAL ACTION POTENTIALS. 003886 04-0

AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION. 003917 04-03

RELEVANCE OF DOPAMINE-RECEPTOR BINDING STUDIES FOR EVALUATION OF ANTIPARKINSONIAN-DRUGS. 004120 04-04

NARCOTIC-REINFORCED RESPONDING: A RAPID EVALUATION PROCEDURE. 004253 04-04

A CLINICAL AND PHARMACODYNAMIC EVALUATION OF SULPIRIDE. 004330 04-08

EVALUATION OF LITHIUM RESPONSE: PSYCHOMETRIC-FINDINGS. 004348 04-09

AN EVALUATION OF TRAZODONE IN THE TREATMENT OF DEPRESSION. 004386 04-09

AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT. 004426 04-10

A COMPARATIVE EVALUATION OF THE EFFICACY OF SOME THERAPEUTIC METHODS USED IN DELIRIUM-TREMENS. 004486 04-11

PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11

A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM. 004543 04-13

COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14

AN EVALUATION OF THE ANTIANXIETY ACTION AND SIDE-EFFECTS OF PROPRANOLOL. 004660 04-15

EVALUATIONS

EVALUATIONS OF LOXAPINE-SUCCINATE IN THE AMBULATORY TREATMENT OF ACUTE SCHIZOPHRENIC-EPISODES. 004345 04-08

EVENT-RELATED

EVENT-RELATED POTENTIAL CHANGES WITH MORPHINE IN NONADDICTED HUMANS. 004512 04-13

THE USE OF EVENT-RELATED SLOW POTENTIALS OF THE BRAIN AS AN OBJECTIVE METHOD TO STUDY THE EFFECTS OF CENTRALLY ACTING DRUGS. 004669 04-16

EVIDENCE

EVIDENCE FOR THERMOREGULATORY DOPAMINERGIC-RECEPTORS LOCATED IN THE PREOPTICUS-MEDIALIS-NUCLEUS OF THE RAT HYPOTHALAMUS. 003754 04-03

SPECIFIC, HIGH-AFFINITY (3H)ETHYLKETOCYCLAZOCINE BINDING IN RAT CENTRAL-NERVOUS-SYSTEM: LACK OF EVIDENCE FOR KAPPA-RECEPTORS. 003840 04-03

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES. 003902 04-03

ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM. 003926 04-03

EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP. 003952 04-03

CLONIDINE AND THE PRIMATE LOCUS-COERULEUS: EVIDENCE SUGGESTING ANXIOLYTIC AND ANTIWITHDRAWAL EFFECTS. (UNPUBLISHED PAPER). 003982 04-03

CNS EFFECTS OF CHOLINE ADMINISTRATION: EVIDENCE FOR TEMPORAL DEPENDENCE. [illegible] 04-03

EVIDENCE THAT THERE ARE SUBCELLULAR POOLS OF NOREPINEPHRINE AND THAT THERE IS FLUX OF NOREPINEPHRINE BETWEEN THESE POOLS. 004004 04-03

IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA. 004011 04-03

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. [illegible] 04-03

ROTATIONAL-BEHAVIOUR ELICITED BY 5 HT IN THE RAT: EVIDENCE FOR AN INHIBITORY ROLE OF 5 HT IN THE SUBSTANTIA-NIGRA AND CORPUS-STRIATUM. 004141 04-04

EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE. 004173 04-04

CLONIDINE-INDUCED HYPERPHAGIA IN MONKEYS: EVIDENCE FOR ALPHA2-NORADRENERGIC-RECEPTOR MEDIATION. 004215 04-04

DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER). 004401 04-09

MINI-SYMPOSIUM. IV. DISCRIMINATIVE-STIMULUS EFFECTS OF NARCOTICS: EVIDENCE FOR MULTIPLE RECEPTOR-MEDIATED ACTIONS. 004719 04-17

EVOKED

INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03

DIFFERENTIAL TOLERANCE TO THE EFFECTS OF MORPHINE ON EVOKED ACTIVITY IN THE HIPPOCAMPAL SLICE. 003747 04-03

MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT. 003849 04-03

INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03

INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003935 04-03

EVOKED-POTENTIALS

ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA. 004316 04-08

APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS. 004549 04-13

EVOKED-RESPONSE

THE BRAINSTEM AUDITORY EVOKED-RESPONSE AS A TOOL IN NEUROBEHAVIORAL TOXICOLOGY AND MEDICINE. 004277 04-05

EVOKED-RESPONSES

THE EFFECT OF CHOLINERGIC SUBSTANCES ON NOCICEPTIVE EVOKED-RESPONSES IN SPECIFIC NUCLEI OF THE THALAMUS. 003770 04-03

THE EFFECT OF NOOTROPIL ON THE TRANSCALLOSAL AND PRIMARY EVOKED-RESPONSES OF THE CAT CEREBRAL-CORTEX. 003780 04-03

EVOLUTION

MINI-SYMPOSIUM: II. MULTIPLE OPIOID-RECEPTORS. A LITTLE ABOUT THEIR HISTORY AND SOME IMPLICATIONS RELATED TO EVOLUTION. 004728 04-17

EXACERBATE

DO STIMULANTS PROVOKE, CAUSE, OR EXACERBATE TICS AND TOURETTE-SYNDROME? 004485 04-11

EXACERBATES

PYRAZOLE EXACERBATES HANDLING-INDUCED CONVULSIONS IN MICE. 004094 04-04

EXACERBATING

POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS. 004730 04-17

EXAMINATION

OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES. 004084 04-03

EXCITABILITY

NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS. [illegible] 04-03

THE EFFECT OF PSYCHOSTIMULANTS ON CHANGES IN THE EXCITABILITY OF THE VISUAL CEREBRAL-CORTEX. 003919 04-03

THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES. [illegible] 04-03

EXCITANT

BACLOFEN: STEREOSELECTIVE INHIBITION OF EXCITANT AMINO-ACID RELEASE. [illegible] 04-03

EXCITATION
- SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03
- INSEPARABILITY OF ACETYLCHOLINESTERASE AND NERVE EXCITATION. 003875 04-03
- SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER). 004565 04-14

EXCITATORY
- EXCITATORY EFFECTS OF DIHYDROCAPSAICIN ON NOCICEPTIVE NEURONS IN THE MEDIAL THALAMUS. 003714 04-03
- EFFECTS OF BARBITURATES ON INHIBITORY AND EXCITATORY RESPONSES TO APPLIED NEUROTRANSMITTERS IN APLYSIA. 003762 04-03
- THE EXCITATORY EFFECT OF ATROPINE ON THE NEURONS OF THE FROG SYMPATHETIC GANGLIA. 004041 04-03

EXCITEMENT
- PSYCHOTIC EXCITEMENT IN MEDICAL-EMERGENCIES. 004480 04-11

EXCRETION
- HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004456 04-11
- CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13
- IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15

EXECUTION
- SELECTIVE EFFECTS OF BARBITURATE AND AMPHETAMINE ON INFORMATION-PROCESSING AND RESPONSE EXECUTION. 004563 04-14

EXERCISE
- THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION. 004509 04-13

EXOSECRETORY
- THE EFFECT OF SEROTONIN ON THE EXOSECRETORY ACTION OF THE PANCREAS. 004043 04-03

EXPERIENCE
- CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE-CHLORIDE IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS. 004604 04-15

EXPERIENCED
- NEUROLEPTIC TREATMENT AS EXPERIENCED BY A PSYCHIATRIST. 004613 04-15

EXPERIMENTAL
- THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH. 003882 04-03
- STUDIES ON GAMMA AMINOBUTYRIC-ACID TRANSPORT IN COBALT EXPERIMENTAL EPILEPSY IN THE RAT. 003990 04-03
- CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04
- ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS. 004185 04-04

EXPERIMENTAL-STUDY
- THE COMPLEX SPECIFIC PATHOGENETIC THERAPY OF THE STEREOTYPIC-BEHAVIOR-SYNDROME (AN EXPERIMENTAL-STUDY). 004162 04-04

EXPERIMENTS
- A MICROCOMPUTER SYSTEM FOR THE CONTROL OF BEHAVIORAL EXPERIMENTS. 004287 04-06

EXPLORATION
- SAME OR DIFFERENT? AN EXPLORATION OF THE BEHAVIORAL-EFFECTS OF BENZAMIDES. 004207 04-04

EXPLORATORY-BEHAVIOUR
- COMPARISON OF THE EFFECTS OF BETA ENDORPHIN AND MORPHINE ON EXPLORATORY-BEHAVIOUR AND SOCIOSEXUAL-BEHAVIOUR IN THE MALE RAT. 004178 04-04

EXPOSED
- CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

EXPOSURE
- THE EFFECT OF PRENATAL EXPOSURE TO ETHANOL OR OPIATES ON BRAIN CATECHOLAMINE ACTIVITY. 003939 04-03
- NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE. 004264 04-05
- NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. II: EFFECTS OF EXTENDED EXPOSURE TO ACRYLAMIDE. 004265 04-05

EXPRESSION
- EFFECT OF COCAINE AND LIDOCAINE ON THE EXPRESSION OF KINDLED SEIZURES IN THE RAT. 004233 04-04

EXTEROCEPTIVE
- CONDITIONING OF AN INTEROCEPTIVE DRUG STIMULUS TO DIFFERENT EXTEROCEPTIVE CONTEXTS. 004142 04-04

EXTRAPYRAMIDAL
- CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD OF PATIENTS. 004434 04-11
- CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

EXTREME
- THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING. 004016 04-03
- THE EFFECT OF MEBICAR ON THE CONDITION OF ANIMALS UNDER CERTAIN EXTREME CIRCUMSTANCES. 004262 04-04

EYEBLINK
- EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

FACT-SHEET
- FACT-SHEET: TOURETTE-SYNDROME. 004474 04-11

FACTORIAL
- STUDY ON THE STABILITY OF THE FACTORIAL STRUCTURE OF THE AMP SYSTEM DURING TREATMENT. 004696 04-16

FACTS
- PHARMACOLOGICAL-BASES OF PSYCHONEUROENDOCRINOLOGY: PRECLINICAL ASSESSMENT OF CLINICAL FACTS. 003735 04-03

FAILS
- NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND CONDITIONED TASTE-AVERSION. 004121 04-04

FAILURE
- PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08
- IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT? 004640 04-15

FAMILIES
- THE NEGATIVE INFLUENCE OF FAMILIES ON COMPLIANCE. 004745 04-17

FAT
- SUSTAINED DECREASE IN FAT CONSUMPTION PRODUCED BY AMPHETAMINE IN RATS MAINTAINED ON A DIETARY SELF-SELECTION REGIME. 004150 04-04

FATALITIES
- LOXAPINE FATALITIES. 004650 04-15

FEATURE
- HOSTILITY PRODUCTION AS A COMMON FEATURE OF ANTIANXIETY-AGENT ACTION. 004654 04-15

FEEDING
- NALOXONE SUPPRESSES FEEDING AND DRINKING BUT NOT WHEEL RUNNING IN RATS. 004080 04-04

FEMALE
PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03
PHARMACOTHERAPY AND FEMALE SEXUALITY. 004480 04-11
PRAZEPAM METABOLISM IN FEMALE SUBJECTS. 004504 04-13

FEMALES
DECREASED 3H IMIPRAMINE BINDING IN DEPRESSED MALES AND FEMALES. 004349 04-09

FEMORAL
CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED. 003911 04-03

FENFLURAMINE
COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS. 003758 04-03
HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE. 004159 04-04

FENTANYL
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04

FETAL
DISPOSITION OF METHADONE IN THE OVINE MATERNAL FETAL UNIT. 004027 04-03

FIBERS
ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS. 003646 04-01

FIGHTING
SUBCHRONIC-TREATMENT WITH THE TRICYCLIC-ANTIDEPRESSANT DMI INCREASES ISOLATION-INDUCED FIGHTING IN RATS. 004252 04-04

FIGURAL
PERSONALITY AND DRUGS IN VISUAL FIGURAL AFTEREFFECTS. 004581 04-14

FIRING
MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT. 003849 04-03

FIRST-PASS
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13

FLEXOR
EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

FLORA
INHIBITION OF MONOAMINE-OXIDASE BY FURAZOLIDONE IN THE CHICKEN AND THE INFLUENCE OF THE ALIMENTARY FLORA THEREON. 003711 04-03

FLOW
SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC INTERACTION. 003887 04-03
EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT. 003910 04-03
THE EFFECT OF FIVE TRICYCLIC-ANTIDEPRESSANTS ON SALIVARY FLOW AND MOOD IN HEALTHY VOLUNTEERS. 004560 04-14

FLUNITRAZEPAM
ADMINISTRATION OF FLUNITRAZEPAM IN ELECTROCONVULSIVE-THERAPY. 004319 04-08

FLUORESCENCE
RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION. 004202 04-06

FLUORESCENT
FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02

FLUORIDE
CEREBRAL FLUORIDE IN MANIA AND THE EFFECT OF LITHIUM: A HYPOTHESIS. 004713 04-17

FLUOROAMINOMETHYLPHENOLS
SYNTHESIS AND GABA-RECEPTOR BINDING-ACTIVITY OF TWO FLUOROAMINOMETHYLPHENOLS. 003605 04-02

FLUOROTRYPTOPHAN
(-) 6 FLUOROTRYPTOPHAN, AN INHIBITOR OF TRYPTOPHAN-HYDROXYLASE: SLEEP AND WAKEFULNESS IN THE RAT. 004189 04-04

FLUOXETINE
EFFECTS OF FLUOXETINE ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004115 04-04

FLUPENTHIXOL
SEQUELAE OF 6 MONTHS CONTINUOUS ADMINISTRATION OF CIS(Z)- AND TRANS(E) FLUPENTHIXOL IN THE RAT. 004282 04-05

FLUPHENAZINE
EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT. 003870 04-03
EFFECTS OF AGE ON DOPAMINERGIC-SUPERSENSITIVITY INDUCED BY CHRONIC FLUPHENAZINE. 003940 04-03
BEHAVIOR OF RATS AND MICE ADMINISTERED ACTIVE METABOLITES OF FLUPHENAZINE, 7 HYDROXYFLUPHENAZINE AND FLUPHENAZINE-SULFOXIDE. 004256 04-04
DEPOT FLUPHENAZINE MAINTENANCE-TREATMENT AND ASSOCIATED WEIGHT CHANGES. 004625 04-15

FLUPHENAZINE-DECANOATE
THE PROLACTIN RESPONSE IN PATIENTS RECEIVING NEUROLEPTIC THERAPY. THE EFFECT OF FLUPHENAZINE-DECANOATE. 004318 04-08
THE COURSE OF LONG-TERM-TREATMENT WITH FLUPHENAZINE-DECANOATE (DAPOTUM-D). 004605 04-15

FLUPHENAZINE-SULFOXIDE
BEHAVIOR OF RATS AND MICE ADMINISTERED ACTIVE METABOLITES OF FLUPHENAZINE, 7 HYDROXYFLUPHENAZINE AND FLUPHENAZINE-SULFOXIDE. 004256 04-04

FLURAZEPAM-INDUCED
FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES. 004729 04-17

FLUTROLINE
A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004330 04-06

FLUVOXAMINE
FLUVOXAMINE AS AN ANTIDEPRESSANT-DRUG. 003773 04-03

FLUX
EVIDENCE THAT THERE ARE SUBCELLULAR POOLS OF NOREPINEPHRINE AND THAT THERE IS FLUX OF NOREPINEPHRINE BETWEEN THESE POOLS. 004004 04-03

FLUXES
THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS. 003934 04-03

FOCAL
THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004429 04-11

FOLLOWUP
A TWELVE-YEAR FOLLOWUP OF THE NIMH-PSC HIGH-DOSE CHLORPROMAZINE STUDY OF CHRONIC SCHIZOPHRENICS — IMPLICATIONS FOR DEINSTITUTIONALIZATION. (UNPUBLISHED PAPER). 004323 04-08
A FOLLOWUP STUDY OF SCHIZOPHRENIC-OUTPATIENTS TREATED WITH DEPOT NEUROLEPTICS. 004342 04-08
HYPERACTIVES AS YOUNG ADULTS: PROSPECTIVE TEN-YEAR FOLLOWUP. 004464 04-11

FOOD
FOOD PREFERENCE FOLLOWING ACUTE OR CHRONIC CHLORDIAZEPOXIDE ADMINISTRATION: TOLERANCE TO AN ANTINEOPHOBIC ACTION. [illegible] 04-04
SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS. [illegible] 04-04

NALOXONE SUPPRESSES FOOD/WATER CONSUMPTION IN THE DEPRIVED CAT. 004114 04-04

CHOICE BETWEEN FOOD AND HEROIN: EFFECTS OF MORPHINE, NALOXONE, AND SECOBARBITAL. 004123 04-04

THE SITE OF ACTION OF NALOXONE IN SUPPRESSING FOOD AND WATER INTAKE IN RATS. 004146 04-04

SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

HISTIDYL-PROLINE DIKETOPIPERAZINE DECREASES FOOD INTAKE IN RATS. 004181 04-04

PHARMACOKINETIC-STUDY OF APOMORPHINE-INDUCED STEREOTYPY IN FOOD DEPRIVED RATS. 004247 04-04

FOREBRAIN

DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT. 004171 04-04

FORECASTING

THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08

FORM-FRUSTE-DU-SYNDROME-MALIN

TWO CASES OF FORM-FRUSTE-DU-SYNDROME-MALIN WITH HIGH-LEVELS OF SERUM CPK. 004636 04-15

FORMATION

INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 003783 04-03

MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT. 003849 04-03

CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03

DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 004030 04-03

THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS. 004510 04-13

PHARMACOLOGICAL MODULATION OF FORMATION OF LONG-TERM MEMORY. 004578 04-14

FORMULATIONS

SIMULTANEOUS HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHIC-DETERMINATION OF AMITRIPTYLINE-HYDROCHLORIDE IN TWO-COMPONENT TABLET FORMULATIONS. 004673 04-16

FORTUITOUS

DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

FOWL

TONIC IMMOBILITY IN DOMESTIC FOWL: POSSIBLE INTERACTION OF SEROTONERGIC AND DOPAMINERGIC MECHANISMS. 004246 04-04

FRACTION

INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03

THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004028 04-03

FRACTIONS

NEWLY SYNTHESIZED CHOLECYSTOKININ IN SUBCELLULAR FRACTIONS OF THE RAT-BRAIN. 003805 04-03

EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS. 003914 04-03

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03

FRAGILE

FRAGILE SITES IN HUMAN CHROMOSOMES 1. THE EFFECT OF METHIONINE ON THE XQ-FRAGILE-SITE. 004515 04-13

FRAGMENT

PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT. 003734 04-08

FRAGMENTS

NEUROTENSIN RELEASE BY RAT HYPOTHALAMIC FRAGMENTS IN VITRO. 003920 04-03

FREE

COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN. 003831 04-03

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003832 04-03

DRUG-INDUCED CHANGES IN THE COMPOSITION OF THE CEREBRAL FREE AMINO-ACID POOL. 004039 04-03

IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15

CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

FREEDOM

IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT? 004640 04-15

FROG

THE EXCITATORY EFFECT OF ATROPINE ON THE NEURONS OF THE FROG SYMPATHETIC GANGLIA. 004041 04-03

FRONTAL

THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS. 003788 04-03

ALPHA1-ADRENOCEPTORS AND ALPHA2-ADRENOCEPTORS IN RAT-CEREBRAL-CORTEX: EFFECT OF FRONTAL LOBOTOMY. 003944 04-03

FRONTAL-CEREBRAL-CORTEX

THE EFFECTS OF LITHIUM ON MYOINOSITOL LEVELS IN LAYERS OF FRONTAL-CEREBRAL-CORTEX, IN CEREBELLUM, AND IN CORPUS-CALLOSUM OF THE RAT. 003712 04-03

FRUCTOSEBIPHOSPHATASE

STIMULATION OF FRUCTOSEBIPHOSPHATASE ACTIVITY AND SYNTHESIS IN THE CEREBRAL-CORTEX OF RATS SUBMITTED TO THE CONVULSANT METHIONINE-SULFOXIMINE. 003838 04-03

FRUSEMIDE

THE EFFECT OF FRUSEMIDE PIRETANIDE AND BUMETANIDE ON COCHLEAR SUCCINIC-DEHYDROGENASE. 003757 04-03

FUELS

SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS. 004098 04-04

FUNCTION

THE EFFECTS OF CHRONIC METHYLPHENIDATE TREATMENT ON GROWTH AND ENDOCRINE FUNCTION IN THE DEVELOPING RAT. 003811 04-03

ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004053 04-03

EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE. 004097 04-04

ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR. 004109 04-04

A NEUROENDOCRINE-STUDY OF ADRENOCEPTOR FUNCTION IN ENDOGENOUS DEPRESSION. 004362 04-09

ALTERATIONS IN NORADRENERGIC FUNCTION DURING CLORGYLINE TREATMENT. 004393 04-09

RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER).
004480 04-10
HYPERVENTILATION-SYNDROME AND BETA-RECEPTOR FUNCTION -- CLINICAL-EFFECT OF BETA BLOCKER UPON THE SYNDROME.
004459 04-11
KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY.
004464 04-15
DOWN REGULATION OF NORADRENERGIC-RECEPTOR FUNCTION BY ANTIDEPRESSANT-DRUGS: FUNCTIONAL SIGNIFICANCE AND DISTINCTION FROM ANTIPSYCHOTIC-DRUGS. (UNPUBLISHED PAPER).
004746 04-17

FUNCTIONAL
A STUDY OF THE EFFECT OF NEUROPHARMACOLOGICAL DRUGS ON THE FUNCTIONAL ACTIVITY OF RAT-BRAIN.
004107 04-04
DOWN REGULATION OF NORADRENERGIC-RECEPTOR FUNCTION BY ANTIDEPRESSANT-DRUGS: FUNCTIONAL SIGNIFICANCE AND DISTINCTION FROM ANTIPSYCHOTIC-DRUGS. (UNPUBLISHED PAPER).
004746 04-17
NOTES ON PHARMACOTHERAPY OF FUNCTIONAL PSYCHOSES.
004748 04-17

FUNCTIONING
BLOOD-PRESSURE AND COGNITIVE FUNCTIONING.
004492 04-11

FUNCTIONS
THE EFFECTS OF THEOPHYLLINE AND CAFFEINE ON THERMOREGULATORY FUNCTIONS OF RATS AT DIFFERENT AMBIENT TEMPERATURES.
003907 04-03

FURAZOLIDONE
INHIBITION OF MONOAMINE-OXIDASE BY FURAZOLIDONE IN THE CHICKEN AND THE INFLUENCE OF THE ALIMENTARY FLORA THEREON.
003711 04-03

GABA
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO.
003741 04-03
3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN.
003839 04-03
A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION.
003851 04-03
SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT.
003877 04-03
EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS.
003914 04-03
EVIDENCE TO SUGGEST THAT DOPAMINE-INDUCED INCREASE IN GABA CONCENTRATIONS IN CHICK BRAIN IS MEDIATED THROUGH CYCLIC-AMP.
003952 04-03
DOPAMINE-DEPENDENT HYPERACTIVITY IN THE FOLLOWING MANIPULATION OF GABA MECHANISMS IN THE REGION OF THE NUCLEUS-ACCUMBENS.
003976 04-03
THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES.
004032 04-03
IN VITRO MODULATION BY AVERMECTIN-B1A OF THE GABA/BENZODIAZEPINE-RECEPTOR COMPLEX OF RAT-CEREBELLUM.
004023 04-03
AVOIDANCE ENHANCEMENT AND DISCRIMINATIVE RESPONSE CONTROL BY ANXIOLYTICS WITH DRUGS ACTING ON THE GABA SYSTEM.
004193 04-04

GABA-AMINOTRANSFERASE
EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS.
003914 04-03

GABA-ENHANCEMENT
GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE.
003786 04-03

GABA-MEDIATED
AN ELECTROPHYSIOLOGICAL MODEL OF GABA-MEDIATED NEUROTRANSMISSION.
003929 04-03

GABA-RECEPTOR
SYNTHESIS AND GABA-RECEPTOR BINDING-ACTIVITY OF TWO FLUOROAMINOMETHYLPHENOLS.
003693 04-02
ROLE OF THE ANTERIOR PITUITARY GABA-RECEPTOR IN THE CONTROL OF PROLACTIN RELEASE.
003809 04-03
EFFECTS OF HALOPEMIDE ON GABA-RECEPTOR BINDING, UPTAKE AND RELEASE.
003918 04-03
SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES.
004728 04-17

GABA-RECEPTORS
RELATIONSHIP BETWEEN THE PRESENCE OF DOPAMINERGIC NEURONS AND GABA-RECEPTORS IN SUBSTANTIA-NIGRA: EFFECTS OF LESIONS.
003997 04-03

GABAB
3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN.
003839 04-03

GABAERGIC
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS.
003807 04-03
IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA.
004011 04-03
ON SOME RELATIONSHIPS BETWEEN GABAERGIC AND 5 HT-ERGIC MECHANISMS IN PENTYLENETETRAZOL CONVULSIVE-SEIZURE REACTIONS.
004166 04-04

GAMMA-RAY
SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING.
004293 04-06

GANGLIA
THE EFFECTS OF ALPHA AND BETA NEUROTOXINS FROM THE VENOMS OF VARIOUS SNAKES ON TRANSMISSION IN AUTONOMIC GANGLIA.
003750 04-03
A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLIA OF SEVERAL SPECIES.
003779 04-03
THE EXCITATORY EFFECT OF ATROPINE ON THE NEURONS OF THE FROG SYMPATHETIC GANGLIA.
004041 04-03

GANGLION
5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS.
003710 04-03
RELATIVE ACTIVITIES OF SUBSTANCES RELATED TO 5 HYDROXYTRYPTAMINE AS DEPOLARIZING-AGENTS OF SUPERIOR CERVICAL GANGLION CELLS.
004047 04-03

GAS-CHROMATOGRAPHIC-PROPERTIES
GAS-CHROMATOGRAPHIC-PROPERTIES OF 1,3 DIALKYLBARBITURATE DERIVATIVES.
003658 04-01

GAS-CHROMATOGRAPHIC-SYNTHESIS
ON-COLUMN GAS-CHROMATOGRAPHIC-SYNTHESIS OF 1,3 DIALKYL (C=1-10), BENZYL, AND CYCLOHEXYLBARBITURATE DERIVATIVES.
003656 04-01

GAS-CHROMATOGRAPHY
GAS-CHROMATOGRAPHY, MASS-SPECTROMETRY, AND COMBINED CHROMATOGRAPHY MASS-SPECTROMETRY.
004290 04-06
RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY.
004322 04-06
GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPE ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS.
004683 04-16
COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN.
004692 04-16

GAS-EXCHANGE
THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING.
[illegible] 04-03

GASTRIC
INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG.
004386 04-07

GASTROINTESTINAL
COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT.
003928 04-03

GENETIC
CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT. 003899 04-03
GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

GENICULATE
SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT. 003877 04-03

GENOTYPIC
GENOTYPIC INFLUENCES ON STRIATAL DOPAMINERGIC REGULATION IN MICE. 004217 04-04

GEOGRAPHICALLY
PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK. 004734 04-17

GLAUCOMA
PSYCHOTROPIC-MEDICATIONS AND GLAUCOMA. 004647 04-15

GLC
GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06
MEASUREMENT OF NEUROLEPTIC CONCENTRATIONS BY GLC AND RADIORECEPTOR ASSAY. 004682 04-16
GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004687 04-16

GLIOMA
CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS. 003823 04-03
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03

GLUCOCORTICOIDS
ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS. 003801 04-03

GLUCOSE
EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND CYCLIC-AMP IN FED MICE. 003946 04-03
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05
INTERACTION OF CHLORPROMAZINE WITH THE TRANSPORT SYSTEM OF GLUCOSE IN HUMAN ERYTHROCYTES. 004529 04-13

GLUCOSE-6-PHOSPHATASE
EFFECTS OF ANIMAL AGE AND PHENOBARBITAL ON RAT LIVER GLUCOSE-6-PHOSPHATASE ACTIVITY. 003997 04-03

GLUTAMATE
CHARACTERIZATION OF TWO (3H)GLUTAMATE BINDING-SITES IN RAT HIPPOCAMPAL MEMBRANES. 003726 04-03
THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE. 003923 04-03
L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03
HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04

GLUTAMATERGIC
THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE. 003923 04-03

GLUTAMIC-ACID
IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03

GLYCEROL
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05

GLYCINE
EFFECT OF LITHIUM ON GLYCINE LEVELS IN PATIENTS WITH AFFECTIVE-DISORDERS. 004606 04-15

GLYCOL
RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY. 004303 04-06

GOAT
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03

GOLDFISH
A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY. 003677 04-01

GRADUATED
WITHDRAWAL SYMPTOMS AFTER GRADUATED CESSATION OF IMIPRAMINE IN CHILDREN. 004630 04-15

GRANULES
ACCUMULATION OF AMANTADINE BY ISOLATED CHROMAFFIN GRANULES. 003866 04-03

GREY
EFFECT OF CHRONIC MORPHINE TREATMENT ON THE INTERACTION BETWEEN THE PERIAQUEDUCTAL GREY AND THE NUCLEUS-RAPHE-MAGNUS OF THE RAT. 003727 04-03

GROUP
EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING. 003702 04-02

GROWTH
THE EFFECTS OF CHRONIC METHYLPHENIDATE TREATMENT ON GROWTH AND ENDOCRINE FUNCTION IN THE DEVELOPING RAT. 003811 04-03
ACTIVITY AND CATCH-UP GROWTH IN HYPOTHYROID RATS. 004190 04-04

GROWTH-FACTOR
NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03

GROWTH-HORMONE
DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09
PROLACTIN AND GROWTH-HORMONE STUDIES IN SCHIZOPHRENIC-PATIENTS AND NORMAL CONTROLS. 004538 04-13

GTP
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03

GUANETHIDINE
THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS. 003900 04-03

GUANINE-NUCLEOTIDES
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS. 003992 04-03

GUANOSINE
THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH. 003882 04-03

GUANYLATE-CYCLASE
GUANYLATE-CYCLASE — CYCLIC-GMP IN MOUSE CEREBRAL-CORTEX AND CEREBELLUM: MODIFICATION BY ANTICONVULSANTS. 003956 04-03

GUIDABLE
SENILE-DEMENTIA IN ITS STILL GUIDABLE INITIAL PHASE. 004699 04-17

GUIDE
LITHIUM TREATMENT OF MANIC-DEPRESSIVE-ILLNESS. A PRACTICAL GUIDE. 004408 04-09

GUIDELINES
GUIDELINES ON THE DIAGNOSIS AND TREATMENT OF DEPRESSION. 004376 04-09

GUINEA-PIG
COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03
PROPERTIES OF A CDP-DIGLYCERIDE-HYDROLASE FROM GUINEA-PIG BRAIN. 003987 04-03
THE EFFECT OF CHRONIC LEVODOPA ON HALOPERIDOL-INDUCED BEHAVIORAL-SUPERSENSITIVITY IN THE GUINEA-PIG. 004249 04-04

H-REFLEX
DES-TYROSINE-GAMMA-ENDORPHIN: H-REFLEX RESPONSE SIMILAR TO NEUROLEPTICS. 004540 04-13

HABENULO-INTERPEDUNCULAR
ANESTHETICS AND THE HABENULO-INTERPEDUNCULAR SYSTEM: SELECTIVE SPARING OF METABOLIC ACTIVITY. 003833 04-03

HABIT
EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE. 004097 04-04

HABITUATION
HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE. 004159 04-04

HALF-LIFE
LITHIUM ELIMINATION HALF-LIFE AND DURATION OF THERAPY. 004369 04-09

HALLUCINOGENIC
LACK OF SPECIFICITY OF AN ANIMAL BEHAVIOR MODEL FOR HALLUCINOGENIC DRUG ACTION. 004250 04-04
DISCRIMINATIVE-STIMULUS PROPERTIES OF THE HALLUCINOGENIC AGENT DOM. 004260 04-04

HALLUCINOGENS
A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS. 004037 04-03

HALOPEMIDE
EFFECTS OF HALOPEMIDE ON GABA-RECEPTOR BINDING, UPTAKE AND RELEASE. 003913 04-03

HALOPERIDOL
MEASUREMENT OF HALOPERIDOL IN HUMAN PLASMA USING REVERSED PHASE HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY. (UNPUBLISHED PAPER). 003687 04-01
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS. 003731 04-03
DOPAMINE METABOLITES IN CAUDATE AND CORTEX AFTER LITHIUM AND HALOPERIDOL. (UNPUBLISHED PAPER). 003738 04-03
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE. 003792 04-03
INCREASED MESOLIMBIC DOPAMINE BINDING FOLLOWING CHRONIC HALOPERIDOL TREATMENT. 003872 04-03
THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS. 004087 04-04
EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL AND PIMOZIDE ON REFLEX BRADYCARDIA IN RATS. 004085 04-04
AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL. 004208 04-04
HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004282 04-08
MOBILIZATION OF REFRACTORY CHRONIC SCHIZOPHRENICS WITH HALOPERIDOL. 004337 04-08
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13
APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS. 004549 04-13
CLINICAL-EVALUATION OF BROMPERIDOL VERSUS HALOPERIDOL IN PSYCHOTIC-PATIENTS. 004592 04-14
PATHOPHYSIOLOGICAL AND MORPHOLOGICAL CHANGES IN THE CNS DURING LONG-TERM ADMINISTRATION OF HALOPERIDOL. 004632 04-15
APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT. 004651 04-15

HALOPERIDOL-INDUCED
LITHIUM EFFECTS ON HALOPERIDOL-INDUCED PRESYNAPTIC AND POSTSYNAPTIC DOPAMINE-RECEPTOR SUPERSENSITIVITY. 004244 04-04
THE EFFECT OF CHRONIC LEVODOPA ON HALOPERIDOL-INDUCED BEHAVIORAL-SUPERSENSITIVITY IN THE GUINEA-PIG. 004249 04-04
PROMETHAZINE AND DIAZEPAM POTENTIATE THE HALOPERIDOL-INDUCED PROLACTIN RESPONSES. 004499 04-13

HALOTHANE
HALOTHANE ACCUMULATION IN RAT-BRAIN AND LIVER. 003774 04-03

HALTING
A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA. 004584 04-14

HAMSTER
EFFECT OF 6 HYDROXYDOPAMINE ON THE FINE STRUCTURE OF THE HAMSTER PINEAL-GLAND. 003747 04-03
METHADONE REDUCES SEXUAL-PERFORMANCE AND SEXUAL-MOTIVATION IN THE MALE SYRIAN GOLDEN HAMSTER. 004183 04-04

HAMSTERS
ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS. 003646 04-01

HANDICAPPED
TARDIVE-DYSKINESIA AND OTHER DRUG-INDUCED MOVEMENT-DISORDERS AMONG HANDICAPPED CHILDREN AND YOUTH. 004614 04-15

HANDLING-INDUCED
PYRAZOLE EXACERBATES HANDLING-INDUCED CONVULSIONS IN MICE. 004094 04-04
HANDLING-INDUCED SEIZURES AND ROTATIONAL-BEHAVIOR IN THE MONGOLIAN-GERBIL. 004216 04-04

HARMANE
BENZODIAZEPINE ANTAGONISM BY HARMANE AND OTHER BETA CARBOLINES IN VITRO AND IN VIVO. 004211 04-04

HEAD-POKE
HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE. 004159 04-04

HEADS
QUINUCLIDINYL BENZILATE BINDING IN HOUSEFLY HEADS AND RAT-BRAIN. 003868 04-03

HEALTHY
THE EFFECT OF FIVE TRICYCLIC-ANTIDEPRESSANTS ON SALIVARY FLOW AND MOOD IN HEALTHY VOLUNTEERS. 004580 04-14
A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN. 004574 04-14

HEART
OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003790 04-03

HEROINOMANICS
A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEROINOMANICS AND OF ADDICTS DURING WITHDRAWAL. 004445 04-11

HELIX-POMATIA
PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS. [illegible]

HEMISPHERES
ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003726 04-03

THE EFFECT OF DIAZEPAM ON CYCLIC EXCITABILITY CHANGES IN AN EPILEPTIC-FOCUS IN THE CORTEX OF THE MAJOR HEMISPHERES.
003984 04-03

HEPATITIS
CLINICAL PHARMACOKINETICS OF CHLORDIAZEPOXIDE IN PATIENTS WITH ALCOHOLIC HEPATITIS.
004473 04-11

HERITABLE
SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER).
004565 04-14

HEROIN
CHOICE BETWEEN FOOD AND HEROIN: EFFECTS OF MORPHINE, NALOXONE, AND SECOBARBITAL.
004123 04-04
METHADONE TREATMENT OF HEROIN ADDICTS IN SWITZERLAND.
004452 04-11
SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN.
004489 04-11

HETEROGENEITY
OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES.
003902 04-03
BENZODIAZEPINE-RECEPTOR: HETEROGENEITY IN RABBIT BRAIN.
004060 04-03

HEXAHYDROMETHYL-1H-PYRAZINOCARBAZOL-HCL
PHARMACOLOGICAL-PROPERTIES OF 2,3,3A,4,5,6 HEXAHYDROMETHYL-1H-PYRAZINOCARBAZOL-HCL (PIRLINDOLE), A NEW ANTIDEPRESSANT.
004174 04-04

HGH
TSH, HGH, HPR, AND CORTISOL RESPONSE TO TRH IN DEPRESSED-PATIENTS.
004399 04-09

HIAA
CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT.
004382 04-09

HIERARCHY
THE INTEGRITY OF THE SOCIAL HIERARCHY IN MICE FOLLOWING ADMINISTRATION OF PSYCHOTROPIC-DRUGS.
004202 04-04

HIGH
DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH.
004305 04-06

HIGH-AFFINITY
SPECIFIC, HIGH-AFFINITY (3H)ETHYLKETOCYCLAZOCINE BINDING IN RAT CENTRAL-NERVOUS-SYSTEM: LACK OF EVIDENCE FOR KAPPA-RECEPTORS.
003840 04-03
EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS.
003908 04-03
DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET?
003962 04-03
HIGH-AFFINITY BINDING-SITES FOR A SOMATOSTATIN-28 ANALOG IN RAT-BRAIN.
003985 04-03
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS.
003992 04-03
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES.
004009 04-03
THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES.
004028 04-03

HIGH-CONCENTRATIONS
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003731 04-03

HIGH-DOSAGE
EFFECTS OF HIGH-DOSAGE LISURIDE-HYDROGEN-MALEATE (LHM) IN PARKINSON-SYNDROME.
004460 04-11

HIGH-DOSE
EFFECTS OF A HIGH-DOSE TREATMENT OF METHAMPHETAMINE ON CAUDATE DOPAMINE AND ANOREXIA IN RATS.
004073 04-04
INTRATHECAL HIGH-DOSE MORPHINE PRODUCES HYPERALGESIA IN THE RAT.
004254 04-04
A TWELVE-YEAR FOLLOWUP OF THE NIMH-PRB HIGH-DOSE CHLORPROMAZINE STUDY OF CHRONIC SCHIZOPHRENICS -- IMPLICATIONS FOR DEINSTITUTIONALIZATION. (UNPUBLISHED PAPER).
004323 04-06
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HIGH-DOSE ERGOT ALKALOID TREATMENT FOR DEMENTIA. PRELIMINARY REPORT.
004493 04-11

HIGH-LEVELS
TWO CASES OF FORM-FRUSTE-DU-SYNDROME-MALIN WITH HIGH-LEVELS OF SERUM CPK.
004636 04-15

HIGH-PERFORMANCE
MEASUREMENT OF HALOPERIDOL IN HUMAN PLASMA USING REVERSED PHASE HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY. (UNPUBLISHED PAPER).
003667 04-01
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: METHODOLOGY.
004285 04-06
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: APPLICATIONS.
004296 04-06
RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION.
004302 04-06
SIMULTANEOUS HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHIC-DETERMINATION OF AMITRIPTYLINE-HYDROCHLORIDE IN TWO-COMPONENT TABLET FORMULATIONS.
004673 04-16

HIPPOCAMPAL
BEHAVIORAL AND REGIONAL NEUROCHEMICAL SEQUELAE OF HIPPOCAMPAL DESTRUCTION IN THE RAT.
003721 04-03
CHARACTERIZATION OF TWO (3H)GLUTAMATE BINDING-SITES IN RAT HIPPOCAMPAL MEMBRANES.
003726 04-03
ACETYLCHOLINE-INDUCED MODULATION OF HIPPOCAMPAL PYRAMIDAL NEURONS.
003728 04-03
DIFFERENTIAL TOLERANCE TO THE EFFECTS OF MORPHINE ON EVOKED ACTIVITY IN THE HIPPOCAMPAL SLICE.
003760 04-03
HIPPOCAMPAL SLOW ACTIVITY: TWO INPUT SYSTEMS? (UNPUBLISHED PAPER).
003812 04-03
NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS.
003842 04-03
THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES.
003885 04-03
EFFECTS OF ENKEPHALIN, MORPHINE, AND NALOXONE ON THE ELECTRICAL-ACTIVITY OF THE IN VITRO HIPPOCAMPAL SLICE PREPARATION.
003918 04-03
EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT.
003951 04-03
CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS.
004076 04-04
HIPPOCAMPAL INVOLVEMENT IN THE PHARMACOLOGIC INDUCTION OF WITHDRAWAL-LIKE BEHAVIORS.
004140 04-04
THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS.
004510 04-13

HIPPOCAMPAL-CA1-REGION
DIFFERENTIAL-EFFECTS OF PENTOBARBITAL AND ETHER ON THE SYNAPTIC TRANSMISSION OF THE HIPPOCAMPAL-CA1-REGION IN THE RAT.
003903 04-03

HIPPOCAMPUS
DIAZEPAM ANXIOLYTIC-ACTIVITY IN HIPPOCAMPUS.
003743 04-03
COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS.
003758 04-03

NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS. 003842 04-03

EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS. 003906 04-03

SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX. 004015 04-03

EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810) AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS. 004149 04-04

HISTAMINE

H2-RECEPTORS MEDIATE INCREASES IN PERMEABILITY OF THE BLOOD-BRAIN-BARRIER DURING ARTERIAL HISTAMINE INFUSION. 003817 04-03

EFFECT OF DIAZEPAM ON STRESS-INDUCED CHANGES IN BRAIN HISTAMINE. 003932 04-03

TRICYCLIC-ANTIDEPRESSANTS AND HISTAMINE H1-RECEPTORS. 003986 04-03

ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 004030 04-03

HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

PSYCHOTHERAPEUTIC-DRUGS, HISTAMINE H1-RECEPTORS AND MUSCARINIC ACETYLCHOLINE-RECEPTORS. 004727 04-17

HISTAMINERGIC

ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

HISTIDINE

EFFECT OF L HISTIDINE AND CHLORCYCLIZINE ON APOMORPHINE-INDUCED CLIMBING-BEHAVIOUR AND METHAMPHETAMINE STEREOTYPY IN MICE. 004147 04-04

HISTIDYL-PROLINE

HISTIDYL-PROLINE DIKETOPIPERAZINE DECREASES FOOD INTAKE IN RATS. 004181 04-04

HISTOCHEMICAL

FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02

A SIMPLE HISTOCHEMICAL SCREENING METHOD FOR AMINE UPTAKE. 004295 04-06

HISTORY

MINI-SYMPOSIUM: II. MULTIPLE OPIOID-RECEPTORS. A LITTLE ABOUT THEIR HISTORY AND SOME IMPLICATIONS RELATED TO EVOLUTION. 004728 04-17

HOMEOPATHY

THE TREATMENT OF INSOMNIA THROUGH HOMEOPATHY IN A CLINIC. 004484 04-11

HOMOGENATE

STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE. 003718 04-03

HOMOGENATES

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03

HOMOVANILLIC-ACID

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HPLC. 004305 04-06

CEREBROSPINAL-FLUID HOMOVANILLIC-ACID PATTERNS DURING NEUROLEPTIC TREATMENT. (UNPUBLISHED PAPER). 004602 04-13

HORMONAL

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS. PRELIMINARY-STUDY. 004505 04-13

CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

HORMONES

DRUGS, TRANSMITTERS AND HORMONES, AND MATING-BEHAVIOR. 004721 04-17

HOSPITALIZED

THE EFFECTS OF NEUROLEPTIC-DRUGS ON THE SOCIAL INTERACTIONS OF HOSPITALIZED PSYCHOTIC-PATIENTS. 004597 04-14

HOSTILITY

HOSTILITY PRODUCTION AS A COMMON FEATURE OF ANTIANXIETY-AGENT ACTION. 004654 04-15

HOT

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004054 04-03

HOUSEFLY

QUINUCLIDINYL BENZILATE BINDING IN HOUSEFLY HEADS AND RAT-BRAIN. 003868 04-03

HPR

TSH, HGH, HPR, AND CORTISOL RESPONSE TO TRH IN DEPRESSED-PATIENTS. 004399 04-09

HT

ROTATIONAL-BEHAVIOUR ELICITED BY 5 HT IN THE RAT: EVIDENCE FOR AN INHIBITORY ROLE OF 5 HT IN THE SUBSTANTIA-NIGRA AND CORPUS-STRIATUM. 004141 04-04

DOPAMINE AND 5 HT SUPERSENSITIVITY IN NEUROORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004583 04-13

HT-ERGIC

ON SOME RELATIONSHIPS BETWEEN GABAERGIC AND 5 HT-ERGIC MECHANISMS IN PENTYLENETETRAZOL CONVULSIVE-SEIZURE REACTIONS. 004066 04-04

HTP

AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN. 003941 04-03

TREATMENT OF DEPRESSION WITH AN MAO-INHIBITOR FOLLOWED BY 5 HTP — AN UNFINISHED RESEARCH PROJECT. 004377 04-09

HT2

REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE. 003964 04-03

HUMAN

SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN ANALOGS WITH DISULFIDE BRIDGES. 003683 04-01

A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003648 04-01

MEASUREMENT OF HALOPERIDOL IN HUMAN PLASMA USING REVERSED-PHASE HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY. (UNPUBLISHED PAPER). 003667 04-01

PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN. 003671 04-01

SOLUBILIZATION OF NEUROLEPTIC/DOPAMINE-RECEPTORS OF HUMAN BRAIN STRIATUM. 003709 04-02

THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE. 003903 04-03

LIBERATION OF CATECHOLAMINES AND 5 HYDROXYTRYPTAMINE FROM HUMAN BLOOD-PLATELETS. 003907 04-03

(3H) IMIPRAMINE BINDING IN HUMAN PLATELETS: A NEW BIOCHEMICAL-PARAMETER IN DEPRESSION. 004396 04-09

BIOCHEMICAL-STUDIES OF HUMAN EPILEPTICS DURING ANTICONVULSANT THERAPY.
004490 04-11
ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA.
004507 04-13
FRAGILE SITES IN HUMAN CHROMOSOMES I. THE EFFECT OF METHIONINE ON THE XQ-FRAGILE-SITE.
004515 04-13
INTERACTION OF CHLORPROMAZINE WITH THE TRANSPORT SYSTEM OF GLUCOSE IN HUMAN ERYTHROCYTES.
004529 04-13
EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS – IN VITRO DETERMINATION OF THE IC50.
004532 04-13
APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS.
004549 04-13
HUMAN SOCIAL CONVERSATION: EFFECTS OF ETHANOL, SECOBARBITAL AND CHLORPROMAZINE.
004582 04-14
CHLORPROMAZINE ANALYSIS IN HUMAN PLASMA. (UNPUBLISHED PAPER).
004591 04-15
HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND.
004676 04-16

HUMANS
EVENT-RELATED POTENTIAL CHANGES WITH MORPHINE IN NONADDICTED HUMANS.
004512 04-13
LITHIUM EFFECTS ON CITRATE METABOLISM IN HUMANS AND RATS.
004537 04-13
DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO.
004566 04-14

HUNTINGTONS-DISEASE
CHOLINOMIMETICS IN HUNTINGTONS-DISEASE.
004442 04-11
CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE-CHLORIDE IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS.
004604 04-15

HUSSER
THE TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: AN INTERVIEW WITH DR. J. HUSSER.
004328 04-08

HVA
CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT.
004382 04-09

HYBRID
CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS.
003823 04-03
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS.
003975 04-03

HYDIPHEN
THE PHARMACOLOGICAL CHARACTERISTICS OF THE TRANQUILIZING EFFECT OF HYDIPHEN.
004261 04-04

HYDRALAZINE
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS.
003947 04-03

HYDRATE
PHARMACOLOGY OF 2 O CHLOROBENZOYL-CHLORO-METHYL-NA-GLYCYLGLYCINANILIDE HYDRATE (45-0088-S), A COMPOUND WITH BENZODIAZEPINE-LIKE PROPERTIES.
003692 04-02

HYDROCORTISONE
EFFECT OF NEONATAL HYDROCORTISONE TREATMENT ON BRAIN-MONOAMINES IN DEVELOPING RATS.
003893 04-03

HYDROXY-DOPAMINE
THE INFLUENCE OF UNILATERAL 6 HYDROXY-DOPAMINE LESIONS OF THE SUBSTANTIA-NIGRA IN THE ABSENCE OF THE TELENCEPHALON.
004197 04-04

HYDROXY-3-METHOXYMANDELIC-ACID
NOREPINEPHRINE METABOLISM IN MAN USING DEUTERIUM LABELLING: 4 HYDROXY-3-METHOXYMANDELIC-ACID.
004534 04-13

HYDROXYBUTYRATE
TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY.
004571 04-14

HYDROXYBUTYRIC-ACID
REGIONAL AND SUBCELLULAR LOCALIZATION IN RAT-BRAIN OF THE ENZYMES THAT CAN SYNTHESIZE GAMMA HYDROXYBUTYRIC-ACID.
003675 04-01
EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL AND PIMOZIDE ON REFLEX BRADYCARDIA IN RATS.
004085 04-04

HYDROXYCITRATE
INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE.
004044 04-03

HYDROXYDOPA
DEVELOPMENTAL-CHANGE IN REARING RESPONSE TO ATROPINE IN RATS TREATED WITH 6 HYDROXYDOPA.
004191 04-04

HYDROXYDOPAMINE
EFFECT OF 6 HYDROXYDOPAMINE ON THE FINE STRUCTURE OF THE HAMSTER PINEAL-GLAND.
003747 04-03
THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE.
003958 04-03
THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS.
004129 04-04
CATECHOLAMINE SEROTONIN INTERACTION EFFECTS ON ACTIVITY IN RATS NEONATALLY TREATED WITH 6 HYDROXYDOPAMINE.
004194 04-04

HYDROXYDOPAMINE-INDUCED
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS.
003871 04-03

HYDROXYFLUPHENAZINE
BEHAVIOR OF RATS AND MICE ADMINISTERED ACTIVE METABOLITES OF FLUPHENAZINE, 7 HYDROXYFLUPHENAZINE AND FLUPHENAZINE-SULFOXIDE.
004256 04-04

HYDROXYINDOLACETIC-ACID
DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH.
004305 04-06

HYDROXYINDOLEACETIC-ACID
A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS.
004301 04-06

HYDROXYMETHYL-BETA-CARBOLINE
3 HYDROXYMETHYL-BETA-CARBOLINE ANTAGONIZES SOME PHARMACOLOGIC ACTIONS OF DIAZEPAM.
004221 04-04

HYDROXYTRYPTAMINE
5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS.
003710 04-03
INTERACTIONS BETWEEN A MONOFLUORINATED ANALOGUE OF P CHLOROAMPHETAMINE AND 5 HYDROXYTRYPTAMINE IN BRAIN.
003719 04-03
CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP.
003769 04-03
EFFECTS OF PHENYTOIN ON MOUSE CEREBELLAR 5 HYDROXYTRYPTAMINE AND NOREPINEPHRINE.
003795 04-03
PRESYNAPTIC REGULATION OF THE RELEASE OF ACETYLCHOLINE BY 5 HYDROXYTRYPTAMINE.
003843 04-03
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES.
003925 04-03
EFFECTS OF 5 HYDROXYTRYPTAMINE ON CENTRAL NEURONES ANTAGONIZED BY BICUCULLINE AND PICROTOXIN.
003931 04-03
LIBERATION OF CATECHOLAMINES AND 5 HYDROXYTRYPTAMINE FROM HUMAN BLOOD-PLATELETS.
003967 04-03

EFFECT OF IMIPRAMINE ON CENTRAL 5 HYDROXYTRYPTAMINE TURNOVER AND METABOLISM IN RATS. 003999 04-03
RELATIVE ACTIVITIES OF SUBSTANCES RELATED TO 5 HYDROXYTRYPTAMINE AS DEPOLARIZING-AGENTS OF SUPERIOR CERVICAL GANGLION CELLS. 004047 04-03
INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04
ATTENUATION OF PETHIDINE-INDUCED ANTINOCICEPTION BY ZIMELIDINE, AN INHIBITOR OF 5 HYDROXYTRYPTAMINE REUPTAKE. 004118 04-04
EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004144 04-04
HYDROXYTRYPTAMINE-LIKE
5 HYDROXYTRYPTAMINE-LIKE PROPERTIES OF M CHLOROPHENYLPIPERAZINE: COMPARISON WITH QUIPAZINE. 004210 04-04
HYDROXYTRYPTAMINERGIC
DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT. 004171 04-04
HYDROXYTRYPTOPHAN
DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION. 003722 04-03
AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN. 003941 04-03
HYDROXYTRYPTOPHAN-DECARBOXYLASE
A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS. 004201 04-06
HYDROXYTRYPTOPHAN-INDUCED
L 5 HYDROXYTRYPTOPHAN-INDUCED DRINKING IN RATS: POSSIBLE MECHANISMS FOR INDUCTION. 004237 04-04
HYPERACTIVE-CHILDREN
PREDICTING STIMULANT-EFFECTIVENESS IN HYPERACTIVE-CHILDREN WITH A REPEATABLE NEUROPSYCHOLOGICAL-BATTERY: A PRELIMINARY STUDY. 004453 04-11
HYPERACTIVES
HYPERACTIVES AS YOUNG ADULTS: PROSPECTIVE TEN-YEAR FOLLOWUP. 004454 04-11
HYPERACTIVITY
DOPAMINE-DEPENDENT HYPERACTIVITY IN THE FOLLOWING MANIPULATION OF GABA MECHANISMS IN THE REGION OF THE NUCLEUS-ACCUMBENS. 003976 04-03
HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04
CENTRAL AND PERIPHERAL EFFECTS OF LITHIUM ON AMPHETAMINE-INDUCED HYPERACTIVITY IN RATS. 004225 04-04
DRUG-THERAPY FOR HYPERACTIVITY: TREATMENT PROCEDURES IN NATURAL SETTINGS. 004449 04-11
PREVALENCE OF HYPERACTIVITY AND RELATED TREATMENTS AMONG ELEMENTARY SCHOOL CHILDREN. 004469 04-11
PREVALENCE OF DRUG-TREATMENT FOR HYPERACTIVITY AND OTHER CHILDHOOD BEHAVIOR-DISORDERS. 004713 04-17
PSYCHOSOCIAL-ASPECTS OF DRUG-TREATMENT FOR HYPERACTIVITY. 004714 04-17
HYPERALGESIA
INTRATHECAL HIGH-DOSE MORPHINE PRODUCES HYPERALGESIA IN THE RAT. 004254 04-04
HYPERGLYCEMIA
INTRAVENTRICULAR CHOLECYSTOKININ-OCTAPEPTIDE PRODUCES HYPERGLYCEMIA IN RATS. 003943 04-03
HYPERKINESIA
TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA-LEVELS OF DIPHENYLHYDANTOIN. 004630 04-15
HYPERPHAGIA
CLONIDINE-INDUCED HYPERPHAGIA IN MONKEYS: EVIDENCE FOR ALPHA2-NORADRENERGIC-RECEPTOR MEDIATION. 004015 04-04
HYPERPOLARIZATION
DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. 004049 04-03
HYPERPYREXIA
CHARACTERISTIC HYPERPYREXIA INDUCED BY LICL AND TRANYLCYPROMINE IN RATS. 004278 04-05
HYPERSENSITIVITY
A CONTROLLED-STUDY OF L-DOPA IN SCHIZOPHRENIA WITH REFERENCE TO THE THEORY OF DOPAMINERGIC-RECEPTOR HYPERSENSITIVITY. 004312 04-08
HYPERTENSION
CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT. 003899 04-03
HYPERTENSIVE-RATS
POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS. 003947 04-03
DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS. 004226 04-03
HYPERTHERMIC-RESPONSE
HYPERTHERMIC-RESPONSE TO (-) CATHINONE, AN ALKALOID OF CATHA-EDULIS (KHAT). 003694 04-02
HYPERVENTILATION-SYNDROME
HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004456 04-11
HYPERVENTILATION-SYNDROME AND BETA-RECEPTOR FUNCTION — CLINICAL-EFFECT OF BETA BLOCKER UPON THE SYNDROME. 004459 04-11
HYPNOSIS
EFFECTS OF PAIN, MORPHINE AND NALOXONE ON THE DURATION OF ANIMAL HYPNOSIS. 004081 04-04
HYPNOTIC-EFFECTS
EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL. 003882 04-03
HYPNOTIC-INTERACTIONS
ETHANOL SEDATIVE HYPNOTIC-INTERACTIONS: IN VITRO STUDIES ON NA-K-ACTIVATED ADENOSINE-TRIPHOSPHATASE. 004289 04-05
HYPNOTICA
THE TWO SURVIVAL CASES OF ALPHA-PATTERN COMA CAUSED BY LARGE AMOUNTS OF HYPNOTICA AND NEUROLEPTICA. 004508 04-15
HYPOACTIVITY
LITHIUM AMELIORATION OF RESERPINE-INDUCED HYPOACTIVITY IN RATS. 004167 04-04
HYPOCHONDRIACAL
THE PROBLEM OF PSYCHOPHARMACOTHERAPY OF SLOWLY PROGRESSIVE HYPOCHONDRIACAL SCHIZOPHRENIA. 004340 04-08
HYPOGLYCEMIA
AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA. 004276 04-05
HYPOPHYSIS
DRUG-INDUCED ALTERATIONS OF THE HYPOTHALAMUS HYPOPHYSIS AXIS. 004535 04-13
HYPOTENSION
HYPOTENSION ALTERS THE RELEASE OF CATECHOLAMINES IN THE HYPOTHALAMUS OF THE CONSCIOUS RABBIT. 003948 04-03
HYPOTENSIVE-EFFECT
CENTRAL HYPOTENSIVE-EFFECT OF GAMMA AMINOBUTYRIC-ACID IN ANESTHETIZED DOGS. 003773 04-03

THE EFFECT OF ANTIDEPRESSANTS ON THE HYPOTENSIVE-EFFECT OF CLOFELIN IN RATS. 003934 04-03

HYPOTHALAMIC
THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS. 003713 04-03
UNIMPAIRED QUININE METABOLISM IN RATS WITH VENTROMEDIAL HYPOTHALAMIC LESIONS. 003821 04-03
CATECHOLAMINE SYNTHESIS REGULATION IN HYPOTHALAMIC SYNAPTOSOMES. (UNPUBLISHED PAPER). 003829 04-03
SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC INTERACTION. 003887 04-03
NEUROTENSIN RELEASE BY RAT HYPOTHALAMIC FRAGMENTS IN VITRO. 003920 04-03
NEUROTRANSMITTER CONTROL OF HYPOTHALAMIC PITUITARY THYROID-FUNCTION IN RATS. 003942 04-03
EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES. 003970 04-03
THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING. 004016 04-03

HYPOTHALAMUS
EVIDENCE FOR THERMOREGULATORY DOPAMINERGIC-RECEPTORS LOCATED IN THE PREOPTICUS-MEDIALIS-NUCLEUS OF THE RAT HYPOTHALAMUS. 003754 04-03
SELECTIVE MODIFICATION BY OPIATES OF NEURONAL ACTIVITY OF THE MEDIAL BASAL HYPOTHALAMUS. 003773 04-03
HYPOTENSION ALTERS THE RELEASE OF CATECHOLAMINES IN THE HYPOTHALAMUS OF THE CONSCIOUS RABBIT. 003968 04-03
DRUG-INDUCED ALTERATIONS OF THE HYPOTHALAMUS HYPOPHYSIS AXIS. 004535 04-13

HYPOTHERMIC-EFFECTS
THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE. 003933 04-03
THE EFFECTS OF PEPTIDES ON TOLERANCE TO THE CATALEPTIC-EFFECTS AND HYPOTHERMIC-EFFECTS OF MORPHINE IN THE RAT. 004072 04-04

HYPOTHESIS
CEREBRAL FLUORIDE IN MANIA AND THE EFFECT OF LITHIUM: A HYPOTHESIS. 004715 04-17

HYPOTHYROID
ACTIVITY AND CATCH-UP GROWTH IN HYPOTHYROID RATS. 004190 04-04

HYPOXEMIA
NA-GAMMA-HYDROXYBUTYRATE IN CEREBRAL PROTECTION DURING SEVERE HYPOXEMIA IN THE RAT. 003895 04-03

HYSTERIA
ON THE USE OF CERTAIN PHARMACOLOGICAL CATEGORIES IN HYSTERIA. 004347 04-09
POSSIBILITIES OF PATHOGENETIC THERAPY OF HYSTERIA. 004429 04-10

H1-RECEPTOR
HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

H1-RECEPTOR-MEDIATED
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03
DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 004030 04-03

H1-RECEPTORS
TRICYCLIC-ANTIDEPRESSANTS AND HISTAMINE H1-RECEPTORS. 003986 04-03
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03
PSYCHOTHERAPEUTIC-DRUGS, HISTAMINE H1-RECEPTORS AND MUSCARINIC ACETYLCHOLINE-RECEPTORS. 004737 04-17

H2-RECEPTOR
HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

H2-RECEPTORS
H2-RECEPTORS MEDIATE INCREASES IN PERMEABILITY OF THE BLOOD-BRAIN-BARRIER DURING ARTERIAL HISTAMINE INFUSION. 003817 04-03

IBOTENIC
IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03

IC50
EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS – IN VITRO DETERMINATION OF THE IC50. 004532 04-13

IDENTIFIED
EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. 004026 04-03

IMAGING
SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING. 004293 04-06

IMIDAZOLE
AMINOPHYLLINE AND IMIDAZOLE AS CONVULSANTS. 004232 04-04

IMIDAZOLIDINES
THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE. 003933 04-03

IMINO-3-ALKYLTHIAZOLINE
SYNTHESIS AND PHARMACOLOGICAL ACTIVITY OF SOME 2 IMINO-3-ALKYLTHIAZOLINE DERIVATIVES. 003698 04-02

IMIPRAMINE
ON THE KINETICS OF IMIPRAMINE AND RELATED ANTIDEPRESSANTS. 003945 04-03
REGIONAL DISTRIBUTION OF (3H)IMIPRAMINE BINDING IN RAT-BRAIN. 003955 04-03
DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET? 003962 04-03
ELECTROPHYSIOLOGICAL-EFFECTS OF IMIPRAMINE ON BOVINE VENTRICULAR-MUSCLE AND PURKINJE-FIBRES. 003988 04-03
EFFECT OF IMIPRAMINE ON CENTRAL 5 HYDROXYTRYPTAMINE TURNOVER AND METABOLISM IN RATS. 003999 04-03
TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09
DECREASED 3H IMIPRAMINE BINDING IN DEPRESSED MALES AND FEMALES. 004349 04-09
(3H) IMIPRAMINE BINDING IN HUMAN PLATELETS: A NEW BIOCHEMICAL-PARAMETER IN DEPRESSION. 004358 04-09
VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY. 004392 04-09
TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09
BLOCKADE BY IMIPRAMINE OR DESIPRAMINE OF PANIC-INDUCED BY SODIUM-LACTATE. 004427 04-10
TREATMENT OF ENCOPRESIS WITH IMIPRAMINE. 004451 04-11
SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION. 004518 04-13
WITHDRAWAL SYMPTOMS AFTER GRADUATED CESSATION OF IMIPRAMINE IN CHILDREN. 004630 04-15

IMMOBILITY
THE EFFECTS OF TRYPTOPHAN AND MANIPULATIONS OF SEROTONERGIC-RECEPTORS ON TONIC IMMOBILITY IN CHICKENS. 004245 04-04

TONIC IMMOBILITY IN DOMESTIC FOWL: POSSIBLE INTERACTION OF SEROTONERGIC AND DOPAMINERGIC MECHANISMS.
004246 04-04

IMMUNIZATION
NEUTRALIZATION OF THE EFFECT OF DELTA9 TETRAHYDROCANNABINOL ON BARBITURATE SLEEPING-TIME BY SPECIFIC ACTIVE IMMUNIZATION.
003803 04-03

IMMUNODETECTION
IMMUNODETECTION OF ACH-RECEPTOR IN THE CNS. (UNPUBLISHED PAPER).
003670 04-01

IMMUNOGLOBULIN
PROSPECTS FOR THE TREATMENT OF POSTENCEPHALITIC PARKINSONISM WITH ANTILYMPHOCYTIC IMMUNOGLOBULIN.
004572 04-14

IMMUNOLOGICAL
BIOCHEMICAL AND IMMUNOLOGICAL PROPERTIES OF THE MOUSE BRAIN ENOLASES PURIFIED BY A SIMPLE METHOD.
003668 04-01
IMMUNOLOGICAL COMPONENTS IN SCHIZOPHRENIA.
004324 04-08

IMMUNOREACTIVITY
EFFECT OF MORPHINE AND NALOXONE ON LEU-ENKEPHALIN-LIKE IMMUNOREACTIVITY IN DOGS.
003894 04-03

IMMUNOTITRATABLE
REDUCTION IN THE LEVEL OF IMMUNOTITRATABLE DOPAMINE-BETA-HYDROXYLASE AFTER CHRONIC ADMINISTRATION OF L-DOPA OR ALPHA METHYLDOPA.
003764 04-03

IMPAIR
IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD.
004600 04-15

IMPROVEMENTS
CHANGES IN THE CLINICAL-PICTURE AND THE COURSE OF PSYCHOSES DURING MASSIVE PSYCHOPHARMACOTHERAPY AND THE SIGNIFICANCE OF THESE CHANGES FOR IMPROVEMENTS IN PSYCHIATRIC-TREATMENT.
004699 04-17

IMPULSES
SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE.
003778 04-03

IMPURITIES
IMPURITIES IN DRUGS V: MEPROBAMATE.
004631 04-15

INACTIVATION
THE INACTIVATION OF GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE IN DISSOCIATED NEURONAL CULTURES FROM SPINAL-CORD.
003980 04-03

INCLUDED
MECHANISM OF LITHIUM INCLUDED ELEVATION IN RED-BLOOD-CELL CHOLINE CONTENT: AN IN VITRO ANALYSIS.
004511 04-13

INDEPENDENCE
THE NOSOLOGICAL INDEPENDENCE OF INVOLUTIONAL DEPRESSION AND ITS DYNAMICS DURING PSYCHOPHARMACOTHERAPY.
004389 04-09

INDEX
PROLACTIN AND NEUROLEPTIC-DRUGS: A BIOCHEMICAL INDEX OF CLINICAL-RESPONSE?
004539 04-13

INDICATIONS
INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER.
003669 04-01

INDIVIDUAL
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE.
003792 04-03
INDIVIDUAL DIFFERENCES IN EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND ANTICHOLINERGIC-DRUGS ON OPERANT-BEHAVIOR IN THE SQUIRREL-MONKEY.
004176 04-04

INDOL-3-YLMETHYLPIPERID-4-YL-3-BENZOYLUREA
BEHAVIOURAL AND NEUROCHEMICAL PROPERTIES OF 1 1 INDOL-3-YLMETHYLPIPERID-4-YL-3-BENZOYLUREA (WY-25093) IN RODENTS.
003686 04-02

INDOLEALKYLAMINE
A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS.
004007 04-03

INDOMETHACIN
EFFECTS OF INDOMETHACIN AND METHYLPREDNISOLONE ON RENAL ELIMINATION OF LITHIUM IN THE RAT.
004270 04-05

INDUCED
EFFECTS OF AGE ON DOPAMINERGIC-SUPERSENSITIVITY INDUCED BY CHRONIC FLUPHENAZINE.
003940 04-03
EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT.
003951 04-03
THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE.
003958 04-03
SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX.
004015 04-03
DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE.
004019 04-03
EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS.
004126 04-04
CHARACTERISTIC HYPERPYREXIA INDUCED BY LICL AND TRANYLCYPROMINE IN RATS.
004278 04-05
ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN.
004500 04-13
ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA.
004507 04-13
MANIC-STATE INDUCED BY SALBUTAMOL TAKEN ORALLY.
004622 04-15
ABNORMAL MOVEMENTS INDUCED BY PSYCHOTROPIC-DRUGS.
004653 04-15

INDUCES
LITHIUM INDUCES DOSE-RELATED INCREASES AND DECREASES IN ACTIVITY LEVELS IN THE RAT.
004079 04-04

INDUCTION
RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER).
003998 04-03
INDUCTION OF BEHAVIORAL-SUPERSENSITIVITY TO APOMORPHINE BY DFP TREATMENT.
004099 04-04
HIPPOCAMPAL INVOLVEMENT IN THE PHARMACOLOGIC INDUCTION OF WITHDRAWAL-LIKE BEHAVIORS.
004140 04-04
L 5 HYDROXYTRYPTOPHAN-INDUCED DRINKING IN RATS: POSSIBLE MECHANISMS FOR INDUCTION.
004237 04-04

INFORMATION-PROCESSING
SELECTIVE EFFECTS OF BARBITURATE AND AMPHETAMINE ON INFORMATION-PROCESSING AND RESPONSE EXECUTION.
004643 04-14

INFRARED
A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE.
004686 04-16

INFUSION
H2-RECEPTORS MEDIATE INCREASES IN PERMEABILITY OF THE BLOOD-BRAIN-BARRIER DURING ARTERIAL HISTAMINE INFUSION.
003817 04-03
SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS.
004098 04-04
THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT: A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM.
004297 04-06
THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION.
004509 04-13

INFUSIONS
CLINICAL-EFFECTS OF BETA ENDORPHIN INFUSIONS.
004380 04-09

INHIBIT
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003731 04-03
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS.
003975 04-03

INHIBITION

STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

INHIBITION OF MONOAMINE-OXIDASE BY FURAZOLIDONE IN THE CHICKEN AND THE INFLUENCE OF THE ALIMENTARY FLORA THEREON. 003711 04-03

PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03

INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03

NONCOMPETITIVE AMINE UPTAKE INHIBITION BY THE NEW ANTIDEPRESSANT PRIDEFINE. 003771 04-03

SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

INHIBITION OF SYNAPTOSOMAL CALCIUM UPTAKE BY ETHANOL. 003827 04-03

INHIBITION OF AMINOPEPTIDASE AND ACETYLCHOLINESTERASE BY PUROMYCIN AND PUROMYCIN ANALOGS. 003835 04-03

BACLOFEN: STEREOSELECTIVE INHIBITION OF EXCITANT AMINO-ACID RELEASE. 003867 04-03

CHARACTERISTICS OF THE INHIBITION OF RAT-BRAIN MONOAMINE-OXIDASE IN VITRO BY MD780515. 003874 04-03

INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE. 003876 04-03

THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC-ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY. 003880 04-03

THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS. 003900 04-03

INHIBITION OF LYSOSOMAL LIPASES BY CHLORPROMAZINE: A POSSIBLE MECHANISMS OF STABILIZATION. 003993 04-03

PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03

INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES. 004042 04-03

INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE. 004044 04-03

DIFFERENTIAL INHIBITION OF ALPHA1-ADRENOCEPTOR AND ALPHA2-ADRENOCEPTOR MEDIATED PRESSOR RESPONSES IN PITHED RATS. 004057 04-03

HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04

SUPPRESSION OF ALCOHOL DRINKING WITH BRAIN ALDEHYDE-DEHYDROGENASE INHIBITION. 004220 04-04

INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG. 004306 04-07

THE ANTIDEPRESSANT EFFECTS OF TRAZODONE AND INHIBITION OF PLATELET SEROTONIN REUPTAKE. 004383 04-09

INHIBITOR

ANTITREMOR ACTION OF C10DICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR. 004096 04-04

ANORECTIC-PROPERTIES OF A NEW LONG ACTING SEROTONIN UPTAKE INHIBITOR. 004105 04-04

ATTENUATION OF PETHIDINE-INDUCED ANTINOCICEPTION BY ZIMELIDINE, AN INHIBITOR OF 5 HYDROXYTRYPTAMINE REUPTAKE. 004118 04-04

() 6 FLUOROTRYPTOPHAN, AN INHIBITOR OF TRYPTOPHAN-HYDROXYLASE: SLEEP AND WAKEFULNESS IN THE RAT. 004189 04-04

INHIBITORS

IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03

EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS. 003914 04-03

AMINE UPTAKE INHIBITORS: CRITERIA OF SELECTIVITY. 003921 04-03

IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03

ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03

DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE. 004130 04-04

EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004144 04-04

SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES. 004725 04-17

INHIBITORY

EFFECTS OF BARBITURATES ON INHIBITORY AND EXCITATORY RESPONSES TO APPLIED NEUROTRANSMITTERS IN APLYSIA. 003762 04-03

PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE. 003777 04-03

ROTATIONAL-BEHAVIOUR ELICITED BY 5 HT IN THE RAT: EVIDENCE FOR AN INHIBITORY ROLE OF 5 HT IN THE SUBSTANTIA-NIGRA AND CORPUS-STRIATUM. 004141 04-04

INHIBITORY-ACTION

INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03

INHIBITORY-EFFECTS

SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION. 004518 04-13

INHIBITS

DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003806 04-03

DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. 003836 04-03

INITIAL

SENILE-DEMENTIA IN ITS STILL GUIDABLE INITIAL PHASE. 004698 04-17

INJECTION

DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION. 003722 04-03

CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP. 003769 04-03

CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS. 003807 04-03

THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04

USE OF THE INTRACEREBRAL INJECTION TECHNIQUE TO ELUCIDATE MECHANISMS OF APOMORPHINE CLIMBING AND ITS ANTAGONISM IN THE MOUSE. 004092 04-04

INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04

SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

INVOLVEMENT OF DOPAMINE IN CIRCLING RESPONSES TO MUSCIMOL DEPENDS ON INTRANIGRAL SITE OF INJECTION. 004158 04-04

AVOIDANCE RESPONSE IN RATS AFTER INJECTION OF DOPAMINE INTO THE NEOSTRIATUM. 004255 04-04

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

INJECTIONS

OPIATE-DEPENDENCE FOLLOWING ACUTE INJECTIONS OF MORPHINE AND NALOXONE: THE ASSESSMENT OF VARIOUS WITHDRAWAL SIGNS. 004209 04-04

INKASAN

THE EFFECT OF THE NEW ANTIDEPRESSANT INKASAN ON THE BIOELECTRICAL-ACTIVITY OF THE BRAIN AND ON CONDITIONED REFLEXES. 004212 04-04

INORGANIC

EFFECT OF INORGANIC LEAD ON RAT-BRAIN MITOCHONDRIAL RESPIRATION AND ENERGY PRODUCTION. 004267 04-05

INOSINE

THE BENZODIAZEPINES AND INOSINE ANTAGONIZE CAFFEINE-INDUCED SEIZURES. 004172 04-04

INPATIENTS

MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17

INPUT

HIPPOCAMPAL SLOW ACTIVITY: TWO INPUT SYSTEMS? (UNPUBLISHED PAPER). 003812 04-03

INPUTS

THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS. 004510 04-13

INSENSITIVE

3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN. 003839 04-03

EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE. 004173 04-04

INSENSITIVITY

THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES. 004002 04-03

INSEPARABILITY

INSEPARABILITY OF ACETYLCHOLINESTERASE AND NERVE EXCITATION. 003875 04-03

INSOMNIA

THE TREATMENT OF INSOMNIA THROUGH HOMEOPATHY IN A CLINIC. 004484 04-11

DEPRENYL DOES NOT CAUSE INSOMNIA IN PARKINSONIAN-PATIENTS. 004569 04-14

FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES. 004729 04-17

INSTITUTIONALIZED

COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS. 004438 04-11

INSUFFICIENT

THERAPEUTIC TREATMENT OF INSUFFICIENT PERFORMANCE IN CEREBROVASCULAR-DISEASES. 004718 04-17

INSULIN-INDUCED

AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA. 004276 04-05

INTAKE

DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS. 004025 04-03

SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS. 004098 04-04

THE SITE OF ACTION OF NALOXONE IN SUPPRESSING FOOD AND WATER INTAKE IN RATS. 004146 04-04

HISTIDYL-PROLINE DIKETOPIPERAZINE DECREASES FOOD INTAKE IN RATS. 004181 04-04

INTEGRITY

THE INTEGRITY OF THE SOCIAL HIERARCHY IN MICE FOLLOWING ADMINISTRATION OF PSYCHOTROPIC-DRUGS. 004202 04-04

INTELLIGENCE

BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS. 004658 04-15

INTERACTION

EFFECT OF CHRONIC MORPHINE TREATMENT ON THE INTERACTION BETWEEN THE PERIAQUEDUCTAL GREY AND THE NUCLEUS-RAPHE-MAGNUS OF THE RAT. 003727 04-03

INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN. 003754 04-03

A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION. 003851 04-03

THE INTERACTION OF TRAZODONE WITH RAT-BRAIN MUSCARINIC-CHOLINOCEPTORS. 003855 04-03

SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC INTERACTION. 003887 04-03

THE INTERACTION OF AMINE LOCAL ANESTHETICS WITH MUSCARINIC-RECEPTORS. 004031 04-03

INTERACTION OF STEREOISOMERS OF BARBITURATES WITH CISALPHA DIHYDROPICROTOXININ BINDING-SITES. 004036 04-03

CATECHOLAMINE SEROTONIN INTERACTION EFFECTS ON ACTIVITY IN RATS NEONATALLY TREATED WITH 6 HYDROXYDOPAMINE. 004194 04-04

TONIC IMMOBILITY IN DOMESTIC FOWL: POSSIBLE INTERACTION OF SEROTONERGIC AND DOPAMINERGIC MECHANISMS. 004246 04-04

RECENT STUDIES ON INTERACTION BETWEEN OPIOID-PEPTIDES AND THEIR RECEPTORS. 004300 04-06

THE INTERACTION OF PSYCHOPHARMACOLOGY AND PSYCHOANALYSIS IN THE BORDERLINE-PATIENT. 004430 04-10

MECHANISM OF VALPROATE PHENOBARBITAL INTERACTION IN EPILEPTIC-PATIENTS. 004522 04-13

INTERACTION OF CHLORPROMAZINE WITH THE TRANSPORT SYSTEM OF GLUCOSE IN HUMAN ERYTHROCYTES. 004529 04-13

INTRAVENOUS DIAZEPAM AND ORAL ETHANOL INTERACTION. 004552 04-13

KINETICS OF A CARBAMAZEPINE-ETHOSUXIMIDE INTERACTION. 004558 04-13

INTERACTION OF P CHLOROPHENYLALANINE, MIANSERINE AND DANITRACEN WITH AMPHETAMINE. 004599 04-15

INTERACTIONS

INTERACTIONS BETWEEN A MONOFLUORINATED ANALOGUE OF P CHLOROAMPHETAMINE AND 5 HYDROXYTRYPTAMINE IN BRAIN. 003719 04-03

INTERACTIONS BETWEEN CHLORPROMAZINE AND SOME OF ITS METABOLITES. 004001 04-03

MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS. 004058 04-03

THE EFFECTS OF 2,5 DIMETHOXY-4-METHYLAMPHETAMINE (DOM) ON OPERANT-BEHAVIOR: INTERACTIONS WITH OTHER NEUROACTIVE-AGENTS. 004089 04-04

INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR. 004127 04-04

THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT; INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT. 004279 04-05

INTERACTIONS BETWEEN ANTIDEPRESSANTS AND OTHER DRUGS. 004371 04-09

THE EFFECTS OF NEUROLEPTIC-DRUGS ON THE SOCIAL INTERACTIONS OF HOSPITALIZED PSYCHOTIC-PATIENTS. 004577 04-14

INTERCONVERTING

INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES. 003737 04-03

INTEREST
NEUROLEPTIC TRICYCLIC-ANTIDEPRESSANT COMBINATION: PHARMACOLOGICAL-ASPECTS AND THERAPEUTIC INTEREST. 004501 04-13

INTERFERENCE
AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03

INTERMEDIATE
LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03

DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES. 004003 04-03

INTERMEDIATES
ANTICONVULSANT PROPERTIES OF SELECTED PYRROLOPYRIMIDINEDIONES AND INTERMEDIATES. 003700 04-02

INTERNAL
GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

INTEROCEPTIVE
CONDITIONING OF AN INTEROCEPTIVE DRUG STIMULUS TO DIFFERENT EXTEROCEPTIVE CONTEXTS. 004142 04-04

INTERPRETATION
EPILEPTOGENIC PROPERTIES OF ENFLURANE AND THEIR CLINICAL INTERPRETATION. 004609 04-15

INTERSTITIAL
THE ROLE OF LITHIUM IN THE PRODUCTION OF INTERSTITIAL NEPHRITIS: A CASE-HISTORY. 004655 04-15

INTERVIEW
THE TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: AN INTERVIEW WITH DR. J. HUSSER. 004328 04-08

INTOXICATION
LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004273 04-05

ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT. 004665 04-15

INTRAAXONAL
THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT. 003897 04-03

INTRACEREBRAL
USE OF THE INTRACEREBRAL INJECTION TECHNIQUE TO ELUCIDATE MECHANISMS OF APOMORPHINE CLIMBING AND ITS ANTAGONISM IN THE MOUSE. 004092 04-04

INTRACEREBRAL SUBSTANCE-P IN MICE: BEHAVIORAL-EFFECTS AND NARCOTIC AGENTS. 004218 04-04

INTRACEREBROVENTRICULAR
CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP. 003769 04-03

SUSTAINED INTRACEREBROVENTRICULAR INFUSION OF BRAIN FUELS REDUCES BODY-WEIGHT AND FOOD INTAKE IN RATS. 004098 04-04

INTRAMUSCULAR
SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

INTRANEURONAL
IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03

INTRANIGRAL
INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04

INVOLVEMENT OF DOPAMINE IN CIRCLING RESPONSES TO MUSCIMOL DEPENDS ON INTRANIGRAL SITE OF INJECTION. 004158 04-04

INTRAOCULAR
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS. 003807 04-03

INTRAPERITONEAL
THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

INTRATHECAL
A REEVALUATION OF THE NEUROCHEMICAL-EFFECTS AND ANTINOCICEPTIVE-EFFECTS OF INTRATHECAL CAPSAICIN IN THE RAT. 004184 04-04

INTRATHECAL HIGH-DOSE MORPHINE PRODUCES HYPERALGESIA IN THE RAT. 004254 04-04

INTRAVENOUS
EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON SUBSEQUENT PROTEIN SYNTHESIS IN A CELL-FREE SYSTEM DERIVED FROM BRAIN. 003761 04-03

COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN. 003831 04-03

A COMPARATIVE-STUDY OF INTRAVENOUS LORAZEPAM AND CLONAZEPAM IN STATUS-EPILEPTICUS. 004487 04-11

INTRAVENOUS DIAZEPAM AND ORAL ETHANOL INTERACTION. 004552 04-13

TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

INTRAVENTRICULAR
INTRAVENTRICULAR CHOLECYSTOKININ-OCTAPEPTIDE PRODUCES HYPERGLYCEMIA IN RATS. 003943 04-03

ANALGESIA FOLLOWING INTRAVENTRICULAR ADMINISTRATION OF 2 DEOXY-D-GLUCOSE. 004074 04-04

INVOLUNTARY-MOVEMENTS
PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08

INVOLUNTARY-PATIENTS
THE RIGHTS OF INVOLUNTARY-PATIENTS TO REFUSE PHARMACOTHERAPY: WHAT IS REASONABLE? 004730 04-17

INVOLUTIONAL
THE NOSOLOGICAL INDEPENDENCE OF INVOLUTIONAL DEPRESSION AND ITS DYNAMICS DURING PSYCHOPHARMACOTHERAPY. 004389 04-09

ION-MONITORING
A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003663 04-01

A QUANTITATIVE PROBE FOR BIOLOGICAL-PSYCHIATRY: SELECTED ION-MONITORING. 004685 04-16

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

IONTOPHORESIS
IONTOPHORESIS OF KAINIC-ACID. 004294 04-06

IONTOPHORETIC
THE PHYSICS OF IONTOPHORETIC PIPETTES. 004299 04-06

IONTOPHORETICALLY
MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS. 004058 04-03

IRAZEPINE
IN VIVO EFFECTS OF TWO NOVEL ALKYLATING BENZODIAZEPINE, IRAZEPINE AND KENAZEPINE. 004251 04-04

ISATINS
SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02

ISF-2522
CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY).
004519 04-13
ISOLATED
SYNTHESIS OF CYTOSKELETAL PROTEINS IN BULK ISOLATED NEURONAL PERIKARYA.
003672 04-01
PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT.
003734 04-03
PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE.
003749 04-03
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: KINETIC STUDIES.
003814 04-03
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: PHARMACOLOGICAL-STUDIES.
003815 04-03
ACCUMULATION OF AMANTADINE BY ISOLATED CHROMAFFIN GRANULES.
003866 04-03
ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE.
003879 04-03
THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS.
003924 04-03
COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT.
003928 04-03
A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY.
004054 04-03
POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM.
004266 04-05
ISOLATION
THE DOPAMINE-RECEPTOR: ISOLATION, PURIFICATION AND REGULATION.
003660 04-01
ISOLATION-INDUCED
SUBCHRONIC-TREATMENT WITH THE TRICYCLIC-ANTIDEPRESSANT DMI INCREASES ISOLATION-INDUCED FIGHTING IN RATS.
004252 04-04
ISOLE
SPECIFIC AND NONSPECIFIC MULTIPLE UNIT ACTIVITIES DURING PENTYLENETETRAZOL SEIZURES. I. ANIMALS WITH ENCEPHALE ISOLE.
004046 04-03
ISOMERIZATION
ISOMERIZATION OF THE MUSCARINIC-RECEPTOR ANTAGONIST COMPLEX.
003860 04-03
ISOMERS
THE EFFECT OF PROPRANOLOL AND ITS ISOMERS ON PURKINJE NEURONES IN RAT CEREBELLUM.
004059 04-03
ISOPROTERENOL-INDUCED
DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION.
003836 04-03
ISOTOPE-LABELED
GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD.
004291 04-06
ISOTOPES
STABLE ISOTOPES USED IN STUDIES OF METRIFONATE.
003847 04-03
ISOTOPIC
GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS.
004683 04-16
ITALY
PSYCHOTROPIC-DRUGS AND PSYCHIATRIC-HOSPITAL ADMISSIONS IN VERONA, ITALY.
004717 04-17
K
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN NEURONS.
003834 04-03
KAINIC-ACID
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS.
003807 04-03
IONTOPHORESIS OF KAINIC-ACID.
004294 04-06
KAPPA-RECEPTORS
SPECIFIC, HIGH-AFFINITY (3H)ETHYLKETOCYCLAZOCINE BINDING IN RAT CENTRAL-NERVOUS-SYSTEM: LACK OF EVIDENCE FOR KAPPA-RECEPTORS.
003840 04-03
KENAZEPINE
IN VIVO EFFECTS OF TWO NOVEL ALKYLATING BENZODIAZEPINE, IRAZEPINE AND KENAZEPINE.
004251 04-04
KETAMINE
CHANGES IN GAMMA AMINOBUTYRIC-ACID SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA.
003891 04-03
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES.
004009 04-03
KETONES
SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES.
003699 04-02
KHAT
HYPERTHERMIC-RESPONSE TO (-) CATHINONE, AN ALKALOID OF CATHA-EDULIS (KHAT).
003694 04-02
KIDNEY
PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE.
003749 04-03
A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY.
004054 04-03
KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY.
004664 04-15
KIDS
ASTHMA THERAPY MAY UNDERCUT KIDS AT SCHOOL.
004475 04-11
KINDLED
EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810) AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS.
004149 04-04
SEROTONERGIC MECHANISM IN SEIZURES KINDLED FROM THE RABBIT AMYGDALA.
004227 04-04
EFFECT OF COCAINE AND LIDOCAINE ON THE EXPRESSION OF KINDLED SEIZURES IN THE RAT.
0042[illegible] 04-[illegible]
KINETIC
PHYSICAL AND KINETIC PROPERTIES OF CHOLINE-ACETYL-TRANSFERASE FROM RAT AND BOVINE BRAIN.
003676 04-01
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: KINETIC STUDIES.
003814 04-03
STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS.
003832 04-03
KINETIC STUDIES ON THE ENTRY OF D-AMPHETAMINE INTO THE CENTRAL-NERVOUS-SYSTEM: I. CEREBROSPINAL-FLUID.
004005 04-03
THE USE OF CLINICAL KINETIC DATA IN TREATMENT WITH ANTIDEPRESSANT-DRUGS.
004686 04-16
KINETICS
ON THE KINETICS OF IMIPRAMINE AND RELATED ANTIDEPRESSANTS.
003940 04-03
DESMETHYLDIAZEPAM KINETICS IN THE ELDERLY AFTER ORAL PRAZEPAM.
004482 04-11
EFFECT OF NOREPINEPHRINE UPTAKE BLOCKERS ON NOREPINEPHRINE KINETICS.
004506 04-13
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM. II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT.
004516 04-13

CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM. 004545 04-13

KINETICS OF A CARBAMAZEPINE-ETHOSUXIMIDE INTERACTION. 004558 04-13

THE KINETICS OF PSYCHIATRIC-DRUGS. 004739 04-17

L-DOPA

REDUCTION IN THE LEVEL OF IMMUNOTITRATABLE DOPAMINE-BETA-HYDROXYLASE AFTER CHRONIC ADMINISTRATION OF L-DOPA OR ALPHA METHYLDOPA. 003764 04-03

PHARMACOLOGICAL DIFFERENCE OF L-DOPA, APOMORPHINE, AND BROMOCRIPTINE AGAINST METOCLOPRAMIDE. 003790 04-03

AUTORADIOGRAPHIC STUDIES ON DISTRIBUTION OF L-3,4 DIHYDROXYPHENYLALANINE (L-DOPA) 14C AND L 5 HYDROXYTRYPTOPHAN (L 5 HTP) 14C IN THE CAT BRAIN. 003941 04-03

DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE. 004019 04-03

EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE. 004186 04-04

A CONTROLLED-STUDY OF L-DOPA IN SCHIZOPHRENIA WITH REFERENCE TO THE THEORY OF DOPAMINERGIC-RECEPTOR HYPERSENSITIVITY. 004312 04-08

ASSESSING L-DOPA THERAPY FOR PARKINSONS. 004465 04-11

PROBLEMS OF TREATING DEFORMING MYODYSTONIA WITH L-DOPA, AND PREDICTION OF ITS THERAPEUTIC EFFECT. 004536 04-13

L-ISOMERS

COMPARATIVE-STUDIES OF THE PHARMACOLOGICAL-EFFECTS OF THE D-ISOMERS AND L-ISOMERS OF CODEINE. 004084 04-04

LABEL

DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET? 003962 04-03

BACLOFEN IN THE TREATMENT OF TARDIVE-DYSKINESIA: OPEN LABEL STUDY. 004619 04-15

CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

LABELED

REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE. 003964 04-03

LABELING

HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND. 004676 04-16

LABELLED

INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER. 003669 04-01

LABELLING

NOREPINEPHRINE METABOLISM IN MAN USING DEUTERIUM LABELLING: 4 HYDROXY-3-METHOXYMANDELIC-ACID. 004534 04-13

LABORATORY

CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13

EFFECTS OF SUPIDIMIDE (CG-3033) ON OBJECTIVE AND SUBJECTIVE SLEEP PARAMETERS (A SLEEP LABORATORY STUDY). 004567 04-14

THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY. 004681 04-16

LATERAL

SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT. 003877 04-03

LAYERS

THE EFFECTS OF LITHIUM ON MYOINOSITOL LEVELS IN LAYERS OF FRONTAL-CEREBRAL-CORTEX, IN CEREBELLUM, AND IN CORPUS-CALLOSUM OF THE RAT. 003712 04-03

LEAD

EFFECT OF INORGANIC LEAD ON RAT-BRAIN MITOCHONDRIAL RESPIRATION AND ENERGY PRODUCTION. 004267 04-05

LEARNING

AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL. 004208 04-04

BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS. 004658 04-15

LECITHIN

LECITHIN FOR THE TREATMENT OF TARDIVE-DYSKINESIA. 004612 04-15

LECTINS

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES -- ARE THEY CELL ADHESION MOLECULES? 003724 04-03

LEFT

THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

LENNOX-GASTAUT-SYNDROME

ANTIEPILEPTIC-EFFECT OF CLOBAZAM IN LENNOX-GASTAUT-SYNDROME. 004479 04-11

LESCH-NYHANS-SYNDROME

SEROTONERGIC APPROACHES TO THE MODIFICATION OF BEHAVIOR IN THE LESCH-NYHANS-SYNDROME. 004576 04-14

LESIONED

THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

LESIONS

RELATIONSHIP BETWEEN THE PRESENCE OF DOPAMINERGIC NEURONS AND GABA-RECEPTORS IN SUBSTANTIA-NIGRA: EFFECTS OF LESIONS. 003797 04-03

UNIMPAIRED QUININE METABOLISM IN RATS WITH VENTROMEDIAL HYPOTHALAMIC LESIONS. 003821 04-03

STUDIES ON AXONAL TRANSPORT IN DOPAMINERGIC NEURONS: EFFECT OF NEUROPHARMACOLOGIC LESIONS. 003858 04-03

CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROKYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03

EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT. 003910 04-03

THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS. 004117 04-04

DOPAMINERGIC AGONISTS DIFFERENTIALLY AFFECT OPEN-FIELD ACTIVITY OF RATS WITH A10 LESIONS. 004135 04-04

THE INFLUENCE OF UNILATERAL 6 HYDROXY-DOPAMINE LESIONS OF THE SUBSTANTIA-NIGRA IN THE ABSENCE OF THE TELENCEPHALON. 004197 04-04

LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004273 04-05

LEU-ENKEPHALIN-LIKE

EFFECT OF MORPHINE AND NALOXONE ON LEU-ENKEPHALIN-LIKE IMMUNOREACTIVITY IN DOGS. 003894 04-03

LEUKOCYTE

AN ATTEMPT TO ASSESS THE EFFECT OF LITHIUM ON THE NEUTROPHIL LEUKOCYTE SYSTEM IN AFFECTIVE-PSYCHOSIS. 004416 04-09

LEVODOPA

THE EFFECT OF CHRONIC LEVODOPA ON HALOPERIDOL-INDUCED BEHAVIORAL-SUPERSENSITIVITY IN THE GUINEA-PIG. 004249 04-04

LEVODOPA: LONG-TERM IMPACT ON PARKINSONS-DISEASE. 004476 04-11

ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA. 004507 04-13

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004551 04-13

ELECTROENCEPHALOGRAPHIC CHANGE IN PARKINSONIAN-PATIENTS TREATED WITH LEVODOPA CARBIDOPA. 004557 04-13

LEVOMEPROMAZINE
AN UNUSUAL CASE OF THIORIDAZINE AND LEVOMEPROMAZINE DEPENDENCE.
004634 04-15
LI1
ANTAGONISM OF ETHANOL-INDUCED DECREASE IN LI1 BY P CHLOROPHENYLALANINE: LACK OF CORRELATION WITH ALTERED SEROTONERGIC MECHANISMS.
003748 04-03
LIABILITY
BUPRENORPHINE: DEMONSTRATION OF PHYSICAL-DEPENDENCE LIABILITY.
004104 04-04
CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACO-EEG AND OPEN LABEL CLINICAL-TRIAL.
004620 04-15
LIBERATION
LIBERATION OF CATECHOLAMINES AND 5 HYDROXYTRYPTAMINE FROM HUMAN BLOOD-PLATELETS.
003967 04-03
LICL
CHARACTERISTIC HYPERPYREXIA INDUCED BY LICL AND TRANYLCYPROMINE IN RATS.
004278 04-05
LIDOCAINE
EFFECT OF COCAINE AND LIDOCAINE ON THE EXPRESSION OF KINDLED SEIZURES IN THE RAT.
004233 04-04
LIFE-TABLE
PROPHYLACTIC-EFFECT OF LITHIUM AGAINST DEPRESSION IN CYCLOTHYMIC-PATIENTS: A LIFE-TABLE ANALYSIS.
004391 04-09
LIGAND
(3H)METERGOLINE: A NEW LIGAND OF SEROTONIN-RECEPTORS IN THE RAT-BRAIN.
003825 04-03
OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES.
003902 04-03
HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND.
004676 04-16
LIGHT
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO.
004544 04-13
LIMITS
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION.
004088 04-04
LINK
ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA.
004316 04-08
LIPASES
INHIBITION OF LYSOSOMAL LIPASES BY CHLORPROMAZINE: A POSSIBLE MECHANISMS OF STABILIZATION.
003993 04-03
LIPOSOMES
PASSAGE THROUGH THE BLOOD-BRAIN-BARRIER OF THYROTROPIN-RELEASING-HORMONE ENCAPSULATED IN LIPOSOMES.
004298 04-06
LIPOTROPIN
VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA.
003715 04-03
LIQUID-CHROMATOGRAPHIC-DETERMINATION
SIMULTANEOUS HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHIC-DETERMINATION OF AMITRIPTYLINE-HYDROCHLORIDE IN TWO-COMPONENT TABLET FORMULATIONS.
004673 04-16
LIQUID-CHROMATOGRAPHY
MEASUREMENT OF HALOPERIDOL IN HUMAN PLASMA USING REVERSED PHASE HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY. (UNPUBLISHED PAPER).
003667 04-01
A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION.
003674 04-01
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: METHODOLOGY.
004285 04-06
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: APPLICATIONS.
004296 04-06
RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION.
004302 04-06
LISURIDE
STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE.
003718 04-03
LISURIDE-HYDROGEN-MALEATE
EFFECTS OF HIGH-DOSAGE LISURIDE-HYDROGEN-MALEATE (LHM) IN PARKINSON-SYNDROME.
004460 04-11
LITHIUM
EFFECT OF LOW-DOSE LITHIUM ADMINISTRATION AND SUBSEQUENT WITHDRAWAL ON BIOGENIC-AMINES IN RAT-BRAIN.
003708 04-03
THE EFFECTS OF LITHIUM ON MYOINOSITOL LEVELS IN LAYERS OF FRONTAL-CEREBRAL-CORTEX, IN CEREBELLUM, AND IN CORPUS-CALLOSUM OF THE RAT.
003712 04-03
DOPAMINE METABOLITES IN CAUDATE AND CORTEX AFTER LITHIUM AND HALOPERIDOL. (UNPUBLISHED PAPER).
003738 04-03
THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS.
003788 04-03
LITHIUM INDUCES DOSE-RELATED INCREASES AND DECREASES IN ACTIVITY LEVELS IN THE RAT.
004079 04-04
EFFECTS OF LITHIUM ON BEHAVIOUR AND CENTRAL MONOAMINES.
004110 04-04
LITHIUM AMELIORATION OF RESERPINE-INDUCED HYPOACTIVITY IN RATS.
004167 04-04
LITHIUM AND MOTOR-ACTIVITY OF ANIMALS: EFFECTS AND POSSIBLE MECHANISM-OF-ACTION.
004222 04-04
CENTRAL AND PERIPHERAL EFFECTS OF LITHIUM ON AMPHETAMINE-INDUCED HYPERACTIVITY IN RATS.
004223 04-04
LITHIUM EFFECTS ON HALOPERIDOL-INDUCED PRESYNAPTIC AND POSTSYNAPTIC DOPAMINE-RECEPTOR SUPERSENSITIVITY.
004244 04-04
EFFECTS OF INDOMETHACIN AND METHYLPREDNISOLONE ON RENAL ELIMINATION OF LITHIUM IN THE RAT.
004270 04-05
EVALUATION OF LITHIUM RESPONSE: PSYCHOMETRIC-FINDINGS.
004348 04-09
RECEPTORS, ADENYLATE-CYCLASE, DEPRESSION, AND LITHIUM.
004353 04-09
CLINICAL SIGNIFICANCE OF THE ERYTHROPLASMATIC RATIO OF LITHIUM.
004357 04-09
LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE).
004365 04-09
LITHIUM USE IN AFFECTIVE-DISORDERS.
004367 04-09
LITHIUM ELIMINATION HALF-LIFE AND DURATION OF THERAPY.
004369 04-09
PROPHYLACTIC-EFFECT OF LITHIUM AGAINST DEPRESSION IN CYCLOTHYMIC-PATIENTS: A LIFE-TABLE ANALYSIS.
004391 04-09
LITHIUM TREATMENT OF MANIC-DEPRESSIVE-ILLNESS: A PRACTICAL GUIDE.
004408 04-09
LITHIUM AND AGGRESSIVE-BEHAVIOR.
004429 04-09
AN ATTEMPT TO ASSESS THE EFFECT OF LITHIUM ON THE NEUTROPHIL LEUKOCYTE SYSTEM IN AFFECTIVE-PSYCHOSIS.
004416 04-09
MECHANISM OF LITHIUM INCLUDED ELEVATION IN RED-BLOOD-CELL CHOLINE CONTENT: AN IN VITRO ANALYSIS.
004511 04-13
A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM.
004530 04-13
LITHIUM EFFECTS ON CITRATE METABOLISM IN HUMANS AND RATS.
004537 04-13
NEUROLOGICAL TOLERANCE OF LITHIUM AND PSYCHOTROPIC-DRUGS IN COMBINATION: 265 CASES.
004594 04-15
EFFECT OF LITHIUM ON GLYCINE LEVELS IN PATIENTS WITH AFFECTIVE-DISORDERS.
004606 04-15
EFFECT OF LITHIUM ON REACTION-TIME — A STUDY OF DIURNAL VARIATIONS.
004607 04-15

OPHTHALMOLOGICAL SIDE-EFFECTS OF LITHIUM. 004615 04-15

A CASE OF PETIT-MAL EPILEPSY AGGRAVATED BY LITHIUM. 004641 04-15

THE ROLE OF LITHIUM IN THE PRODUCTION OF INTERSTITIAL NEPHRITIS: A CASE-HISTORY. 004655 04-15

MITIGATING ACUTE SKIN RASHES AND NAUSEA FROM LITHIUM. 004661 04-15

KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY. 004664 04-15

CEREBRAL FLUORIDE IN MANIA AND THE EFFECT OF LITHIUM: A HYPOTHESIS. 004715 04-17

LITHIUM-CARBONATE

COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09

CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004404 04-09

UNWANTED EFFECTS OF LITHIUM-CARBONATE USED IN THE PREVENTION OF RELAPSES OF AFFECTIVE-ILLNESS. 004625 04-15

LITHIUM-CARBONATE IN THE TREATMENT OF MOVEMENT-DISORDERS. A CRITICAL REVIEW. 004668 04-15

LITHIUM-HYDROXYBUTYRATE

THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL-ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN. 003994 04-03

LIVER

HALOTHANE ACCUMULATION IN RAT-BRAIN AND LIVER. 003774 04-03

EFFECTS OF ANIMAL AGE AND PHENOBARBITAL ON RAT LIVER GLUCOSE-6-PHOSPHATASE ACTIVITY. 003997 04-03

OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES. 004024 04-03

LM24056

INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG. 004306 04-07

LOAD

IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15

LOADED

CENTRAL-EFFECTS OF ANGIOTENSIN-II IN WATER AND SALINE LOADED RATS. 003845 04-03

LOBE

DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES. 004003 04-03

LOBES

LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03

LOBOTOMY

ALPHA1-ADRENOCEPTORS AND ALPHA2-ADRENOCEPTORS IN RAT-CEREBRAL-CORTEX: EFFECT OF FRONTAL LOBOTOMY. 003944 04-03

LOCAL

THE INTERACTION OF AMINE LOCAL ANESTHETICS WITH MUSCARINIC-RECEPTORS. 004031 04-03

LOCALISATION

NEURONAL LOCALISATION OF BENZODIAZEPINE-RECEPTORS IN CEREBELLUM. 003739 04-03

LOCALIZATION

ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS. 003666 04-01

REGIONAL AND SUBCELLULAR LOCALIZATION IN RAT-BRAIN OF THE ENZYMES THAT CAN SYNTHESIZE GAMMA HYDROXYBUTYRIC-ACID. 003675 04-01

AUTORADIOGRAPHIC LOCALIZATION OF DRUG AND NEUROTRANSMITTER-RECEPTORS IN THE BRAIN. 004292 04-06

LOCOMOTOR-ACTIVITY

OPPOSITE EFFECTS OF NALOXONE ON SUBSTANCE-P-INDUCED IN BRAIN DOPA SYNTHESIS AND IN LOCOMOTOR-ACTIVITY IN RATS. 003799 04-03

LOCOMOTOR-ACTIVITY IN MORPHINE-DEPENDENT AND POSTDEPENDENT RATS. 004077 04-04

DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE. 004130 04-04

THE EFFECTS OF P CHLOROAMPHETAMINE ADMINISTRATION ON LOCOMOTOR-ACTIVITY AND SEROTONIN IN NEONATAL AND ADULT RATS. (UNPUBLISHED PAPER). 004169 04-04

LOCOMOTOR-STIMULATION

EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS. 004126 04-04

LOCUS-COERULEUS

THE NEUROANATOMY AND PHARMACOLOGY OF THE NUCLEUS LOCUS-COERULEUS. (UNPUBLISHED PAPER). 003810 04-03

THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

CLONIDINE AND THE PRIMATE LOCUS-COERULEUS: EVIDENCE SUGGESTING ANXIOLYTIC AND ANTIWITHDRAWAL EFFECTS. (UNPUBLISHED PAPER). 003982 04-03

LOFEPRAMINE

THE PHARMACOLOGICAL PROFILE OF LOFEPRAMINE, A NEW ANTIDEPRESSANT-DRUG. 004006 04-03

LONG-ACTING

NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO. 004198 04-04

COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09

LONG-STAY

PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08

LONG-TERM

THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS. 003788 04-03

LONG-TERM EFFECTS OF MULTIPLE DOSES OF METHAMPHETAMINE ON TRYPTOPHAN-HYDROXYLASE AND TYROSINE-HYDROXYLASE ACTIVITY IN RAT-BRAIN. 003850 04-03

ALPHA2-ADRENORECEPTORS IN RAT-BRAIN ARE DECREASED AFTER LONG-TERM TRICYCLIC-ANTIDEPRESSANT DRUG-TREATMENT. 004008 04-03

EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS. 004101 04-04

THE EFFECT OF LONG-TERM MAINTENANCE-THERAPY ON SCHIZOPHRENIC-PATIENTS USING SOMATOTHERAPEUTIC MEASURES. 004325 04-08

LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BICHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08

LEVODOPA: LONG-TERM IMPACT ON PARKINSONS-DISEASE. 004476 04-11

PHARMACOLOGICAL MODULATION OF FORMATION OF LONG-TERM MEMORY. 004578 04-14

LONG-TERM USE AND ABUSE OF BENZODIAZEPINES. 004598 04-15

ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE. 004626 04-15

PATHOPHYSIOLOGICAL AND MORPHOLOGICAL CHANGES IN THE CNS DURING LONG-TERM ADMINISTRATION OF HALOPERIDOL. 004633 04-15

LONG-TERM-TREATMENT

LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03

STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. [illegible] 04-03
LONG-TERM-TREATMENT FOR DEPRESSION. 004372 04-09
THE COURSE OF LONG-TERM-TREATMENT WITH FLUPHENAZINE-DECANOATE (DAPOTUM-D). 004805 04-15

LOOK
EFFECTS OF CHLORPROMAZINE ON ESCAPE AND AVOIDANCE RESPONSES: A CLOSER LOOK. 004226 04-04

LORAZEPAM
ACTIVITY OF BROMAZEPAM AND LORAZEPAM IN NEUROTIC DEPRESSIONS. 004384 04-09
A COMPARATIVE-STUDY OF INTRAVENOUS LORAZEPAM AND CLONAZEPAM IN STATUS-EPILEPTICUS. 004487 04-11

LORMETAZEPAM
AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13

LOSS
THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

LOW
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH CONCENTRATIONS. 003731 04-03
LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09

LOW-DOSE
EFFECT OF LOW-DOSE LITHIUM ADMINISTRATION AND SUBSEQUENT WITHDRAWAL ON BIOGENIC-AMINES IN RAT-BRAIN. 003708 04-03

LOW-DOSES
EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE. 004173 04-04

LOXAPINE
LOXAPINE FATALITIES. 004650 04-15

LOXAPINE-SUCCINATE
EVALUATIONS OF LOXAPINE-SUCCINATE IN THE AMBULATORY TREATMENT OF ACUTE SCHIZOPHRENIC-EPISODES. 004345 04-08

LSD
LSD, PSYCHOTOGENIC PROCEDURES AND BRAIN NEUROHUMORS. (UNPUBLISHED PAPER). 004448 04-11
LSD: MY PROBLEM CHILD. 004497 04-12

LUMBAR
A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003663 04-01

LYMPHOCYTES
THE EFFECT OF CHLORPROMAZINE AND MAJEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ. 004541 04-13

LYSERGIC-ACID
A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS. 004007 04-03

LYSERGIC-ACID-DIETHYLAMIDE
EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON SUBSEQUENT PROTEIN SYNTHESIS IN A CELL-FREE SYSTEM DERIVED FROM BRAIN. [illegible] 04-03
COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN. [illegible] 04-03
CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. [illegible] 04-03

LYSINE
BLOCKADE BY L LYSINE OF NONNARCOTIC ANALGESICS. 003857 04-03

LYSINE-VASOPRESSIN
USE OF LYSINE-VASOPRESSIN IN THE TREATMENT OF POSTTRAUMATIC AMNESIA. 004583 04-14

[illegible]
CLINICAL RESULTS OBTAINED WITH THE USE OF [illegible] IN DEPRESSIVE-SYNDROMES. 004297 04-09

LYSOSOMAL
INHIBITION OF LYSOSOMAL LIPASES BY CHLORPROMAZINE: A POSSIBLE MECHANISMS OF STABILIZATION. 003993 04-03

LYTIC-EFFECTS
MECHANISM OF MEMBRANE STABILIZING AND LYTIC-EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS. 004283 04-05

MAJEPTIL
THE EFFECT OF CHLORPROMAZINE AND MAJEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ. 004541 04-13

MAGNITUDE
POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME. 004610 04-15

MAINTENANCE
ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11

MAINTENANCE-THERAPY
THE EFFECT OF LONG-TERM MAINTENANCE-THERAPY ON SCHIZOPHRENIC-PATIENTS USING SOMATOTHERAPEUTIC MEASURES. 004325 04-08

MAINTENANCE-TREATMENT
DEPOT FLUPHENAZINE MAINTENANCE-TREATMENT AND ASSOCIATED WEIGHT CHANGES. 004635 04-15

MALE
ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003936 04-03
COMPARISON OF THE EFFECTS OF BETA ENDORPHIN AND MORPHINE ON EXPLORATORY-BEHAVIOUR AND SOCIOSEXUAL-BEHAVIOUR IN THE MALE RAT. 004178 04-04
METHADONE REDUCES SEXUAL-PERFORMANCE AND SEXUAL-MOTIVATION IN THE MALE SYRIAN GOLDEN HAMSTER. 004183 04-04
SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS. 004234 04-04
PHARMACOTHERAPY OF SEXUAL-IMPOTENCE IN THE MALE. 004425 04-11
BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS. [illegible] 04-13

MALES
DECREASED 3H IMIPRAMINE BINDING IN DEPRESSED MALES AND FEMALES. 004349 04-09

MALIGNANT-SYNDROME
BIOCHEMICAL AND NEUROENDOCRINE APPROACHES TO A MALIGNANT-SYNDROME OF NEUROLEPTIC. [illegible] 04-15

MAMMALIAN
ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN. 003820 04-03

MAN
PHARMACOKINETIC-STUDY IN MAN OF THE [illegible] PREPARATION. 004440 04-11
PHARMACOKINETICS OF [illegible] IN MAN AFTER SINGLE AND MULTIPLE ORAL DOSES. [illegible] 04-13
NOREPINEPHRINE METABOLISM IN MAN USING DEUTERIUM LABELING: 4 HYDROXY-3-METHOXYMANDELIC-ACID. 004604 04-13
THE PHARMACOKINETICS OF MIDAZOLAM IN MAN. [illegible] 04-13

SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER). 004565 04-14

A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN. 004574 04-14

THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE IN MAN. 004580 04-14

MANAGEMENT

ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT. 004665 04-15

MANGANESE

MENTAL-DISTURBANCES IN CHRONIC MANGANESE POISONING. 004621 04-15

MANIA

CHANGES IN BLOOD PLASMA OSMOLALITY AND STATES OF MANIA. 004352 04-09

PLASMA CORTICOSTERIODS IN MANIA: THE EFFECTS OF PIMOZIDE. 004363 04-09

CHOLINERGIC MECHANISMS IN MANIA AND DEPRESSION: QUESTIONS OF SPECIFICITY. 004374 04-09

TRICYCLIC-ANTIDEPRESSANT-INDUCED MANIA. 004656 04-15

CHOLINOMIMETICS IN MANIA, SCHIZOPHRENIA, AND MEMORY-DISORDERS. 004703 04-17

CEREBRAL FLUORIDE IN MANIA AND THE EFFECT OF LITHIUM: A HYPOTHESIS. 004715 04-17

MANIC-DEPRESSIVE-ILLNESS

A PRELIMINARY DOUBLE-BLIND STUDY ON THE EFFICACY OF CARBAMAZEPINE IN PROPHYLAXIS OF MANIC-DEPRESSIVE-ILLNESS. 004388 04-09

LITHIUM TREATMENT OF MANIC-DEPRESSIVE-ILLNESS. A PRACTICAL GUIDE. 004408 04-09

MANIC-DEPRESSIVES

DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09

MANIC-PATIENTS

ERYTHROCYTE CHOLINE CONCENTRATIONS ARE ELEVATED IN MANIC-PATIENTS. 004521 04-13

MANIC-STATE

MANIC-STATE INDUCED BY SALBUTAMOL TAKEN ORALLY. 004622 04-15

MANIPULATION

PHARMACOLOGIC MANIPULATION OF BRAIN AND PITUITARY ENDORPHIN CONTENT AND RELEASE. 003837 04-03

DOPAMINE-DEPENDENT HYPERACTIVITY IN THE FOLLOWING MANIPULATION OF GABA MECHANISMS IN THE REGION OF THE NUCLEUS-ACCUMBENS. 003976 04-03

BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13

MANIPULATIONS

THE EFFECTS OF TRYPTOPHAN AND MANIPULATIONS OF SEROTONERGIC-RECEPTORS ON TONIC IMMOBILITY IN CHICKENS. 004245 04-04

MAO-INHIBITION

IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03

MAO-INHIBITOR

TREATMENT OF DEPRESSION WITH AN MAO-INHIBITOR FOLLOWED BY 5 HTP -- AN UNFINISHED RESEARCH PROJECT. 004377 04-09

MAOI-INDUCED

MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN ADOLESCENT. 004637 04-15

MAPROTILINE

GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06

MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17

MARIHUANA

MEMORY: THE EFFECTS OF ALCOHOL AND OF MARIHUANA. 004570 04-14

MARMOSET

AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL. 004208 04-04

MASS-FRAGMENTOGRAPHY

RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY. 004303 04-06

MASS-SPECTROMETRIC-DETERMINATION

GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06

MASS-SPECTROMETRY

GAS-CHROMATOGRAPHY, MASS-SPECTROMETRY, AND COMBINED CHROMATOGRAPHY MASS-SPECTROMETRY. 004290 04-06

GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS. 004683 04-16

COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004692 04-16

MATERNAL

DISPOSITION OF METHADONE IN THE OVINE MATERNAL FETAL UNIT. 004027 04-03

MATING-BEHAVIOR

DRUGS, TRANSMITTERS AND HORMONES, AND MATING-BEHAVIOR. 004721 04-17

MATURE

APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT. 004651 04-15

MD780515

CHARACTERISTICS OF THE INHIBITION OF RAT-BRAIN MONOAMINE-OXIDASE IN VITRO BY MD780515. 003874 04-03

MEANING

CHARACTER AND MEANING OF QUASI-MORPHINE WITHDRAWAL PHENOMENA ELICITED BY METHYLXANTHINES. 004087 04-04

MEASUREMENTS

BLOOD LEVEL MEASUREMENTS OF TRICYCLIC DRUGS AS A DIAGNOSTIC TOOL. 004368 04-09

MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

MEBICAR

THE EFFECT OF MEBICAR ON THE CONDITION OF ANIMALS UNDER CERTAIN EXTREME CIRCUMSTANCES. 004262 04-04

MECHANISM

METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03

AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION. 003917 04-03

A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS. 004007 04-03

SEROTONERGIC MECHANISM IN SEIZURES KINDLED FROM THE RABBIT AMYGDALA. 004227 04-04

MECHANISM OF MEMBRANE STABILIZING AND LYTIC-EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS. 004283 04-06

MECHANISM OF LITHIUM INCLUDED ELEVATION IN RED-BLOOD-CELL CHOLINE CONTENT: AN IN VITRO ANALYSIS. 004511 04-13

A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM. 004520 04-13

MECHANISM OF VALPROATE PHENOBARBITAL INTERACTION IN EPILEPTIC-PATIENTS. 004522 04-13

MECHANISM-OF-ACTION
- CU-AMINE-OXIDASES: STUDIES RELATED TO THE MECHANISM-OF-ACTION OF BOVINE PLASMA AMINE-OXIDASE (UNPUBLISHED PAPER). 003680 04-01
- STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES. 003973 04-03
- LITHIUM AND MOTOR-ACTIVITY OF ANIMALS: EFFECTS AND POSSIBLE MECHANISM-OF-ACTION. 004222 04-04

- CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003882 04-03

MEMBRANES
- CHARACTERIZATION OF TWO (3H)GLUTAMATE BINDING-SITES IN RAT HIPPOCAMPAL MEMBRANES. 003726 04-03
- PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT. 003734 04-03
- IBOTENIC ACID ANALOGUES AS INHIBITORS OF (3H)GLUTAMIC-ACID BINDING TO CEREBELLAR MEMBRANES. 003848 04-03
- BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA. 003954 04-03
- L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004030 04-03
- DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES. 004033 04-03
- THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004035 04-03

MEMORY
- THE EFFECT OF P CHLOROPHENYLALANINE ON THE DISTRIBUTION OF BIOGENIC-AMINES IN THE BRAIN, AND ON MEMORY IN RATS. 004046 04-04
- THE EFFECTS OF COLCHICINE AND VINBLASTINE ON MEMORY IN CHICKS. 004089 04-04
- MEMORY, OPIATE-RECEPTORS, AND AGING. 004143 04-04

OPIATE MODULATION OF MEMORY. (UNPUBLISHED PAPER). 004177 04-04
ACUTE EFFECT OF DRUGS UPON MEMORY OF PATIENTS WITH SENILE-DEMENTIA. 004561 04-14
MEMORY: THE EFFECTS OF ALCOHOL AND OF MARIHUANA. 004570 04-14
PHARMACOLOGICAL MODULATION OF FORMATION OF LONG-TERM MEMORY. 004578 04-14
VARIOUS ASPECTS OF THE EFFECT OF ANTICONVULSANT-DRUGS ON MEMORY. 004602 04-15

MEMORY-DISORDERS
CHOLINOMIMETICS IN MANIA, SCHIZOPHRENIA, AND MEMORY-DISORDERS. 004703 04-17

MEN
ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN. 004500 04-13
IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15

MENTAL-DISORDERS
SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS. 004433 04-11

MENTAL-DISTURBANCES
MENTAL-DISTURBANCES IN CHRONIC MANGANESE POISONING. 004621 04-15

MENTAL-HYGIENE-CLINIC
PSYCHIATRIC-DRUG-STUDY. PART II. MENTAL-HYGIENE-CLINIC SURVEY, DAY-TREATMENT-CENTER SURVEY, DAY-HOSPITAL SURVEY. 004716 04-17

MENTAL-SYMPTOMS
A STUDY ON MENTAL-SYMPTOMS DEVELOPED DURING THE TREATMENT OF PARKINSONS-DISEASE. 004618 04-15
ANTICONVULSANTS AND MENTAL-SYMPTOMS. 004649 04-15

MENTALLY-RETARDED
ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11
COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS. 004438 04-11

MEPROBAMATE
MEPROBAMATE REDUCES ACCURACY OF PHYSIOLOGICAL DETECTION OF DECEPTION. 004585 04-14
IMPURITIES IN DRUGS V: MEPROBAMATE. 004631 04-15

MESENCEPHALIC
MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT. 003849 04-03

MESENCEPHALON
STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. 003852 04-03

MESOLIMBIC
INCREASED MESOLIMBIC DOPAMINE BINDING FOLLOWING CHRONIC HALOPERIDOL TREATMENT. 003872 04-03

METABOLIC
ANESTHETICS AND THE HABENULO-INTERPEDUNCULAR SYSTEM: SELECTIVE SPARING OF METABOLIC ACTIVITY. 003833 04-03
METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT. 003905 04-03
SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS. 004433 04-11

METABOLISM
DISTRIBUTION OF CESIUM IN THE ORGANISM AND ITS EFFECT ON THE NUCLEOTIDE METABOLISM ENZYMES. 003696 04-02
EFFECT OF AMPHETAMINE ON THE METABOLISM AND INCORPORATION OF (3H) THYMIDINE INTO DNA OF DEVELOPING RAT-BRAIN. 003729 04-03
THE EFFECTS OF ANTIDEPRESSANTS ON THE RETENTION AND METABOLISM OF (3H) NOREPINEPHRINE IN RAT-BRAIN SLICES. 003763 04-03
CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP. 003769 04-03
ETHANOL-INDUCED CHANGES IN CYCLIC-GUANOSINE-PHOSPHATE METABOLISM IN [illegible] VESTIBULAR REGION. 003784 04-03
THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS. 003788 04-03
COMPARATIVE-EFFECTS OF AMANTADINE AND AMFONELIC-ACID ON DOPAMINE METABOLISM IN RAT-BRAIN. 003796 04-03
ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN. 003820 04-03
UNIMPAIRED QUININE METABOLISM IN RATS WITH VENTROMEDIAL HYPOTHALAMIC LESIONS. 003821 04-03
EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS. 003914 04-03
EFFECT OF IMIPRAMINE ON CENTRAL 5 HYDROXYTRYPTAMINE TURNOVER AND METABOLISM IN RATS. 003999 04-03
THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN. 004075 04-04
EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD. 004108 04-04
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05
PRAZEPAM METABOLISM IN FEMALE SUBJECTS. 004504 04-13
NOREPINEPHRINE METABOLISM IN MAN USING DEUTERIUM LABELLING: 4 HYDROXY-3-METHOXYMANDELIC-ACID. 004534 04-13
LITHIUM EFFECTS ON CITRATE METABOLISM IN HUMANS AND RATS. 004537 04-13
CATECHOLAMINE METABOLISM IN A PSYCHOACTIVE CACTUS. 004722 04-17

METABOLITE
GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06

METABOLITES
A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003663 04-01
DOPAMINE METABOLITES IN CAUDATE AND CORTEX AFTER LITHIUM AND HALOPERIDOL. (UNPUBLISHED PAPER). 003738 04-03
INTERACTIONS BETWEEN CHLORPROMAZINE AND SOME OF ITS METABOLITES. 004001 04-03
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES. 004009 04-03
ANTICONVULSANT ACTIVITY OF METABOLITES OF VALPROIC-ACID. 004168 04-04
BEHAVIOR OF RATS AND MICE ADMINISTERED ACTIVE METABOLITES OF FLUPHENAZINE, 7 HYDROXYFLUPHENAZINE AND FLUPHENAZINE-SULFOXIDE. 004256 04-04
RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY. 004303 04-06
CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004559 04-13

METAMPHETAMINE
EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT. 003910 04-03

METERGOLINE
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM.
003732 04-03
(3H)METERGOLINE: A NEW LIGAND OF SEROTONIN-RECEPTORS IN THE RAT-BRAIN.
003895 04-03

METHADONE
DISPOSITION OF METHADONE IN THE OVINE MATERNAL FETAL UNIT.
004027 04-03
METHADONE REDUCES SEXUAL-PERFORMANCE AND SEXUAL-MOTIVATION IN THE MALE SYRIAN GOLDEN HAMSTER.
004183 04-04
METHADONE TREATMENT OF HEROIN ADDICTS IN SWITZERLAND.
004452 04-11
METHADONE USE IN PATIENTS WITH CHRONIC RENAL-DISEASE.
004467 04-11

METHADONE-INDUCED
METHADONE-INDUCED ATTENUATION OF THE EFFECTS OF DELTA9 TETRAHYDROCANNABINOL ON TEMPORAL DISCRIMINATION IN PIGEONS.
004095 04-04

METHAMPHETAMINE
LONG-TERM EFFECTS OF MULTIPLE DOSES OF METHAMPHETAMINE ON TRYPTOPHAN-HYDROXYLASE AND TYROSINE-HYDROXYLASE ACTIVITY IN RAT-BRAIN.
003830 04-03
EFFECTS OF A HIGH-DOSE TREATMENT OF METHAMPHETAMINE ON CAUDATE DOPAMINE AND ANOREXIA IN RATS.
004073 04-04
EFFECT OF L HISTIDINE AND CHLORCYCLIZINE ON APOMORPHINE-INDUCED CLIMBING-BEHAVIOUR AND METHAMPHETAMINE STEREOTYPY IN MICE.
004147 04-04

METHAQUALONE
METHAQUALONE RIA STRUCTURE VERSUS REACTIVITY.
003657 04-01

METHIONINE
FRAGILE SITES IN HUMAN CHROMOSOMES I. THE EFFECT OF METHIONINE ON THE XQ-FRAGILE-SITE.
004515 04-13

METHIONINE-ENKEPHALIN
MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT.
003849 04-03

METHIONINE-SULFOXIMINE
STIMULATION OF FRUCTOSEDIPHOSPHATASE ACTIVITY AND SYNTHESIS IN THE CEREBRAL-CORTEX OF RATS SUBMITTED TO THE CONVULSANT METHIONINE-SULFOXIMINE.
003858 04-03

METHOD
BIOCHEMICAL AND IMMUNOLOGICAL PROPERTIES OF THE MOUSE BRAIN ENOLASES PURIFIED BY A SIMPLE METHOD.
003668 04-01
A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION.
003674 04-01
PRESENCE OF CONJUGATED CATECHOLAMINES IN RAT-BRAIN: A NEW METHOD OF ANALYSIS OF CATECHOLAMINE-SULFATES.
004286 04-06
A SIMPLE HISTOCHEMICAL SCREENING METHOD FOR AMINE UPTAKE.
004295 04-06
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD.
004491 04-11
CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY.
004579 04-14
A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA.
004584 04-14
THE USE OF EVENT-RELATED SLOW POTENTIALS OF THE BRAIN AS AN OBJECTIVE METHOD TO STUDY THE EFFECTS OF CENTRALLY ACTING DRUGS.
004667 04-16

METHODOLOGIES
PHYSICO-CHEMICAL METHODOLOGIES IN PSYCHIATRIC-RESEARCH.
004679 04-16

METHODOLOGY
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: METHODOLOGY.
004283 04-06

METHODS
A COMPARATIVE EVALUATION OF THE EFFICACY OF SOME THERAPEUTIC METHODS USED IN DELIRIUM-TREMENS.
004486 04-11
PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE.
004487 04-11

METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL
POSTMORTEM STABILITY OF BRAIN 3 METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL AND 3,4 DIHYDROXYPHENYLETHYLENEGLYCOL IN THE RAT AND MOUSE.
004048 04-03

METHOXY-4-HYDROXYPHENYLGLYCOL
SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER).
004565 04-14

METHOXY-4-HYDROXYPHENYLGLYCOL-SULFATE
VARIATIONS IN URINARY LEVELS OF 3 METHOXY-4-HYDROXYPHENYLGLYCOL-SULFATE IN PATIENTS WITH DEPRESSIVE SYNDROMES.
004533 04-13

METHOXYDIISOPROPYLTRYPTAMINE
N,N DIISOPROPYLTRYPTAMINE (DIPT) AND 5 METHOXYDIISOPROPYLTRYPTAMINE (5 MEO-DIPT). TWO ORALLY ACTIVE TRYPTAMINE ANALOGS WITH CNS ACTIVITY.
004310 04-07

METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONOXIME
COMPARATIVE ANALGESIC, BEHAVIORAL, AND DEPENDENCE PROPERTIES OF MORPHINE AND O METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONOXIME HCL.
003707 04-02

METHOXYTYRAMINE
A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION.
003674 04-01

METHYLATION
DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE.
004019 04-03

METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE
ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS.
004185 04-04

METHYLDOPA
REDUCTION IN THE LEVEL OF IMMUNOTITRATABLE DOPAMINE-BETA-HYDROXYLASE AFTER CHRONIC ADMINISTRATION OF L-DOPA OR ALPHA METHYLDOPA.
003764 04-03
DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS.
004025 04-03

METHYLDOPAMINE
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS.
003947 04-03

METHYLENEDIOXYAMPHETAMINE
CENTRALLY ACTIVE N SUBSTITUTED ANALOGS OF 3,4 METHYLENEDIOXYPHENYLISOPROPYLAMINE (3,4 METHYLENEDIOXYAMPHETAMINE).
003683 04-02

METHYLENEDIOXYPHENYLISOPROPYLAMINE
CENTRALLY ACTIVE N SUBSTITUTED ANALOGS OF 3,4 METHYLENEDIOXYPHENYLISOPROPYLAMINE (3,4 METHYLENEDIOXYAMPHETAMINE).
003683 04-02

METHYLMERCURY-INDUCED
METHYLMERCURY-INDUCED CHANGES IN OPERANT DISCRIMINATION BY THE PIGEON.
004271 04-05

METHYLPHENIDATE
THE EFFECTS OF CHRONIC METHYLPHENIDATE TREATMENT ON GROWTH AND ENDOCRINE FUNCTION IN THE DEVELOPING RAT.
003811 04-03

METHYLPHENYLALANINE
EFFECT OF ALPHA METHYLPHENYLALANINE AND PHENYLALANINE ON BRAIN POLYRIBOSOMES AND PROTEIN SYNTHESIS.
003733 04-03

METHYLPREDNISOLONE
EFFECTS OF INDOMETHACIN AND METHYLPREDNISOLONE ON RENAL ELIMINATION OF LITHIUM IN THE RAT.
004270 04-05

METHYLXANTHINES
ADENOSINE-RECEPTORS IN THE CENTRAL-NERVOUS-SYSTEM: RELATIONSHIP TO THE CENTRAL-ACTIONS OF METHYLXANTHINES. 003766 04-03
CHARACTER AND MEANING OF QUASI-MORPHINE WITHDRAWAL PHENOMENA ELICITED BY METHYLXANTHINES. 004087 04-04

METOCLOPRAMIDE
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS. 003731 04-03
PHARMACOLOGICAL DIFFERENCE OF L-DOPA, APOMORPHINE, AND BROMOCRIPTINE AGAINST METOCLOPRAMIDE. 003790 04-03

METRAZOL
ELECTROCORTICOGRAPHIC ACTIVITY ELICITED BY METRAZOL DURING ONTOGENESIS IN RATS. 004064 04-03

METRIFONATE
STABLE ISOTOPES USED IN STUDIES OF METRIFONATE. 003847 04-03

MEXAZOLAM
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD. 004491 04-11

MHPG
TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09
SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER). 004565 04-14

MIANSERIN
SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03
A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09
MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17

MIANSERINE
INTERACTION OF P CHLOROPHENYLALANINE, MIANSERINE AND DANITRACEN WITH AMPHETAMINE. 004599 04-15

MICROCOMPUTER
A MICROCOMPUTER SYSTEM FOR THE CONTROL OF BEHAVIORAL EXPERIMENTS. 004287 04-06

MICROINJECTION
SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX. 004015 04-03

MICROPROPERTIES
MICROPROPERTIES OF OPERANT-BEHAVIOR AS ASPECTS OF TOXICITY. 004666 04-15

MICROSOMAL
INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES. 004042 04-03

MICROSOMES
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03

MIDAZOLAM
THE PHARMACOKINETICS OF MIDAZOLAM IN MAN. 004555 04-13
COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14

MIDBRAIN
CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03
GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

MINI-SYMPOSIUM
MINI-SYMPOSIUM. III. SIMPLE IN VIVO TESTS THAT DIFFERENTIATE PROTOTYPE AGONISTS AT OPIATE-RECEPTORS. 004289 04-06
MINI-SYMPOSIUM. I. THE IN VIVO DIFFERENTIATION OF OPIATE-RECEPTORS: INTRODUCTION. 004697 04-17
MINI-SYMPOSIUM. IV. DISCRIMINATIVE-STIMULUS EFFECTS OF NARCOTICS: EVIDENCE FOR MULTIPLE RECEPTOR-MEDIATED ACTIONS. 004719 04-17
MINI-SYMPOSIUM. II. MULTIPLE OPIOID-RECEPTORS: A LITTLE ABOUT THEIR HISTORY AND SOME IMPLICATIONS RELATED TO EVOLUTION. 004728 04-17

MISINFORMED
MISINFORMED CONSENT. 004326 04-08

MITIGATING
MITIGATING ACUTE SKIN RASHES AND NAUSEA FROM LITHIUM. 004661 04-15

MITOCHONDRIA
OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES. 004024 04-03

MITOCHONDRIAL
EFFECT OF INORGANIC LEAD ON RAT-BRAIN MITOCHONDRIAL RESPIRATION AND ENERGY PRODUCTION. 004267 04-05

MIXTURE
HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE. 004159 04-04
CHARACTERISTICS OF THE STIMULUS PRODUCED BY THE MIXTURE OF CANNABIDIOL WITH DELTA9 TETRAHYDROCANNABINOL. 004263 04-04

MOBILIZATION
MOBILIZATION OF REFRACTORY CHRONIC SCHIZOPHRENICS WITH HALOPERIDOL. 004337 04-08

MODEL
THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE. 003923 04-03
AN ELECTROPHYSIOLOGICAL MODEL OF GABA-MEDIATED NEUROTRANSMISSION. 003929 04-03
THE STEREOTYPED-BEHAVIOR-SYNDROME: A NEW MODEL AND PROPOSED THERAPY. 004163 04-04
LACK OF SPECIFICITY OF AN ANIMAL BEHAVIOR MODEL FOR HALLUCINOGENIC DRUG ACTION. 004250 04-0
HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004332 04-08

MODIFICATION
AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03
SELECTIVE MODIFICATION BY OPIATES OF NEURONAL ACTIVITY OF THE MEDIAL BASAL HYPOTHALAMUS. 003773 04-03
GUANYLATE-CYCLASE – CYCLIC-GMP IN MOUSE CEREBRAL-CORTEX AND CEREBELLUM: MODIFICATION BY ANTICONVULSANTS. 003956 04-03
CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS. 004133 04-04
MODIFICATION OF DRUG-INDUCED CATATONIA AND TREMORS BY QUIPAZINE IN RATS AND MICE. 004164 04-04
SEROTONERGIC APPROACHES TO THE MODIFICATION OF BEHAVIOR IN THE LESCH-NYHANS-SYNDROME. 004576 04-14

MODIFYING
ON MONOAMINERGIC-INTERACTION WITH BEHAVIOUR MODIFYING PEPTIDE-HORMONES. 004700 04-17

MODITEN
RESULTS OF TREATMENT BY MODITEN DEPOT IN OUTPATIENTS-WARDS IN THE SOUTH MORAVIAN REGION. 004648 04-15

MOLECULES
DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES – ARE THEY CELL ADHESION MOLECULES? 003724 04-03

MOLINDONE
EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT.
003870 04-03
PHYSIOLOGICAL SIGNIFICANCE OF DOPAMINE-AUTORECEPTORS AS STUDIED FOLLOWING THEIR SELECTIVE BLOCKADE BY MOLINDONE.
004065 04-04

MOLLUSCAN
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN NEURONS.
003834 04-03

MONGOLIAN-GERBIL
BRAIN BENZODIAZEPINE-RECEPTORS AND THEIR RAPID CHANGES AFTER SEIZURES IN THE MONGOLIAN-GERBIL.
003717 04-03
HANDLING-INDUCED SEIZURES AND ROTATIONAL-BEHAVIOR IN THE MONGOLIAN-GERBIL.
004216 04-04

MONITORING
AMITRIPTYLINE AND NORTRIPTYLINE PLASMA LEVELS MONITORING. PERSPECTIVE IN CLINICAL-PRACTICE.
004675 04-16
THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY.
004681 04-16

MONKEYS
THE EFFECT OF THIOPROPERAZINE ON DELAYED REACTIONS IN LOWER MONKEYS.
004125 04-04
CLONIDINE-INDUCED HYPERPHAGIA IN MONKEYS: EVIDENCE FOR ALPHA2-NORADRENERGIC-RECEPTOR MEDIATION.
004215 04-04

MONOAMINE-OXIDASE
INHIBITION OF MONOAMINE-OXIDASE BY FURAZOLIDONE IN THE CHICKEN AND THE INFLUENCE OF THE ALIMENTARY FLORA THEREON.
003711 04-03
CHARACTERISTICS OF THE INHIBITION OF RAT-BRAIN MONOAMINE-OXIDASE IN VITRO BY MD780515.
003874 04-03
OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES.
004024 04-03
THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION.
004509 04-13
THE ACTIVITY OF BLOOD-PLATELET MONOAMINE-OXIDASE IN ENDOGENOUS DEPRESSION.
004547 04-13

MONOAMINE-OXIDASE-B-INHIBITOR
IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT?
004640 04-15

MONOAMINERGIC
THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING.
004016 04-03

MONOAMINERGIC-INTERACTION
ON MONOAMINERGIC-INTERACTION WITH BEHAVIOUR MODIFYING PEPTIDE-HORMONES.
004700 04-17

MONOAMINES
ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS.
003666 04-01
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES.
004009 04-03
EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON TETRABENAZINE-INDUCED DEPLETION OF BRAIN MONOAMINES IN RATS. 1. NOREPINEPHRINE.
004062 04-03
EFFECTS OF LITHIUM ON BEHAVIOUR AND CENTRAL MONOAMINES.
004110 04-04

MONOFLUORINATED
INTERACTIONS BETWEEN A MONOFLUORINATED ANALOGUE OF P CHLOROAMPHETAMINE AND 5 HYDROXYTRYPTAMINE IN BRAIN.
003712 04-03

MONOFLUOROACETATE
AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA.
004276 04-05

MONOSODIUM-GLUTAMATE
MONOSODIUM-GLUTAMATE: INCREASED NEUROTOXICITY AFTER REMOVAL OF NEURONAL REUPTAKE SITES.
003889 04-03

MONOSYNAPTIC
CANNABINOID-INDUCED ENHANCEMENT AND DEPRESSION OF CAT MONOSYNAPTIC REFLEXES.
004040 04-03

MOOD
ON THE RELATIONSHIP BETWEEN MEASURES OBTAINED BY VIDEO-ANALYSIS OF NONVERBAL-BEHAVIOR AND SELF-RATING OF MOOD.
004410 04-09
THE EFFECT OF FIVE TRICYCLIC-ANTIDEPRESSANTS ON SALIVARY FLOW AND MOOD IN HEALTHY VOLUNTEERS.
004540 04-14

MORAVIAN
RESULTS OF TREATMENT BY MODITEN DEPOT IN OUTPATIENTS-WARDS IN THE SOUTH MORAVIAN REGION.
004648 04-15

MORPHICEPTIN
MORPHICEPTIN (NH4-TYR-PRO-PHE-PRO-CONH2): A POTENT AND SPECIFIC AGONIST FOR MORPHINE MU-RECEPTORS.
003746 04-03

MORPHINANS
EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING.
003702 04-02

MORPHINE
COMPARATIVE ANALGESIC, BEHAVIORAL, AND DEPENDENCE PROPERTIES OF MORPHINE AND O METHOXYLPHENYLCARBAMOYLDIETHYLAMINOPROPIOPHENONEOXIME HCL.
003707 04-02
EFFECT OF CHRONIC MORPHINE TREATMENT ON THE INTERACTION BETWEEN THE PERIAQUEDUCTAL GREY AND THE NUCLEUS-RAPHE-MAGNUS OF THE RAT.
003727 04-03
MORPHICEPTIN (NH4-TYR-PRO-PHE-PRO-CONH2): A POTENT AND SPECIFIC AGONIST FOR MORPHINE MU-RECEPTORS.
003746 04-03
DIFFERENTIAL TOLERANCE TO THE EFFECTS OF MORPHINE ON EVOKED ACTIVITY IN THE HIPPOCAMPAL SLICE.
003760 04-03
MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION.
003782 04-03
LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY.
003846 04-03
MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT.
003849 04-03
ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE.
003863 04-03
EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FROM RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST.
003864 04-03
EFFECT OF MORPHINE AND NALOXONE ON LEU-ENKEPHALIN-LIKE IMMUNOREACTIVITY IN DOGS.
003894 04-03
THE BEHAVIORAL-EFFECTS OF D-AMPHETAMINE ALONE AND IN COMBINATION WITH ACUTE AND CHRONIC MORPHINE TREATMENTS IN RATS.
003915 04-03
EFFECTS OF ENKEPHALIN, MORPHINE, AND NALOXONE ON THE ELECTRICAL-ACTIVITY OF THE IN VITRO HIPPOCAMPAL SLICE PREPARATION.
003918 04-03
THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE.
003958 04-03
ELECTROENCEPHALOGRAPHIC AND BEHAVIORAL-TOLERANCE TO AND CROSS-TOLERANCE BETWEEN D ALA2-METHIONINE-ENKEPHALINAMIDE AND MORPHINE IN THE RAT.
004038 04-03
THE EFFECTS OF PEPTIDES ON TOLERANCE TO THE CATALEPTIC-EFFECTS AND HYPOTHERMIC-EFFECTS OF MORPHINE IN THE RAT.
004072 04-04
EFFECTS OF PAIN, MORPHINE AND NALOXONE ON THE DURATION OF ANIMAL HYPNOSIS.
004081 04-04
CHOICE BETWEEN FOOD AND HEROIN: EFFECTS OF MORPHINE, NALOXONE, AND SECOBARBITAL.
004123 04-04
A SIGNAL-DETECTION-ANALYSIS OF MORPHINE EFFECTS ON THE RESPONSE BIAS OF RATS IN A TWO-SHOCK DISCRIMINATION TASK.
004124 04-04

EFFECTS OF LEVO ALPHA ACETYLMETHADOL (LAAM) ON MORPHINE SELF-ADMINISTRATION IN THE RAT. 004170 04-04

EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE. 004173 04-04

COMPARISON OF THE EFFECTS OF BETA ENDORPHIN AND MORPHINE ON EXPLORATORY-BEHAVIOUR AND SOCIOSEXUAL-BEHAVIOUR IN THE MALE RAT. 004178 04-04

MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04

MORPHINE ANTAGONISTS AND CONSUMMATORY BEHAVIORS. 004196 04-04

OPIATE-DEPENDENCE FOLLOWING ACUTE INJECTIONS OF MORPHINE AND NALOXONE: THE ASSESSMENT OF VARIOUS WITHDRAWAL SIGNS. 004209 04-04

ANTAGONISM BY PHENOXYBENZAMINE AND PENTAZOCINE OF THE ANTINOCICEPTIVE-EFFECTS OF MORPHINE IN THE SPINAL-CORD. 004213 04-04

PHARMACOLOGICAL-ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04

INTRATHECAL HIGH-DOSE MORPHINE PRODUCES HYPERALGESIA IN THE RAT. 004254 04-04

EATING-BEHAVIOR REVEALS RATS PREFERENCE FOR MORPHINE. 004257 04-04

ORAL SELF-ADMINISTRATION OF MORPHINE IN RATS. 004258 04-04

MORPHINE CHALLENGES IN LEVO ALPHA ACETYLMETHADOL (LAAM) POSTADDICT RATS. 004259 04-04

THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT: INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT. 004279 04-05

SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11

EVENT-RELATED POTENTIAL CHANGES WITH MORPHINE IN NONADDICTED HUMANS. 004512 04-13

DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004687 04-16

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004692 04-16

MORPHINE-DEPENDENT

LOCOMOTOR-ACTIVITY IN MORPHINE-DEPENDENT AND POSTDEPENDENT RATS. 004077 04-04

MORPHINE-INDUCED

CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

POTENTIATION OF THE MORPHINE-INDUCED RESPIRATORY RATE DEPRESSION BY CAPTOPRIL. 004275 04-05

MORPHOLOGICAL

PATHOPHYSIOLOGICAL AND MORPHOLOGICAL CHANGES IN THE CNS DURING LONG-TERM ADMINISTRATION OF HALOPERIDOL. 004633 04-15

MOTHERS

BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS. 004658 04-15

MOTOR

CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

MOTOR-ACTIVITY

INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04

LITHIUM AND MOTOR-ACTIVITY OF ANIMALS: EFFECTS AND POSSIBLE MECHANISM-OF-ACTION. 004222 04-04

MOTOR-CORTEX

AMMONIA AND DISINHIBITION IN CAT MOTOR-CORTEX BY AMMONIUM-ACETATE, MONOFLUOROACETATE AND INSULIN-INDUCED HYPOGLYCEMIA. 004276 04-05

MOULDS

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES – ARE THEY CELL ADHESION MOLECULES? 003724 04-03

MOVEMENT-DISORDERS

TARDIVE-DYSKINESIA AND OTHER DRUG-INDUCED MOVEMENT-DISORDERS AMONG HANDICAPPED CHILDREN AND YOUTH. 004614 04-15

LITHIUM-CARBONATE IN THE TREATMENT OF MOVEMENT-DISORDERS. A CRITICAL REVIEW. 004668 04-15

MOVEMENTS

ABNORMAL MOVEMENTS INDUCED BY PSYCHOTROPIC-DRUGS. 004652 04-15

MRNA

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003832 04-03

MU

INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES. 003737 04-03

ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004053 04-03

MU-RECEPTORS

MORPHICEPTIN (NH4-TYR-PRO-PHE-PRO-CONH2): A POTENT AND SPECIFIC AGONIST FOR MORPHINE MU-RECEPTORS. 003746 04-03

MULTICENTRE-STUDY

MULTICENTRE-STUDY WITH VILOXAZINE (VIVALAN) IN DEPRESSED-PATIENTS. 004375 04-09

MULTICENTRE-TRIAL

A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09

MULTIVARIATE

A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE. 004688 04-16

MUSCARINIC

POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT. 004153 04-04

PSYCHOTHERAPEUTIC-DRUGS, HISTAMINE H1-RECEPTORS AND MUSCARINIC ACETYLCHOLINE-RECEPTORS. 004737 04-17

MUSCARINIC-CHOLINOCEPTORS

THE INTERACTION OF TRAZODONE WITH RAT-BRAIN MUSCARINIC-CHOLINOCEPTORS. 003855 04-03

MUSCARINIC-RECEPTOR

INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 003783 04-03

ISOMERIZATION OF THE MUSCARINIC-RECEPTOR ANTAGONIST COMPLEX. 003860 04-03

MUSCARINIC-RECEPTOR: MULTIPLE SITES OR UNITARY CONCEPT? 003896 04-03

MUSCARINIC-RECEPTOR-MEDIATED

DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. 004049 04-03

MUSCARINIC-RECEPTORS

INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN. 003756 04-03

THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004028 04-03

THE INTERACTION OF AMINE LOCAL ANESTHETICS WITH MUSCARINIC-RECEPTORS. 004031 04-03

MUSCIMOL
SOME BARBITURATES ENHANCE THE EFFECT OF MUSCIMOL ON DOPAMINE TURNOVER IN THE RAT RETINA.
003873 04-03
BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA.
003954 04-03
THE INSENSITIVITY OF DEVELOPING BENZODIAZEPINE-RECEPTORS TO CHRONIC-TREATMENT WITH DIAZEPAM, GABA AND MUSCIMOL IN BRAIN CELL-CULTURES.
004002 04-03
MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS.
004058 04-03
INVOLVEMENT OF DOPAMINE IN CIRCLING RESPONSES TO MUSCIMOL DEPENDS ON INTRANIGRAL SITE OF INJECTION.
004158 04-04

MUSCLE-RELAXANT
THE SITE OF ACTION OF MUSCLE-RELAXANT PURINE NUCLEOSIDES.
003742 04-03

MYELIN
CHARACTERIZATION OF THE BASIC PROTEINS FROM RODENT PERIPHERAL-NERVOUS-SYSTEM MYELIN.
003665 04-01

MYELINATED
FURTHER ANALYSIS OF THE MECHANISMS OF ACTION OF BATRACHOTOXIN ON THE MEMBRANE OF MYELINATED NERVE.
003884 04-03

MYODYSTONIA
PROBLEMS OF TREATING DEFORMING MYODYSTONIA WITH L-DOPA, AND PREDICTION OF ITS THERAPEUTIC EFFECT.
004536 04-13

MYOINOSITOL
THE EFFECTS OF LITHIUM ON MYOINOSITOL LEVELS IN LAYERS OF FRONTAL-CEREBRAL-CORTEX, IN CEREBELLUM, AND IN CORPUS-CALLOSUM OF THE RAT.
003712 04-03
MYOINOSITOL TURNOVER IN THE INTACT RAT-BRAIN: INCREASED PRODUCTION AFTER D-AMPHETAMINE.
003723 04-03

N-4
SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT.
003701 04-02

NA-K-ATPASE
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS.
003871 04-03
CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES.
003937 04-03
THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS.
003953 04-03

NA-GAMMA-HYDROXYBUTYRATE
NA-GAMMA-HYDROXYBUTYRATE IN CEREBRAL PROTECTION DURING SEVERE HYPOXEMIA IN THE RAT.
003895 04-03

NA-K
THE EFFECT OF NORADRENALINE ON NA-K TRANSPORT IN RAT-CEREBRAL-CORTICAL SLICES.
004056 04-03

NA-K-ACTIVATED
ETHANOL SEDATIVE HYPNOTIC-INTERACTIONS: IN VITRO STUDIES ON NA-K-ACTIVATED ADENOSINE-TRIPHOSPHATASE.
004269 04-05

NALOXAZONE
NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO.
004198 04-04

NALOXONE
OPPOSITE EFFECTS OF NALOXONE ON SUBSTANCE-P-INDUCED IN BRAIN DOPA SYNTHESIS AND IN LOCOMOTOR-ACTIVITY IN RATS.
003799 04-03
ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE.
003863 04-03
EFFECT OF MORPHINE AND NALOXONE ON LEU-ENKEPHALIN-LIKE IMMUNOREACTIVITY IN DOGS.
003894 04-03
EFFECTS OF ENKEPHALIN, MORPHINE, AND NALOXONE ON THE ELECTRICAL-ACTIVITY OF THE IN VITRO HIPPOCAMPAL SLICE PREPARATION.
003918 04-03
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION.
004034 04-03
NALOXONE SUPPRESSES FEEDING AND DRINKING BUT NOT WHEEL RUNNING IN RATS.
004080 04-04
EFFECTS OF PAIN, MORPHINE AND NALOXONE ON THE DURATION OF ANIMAL HYPNOSIS.
004081 04-04
NALOXONE SUPPRESSES FOOD/WATER CONSUMPTION IN THE DEPRIVED CAT.
004114 04-04
NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND CONDITIONED TASTE-AVERSION.
004121 04-04
CHOICE BETWEEN FOOD AND HEROIN: EFFECTS OF MORPHINE, NALOXONE, AND SECOBARBITAL.
004123 04-04
THE SITE OF ACTION OF NALOXONE IN SUPPRESSING FOOD AND WATER INTAKE IN RATS.
004146 04-04
EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE.
004173 04-04
SOCIAL CROWDING ENHANCES AVERSIVENESS OF NALOXONE IN RATS.
004201 04-04
OPIATE-DEPENDENCE FOLLOWING ACUTE INJECTIONS OF MORPHINE AND NALOXONE: THE ASSESSMENT OF VARIOUS WITHDRAWAL SIGNS.
004209 04-04
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS.
004321 04-08
THE EFFECT OF NALOXONE ON THE CONDITION OF PATIENTS WITH ENDOGENOUS PSYCHOSES.
004381 04-09
ARE THE ENKEPHALINS INVOLVED IN PARKINSONS-DISEASE? CLINICAL AND NEUROENDOCRINE RESPONSES TO NALOXONE ADMINISTRATION.
004431 04-11

NALOXONE-INDUCED
CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS.
004076 04-04

NALTREXONE
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION.
004034 04-03

NARCOLEPSY
TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY.
004571 04-14

NARCOTIC
PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE.
004082 04-04
INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR.
004127 04-04
NARCOTIC DISCRIMINATION IN PIGEONS.
004132 04-04
ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS.
004185 04-04
EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE.
004186 04-04
INTRACEREBRAL SUBSTANCE-P IN MICE: BEHAVIORAL-EFFECTS AND NARCOTIC AGENTS.
004218 04-04
EFFECTS OF NARCOTIC ABSTINENCE ON SCHEDULE-CONTROLLED BEHAVIOR IN DEPENDENT RATS.
004230 04-04

NARCOTIC-REINFORCED
NARCOTIC-REINFORCED RESPONDING: A RAPID EVALUATION PROCEDURE.
004253 04-04

NARCOTICS
MINI-SYMPOSIUM. IV. DISCRIMINATIVE-STIMULUS EFFECTS OF NARCOTICS: EVIDENCE FOR MULTIPLE RECEPTOR-MEDIATED ACTIONS.
004719 04-17

NATURAL

DRUG-THERAPY FOR HYPERACTIVITY: TREATMENT PROCEDURES IN NATURAL SETTINGS. 004449 04-11

CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13

NATURALISTIC

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

NAUSEA

MITIGATING ACUTE SKIN RASHES AND NAUSEA FROM LITHIUM. 004661 04-15

NEFOPAM

THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT: INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT. 004279 04-05

NEGATIVE

THE NEGATIVE INFLUENCE OF FAMILIES ON COMPLIANCE. 004745 04-17

NELSONS-SYNDROME

EFFECT OF TREATMENT WITH SODIUM-VALPROATE AND DIAZEPAM ON PLASMA CORTICOTROPIN IN NELSONS-SYNDROME. 004463 04-11

NEOCORTEX

SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX. 004015 04-03

EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810) AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS. 004149 04-04

NEOCORTICAL

INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03

NEONATAL

EFFECT OF NEONATAL HYDROCORTISONE TREATMENT ON BRAIN-MONOAMINES IN DEVELOPING RATS. 003893 04-03

THE EFFECTS OF P CHLOROAMPHETAMINE ADMINISTRATION ON LOCOMOTOR-ACTIVITY AND SEROTONIN IN NEONATAL AND ADULT RATS. (UNPUBLISHED PAPER). 004169 04-04

NEONATALLY

CATECHOLAMINE SEROTONIN INTERACTION EFFECTS ON ACTIVITY IN RATS NEONATALLY TREATED WITH 6 HYDROXYDOPAMINE. 004194 04-04

NEOSTRIATAL

APPARENT SEROTONERGIC MODULATION OF THE DOSE-DEPENDENT BIPHASIC RESPONSE OF NEOSTRIATAL NEURONS PRODUCED BY D-AMPHETAMINE. 003981 04-03

NEOSTRIATUM

AVOIDANCE RESPONSE IN RATS AFTER INJECTION OF DOPAMINE INTO THE NEOSTRIATUM. 004255 04-04

NEPHRITIS

THE ROLE OF LITHIUM IN THE PRODUCTION OF INTERSTITIAL NEPHRITIS: A CASE-HISTORY. 004655 04-15

NERVE

ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS. 003666 04-01

INSEPARABILITY OF ACETYLCHOLINESTERASE AND NERVE EXCITATION. 003875 04-03

NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03

FURTHER ANALYSIS OF THE MECHANISMS OF ACTION OF BATRACHOTOXIN ON THE MEMBRANE OF MYELINATED NERVE. 003884 04-03

THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

NERVE-ENDINGS

UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: KINETIC STUDIES. 003814 04-03

UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: PHARMACOLOGICAL-STUDIES. 003815 04-03

NERVOUS-SYSTEM

CYCLIC-NUCLEOTIDES AND THE NERVOUS-SYSTEM. 004542 04-13

NERVOUS-TISSUE

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06

NEURAL

INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03

NEUROACTIVE-AGENTS

THE EFFECTS OF 2,5 DIMETHOXY-4-METHYLAMPHETAMINE (DOM) ON OPERANT-BEHAVIOR: INTERACTIONS WITH OTHER NEUROACTIVE-AGENTS. 004089 04-04

NEUROANATOMY

SATIETY CENTER NEUROANATOMY. (UNPUBLISHED PAPER). 003678 04-01

THE NEUROANATOMY AND PHARMACOLOGY OF THE NUCLEUS LOCUS-COERULEUS. (UNPUBLISHED PAPER). 003810 04-03

NEUROBEHAVIORAL

THE BRAINSTEM AUDITORY EVOKED-RESPONSE AS A TOOL IN NEUROBEHAVIORAL TOXICOLOGY AND MEDICINE. 004277 04-05

NEUROBLASTOMA

INVOLVEMENT OF CALCIUM-CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 003783 04-03

CHARACTERIZATION BY (3H)DIHYDROERGOCRYPTINE BINDING OF ALPHA-ADRENERGIC-RECEPTORS IN NEUROBLASTOMA X GLIOMA HYBRID CELLS. 003823 04-03

PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03

DESENSITIZATION OF HISTAMINE H1-RECEPTOR-MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 004030 04-03

DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. 004049 04-03

NEUROBLASTOMA-X

OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03

NEUROCHEMICAL

BEHAVIOURAL AND NEUROCHEMICAL PROPERTIES OF 1 1 INDOL-3-YLMETHYLPIPERID-4-YL-3-BENZOYLUREA (WY-25093) IN RODENTS. 003686 04-02

BEHAVIORAL AND REGIONAL NEUROCHEMICAL SEQUELAE OF HIPPOCAMPAL DESTRUCTION IN THE RAT. 003721 04-03

CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS. 003807 04-03

A POSSIBLE NEUROCHEMICAL BASIS OF THE CENTRAL STIMULATORY EFFECTS OF PP'DDT. 004274 04-05

NEUROCHEMICAL-EFFECTS

A REEVALUATION OF THE NEUROCHEMICAL-EFFECTS AND ANTINOCICEPTIVE-EFFECTS OF INTRATHECAL CAPSAICIN IN THE RAT. 004184 04-04

NEUROCHEMICAL-STUDIES

ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN: NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-DYSKINESIA. 004268 04-05

NEUROENDOCRINE

NEUROENDOCRINE DISTURBANCE IN DEPRESSION. 004405 04-09

ARE THE ENKEPHALINS INVOLVED IN PARKINSONS-DISEASE? CLINICAL AND NEUROENDOCRINE RESPONSES TO NALOXONE ADMINISTRATION. 004431 04-11

BIOCHEMICAL AND NEUROENDOCRINE APPROACHES TO A MALIGNANT-SYNDROME OF NEUROLEPTIC. 004589 04-15

NEUROENDOCRINE-STUDY
A NEUROENDOCRINE-STUDY OF ADRENOCEPTOR FUNCTION IN ENDOGENOUS DEPRESSION. 004362 04-09

NEUROENDOCRINE-TESTS
NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE. 004329 04-08

NEUROHUMORS
LSD, PSYCHOTOGENIC PROCEDURES AND BRAIN NEUROHUMORS. (UNPUBLISHED PAPER). 004448 04-11

NEUROLEPTIC
SOLUBILIZATION OF NEUROLEPTIC/DOPAMINE-RECEPTORS OF HUMAN BRAIN STRIATUM. 003767 04-03
EFFECT OF PRENATAL NEUROLEPTIC TREATMENT ON MEMBRANE RECEPTOR DEVELOPMENT IN THE BRAIN. 003989 04-03
CHRONIC NEUROLEPTIC TREATMENT SPECIFICALLY ALTERS THE NUMBER OF DOPAMINE-RECEPTORS IN RAT-BRAIN. 004033 04-03
IS DOPAMINE ANTAGONISM A REQUISITE OF NEUROLEPTIC ACTIVITY? 004122 04-04
BEHAVIORAL AND BIOCHEMICAL-STUDIES OF THE SCOPOLAMINE-INDUCED REVERSAL OF NEUROLEPTIC ACTIVITY. 004195 04-04
THE PROLACTIN RESPONSE IN PATIENTS RECEIVING NEUROLEPTIC THERAPY. THE EFFECT OF FLUPHENAZINE-DECANOATE. 004318 04-08
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08
LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BICHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08
AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT. 004426 04-10
NEUROLEPTIC TRICYCLIC-ANTIDEPRESSANT COMBINATION: PHARMACOLOGICAL-ASPECTS AND THERAPEUTIC INTEREST. 004501 04-13
CEREBROSPINAL-FLUID HOMOVANILLIC-ACID PATTERNS DURING NEUROLEPTIC TREATMENT. (UNPUBLISHED PAPER). 004502 04-13
BIOCHEMICAL AND NEUROENDOCRINE APPROACHES TO A MALIGNANT-SYNDROME OF NEUROLEPTIC. 004589 04-15
EFFECTS OF NEUROLEPTIC ADJUSTMENT ON CLINICAL CONDITION AND TARDIVE-DYSKINESIA IN SCHIZOPHRENIC-PATIENTS. 004595 04-15
NEUROLEPTIC TREATMENT AS EXPERIENCED BY A PSYCHIATRIST. 004613 04-15
CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15
MEASUREMENT OF NEUROLEPTIC CONCENTRATIONS BY GLC AND RADIORECEPTOR ASSAY. 004682 04-16

NEUROLEPTIC-DRUGS
DOPAMINERGIC NEURONS OF SPINAL-CORD: A POSSIBLE SITE FOR THE ACTION OF NEUROLEPTIC-DRUGS. 004188 04-04
DISRUPTION OF AUTOSHAPED RESPONDING TO A SIGNAL OF BRAIN-STIMULATION REWARD BY NEUROLEPTIC-DRUGS. 004199 04-04
ELECTROCARDIOGRAPHIC-CHANGES IN RATS DURING CHRONIC-TREATMENT WITH ANTIDEPRESSANT AND NEUROLEPTIC-DRUGS. 004284 04-05
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08
NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE. 004329 04-08
THE EFFECT OF AN INTENSIVE COURSE OF NEUROLEPTIC-DRUGS ON SCHIZOPHRENIC-PATIENTS AND THEIR SUBSEQUENT COURSE FOLLOWING THE CESSATION OF ALL NEUROLEPTIC-MEDICATION. 004341 04-08
CHANGES IN PSYCHOPATHOLOGIC SYMPTOMS DURING 20 DAYS OF TREATMENT WITH ANTIDEPRESSANTS AND NEUROLEPTIC-DRUGS. 004415 04-09
PROLACTIN AND NEUROLEPTIC-DRUGS: A BIOCHEMICAL INDEX OF CLINICAL-RESPONSE? 004530 04-13
THE EFFECTS OF NEUROLEPTIC-DRUGS ON THE SOCIAL INTERACTIONS OF HOSPITALIZED PSYCHOTIC-PATIENTS. 004577 04-14

NEUROLEPTIC-INDUCED
THE USE OF CONDITIONED SUPPRESSION TO EVALUATE THE NATURE OF NEUROLEPTIC-INDUCED AVOIDANCE-DEFICITS. 004070 04-04
ON THE THERAPY OF NEUROLEPTIC-INDUCED TARDIVE-DYSKINESIA WITH DIMETHYLAMINOETHANOL (DEANOL). 004627 04-15

NEUROLEPTIC-MEDICATION
THE EFFECT OF AN INTENSIVE COURSE OF NEUROLEPTIC-DRUGS ON SCHIZOPHRENIC-PATIENTS AND THEIR SUBSEQUENT COURSE FOLLOWING THE CESSATION OF ALL NEUROLEPTIC-MEDICATION. 004341 04-08

NEUROLEPTIC-SYNDROME
CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD OF PATIENTS. 004434 04-11

NEUROLEPTICA
THE TWO SURVIVAL CASES OF ALPHA-PATTERN COMA CAUSED BY LARGE AMOUNTS OF HYPNOTICA AND NEUROLEPTICA. 004608 04-15

NEUROLEPTICS
INCREASE OF NEUROTENSIN CONTENT ELICITED BY NEUROLEPTICS IN NUCLEUS-ACCUMBENS. 003808 04-03
STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. 003852 04-03
THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE. 003906 04-03
PRESYNAPTIC AND POSTSYNAPTIC ALPHA-ADRENOCEPTOR ANTAGONISM BY NEUROLEPTICS IN VIVO. 003966 04-03
CLASSICAL NEUROLEPTICS AND DECONDITIONING ACTIVITY AFTER SINGLE OR REPEATED TREATMENTS: ROLE OF DIFFERENT CEREBRAL NEUROTRANSMITTERS. 004115 04-04
A COMPARISON BETWEEN SOME BIOCHEMICAL-EFFECTS AND BEHAVIOURAL-EFFECTS PRODUCED BY NEUROLEPTICS. 004116 04-04
A FOLLOWUP STUDY OF SCHIZOPHRENIC-OUTPATIENTS TREATED WITH DEPOT NEUROLEPTICS. 004342 04-08
HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13
DES-TYROSINE-GAMMA-ENDORPHIN: H-REFLEX RESPONSE SIMILAR TO NEUROLEPTICS. 004540 04-13
NEUROLEPTICS AND THEIR SIDE-EFFECTS. 004590 04-15
RECEPTOR TECHNIQUES IN THE STUDY OF PLASMA LEVELS OF NEUROLEPTICS AND ANTIDEPRESSANT-DRUGS. 004694 04-16
NEUROLEPTICS IN 1979. 004749 04-17

NEUROLOGICAL
NEUROLOGICAL TOLERANCE OF LITHIUM AND PSYCHOTROPIC-DRUGS IN COMBINATION: 265 CASES. 004594 04-15

NEUROLOGICAL-COMPLICATIONS
NEUROLOGICAL-COMPLICATIONS DUE TO THE PHARMACOLOGICAL-TREATMENT OF EPILEPTIC-PATIENTS. 004593 04-15

NEURON
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03
MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03
EFFECTS OF ACUTE AND CHRONIC AMPHETAMINE TREATMENT ON PURKINJE NEURON DISCHARGE IN RAT CEREBELLUM. 003793 04-03
THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE. 003923 04-03

NEURONAL
SYNTHESIS OF CYTOSKELETAL PROTEINS IN BULK ISOLATED NEURONAL PERIKARYA. 003672 04-01
NEURONAL SENSITIVITY OF SOME BRAIN REGIONS TO ANGIOTENSIN-II IN RABBITS. 003716 04-03
NEURONAL LOCALISATION OF BENZODIAZEPINE-RECEPTORS IN CEREBELLUM. 003739 04-03
SELECTIVE MODIFICATION BY OPIATES OF NEURONAL ACTIVITY OF THE MEDIAL BASAL HYPOTHALAMUS. 003773 04-03
MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT. 003849 04-03
INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE. 003876 04-03
ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE. 003879 04-03
OPIATE MECHANISMS: EVALUATION OF RESEARCH INVOLVING NEURONAL ACTION POTENTIALS. 003886 04-03
MONOSODIUM-GLUTAMATE: INCREASED NEUROTOXICITY AFTER REMOVAL OF NEURONAL REUPTAKE SITES. 003889 04-03
4 AMINOPYRIDINE BLOCKADE OF NEURONAL DEPRESSANT RESPONSES TO ADENOSINE-TRIPHOSPHATE. 003963 04-03
THE INACTIVATION OF GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE IN DISSOCIATED NEURONAL CULTURES FROM SPINAL-CORD. 003980 04-03
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

NEURONES
SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03
EFFECTS OF 5 HYDROXYTRYPTAMINE ON CENTRAL NEURONES ANTAGONIZED BY BICUCULLINE AND PICROTOXIN. 003931 04-03
THE EFFECT OF PROPRANOLOL AND ITS ISOMERS ON PURKINJE NEURONES IN RAT CEREBELLUM. 004059 04-03

NEURONS
THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS. 003713 04-03
EXCITATORY EFFECTS OF DIHYDROCAPSAICIN ON NOCICEPTIVE NEURONS IN THE MEDIAL THALAMUS. 003714 04-03
ACETYLCHOLINE-INDUCED MODULATION OF HIPPOCAMPAL PYRAMIDAL NEURONS. 003728 04-03
RELATIONSHIP BETWEEN THE PRESENCE OF DOPAMINERGIC NEURONS AND GABA-RECEPTORS IN SUBSTANTIA-NIGRA: EFFECTS OF LESIONS. 003797 04-03
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS. 003807 04-03
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN NEURONS. 003834 04-03
STUDIES ON AXONAL TRANSPORT IN DOPAMINERGIC NEURONS: EFFECT OF NEUROPHARMACOLOGIC LESIONS. 003858 04-03
SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS. 003859 04-03
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03
SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT. 003877 04-03
CENTRAL DOPAMINERGIC NEURONS DURING DEVELOPMENT OF GENETIC AND DOCA-SALT HYPERTENSION IN THE RAT. 003899 04-03
THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS. 003900 04-03
CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03
APPARENT SEROTONERGIC MODULATION OF THE DOSE-DEPENDENT BIPHASIC RESPONSE OF NEOSTRIATAL NEURONS PRODUCED BY D-AMPHETAMINE. 003981 04-03
EFFECTS OF ZIMELIDINE ON SEROTONINERGIC AND NORADRENERGIC NEURONS AFTER REPEATED ADMINISTRATION IN THE RAT. 003991 04-03
EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. 004026 04-03
THE EXCITATORY EFFECT OF ATROPINE ON THE NEURONS OF THE FROG SYMPATHETIC GANGLIA. 004041 04-03
SELECTIVE EFFECT OF ETHANOL ON THE VESTIBULAR NUCLEUS NEURONS IN THE CAT. 004139 04-04
DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT. 004171 04-04
DOPAMINERGIC NEURONS OF SPINAL-CORD: A POSSIBLE SITE FOR THE ACTION OF NEUROLEPTIC-DRUGS. 004188 04-04
THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS. 004510 04-13

NEUROOTOLOGY
STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09

NEUROPHARMACOLOGIC
STUDIES ON AXONAL TRANSPORT IN DOPAMINERGIC NEURONS: EFFECT OF NEUROPHARMACOLOGIC LESIONS. 003858 04-03

NEUROPHARMACOLOGICAL
A STUDY OF THE EFFECT OF NEUROPHARMACOLOGICAL DRUGS ON THE FUNCTIONAL ACTIVITY OF RAT-BRAIN. 004107 04-04

NEUROPHYSIOLOGICAL
CLINICAL NEUROPHYSIOLOGICAL PROPERTIES OF ANTIDEPRESSANTS. 004373 04-09
MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

NEUROPSYCHIATRY
DRUG CONCENTRATIONS IN NEUROPSYCHIATRY. 004735 04-17

NEUROPSYCHOLOGICAL-BATTERY
PREDICTING STIMULANT-EFFECTIVENESS IN HYPERACTIVE-CHILDREN WITH A REPEATABLE NEUROPSYCHOLOGICAL-BATTERY: A PRELIMINARY STUDY. 004453 04-11

NEUROSCIENCES
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: METHODOLOGY. 004285 04-06
HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY IN THE NEUROSCIENCES: APPLICATIONS. 004296 04-06

NEUROSECRETORY
DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003806 04-03

NEUROSIS
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD. 004491 04-11

NEUROTENSIN
INCREASE OF NEUROTENSIN CONTENT ELICITED BY NEUROLEPTICS IN NUCLEUS-ACCUMBENS. 003808 04-03
NEUROTENSIN RELEASE BY RAT HYPOTHALAMIC FRAGMENTS IN VITRO. 003920 04-03
NEUROTENSIN BLOCKS CERTAIN AMPHETAMINE-INDUCED BEHAVIOURS. 004111 04-04

NEUROTIC
ACTIVITY OF BROMAZEPAM AND LORAZEPAM IN NEUROTIC DEPRESSIONS.
004384 04-09
STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO.
004387 04-09
NEUROTIC-OUTPATIENTS
RELAPSE AFTER SHORT-TERM DRUG-THERAPY IN NEUROTIC-OUTPATIENTS.
004400 04-09
THE RELATIONSHIPS BETWEEN CLINICAL-RESPONSE, PSYCHOPHYSIOLOGICAL-VARIABLES AND PLASMA LEVELS OF AMITRIPTYLINE AND DIAZEPAM IN NEUROTIC-OUTPATIENTS.
004423 04-10
NEUROTIC-PATIENTS
ALPRAZOLAM, A NEW TYPE ANXIOLYTIC IN NEUROTIC-PATIENTS: A PILOT-STUDY.
004422 04-10
NEUROTOXICITY
MONOSODIUM-GLUTAMATE: INCREASED NEUROTOXICITY AFTER REMOVAL OF NEURONAL REUPTAKE SITES.
003889 04-03
NEUROTOXINS
THE EFFECTS OF ALPHA AND BETA NEUROTOXINS FROM THE VENOMS OF VARIOUS SNAKES ON TRANSMISSION IN AUTONOMIC GANGLIA.
003750 04-03
SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS.
003859 04-03
NEUROTRANSMISSION
AN ELECTROPHYSIOLOGICAL MODEL OF GABA-MEDIATED NEUROTRANSMISSION.
003929 04-03
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER.
004021 04-03
NEUROTRANSMITTER
NEUROTRANSMITTER CONTROL OF HYPOTHALAMIC PITUITARY THYROID-FUNCTION IN RATS.
003942 04-03
BEHAVIORAL-EVIDENCE THAT SUBSTANCE-P MAY BE A SPINAL-CORD SENSORY NEUROTRANSMITTER.
004200 04-04
NEUROTRANSMITTER-RECEPTOR
EFFECTS OF ETHANOL ADMINISTRATION AND WITHDRAWAL ON NEUROTRANSMITTER-RECEPTOR SYSTEMS IN C57 MICE.
003979 04-03
NEUROTRANSMITTER-RECEPTORS
NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE.
004264 04-05
NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. II: EFFECTS OF EXTENDED EXPOSURE TO ACRYLAMIDE.
004265 04-05
AUTORADIOGRAPHIC LOCALIZATION OF DRUG AND NEUROTRANSMITTER-RECEPTORS IN THE BRAIN.
004292 04-06
NEUROTRANSMITTERS
EFFECTS OF BARBITURATES ON INHIBITORY AND EXCITATORY RESPONSES TO APPLIED NEUROTRANSMITTERS IN APLYSIA.
003762 04-03
THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS.
003953 04-03
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT.
003961 04-03
CLASSICAL NEUROLEPTICS AND DECONDITIONING ACTIVITY AFTER SINGLE OR REPEATED TREATMENTS: ROLE OF DIFFERENT CEREBRAL NEUROTRANSMITTERS.
004115 04-04
NEUROTROPIC-DRUG
NEUROTROPIC-DRUGS AS COMEDICATION TO PSYCHOTROPICS: COMBINED ADMINISTRATION OF A NEUROTROPIC-DRUG AND A TETRACYCLIC-ANTIDEPRESSANT.
004396 04-09
NEUROTROPIC-DRUGS
NEUROTROPIC-DRUGS AS COMEDICATION TO PSYCHOTROPICS: COMBINED ADMINISTRATION OF A NEUROTROPIC-DRUG AND A TETRACYCLIC-ANTIDEPRESSANT.
004396 04-09
NEUTRALIZATION
NEUTRALIZATION OF THE EFFECT OF DELTA9 TETRAHYDROCANNABINOL ON BARBITURATE SLEEPING-TIME BY SPECIFIC ACTIVE IMMUNIZATION.
003803 04-03
NEUTROPHIL
AN ATTEMPT TO ASSESS THE EFFECT OF LITHIUM ON THE NEUTROPHIL LEUKOCYTE SYSTEM IN AFFECTIVE-PSYCHOSES.
004416 04-09
NEWS
THERAPEUTIC NEWS.
004508 04-07
NICOTINE
EFFECT OF NICOTINE ON IN VIVO SECRETION OF MELANOCORTICOTROPIC-HORMONES IN THE RAT.
003739 04-03
THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT.
003897 04-03
THE ROLE OF NICOTINE IN THE BEHAVIORAL-ASPECTS OF CIGARETTE SMOKING.
004575 04-14
NICTITATING
PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE.
003777 04-03
INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT.
003822 04-03
NIEMANN-PICK
PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN.
003671 04-01
NIGERIAN
PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT.
004334 04-08
NIGHT
AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE.
004309 04-07
NIGRAL
INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P.
004100 04-04
THE ROLE OF NIGRAL PROJECTIONS TO THE THALAMUS IN DRUG-INDUCED CIRCLING-BEHAVIOUR IN THE RAT.
004205 04-04
NIGROSTRIATAL
EFFECTS OF METAMPHETAMINE ON BLOOD FLOW IN THE CAUDATE-PUTAMEN AFTER LESIONS OF THE NIGROSTRIATAL DOPAMINERGIC BUNDLE IN THE RAT.
003910 04-03
THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS.
004117 04-04
DOPAMINE-RECEPTOR CHANGES FOLLOWING DESTRUCTION OF THE NIGROSTRIATAL PATHWAY: LACK OF A RELATIONSHIP TO ROTATIONAL-BEHAVIOR.
004229 04-04
NIMETAZEPAM
REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE.
004517 04-13
NIMH-PRB
A TWELVE-YEAR FOLLOWUP OF THE NIMH-PRB HIGH-DOSE CHLORPROMAZINE STUDY OF CHRONIC SCHIZOPHRENICS -- IMPLICATIONS FOR DEINSTITUTIONALIZATION. (UNPUBLISHED PAPER).
004323 04-08
NITRAZEPAM
REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE.
004517 04-13
NMR
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS.
003654 04-01
NOCICEPTIVE
EXCITATORY EFFECTS OF DIHYDROCAPSAICIN ON NOCICEPTIVE NEURONS IN THE MEDIAL THALAMUS.
003714 04-03
THE EFFECT OF CHOLINERGIC SUBSTANCES ON NOCICEPTIVE EVOKED-RESPONSES IN SPECIFIC NUCLEI OF THE THALAMUS.
003770 04-03
NOCTURNAL
DISULFIRAM AND NOCTURNAL PENILE-TUMESCENCE IN THE CHRONIC ALCOHOLIC.
004536 04-13

NOMIFENSINE
INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03
CONTROLLED CLINICAL-TRIAL OF NOMIFENSINE IN THE TREATMENT OF DEPRESSION. 004417 04-09
PLASMA NOMIFENSINE CONCENTRATION: CARDIOLOGICAL EFFECTS AND CLINICAL-RESPONSE. 004639 04-15
MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17

NON-5-HYDROXYTRYPTAMINERGIC
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03

NONADDICTED
EVENT-RELATED POTENTIAL CHANGES WITH MORPHINE IN NONADDICTED HUMANS. 004512 04-13

NONANTIPSYCHOTIC
PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03

NONCOMPETITIVE
NONCOMPETITIVE AMINE UPTAKE INHIBITION BY THE NEW ANTIDEPRESSANT PRIDEFINE. 003771 04-03

NONDOPAMINERGIC
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03

NONNARCOTIC
BLOCKADE BY L LYSINE OF NONNARCOTIC ANALGESICS. 003857 04-03

NONNOXIOUS
MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03

NONOPIOID
DISCRIMINATION OF ELECTRIC-SHOCK: EFFECTS OF SOME OPIOID AND NONOPIOID DRUGS. 004106 04-04

NONORGANIC
DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

NONRESPONDERS
RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER). 004420 04-10

NONSPECIFIC
SPECIFIC AND NONSPECIFIC MULTIPLE UNIT ACTIVITIES DURING PENTYLENETETRAZOL SEIZURES. I. ANIMALS WITH ENCEPHALE ISOLE. 004046 04-03
NONSPECIFIC FACTORS IN DRUG-EFFECTS: PLACEBO PERSONALITY. 004704 04-17

NONTOXIC
TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

NONTREATED
NORMAL PLASMA DOPAMINE-BETA-HYDROXYLASE IN NONTREATED AND TREATED PARKINSON-PATIENTS. 004471 04-11

NONVERBAL-BEHAVIOR
ON THE RELATIONSHIP BETWEEN MEASURES OBTAINED BY VIDEO-ANALYSIS OF NONVERBAL-BEHAVIOR AND SELF-RATING OF MOOD. 004410 04-09

NOOTROPIC
CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY). 004519 04-13

NOOTROPIL
THE EFFECT OF NOOTROPIL ON THE TRANSCALLOSAL AND PRIMARY EVOKED-RESPONSES OF THE CAT CEREBRAL-CORTEX. 003780 04-03

NOOTROPYL
SOME THERAPEUTIC EFFECTS OF NOOTROPYL. 004458 04-11

NORADRENALINE
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE. 003792 04-03
REGULATION OF NORADRENALINE OVERFLOW IN RAT-CEREBRAL-CORTEX BY PROSTAGLANDIN-E2. 003841 04-03
ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE. 003879 04-03
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS. 003975 04-03
DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE. 004019 04-03
THE EFFECT OF NORADRENALINE ON NA-K TRANSPORT IN RAT-CEREBRAL-CORTICAL SLICES. 004056 04-03
DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06
THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION. 004509 04-13

NORADRENERGIC
SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03
ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM. 003926 04-03
EFFECTS OF ZIMELIDINE ON SEROTONINERGIC AND NORADRENERGIC NEURONS AFTER REPEATED ADMINISTRATION IN THE RAT. 003991 04-03
EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. 004026 04-03
NORADRENERGIC INFLUENCES ON SOUND-INDUCED SEIZURES. 004137 04-04
ALTERATIONS IN NORADRENERGIC FUNCTION DURING CLORGYLINE TREATMENT. 004393 04-09

NORADRENERGIC-RECEPTOR
DOWN REGULATION OF NORADRENERGIC-RECEPTOR FUNCTION BY ANTIDEPRESSANT-DRUGS: FUNCTIONAL SIGNIFICANCE AND DISTINCTION FROM ANTIPSYCHOTIC-DRUGS. (UNPUBLISHED PAPER). 004746 04-17

NORCOCAINE
EFFECTS OF NORCOCAINE AND SOME NORCOCAINE DERIVATIVES ON SCHEDULE-CONTROLLED BEHAVIOR OF PIGEONS AND SQUIRREL-MONKEYS. 004012 04-03

NOREPINEPHRINE
THE EFFECTS OF ANTIDEPRESSANTS ON THE RETENTION AND METABOLISM OF (3H) NOREPINEPHRINE IN RAT-BRAIN SLICES. 003763 04-03
EFFECTS OF PHENYTOIN ON MOUSE CEREBELLAR 5 HYDROXYTRYPTAMINE AND NOREPINEPHRINE. 003795 04-03
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS. 003947 04-03
EVIDENCE THAT THERE ARE SUBCELLULAR POOLS OF NOREPINEPHRINE AND THAT THERE IS FLUX OF NOREPINEPHRINE BETWEEN THESE POOLS. 004004 04-03
MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS. 004058 04-03

EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON TETRABENAZINE-INDUCED DEPLETION OF BRAIN MONOAMINES IN RATS. 1. NOREPINEPHRINE.
004062 04-03
EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS.
004144 04-04
RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY.
004303 04-06
EFFECT OF NOREPINEPHRINE UPTAKE BLOCKERS ON NOREPINEPHRINE KINETICS.
004506 04-13
NOREPINEPHRINE METABOLISM IN MAN USING DEUTERIUM LABELLING: 4 HYDROXY-3-METHOXYMANDELIC-ACID.
004534 04-13

NORMAL
PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN.
003671 04-01
A STUDY OF GAMMA AMINOBUTYRIC-ACID UPTAKE IN NORMAL AND DOWNS-SYNDROME PLATELETS.
003787 04-03
DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION.
003836 04-03
DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE.
004130 04-04
NORMAL PLASMA DOPAMINE-BETA-HYDROXYLASE IN NONTREATED AND TREATED PARKINSON-PATIENTS.
004471 04-11
PROLACTIN AND GROWTH-HORMONE STUDIES IN SCHIZOPHRENIC-PATIENTS AND NORMAL CONTROLS.
004538 04-13
APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS.
004549 04-13
COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS.
004564 04-14
IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD.
004600 04-15
BEHAVIOR AND LEARNING DIFFICULTIES IN CHILDREN OF NORMAL INTELLIGENCE BORN TO ALCOHOLIC MOTHERS.
004658 04-15

NORMETABOLITES
POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME.
004610 04-15

NORTRIPTYLINE
DRUG-INTERACTIONS OF AMITRIPTYLINE AND NORTRIPTYLINE WITH WARFARIN IN THE RAT.
003912 04-03
AMITRIPTYLINE AND NORTRIPTYLINE PLASMA LEVELS MONITORING. PERSPECTIVE IN CLINICAL-PRACTICE.
004675 04-16

NOSOLOGICAL
THE NOSOLOGICAL INDEPENDENCE OF INVOLUTIONAL DEPRESSION AND ITS DYNAMICS DURING PSYCHOPHARMACOTHERAPY.
004389 04-09

NOXIOUS
MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION.
003782 04-03

NUCLEI
PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-III FROM RAT-BRAIN NUCLEI.
003679 04-01
THE EFFECT OF CHOLINERGIC SUBSTANCES ON NOCICEPTIVE EVOKED-RESPONSES IN SPECIFIC NUCLEI OF THE THALAMUS.
003770 04-03
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE.
003792 04-03
SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT.
003877 04-03
PRESSOR EFFECTS OF ELECTRICAL-STIMULATION OF THE DORSAL AND MEDIAN RAPHE NUCLEI IN ANESTHETIZED RATS.
003892 04-03
DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS.
003847 04-03

NUCLEOSIDES
THE SITE OF ACTION OF MUSCLE-RELAXANT PURINE NUCLEOSIDES.
003742 04-03

NUCLEOTIDE
DISTRIBUTION OF CESIUM IN THE ORGANISM AND ITS EFFECT ON THE NUCLEOTIDE METABOLISM ENZYMES.
003606 04-02

NUCLEUS
THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS.
003713 04-03
OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS.
003798 04-03
THE NEUROANATOMY AND PHARMACOLOGY OF THE NUCLEUS LOCUS-COERULEUS. (UNPUBLISHED PAPER).
003810 04-03
SELECTIVE EFFECT OF ETHANOL ON THE VESTIBULAR NUCLEUS NEURONS IN THE CAT.
004139 04-04

NUCLEUS-ACCUMBENS
COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS.
003758 04-03
INCREASE OF NEUROTENSIN CONTENT ELICITED BY NEUROLEPTICS IN NUCLEUS-ACCUMBENS.
003808 04-03
DOPAMINE-DEPENDENT HYPERACTIVITY IN THE FOLLOWING MANIPULATION OF GABA MECHANISMS IN THE REGION OF THE NUCLEUS-ACCUMBENS.
003976 04-03
HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP.
004086 04-04
DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT.
004171 04-04

NUCLEUS-RAPHE-MAGNUS
EFFECT OF CHRONIC MORPHINE TREATMENT ON THE INTERACTION BETWEEN THE PERIAQUEDUCTAL GREY AND THE NUCLEUS-RAPHE-MAGNUS OF THE RAT.
003727 04-03

NURSING-HOMES
PROBLEMS REMAIN IN REVIEWS OF MEDICAID FINANCED DRUG-THERAPY IN NURSING-HOMES.
004736 04-17

NYSTAGMIC
NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS.
003842 04-03

OBESE
METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT.
003905 04-03

OBJECT
AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL.
004088 04-04

OBJECTIVE
EFFECTS OF SUPIDIMIDE (CG-3033) ON OBJECTIVE AND SUBJECTIVE SLEEP PARAMETERS (A SLEEP LABORATORY STUDY).
004567 04-14
THE USE OF EVENT-RELATED SLOW POTENTIALS OF THE BRAIN AS AN OBJECTIVE METHOD TO STUDY THE EFFECTS OF CENTRALLY ACTING DRUGS.
004669 04-16

OBSERVATION
STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO.
004387 04-09

OBSERVATIONS
SOME OBSERVATIONS ON THE PHARMACOLOGICAL ACTIVITY OF MIF (PRO-LEU-GLY-NH2).
004240 04-04

OCYTOCIN
INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER.
003669 04-01

OFFSPRING
EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD. 004108 04-04

OLFACTORY-BULBECTOMY
EFFECTS OF OLFACTORY-BULBECTOMY AND PERIPHERALLY-INDUCED ANOSMIA ON THERMOREGULATION IN THE RAT: SUSCEPTIBILITY TO ANTIDEPRESSANT-DRUGS. 004113 04-04

OLFACTORY-BULBS
REGIONAL CHANGES IN (3H)DIAZEPAM BINDING IN THE BRAINS OF MICE AFTER REMOVAL OF THE OLFACTORY-BULBS. 003844 04-03

OLIGOPHRENICS
THERAPY AND SOCIAL ADAPTATION OF OLIGOPHRENICS (REVIEW OF THE LITERATURE). 004444 04-11

ON-COLUMN
ON-COLUMN GAS-CHROMATOGRAPHIC-SYNTHESIS OF 1,3 DIALYKYL (C=1-10), BENZYL, AND CYCLOHEXYLBARBITURATE DERIVATIVES. 003656 04-01

ONE-STEP
DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06

ONSET
POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME. 004610 04-15

ONTOGENESIS
ELECTROCORTICOGRAPHIC ACTIVITY ELICITED BY METRAZOL DURING ONTOGENESIS IN RATS. 004064 04-03

ONTOGENY
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

OPEN
BACLOFEN IN THE TREATMENT OF TARDIVE-DYSKINESIA: OPEN LABEL STUDY. 004619 04-15
CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

OPEN-FIELD
DOPAMINERGIC AGONISTS DIFFERENTIALLY AFFECT OPEN-FIELD ACTIVITY OF RATS WITH A10 LESIONS. 004135 04-04

OPEN-STUDY
A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL. 004445 04-11

OPERANT
METHYLMERCURY-INDUCED CHANGES IN OPERANT DISCRIMINATION BY THE PIGEON. 004271 04-05

OPERANT-BEHAVIOR
THE EFFECTS OF 2,5 DIMETHOXY-4-METHYLAMPHETAMINE (DOM) ON OPERANT-BEHAVIOR: INTERACTIONS WITH OTHER NEUROACTIVE-AGENTS. 004089 04-04
INDIVIDUAL DIFFERENCES IN EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND ANTICHOLINERGIC-DRUGS ON OPERANT-BEHAVIOR IN THE SQUIRREL-MONKEY. 004176 04-04
MICROPROPERTIES OF OPERANT-BEHAVIOR AS ASPECTS OF TOXICITY. 004666 04-15

OPHTHALMOLOGICAL
OPHTHALMOLOGICAL SIDE-EFFECTS OF LITHIUM. 004615 04-15

OPIATE
POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03
OPIATE MECHANISMS: EVALUATION OF RESEARCH INVOLVING NEURONAL ACTION POTENTIALS. 003886 04-03
OPIATE SYSTEM INFLUENCES CENTRAL RESPIRATORY CHEMOSENSORS. 003971 04-03
REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK — POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER). 004154 04-04
BEHAVIORAL-INTERACTIONS BETWEEN OPIATE AND ANTIEPILEPTIC-DRUGS IN THE MOUSE. 004155 04-04
OPIATE MODULATION OF MEMORY. (UNPUBLISHED PAPER). 004177 04-04
NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO. 004198 04-04

OPIATE-DEPENDENCE
OPIATE-DEPENDENCE FOLLOWING ACUTE INJECTIONS OF MORPHINE AND NALOXONE: THE ASSESSMENT OF VARIOUS WITHDRAWAL SIGNS. 004209 04-04

OPIATE-DEPENDENT
CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS. 004076 04-04

OPIATE-EFFECTS
OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003798 04-03

OPIATE-INDUCED
CONTRIBUTION OF SOCIAL FACTORS TO OPIATE-INDUCED ACTIVATION IN THE MOUSE. 004156 04-04

OPIATE-PENTAPEPTIDE
ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE. 003863 04-03

OPIATE-RECEPTOR
EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING. 003702 04-02
NALOXAZONE, A LONG-ACTING OPIATE ANTAGONIST: EFFECTS ON ANALGESIA IN INTACT ANIMALS AND ON OPIATE-RECEPTOR BINDING IN VITRO. 004198 04-04

OPIATE-RECEPTORS
SYNTHESIS AND PHARMACOLOGICAL-STUDY OF SOME ENKEPHALIN ANALOGS IN RELATION TO THE PLURALITY OF OPIATE-RECEPTORS. 003682 04-02
FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02
INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES. 003737 04-03
PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE. 003777 04-03
THE ROLE OF OPIATE-RECEPTORS OF DIFFERENT BRAIN REGIONS IN DETERMINING THE EMOTIONAL REACTIONS OF RATS. 004017 04-03
MEMORY, OPIATE-RECEPTORS, AND AGING. 004143 04-04
MINI-SYMPOSIUM: III. SIMPLE IN VIVO TESTS THAT DIFFERENTIATE PROTOTYPE AGONISTS AT OPIATE-RECEPTORS. 004289 04-06
MINI-SYMPOSIUM. I. THE IN VIVO DIFFERENTIATION OF OPIATE-RECEPTORS: INTRODUCTION. 004697 04-17

OPIATES
RIA OPIATES: STRUCTURE VERSUS REACTIVITY. 003659 04-01
SELECTIVE MODIFICATION BY OPIATES OF NEURONAL ACTIVITY OF THE MEDIAL BASAL HYPOTHALAMUS. 003773 04-03
COMPARISON OF THE BINDING CHARACTERISTICS OF TRITIATED OPIATES AND OPIOID-PEPTIDES. 003802 04-03
THE EFFECT OF PRENATAL EXPOSURE TO ETHANOL OR OPIATES ON BRAIN CATECHOLAMINE ACTIVITY. 003939 04-03
MODULATION OF DOPAMINE-RECEPTORS BY OPIATES. (UNPUBLISHED PAPER). 003949 04-03
ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004053 04-03

OPIOID
OPIOID ACTIVITIES OF BETA CASOMORPHINS. 003740 04-03

OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES. EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES.
003902 04-03
DISCRIMINATION OF ELECTRIC-SHOCK: EFFECTS OF SOME OPIOID AND NONOPIOID DRUGS.
004106 04-04
OPIOID DEPENDENCE: MECHANISMS AND TREATMENT.
004387 04-14
POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME.
004610 04-15

OPIOID-PEPTIDES
ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS.
003801 04-03
COMPARISON OF THE BINDING CHARACTERISTICS OF TRITIATED OPIATES AND OPIOID-PEPTIDES.
003802 04-03
RECENT STUDIES ON INTERACTION BETWEEN OPIOID-PEPTIDES AND THEIR RECEPTORS.
004300 04-06

OPIOID-RECEPTORS
MINI-SYMPOSIUM: II. MULTIPLE OPIOID-RECEPTORS. A LITTLE ABOUT THEIR HISTORY AND SOME IMPLICATIONS RELATED TO EVOLUTION.
004728 04-17

OPIOIDS
OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS.
003975 04-03
PHENCYCLIDINE-LIKE DISCRIMINATIVE EFFECTS OF OPIOIDS IN THE RAT.
004136 04-04
SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS.
004234 04-04

OPTICAL-ISOMERS
THE PHARMACOLOGICAL ACTION OF THE OPTICAL-ISOMERS OF SYDNOCARB.
003681 04-02
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES.
004009 04-03

ORDINAL
MILD, MODERATE, SEVERE — THE STATISTICAL ANALYSIS OF SHORT ORDINAL SCALES.
004677 04-16

ORGANISM
DISTRIBUTION OF CESIUM IN THE ORGANISM AND ITS EFFECT ON THE NUCLEOTIDE METABOLISM ENZYMES.
003696 04-02

ORGANON-2766
A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN.
004574 04-14

ORIGIN
NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS.
003842 04-03
THE EFFICACY OF PIRACETAM IN VERTIGO: A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN.
004478 04-11

OSMOLALITY
CHANGES IN BLOOD PLASMA OSMOLALITY AND STATES OF MANIA.
004352 04-09

OUTCOME
SALIVA BENZODIAZEPINE LEVELS AND CLINICAL OUTCOME IN DETOXIFYING ALCOHOLIC-PATIENTS.
004671 04-16
COMPUTER-ANALYZED ELETROENCEPHALOGRAM TO PREDICT THE THERAPEUTIC OUTCOME IN SCHIZOPHRENIA.
004680 04-16

OUTPATIENTS-WARDS
RESULTS OF TREATMENT BY MODITEN DEPOT IN OUTPATIENTS-WARDS IN THE SOUTH MORAVIAN REGION.
004648 04-15

OUTWARD-CURRENT
CAFFEINE BLOCKS THE DELAYED K OUTWARD-CURRENT OF MOLLUSCAN NEURONS.
003834 04-03

OVERFLOW
REGULATION OF NORADRENALINE OVERFLOW IN RAT-CEREBRAL-CORTEX BY PROSTAGLANDIN-E2.
003841 04-03

OVERNIGHT
INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG.
004306 04-07

OVERVIEW
AN OVERVIEW OF PHARMACOLOGIC-TREATMENT OF COGNITIVE DECLINE IN THE AGED.
004482 04-11

OVINE
DISPOSITION OF METHADONE IN THE OVINE MATERNAL FETAL UNIT.
004227 04-08

OXAZOLAM
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD.
004471 04-11

OXIDATION
OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES.
004024 04-03
RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION.
004282 04-06

OXOTREMORINE
OXOTREMORINE DOES NOT ENHANCE ACETYLCHOLINE RELEASE FROM RAT DIAPHRAGM PREPARATIONS.
003819 04-03

OXOTREMORINE-LIKE
SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT.
003781 04-02

OXPRENOLOL
A DOUBLE-BLIND TRIAL: THE USE OF OXPRENOLOL AND DIAZEPAM IN ANXIETY.
004420 04-10

OXYPERTINE
A CONTROLLED-TRIAL OF OXYPERTINE IN TARDIVE-DYSKINESIA.
004611 04-15

PAIN
EFFECTS OF PAIN, MORPHINE AND NALOXONE ON THE DURATION OF ANIMAL HYPNOSIS.
004081 04-04
SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS.
004234 04-04
DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY?
004553 04-13

PANCREAS
THE EFFECT OF SEROTONIN ON THE EXOSECRETORY ACTION OF THE PANCREAS.
004043 04-03

PANIC
DIFFERENTIAL DIAGNOSIS AND TREATMENT OF PANIC ATTACKS AND PHOBIC-STATES.
004424 04-10

PANIC-INDUCED
BLOCKADE BY IMIPRAMINE OR DESIPRAMINE OF PANIC-INDUCED BY SODIUM-LACTATE.
004427 04-10

PAPAIN-DERIVED
PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT.
003734 04-03

PARADOXICALLY
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS.
003731 04-03

PARALLEL
GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER).
004112 04-04
A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS.
004301 04-06

PARAMETERS
EFFECTS OF SUPIDIMIDE (CG-3033) ON OBJECTIVE AND SUBJECTIVE SLEEP PARAMETERS (A SLEEP LABORATORY STUDY).
004567 04-14

PARENCHYMAL
ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE. 004626 04-15

PARGYLINE
DOPAMINE, NORADRENALINE AND 3,4 DIHYDROXYPHENYLACETIC-ACID (DOPAC) LEVELS OF INDIVIDUAL BRAIN NUCLEI, EFFECTS OF HALOPERIDOL AND PARGYLINE. 003792 04-03

PARKINSON-PATIENTS
NORMAL PLASMA DOPAMINE-BETA-HYDROXYLASE IN NONTREATED AND TREATED PARKINSON-PATIENTS. 004471 04-11

PARKINSON-SYNDROME
EFFECTS OF HIGH-DOSAGE LISURIDE-HYDROGEN-MALEATE (LHM) IN PARKINSON-SYNDROME. 004460 04-11

PARKINSONIAN-PATIENTS
DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004551 04-13

ELECTROENCEPHALOGRAPHIC CHANGE IN PARKINSONIAN-PATIENTS TREATED WITH LEVODOPA CARBIDOPA. 004557 04-13

DEPRENYL DOES NOT CAUSE INSOMNIA IN PARKINSONIAN-PATIENTS. 004569 04-14

PARKINSONISM
PROSPECTS FOR THE TREATMENT OF POSTENCEPHALITIC PARKINSONISM WITH ANTILYMPHOCYTIC IMMUNOGLOBULIN. 004572 04-14

CONTEMPORARY PROBLEMS IN THE PHARMACOLOGICAL-TREATMENT OF PARKINSONISM. 004628 04-15

PARKINSONS
ASSESSING L-DOPA THERAPY FOR PARKINSONS. 004465 04-11

PARKINSONS-DISEASE
ARE THE ENKEPHALINS INVOLVED IN PARKINSONS-DISEASE? CLINICAL AND NEUROENDOCRINE RESPONSES TO NALOXONE ADMINISTRATION. 004431 04-11

LEVODOPA: LONG-TERM IMPACT ON PARKINSONS-DISEASE. 004476 04-11

A STUDY ON MENTAL-SYMPTOMS DEVELOPED DURING THE TREATMENT OF PARKINSONS-DISEASE. 004618 04-15

PAROTID
CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM. 004545 04-13

PASSAGE
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03

PASSAGE THROUGH THE BLOOD-BRAIN-BARRIER OF THYROTROPIN-RELEASING-HORMONE ENCAPSULATED IN LIPOSOMES. 004298 04-06

PASSIVE-AVOIDANCE
EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE. 004097 04-04

PATCHES
INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES. 003737 04-03

PATHOGENESIS
THE PATHOGENESIS OF STEREOTYPIC-BEHAVIOR. 004161 04-04

TARDIVE-DYSKINESIA: PROBLEMS OF PATHOGENESIS, THERAPY, AND PREVENTION. 004644 04-15

PATHOGENETIC
THE COMPLEX SPECIFIC PATHOGENETIC THERAPY OF THE STEREOTYPIC-BEHAVIOR-SYNDROME (AN EXPERIMENTAL-STUDY). 004162 04-04

POSSIBILITIES OF PATHOGENETIC THERAPY OF HYSTERIA. 004429 04-10

PATHOGENIC
CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

PATHOLOGICAL
PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN. 003671 04-01

PATHOMORPHOLOGY
PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13

PATHOMORPHOSIS
PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13

THE DRUG PATHOMORPHOSIS OF SCHIZOPHRENIA. 004732 04-17

PATHOPHYSIOLOGICAL
PATHOPHYSIOLOGICAL AND MORPHOLOGICAL CHANGES IN THE CNS DURING LONG-TERM ADMINISTRATION OF HALOPERIDOL. 004633 04-15

PATHWAY
DOPAMINE-RECEPTOR CHANGES FOLLOWING DESTRUCTION OF THE NIGROSTRIATAL PATHWAY: LACK OF A RELATIONSHIP TO ROTATIONAL-BEHAVIOR. 004229 04-04

PATIENT
FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES. 004729 04-17

PATIENTS
THE PROLACTIN RESPONSE IN PATIENTS RECEIVING NEUROLEPTIC THERAPY. THE EFFECT OF FLUPHENAZINE-DECANOATE. 004318 04-08

PRELIMINARY TRIAL OF CLONIDINE TREATMENT IN TWO PATIENTS SUFFERING FROM CHRONIC SCHIZOPHRENIA. 004320 04-08

DES-TYROSYL-GAMMA-ENDORPHIN IN SCHIZOPHRENIA: A DOUBLE-BLIND TRIAL IN 13 PATIENTS. 004322 04-08

PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08

PLASMA LEVELS OF THE CIS-ISOMERS AND TRANS-ISOMERS OF DOXEPIN AND DESMETHYLDOXEPIN AFTER ADMINISTRATION OF DOXEPIN TO PATIENTS. 004355 04-09

THE EFFECT OF NALOXONE ON THE CONDITION OF PATIENTS WITH ENDOGENOUS PSYCHOSES. 004381 04-09

CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT. 004382 04-09

CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD OF PATIENTS. 004434 04-11

METHADONE USE IN PATIENTS WITH CHRONIC RENAL-DISEASE. 004467 04-11

CLINICAL PHARMACOKINETICS OF CHLORDIAZEPOXIDE IN PATIENTS WITH ALCOHOLIC HEPATITIS. 004473 04-11

THE EFFICACY OF PIRACETAM IN VERTIGO: A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN. 004478 04-11

INFLUENCE OF CARBAMAZEPINE ON SERUM THYROXINE AND TRIIODOTHYRONINE IN PATIENTS WITH EPILEPSY. 004488 04-11

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13

VARIATIONS IN URINARY LEVELS OF 3 METHOXY-4-HYDROXYPHENYLGLYCOL-SULFATE IN PATIENTS WITH DEPRESSIVE-SYNDROMES. 004533 04-13

THE ACTIVITY OF DOPAMINE-BETA-HYDROXYLASE IN THE PLASMA OF PATIENTS WITH ENDOGENOUS DEPRESSIVE-SYNDROMES. 004548 04-13

ACUTE EFFECT OF DRUGS UPON MEMORY OF PATIENTS WITH SENILE-DEMENTIA. 004561 04-14

CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

EFFECT OF LITHIUM ON GLYCINE LEVELS IN PATIENTS WITH AFFECTIVE-DISORDERS. 004606 04-15

KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY.
004664 04-15

PATTERNED
POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT.
004153 04-04

PATTERNS
CEREBROSPINAL-FLUID HOMOVANILLIC-ACID PATTERNS DURING NEUROLEPTIC TREATMENT. (UNPUBLISHED PAPER).
004502 04-13

PCP
ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT.
004665 04-15

PECULIARITIES
PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM).
004527 04-13
PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS).
004528 04-13

PENILE-TUMESCENCE
DISULFIRAM AND NOCTURNAL PENILE-TUMESCENCE IN THE CHRONIC ALCOHOLIC.
004556 04-13

PENTAGASTRIN-STIMULATED
INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG.
004306 04-07

PENTAZOCINE
ANTAGONISM BY PHENOXYBENZAMINE AND PENTAZOCINE OF THE ANTINOCICEPTIVE-EFFECTS OF MORPHINE IN THE SPINAL-CORD.
004213 04-04

PENTOBARBITAL
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY.
003755 04-03
EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL.
003883 04-03
DIFFERENTIAL-EFFECTS OF PENTOBARBITAL AND ETHER ON THE SYNAPTIC TRANSMISSION OF THE HIPPOCAMPAL-CA1-REGION IN THE RAT.
003903 04-03
HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE.
004119 04-04
DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO.
004566 04-14

PENTYLENETETRAZOL
SPECIFIC AND NONSPECIFIC MULTIPLE UNIT ACTIVITIES DURING PENTYLENETETRAZOL SEIZURES. I. ANIMALS WITH ENCEPHALE ISOLE.
004046 04-03
RELATIONSHIP BETWEEN PENTYLENETETRAZOL-INDUCED SEIZURES AND BRAIN PENTYLENETETRAZOL LEVELS IN MICE.
004061 04-03
ON SOME RELATIONSHIPS BETWEEN GABAERGIC AND 5 HT-ERGIC MECHANISMS IN PENTYLENETETRAZOL CONVULSIVE-SEIZURE REACTIONS.
004166 04-04

PENTYLENETETRAZOL-INDUCED
RELATIONSHIP BETWEEN PENTYLENETETRAZOL-INDUCED SEIZURES AND BRAIN PENTYLENETETRAZOL LEVELS IN MICE.
004061 04-03

PEPTIDE
ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA.
004316 04-08

PEPTIDE-HORMONES
ON MONOAMINERGIC-INTERACTION WITH BEHAVIOUR MODIFYING PEPTIDE-HORMONES.
004700 04-17

PEPTIDES
THE EFFECTS OF PEPTIDES ON TOLERANCE TO THE CATALEPTIC-EFFECTS AND HYPOTHERMIC-EFFECTS OF MORPHINE IN THE RAT.
004072 04-04
ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR.
004109 04-04

PERFORMANCE
THE EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON PERFORMANCE UNDER A DIFFERENTIAL-REINFORCEMENT-OF-LOW-RATES SCHEDULE IN RATS.
004175 04-04

THERAPEUTIC TREATMENT OF INSUFFICIENT PERFORMANCE IN CEREBROVASCULAR-DISEASES.
004718 04-17

PERFUSED
A COMPARISON OF THE RESPONSES TO SOME DOPAMINE-RECEPTOR AGONISTS AND ANTAGONISTS IN THE ISOLATED PERFUSED RAT KIDNEY.
004054 04-03

PERFUSION
TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN.
004628 04-15

PERIAQUEDUCTAL
EFFECT OF CHRONIC MORPHINE TREATMENT ON THE INTERACTION BETWEEN THE PERIAQUEDUCTAL GREY AND THE NUCLEUS-RAPHE-MAGNUS OF THE RAT.
003727 04-03

PERIKARYA
SYNTHESIS OF CYTOSKELETAL PROTEINS IN BULK ISOLATED NEURONAL PERIKARYA.
003672 04-01

PERIPHERAL
OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES.
003902 04-03
ANTITREMOR ACTION OF C10DICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR.
004096 04-04
CENTRAL AND PERIPHERAL EFFECTS OF LITHIUM ON AMPHETAMINE-INDUCED HYPERACTIVITY IN RATS.
004223 04-04
PERIPHERAL SEROTONERGIC AND ADRENERGIC RESPONSES IN DEPRESSION.
004364 04-09
THE EFFECT OF CHLORPROMAZINE AND MAGEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ.
004541 04-13

PERIPHERAL-CORRELATES
PERIPHERAL-CORRELATES OF SEROTONERGICALLY-INFLUENCED BEHAVIORS IN VERVET-MONKEYS (CERCOPITHECUS-AETHIOPS-SABAEUS).
004204 04-04

PERIPHERAL-NERVOUS-SYSTEM
CHARACTERIZATION OF THE BASIC PROTEINS FROM RODENT PERIPHERAL-NERVOUS-SYSTEM MYELIN.
003665 04-01

PERIPHERALLY-INDUCED
EFFECTS OF OLFACTORY-BULBECTOMY AND PERIPHERALLY-INDUCED ANOSMIA ON THERMOREGULATION IN THE RAT: SUSCEPTIBILITY TO ANTIDEPRESSANT-DRUGS.
004113 04-04

PERMEABILITY
H2-RECEPTORS MEDIATE INCREASES IN PERMEABILITY OF THE BLOOD-BRAIN-BARRIER DURING ARTERIAL HISTAMINE INFUSION.
003817 04-03
THE EFFECT OF DIBENZAZEPINES (TRICYCLIC-ANTIDEPRESSANTS) ON CEREBRAL CAPILLARY PERMEABILITY IN THE RAT IN VIVO.
003974 04-03

PERSON
ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON.
004437 04-11

PERSONALITY
PERSONALITY AS A PREDICTOR OF PSYCHOTHERAPY AND PHARMACOTHERAPY-OUTCOME FOR DEPRESSED-OUTPATIENTS. (UNPUBLISHED PAPER).
004418 04-09
PERSONALITY AND DRUGS IN VISUAL FIGURAL AFTEREFFECTS.
004581 04-14
NONSPECIFIC FACTORS IN DRUG-EFFECTS: PLACEBO PERSONALITY.
004704 04-17

PERSONS
COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS.
004438 04-11

PERSPECTIVE
AMITRIPTYLINE AND NORTRIPTYLINE PLASMA LEVELS MONITORING. PERSPECTIVE IN CLINICAL-PRACTICE.
004675 04-16
THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY.
004681 04-16

PETHIDINE-INDUCED

ATTENUATION OF PETHIDINE-INDUCED ANTINOCICEPTION BY ZIMELIDINE, AN INHIBITOR OF 5 HYDROXYTRYPTAMINE REUPTAKE. 004118 04-04

PETIT-MAL

A CASE OF PETIT-MAL EPILEPSY AGGRAVATED BY LITHIUM. 004641 04-15

PHARMACEUTICAL

RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION. 004302 04-06

PHARMACODYNAMIC

A CLINICAL AND PHARMACODYNAMIC EVALUATION OF SULPIRIDE. 004338 04-08

PHARMACOEEG

CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY). 004519 04-13

CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

PHARMACOKINETIC

THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08

SINGLE-DOSE PHARMACOKINETIC DATA ON ZIMELIDINE IN DEPRESSED-PATIENTS. 004385 04-09

SERUM CONCENTRATION OF ANTICONVULSANTS. PHARMACOKINETIC FINDINGS AND THEIR PRACTICAL APPLICATION. 004443 04-11

DOSAGE FORM DESIGN FOR IMPROVEMENT OF BIOAVAILABILITY OF LEVODOPA III: INFLUENCE OF DOSE ON PHARMACOKINETIC BEHAVIOR OF LEVODOPA IN DOGS AND PARKINSONIAN-PATIENTS. 004551 04-13

PHARMACOKINETIC-STUDIES

PHARMACOKINETIC-STUDIES WITH CHOLINE-CHLORIDE: A PRELIMINARY REPORT. 004514 04-13

PHARMACOKINETIC-STUDY

PHARMACOKINETIC-STUDY OF APOMORPHINE-INDUCED STEREOTYPY IN FOOD DEPRIVED RATS. 004247 04-04

PHARMACOKINETIC-STUDY IN MAN OF THE CI-757 PREPARATION. 004440 04-11

PHARMACOKINETICS

PHARMACOKINETICS AND CLINICAL-RESPONSE TO TRICYCLIC-ANTIDEPRESSANTS. 004370 04-09

CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004403 04-09

CLINICAL PHARMACOKINETICS OF CHLORDIAZEPOXIDE IN PATIENTS WITH ALCOHOLIC HEPATITIS. 004473 04-11

CLINICAL PHARMACOKINETICS OF BENZODIAZEPINES. 004524 04-13

PHARMACOKINETICS OF CLOXAZOLAM IN MAN AFTER SINGLE AND MULTIPLE ORAL DOSES. 004530 04-13

THE PHARMACOKINETICS OF MIDAZOLAM IN MAN. 004555 04-13

PHARMACOKINETICS OF ANTICONVULSANT-DRUGS. 004738 04-17

PHARMACOLOGIC

SYNTHESIS AND BIOCHEMICAL AND PHARMACOLOGIC PROPERTIES OF ANALOGUES AND DERIVATIVES OF P CHLOROPHENYLALANINE. 003691 04-02

PHARMACOLOGIC MANIPULATION OF BRAIN AND PITUITARY ENDORPHIN CONTENT AND RELEASE. 003837 04-03

HIPPOCAMPAL INVOLVEMENT IN THE PHARMACOLOGIC INDUCTION OF WITHDRAWAL-LIKE BEHAVIORS. 004140 04-04

3 HYDROXYMETHYL-BETA-CARBOLINE ANTAGONIZES SOME PHARMACOLOGIC ACTIONS OF DIAZEPAM. 004221 04-04

PHARMACOLOGIC-TREATMENT

AN OVERVIEW OF PHARMACOLOGIC-TREATMENT OF COGNITIVE DECLINE IN THE AGED. 004482 04-11

PHARMACOLOGICAL

THE PHARMACOLOGICAL ACTION OF THE OPTICAL-ISOMERS OF SYDNOCARB. 003681 04-02

SYNTHESIS AND PHARMACOLOGICAL ACTIVITY OF SOME 2 IMINO-3-ALKYLTHIAZOLINE DERIVATIVES. 003698 04-02

SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT. 003701 04-02

PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE. 003777 04-03

PHARMACOLOGICAL DIFFERENCE OF L-DOPA, APOMORPHINE, AND BROMOCRIPTINE AGAINST METOCLOPRAMIDE. 003790 04-03

THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

THE PHARMACOLOGICAL PROFILE OF LOFEPRAMINE, A NEW ANTIDEPRESSANT-DRUG. 004006 04-03

THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING. 004016 04-03

PHARMACOLOGICAL REGULATION OF CALMODULIN. 004052 04-03

PHARMACOLOGICAL AND BIOCHEMICAL-PROPERTIES OF BRL-14342, A NOVEL POTENTIAL ANTIDEPRESSANT-DRUG. 004086 04-04

ANALGESIC AND OTHER PHARMACOLOGICAL ACTIVITIES OF A NEW NARCOTIC ANTAGONIST ANALGESIC (-) 1 3 METHYLBUTENYLHYDROXYPHENYLPHENYLETHYLPIPERAZINE AND ITS ENANTIOMORPH IN EXPERIMENTAL ANIMALS. 004185 04-04

SOME OBSERVATIONS ON THE PHARMACOLOGICAL ACTIVITY OF MIF (PRO-LEU-GLY-NH2). 004240 04-04

THE PHARMACOLOGICAL CHARACTERISTICS OF THE TRANQUILIZING EFFECT OF HYDIPHEN. 004261 04-04

ON THE USE OF CERTAIN PHARMACOLOGICAL CATEGORIES IN HYSTERIA. 004347 04-09

PHARMACOLOGICAL INFLUENCE OF SEXUAL-FUNCTIONS IN ADOLESCENTS. 004436 04-11

PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM). 004527 04-13

PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13

PHARMACOLOGICAL MODULATION OF FORMATION OF LONG-TERM MEMORY. 004578 04-14

MECHANISMS AND PHARMACOLOGICAL IMPLICATIONS OF ALTERING CALMODULIN ACTIVITY. 004751 04-17

PHARMACOLOGICAL-ASPECTS

PHARMACOLOGICAL-ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04

NEUROLEPTIC TRICYCLIC-ANTIDEPRESSANT COMBINATION: PHARMACOLOGICAL-ASPECTS AND THERAPEUTIC INTEREST. 004501 04-13

PHARMACOLOGICAL-BASES

PHARMACOLOGICAL-BASES OF PSYCHONEUROENDOCRINOLOGY: PRECLINICAL ASSESSMENT OF CLINICAL FACTS. 003735 04-03

PHARMACOLOGICAL-EFFECTS

COMPARATIVE-STUDIES OF THE PHARMACOLOGICAL-EFFECTS OF THE D-ISOMERS AND L-ISOMERS OF CODEINE. 004084 04-04

ASPECTS OF PHARMACOLOGICAL-EFFECTS OF ANTIEPILEPTIC-DRUGS. 004462 04-11

PHARMACOLOGICAL-PROPERTIES

A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLIA OF SEVERAL SPECIES. 003779 04-03

PHARMACOLOGICAL-PROPERTIES OF 2,3,3A,4,5,6 HEXAHYDROMETHYL-1H-PYRAZINOCARBAZOL-HCL (PIRLINDOLE), A NEW ANTIDEPRESSANT. 004174 04-04

PHARMACOLOGICAL-PROPERTIES OF SOME SECOND-GENERATION ANTIDEPRESSANT-DRUGS. 004726 04-17

PHARMACOLOGICAL-STUDIES
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: PHARMACOLOGICAL-STUDIES.
003815 04-03
PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE.
004082 04-04
PHARMACOLOGICAL-STUDY
SYNTHESIS AND PHARMACOLOGICAL-STUDY OF SOME ENKEPHALIN ANALOGS IN RELATION TO THE PLURALITY OF OPIATE-RECEPTORS.
003682 04-02
PHARMACOLOGICAL-TREATMENT
PHOBIA: PSYCHOLOGICAL-TREATMENT AND PHARMACOLOGICAL-TREATMENT.
004425 04-10
NEUROLOGICAL-COMPLICATIONS DUE TO THE PHARMACOLOGICAL-TREATMENT OF EPILEPTIC-PATIENTS.
004593 04-15
CONTEMPORARY PROBLEMS IN THE PHARMACOLOGICAL-TREATMENT OF PARKINSONISM.
004628 04-15
PHARMACOLOGY
PHARMACOLOGY OF 1 DICHLOROBENZYL-TETRAHYDROPYRIMIDONE, A NOVEL ANTIDEPRESSANT COMPOUND WITH ANTIANXIETY ACTIVITY.
003688 04-02
PHARMACOLOGY OF 2 O CHLOROBENZOYL-CHLORO-METHYL-NA-GLYCYLGLYCINANILIDE HYDRATE (45-0088-S), A COMPOUND WITH BENZODIAZEPINE-LIKE PROPERTIES.
003692 04-02
THE NEUROANATOMY AND PHARMACOLOGY OF THE NUCLEUS LOCUS-COERULEUS. (UNPUBLISHED PAPER).
003810 04-03
SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION.
004206 04-04
PHARMACOPSYCHOLOGY
CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY).
004519 04-13
PHARMACOTHERAPY
PHARMACOTHERAPY FOR DEPRESSION.
004251 04-09
DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER).
004401 04-09
PHARMACOTHERAPY AND PSYCHOTHERAPY FOR AMBULATORY DEPRESSION: EFFICACY AND CHOICES.
004413 04-09
PHARMACOTHERAPY OF SEXUAL-IMPOTENCE IN THE MALE.
004435 04-11
PHARMACOTHERAPY FOR SEXUAL-OFFENDERS: REVIEW OF THE ACTION OF ANTIANDROGENS WITH SPECIAL REFERENCE TO THEIR PSYCHIC-EFFECTS.
004455 04-11
PHARMACOTHERAPY AND FEMALE SEXUALITY.
004463 04-11
THE RIGHTS OF INVOLUNTARY-PATIENTS TO REFUSE PHARMACOTHERAPY: WHAT IS REASONABLE?
004730 04-17
NOTES ON PHARMACOTHERAPY OF FUNCTIONAL PSYCHOSES.
004748 04-17
PHARMACOTHERAPY-OUTCOME
PERSONALITY AS A PREDICTOR OF PSYCHOTHERAPY AND PHARMACOTHERAPY-OUTCOME FOR DEPRESSED-OUTPATIENTS. (UNPUBLISHED PAPER).
004418 04-09
PHENCYCLIDINE
EFFECTS OF ACUTE AND CHRONIC ADMINISTRATION OF PHENCYCLIDINE ON DOPAMINERGIC-RECEPTORS IN RAT STRIATUM.
003901 04-03
ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM.
003926 04-03
ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT.
004665 04-15
PHENCYCLIDINE-INDUCED
EFFECTS OF DOPAMINERGIC DRUGS ON PHENCYCLIDINE-INDUCED BEHAVIOR IN THE RAT.
004083 04-04
PHENCYCLIDINE-LIKE
PHENCYCLIDINE-LIKE DISCRIMINATIVE EFFECTS OF OPIOIDS IN THE RAT.
004136 04-04
PHENELZINE
COMPARATIVE-EFFECTS OF PHENELZINE AND AMITRIPTYLINE: A PLACEBO-CONTROLLED-TRIAL.
004402 04-09
PHENETHYLAMINE
A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS.
004007 04-03
PHENOBARBITAL
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL.
003725 04-03
EFFECTS OF ANIMAL AGE AND PHENOBARBITAL ON RAT LIVER GLUCOSE-6-PHOSPHATASE ACTIVITY.
003997 04-03
MECHANISM OF VALPROATE PHENOBARBITAL INTERACTION IN EPILEPTIC-PATIENTS.
004522 04-13
PHENOBARBITONE
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT.
003961 04-03
PHENOLIC
EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING.
003702 04-02
EFFECTS OF MOLINDONE AND FLUPHENAZINE ON THE BRAIN CONCENTRATION OF SOME PHENOLIC AND CATECHOLIC AMINES IN THE MOUSE AND THE RAT.
003870 04-03
PHENOMENA
CHARACTER AND MEANING OF QUASI-MORPHINE WITHDRAWAL PHENOMENA ELICITED BY METHYLXANTHINES.
004087 04-04
PHENOTHIAZINE
SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE.
003673 04-01
INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG.
004306 04-07
PHENOXYBENZAMINE
METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT.
003905 04-03
PHENOXYBENZAMINE AND BROMOCRIPTINE ATTENUATE NEED FOR REM SLEEP IN RATS.
004203 04-04
ANTAGONISM BY PHENOXYBENZAMINE AND PENTAZOCINE OF THE ANTINOCICEPTIVE-EFFECTS OF MORPHINE IN THE SPINAL-CORD.
004213 04-04
PHENYLALANINE
EFFECT OF ALPHA METHYLPHENYLALANINE AND PHENYLALANINE ON BRAIN POLYRIBOSOMES AND PROTEIN SYNTHESIS.
003733 04-03
PHENYLETHYLAMINE
PHENYLETHYLAMINE EFFECTS ON DOPAMINE SYNTHESIS: STRUCTURE-ACTIVITY RELATIONSHIPS. (UNPUBLISHED PAPER).
003959 04-03
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY.
004018 04-03
OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES.
004024 04-03
PHENYLETHYLAMINES
COMPARATIVE-EFFECTS OF SUBSTITUTED PHENYLETHYLAMINES ON BRAIN SEROTONERGIC MECHANISMS.
003854 04-03
PHENYLURETHANS
SYNTHESIS OF PHENYLURETHANS OF 1,2 DIALKYL-4-PYRAZOLIDINOLS AS ANTICONVULSANT AGENTS.
003695 04-02
PHENYTOIN
EFFECTS OF PHENYTOIN ON MOUSE CEREBELLAR 5 HYDROXYTRYPTAMINE AND NOREPINEPHRINE.
003795 04-03
PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE.
004020 04-03
EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD.
004108 04-04

PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11

ANTIEPILEPTIC THERAPY WITH PHENYTOIN: WHICH IS THE OPTIMUM SERUM LEVEL? 004586 04-14

PHEOCHROMOCYTOMA
PURIFICATION AND CHARACTERIZATION OF RAT PHEOCHROMOCYTOMA DOPAMINE-BETA-HYDROXYLASE. 003664 04-01

PHOBIA
PHOBIA: PSYCHOLOGICAL-TREATMENT AND PHARMACOLOGICAL-TREATMENT. 004425 04-10

PHOBIC-STATES
DIFFERENTIAL DIAGNOSIS AND TREATMENT OF PANIC ATTACKS AND PHOBIC-STATES. 004424 04-10

PHOSPHOLIPID
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

PHOTOSENSITIVE
THE EFFECT OF SODIUM-VALPROATE ON THE PHOTOSENSITIVE VEP. 004513 04-13

PHYSICAL
PHYSICAL AND KINETIC PROPERTIES OF CHOLINE-ACETYL-TRANSFERASE FROM RAT AND BOVINE BRAIN. 003676 04-01

PHYSICAL-DEPENDENCE
BUPRENORPHINE: DEMONSTRATION OF PHYSICAL-DEPENDENCE LIABILITY. 004104 04-04

PHYSICO-CHEMICAL
PHYSICO-CHEMICAL METHODOLOGIES IN PSYCHIATRIC-RESEARCH. 004679 04-16

PHYSICS
THE PHYSICS OF IONTOPHORETIC PIPETTES. 004299 04-06

PHYSIOLOGICAL
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

PHYSIOLOGICAL SIGNIFICANCE OF DOPAMINE-AUTORECEPTORS AS STUDIED FOLLOWING THEIR SELECTIVE BLOCKADE BY MOLINDONE. 004065 04-04

PHYSIOLOGICAL AND BEHAVIORAL APPROACHES TO THE STUDY OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004242 04-04

MEPROBAMATE REDUCES ACCURACY OF PHYSIOLOGICAL DETECTION OF DECEPTION. 004585 04-14

BIOLOGICAL AND PHYSIOLOGICAL PREDICTORS OF DRUG RESPONSE. (UNPUBLISHED PAPER). 004708 04-17

PHYTOHEMAGGLUTININ
THE EFFECT OF CHLORPROMAZINE AND MAGEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ. 004541 04-13

PIAL-ARTERIES
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03

PICOGRAM
A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION. 003674 04-01

PICOMOLE
DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH. 004305 04-06

PICROTOXIN
EFFECTS OF 5 HYDROXYTRYPTAMINE ON CENTRAL NEURONES ANTAGONIZED BY BICUCULLINE AND PICROTOXIN. 003931 04-03

PIECES
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-03

PIGEON
METHYLMERCURY-INDUCED CHANGES IN OPERANT DISCRIMINATION BY THE PIGEON. 004271 04-05

PIGEONS
EFFECTS OF NORCOCAINE AND SOME NORCOCAINE DERIVATIVES ON SCHEDULE-CONTROLLED BEHAVIOR OF PIGEONS AND SQUIRREL-MONKEYS. 004012 04-03

METHADONE-INDUCED ATTENUATION OF THE EFFECTS OF DELTA9 TETRAHYDROCANNABINOL ON TEMPORAL DISCRIMINATION IN PIGEONS. 004095 04-04

NARCOTIC DISCRIMINATION IN PIGEONS. 004132 04-04

PILOT-STUDY
ALPRAZOLAM, A NEW TYPE ANXIOLYTIC IN NEUROTIC-PATIENTS: A PILOT-STUDY. 004422 04-10

PIMOZIDE
EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL AND PIMOZIDE ON REFLEX BRADYCARDIA IN RATS. 004085 04-04

PLASMA CORTICOSTERIODS IN MANIA: THE EFFECTS OF PIMOZIDE. 004363 04-09

THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE IN MAN. 004580 04-14

PINEAL-GLAND
ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS. 003666 04-01

EFFECT OF 6 HYDROXYDOPAMINE ON THE FINE STRUCTURE OF THE HAMSTER PINEAL-GLAND. 003747 04-03

CIRCADIAN-VARIATION OF CYCLIC-AMP IN THE RAT PINEAL-GLAND. 003938 04-03

PINNA-REFLEX
EFFECTS ON THE PINNA-REFLEX OF DRUGS ACTING AT ALPHA-ADRENOCEPTORS. 004078 04-04

PIPETTES
THE PHYSICS OF IONTOPHORETIC PIPETTES. 004299 04-06

PIRACETAM
PIRACETAM ACTIVITY MAY DIFFER ACCORDING TO THE AGE OF THE RECIPIENT MOUSE. 003705 04-02

THE EFFICACY OF PIRACETAM IN VERTIGO: A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN. 004478 04-11

PIRETANIDE
THE EFFECT OF FRUSEMIDE PIRETANIDE AND BUMETANIDE ON COCHLEAR SUCCINIC-DEHYDROGENASE. 003757 04-03

PIRIBEDIL
PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE. 003749 04-03

INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03

PIRLINDOLE
PHARMACOLOGICAL-PROPERTIES OF 2,3,3A,4,5,6 HEXAHYDROMETHYL-1H-PYRAZINOCARBAZOL-HCL (PIRLINDOLE), A NEW ANTIDEPRESSANT. 004174 04-04

PITHED
DIFFERENTIAL INHIBITION OF ALPHA1-ADRENOCEPTOR AND ALPHA2-ADRENOCEPTOR MEDIATED PRESSOR RESPONSES IN PITHED RATS. 004057 04-03

PITUITARY
ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS. 003801 04-03

ROLE OF THE ANTERIOR PITUITARY GABA-RECEPTOR IN THE CONTROL OF PROLACTIN RELEASE. 003809 04-03

PHARMACOLOGIC MANIPULATION OF BRAIN AND PITUITARY ENDORPHIN CONTENT AND RELEASE. 003837 04-03

LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03

NEUROTRANSMITTER CONTROL OF HYPOTHALAMIC PITUITARY THYROID-FUNCTION IN RATS. 003942 04-03

DOPAMINE-RECEPTOR BINDING IN BOVINE INTERMEDIATE LOBE PITUITARY MEMBRANES. 004003 04-03

EFFECTS OF CAFFEINE ON ANTERIOR PITUITARY AND THYROID-FUNCTION IN THE RAT. 004014 04-03

ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR. 004109 04-04

PK-8165

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

PK-9084

MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-8165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

PLACEBO

VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY. 004392 04-09

RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER). 004420 04-10

BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13

DRUG PREFERENCE IN HUMANS: DOUBLE-BLIND CHOICE COMPARISON OF PENTOBARBITAL, DIAZEPAM AND PLACEBO. 004566 04-14

NONSPECIFIC FACTORS IN DRUG-EFFECTS: PLACEBO PERSONALITY. 004704 04-17

PLACEBO-CONTROLLED-TRIAL

COMPARATIVE-EFFECTS OF PHENELZINE AND AMITRIPTYLINE: A PLACEBO-CONTROLLED-TRIAL. 004402 04-09

PLACEBO-EFFECT

CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

PLACEBO-EFFECTS

ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11

PLASMA

MEASUREMENT OF HALOPERIDOL IN HUMAN PLASMA USING REVERSED PHASE HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY. (UNPUBLISHED PAPER). 003667 04-01

CU-AMINE-OXIDASES: STUDIES RELATED TO THE MECHANISM-OF-ACTION OF BOVINE PLASMA AMINE-OXIDASE (UNPUBLISHED PAPER). 003680 04-01

VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03

QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03

EFFECT OF AMPHETAMINE ON PLASMA CORTICOSTERONE IN THE CONSCIOUS RAT. 003888 04-03

EFFECTS OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC BLOCKERS ON CHLORPROMAZINE-INDUCED ELEVATION OF PLASMA GLUCOSE AND CYCLIC-AMP IN FED MICE. 003946 04-03

RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY. 004303 04-06

PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08

NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE. 004329 04-08

PLASMA DOPAMINE-BETA-HYDROXYLASE ACTIVITY IN CHRONIC SCHIZOPHRENIC-PATIENTS TESTED WITH SINGLE-DOSE OF 2 BROMO-ALPHA-ERGOCRIPTINE (PARLODEL). 004343 04-08

CHANGES IN BLOOD PLASMA OSMOLALITY AND STATES OF MANIA. 004352 04-09

PLASMA LEVELS OF THE CIS-ISOMERS AND TRANS-ISOMERS OF DOXEPIN AND DESMETHYLDOXEPIN AFTER ADMINISTRATION OF DOXEPIN TO PATIENTS. 004355 04-09

PLASMA CORTICOSTERIODS IN MANIA: THE EFFECTS OF PIMOZIDE. 004363 04-09

LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09

ELECTROCARDIOGRAM-CHANGES AND PLASMA DESIPRAMINE LEVELS DURING TREATMENT OF DEPRESSION. 004411 04-09

THE RELATIONSHIPS BETWEEN CLINICAL-RESPONSE, PSYCHOPHYSIOLOGICAL-VARIABLES AND PLASMA LEVELS OF AMITRIPTYLINE AND DIAZEPAM IN NEUROTIC-OUTPATIENTS. 004423 04-10

THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004439 04-11

EFFECT OF TREATMENT WITH SODIUM-VALPROATE AND DIAZEPAM ON PLASMA CORTICOTROPIN IN NELSONS-SYNDROME. 004463 04-11

NORMAL PLASMA DOPAMINE-BETA-HYDROXYLASE IN NONTREATED AND TREATED PARKINSON-PATIENTS. 004471 04-11

DOXEPIN PLASMA LEVELS AND ANXIOLYTIC RESPONSE. 004477 04-11

PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11

USE OF PLASMA CONCENTRATION DETERMINATIONS. 004498 04-13

KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13

VALPROIC-ACID IN CHILDHOOD-EPILEPSY: ANTICONVULSIVE EFFICACY IN RELATION TO ITS PLASMA LEVELS. 004525 04-13

THE ACTIVITY OF DOPAMINE-BETA-HYDROXYLASE IN THE PLASMA OF PATIENTS WITH ENDOGENOUS DEPRESSIVE-SYNDROMES. 004548 04-13

ANTICHOLINERGIC-EFFECTS AND PLASMA DESIPRAMINE LEVELS. 004550 04-13

CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004559 04-13

SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER). 004565 04-14

CHLORPROMAZINE ANALYSIS IN HUMAN PLASMA. (UNPUBLISHED PAPER). 004591 04-15

TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

PLASMA NOMIFENSINE CONCENTRATION: CARDIOLOGICAL EFFECTS AND CLINICAL-RESPONSE. 004639 04-15

AMITRIPTYLINE AND NORTRIPTYLINE PLASMA LEVELS MONITORING. PERSPECTIVE IN CLINICAL-PRACTICE. 004675 04-16

THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY. 004681 04-16

A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004684 04-16

RECEPTOR TECHNIQUES IN THE STUDY OF PLASMA LEVELS OF NEUROLEPTICS AND ANTIDEPRESSANT-DRUGS. 004694 04-16

PLASTICITY

A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY. 003677 04-01

PLATELET

THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE. 003923 04-03

DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET? 003962 04-03

THE ANTIDEPRESSANT EFFECTS OF TRAZODONE AND INHIBITION OF PLATELET SEROTONIN REUPTAKE. 004383 04-09

THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION. 004509 04-13

SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION. 004518 04-13

HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND. 004676 04-16

PLATELETS

A STUDY OF GAMMA AMINOBUTYRIC-ACID UPTAKE IN NORMAL AND DOWNS-SYNDROME PLATELETS. 003787 04-03

(3H) IMIPRAMINE BINDING IN HUMAN PLATELETS: A NEW BIOCHEMICAL-PARAMETER IN DEPRESSION. 004358 04-09

EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS -- IN VITRO DETERMINATION OF THE IC50. 004532 04-13

ANTIDEPRESSANTS AND THE SEROTONIN UPTAKE IN PLATELETS. 004727 04-17

PLAUSIBLE

THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS. 003953 04-03

PLAY

DOES RAPID-EYE-MOVEMENT SLEEP PLAY A ROLE IN BRAIN DEVELOPMENT? 004091 04-04

PLG

HABITUATION OF THE THE HEAD-POKE RESPONSE: EFFECTS OF AN AMPHETAMINE BARBITURATE MIXTURE, PLG AND FENFLURAMINE. 004159 04-04

PLURALITY

SYNTHESIS AND PHARMACOLOGICAL-STUDY OF SOME ENKEPHALIN ANALOGS IN RELATION TO THE PLURALITY OF OPIATE-RECEPTORS. 003682 04-02

PNEUMATIC

AN IMPROVED PNEUMATIC SYRINGE FOR SELF-ADMINISTRATION OF DRUGS BY RATS. 004304 04-06

PNMT

IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03

POISONING

MENTAL-DISTURBANCES IN CHRONIC MANGANESE POISONING. 004621 04-15

POLYADENYLATED

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003832 04-03

POLYETHYLENE-GLYCOL

THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL. 004045 04-03

POLYPHARMACY

POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS. 004720 04-17

POLYRIBOSOMES

EFFECT OF ALPHA METHYLPHENYLALANINE AND PHENYLALANINE ON BRAIN POLYRIBOSOMES AND PROTEIN SYNTHESIS. 003733 04-03

POLYSOMES

COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN. 003831 04-03

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003832 04-03

POLYSOMNOGRAPHIC

TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY. 004571 04-14

PONS-MEDULLA

STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. 003852 04-03

PONTO-GENICULO-OCCIPITAL

DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02

POPULATION

PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK. 004734 04-17

POSITION

EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING. 003702 04-02

POSITIVE

A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLIA OF SEVERAL SPECIES. 003779 04-03

POSTADDICT

MORPHINE CHALLENGES IN LEVO ALPHA ACETYLMETHADOL (LAAM) POSTADDICT RATS. 004259 04-04

POSTCONCUSSIONAL-SYNDROME

DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

POSTDEPENDENT

LOCOMOTOR-ACTIVITY IN MORPHINE-DEPENDENT AND POSTDEPENDENT RATS. 004077 04-04

POSTENCEPHALITIC

PROSPECTS FOR THE TREATMENT OF POSTENCEPHALITIC PARKINSONISM WITH ANTILYMPHOCYTIC IMMUNOGLOBULIN. 004572 04-14

POSTERIOR

LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03

POSTMENOPAUSAL-WOMEN

THE EFFECTS OF ESTROGEN THERAPY ON THE SEX-LIFE OF POSTMENOPAUSAL-WOMEN. 004573 04-14

POSTMORTEM

POSTMORTEM STABILITY OF BRAIN 3 METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL AND 3,4 DIHYDROXYPHENYLETHYLENEGLYCOL IN THE RAT AND MOUSE. 004048 04-03

POSTSYNAPTIC

PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03

DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03

PRESYNAPTIC AND POSTSYNAPTIC ALPHA-ADRENOCEPTOR ANTAGONISM BY NEUROLEPTICS IN VIVO. 003966 04-03

EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS. 004126 04-04

LITHIUM EFFECTS ON HALOPERIDOL-INDUCED PRESYNAPTIC AND POSTSYNAPTIC DOPAMINE-RECEPTOR SUPERSENSITIVITY. 004244 04-04

POSTTRAUMATIC

USE OF LYSINE-VASOPRESSIN IN THE TREATMENT OF POSTTRAUMATIC AMNESIA. 004583 04-14

POSTURAL

DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

POTASSIUM
INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03

POTENCIES
PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03
COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03

POTENCY
DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS. 004025 04-03

POTENTIAL
SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02
A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLIA OF SEVERAL SPECIES. 003779 04-03
DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. 004049 04-03
PHARMACOLOGICAL AND BIOCHEMICAL-PROPERTIES OF BRL-14342, A NOVEL POTENTIAL ANTIDEPRESSANT-DRUG. 004086 04-04
SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING. 004293 04-06
EVENT-RELATED POTENTIAL CHANGES WITH MORPHINE IN NONADDICTED HUMANS. 004512 04-13

POTENTIALS
OPIATE MECHANISMS: EVALUATION OF RESEARCH INVOLVING NEURONAL ACTION POTENTIALS. 003886 04-03
THE USE OF EVENT-RELATED SLOW POTENTIALS OF THE BRAIN AS AN OBJECTIVE METHOD TO STUDY THE EFFECTS OF CENTRALLY ACTING DRUGS. 004669 04-16

POTENTIATE
PROMETHAZINE AND DIAZEPAM POTENTIATE THE HALOPERIDOL-INDUCED PROLACTIN RESPONSES. 004499 04-13

POTENTIATION
POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM. 004266 04-05
POTENTIATION OF THE MORPHINE-INDUCED RESPIRATORY RATE DEPRESSION BY CAPTOPRIL. 004275 04-05
POTENTIATION OF THE EFFECT OF ANTIDEPRESSANT-DRUGS BY TRYPTOPHAN. 004412 04-09

PRAZEPAM
ANXIOUS-DEPRESSIVE-SYNDROME. CLINICAL-STUDY OF A NEW BENZODIAZEPINE, PRAZEPAM. 004354 04-09
PRAZEPAM: A NEW BENZODIAZEPINE FOR THE TREATMENT OF ANXIOUS-DEPRESSIVE STATES. 004419 04-10
CLINICAL USE OF A NEW BENZODIAZEPINE, PRAZEPAM. 004421 04-10
DESMETHYLDIAZEPAM KINETICS IN THE ELDERLY AFTER ORAL PRAZEPAM. 004432 04-11
PRAZEPAM METABOLISM IN FEMALE SUBJECTS. 004504 04-13

PRECLINICAL
PHARMACOLOGICAL-BASES OF PSYCHONEUROENDOCRINOLOGY: PRECLINICAL ASSESSMENT OF CLINICAL FACTS. 003735 04-03
CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE-CHLORIDE IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS. 004604 04-15

PREDICTING
PREDICTING STIMULANT-EFFECTIVENESS IN HYPERACTIVE-CHILDREN WITH A REPEATABLE NEUROPSYCHOLOGICAL-BATTERY: A PRELIMINARY STUDY. 004403 04-11

PREDICTIVE
HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004456 04-11

PREDICTOR
PERSONALITY AS A PREDICTOR OF PSYCHOTHERAPY AND PHARMACOTHERAPY-OUTCOME FOR DEPRESSED-OUTPATIENTS. (UNPUBLISHED PAPER). 004418 04-09

PREDICTORS
LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09
TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09
BIOLOGICAL AND PHYSIOLOGICAL PREDICTORS OF DRUG RESPONSE. (UNPUBLISHED PAPER). 004708 04-17

PREINCUBATION
BENZODIAZEPINE-RECEPTORS: EFFECT OF TISSUE PREINCUBATION AT 37 DEGREES C. 004013 04-03

PREJUNCTIONAL
PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE. 003749 04-03
INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN. 003756 04-03

PRELIMINARY-STUDY
HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

PRENATAL
THE EFFECT OF PRENATAL EXPOSURE TO ETHANOL OR OPIATES ON BRAIN CATECHOLAMINE ACTIVITY. 003939 04-03
EFFECT OF PRENATAL NEUROLEPTIC TREATMENT ON MEMBRANE RECEPTOR DEVELOPMENT IN THE BRAIN. 003989 04-03
EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD. 004108 04-04

PREOPTICUS-MEDIALIS-NUCLEUS
EVIDENCE FOR THERMOREGULATORY DOPAMINERGIC-RECEPTORS LOCATED IN THE PREOPTICUS-MEDIALIS-NUCLEUS OF THE RAT HYPOTHALAMUS. 003754 04-03

PRESSOR
PRESSOR EFFECTS OF ELECTRICAL-STIMULATION OF THE DORSAL AND MEDIAN RAPHE NUCLEI IN ANESTHETIZED RATS. 003892 04-03
DIFFERENTIAL INHIBITION OF ALPHA1-ADRENOCEPTOR AND ALPHA2-ADRENOCEPTOR MEDIATED PRESSOR RESPONSES IN PITHED RATS. 004057 04-03

PRESSURE
THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL. 004045 04-03

PRESYNAPTIC
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03
PHARMACOLOGICAL DIFFERENTIATION OF PRESYNAPTIC INHIBITORY ALPHA-ADRENOCEPTORS AND OPIATE-RECEPTORS IN THE CAT NICTITATING MEMBRANE. 003777 04-03
PRESYNAPTIC REGULATION OF THE RELEASE OF ACETYLCHOLINE BY 5 HYDROXYTRYPTAMINE. 003843 04-03
PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS. 003869 04-03

ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM. 003926 04-03
PRESYNAPTIC AND POSTSYNAPTIC ALPHA-ADRENOCEPTOR ANTAGONISM BY NEUROLEPTICS IN VIVO. 003966 04-03
THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004028 04-03
LITHIUM EFFECTS ON HALOPERIDOL-INDUCED PRESYNAPTIC AND POSTSYNAPTIC DOPAMINE-RECEPTOR SUPERSENSITIVITY. 004244 04-04

PRESYNAPTIC-AUTORECEPTORS
SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03

PRETREATMENT
TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE. 004406 04-09

PREVALENCE
PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08
PREVALENCE OF HYPERACTIVITY AND RELATED TREATMENTS AMONG ELEMENTARY SCHOOL CHILDREN. 004469 04-11
PREVALENCE OF DRUG-TREATMENT FOR HYPERACTIVITY AND OTHER CHILDHOOD BEHAVIOR-DISORDERS. 004713 04-17

PREVENTION
PREVENTION OF TARDIVE-DYSKINESIA AND OTHER DRUG RELATED ADVERSE-EFFECTS. 004601 04-15
UNWANTED EFFECTS OF LITHIUM-CARBONATE USED IN THE PREVENTION OF RELAPSES OF AFFECTIVE-ILLNESS. 004625 04-15
TARDIVE-DYSKINESIA: PROBLEMS OF PATHOGENESIS, THERAPY, AND PREVENTION. 004644 04-15

PREWEANING
EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD. 004108 04-04

PRIDEFINE
NONCOMPETITIVE AMINE UPTAKE INHIBITION BY THE NEW ANTIDEPRESSANT PRIDEFINE. 003771 04-03

PRIMARY
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03
SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03
THE EFFECT OF NOOTROPIL ON THE TRANSCALLOSAL AND PRIMARY EVOKED-RESPONSES OF THE CAT CEREBRAL-CORTEX. 003780 04-03
SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS. 003859 04-03
BENZODIAZEPINE-RECEPTORS ON PRIMARY CULTURES OF MOUSE ASTROCYTES. 004029 04-03
CORTISOL DYNAMICS AND DEXAMETHASONE PHARMACOKINETICS IN PRIMARY ENDOGENOUS DEPRESSION: PRELIMINARY FINDINGS. 004403 04-09

PRIMATE
CLONIDINE AND THE PRIMATE LOCUS-COERULEUS: EVIDENCE SUGGESTING ANXIOLYTIC AND ANTIWITHDRAWAL EFFECTS. (UNPUBLISHED PAPER). 003982 04-03

PRINCIPLES
SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS. 004433 04-11

PRO-LEU-GLY-NH2
SOME OBSERVATIONS ON THE PHARMACOLOGICAL ACTIVITY OF MIF (PRO-LEU-GLY-NH2). 004240 04-04

PROBE
A QUANTITATIVE PROBE FOR BIOLOGICAL-PSYCHIATRY: SELECTED ION-MONITORING. 004685 04-16

PROBENECID
A SELECTED ION-MONITORING ASSAY FOR BIOGENIC-AMINE METABOLITES AND PROBENECID, IN HUMAN LUMBAR CEREBROSPINAL-FLUID. 003663 04-01

PROBES
FLUORESCENT PROBES OF ALPHA-ADRENERGIC AND BETA-ADRENERGIC AND OPIATE-RECEPTORS: BIOCHEMICAL AND HISTOCHEMICAL EVALUATION. 003685 04-02

PROCEDURES
ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES, MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11
COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS. 004438 04-11
LSD, PSYCHOTOGENIC PROCEDURES AND BRAIN NEUROHUMORS. (UNPUBLISHED PAPER). 004448 04-11
DRUG-THERAPY FOR HYPERACTIVITY: TREATMENT PROCEDURES IN NATURAL SETTINGS. 004449 04-11
COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004692 04-16

PROFILE
THE PHARMACOLOGICAL PROFILE OF LOFEPRAMINE, A NEW ANTIDEPRESSANT-DRUG. 004006 04-03

PROGNOSIS
THE PROGNOSIS OF EPILEPSY AND THE STRATEGY FOR TERMINATING ANTIEPILEPTIC THERAPY. 004724 04-17

PROGRESSIVE
THE PROBLEM OF PSYCHOPHARMACOTHERAPY OF SLOWLY PROGRESSIVE HYPOCHONDRIACAL SCHIZOPHRENIA. 004340 04-08

PROJECTIONS
THE ROLE OF NIGRAL PROJECTIONS TO THE THALAMUS IN DRUG-INDUCED CIRCLING-BEHAVIOUR IN THE RAT. 004205 04-04

PROLACTIN
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS. 003731 04-03
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03
ROLE OF THE ANTERIOR PITUITARY GABA-RECEPTOR IN THE CONTROL OF PROLACTIN RELEASE. 003809 04-03
PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03
THE PROLACTIN RESPONSE IN PATIENTS RECEIVING NEUROLEPTIC THERAPY. THE EFFECT OF FLUPHENAZINE-DECANOATE. 004318 04-08
NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE. 004329 04-08
HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004332 04-08
DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09
PROMETHAZINE AND DIAZEPAM POTENTIATE THE HALOPERIDOL-INDUCED PROLACTIN RESPONSES. 004499 04-13
PROLACTIN AND GROWTH-HORMONE STUDIES IN SCHIZOPHRENIC-PATIENTS AND NORMAL CONTROLS. 004538 04-13
PROLACTIN AND NEUROLEPTIC-DRUGS: A BIOCHEMICAL INDEX OF CLINICAL-RESPONSE? 004539 04-13

SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER). 004565 04-14

PROLACTINAEMIA
BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS. 004503 04-13

PROLIFERATION
THE EFFECT OF CHLORPROMAZINE AND MAGEPTIL ON THE PROLIFERATION OF PERIPHERAL BLOOD LYMPHOCYTES IN CULTIVATION WITH PHYTOHEMAGGLUTININ. 004541 04-13

PROLINE
BIOLOGICAL EVALUATION OF A TRH ANALOGUE WITH A MODIFIED PROLINE RESIDUE. 003662 04-01

PROMAZINE
SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

PROMETHAZINE
PROMETHAZINE AND DIAZEPAM POTENTIATE THE HALOPERIDOL-INDUCED PROLACTIN RESPONSES. 004499 04-13

PROMISE
THE PROMISE OF BIOLOGICAL-PSYCHIATRY. 004752 04-17

PROPANIDID
VALUE OF PROPANIDID IN ELECTROCONVULSIVE-THERAPY (COMPARISON WITH THIOPENTONE). 004379 04-09

PROPHYLACTIC
COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09
CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004404 04-09

PROPHYLACTIC-EFFECT
PROPHYLACTIC-EFFECT OF LITHIUM AGAINST DEPRESSION IN CYCLOTHYMIC-PATIENTS: A LIFE-TABLE ANALYSIS. 004391 04-09

PROPHYLAXIS
LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09
A PRELIMINARY DOUBLE-BLIND STUDY ON THE EFFICACY OF CARBAMAZEPINE IN PROPHYLAXIS OF MANIC-DEPRESSIVE-ILLNESS. 004388 04-09

PROPRANOLOL
THE EFFECT OF PROPRANOLOL AND ITS ISOMERS ON PURKINJE NEURONES IN RAT CEREBELLUM. 004059 04-03
EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS. 004126 04-04
AN EVALUATION OF THE ANTIANXIETY ACTION AND SIDE-EFFECTS OF PROPRANOLOL. 004660 04-15

PROPYLNORANTIFEIN
THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN. 004075 04-04

PROSTAGLANDIN-D2
EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. 003983 04-03

PROSTAGLANDIN-E2
REGULATION OF NORADRENALINE OVERFLOW IN RAT-CEREBRAL-CORTEX BY PROSTAGLANDIN-E2. 003841 04-03
EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. 003983 04-03

PROSTAGLANDIN-F2ALPHA
EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. 003983 04-03

PROTECTION
NA-GAMMA-HYDROXYBUTYRATE IN CEREBRAL PROTECTION DURING SEVERE HYPOXEMIA IN THE RAT. 003895 04-03
COCAINE AND SEIZURE PROTECTION IN MICE OF VARYING BRAIN WEIGHTS. 004103 04-04

PROTEIN
EFFECT OF ALPHA METHYLPHENYLALANINE AND PHENYLALANINE ON BRAIN POLYRIBOSOMES AND PROTEIN SYNTHESIS. 003733 04-03
EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON SUBSEQUENT PROTEIN SYNTHESIS IN A CELL-FREE SYSTEM DERIVED FROM BRAIN. 003761 04-03
DIETARY PROTEIN INTAKE INFLUENCES THE ANTIHYPERTENSIVE POTENCY OF METHYLDOPA IN SPONTANEOUSLY HYPERTENSIVE-RATS. 004025 04-03
PROTEIN BINDING OF CHLORPROMAZINE IN CEREBROSPINAL-FLUID AND SERUM. 004311 04-08

PROTEINS
CHARACTERIZATION OF THE BASIC PROTEINS FROM RODENT PERIPHERAL-NERVOUS-SYSTEM MYELIN. 003665 04-01
SYNTHESIS OF CYTOSKELETAL PROTEINS IN BULK ISOLATED NEURONAL PERIKARYA. 003672 04-01
A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY. 003677 04-01

PROTON
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

PROTOTYPE
MINI-SYMPOSIUM: III. SIMPLE IN VIVO TESTS THAT DIFFERENTIATE PROTOTYPE AGONISTS AT OPIATE-RECEPTORS. 004289 04-06

PROVOKE
DO STIMULANTS PROVOKE, CAUSE, OR EXACERBATE TICS AND TOURETTE-SYNDROME? 004485 04-11

PSYCHIATRIC
PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08
PSYCHIATRIC USES OF BETA-BLOCKERS. 004709 04-17

PSYCHIATRIC-DRUG-STUDY
PSYCHIATRIC-DRUG-STUDY. PART II. MENTAL-HYGIENE-CLINIC SURVEY, DAY-TREATMENT-CENTER SURVEY, DAY-HOSPITAL SURVEY. 004716 04-17

PSYCHIATRIC-DRUGS
THE KINETICS OF PSYCHIATRIC-DRUGS. 004739 04-17

PSYCHIATRIC-HOSPITAL
PSYCHOTROPIC-DRUGS AND PSYCHIATRIC-HOSPITAL ADMISSIONS IN VERONA, ITALY. 004717 04-17

PSYCHIATRIC-ILLNESS
PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK. 004734 04-17

PSYCHIATRIC-RESEARCH
PHYSICO-CHEMICAL METHODOLOGIES IN PSYCHIATRIC-RESEARCH. 004679 04-16

PSYCHIATRIC-TREATMENT
CHANGES IN THE CLINICAL-PICTURE AND THE COURSE OF PSYCHOSES DURING MASSIVE PSYCHOPHARMACOTHERAPY AND THE SIGNIFICANCE OF THESE CHANGES FOR IMPROVEMENTS IN PSYCHIATRIC-TREATMENT. 004699 04-17

PSYCHIATRIST
NEUROLEPTIC TREATMENT AS EXPERIENCED BY A PSYCHIATRIST. 004613 04-15

PSYCHIATRISTS
CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS. 004603 04-15

PSYCHIATRY
CLINICAL APPLICATION OF ANTIANDROGENS IN PSYCHIATRY. 004457 04-11
CURRENT TRENDS IN TREATMENT IN PSYCHIATRY. 004747 04-17

PSYCHIC-EFFECTS
PHARMACOTHERAPY FOR SEXUAL-OFFENDERS: REVIEW OF THE ACTION OF ANTIANDROGENS WITH SPECIAL REFERENCE TO THEIR PSYCHIC-EFFECTS. 004455 04-11

PSYCHOACTIVE
CATECHOLAMINE METABOLISM IN A PSYCHOACTIVE CACTUS. 004722 04-17

PSYCHOACTIVE-DRUGS
ACUTE AND CHRONIC EFFECTS OF PSYCHOACTIVE-DRUGS ON ADRENERGIC-RECEPTORS AND CALMODULIN. 004750 04-17

PSYCHOANALYSIS
THE INTERACTION OF PSYCHOPHARMACOLOGY AND PSYCHOANALYSIS IN THE BORDERLINE-PATIENT. 004430 04-10

PSYCHOBIOLOGY
THE PSYCHOBIOLOGY OF AGING. 003861 04-03

PSYCHOLOGICAL
ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN. 004500 04-13
EMOTIONAL-DISORDERS IN CHILDREN AND ADOLESCENTS: MEDICAL AND PSYCHOLOGICAL APPROACHES TO TREATMENT. 004743 04-17

PSYCHOLOGICAL-TREATMENT
PHOBIA: PSYCHOLOGICAL-TREATMENT AND PHARMACOLOGICAL-TREATMENT. 004425 04-10

PSYCHOMETRIC-FINDINGS
EVALUATION OF LITHIUM RESPONSE: PSYCHOMETRIC-FINDINGS. 004348 04-09

PSYCHOMOTOR
SEXUAL-EFFECTS OF ANTIDEPRESSANTS AND PSYCHOMOTOR STIMULANT-DRUGS. 004646 04-15

PSYCHONEUROENDOCRINOLOGY
PHARMACOLOGICAL-BASES OF PSYCHONEUROENDOCRINOLOGY: PRECLINICAL ASSESSMENT OF CLINICAL FACTS. 003735 04-03

PSYCHOPATHOLOGIC
CHANGES IN PSYCHOPATHOLOGIC SYMPTOMS DURING 20 DAYS OF TREATMENT WITH ANTIDEPRESSANTS AND NEUROLEPTIC-DRUGS. 004415 04-09

PSYCHOPATHOLOGICAL-FINDINGS
CORRELATIONS BETWEEN VISUAL-EVOKED-POTENTIALS AND PSYCHOPATHOLOGICAL-FINDINGS IN SCHIZOPHRENIC-PATIENTS UNDER TREATMENT WITH VARIOUS PSYCHOPHARMACOLOGICAL-DRUGS. 004315 04-08

PSYCHOPATHOLOGY
ENDORPHINS IN PSYCHOPATHOLOGY. 004313 04-08
PSYCHOPATHOLOGY AND ENDORPHINS. 004317 04-08
PSYCHOTROPIC-DRUGS AND THEIR RELATIONSHIP WITH PSYCHOPATHOLOGY OF AFFECTIVE-DISORDERS. 004361 04-09

PSYCHOPHARMACOLOGICAL
PSYCHOPHARMACOLOGICAL AND SOCIAL ASPECTS OF SCHIZOPHRENIA: RECENT DEVELOPMENTS. 004336 04-08

PSYCHOPHARMACOLOGICAL-DRUGS
CORRELATIONS BETWEEN VISUAL-EVOKED-POTENTIALS AND PSYCHOPATHOLOGICAL-FINDINGS IN SCHIZOPHRENIC-PATIENTS UNDER TREATMENT WITH VARIOUS PSYCHOPHARMACOLOGICAL-DRUGS. 004315 04-08

PSYCHOPHARMACOLOGY
PROGRESS IN PSYCHOPHARMACOLOGY. 004398 04-09
THE INTERACTION OF PSYCHOPHARMACOLOGY AND PSYCHOANALYSIS IN THE BORDERLINE-PATIENT. 004430 04-10
CHILD PSYCHOPHARMACOLOGY. 004470 04-11
ELECTRORETINOGRAPHY (ERG) AS A TOOL OF INVESTIGATION IN HUMAN PSYCHOPHARMACOLOGY. ELECTRORETINOGRAPHIC-CHANGES INDUCED BY A COMBINATION OF CARBIDOPA AND LEVODOPA. 004507 04-13
DEVELOPMENT OF PSYCHOPHARMACOLOGY. 004667 04-15
ON THE USE OF REPEATED MEASURES DESIGNS IN PSYCHOPHARMACOLOGY. 004695 04-16
PSYCHOPHARMACOLOGY FOR THE AGED. 004701 04-17
PSYCHOPHARMACOLOGY OF AGING. 004710 04-17
PSYCHOPHARMACOLOGY AND PSYCHOTHERAPY IN THE TREATMENT OF ANXIETY. 004712 04-17

PSYCHOPHARMACOTHERAPY
CLINICAL AND BIOCHEMICAL-CORRELATIONS IN ABRUPT DISCONTINUATION OF PSYCHOPHARMACOTHERAPY. 004330 04-08
THE PROBLEM OF PSYCHOPHARMACOTHERAPY OF SLOWLY PROGRESSIVE HYPOCHONDRIACAL SCHIZOPHRENIA. 004340 04-08
THE NOSOLOGICAL INDEPENDENCE OF INVOLUTIONAL DEPRESSION AND ITS DYNAMICS DURING PSYCHOPHARMACOTHERAPY. 004389 04-09
PSYCHOPHARMACOTHERAPY OF SEXUAL-DISORDERS IN THE AGED. 004466 04-11
CHANGES IN THE CLINICAL-PICTURE AND THE COURSE OF PSYCHOSES DURING MASSIVE PSYCHOPHARMACOTHERAPY AND THE SIGNIFICANCE OF THESE CHANGES FOR IMPROVEMENTS IN PSYCHIATRIC-TREATMENT. 004699 04-17
PSYCHOPHARMACOTHERAPY: THE PRESENT STATE AND THE DEVELOPMENT OF TRENDS. 004723 04-17

PSYCHOPHYSIOLOGICAL-TESTS
A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM. 004543 04-13

PSYCHOPHYSIOLOGICAL-VARIABLES
THE RELATIONSHIPS BETWEEN CLINICAL-RESPONSE, PSYCHOPHYSIOLOGICAL-VARIABLES AND PLASMA LEVELS OF AMITRIPTYLINE AND DIAZEPAM IN NEUROTIC-OUTPATIENTS. 004423 04-10

PSYCHOSES
THE EFFECT OF NALOXONE ON THE CONDITION OF PATIENTS WITH ENDOGENOUS PSYCHOSES. 004381 04-09
CHANGES IN THE CLINICAL-PICTURE AND THE COURSE OF PSYCHOSES DURING MASSIVE PSYCHOPHARMACOTHERAPY AND THE SIGNIFICANCE OF THESE CHANGES FOR IMPROVEMENTS IN PSYCHIATRIC-TREATMENT. 004699 04-17
NOTES ON PHARMACOTHERAPY OF FUNCTIONAL PSYCHOSES. 004748 04-17

PSYCHOSIS
DRUG-INDUCED PSYCHOSIS AND SCHIZOPHRENIA IN ADOLESCENTS. 004596 04-15

PSYCHOSOCIAL-ASPECTS
PSYCHOSOCIAL-ASPECTS OF DRUG-TREATMENT FOR HYPERACTIVITY. 004714 04-17

PSYCHOSOMATIC-DISEASES
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD. 004491 04-11

PSYCHOSTIMULANTS
THE EFFECT OF PSYCHOSTIMULANTS ON CHANGES IN THE EXCITABILITY OF THE VISUAL CEREBRAL-CORTEX. 003919 04-03

PSYCHOTHERAPEUTIC-DRUGS
PSYCHOTHERAPEUTIC-DRUGS, HISTAMINE H1-RECEPTORS AND MUSCARINIC ACETYLCHOLINE-RECEPTORS. 004737 04-17

PSYCHOTHERAPIES
CLINICAL-TRIAL OF PSYCHOTHERAPIES IS UNDER WAY. 004378 04-09

PSYCHOTHERAPY
EFFECTS OF ALTHESIN IN PSYCHOTHERAPY OF SCHIZOPHRENICS: PRELIMINARY REPORT. 004331 04-08
DO PSYCHOTHERAPY AND PHARMACOTHERAPY FOR DEPRESSION CONFLICT? EMPIRICAL EVIDENCE FROM A CLINICAL-TRIAL. (UNPUBLISHED PAPER). 004401 04-09
PHARMACOTHERAPY AND PSYCHOTHERAPY FOR AMBULATORY DEPRESSION: EFFICACY AND CHOICES. 004413 04-09
PERSONALITY AS A PREDICTOR OF PSYCHOTHERAPY AND PHARMACOTHERAPY-OUTCOME FOR DEPRESSED-OUTPATIENTS. (UNPUBLISHED PAPER). 004418 04-09
PSYCHOPHARMACOLOGY AND PSYCHOTHERAPY IN THE TREATMENT OF ANXIETY. 004712 04-17

PSYCHOTIC
PSYCHOTIC EXCITEMENT IN MEDICAL-EMERGENCIES. 004480 04-11

PSYCHOTIC-PATIENTS
CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004559 04-13
CLINICAL-EVALUATION OF BROMPERIDOL VERSUS HALOPERIDOL IN PSYCHOTIC-PATIENTS. 004562 04-14

THE EFFECTS OF NEUROLEPTIC-DRUGS ON THE SOCIAL INTERACTIONS OF HOSPITALIZED PSYCHOTIC-PATIENTS.
004577 04-14

PSYCHOTOGENIC
LSD, PSYCHOTOGENIC PROCEDURES AND BRAIN NEUROHUMORS. (UNPUBLISHED PAPER).
004448 04-11

PSYCHOTOMIMETIC
REGULATION OF BIOGENESIS OF PSYCHOTOMIMETIC AMINES. (UNPUBLISHED PAPER).
003818 04-03

PSYCHOTROPIC-AGENT
A CLINICAL-EVALUATION OF THE EFFECTS OF A NEW PSYCHOTROPIC-AGENT, MEXAZOLAM (CS-386) ON PSYCHOSOMATIC-DISEASES AND NEUROSIS: A COMPARATIVE-STUDY WITH OXAZOLAM, USING THE DOUBLE-BLIND METHOD.
004491 04-11

EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS -- IN VITRO DETERMINATION OF THE IC50.
004532 04-13

PSYCHOTROPIC-DRUG
COMPARISON OF PSYCHOTROPIC-DRUG, RESPONSE COST, AND PSYCHOTROPIC-DRUG PLUS RESPONSE COST PROCEDURES FOR CONTROLLING INSTITUTIONALIZED MENTALLY-RETARDED PERSONS.
004438 04-11

PSYCHOTROPIC-DRUGS
THE INTEGRITY OF THE SOCIAL HIERARCHY IN MICE FOLLOWING ADMINISTRATION OF PSYCHOTROPIC-DRUGS.
004202 04-04

PSYCHOTROPIC-DRUGS AND THEIR RELATIONSHIP WITH PSYCHOPATHOLOGY OF AFFECTIVE-DISORDERS.
004361 04-09

PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS).
004528 04-13

A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA.
004584 04-14

NEUROLOGICAL TOLERANCE OF LITHIUM AND PSYCHOTROPIC-DRUGS IN COMBINATION: 265 CASES.
004594 04-15

ABNORMAL MOVEMENTS INDUCED BY PSYCHOTROPIC-DRUGS.
004652 04-15

PSYCHOTROPIC-DRUGS AND PSYCHIATRIC-HOSPITAL ADMISSIONS IN VERONA, ITALY.
004717 04-17

PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK.
004734 04-17

PSYCHOTROPIC-MEDICATION
THE EFFECTS OF PSYCHOTROPIC-MEDICATION ON COGNITIVE CONTROL MEASURES. (PH.D. DISSERTATION).
004523 04-13

PSYCHOTROPIC-MEDICATIONS
PSYCHOTROPIC-MEDICATIONS AND GLAUCOMA.
004647 04-15

SIDE-EFFECTS AND UNDESIRABLE COMBINATIONS OF PSYCHOTROPIC-MEDICATIONS.
004663 04-15

PSYCHOTROPICS
NEUROTROPIC-DRUGS AS COMEDICATION TO PSYCHOTROPICS: COMBINED ADMINISTRATION OF A NEUROTROPIC-DRUG AND A TETRACYCLIC-ANTIDEPRESSANT.
004396 04-09

ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE.
004626 04-15

PSYCHPHARMACOTHERAPY
THE STATE OF THE ADRENERGIC AND CHOLINERGIC SYSTEMS IN SCHIZOPHRENIC-PATIENTS DURING PSYCHPHARMACOTHERAPY.
004526 04-13

PUBLICATIONS
UNDESIRABLE EFFECTS OF MEDICINES: A REVIEW OF SEVERAL PUBLICATIONS ISSUED FROM 1977-1979.
004632 04-15

PUNISHED-RESPONDING
SCHEDULE DEPENDENT CHANGE OF PUNISHED-RESPONDING AFTER DIAZEPAM IN RATS.
004165 04-04

SOME EFFECTS OF CLOZAPINE ON PUNISHED-RESPONDING BY MICE AND SQUIRREL-MONKEYS.
004224 04-04

PUNISHER
HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE.
004119 04-04

PUPILLARY
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO.
004544 04-13

PURIFICATION
THE DOPAMINE-RECEPTOR: ISOLATION, PURIFICATION AND REGULATION.
003660 04-01

DOPAMINE-RECEPTOR PURIFICATION AND CHARACTERIZATION. (UNPUBLISHED PAPER).
003661 04-01

PURIFICATION AND CHARACTERIZATION OF RAT PHEOCHROMOCYTOMA DOPAMINE-BETA-HYDROXYLASE.
003664 04-01

PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN.
003671 04-01

PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-III FROM RAT-BRAIN NUCLEI.
003679 04-01

DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH.
004305 04-06

PURIFIED
BIOCHEMICAL AND IMMUNOLOGICAL PROPERTIES OF THE MOUSE BRAIN ENOLASES PURIFIED BY A SIMPLE METHOD.
003648 04-01

PURINE
THE SITE OF ACTION OF MUSCLE-RELAXANT PURINE NUCLEOSIDES.
003742 04-03

PURKINJE
EFFECTS OF ACUTE AND CHRONIC AMPHETAMINE TREATMENT ON PURKINJE NEURON DISCHARGE IN RAT CEREBELLUM.
003793 04-03

THE EFFECT OF PROPRANOLOL AND ITS ISOMERS ON PURKINJE NEURONES IN RAT CEREBELLUM.
004059 04-03

PURKINJE-CELLS
MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS.
004058 04-03

PURKINJE-FIBRES
ELECTROPHYSIOLOGICAL-EFFECTS OF IMIPRAMINE ON BOVINE VENTRICULAR-MUSCLE AND PURKINJE-FIBRES.
003988 04-03

PUROMYCIN
INHIBITION OF AMINOPEPTIDASE AND ACETYLCHOLINESTERASE BY PUROMYCIN AND PUROMYCIN ANALOGS.
003835 04-03

PUTATIVE
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT.
003961 04-03

PYRAMIDAL
ACETYLCHOLINE-INDUCED MODULATION OF HIPPOCAMPAL PYRAMIDAL NEURONS.
003728 04-03

PYRAZOLE
PYRAZOLE EXACERBATES HANDLING-INDUCED CONVULSIONS IN MICE.
004094 04-04

PYRIDOXINE
HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION.
004456 04-11

PYRIFORM
LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION.
004273 04-05

PYRIMIDOPYRIMIDINE
SYNTHESIS AND STRUCTURE-ACTIVITY RELATIONSHIP OF A PYRIMIDOPYRIMIDINE DERIVATIVE WITH ANTIDEPRESSANT ACTIVITY.
003653 04-01

PYRROLIDONE
SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 OXO AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT.
003701 04-02

PYRROLOPYRIMIDINEDIONES
ANTICONVULSANT PROPERTIES OF SELECTED PYRROLOPYRIMIDINEDIONES AND INTERMEDIATES. 003700 04-02

QUALITY
POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME. 004610 04-15

QUANTITATION
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03

COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004692 04-16

QUANTITATIVE
CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY). 004519 04-13

CLOPIPAZAN (SKF-69634), A NEW NEUROLEPTIC ESSENTIALLY FREE OF EXTRAPYRAMIDAL LIABILITY: QUANTITATIVE PHARMACOEEG AND OPEN LABEL CLINICAL-TRIAL. 004620 04-15

ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT. 004665 04-15

A QUANTITATIVE PROBE FOR BIOLOGICAL-PSYCHIATRY: SELECTED ION-MONITORING. 004685 04-16

QUASI-MORPHINE
CHARACTER AND MEANING OF QUASI-MORPHINE WITHDRAWAL PHENOMENA ELICITED BY METHYLXANTHINES. 004087 04-04

RX-336-M, A NEW CHEMICAL TOOL IN THE ANALYSIS OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004093 04-04

PHYSIOLOGICAL AND BEHAVIORAL APPROACHES TO THE STUDY OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004242 04-04

QUESTIONS
CHOLINERGIC MECHANISMS IN MANIA AND DEPRESSION: QUESTIONS OF SPECIFICITY. 004374 04-09

CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE-CHLORIDE IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS. 004604 04-15

QUININE
UNIMPAIRED QUININE METABOLISM IN RATS WITH VENTROMEDIAL HYPOTHALAMIC LESIONS. 003821 04-03

QUINOLINE
MULTIPLE BENZODIAZEPINE-RECEPTORS: EVIDENCE OF A DISSOCIATION BETWEEN ANTICONFLICT AND ANTICONVULSANT PROPERTIES BY PK-B165 AND PK-9084 (TWO QUINOLINE DERIVATIVES). 003898 04-03

QUINUCLIDINYL
QUINUCLIDINYL BENZILATE BINDING IN HOUSEFLY HEADS AND RAT-BRAIN. 003868 04-03

QUIPAZINE
MODIFICATION OF DRUG-INDUCED CATATONIA AND TREMORS BY QUIPAZINE IN RATS AND MICE. 004164 04-04

5 HYDROXYTRYPTAMINE-LIKE PROPERTIES OF M CHLOROPHENYLPIPERAZINE: COMPARISON WITH QUIPAZINE. 004210 04-04

R-15
DOPAMINE INHIBITS BURST-FIRING OF NEUROSECRETORY CELL R-15 IN APLYSIA-CALIFORNICA: ESTABLISHMENT OF A DOSE-RESPONSE RELATIONSHIP. 003806 04-03

R-5135
A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION. 003851 04-03

RABBIT
PREJUNCTIONAL ACTIONS OF PIRIBEDIL ON THE ISOLATED KIDNEY OF THE RABBIT: COMPARISON WITH APOMORPHINE. 003749 04-03

COMPARISON OF THE EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON FREE AND MEMBRANE-BOUND POLYSOMES IN THE RABBIT BRAIN. 003831 04-03

CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003832 04-03

STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. 003852 04-03

EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT. 003951 04-03

HYPOTENSION ALTERS THE RELEASE OF CATECHOLAMINES IN THE HYPOTHALAMUS OF THE CONSCIOUS RABBIT. 003968 04-03

EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. 003983 04-03

THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL-ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN. 003994 04-03

THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

BENZODIAZEPINE-RECEPTOR: HETEROGENEITY IN RABBIT BRAIN. 004060 04-03

SEROTONERGIC MECHANISM IN SEIZURES KINDLED FROM THE RABBIT AMYGDALA. 004227 04-04

THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT: INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT. 004279 04-05

RABBITS
NEURONAL SENSITIVITY OF SOME BRAIN REGIONS TO ANGIOTENSIN-II IN RABBITS. 003716 04-03

OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003798 04-03

NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS. 003842 04-03

CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03

INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03

EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

BEHAVIORAL-PHARMACOLOGY OF TETRAHYDROCANNABINOL CONVULSIONS IN RABBITS. 004288 04-06

RADICAL
SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE. 003673 04-01

RADIOCALCIUM
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: KINETIC STUDIES. 003814 04-03

UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: PHARMACOLOGICAL-STUDIES. 003815 04-03

RADIOIMMUNOASSAY
A RADIOIMMUNOASSAY FOR EPENDYMINS BETA AND GAMMA: TWO GOLDFISH BRAIN PROTEINS INVOLVED IN BEHAVIORAL PLASTICITY. 003677 04-01

VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03

RADIOIMMUNOASSAY OF TRICYCLIC-ANTIDEPRESSANTS. 004674 04-16

A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004684 04-16

SERUM LEVELS OF BUTORPHANOL BY RADIOIMMUNOASSAY. 004691 04-16

A SENSITIVE BENZODIAZEPINE RADIOIMMUNOASSAY OF BROAD SPECIFICITY. 004693 04-16

RADIOIMMUNOLOGIC
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13

RADIORECEPTOR
MEASUREMENT OF NEUROLEPTIC CONCENTRATIONS BY GLC AND RADIORECEPTOR ASSAY. 004682 04-16
A RAPID AND SENSITIVE RADIORECEPTOR ASSAY FOR TERTIARY AMINE TRICYCLIC-ANTIDEPRESSANTS. 004689 04-16

RAPID-EYE-MOVEMENT
DOES RAPID-EYE-MOVEMENT SLEEP PLAY A ROLE IN BRAIN DEVELOPMENT? 004091 04-04

RASHES
MITIGATING ACUTE SKIN RASHES AND NAUSEA FROM LITHIUM. 004661 04-15

RAT-BRAIN
REGIONAL AND SUBCELLULAR LOCALIZATION IN RAT-BRAIN OF THE ENZYMES THAT CAN SYNTHESIZE GAMMA HYDROXYBUTYRIC-ACID. 003675 04-01
PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-III FROM RAT-BRAIN NUCLEI. 003679 04-01
EFFECT OF LOW-DOSE LITHIUM ADMINISTRATION AND SUBSEQUENT WITHDRAWAL ON BIOGENIC-AMINES IN RAT-BRAIN. 003708 04-03
MYOINOSITOL TURNOVER IN THE INTACT RAT-BRAIN: INCREASED PRODUCTION AFTER D-AMPHETAMINE. 003723 04-03
EFFECT OF AMPHETAMINE ON THE METABOLISM AND INCORPORATION OF (3H) THYMIDINE INTO DNA OF DEVELOPING RAT-BRAIN. 003729 04-03
AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03
THE EFFECTS OF ANTIDEPRESSANTS ON THE RETENTION AND METABOLISM OF (3H) NOREPINEPHRINE IN RAT-BRAIN SLICES. 003763 04-03
INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03
HALOTHANE ACCUMULATION IN RAT-BRAIN AND LIVER. 003774 04-03
EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN. 003794 04-03
COMPARATIVE-EFFECTS OF AMANTADINE AND AMFONELIC-ACID ON DOPAMINE METABOLISM IN RAT-BRAIN. 003796 04-03
NEWLY SYNTHESIZED CHOLECYSTOKININ IN SUBCELLULAR FRACTIONS OF THE RAT-BRAIN. 003805 04-03
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: KINETIC STUDIES. 003814 04-03
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: PHARMACOLOGICAL-STUDIES. 003815 04-03
(3H)METERGOLINE: A NEW LIGAND OF SEROTONIN-RECEPTORS IN THE RAT-BRAIN. 003825 04-03
3H BACLOFEN AND 3H GABA BIND TO BICUCULLINE INSENSITIVE GABAB SITES IN RAT-BRAIN. 003839 04-03
LONG-TERM EFFECTS OF MULTIPLE DOSES OF METHAMPHETAMINE ON TRYPTOPHAN-HYDROXYLASE AND TYROSINE-HYDROXYLASE ACTIVITY IN RAT-BRAIN. 003850 04-03
THE INTERACTION OF TRAZODONE WITH RAT-BRAIN MUSCARINIC-CHOLINOCEPTORS. 003855 04-03
QUINUCLIDINYL BENZILATE BINDING IN HOUSEFLY HEADS AND RAT-BRAIN. 003868 04-03
CHARACTERISTICS OF THE INHIBITION OF RAT-BRAIN MONOAMINE-OXIDASE IN VITRO BY MD780515. 003874 04-03
DIFFERENTIAL-EFFECTS OF ELECTROCONVULSIVE-SHOCK AND ANTIDEPRESSANT-DRUGS ON SEROTONIN2-RECEPTORS IN RAT-BRAIN. 003878 04-03
CHANGES IN GAMMA AMINOBUTYRIC-AC[illegible] SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA. 003891 04-03
RESERPINE EFFECT ON THE AXONAL TRANSPORT OF DOPAMINE-BETA-HYDROXYLASE AND TYROSINE-HYDROXYLASE IN RAT-BRAIN. 003904 04-03
THE INFLUENCE OF D-AMPHETAMINE ON RAT-BRAIN STRIATAL REDUCED BIOPTERIN CONCENTRATION. 003922 04-03
IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03
REGIONAL DISTRIBUTION OF (3H)IMIPRAMINE BINDING IN RAT-BRAIN. 003955 04-03
EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER). 003960 04-03
HIGH-AFFINITY BINDING-SITES FOR A SOMATOSTATIN-28 ANALOG IN RAT-BRAIN. 003985 04-03
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS. 003992 04-03
ALPHA2-ADRENORECEPTORS IN RAT-BRAIN ARE DECREASED AFTER LONG-TERM TRICYCLIC-ANTIDEPRESSANT DRUG-TREATMENT. 004008 04-03
DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE. 004019 04-03
ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03
CHRONIC NEUROLEPTIC TREATMENT SPECIFICALLY ALTERS THE NUMBER OF DOPAMINE-RECEPTORS IN RAT-BRAIN. 004033 04-03
THE EFFECTS OF ACUTE AND CHRONIC ETHANOL ADMINISTRATION AND ITS WITHDRAWAL ON GAMMA AMINOBUTYRIC-ACID-RECEPTOR BINDING IN RAT-BRAIN. 004035 04-03
INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE. 004044 04-03
DEVELOPMENTAL-CHANGE OF BETA-ADRENERGIC-RECEPTORS IN RAT-BRAIN. 004050 04-03
A STUDY OF THE EFFECT OF NEUROPHARMACOLOGICAL DRUGS ON THE FUNCTIONAL ACTIVITY OF RAT-BRAIN. 004107 04-04
EFFECT OF INORGANIC LEAD ON RAT-BRAIN MITOCHONDRIAL RESPIRATION AND ENERGY PRODUCTION. 004267 04-05
PRESENCE OF CONJUGATED CATECHOLAMINES IN RAT-BRAIN: A NEW METHOD OF ANALYSIS OF CATECHOLAMINE-SULFATES. 004286 04-06
SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING. 004293 04-06
A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS. 004301 04-06
RAT-BRAIN AND PLASMA NOREPINEPHRINE GLYCOL METABOLITES DETERMINED BY GAS-CHROMATOGRAPHY MASS-FRAGMENTOGRAPHY. 004303 04-06

RAT-CEREBELLUM
L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03
IN VITRO MODULATION BY AVERMECTIN-B1A OF THE GABA/BENZODIAZEPINE-RECEPTOR COMPLEX OF RAT-CEREBELLUM. 004023 04-03

RAT-CEREBRAL-CORTEX
CATECHOLAMINE TURNOVER IN RAT-CEREBRAL-CORTEX AND CAUDATE FOLLOWING REPEATED TREATMENT WITH DIHYDROERGOTOXINE. 003765 04-03
REGULATION OF NORADRENALINE OVERFLOW IN RAT-CEREBRAL-CORTEX BY PROSTAGLANDIN-E2. 003841 04-03
THE UPTAKE OF CARNITINE BY SLICES OF RAT-CEREBRAL-CORTEX. 003853 04-03
EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FROM RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST. 003864 04-03
ALPHA1-ADRENOCEPTORS AND ALPHA2-ADRENOCEPTORS IN RAT-CEREBRAL-CORTEX: EFFECT OF FRONTAL LOBOTOMY. 003944 04-03
EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 003969 04-03

RAT-CEREBRAL-CORTICAL
- ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03
- THE EFFECT OF NORADRENALINE ON NA-K TRANSPORT IN RAT-CEREBRAL-CORTICAL SLICES. 004056 04-03

RAT-CORTEX
- THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC-ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY. 003880 04-03

RATE
- OPIATE-EFFECTS IN THE AMYGDALA CENTRAL NUCLEUS ON HEART RATE CONDITIONING IN RABBITS. 003798 04-03
- CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS. 004133 04-04
- POTENTIATION OF THE MORPHINE-INDUCED RESPIRATORY RATE DEPRESSION BY CAPTOPRIL. 004275 04-05

REACTION-TIME
- EFFECT OF LITHIUM ON REACTION-TIME – A STUDY OF DIURNAL VARIATIONS. 004607 04-15

REACTIONS
- THE ROLE OF OPIATE-RECEPTORS OF DIFFERENT BRAIN REGIONS IN DETERMINING THE EMOTIONAL REACTIONS OF RATS. 004017 04-03
- THE EFFECT OF THIOPROPERAZINE ON DELAYED REACTIONS IN LOWER MONKEYS. 004125 04-04
- ON SOME RELATIONSHIPS BETWEEN GABAERGIC AND 5 HT-ERGIC MECHANISMS IN PENTYLENETETRAZOL CONVULSIVE-SEIZURE REACTIONS. 004166 04-04
- THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS. 004510 04-13
- REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE. 004517 04-13

REACTIVITY
- METHAQUALONE RIA STRUCTURE VERSUS REACTIVITY. 003657 04-01
- RIA OPIATES: STRUCTURE VERSUS REACTIVITY. 003659 04-01

REARING
- DEVELOPMENTAL-CHANGE IN REARING RESPONSE TO ATROPINE IN RATS TREATED WITH 6 HYDROXYDOPA. 004191 04-04

REASONABLE
- THE RIGHTS OF INVOLUNTARY-PATIENTS TO REFUSE PHARMACOTHERAPY: WHAT IS REASONABLE? 004730 04-17

REASSESSMENT
- BENZODIAZEPINES IN SCHIZOPHRENIA: A NEED FOR REASSESSMENT. 004733 04-17

RECEPTOR
- EFFECTS OF 3',4' DIHYDROXYNOMIFENSINE ON THE DOPAMINE VASCULAR RECEPTOR. 003890 04-03
- EFFECT OF PRENATAL NEUROLEPTIC TREATMENT ON MEMBRANE RECEPTOR DEVELOPMENT IN THE BRAIN. 003989 04-03
- RECEPTOR TECHNIQUES IN THE STUDY OF PLASMA LEVELS OF NEUROLEPTICS AND ANTIDEPRESSANT-DRUGS. 004694 04-16

RECEPTOR-MEDIATED
- MINI-SYMPOSIUM. IV. DISCRIMINATIVE-STIMULUS EFFECTS OF NARCOTICS: EVIDENCE FOR MULTIPLE RECEPTOR-MEDIATED ACTIONS. 004719 04-17

RECEPTORS
- EFFECTS OF ANTIDEPRESSANT-DRUGS ON DIFFERENT RECEPTORS IN THE BRAIN. 003824 04-03
- EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE. 004173 04-04
- RECENT STUDIES ON INTERACTION BETWEEN OPIOID-PEPTIDES AND THEIR RECEPTORS. 004300 04-06
- RECEPTORS, ADENYLATE-CYCLASE, DEPRESSION, AND LITHIUM. 004353 04-09

RECIPIENT
- PIRACETAM ACTIVITY MAY DIFFER ACCORDING TO THE AGE OF THE RECIPIENT MOUSE. 003705 04-02

RECORDINGS
- COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14

RECRUITING
- INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03

RECURRENT
- LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09

RECYCLES
- 5' TRIPHOSPHATE RECYCLES INDEPENDENTLY OF ACETYLCHOLINE IN CHOLINERGIC SYNAPTIC VESICLES. 004063 04-03

RED-BLOOD-CELL
- MECHANISM OF LITHIUM INCLUDED ELEVATION IN RED-BLOOD-CELL CHOLINE CONTENT: AN IN VITRO ANALYSIS. 004511 04-13

REDERGINE
- EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (REDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT. 003703 04-02

REDUCTION
- REDUCTION IN THE LEVEL OF IMMUNOTITRATABLE DOPAMINE-BETA-HYDROXYLASE AFTER CHRONIC ADMINISTRATION OF L-DOPA OR ALPHA METHYLDOPA. 003764 04-03
- REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK -- POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER). 004154 04-04

REEVALUATION
- A REEVALUATION OF THE NEUROCHEMICAL-EFFECTS AND ANTINOCICEPTIVE-EFFECTS OF INTRATHECAL CAPSAICIN IN THE RAT. 004184 04-04

REFLEX
- EFFECTS OF DOPAMINE, APOMORPHINE, GAMMA HYDROXYBUTYRIC-ACID, HALOPERIDOL AND PIMOZIDE ON REFLEX BRADYCARDIA IN RATS. 004085 04-04
- EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04
- BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13

REFLEX-INDUCED
- MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS. 003744 04-03

REFLEXES
- CANNABINOID-INDUCED ENHANCEMENT AND DEPRESSION OF CAT MONOSYNAPTIC REFLEXES. 004040 04-03
- POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT. 004153 04-04
- THE EFFECT OF THE NEW ANTIDEPRESSANT INKASAN ON THE BIOELECTRICAL-ACTIVITY OF THE BRAIN AND ON CONDITIONED REFLEXES. 004212 04-04

REFRACTORY
- MOBILIZATION OF REFRACTORY CHRONIC SCHIZOPHRENICS WITH HALOPERIDOL. 004337 04-08

REFUSE
- THE RIGHTS OF INVOLUNTARY-PATIENTS TO REFUSE PHARMACOTHERAPY: WHAT IS REASONABLE? 004730 04-17

REGIME
- SUSTAINED DECREASE IN FAT CONSUMPTION PRODUCED BY AMPHETAMINE IN RATS MAINTAINED ON A DIETARY SELF-SELECTION REGIME. 004150 04-04

REGIMEN
- POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS. 004720 04-17

REGULATED
- DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES – ARE THEY CELL ADHESION MOLECULES? 003724 04-03

REGULATING
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04

REGULATION
THE DOPAMINE-RECEPTOR: ISOLATION, PURIFICATION AND REGULATION. 003660 04-01
ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS. 003801 04-03
REGULATION OF ALPHA1-ADRENOCEPTORS IN THE CEREBRAL CORTEX OF THE RAT BY THYROID-HORMONES. 003816 04-03
REGULATION OF BIOGENESIS OF PSYCHOTOMIMETIC AMINES. (UNPUBLISHED PAPER). 003818 04-03
CATECHOLAMINE SYNTHESIS REGULATION IN HYPOTHALAMIC SYNAPTOSOMES. (UNPUBLISHED PAPER). 003829 04-03
REGULATION OF NORADRENALINE OVERFLOW IN RAT-CEREBRAL-CORTEX BY PROSTAGLANDIN-E2. 003841 04-03
PRESYNAPTIC REGULATION OF THE RELEASE OF ACETYLCHOLINE BY 5 HYDROXYTRYPTAMINE. 003843 04-03
EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER). 003960 04-03
REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE. 003984 04-03
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS. 003992 04-03
CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS. 004032 04-03
PHARMACOLOGICAL REGULATION OF CALMODULIN. 004052 04-03
GENOTYPIC INFLUENCES ON STRIATAL DOPAMINERGIC REGULATION IN MICE. 004217 04-04
DOWN REGULATION OF NORADRENERGIC-RECEPTOR FUNCTION BY ANTIDEPRESSANT-DRUGS: FUNCTIONAL SIGNIFICANCE AND DISTINCTION FROM ANTIPSYCHOTIC-DRUGS. (UNPUBLISHED PAPER). 004746 04-17

RELAPSE
RELAPSE AFTER SHORT-TERM DRUG-THERAPY IN NEUROTIC-OUTPATIENTS. 004400 04-09

RELAPSES
UNWANTED EFFECTS OF LITHIUM-CARBONATE USED IN THE PREVENTION OF RELAPSES OF AFFECTIVE-ILLNESS. 004625 04-15

RELEASE
VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03
CHLORPROMAZINE, HALOPERIDOL, METOCLOPRAMIDE AND DOMPERIDONE RELEASE PROLACTIN THROUGH DOPAMINE ANTAGONISM AT LOW CONCENTRATIONS BUT PARADOXICALLY INHIBIT PROLACTIN RELEASE AT HIGH-CONCENTRATIONS. 003731 04-03
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03
GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE. 003786 04-03
ROLE OF THE ANTERIOR PITUITARY GABA-RECEPTOR IN THE CONTROL OF PROLACTIN RELEASE. 003809 04-03
OXOTREMORINE DOES NOT ENHANCE ACETYLCHOLINE RELEASE FROM RAT DIAPHRAGM PREPARATIONS. 003819 04-03
PHARMACOLOGIC MANIPULATION OF BRAIN AND PITUITARY ENDORPHIN CONTENT AND RELEASE. 003837 04-03
PRESYNAPTIC REGULATION OF THE RELEASE OF ACETYLCHOLINE BY 5 HYDROXYTRYPTAMINE. 003843 04-03
LONG-TERM-TREATMENT OF RATS WITH MORPHINE DECREASES IN VITRO BIOSYNTHESIS IN AND RELEASE OF BETA ENDORPHIN FROM INTERMEDIATE/POSTERIOR LOBES OF PITUITARY. 003846 04-03
INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03
ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE. 003863 04-03
EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FROM RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST. 003864 04-03
BACLOFEN: STEREOSELECTIVE INHIBITION OF EXCITANT AMINO-ACID RELEASE. 003867 04-03
CHARACTERIZATION OF ENKEPHALIN RELEASE FROM RAT STRIATUM. 003909 04-03
EFFECTS OF HALOPEMIDE ON GABA-RECEPTOR BINDING, UPTAKE AND RELEASE. 003913 04-03
NEUROTENSIN RELEASE BY RAT HYPOTHALAMIC FRAGMENTS IN VITRO. 003920 04-03
THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS. 003924 04-03
INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03
CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES. 003937 04-03
THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS. 003953 04-03
HYPOTENSION ALTERS THE RELEASE OF CATECHOLAMINES IN THE HYPOTHALAMUS OF THE CONSCIOUS RABBIT. 003968 04-03
EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES. 003970 04-03
STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES. 003973 04-03
EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. 003983 04-03
IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA. 004011 04-03
DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09

RELEASING
PROLACTIN RELEASING POTENCIES OF ANTIPSYCHOTIC AND RELATED NONANTIPSYCHOTIC COMPOUNDS IN FEMALE RATS: RELATION TO CLINICAL POTENCIES. 003830 04-03
DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE. 004138 04-04

REM
PHENOXYBENZAMINE AND BROMOCRIPTINE ATTENUATE NEED FOR REM SLEEP IN RATS. 004203 04-04
CHANGES OF RESPONSE TO DOPAMINERGIC DRUGS IN RATS SUBMITTED TO REM SLEEP DEPRIVATION. 004239 04-04

RENAL
EFFECTS OF INDOMETHACIN AND METHYLPREDNISOLONE ON RENAL ELIMINATION OF LITHIUM IN THE RAT. 004270 04-05

RENAL-DISEASE
METHADONE USE IN PATIENTS WITH CHRONIC RENAL-DISEASE. 004462 04-11
DRUGS AND RENAL-DISEASE. 004645 04-15

REPEATABLE
PREDICTING STIMULANT-EFFECTIVENESS IN HYPERACTIVE-CHILDREN WITH A REPEATABLE NEUROPSYCHOLOGICAL-BATTERY: A PRELIMINARY STUDY.
004453 04-11

REPETITIVE
EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS.
004148 04-04

RESEARCH
OPIATE MECHANISMS: EVALUATION OF RESEARCH INVOLVING NEURONAL ACTION POTENTIALS.
003886 04-03
ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA.
004316 04-08
TREATMENT OF DEPRESSION WITH AN MAO-INHIBITOR FOLLOWED BY 5 HTP — AN UNFINISHED RESEARCH PROJECT.
004377 04-09
CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS.
004603 04-15
NEW BIOLOGICAL RESEARCH RELEVANT TO ANXIETY.
004705 04-17

RESERPINE
RESERPINE EFFECT ON THE AXONAL TRANSPORT OF DOPAMINE-BETA-HYDROXYLASE AND TYROSINE-HYDROXYLASE IN RAT-BRAIN.
003904 04-03

RESERPINE-INDUCED
LITHIUM AMELIORATION OF RESERPINE-INDUCED HYPOACTIVITY IN RATS.
004167 04-04
EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE.
004186 04-04

RESERPINIZED
DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE.
004130 04-04

RESIDUE
BIOLOGICAL EVALUATION OF A TRH ANALOGUE WITH A MODIFIED PROLINE RESIDUE.
003662 04-01

RESPIRATION
AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION.
003917 04-03
EFFECT OF INORGANIC LEAD ON RAT-BRAIN MITOCHONDRIAL RESPIRATION AND ENERGY PRODUCTION.
004267 04-05

RESPIRATORY
OPIATE SYSTEM INFLUENCES CENTRAL RESPIRATORY CHEMOSENSORS.
003971 04-03
RESPIRATORY DEPRESSION PRODUCED BY DIAZEPAM IN CATS: EFFECT OF ANESTHESIA.
004272 04-05
POTENTIATION OF THE MORPHINE-INDUCED RESPIRATORY RATE DEPRESSION BY CAPTOPRIL.
004275 04-05
FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES.
004729 04-17

RESPONDERS
RESPONDERS AND NONRESPONDERS TO CHLORDIAZEPOXIDE AND PLACEBO. A DISCRIMINANT FUNCTION ANALYSIS. (UNPUBLISHED PAPER).
004420 04-10

RESTORATION
THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH.
003882 04-03

RESTRAINED
EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN.
003794 04-03

RETENTION
THE EFFECTS OF ANTIDEPRESSANTS ON THE RETENTION AND METABOLISM OF (3H) NOREPINEPHRINE IN RAT-BRAIN SLICES.
003763 04-03
EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE.
004097 04-04

RETICULAR
MORPHINE AND METHIONINE-ENKEPHALIN: DIFFERENT EFFECTS ON SPONTANEOUS AND EVOKED NEURONAL FIRING IN THE MESENCEPHALIC RETICULAR FORMATION OF THE RAT.
003849 04-03
CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS.
003972 04-03

RETICULOSEPTAL
THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS.
004510 04-13

RETINA
STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE.
003706 04-02
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA.
003776 04-03
CHANGES OF ELECTRORETINOGRAM AND NEUROCHEMICAL ASPECTS OF GABAERGIC NEURONS OF RETINA AFTER INTRAOCULAR INJECTION OF KAINIC-ACID IN RATS.
003807 04-03
SOME BARBITURATES ENHANCE THE EFFECT OF MUSCIMOL ON DOPAMINE TURNOVER IN THE RAT RETINA.
003873 04-03
BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA.
003954 04-03
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS.
004051 04-03

RETROGRADE
PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT.
003734 04-03
RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS.
004231 04-04

REUPTAKE
MONOSODIUM-GLUTAMATE: INCREASED NEUROTOXICITY AFTER REMOVAL OF NEURONAL REUPTAKE SITES.
003889 04-03
DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET?
003962 04-03
ATTENUATION OF PETHIDINE-INDUCED ANTINOCICEPTION BY ZIMELIDINE, AN INHIBITOR OF 5 HYDROXYTRYPTAMINE REUPTAKE.
004118 04-04
EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS.
004144 04-04
THE ANTIDEPRESSANT EFFECTS OF TRAZODONE AND INHIBITION OF PLATELET SEROTONIN REUPTAKE.
004383 04-09

REVERSAL
ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE.
003863 04-03
THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS.
003900 04-03
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY.
004018 04-03
DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE.
004019 04-03
EFFECTS OF NARCOTIC ANTAGONISTS ON L-DOPA REVERSAL OF RESERPINE-INDUCED CATALEPSY AND BLEPHAROPTOSIS IN MICE.
004186 04-04
BEHAVIORAL AND BIOCHEMICAL-STUDIES OF THE SCOPOLAMINE-INDUCED REVERSAL OF NEUROLEPTIC ACTIVITY.
004195 04-04
AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL.
004208 04-04

REVERSE
SEPARATION OF BARBITURATES USING REVERSE PHASE THIN-LAYER-CHROMATOGRAPHY.
004670 04-16

REVERSIBLE
REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE.
004517 04-13

REVIEWS
PROBLEMS REMAIN IN REVIEWS OF MEDICAID FINANCED DRUG-THERAPY IN NURSING-HOMES. 004736 04-17

REWARD
REWARD AND DETECTION THRESHOLDS FOR BRAIN-STIMULATION: DISSOCIATIVE-EFFECTS OF COCAINE. 004160 04-04
MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04
DISRUPTION OF AUTOSHAPED RESPONDING TO A SIGNAL OF BRAIN-STIMULATION REWARD BY NEUROLEPTIC-DRUGS. 004199 04-04

RHESUS-MONKEY
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03

RHESUS-MONKEYS
THE EFFECTS OF ELECTRIC-SHOCK ON RESPONDING MAINTAINED BY COCAINE IN RHESUS-MONKEYS. 004071 04-04
CHLORPROMAZINE EFFECTS ON COCAINE-REINFORCED RESPONDING IN RHESUS-MONKEYS: RECIPROCAL MODIFICATION OF RATE ALTERING EFFECTS OF THE DRUGS. 004133 04-04
DISCRIMINATIVE-STIMULUS EFFECTS OF ETORPHINE IN RHESUS-MONKEYS. 004134 04-04

RIA
METHAQUALONE RIA STRUCTURE VERSUS REACTIVITY. 003657 04-01
RIA OPIATES: STRUCTURE VERSUS REACTIVITY. 003659 04-01

RIGHT
THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

RIGHT-TO-REFUSE
THE CONSTITUTIONAL RIGHT-TO-REFUSE ANTIPSYCHOTIC-MEDICATIONS. 004496 04-12

RIGHTS
THE RIGHTS OF INVOLUNTARY-PATIENTS TO REFUSE PHARMACOTHERAPY: WHAT IS REASONABLE? 004730 04-17

RING-OPENING
REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE. 004517 04-13

RISK
POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS. 004720 04-17

RNA-POLYMERASE-BII
PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-BII FROM RAT-BRAIN NUCLEI. 003679 04-01

RNA-POLYMERASE-II
RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). 003998 04-03

RO-11-2465
EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS -- IN VITRO DETERMINATION OF THE IC50. 004532 04-13

RO-4-1284
EFFECT OF RO-4-1284 ON AUDIOGENIC-SEIZURE SUSCEPTIBILITY AND INTENSITY IN EPILEPSY-PRONE RATS. 003865 04-03

RODENT
CHARACTERIZATION OF THE BASIC PROTEINS FROM RODENT PERIPHERAL-NERVOUS-SYSTEM MYELIN. 003665 04-01

RODENTS
BEHAVIOURAL AND NEUROCHEMICAL PROPERTIES OF 1 1 INDOL-3-YLMETHYLPIPERID-4-YL-3-BENZOYLUREA (WY-23093) IN RODENTS. 003686 04-02

ROTATIONAL-BEHAVIOR
THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04
HANDLING-INDUCED SEIZURES AND ROTATIONAL-BEHAVIOR IN THE MONGOLIAN-GERBIL. 004216 04-04
DOPAMINE-RECEPTOR CHANGES FOLLOWING DESTRUCTION OF THE NIGROSTRIATAL PATHWAY: LACK OF A RELATIONSHIP TO ROTATIONAL-BEHAVIOR. 004229 04-04

ROTATIONAL-BEHAVIOUR
ROTATIONAL-BEHAVIOUR ELICITED BY 5 HT IN THE RAT: EVIDENCE FOR AN INHIBITORY ROLE OF 5 HT IN THE SUBSTANTIA-NIGRA AND CORPUS-STRIATUM. 004141 04-04

RUNNING
NALOXONE SUPPRESSES FEEDING AND DRINKING BUT NOT WHEEL RUNNING IN RATS. 004080 04-04

RX-336-M
RX-336-M, A NEW CHEMICAL TOOL IN THE ANALYSIS OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004093 04-04

SAFETY
TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09
CNS EFFECTS OF ISF-2522, A NEW NOOTROPIC (A PHASE I SAFETY AND CNS EFFICACY STUDY WITH QUANTITATIVE PHARMACOEEG AND PHARMACOPSYCHOLOGY). 004519 04-13

SALBUTAMOL
MANIC-STATE INDUCED BY SALBUTAMOL TAKEN ORALLY. 004622 04-15

SALINE
CENTRAL-EFFECTS OF ANGIOTENSIN-II IN WATER AND SALINE LOADED RATS. 003845 04-03
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04
RAPID ACQUISITION OF A TWO-DRUG DISCRIMINATION: TIME OF DAY EFFECT UPON SALINE STATE. 004214 04-04

SALIVA
QUANTITATION AND COMPARISON OF PHENOBARBITAL LEVELS IN THE PLASMA, SALIVA, AND CEREBROSPINAL-FLUID OF THE RAT, AND THE DEMONSTRATION OF AN ALTERATION OF DRUG PASSAGE BY ETHANOL. 003725 04-03
CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM. 004545 04-13
SALIVA BENZODIAZEPINE LEVELS AND CLINICAL OUTCOME IN DETOXIFYING ALCOHOLIC-PATIENTS. 004671 04-16

SALIVARY
PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11
THE EFFECT OF FIVE TRICYCLIC-ANTIDEPRESSANTS ON SALIVARY FLOW AND MOOD IN HEALTHY VOLUNTEERS. 004560 04-14

SAMPLES
RAPID DETERMINATION OF CHLORPROMAZINE-HCL AND TWO OXIDATION PRODUCTS IN VARIOUS PHARMACEUTICAL SAMPLES USING HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHY AND FLUORESCENCE DETECTION. 004302 04-06

SAMSO
PSYCHIATRIC-ILLNESS AND USE OF PSYCHOTROPIC-DRUGS IN THE GEOGRAPHICALLY DELIMITED POPULATION OF SAMSO, DENMARK. 004734 04-17

SAPHENOUS
INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN. 003756 04-03

SATIETY
SATIETY CENTER NEUROANATOMY. (UNPUBLISHED PAPER). 003678 04-01

SCALES
MILD, MODERATE, SEVERE -- THE STATISTICAL ANALYSIS OF SHORT ORDINAL SCALES. 004677 04-16

SCHEDULE
SCHEDULE DEPENDENT CHANGE OF PUNISHED-RESPONDING AFTER DIAZEPAM IN RATS. 004165 04-04
THE EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON PERFORMANCE UNDER A DIFFERENTIAL-REINFORCEMENT-OF-LOW-RATES SCHEDULE IN RATS. 004175 04-04

SCHEDULE-CONTROLLED
EFFECTS OF NORCOCAINE AND SOME NORCOCAINE DERIVATIVES ON SCHEDULE-CONTROLLED BEHAVIOR OF PIGEONS AND SQUIRREL-MONKEYS. 004012 04-03
INTERACTIONS BETWEEN NARCOTIC AGONISTS, PARTIAL AGONISTS AND ANTAGONISTS EVALUATED BY SCHEDULE-CONTROLLED BEHAVIOR. 004127 04-04
EFFECTS OF NARCOTIC ABSTINENCE ON SCHEDULE-CONTROLLED BEHAVIOR IN DEPENDENT RATS. 004230 04-04

SCHEDULES
SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

SCHIZOPHRENIA
A CONTROLLED-STUDY OF L-DOPA IN SCHIZOPHRENIA WITH REFERENCE TO THE THEORY OF DOPAMINERGIC-RECEPTOR HYPERSENSITIVITY. 004312 04-08
DRUGS AND SCHIZOPHRENIA. 004314 04-08
ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA. 004316 04-08
PRELIMINARY TRIAL OF CLONIDINE TREATMENT IN TWO PATIENTS SUFFERING FROM CHRONIC SCHIZOPHRENIA. 004320 04-08
DES-TYROSYL-GAMMA-ENDORPHIN IN SCHIZOPHRENIA: A DOUBLE-BLIND TRIAL IN 13 PATIENTS. 004322 04-08
IMMUNOLOGICAL COMPONENTS IN SCHIZOPHRENIA. 004324 04-08
APOMORPHINE IN SCHIZOPHRENIA. 004327 04-08
A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004333 04-08
THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08
PSYCHOPHARMACOLOGICAL AND SOCIAL ASPECTS OF SCHIZOPHRENIA: RECENT DEVELOPMENTS. 004336 04-08
THE PROBLEM OF PSYCHOPHARMACOTHERAPY OF SLOWLY PROGRESSIVE HYPOCHONDRIACAL SCHIZOPHRENIA. 004340 04-08
PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13
A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA. 004584 04-14
DRUG-INDUCED PSYCHOSIS AND SCHIZOPHRENIA IN ADOLESCENTS. 004596 04-15
COMPUTER-ANALYZED ELETROENCEPHALOGRAM TO PREDICT THE THERAPEUTIC OUTCOME IN SCHIZOPHRENIA. 004680 04-16
CHOLINOMIMETICS IN MANIA, SCHIZOPHRENIA, AND MEMORY-DISORDERS. 004703 04-17
THE DRUG PATHOMORPHOSIS OF SCHIZOPHRENIA. 004732 04-17
BENZODIAZEPINES IN SCHIZOPHRENIA: A NEED FOR REASSESSMENT. 004733 04-17

SCHIZOPHRENIC-EPISODES
EVALUATIONS OF LOXAPINE-SUCCINATE IN THE AMBULATORY TREATMENT OF ACUTE SCHIZOPHRENIC-EPISODES. 004345 04-08

SCHIZOPHRENIC-OUTPATIENTS
A FOLLOWUP STUDY OF SCHIZOPHRENIC-OUTPATIENTS TREATED WITH DEPOT NEUROLEPTICS. 004342 04-08

SCHIZOPHRENIC-PATIENTS
CORRELATIONS BETWEEN VISUAL-EVOKED-POTENTIALS AND PSYCHOPATHOLOGICAL-FINDINGS IN SCHIZOPHRENIC-PATIENTS UNDER TREATMENT WITH VARIOUS PSYCHOPHARMACOLOGICAL-DRUGS. 004315 04-08
PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08
THE EFFECT OF LONG-TERM MAINTENANCE-THERAPY ON SCHIZOPHRENIC-PATIENTS USING SOMATOTHERAPEUTIC MEASURES. 004325 04-08
THE TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: AN INTERVIEW WITH DR. J. HUSSER. 004328 04-08
THE USE OF SODIUM-NUCLEINATE IN THE TREATMENT OF SCHIZOPHRENIC-PATIENTS. 004339 04-08
THE EFFECT OF AN INTENSIVE COURSE OF NEUROLEPTIC-DRUGS ON SCHIZOPHRENIC-PATIENTS AND THEIR SUBSEQUENT COURSE FOLLOWING THE CESSATION OF ALL NEUROLEPTIC-MEDICATION. 004341 04-08
PLASMA DOPAMINE-BETA-HYDROXYLASE ACTIVITY IN CHRONIC SCHIZOPHRENIC-PATIENTS TESTED WITH SINGLE-DOSE OF 2 BROMO-ALPHA-ERGOCRIPTINE (PARLODEL). 004343 04-08
LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BICHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08
THE STATE OF THE ADRENERGIC AND CHOLINERGIC SYSTEMS IN SCHIZOPHRENIC-PATIENTS DURING PSYCHPHARMACOTHERAPY. 004526 04-13
PROLACTIN AND GROWTH-HORMONE STUDIES IN SCHIZOPHRENIC-PATIENTS AND NORMAL CONTROLS. 004538 04-13
EFFECTS OF NEUROLEPTIC ADJUSTMENT ON CLINICAL CONDITION AND TARDIVE-DYSKINESIA IN SCHIZOPHRENIC-PATIENTS. 004595 04-15

SCHIZOPHRENICS
A TWELVE-YEAR FOLLOWUP OF THE NIMH-PRB HIGH-DOSE CHLORPROMAZINE STUDY OF CHRONIC SCHIZOPHRENICS – IMPLICATIONS FOR DEINSTITUTIONALIZATION. (UNPUBLISHED PAPER). 004323 04-08
EFFECTS OF ALTHESIN IN PSYCHOTHERAPY OF SCHIZOPHRENICS: PRELIMINARY REPORT. 004331 04-08
HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004332 04-08
MOBILIZATION OF REFRACTORY CHRONIC SCHIZOPHRENICS WITH HALOPERIDOL. 004337 04-08

SCHOOL
PREVALENCE OF HYPERACTIVITY AND RELATED TREATMENTS AMONG ELEMENTARY SCHOOL CHILDREN. 004469 04-11
ASTHMA THERAPY MAY UNDERCUT KIDS AT SCHOOL. 004475 04-11

SCIATIC-NERVE
THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT. 003897 04-03
EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

SCOPOLAMINE
SCOPOLAMINE IN CHOLINOLYTIC TREATMENT. 004468 04-11
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13

SCOPOLAMINE-INDUCED
TIME-DEPENDENT CHANGES IN ANTEROGRADE SCOPOLAMINE-INDUCED AMNESIA IN RATS. 004182 04-04
BEHAVIORAL AND BIOCHEMICAL-STUDIES OF THE SCOPOLAMINE-INDUCED REVERSAL OF NEUROLEPTIC ACTIVITY. 004195 04-04

SCREENING
A SIMPLE HISTOCHEMICAL SCREENING METHOD FOR AMINE UPTAKE. 004205 04-04
MASS SCREENING AND CONFIRMATION OF DIAZEPAM IN URINE BY EMIT THIN-LAYER-CHROMATOGRAPHY. 004672 04-16

SECOBARBITAL
INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS. 004022 04-03
CHOICE BETWEEN FOOD AND HEROIN: EFFECTS OF MORPHINE, NALOXONE, AND SECOBARBITAL 004123 04-04
HUMAN SOCIAL CONVERSATION: EFFECTS OF ETHANOL, SECOBARBITAL AND CHLORPROMAZINE. 004582 04-14

SECOND-GENERATION
PHARMACOLOGICAL-PROPERTIES OF SOME SECOND-GENERATION ANTIDEPRESSANT-DRUGS. 004726 04-17

SECOND-ORDER
SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04

SECRETION
EFFECT OF NICOTINE ON IN VIVO SECRETION OF MELANOCORTICOTROPIC-HORMONES IN THE RAT. 003759 04-03
INHIBITION OF PENTAGASTRIN-STIMULATED AND OVERNIGHT GASTRIC SECRETION BY LM24056, A NEW PHENOTHIAZINE DERIVED ANTISECRETORY DRUG. 004306 04-07

SEDATIVE
EVIDENCE FOR SEDATIVE EFFECTS OF LOW-DOSES OF MORPHINE IN MICE INVOLVING RECEPTORS INSENSITIVE TO NALOXONE. 004173 04-04
ETHANOL SEDATIVE HYPNOTIC-INTERACTIONS: IN VITRO STUDIES ON NA-K-ACTIVATED ADENOSINE-TRIPHOSPHATASE. 004269 04-05
AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07

SEIZURE
EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT. 003951 04-03
COCAINE AND SEIZURE PROTECTION IN MICE OF VARYING BRAIN WEIGHTS. 004103 04-04
NEW ANTIDEPRESSANT-DRUGS AND THE SEIZURE THRESHOLD. 004662 04-15

SEIZURES
BRAIN BENZODIAZEPINE-RECEPTORS AND THEIR RAPID CHANGES AFTER SEIZURES IN THE MONGOLIAN-GERBIL. 003717 04-03
SPECIFIC AND NONSPECIFIC MULTIPLE UNIT ACTIVITIES DURING PENTYLENETETRAZOL SEIZURES. I. ANIMALS WITH ENCEPHALE ISOLE. 004046 04-03
RELATIONSHIP BETWEEN PENTYLENETETRAZOL-INDUCED SEIZURES AND BRAIN PENTYLENETETRAZOL LEVELS IN MICE. 004061 04-03
EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS. 004101 04-04
NORADRENERGIC INFLUENCES ON SOUND-INDUCED SEIZURES. 004137 04-04
EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004144 04-04
EFFECTS OF FLUOXETINE ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004145 04-04
EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810) AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS. 004149 04-04
EFFECT OF GAMMA VINYL-GABA ON BICUCULLINE-INDUCED SEIZURES. 004157 04-04
THE BENZODIAZEPINES AND INOSINE ANTAGONIZE CAFFEINE-INDUCED SEIZURES. 004172 04-04
HANDLING-INDUCED SEIZURES AND ROTATIONAL-BEHAVIOR IN THE MONGOLIAN-GERBIL. 004216 04-04
SEROTONERGIC MECHANISM IN SEIZURES KINDLED FROM THE RABBIT AMYGDALA. 004227 04-04
EFFECT OF COCAINE AND LIDOCAINE ON THE EXPRESSION OF KINDLED SEIZURES IN THE RAT. 004233 04-04

SELECTIVE
SELECTIVE MODIFICATION BY OPIATES OF NEURONAL ACTIVITY OF THE MEDIAL BASAL HYPOTHALAMUS. 003773 04-03
ANESTHETICS AND THE HABENULO-INTERPEDUNCULAR SYSTEM: SELECTIVE SPARING OF METABOLIC ACTIVITY. 003833 04-03
SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS. 003859 04-03
MULTIPLE ALPHA2-NORADRENERGIC-RECEPTOR SITES IN RAT-BRAIN: SELECTIVE REGULATION OF HIGH-AFFINITY (3H)CLONIDINE BINDING BY GUANINE-NUCLEOTIDES AND DIVALENT-CATIONS. 003992 04-03
PHYSIOLOGICAL SIGNIFICANCE OF DOPAMINE-AUTORECEPTORS AS STUDIED FOLLOWING THEIR SELECTIVE BLOCKADE BY MOLINDONE. 004065 04-04
SELECTIVE EFFECT OF ETHANOL ON THE VESTIBULAR NUCLEUS NEURONS IN THE CAT. 004139 04-04
SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION. 004518 04-13
SELECTIVE EFFECTS OF BARBITURATE AND AMPHETAMINE ON INFORMATION-PROCESSING AND RESPONSE EXECUTION. 004563 04-14
IS THE FAILURE OF (-)DEPRENYL, A SELECTIVE MONOAMINE-OXIDASE-B-INHIBITOR, TO ALLEVIATE DEPRESSION RELATED TO FREEDOM FROM THE CHEESE EFFECT? 004640 04-15
HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND. 004676 04-16

SELECTIVITY
AMINE UPTAKE INHIBITORS: CRITERIA OF SELECTIVITY. 003921 04-03

SELF-ADMINISTERED
BEHAVIORAL-EFFECTS OF SELF-ADMINISTERED COCAINE: RESPONDING MAINTAINED ALTERNATELY BY COCAINE AND ELECTRIC-SHOCK IN SQUIRREL-MONKEYS. 004225 04-04

SELF-ADMINISTRATION
EFFECTS OF LEVO ALPHA ACETYLMETHADOL (LAAM) ON MORPHINE SELF-ADMINISTRATION IN THE RAT. 004170 04-04
ORAL SELF-ADMINISTRATION OF MORPHINE IN RATS. 004258 04-04
AN IMPROVED PNEUMATIC SYRINGE FOR SELF-ADMINISTRATION OF DRUGS BY RATS. 004304 04-06

SELF-RATING
ON THE RELATIONSHIP BETWEEN MEASURES OBTAINED BY VIDEO-ANALYSIS OF NONVERBAL-BEHAVIOR AND SELF-RATING OF MOOD. 004410 04-09

SELF-SELECTION
SUSTAINED DECREASE IN FAT CONSUMPTION PRODUCED BY AMPHETAMINE IN RATS MAINTAINED ON A DIETARY SELF-SELECTION REGIME. 004150 04-04

SENESCENT
APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT. 004651 04-15

SENILE-DEMENTIA
ACUTE EFFECT OF DRUGS UPON MEMORY OF PATIENTS WITH SENILE-DEMENTIA. 004561 04-14
SENILE-DEMENTIA IN ITS STILL GUIDABLE INITIAL PHASE. 004698 04-17

SENSITIVE
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03
A RAPID AND SENSITIVE RADIORECEPTOR ASSAY FOR TERTIARY AMINE TRICYCLIC-ANTIDEPRESSANTS. 004689 04-16
A SENSITIVE BENZODIAZEPINE RADIOIMMUNOASSAY OF BROAD SPECIFICITY. 004693 04-16

SENSITIVITY
5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS. 003710 04-03
THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS. 003713 04-03
NEURONAL SENSITIVITY OF SOME BRAIN REGIONS TO ANGIOTENSIN-II IN RABBITS. 003716 04-03
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03
SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT. 003877 04-03
CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS. 003972 04-03
ALTERATIONS IN GAMMA AMINOBUTYRIC-ACID-RECEPTOR SENSITIVITY FOLLOWING ACUTE AND CHRONIC ETHANOL TREATMENTS. 004037 04-03

FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION.
004088 04-04
SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS.
004234 04-04

SENSORIMOTOR
THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS.
003713 04-03

SENSORY
SENSORY NEUROTOXINS: CHEMICALLY-INDUCED SELECTIVE DESTRUCTION OF PRIMARY SENSORY NEURONS.
003859 04-03
BEHAVIORAL-EVIDENCE THAT SUBSTANCE-P MAY BE A SPINAL-CORD SENSORY NEUROTRANSMITTER.
004200 04-04
THE ROLE OF RETICULOSEPTAL INPUTS IN THE FORMATION OF DIFFERENT TYPES OF SENSORY REACTIONS OF THE HIPPOCAMPAL NEURONS.
004510 04-13

SEPARATION
SEPARATION OF BARBITURATES USING REVERSE PHASE THIN-LAYER-CHROMATOGRAPHY.
004670 04-16

SEPHADEX-G-10
DETERMINATION OF PICOMOLE AMOUNTS OF DOPAMINE, NORADRENALINE, 3,4 DIHYDROXYPHENYLALANINE, 3,4 DIHYDROXYPHENYLACETIC-ACID, HOMOVANILLIC-ACID, AND 5 HYDROXYINDOLACETIC-ACID IN NERVOUS-TISSUE AFTER ONE-STEP PURIFICATION ON SEPHADEX-G-10, USING HIGH.
004305 04-06

SEPTI
DESTRUCTION OF 5 HYDROXYTRYPTAMINERGIC NEURONS AND THE DYNAMICS OF DOPAMINE IN NUCLEUS-ACCUMBENS SEPTI AND OTHER FOREBRAIN REGIONS OF THE RAT.
004171 04-04

SEQUELAE
BEHAVIORAL AND REGIONAL NEUROCHEMICAL SEQUELAE OF HIPPOCAMPAL DESTRUCTION IN THE RAT.
003721 04-03
SEQUELAE OF 6 MONTHS CONTINUOUS ADMINISTRATION OF CIS(Z)- AND TRANS(E) FLUPENTHIXOL IN THE RAT.
004282 04-05

SEROTONERGIC
ANTAGONISM OF ETHANOL-INDUCED DECREASE IN LH BY P CHLOROPHENYLALANINE: LACK OF CORRELATION WITH ALTERED SEROTONERGIC MECHANISMS.
003748 04-03
COMPARATIVE-EFFECTS OF SUBSTITUTED PHENYLETHYLAMINES ON BRAIN SEROTONERGIC MECHANISMS.
003854 04-03
AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION.
003917 04-03
APPARENT SEROTONERGIC MODULATION OF THE DOSE-DEPENDENT BIPHASIC RESPONSE OF NEOSTRIATAL NEURONS PRODUCED BY D-AMPHETAMINE.
003981 04-03
A COMMON MECHANISM FOR LYSERGIC-ACID, INDOLEALKYLAMINE AND PHENETHYLAMINE HALLUCINOGENS: SEROTONERGIC MEDIATION OF BEHAVIORAL-EFFECTS IN RATS.
004007 04-03
EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS.
004026 04-03
SEROTONERGIC MECHANISM IN SEIZURES KINDLED FROM THE RABBIT AMYGDALA.
004227 04-04
TONIC IMMOBILITY IN DOMESTIC FOWL: POSSIBLE INTERACTION OF SEROTONERGIC AND DOPAMINERGIC MECHANISMS.
004246 04-04
PERIPHERAL SEROTONERGIC AND ADRENERGIC RESPONSES IN DEPRESSION.
004364 04-09
SEROTONERGIC APPROACHES TO THE MODIFICATION OF BEHAVIOR IN THE LESCH-NYHANS-SYNDROME.
004576 04-14

SEROTONERGIC-RECEPTORS
THE EFFECTS OF TRYPTOPHAN AND MANIPULATIONS OF SEROTONERGIC-RECEPTORS ON TONIC IMMOBILITY IN CHICKENS.
004245 04-04

SEROTONERGICALLY-INFLUENCED
PERIPHERAL-CORRELATES OF SEROTONERGICALLY-INFLUENCED BEHAVIORS IN VERVET-MONKEYS (CERCOPITHECUS-AETHIOPS-SABAEUS).
004204 04-04

SEROTONIN
EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN.
003794 04-03
PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS.
003869 04-03
THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH.
003882 04-03
DOES HIGH-AFFINITY (3H) IMIPRAMINE BINDING LABEL SEROTONIN REUPTAKE SITES IN BRAIN AND PLATELET?
003962 04-03
IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA.
004011 04-03
THE EFFECT OF SEROTONIN ON THE EXOSECRETORY ACTION OF THE PANCREAS.
004043 04-03
ANORECTIC-PROPERTIES OF A NEW LONG ACTING SEROTONIN UPTAKE INHIBITOR.
004105 04-04
THE EFFECTS OF P CHLOROAMPHETAMINE ADMINISTRATION ON LOCOMOTOR-ACTIVITY AND SEROTONIN IN NEONATAL AND ADULT RATS. (UNPUBLISHED PAPER).
004169 04-04
CATECHOLAMINE SEROTONIN INTERACTION EFFECTS ON ACTIVITY IN RATS NEONATALLY TREATED WITH 6 HYDROXYDOPAMINE.
004194 04-04
A SIMPLE DETERMINATION OF SEROTONIN, 5 HYDROXYINDOLEACETIC-ACID AND 5 HYDROXYTRYPTOPHAN-DECARBOXYLASE ACTIVITY IN RAT-BRAIN AREAS AND PARALLEL CORRELATION AMONG THE LEVELS.
004301 04-06
THE ANTIDEPRESSANT EFFECTS OF TRAZODONE AND INHIBITION OF PLATELET SEROTONIN REUPTAKE.
004383 04-09
EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS -- IN VITRO DETERMINATION OF THE IC50.
004532 04-13
ANTIDEPRESSANTS AND THE SEROTONIN UPTAKE IN PLATELETS.
004727 04-17

SEROTONIN-RECEPTOR
DOM AND RELATED 2,5 DIMETHOXY-4-ALKYLPHENYLISOPROPYLAMINES: BEHAVIORAL AND SEROTONIN-RECEPTOR PROPERTIES.
003690 04-02

SEROTONIN-RECEPTORS
(3H)METERGOLINE: A NEW LIGAND OF SEROTONIN-RECEPTORS IN THE RAT-BRAIN.
003825 04-03

SEROTONINERGIC
EFFECTS OF ZIMELIDINE ON SEROTONINERGIC AND NORADRENERGIC NEURONS AFTER REPEATED ADMINISTRATION IN THE RAT.
003991 04-03

SEROTONIN2-RECEPTORS
DIFFERENTIAL-EFFECTS OF ELECTROCONVULSIVE-SHOCK AND ANTIDEPRESSANT-DRUGS ON SEROTONIN2-RECEPTORS IN RAT-BRAIN.
003878 04-03
REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE.
003964 04-03

SERUM
BRAIN AND SERUM CALCIUM CONCENTRATIONS FOLLOWING ELECTROCONVULSIVE-SHOCK OR BICUCULLINE-INDUCED CONVULSIONS IN RATS.
003736 04-03
PROTEIN BINDING OF CHLORPROMAZINE IN CEREBROSPINAL-FLUID AND SERUM.
004311 04-08
SERUM CONCENTRATION OF ANTICONVULSANTS. PHARMACOKINETIC FINDINGS AND THEIR PRACTICAL APPLICATION.
004443 04-11
INFLUENCE OF CARBAMAZEPINE ON SERUM THYROXINE AND TRIIODOTHYRONINE IN PATIENTS WITH EPILEPSY.
004488 04-11
CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM.
004545 04-13
ANTIEPILEPTIC THERAPY WITH PHENYTOIN: WHICH IS THE OPTIMUM SERUM LEVEL?
004586 04-14
TWO CASES OF FORM-FRUSTE-DU-SYNDROME-MALIN WITH HIGH-LEVELS OF SERUM CPK.
004636 04-15
SERUM LEVELS OF BUTORPHANOL BY RADIOIMMUNOASSAY.
004691 04-16

SEVERE
NA-GAMMA-HYDROXYBUTYRATE IN CEREBRAL PROTECTION DURING SEVERE HYPOXEMIA IN THE RAT. 003895 04-03
THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION. 004509 04-13
MILD, MODERATE, SEVERE – THE STATISTICAL ANALYSIS OF SHORT ORDINAL SCALES. 004677 04-16

SEX
SEX, PLASMA PROLACTIN AND PLASMA 3 METHOXY-4-HYDROXYPHENYLGLYCOL (MHPG) PREDICT HERITABLE D-AMPHETAMINE EXCITATION IN MAN. (UNPUBLISHED PAPER). 004565 04-14
DRUGS, ALCOHOL AND SEX. 004706 04-17

SEX-LIFE
THE EFFECTS OF ESTROGEN THERAPY ON THE SEX-LIFE OF POSTMENOPAUSAL-WOMEN. 004573 04-14

SEX-OFFENDERS
TREATMENT OF SEX-OFFENDERS WITH MEDROXYPROGESTERONE-ACETATE. 004450 04-11

SEXUAL-BEHAVIOR
SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS. 004234 04-04
THE EFFECTS OF ANTIANXIETY AND ANTIPSYCHOTIC-DRUGS ON SEXUAL-BEHAVIOR. 004657 04-15

SEXUAL-DISORDERS
PSYCHOPHARMACOTHERAPY OF SEXUAL-DISORDERS IN THE AGED. 004466 04-11

SEXUAL-DYSFUNCTIONS
BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS. 004503 04-13

SEXUAL-EFFECTS
SEXUAL-EFFECTS OF ANTIDEPRESSANTS AND PSYCHOMOTOR STIMULANT-DRUGS. 004646 04-15

SEXUAL-FUNCTIONS
PHARMACOLOGICAL INFLUENCE OF SEXUAL-FUNCTIONS IN ADOLESCENTS. 004436 04-11

SEXUAL-IMPOTENCE
PHARMACOTHERAPY OF SEXUAL-IMPOTENCE IN THE MA 004435 04-11

SEXUAL-MOTIVATION
METHADONE REDUCES SEXUAL-PERFORMANCE AND SEXUAL-MOTIVATION IN THE MALE SYRIAN GOLDEN HAMSTER. 004183 04-04

SEXUAL-OFFENDERS
PHARMACOTHERAPY FOR SEXUAL-OFFENDERS: REVIEW OF THE ACTION OF ANTIANDROGENS WITH SPECIAL REFERENCE TO THEIR PSYCHIC-EFFECTS. 004455 04-11

SEXUAL-PERFORMANCE
METHADONE REDUCES SEXUAL-PERFORMANCE AND SEXUAL-MOTIVATION IN THE MALE SYRIAN GOLDEN HAMSTER. 004183 04-04

SEXUALITY
PHARMACOTHERAPY AND FEMALE SEXUALITY. 004483 04-11

SHAKING-BEHAVIOR
PHARMACOLOGICAL ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04

SHIFTS
THE EFFECT OF SMALL DOSES OF HALOPERIDOL AND CLOZAPINE ON BEHAVIORAL SHIFTS IN CATS, ARISING AFTER CESSATION OF ELECTRICAL-STIMULATION OF THE CAUDATE-NUCLEUS. 004067 04-04

SHOCK-AVOIDANCE
BETA-ADRENERGIC INFLUENCE ON CARDIAC DYNAMICS DURING SHOCK-AVOIDANCE IN DOGS. 003813 04-03

SHORT
MILD, MODERATE, SEVERE – THE STATISTICAL ANALYSIS OF SHORT ORDINAL SCALES. 004677 04-16

SHORT-ACTING
EFFECTS OF A SHORT-ACTING BENZODIAZEPINE ON BRAIN ELECTRICAL-ACTIVITY DURING SLEEP. 004568 04-14

SHORT-TERM
INVOLVEMENT OF CALCIUM CHANNELS IN SHORT-TERM DESENSITIZATION OF MUSCARINIC-RECEPTOR MEDIATED CYCLIC-GMP FORMATION IN MOUSE NEUROBLASTOMA CELLS. 003783 04-03
COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09
RELAPSE AFTER SHORT-TERM DRUG-THERAPY IN NEUROTIC-OUTPATIENTS. 004400 04-09

SHUNT
CHANGES IN GAMMA AMINOBUTYRIC-ACID SHUNT ENZYMES IN REGIONS OF RAT-BRAIN WITH KETAMINE ANESTHESIA. 003891 04-03

SIDE-EFFECTS
A DOUBLE-BLIND MULTICENTRE-TRIAL COMPARING THE EFFICACY AND SIDE-EFFECTS OF MIANSERIN AND CHLORIMIPRAMINE IN DEPRESSED-INPATIENTS AND DEPRESSED-OUTPATIENTS. 004395 04-09
NEUROLEPTICS AND THEIR SIDE-EFFECTS. 004590 04-15
OPHTHALMOLOGICAL SIDE-EFFECTS OF LITHIUM. 004615 04-15
AN EVALUATION OF THE ANTIANXIETY ACTION AND SIDE-EFFECTS OF PROPRANOLOL. 004660 04-15
SIDE-EFFECTS AND UNDESIRABLE COMBINATIONS OF PSYCHOTROPIC-MEDICATIONS. 004663 04-15

SIGMA
ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004053 04-03

SIGNAL
DISRUPTION OF AUTOSHAPED RESPONDING TO A SIGNAL OF BRAIN-STIMULATION REWARD BY NEUROLEPTIC-DRUGS. 004199 04-04

SIGNAL-DETECTION-ANALYSIS
A SIGNAL-DETECTION-ANALYSIS OF MORPHINE EFFECTS ON THE RESPONSE BIAS OF RATS IN A TWO-SHOCK DISCRIMINATION TASK. 004124 04-04

SINGLE
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03
CLASSICAL NEUROLEPTICS AND DECONDITIONING ACTIVITY AFTER SINGLE OR REPEATED TREATMENTS: ROLE OF DIFFERENT CEREBRAL NEUROTRANSMITTERS. 004115 04-04
EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04
NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE. 004264 04-05
PHARMACOKINETICS OF CLOXAZOLAM IN MAN AFTER SINGLE AND MULTIPLE ORAL DOSES. 004530 04-13
TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

SINGLE-BLIND
ANALYSIS OF SINGLE-BLIND AND DOUBLE-BLIND PROCEDURES MAINTENANCE OF PLACEBO-EFFECTS AND DRUG-INDUCED DYSKINESIA WITH MENTALLY-RETARDED PERSON. 004437 04-11

SINGLE-CASE
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HIGH-DOSE ERGOT ALKALOID TREATMENT FOR DEMENTIA. PRELIMINARY REPORT. 004493 04-11

SINGLE-DOSE
PLASMA DOPAMINE-BETA-HYDROXYLASE ACTIVITY IN CHRONIC SCHIZOPHRENIC-PATIENTS TESTED WITH SINGLE-DOSE OF 2 BROMO-ALPHA-ERGOCRIPTINE (PARLODEL). 004343 04-08
SINGLE-DOSE PHARMACOKINETIC DATA ON ZIMELIDINE IN DEPRESSED-PATIENTS. 004385 04-09

SINGLE-THERAPEUTIC-DOSE
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05

SKF-64139
IN VIVO INTRANEURONAL MAO-INHIBITION IN RAT-BRAIN SKF-64139, COMPARISON TO OTHER POTENT PNMT INHIBITORS. 003935 04-03

SKIN
BILATERAL SKIN CONDUCTANCE AND THE PUPILLARY LIGHT DARK REFLEX: MANIPULATION BY CHLORPROMAZINE, HALOPERIDOL, SCOPOLAMINE, AND PLACEBO. 004544 04-13
MITIGATING ACUTE SKIN RASHES AND NAUSEA FROM LITHIUM. 004661 04-15

SLEEP
DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02
DOES RAPID-EYE-MOVEMENT SLEEP PLAY A ROLE IN BRAIN DEVELOPMENT? 004091 04-04
() 6 FLUOROTRYPTOPHAN, AN INHIBITOR OF TRYPTOPHAN-HYDROXYLASE: SLEEP AND WAKEFULNESS IN THE RAT. 004189 04-04
PHENOXYBENZAMINE AND BROMOCRIPTINE ATTENUATE NEED FOR REM SLEEP IN RATS. 004203 04-04
CHANGES OF RESPONSE TO DOPAMINERGIC DRUGS IN RATS SUBMITTED TO REM SLEEP DEPRIVATION. 004239 04-04
COMPUTERIZED ANALYSIS OF SLEEP RECORDINGS APPLIED TO DRUG EVALUATION: MIDAZOLAM IN NORMAL SUBJECTS. 004564 04-14
EFFECTS OF SUPIDIMIDE (CG-3033) ON OBJECTIVE AND SUBJECTIVE SLEEP PARAMETERS (A SLEEP LABORATORY STUDY). 004567 04-14
EFFECTS OF A SHORT-ACTING BENZODIAZEPINE ON BRAIN ELECTRICAL-ACTIVITY DURING SLEEP. 004568 04-14
A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN. 004574 04-14

SLEEP-APNEA
TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY. 004571 04-14

SLEEP-APNEA-SYNDROME
FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES. 004729 04-17

SLEEP-DISORDERS
THE CLASSIFICATION OF SLEEP-DISORDERS AND THE TREATMENT OF VARIOUS FORMS OF SOMNAMBULISM. 004461 04-11

SLEEP-DISTURBANCE
AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07

SLEEP-RELATED
FLURAZEPAM-INDUCED SLEEP-APNEA-SYNDROME IN A PATIENT WITH INSOMNIA AND MILD SLEEP-RELATED RESPIRATORY CHANGES. 004729 04-17

SLEEP-WAKEFULNESS
EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (REDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT. 003703 04-02

SLEEPING-TIME
NEUTRALIZATION OF THE EFFECT OF DELTA9 TETRAHYDROCANNABINOL ON BARBITURATE SLEEPING-TIME BY SPECIFIC ACTIVE IMMUNIZATION. 003803 04-03

SLICE
DIFFERENTIAL TOLERANCE TO THE EFFECTS OF MORPHINE ON EVOKED ACTIVITY IN THE HIPPOCAMPAL SLICE. 003760 04-03
GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE. 003786 04-03
EFFECTS OF ENKEPHALIN, MORPHINE, AND NALOXONE ON THE ELECTRICAL-ACTIVITY OF THE IN VITRO HIPPOCAMPAL SLICE PREPARATION. 003918 04-03

SLICES
THE EFFECTS OF ANTIDEPRESSANTS ON THE RETENTION AND METABOLISM OF (3H) NOREPINEPHRINE IN RAT-BRAIN SLICES. 003763 04-03
GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE. 003786 04-03
THE UPTAKE OF CARNITINE BY SLICES OF RAT-CEREBRAL-CORTEX. 003853 04-03
INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03
ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03
EFFECT OF PROSTAGLANDIN-D2, PROSTAGLANDIN-E2 AND PROSTAGLANDIN-F2ALPHA ON CATECHOLAMINE RELEASE FROM SLICES OF RAT AND RABBIT BRAIN. 003983 04-03
INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE. 004044 04-03
THE EFFECT OF NORADRENALINE ON NA-K TRANSPORT IN RAT-CEREBRAL-CORTICAL SLICES. 004056 04-03

SLIME
DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES -- ARE THEY CELL ADHESION MOLECULES? 003724 04-03

SMOKING
THE ROLE OF NICOTINE IN THE BEHAVIORAL-ASPECTS OF CIGARETTE SMOKING. 004575 04-14

SMOOTH-MUSCLE
POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM. 004266 04-05

SNAKES
THE EFFECTS OF ALPHA AND BETA NEUROTOXINS FROM THE VENOMS OF VARIOUS SNAKES ON TRANSMISSION IN AUTONOMIC GANGLIA. 003750 04-03

SOCIAL
CONTRIBUTION OF SOCIAL FACTORS TO OPIATE-INDUCED ACTIVATION IN THE MOUSE. 004156 04-04
SOCIAL CROWDING ENHANCES AVERSIVENESS OF NALOXONE IN RATS. 004201 04-04
THE INTEGRITY OF THE SOCIAL HIERARCHY IN MICE FOLLOWING ADMINISTRATION OF PSYCHOTROPIC-DRUGS. 004202 04-04
PSYCHOPHARMACOLOGICAL AND SOCIAL ASPECTS OF SCHIZOPHRENIA: RECENT DEVELOPMENTS. 004336 04-08
THERAPY AND SOCIAL ADAPTATION OF OLIGOPHRENICS (REVIEW OF THE LITERATURE). 004444 04-11
THE EFFECTS OF NEUROLEPTIC-DRUGS ON THE SOCIAL INTERACTIONS OF HOSPITALIZED PSYCHOTIC-PATIENTS. 004577 04-14
HUMAN SOCIAL CONVERSATION: EFFECTS OF ETHANOL, SECOBARBITAL AND CHLORPROMAZINE. 004582 04-14

SOCIOSEXUAL-BEHAVIOUR
COMPARISON OF THE EFFECTS OF BETA ENDORPHIN AND MORPHINE ON EXPLORATORY-BEHAVIOUR AND SOCIOSEXUAL-BEHAVIOUR IN THE MALE RAT. 004178 04-04

SODIUM
INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03

SODIUM-DEPENDENT
EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS. 003908 04-03

SODIUM-DIPROPYLACETATE
THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY. 003880 04-03
EFFECT OF SODIUM-DIPROPYLACETATE ON CONFLICT-BEHAVIOR IN RATS. 004192 04-04

SODIUM-LACTATE
BLOCKADE BY IMIPRAMINE OR DESIPRAMINE OF PANIC-INDUCED BY SODIUM-LACTATE. 004427 04-10

SODIUM-NUCLEINATE
THE USE OF SODIUM-NUCLEINATE IN THE TREATMENT OF SCHIZOPHRENIC-PATIENTS. 004339 04-08

SODIUM-VALPROATE
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE

ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT. 003961 04-03
EFFECT OF TREATMENT WITH SODIUM-VALPROATE AND DIAZEPAM ON PLASMA CORTICOTROPIN IN NELSONS-SYNDROME. 004463 04-11
THE EFFECT OF SODIUM-VALPROATE ON THE PHOTOSENSITIVE VEP. 004513 04-13

SOLID
SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE. 003673 04-01

SOLUBILIZATION
SOLUBILIZATION OF NEUROLEPTIC/DOPAMINE-RECEPTORS OF HUMAN BRAIN STRIATUM. 003767 04-03

SOLUTION
SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE. 003673 04-01

SOLVENTS
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

SOMATOSENSORY
EFFECTS OF PENTOBARBITAL AND ETHANOL UPON SINGLE NEURON ACTIVITY IN THE PRIMARY SOMATOSENSORY CORTEX OF THE RHESUS-MONKEY. 003755 04-03

SOMATOSTATIN-28
HIGH-AFFINITY BINDING-SITES FOR A SOMATOSTATIN-28 ANALOG IN RAT-BRAIN. 003985 04-03

SOMATOTHERAPEUTIC
THE EFFECT OF LONG-TERM MAINTENANCE-THERAPY ON SCHIZOPHRENIC-PATIENTS USING SOMATOTHERAPEUTIC MEASURES. 004325 04-08

SOMNAMBULISM
THE CLASSIFICATION OF SLEEP-DISORDERS AND THE TREATMENT OF VARIOUS FORMS OF SOMNAMBULISM. 004461 04-11

SOUND-INDUCED
NORADRENERGIC INFLUENCES ON SOUND-INDUCED SEIZURES. 004137 04-04

SOUTH
RESULTS OF TREATMENT BY MODITEN DEPOT IN OUTPATIENTS-WARDS IN THE SOUTH MORAVIAN REGION. 004648 04-15

SPARING
ANESTHETICS AND THE HABENULO-INTERPEDUNCULAR SYSTEM: SELECTIVE SPARING OF METABOLIC ACTIVITY. 003833 04-03

SPECIES
A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLION OF SEVERAL SPECIES. 003779 04-03
OXIDATION OF BETA PHENYLETHYLAMINE BY BOTH TYPES OF MONOAMINE-OXIDASE: EXAMINATION OF ENZYMES IN BRAIN AND LIVER MITOCHONDRIA OF EIGHT SPECIES. 004024 04-03

SPECIFICITY
LACK OF SPECIFICITY OF AN ANIMAL BEHAVIOR MODEL FOR HALLUCINOGENIC DRUG ACTION. 004250 04-04
CHOLINERGIC MECHANISMS IN MANIA AND DEPRESSION: QUESTIONS OF SPECIFICITY. 004374 04-0[illegible]
A SENSITIVE BENZODIAZEPINE RADIOIMMUNOASSAY OF BROAD SPECIFICITY. 004693 04-16

SPECTRA
SPECTRA OF RADICAL CATIONS OF PHENOTHIAZINE DERIVATIVES IN SOLUTION AND SOLID STATE. 003673 04-01
A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE. 004688 04-16

SPECTRAL
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

SPECTROFLUOROMETRIC
COMPARISON OF SPECTROFLUOROMETRIC AND GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY PROCEDURES FOR THE QUANTITATION OF MORPHINE IN BLOOD AND BRAIN. 004692 04-16

SPECTROPHOTOMETRY
A COMPARISON OF RADIOIMMUNOASSAY WITH SPECTROPHOTOMETRY FOR THE DETERMINATION OF PLASMA DIPHENYLHYDANTOIN CONCENTRATIONS. 004684 04-16

SPHINGOMYELINASE
PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (M. NIEMANN-PICK TYPE C) HUMAN BRAIN. 003671 04-01

SPINAL
DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION. 003722 04-03

SPINAL-CORD
DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD. 003800 04-03
NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03
THE INACTIVATION OF GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE IN DISSOCIATED NEURONAL CULTURES FROM SPINAL-CORD. 003980 04-03
EFFECTS OF NOREPINEPHRINE AND 5 HYDROXYTRYPTAMINE REUPTAKE INHIBITORS ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004144 04-04
EFFECTS OF FLUOXETINE ON ELECTRICALLY-INDUCED SPINAL-CORD SEIZURES IN RATS. 004145 04-04
DOPAMINERGIC NEURONS OF SPINAL-CORD: A POSSIBLE SITE FOR THE ACTION OF NEUROLEPTIC-DRUGS. 004188 04-04
BEHAVIORAL-EVIDENCE THAT SUBSTANCE-P MAY BE A SPINAL-CORD SENSORY NEUROTRANSMITTER. 004200 04-04
SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION. 004206 04-04
ANTAGONISM BY PHENOXYBENZAMINE AND PENTAZOCINE OF THE ANTINOCICEPTIVE-EFFECTS OF MORPHINE IN THE SPINAL-CORD. 004213 04-04

SPIPERONE
EFFECT OF CHRONIC SULPIRIDE ON STRIATAL SPIPERONE BINDING. 003720 04-03
DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03
CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS. 004032 04-03

SPIROPERIDOL
THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE. 003906 04-03
REGULATION OF SEROTONIN2-RECEPTORS (5 HT2) LABELED WITH (3H)SPIROPERIDOL BY CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT AMITRIPTYLINE. 003964 04-03
THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

SPREADING
SPREADING DEPRESSION INDUCED BY MICROINJECTION OF ENKEPHALINS INTO THE HIPPOCAMPUS AND NEOCORTEX. 004015 04-03

SQUIRREL-MONKEY
SECOND-ORDER SCHEDULES OF INTRAMUSCULAR COCAINE INJECTION IN THE SQUIRREL-MONKEY: COMPARISONS WITH FOOD PRESENTATION AND EFFECTS OF D-AMPHETAMINE AND PROMAZINE. 004152 04-04
INDIVIDUAL DIFFERENCES IN EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND ANTICHOLINERGIC-DRUGS ON OPERANT-BEHAVIOR IN THE SQUIRREL-MONKEY. 004176 04-04

SQUIRREL-MONKEYS
EFFECTS OF NORCOCAINE AND SOME NORCOCAINE DERIVATIVES ON SCHEDULE-CONTROLLED BEHAVIOR OF PIGEONS AND SQUIRREL-MONKEYS. 004012 04-03
HISTAMINE AS A PUNISHER IN SQUIRREL-MONKEYS: EFFECTS OF PENTOBARBITAL, CHLORDIAZEPOXIDE AND H1-RECEPTOR AND H2-RECEPTOR ANTAGONISTS ON BEHAVIOR AND CARDIOVASCULAR RESPONSE. 004119 04-04

DIAZEPAM-INDUCED ATAXIA IN TROTTING SQUIRREL-MONKEYS. 004138 04-04

SOME EFFECTS OF CLOZAPINE ON PUNISHED-RESPONDING BY MICE AND SQUIRREL-MONKEYS. 004224 04-04

BEHAVIORAL-EFFECTS OF SELF-ADMINISTERED COCAINE: RESPONDING MAINTAINED ALTERNATELY BY COCAINE AND ELECTRIC-SHOCK IN SQUIRREL-MONKEYS. 004225 04-04

STABILITY

POSTMORTEM STABILITY OF BRAIN 3 METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL AND 3,4 DIHYDROXYPHENYLETHYLENEGLYCOL IN THE RAT AND MOUSE. 004048 04-03

STUDY ON THE STABILITY OF THE FACTORIAL STRUCTURE OF THE AMP SYSTEM DURING TREATMENT. 004696 04-16

STABILIZATION

INHIBITION OF LYSOSOMAL LIPASES BY CHLORPROMAZINE: A POSSIBLE MECHANISMS OF STABILIZATION. 003993 04-03

STABILIZING

MECHANISM OF MEMBRANE STABILIZING AND LYTIC-EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS. 004283 04-05

STABLE

STABLE ISOTOPES USED IN STUDIES OF METRIFONATE. 003847 04-03

GLC MASS-SPECTROMETRIC-DETERMINATION OF MAPROTILINE AND ITS MAJOR METABOLITE USING STABLE ISOTOPE-LABELED ANALOG AS INTERNAL STANDARD. 004291 04-06

GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS. 004683 04-16

STANDARDIZATION

STANDARDIZATION OF THE DEXAMETHASONE-SUPPRESSION-TEST FOR THE DIAGNOSIS OF MELANCHOLIA. (UNPUBLISHED PAPER). 004359 04-09

STANDARDS

SIMULTANEOUS DETERMINATION OF MORPHINE AND CODEINE IN BLOOD BY USE OF SELECT ION-MONITORING AND DEUTERATED INTERNAL STANDARDS. 004690 04-16

STATISTICAL

MILD, MODERATE, SEVERE -- THE STATISTICAL ANALYSIS OF SHORT ORDINAL SCALES. 004677 04-16

STATOKINESIMETER

DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

STATUS-EPILEPTICUS

A COMPARATIVE-STUDY OF INTRAVENOUS LORAZEPAM AND CLONAZEPAM IN STATUS-EPILEPTICUS. 004487 04-11

STEREOISOMERS

COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS. 003758 04-03

INTERACTION OF STEREOISOMERS OF BARBITURATES WITH (3H)ALPHA DIHYDROPICROTOXININ BINDING-SITES. 004036 04-03

STEREOSELECTIVE

BACLOFEN: STEREOSELECTIVE INHIBITION OF EXCITANT AMINO-ACID RELEASE. 003867 04-03

STEREOSPECIFIC

STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

STEREOTYPED-BEHAVIOR-SYNDROME

THE STEREOTYPED-BEHAVIOR-SYNDROME: A NEW MODEL AND PROPOSED THERAPY. 004163 04-04

STEREOTYPIC-BEHAVIOR

THE PATHOGENESIS OF STEREOTYPIC-BEHAVIOR. 004161 04-04

STEREOTYPIC-BEHAVIOR-SYNDROME

THE COMPLEX SPECIFIC PATHOGENETIC THERAPY OF THE STEREOTYPIC-BEHAVIOR-SYNDROME (AN EXPERIMENTAL-STUDY). 004162 04-04

STEREOTYPY

RELATION BETWEEN BRAIN CATECHOLAMINE-RECEPTORS AND DOPAMINERGIC STEREOTYPY IN RAT STRAINS. 004131 04-04

EFFECT OF L HISTIDINE AND CHLORCYCLIZINE ON APOMORPHINE-INDUCED CLIMBING-BEHAVIOUR AND METHAMPHETAMINE STEREOTYPY IN MICE. 004147 04-04

PHARMACOKINETIC-STUDY OF APOMORPHINE-INDUCED STEREOTYPY IN FOOD DEPRIVED RATS. 004247 04-04

APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT. 004651 04-15

STEROID

A STEROID DERIVATIVE, R-5135, ANTAGONIZES THE GABA/BENZODIAZEPINE-RECEPTOR INTERACTION. 003651 04-03

STEROID-HORMONES

ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN. 004500 04-13

STIMULANT

1 SUBSTITUTED BENZYLTETRAHYDROPYRIMIDONES: A SERIES WITH STIMULANT AND DEPRESSANT ACTIVITIES. 003687 04-02

THE EFFECT OF THE DOPAMINE-RECEPTOR BLOCKING-DRUG PIMOZIDE ON THE STIMULANT AND ANORECTIC-ACTIONS OF DEXTROAMPHETAMINE IN MAN. 004580 04-14

STIMULANT-DRUGS

SEXUAL-EFFECTS OF ANTIDEPRESSANTS AND PSYCHOMOTOR STIMULANT-DRUGS. 004646 04-15

STIMULANT-EFFECTIVENESS

PREDICTING STIMULANT-EFFECTIVENESS IN HYPERACTIVE-CHILDREN WITH A REPEATABLE NEUROPSYCHOLOGICAL-BATTERY: A PRELIMINARY STUDY. 004453 04-11

STIMULANTS

DO STIMULANTS PROVOKE, CAUSE, OR EXACERBATE TICS AND TOURETTE-SYNDROME? 004485 04-11

STIMULATES

VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03

NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03

SEXUAL-BEHAVIOR DECREASES PAIN SENSITIVITY AND STIMULATES ENDOGENOUS OPIOIDS IN MALE RATS. 004234 04-04

STIMULATION

MORPHINE DEPRESSES DORSAL-HORN NEURON RESPONSES TO CONTROLLED NOXIOUS AND NONNOXIOUS CUTANEOUS STIMULATION. 003782 04-03

POSSIBLE ROLE OF AN ENDOGENOUS OPIATE IN THE CARDIOVASCULAR-EFFECTS OF CENTRAL ALPHA-ADRENOCEPTOR STIMULATION IN SPONTANEOUSLY HYPERTENSIVE-RATS. 003791 04-03

STIMULATION OF FRUCTOSEBIPHOSPHATASE ACTIVITY AND SYNTHESIS IN THE CEREBRAL-CORTEX OF RATS SUBMITTED TO THE CONVULSANT METHIONINE-SULFOXIMINE. 003838 04-03

EFFECT OF MEDIAN RAPHE STIMULATION ON HIPPOCAMPAL SEIZURE DISCHARGE INDUCED BY CARBACHOL IN THE RABBIT. 003951 04-03

STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES. 003973 04-03

RNA-POLYMERASE-II IN C6-GLIOMA CELLS: ALPHA AMANITIN BLOCKADE OF CYCLIC-AMP-PHOSPHODIESTERASE INDUCTION BY BETA-ADRENERGIC STIMULATION. (UNPUBLISHED PAPER). 003998 04-03

ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

STIMULATORY
STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE. 003718 04-03
A POSSIBLE NEUROCHEMICAL BASIS OF THE CENTRAL STIMULATORY EFFECTS OF PP'DDT. 004274 04-05

STIMULUS
CONDITIONING OF AN INTEROCEPTIVE DRUG STIMULUS TO DIFFERENT EXTEROCEPTIVE CONTEXTS. 004142 04-04
CHARACTERISTICS OF THE STIMULUS PRODUCED BY THE MIXTURE OF CANNABIDIOL WITH DELTA9 TETRAHYDROCANNABINOL. 004263 04-04

STOPPING
STOPPING MEDICATION IN CHILDREN WITH EPILEPSY. 004447 04-11

STRAINS
RELATION BETWEEN BRAIN CATECHOLAMINE-RECEPTORS AND DOPAMINERGIC STEREOTYPY IN RAT STRAINS. 004131 04-04
ACETYLCHOLINE TURNOVER AND AGGRESSION IN RELATED THREE STRAINS OF MICE. 004151 04-04

STRATEGIES
CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS. 004603 04-15

STRATEGY
THE PROGNOSIS OF EPILEPSY AND THE STRATEGY FOR TERMINATING ANTIEPILEPTIC THERAPY. 004724 04-17

STRESS-INDUCED
EFFECT OF DIAZEPAM ON STRESS-INDUCED CHANGES IN BRAIN HISTAMINE. 003932 04-03

STRESS-MODULATED
STRESS-MODULATED ALTERATION OF BRAIN BIOGENIC AMINES IN THE RAT: EFFECTS OF [illegible]. 003978 04-03

STRIATAL
STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE. 003718 04-03
EFFECT OF CHRONIC SULPIRIDE ON STRIATAL SPIPERONE BINDING. 003720 04-03
INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES. 003737 04-03
PRESYNAPTIC AND POSTSYNAPTIC STRIATAL DOPAMINE-RECEPTORS: DIFFERENTIAL SENSITIVITY TO APOMORPHINE INHIBITION OF (3H)DOPAMINE AND (14C)GABA RELEASE IN VITRO. 003741 04-03
THE EFFECT OF LONG-TERM CONCURRENT ADMINISTRATION OF CHLORPROMAZINE AND LITHIUM ON THE STRIATAL AND FRONTAL CORTICAL DOPAMINE METABOLISM IN RATS. 003788 04-03
ANTIDOPAMINERGIC EFFECT OF ESTROGENS AT THE STRIATAL LEVEL. 003789 04-03
INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES. 003862 04-03
THE INFLUENCE OF D-AMPHETAMINE ON RAT-BRAIN STRIATAL REDUCED BIOPTERIN CONCENTRATION. 003922 04-03
EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER). 003960 04-03
EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES. 003970 04-03
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY. 004018 04-03
CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS. 004032 04-03
ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION. 004053 04-03
THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04
GENOTYPIC INFLUENCES ON STRIATAL DOPAMINERGIC REGULATION IN MICE. 004217 04-04

STRIATONIGRAL
RESPONSE OF STRIATONIGRAL SUBSTANCE-P SYSTEMS TO A DOPAMINE-RECEPTOR AGONIST AND ANTAGONIST. 003826 04-03

STRIATUM
COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS. 003758 04-03
SOLUBILIZATION OF NEUROLEPTIC/DOPAMINE-RECEPTORS OF HUMAN BRAIN STRIATUM. 003767 04-03
GABA-ENHANCEMENT OF (3H)DOPAMINE RELEASE FROM SLICES OF RAT STRIATUM: DEPENDENCE ON SLICE SIZE. 003786 04-03
CHANGE IN CATECHOLAMINE SENSITIVE NA-K-ATPASE ACTIVITY IN THE RAT STRIATUM MICROSOMES FOLLOWING ELECTROLYTIC OR 6 HYDROXYDOPAMINE-INDUCED LESIONS OF DOPAMINERGIC NEURONS. 003871 04-03
EFFECTS OF ACUTE AND CHRONIC ADMINISTRATION OF PHENCYCLIDINE ON DOPAMINERGIC-RECEPTORS IN RAT STRIATUM. 003901 04-03
CHARACTERIZATION OF ENKEPHALIN RELEASE FROM RAT STRIATUM. 003909 04-03

STRUCTURE
METHAQUALONE RIA STRUCTURE VERSUS REACTIVITY. 003657 04-01
RIA OPIATES: STRUCTURE VERSUS REACTIVITY. 003659 04-01
PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-BII FROM RAT-BRAIN NUCLEI. 003679 04-01
EFFECT OF 6 HYDROXYDOPAMINE ON THE FINE STRUCTURE OF THE HAMSTER PINEAL-GLAND. 003747 04-03
STUDY ON THE STABILITY OF THE FACTORIAL [illegible] OF THE AMP SYSTEM [illegible] TREATMENT. 004696 04-16

STRUCTURE-ACTIVITY
SYNTHESIS AND STRUCTURE-ACTIVITY RELATIONSHIP OF A PYRIMIDOPYRIMIDINE DERIVATIVE WITH ANTIDEPRESSANT ACTIVITY. 003653 04-01
PHENYLETHYLAMINE EFFECTS ON DOPAMINE SYNTHESIS: STRUCTURE-ACTIVITY RELATIONSHIPS. (UNPUBLISHED PAPER). 003959 04-03
SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES. 004725 04-17

STRUCTURES
THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL-ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN. 003994 04-03
THE EFFECT OF PHARMACOLOGICAL DESTRUCTION OF HYPOTHALAMIC MONOAMINERGIC STRUCTURES ON BODY-TEMPERATURE AND GAS-EXCHANGE DURING EXTREME COOLING. 004016 04-03
LESIONS OF AMYGDALA, PYRIFORM CORTEX AND OTHER BRAIN STRUCTURES DUE TO DIPIPERIDINOETHANE INTOXICATION. 004273 04-05

STRUGGLING
EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

STRYCHNINE
SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

SUBCELLULAR
REGIONAL AND SUBCELLULAR LOCALIZATION IN RAT-BRAIN OF THE ENZYMES THAT CAN SYNTHESIZE GAMMA HYDROXYBUTYRIC-ACID. 003675 04-01
NEWLY SYNTHESIZED CHOLECYSTOKININ IN SUBCELLULAR FRACTIONS OF THE RAT-BRAIN. 003805 04-03
DOPAMINE-RECEPTORS IN SUBCELLULAR FRACTIONS FROM BOVINE CAUDATE: ENRICHMENT OF (3H)SPIPERONE BINDING IN A POSTSYNAPTIC MEMBRANE FRACTION. 003948 04-03
EVIDENCE THAT THERE ARE SUBCELLULAR POOLS OF NOREPINEPHRINE AND THAT THERE IS FLUX OF NOREPINEPHRINE BETWEEN THESE POOLS. 004004 04-03

SUBCHRONIC
EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

SUBCHRONIC-TREATMENT
SUBCHRONIC-TREATMENT WITH THE TRICYCLIC-ANTIDEPRESSANT DMI INCREASES ISOLATION-INDUCED FIGHTING IN RATS. 004252 04-04

SUBCORTICAL
THE EFFECT OF LITHIUM-HYDROXYBUTYRATE ON THE BIOELECTRICAL-ACTIVITY OF THE CORTEX AND SOME SUBCORTICAL STRUCTURES OF THE RABBIT BRAIN. 003994 04-03

SUBJECTIVE
DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

EFFECTS OF SUPIDIMIDE (CG-3033) ON OBJECTIVE AND SUBJECTIVE SLEEP PARAMETERS (A SLEEP LABORATORY STUDY). 004567 04-14

SUBSTANCE-P
RESPONSE OF STRIATONIGRAL SUBSTANCE-P SYSTEMS TO A DOPAMINE-RECEPTOR AGONIST AND ANTAGONIST. 003826 04-03

NERVE GROWTH-FACTOR STIMULATES DEVELOPMENT OF SUBSTANCE-P IN THE EMBRYONIC SPINAL-CORD. 003881 04-03

SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC INTERACTION. 003887 04-03

INTRANIGRAL INJECTION OF CAPSAICIN ENHANCES MOTOR-ACTIVITY AND DEPLETES NIGRAL 5 HYDROXYTRYPTAMINE BUT NOT SUBSTANCE-P. 004100 04-04

BEHAVIORAL-EVIDENCE THAT SUBSTANCE-P MAY BE A SPINAL-CORD SENSORY NEUROTRANSMITTER. 004200 04-04

INTRACEREBRAL SUBSTANCE-P IN MICE: BEHAVIORAL-EFFECTS AND NARCOTIC AGENTS. 004218 04-04

SUBSTANCE-P-INDUCED
OPPOSITE EFFECTS OF NALOXONE ON SUBSTANCE-P-INDUCED IN BRAIN DOPA SYNTHESIS AND IN LOCOMOTOR-ACTIVITY IN RATS. 003799 04-03

SUBSTANTIA-NIGRA
RELATIONSHIP BETWEEN THE PRESENCE OF DOPAMINERGIC NEURONS AND GABA-RECEPTORS IN SUBSTANTIA-NIGRA: EFFECTS OF LESIONS. 003797 04-03

THE EFFECT OF SODIUM-DIPROPYLACETATE ON GAMMA AMINOBUTYRIC-ACID DEPENDENT INHIBITION IN THE RAT-CORTEX AND SUBSTANTIA-NIGRA IN RELATION TO ITS ANTICONVULSANT ACTIVITY. 003880 04-03

IN VIVO EVIDENCE FOR GABAERGIC CONTROL OF SEROTONIN RELEASE IN THE CAT SUBSTANTIA-NIGRA. 004011 04-03

ROTATIONAL-BEHAVIOUR ELICITED BY 5 HT IN THE RAT: EVIDENCE FOR AN INHIBITORY ROLE OF 5 HT IN THE SUBSTANTIA-NIGRA AND CORPUS-STRIATUM. 004141 04-04

MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04

THE INFLUENCE OF UNILATERAL 6 HYDROXY-DOPAMINE LESIONS OF THE SUBSTANTIA-NIGRA IN THE ABSENCE OF THE TELENCEPHALON. 004197 04-04

SUBSTITUTED
CENTRALLY ACTIVE N SUBSTITUTED ANALOGS OF 3,4 METHYLENEDIOXYPHENYLISOPROPYLAMINE (3,4 METHYLENEDIOXYAMPHETAMINE). 003683 04-02

1 SUBSTITUTED BENZYLTETRAHYDROPYRIMIDONES: A SERIES WITH STIMULANT AND DEPRESSANT ACTIVITIES. 003687 04-02

ACYLCYANAMIDES, ACYLUREA, AND VARIOUS SUBSTITUTED ARYLALLOPHANATES; EFFECT ON THE CNS. 003689 04-02

COMPARATIVE-EFFECTS OF SUBSTITUTED PHENYLETHYLAMINES ON BRAIN SEROTONERGIC MECHANISMS. 003854 04-03

COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03

SUBUNIT
PURIFICATION AND SUBUNIT STRUCTURE OF DNA-DEPENDENT RNA-POLYMERASE-BII FROM RAT-BRAIN NUCLEI. 003679 04-01

SUCCINIC-DEHYDROGENASE
THE EFFECT OF FRUSEMIDE PIRETANIDE AND BUMETANIDE ON COCHLEAR SUCCINIC-DEHYDROGENASE. 003757 04-03

SUFFERING
PRELIMINARY TRIAL OF CLONIDINE TREATMENT IN TWO PATIENTS SUFFERING FROM CHRONIC SCHIZOPHRENIA. 004320 04-08

SULFAMOYLMETHYL-BENZISOXAZOLE
EFFECTS OF 3 SULFAMOYLMETHYL-BENZISOXAZOLE (AD-810) AND SOME ANTIEPILEPTICS ON THE KINDLED SEIZURES IN THE NEOCORTEX, HIPPOCAMPUS AND AMYGDALA IN RATS. 004149 04-04

SULPIRIDE
EFFECT OF CHRONIC SULPIRIDE ON STRIATAL SPIPERONE BINDING. 003720 04-03

CATION REGULATION DIFFERENTIATES SPECIFIC BINDING OF (3H)SULPIRIDE AND (3H)SPIPERONE TO RAT STRIATAL PREPARATIONS. 004032 04-03

WHY DOES SULPIRIDE NOT BLOCK THE EFFECT OF DOPAMINE ON THE DOPAMINE-SENSITIVE ADENYLATE-CYCLASE? 004055 04-03

A CLINICAL AND PHARMACODYNAMIC EVALUATION OF SULPIRIDE. 004338 04-08

BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS. 004503 04-13

SULTHIAME
CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT. 003961 04-03

SUPERIOR
A COMPARATIVE-STUDY OF THE PHARMACOLOGICAL-PROPERTIES OF THE POSITIVE POTENTIAL RECORDED FROM THE SUPERIOR CERVICAL GANGLIA OF SEVERAL SPECIES. 003779 04-03

RELATIVE ACTIVITIES OF SUBSTANCES RELATED TO 5 HYDROXYTRYPTAMINE AS DEPOLARIZING-AGENTS OF SUPERIOR CERVICAL GANGLION CELLS. 004047 04-03

SUPERSENSITIVITY
DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION. 003722 04-03

SUPERSENSITIVITY OF CENTRAL NORADRENERGIC PRESYNAPTIC-AUTORECEPTORS FOLLOWING CHRONIC-TREATMENT WITH THE ANTIDEPRESSANT MIANSERIN. 003745 04-03

DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD. 003800 04-03

THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE. 003958 04-03

LITHIUM EFFECTS ON HALOPERIDOL-INDUCED PRESYNAPTIC AND POSTSYNAPTIC DOPAMINE-RECEPTOR SUPERSENSITIVITY. 004244 04-04

ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN: NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-DYSKINESIA. 004268 04-05

DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

SUPIDIMIDE
EFFECTS OF SUPIDIMIDE (CG-3033) ON OBJECTIVE AND SUBJECTIVE SLEEP PARAMETERS (A SLEEP LABORATORY STUDY). 004567 04-14

SUPPRESS
METERGOLINE AND CYPROHEPTADINE SUPPRESS PROLACTIN RELEASE BY A NON-5-HYDROXYTRYPTAMINERGIC, NONDOPAMINERGIC MECHANISM. 003732 04-03

SUPPRESSES
CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS. 004076 04-04

NALOXONE SUPPRESSES FEEDING AND DRINKING BUT NOT WHEEL RUNNING IN RATS. 004080 04-04

NALOXONE SUPPRESSES FOOD/WATER CONSUMPTION IN THE DEPRIVED CAT. 004114 04-04

SUPPRESSING
THE SITE OF ACTION OF NALOXONE IN SUPPRESSING FOOD AND WATER INTAKE IN RATS. 004146 04-04

SUPPRESSION
  THE USE OF CONDITIONED SUPPRESSION TO EVALUATE THE NATURE OF NEUROLEPTIC-INDUCED AVOIDANCE-DEFICITS. 004070 04-04
  SUPPRESSION OF ALCOHOL DRINKING WITH BRAIN ALDEHYDE-DEHYDROGENASE INHIBITION. 004220 04-04
  SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11

SUPRASPINAL
  SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

SURVIVAL
  THE TWO SURVIVAL CASES OF ALPHA-PATTERN COMA CAUSED BY LARGE AMOUNTS OF HYPNOTICA AND NEUROLEPTICA. 004608 04-15

SUSCEPTIBILITY
  EFFECT OF RO-4-1284 ON AUDIOGENIC-SEIZURE SUSCEPTIBILITY AND INTENSITY IN EPILEPSY-PRONE RATS. 003865 04-03
  EFFECTS OF OLFACTORY-BULBECTOMY AND PERIPHERALLY-INDUCED ANOSMIA ON THERMOREGULATION IN THE RAT: SUSCEPTIBILITY TO ANTIDEPRESSANT-DRUGS. 004113 04-04

SWITZERLAND
  METHADONE TREATMENT OF HEROIN ADDICTS IN SWITZERLAND. 004452 04-11

SYDNOCARB
  THE PHARMACOLOGICAL ACTION OF THE OPTICAL-ISOMERS OF SYDNOCARB. 003681 04-02

SYMPATHETIC
  5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS. 003710 04-03
  INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03
  THE EXCITATORY EFFECT OF ATROPINE ON THE NEURONS OF THE FROG SYMPATHETIC GANGLIA. 004041 04-03

SYMPATHOADRENAL
  METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT. 003905 04-03

SYMPATHOMIMETIC-AMINES
  SYMPATHOMIMETIC-AMINES AND TRICYCLIC-ANTIDEPRESSANT DRUGS. 004678 04-16

SYMPTOMS
  ALTERATIONS OF EVOKED-POTENTIALS LINK RESEARCH IN ATTENTION-DYSFUNCTION TO PEPTIDE RESPONSE SYMPTOMS OF SCHIZOPHRENIA. 004316 04-08
  CHANGES IN PSYCHOPATHOLOGIC SYMPTOMS DURING 20 DAYS OF TREATMENT WITH ANTIDEPRESSANTS AND NEUROLEPTIC-DRUGS. 004415 04-09
  WITHDRAWAL SYMPTOMS AFTER GRADUATED CESSATION OF IMIPRAMINE IN CHILDREN. 004630 04-15
  ANOREXIA-NERVOSA. SYMPTOMS, COURSE AND POSSIBILITIES FOR TREATMENT. 004711 04-17

SYNAPTIC
  PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT. 003734 04-03
  PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS. 003869 04-03
  DIFFERENTIAL-EFFECTS OF PENTOBARBITAL AND ETHER ON THE SYNAPTIC TRANSMISSION OF THE HIPPOCAMPAL-CA1-REGION IN THE RAT. 003903 04-03
  THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS. 003924 04-03
  L ASPARTATE BINDING-SITES IN RAT-CEREBELLUM: A COMPARISON OF THE BINDING OF L (3H)ASPARTATE AND L (3H)GLUTAMATE TO SYNAPTIC MEMBRANES. 004000 04-03
  5' TRIPHOSPHATE RECYCLES INDEPENDENTLY OF ACETYLCHOLINE IN CHOLINERGIC SYNAPTIC VESICLES. 004063 04-03

SYNAPTOSOMAL
  INHIBITION OF SYNAPTOSOMAL CALCIUM UPTAKE BY ETHANOL. 003827 04-03
  EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS. 003914 04-03
  THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004088 04-03

SYNAPTOSOMES
  INHIBITION OF (3H)DIAZEPAM BINDING BY AN ENDOGENOUS FRACTION FROM RAT-BRAIN SYNAPTOSOMES. 003768 04-03
  CATECHOLAMINE SYNTHESIS REGULATION IN HYPOTHALAMIC SYNAPTOSOMES. (UNPUBLISHED PAPER). 003829 04-03
  EFFECT OF VERAPAMIL ON 45CA UPTAKE BY SYNAPTOSOMES. 003856 04-03
  CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES. 003937 04-03
  EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER). 003960 04-03
  EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES. 003970 04-03
  STUDIES ON THE MECHANISM-OF-ACTION OF AVERMECTIN-B1A: STIMULATION OF RELEASE OF GAMMA AMINOBUTYRIC-ACID FROM BRAIN SYNAPTOSOMES. 003973 04-03

SYNDROME
  A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE UP THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL. 004445 04-11
  HYPERVENTILATION-SYNDROME AND BETA-RECEPTOR FUNCTION -- CLINICAL-EFFECT OF BETA BLOCKER UPON THE SYNDROME. 004459 04-11

SYNTHESIS
  SYNTHESIS AND STRUCTURE-ACTIVITY RELATIONSHIP OF A PYRIMIDOPYRIMIDINE DERIVATIVE WITH ANTIDEPRESSANT ACTIVITY. 003653 04-01
  SYNTHESIS AND BIOLOGICAL-ACTIVITY OF HUMAN BETA ENDORPHIN ANALOGS WITH DISULFIDE BRIDGES. 003655 04-01
  SYNTHESIS OF CYTOSKELETAL PROTEINS IN BULK ISOLATED NEURONAL PERIKARYA. 003672 04-01
  SYNTHESIS AND PHARMACOLOGICAL-STUDY OF SOME ENKEPHALIN ANALOGS IN RELATION TO THE PLURALITY OF OPIATE-RECEPTORS. 003682 04-02
  SYNTHESIS AND BIOCHEMICAL AND PHARMACOLOGIC PROPERTIES OF ANALOGUES AND DERIVATIVES OF P CHLOROPHENYLALANINE. 003691 04-02
  SYNTHESIS AND GABA-RECEPTOR BINDING-ACTIVITY OF TWO FLUOROAMINOMETHYLPHENOLS. 003693 04-02
  SYNTHESIS OF PHENYLURETHANS OF 1,2 DIALKYL-4-PYRAZOLIDINOLS AS ANTICONVULSANT AGENTS. 003695 04-02
  SYNTHESIS AND PHARMACOLOGICAL ACTIVITY OF SOME 2 IMINO-3-ALKYLTHIAZOLINE DERIVATIVES. 003698 04-02
  SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02
  SYNTHESIS AND PHARMACOLOGICAL PROPERTIES OF N-4 1 AZETIDINYLBUTYNYL 2 PYRROLIDONE, A HIGHLY POTENT OXOTREMORINE-LIKE AGENT. 003701 04-02
  EFFECT OF ALPHA METHYLPHENYLALANINE AND PHENYLALANINE ON BRAIN POLYRIBOSOMES AND PROTEIN SYNTHESIS. 003733 04-03
  EFFECT OF INTRAVENOUS ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE ON SUBSEQUENT PROTEIN SYNTHESIS IN A CELL-FREE SYSTEM DERIVED FROM BRAIN. 003761 04-03
  CATECHOLAMINE AND 5 HYDROXYTRYPTAMINE SYNTHESIS AND METABOLISM FOLLOWING INTRACEREBROVENTRICULAR INJECTION OF DIBUTYRYL-CYCLIC-AMP. 003769 04-03
  OPPOSITE EFFECTS OF NALOXONE ON SUBSTANCE-P-INDUCED IN BRAIN DOPA SYNTHESIS AND IN LOCOMOTOR-ACTIVITY IN RATS. 003799 04-03
  CATECHOLAMINE SYNTHESIS REGULATION IN HYPOTHALAMIC SYNAPTOSOMES. (UNPUBLISHED PAPER). 003829 04-03

STIMULATION OF FRUCTOSEBIPHOSPHATASE ACTIVITY AND SYNTHESIS IN THE CEREBRAL-CORTEX OF RATS SUBMITTED TO THE CONVULSANT METHIONINE-SULFOXIMINE. 003838 04-03

PHENYLETHYLAMINE EFFECTS ON DOPAMINE SYNTHESIS: STRUCTURE-ACTIVITY RELATIONSHIPS. (UNPUBLISHED PAPER). 003959 04-03

EFFECTS OF IN VIVO AMPHETAMINE ADMINISTRATION ON DOPAMINE SYNTHESIS REGULATION IN RAT-BRAIN STRIATAL SYNAPTOSOMES. (UNPUBLISHED PAPER). 003960 04-03

INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE. 004044 04-03

ANTITREMOR ACTION OF C10DICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR. 004096 04-04

SYNTHESIZE

REGIONAL AND SUBCELLULAR LOCALIZATION IN RAT-BRAIN OF THE ENZYMES THAT CAN SYNTHESIZE GAMMA HYDROXYBUTYRIC-ACID. 003675 04-01

SYNTHESIZED

NEWLY SYNTHESIZED CHOLECYSTOKININ IN SUBCELLULAR FRACTIONS OF THE RAT-BRAIN. 003805 04-03

SYNTHESIZING

DIFFERENTIAL-EFFECTS OF ALPHA METHYLDOPAMINE, CLONIDINE AND HYDRALAZINE ON NOREPINEPHRINE AND EPINEPHRINE SYNTHESIZING ENZYMES IN THE BRAINSTEM NUCLEI OF SPONTANEOUSLY HYPERTENSIVE-RATS. 003947 04-03

SYNTHETIC

A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN. 004574 04-14

SYRINGE

AN IMPROVED PNEUMATIC SYRINGE FOR SELF-ADMINISTRATION OF DRUGS BY RATS 004304 04-06

SYSTEMIC

THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL. 004045 04-03

TACHYCARDIA

MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS. 003744 04-03

TAIL

EFFECTS OF ANALGESICS AND CNS-ACTING DRUGS ON STRUGGLING FOLLOWING REPETITIVE STIMULATION OF THE TAIL, AND FLEXOR REFLEX TO A SINGLE STIMULATION OF THE SCIATIC-NERVE IN RATS. 004148 04-04

TAIPOXIN

EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC AXON TERMINALS IN THE MOUSE ADRENAL-MEDULLA. 003916 04-03

TARDIVE-DYSKINESIA

ANTAGONISM OF DOPAMINE SUPERSENSITIVITY BY ESTROGEN: NEUROCHEMICAL-STUDIES IN AN ANIMAL-MODEL OF TARDIVE-DYSKINESIA. 004268 04-05

THE BIOCHEMICAL BACKGROUND TO TARDIVE-DYSKINESIA. 004588 04-15

TARDIVE-DYSKINESIA: RECENT DEVELOPMENTS. 004592 04-15

EFFECTS OF NEUROLEPTIC ADJUSTMENT ON CLINICAL CONDITION AND TARDIVE-DYSKINESIA IN SCHIZOPHRENIC-PATIENTS. 004595 04-15

PREVENTION OF TARDIVE-DYSKINESIA AND OTHER DRUG RELATED ADVERSE-EFFECTS. 004601 04-15

CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS. 004603 04-15

CLINICAL AND PRECLINICAL EXPERIENCE WITH CHOLINE-CHLORIDE IN HUNTINGTONS-DISEASE AND TARDIVE-DYSKINESIA: UNANSWERED QUESTIONS. 004604 04-15

A CONTROLLED-TRIAL OF OXYPERTINE IN TARDIVE-DYSKINESIA. 004611 04-15

LECITHIN FOR THE TREATMENT OF TARDIVE-DYSKINESIA. 004612 04-15

TARDIVE-DYSKINESIA AND OTHER DRUG-INDUCED MOVEMENT-DISORDERS AMONG HANDICAPPED CHILDREN AND YOUTH. 004614 04-15

TREATMENT OF TARDIVE-DYSKINESIA. 004616 04-15

BACLOFEN IN THE TREATMENT OF TARDIVE-DYSKINESIA: OPEN LABEL STUDY. 004619 04-15

TARDIVE-DYSKINESIA. 004624 04-15

ON THE THERAPY OF NEUROLEPTIC-INDUCED TARDIVE-DYSKINESIA WITH DIMETHYLAMINOETHANOL (DEANOL). 004627 04-15

PRESENT ATTEMPTS AT TREATING TARDIVE-DYSKINESIA. 004629 04-15

TARDIVE-DYSKINESIA: PROBLEMS OF PATHOGENESIS, THERAPY, AND PREVENTION. 004644 04-15

TASTE-AVERSION

NALOXONE FAILS TO BLOCK AMPHETAMINE-INDUCED ANOREXIA AND CONDITIONED TASTE-AVERSION. 004121 04-04

TAURINE

MODULATORY INTERACTIONS BETWEEN NOREPINEPHRINE AND TAURINE, BETA ALANINE, GAMMA AMINOBUTYRIC-ACID AND MUSCIMOL APPLIED IONTOPHORETICALLY TO CEREBELLAR PURKINJE-CELLS. 004058 04-03

TECHNIQUE

USE OF THE INTRACEREBRAL INJECTION TECHNIQUE TO ELUCIDATE MECHANISMS OF APOMORPHINE CLIMBING AND ITS ANTAGONISM IN THE MOUSE. 004092 04-04

TECHNIQUES

GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004487 04-16

RECEPTOR TECHNIQUES IN THE STUDY OF PLASMA LEVELS OF NEUROLEPTICS AND ANTIDEPRESSANT-DRUGS. 004694 04-16

TEGMENTAL

MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04

TELENCEPHALON

THE INFLUENCE OF UNILATERAL 6 HYDROXY-DOPAMINE LESIONS OF THE SUBSTANTIA-NIGRA IN THE ABSENCE OF THE TELENCEPHALON. 004197 04-04

TELEOST

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-03

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS. 004051 04-03

TEMPERATURE

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

TEMPERATURES

THE EFFECTS OF THEOPHYLLINE AND CAFFEINE ON THERMOREGULATORY FUNCTIONS OF RATS AT DIFFERENT AMBIENT TEMPERATURES. 003907 04-03

CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES. EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

TEMPORAL

CNS EFFECTS OF CHOLINE ADMINISTRATION: EVIDENCE FOR TEMPORAL DEPENDENCE. 003996 04-03

METHADONE-INDUCED ATTENUATION OF THE EFFECTS OF DELTA9 TETRAHYDROCANNABINOL ON TEMPORAL DISCRIMINATION IN PIGEONS. 004095 04-04

CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

TERMINALS

EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC AXON TERMINALS IN THE MOUSE ADRENAL-MEDULLA. 003916 04-03

THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS. 003924 04-03

THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS. 004129 04-04

TERMINATING
THE PROGNOSIS OF EPILEPSY AND THE STRATEGY FOR TERMINATING ANTIEPILEPTIC THERAPY. 004724 04-17

TERTIARY
A RAPID AND SENSITIVE RADIORECEPTOR ASSAY FOR TERTIARY AMINE TRICYCLIC-ANTIDEPRESSANTS. 004689 04-16

TEST
STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09
AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT. 004426 04-10

TESTED
PLASMA DOPAMINE-BETA-HYDROXYLASE ACTIVITY IN CHRONIC SCHIZOPHRENIC-PATIENTS TESTED WITH SINGLE-DOSE OF 2 BROMO-ALPHA-ERGOCRIPTINE (PARLODEL). 004343 04-08

TESTS
MINI-SYMPOSIUM: III. SIMPLE IN VIVO TESTS THAT DIFFERENTIATE PROTOTYPE AGONISTS AT OPIATE-RECEPTORS. 004289 04-06

TETANUS-TOXIN
PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT. 003734 04-03

TETRABENAZINE-INDUCED
EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON TETRABENAZINE-INDUCED DEPLETION OF BRAIN MONOAMINES IN RATS. 1. NOREPINEPHRINE. 004062 04-03

TETRACYCLIC-ANTIDEPRESSANT
NEUROTROPIC-DRUGS AS COMEDICATION TO PSYCHOTROPICS: COMBINED ADMINISTRATION OF A NEUROTROPIC-DRUG AND A TETRACYCLIC-ANTIDEPRESSANT. 004396 04-09

TETRACYCLIC-ANTIDEPRESSANTS
DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09

TETRAHYDROCANNABINOL
NEUTRALIZATION OF THE EFFECT OF DELTA9 TETRAHYDROCANNABINOL ON BARBITURATE SLEEPING-TIME BY SPECIFIC ACTIVE IMMUNIZATION. 003803 04-03
EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS. 003908 04-03
METHADONE-INDUCED ATTENUATION OF THE EFFECTS OF DELTA9 TETRAHYDROCANNABINOL ON TEMPORAL DISCRIMINATION IN PIGEONS. . 004095 04-04
ATTENUATION OF DELTA9 TETRAHYDROCANNABINOL-INDUCED WITHDRAWAL-LIKE BEHAVIOUR BY DELTA9 TETRAHYDROCANNABINOL. 004243 04-04
CHARACTERISTICS OF THE STIMULUS PRODUCED BY THE MIXTURE OF CANNABIDIOL WITH DELTA9 TETRAHYDROCANNABINOL. 004263 04-04
BEHAVIORAL-PHARMACOLOGY OF TETRAHYDROCANNABINOL CONVULSIONS IN RABBITS. 004288 04-06

TETRAHYDROCANNABINOL-INDUCED
ATTENUATION OF DELTA9 TETRAHYDROCANNABINOL-INDUCED WITHDRAWAL-LIKE BEHAVIOUR BY DELTA9 TETRAHYDROCANNABINOL. 004243 04-04

TETRAPEPTIDE
POTENT TETRAPEPTIDE ENKEPHALINS. 003684 04-02

TETRAPHENYLPHOSPHONIUM
DEMONSTRATION OF A MUSCARINIC-RECEPTOR-MEDIATED CYCLIC-GMP-DEPENDENT HYPERPOLARIZATION OF THE MEMBRANE POTENTIAL OF MOUSE NEUROBLASTOMA CELLS USING (3H)TETRAPHENYLPHOSPHONIUM. 004049 04-03

THALAMUS
EXCITATORY EFFECTS OF DIHYDROCAPSAICIN ON NOCICEPTIVE NEURONS IN THE MEDIAL THALAMUS. 003714 04-03
UNIT ACTIVITY IN MEDIAL THALAMUS: COMPARATIVE-EFFECTS OF CAFFEINE AND AMPHETAMINE. 003752 04-03
THE EFFECT OF CHOLINERGIC SUBSTANCES ON NOCICEPTIVE EVOKED-RESPONSES IN SPECIFIC NUCLEI OF THE THALAMUS. 003770 04-03
THE ROLE OF NIGRAL PROJECTIONS TO THE THALAMUS IN DRUG-INDUCED CIRCLING-BEHAVIOUR IN THE RAT. 004205 04-04

THEOPHYLLINE
THE EFFECTS OF THEOPHYLLINE AND CAFFEINE ON THERMOREGULATORY FUNCTIONS OF RATS AT DIFFERENT AMBIENT TEMPERATURES. 003907 04-03

THEORY
A CONTROLLED-STUDY OF L-DOPA IN SCHIZOPHRENIA WITH REFERENCE TO THE THEORY OF DOPAMINERGIC-RECEPTOR HYPERSENSITIVITY. 004312 04-08

THERAPEUTIC
THERAPEUTIC NEWS. 004308 04-07
CLINICAL DEPRESSIONS: DIAGNOSTIC AND THERAPEUTIC CHALLENGES. 004350 04-09
THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004439 04-11
SOME THERAPEUTIC EFFECTS OF NOOTROPYL. 004458 04-11
A COMPARATIVE EVALUATION OF THE EFFICACY OF SOME THERAPEUTIC METHODS USED IN DELIRIUM-TREMENS. 004486 04-11
NEUROLEPTIC TRICYCLIC-ANTIDEPRESSANT COMBINATION: PHARMACOLOGICAL-ASPECTS AND THERAPEUTIC INTEREST. 004501 04-13
PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM). 004527 04-13
PROBLEMS OF TREATING DEFORMING MYODYSTONIA WITH L-DOPA, AND PREDICTION OF ITS THERAPEUTIC EFFECT. 004536 04-13
COMPUTER-ANALYZED ELETROENCEPHALOGRAM TO PREDICT THE THERAPEUTIC OUTCOME IN SCHIZOPHRENIA. 004680 04-16
THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY. 004681 04-16
THERAPEUTIC TREATMENT OF INSUFFICIENT PERFORMANCE IN CEREBROVASCULAR-DISEASES. 004718 04-17

THERAPY
THE COMPLEX SPECIFIC PATHOGENETIC THERAPY OF THE STEREOTYPIC-BEHAVIOR-SYNDROME (AN EXPERIMENTAL-STUDY). 004162 04-04
THE STEREOTYPED-BEHAVIOR-SYNDROME: A NEW MODEL AND PROPOSED THERAPY. 004163 04-04
THE PROLACTIN RESPONSE IN PATIENTS RECEIVING NEUROLEPTIC THERAPY. THE EFFECT OF FLUPHENAZINE-DECANOATE. 004318 04-08
THE USE OF CLINICAL AND PHARMACOKINETIC CRITERIA IN FORECASTING THE EFFICACY OF THERAPY IN SCHIZOPHRENIA. 004335 04-08
LITHIUM ELIMINATION HALF-LIFE AND DURATION OF THERAPY. 004369 04-09
CLINICAL-EVALUATION OF THE PROPHYLACTIC EFFECTIVENESS OF PROLONGED LITHIUM-CARBONATE THERAPY IN ENDOGENOUS DEPRESSIVE-SYNDROMES. 004404 04-09
POSSIBILITIES OF PATHOGENETIC THERAPY OF HYSTERIA. 004429 04-10
SOME PRINCIPLES OF DIFFERENTIATED METABOLIC DRUG-TREATMENT IN COMPREHENSIVE THERAPY OF MENTAL-DISORDERS. 004433 04-11
THERAPY AND SOCIAL ADAPTATION OF OLIGOPHRENICS (REVIEW OF THE LITERATURE). 004444 04-11
ASSESSING L-DOPA THERAPY FOR PARKINSONS. 004465 04-11
ASTHMA THERAPY MAY UNDERCUT KIDS AT SCHOOL. 004475 04-11
BIOCHEMICAL-STUDIES OF HUMAN EPILEPTICS DURING ANTICONVULSANT THERAPY. 004490 04-11
PHENYTOIN THERAPY FOR EPILEPTIC-CHILDREN: EVALUATION OF SALIVARY AND PLASMA CONCENTRATIONS AND OF METHODS OF ASSESSING COMPLIANCE. 004495 04-11
THE EFFECTS OF ESTROGEN THERAPY ON THE SEX-LIFE OF POSTMENOPAUSAL-WOMEN. 004573 04-14
CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

ANTIEPILEPTIC THERAPY WITH PHENYTOIN: WHICH IS THE OPTIMUM SERUM LEVEL? 004586 04-14

ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE. 004626 04-15

ON THE THERAPY OF NEUROLEPTIC-INDUCED TARDIVE-DYSKINESIA WITH DIMETHYLAMINOETHANOL (DEANOL). 004627 04-15

TARDIVE-DYSKINESIA: PROBLEMS OF PATHOGENESIS, THERAPY, AND PREVENTION. 004644 04-15

KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY. 004664 04-15

THE PROGNOSIS OF EPILEPSY AND THE STRATEGY FOR TERMINATING ANTIEPILEPTIC THERAPY. 004724 04-17

THERAPY-RESISTANT

POLYPHARMACY REGIMEN AS AN EXACERBATING RISK IN THERAPY-RESISTANT EPILEPTIC-SEIZURES AND BEHAVIORAL-DISORDERS. 004720 04-17

THERMOREGULATION

EFFECTS OF OLFACTORY-BULBECTOMY AND PERIPHERALLY-INDUCED ANOSMIA ON THERMOREGULATION IN THE RAT: SUSCEPTIBILITY TO ANTIDEPRESSANT-DRUGS. 004113 04-04

THERMOREGULATORY

EVIDENCE FOR THERMOREGULATORY DOPAMINERGIC-RECEPTORS LOCATED IN THE PREOPTICUS-MEDIALIS-NUCLEUS OF THE RAT HYPOTHALAMUS. 003754 04-03

THE EFFECTS OF THEOPHYLLINE AND CAFFEINE ON THERMOREGULATORY FUNCTIONS OF RATS AT DIFFERENT AMBIENT TEMPERATURES. 003907 04-03

THIN-LAYER-CHROMATOGRAPHY

SEPARATION OF BARBITURATES USING REVERSE PHASE THIN-LAYER-CHROMATOGRAPHY. 004670 04-16

MASS SCREENING AND CONFIRMATION OF DIAZEPAM IN URINE BY EMIT THIN-LAYER-CHROMATOGRAPHY. 004672 04-16

THIOPENTONE

VALUE OF PROPANIDID IN ELECTROCONVULSIVE-THERAPY (COMPARISON WITH THIOPENTONE). 004379 04-09

THIOPROPERAZINE

THE EFFECT OF THIOPROPERAZINE ON DELAYED REACTIONS IN LOWER MONKEYS. 004125 04-04

THIORIDAZINE

AN UNUSUAL CASE OF THIORIDAZINE AND LEVOMEPROMAZINE DEPENDENCE. 004634 04-15

THIP

HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04

THRESHOLD

THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

NEW ANTIDEPRESSANT-DRUGS AND THE SEIZURE THRESHOLD. 004662 04-15

THRESHOLDS

REWARD AND DETECTION THRESHOLDS FOR BRAIN-STIMULATION: DISSOCIATIVE-EFFECTS OF COCAINE. 004160 04-04

MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04

THYMIDINE

EFFECT OF AMPHETAMINE ON THE METABOLISM AND INCORPORATION OF (3H) THYMIDINE INTO DNA OF DEVELOPING RAT-BRAIN. 003729 04-03

THYROID-FUNCTION

NEUROTRANSMITTER CONTROL OF HYPOTHALAMIC PITUITARY THYROID-FUNCTION IN RATS. 003942 04-03

EFFECTS OF CAFFEINE ON ANTERIOR PITUITARY AND THYROID-FUNCTION IN THE RAT. 004014 04-03

THYROID-GLAND

CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14

THYROID-HORMONES

REGULATION OF ALPHA1-ADRENOCEPTORS IN THE CEREBRAL CORTEX OF THE RAT BY THYROID-HORMONES. 003816 04-03

THYROSTIMULATING-RELEASING-HORMONE

DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09

THYROTROPHIN-RELEASING-FACTOR

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY. 004505 04-13

THYROTROPIN-RELEASING-HORMONE

THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

PASSAGE THROUGH THE BLOOD-BRAIN-BARRIER OF THYROTROPIN-RELEASING-HORMONE ENCAPSULATED IN LIPOSOMES. 004298 04-06

THYROXIN

THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS. 003713 04-03

THYROXINE

INFLUENCE OF CARBAMAZEPINE ON SERUM THYROXINE AND TRIIODOTHYRONINE IN PATIENTS WITH EPILEPSY. 004488 04-11

TICS

DO STIMULANTS PROVOKE, CAUSE, OR EXACERBATE TICS AND TOURETTE-SYNDROME? 004485 04-11

TIME

RAPID ACQUISITION OF A TWO-DRUG DISCRIMINATION: TIME OF DAY EFFECT UPON SALINE STATE. 004214 04-04

TIME-COURSE

CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD OF PATIENTS. 004434 04-11

TIME-DEPENDENT

TIME-DEPENDENT CHANGES IN ANTEROGRADE SCOPOLAMINE-INDUCED AMNESIA IN RATS. 004182 04-04

TISSUE

A RAPID AND SIMPLE METHOD FOR THE DETERMINATION OF PICOGRAM LEVELS OF 3 METHOXYTYRAMINE IN BRAIN TISSUE USING LIQUID-CHROMATOGRAPHY WITH ELECTROCHEMICAL DETECTION. 003674 04-01

TISSUE CHOLINE STUDIED USING A SIMPLE CHEMICAL ASSAY. 003828 04-03

INHIBITION OF DOPAMINE D-1 AND D-2 BINDING-SITES IN NEURONAL TISSUE BY ASCORBATE. 003876 04-03

EFFECT OF INHIBITORS OF GABA-AMINOTRANSFERASE ON THE METABOLISM OF GABA IN BRAIN TISSUE AND SYNAPTOSOMAL FRACTIONS. 003914 04-03

THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03

BENZODIAZEPINE-RECEPTORS: EFFECT OF TISSUE PREINCUBATION AT 37 DEGREES C. 004013 04-03

EFFECT OF DESMETHYLIMIPRAMINE ON TISSUE DISTRIBUTION AND ANORECTIC-ACTIVITY OF CHLORPHENTERMINE IN RATS. 004179 04-04

TISSUES

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES -- ARE THEY CELL ADHESION MOLECULES? 003724 04-03

ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE. 003879 04-03

OPIOID BINDING PROPERTIES OF BRAIN AND PERIPHERAL TISSUES: EVIDENCE FOR HETEROGENEITY IN OPIOID LIGAND BINDING SITES. 003902 04-03

TLC

GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004687 04-16

TOLERANCE
DIFFERENTIAL TOLERANCE TO THE EFFECTS OF MORPHINE ON EVOKED ACTIVITY IN THE HIPPOCAMPAL SLICE. 003760 04-03
EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL. 003883 04-03
THE EFFECTS OF PEPTIDES ON TOLERANCE TO THE CATALEPTIC-EFFECTS AND HYPOTHERMIC-EFFECTS OF MORPHINE IN THE RAT. 004072 04-04
FOOD PREFERENCE FOLLOWING ACUTE OR CHRONIC CHLORDIAZEPOXIDE ADMINISTRATION: TOLERANCE TO AN ANTINEOPHOBIC ACTION. 004090 04-04
NEUROLOGICAL TOLERANCE OF LITHIUM AND PSYCHOTROPIC-DRUGS IN COMBINATION: 265 CASES. 004594 04-15

TOMOGRAPHY
THERAPEUTIC PLASMA LEVELS OF SOME ANTICONVULSANTS IN FOCAL EPILEPSY IN RELATION TO COMPUTERIZED AXIAL TOMOGRAPHY. 004439 04-11

TONIC
THE EFFECTS OF TRYPTOPHAN AND MANIPULATIONS OF SEROTONERGIC-RECEPTORS ON TONIC IMMOBILITY IN CHICKENS. 004245 04-04
TONIC IMMOBILITY IN DOMESTIC FOWL: POSSIBLE INTERACTION OF SEROTONERGIC AND DOPAMINERGIC MECHANISMS. 004246 04-04
DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

TOURETTE-SYNDROME
FACT-SHEET: TOURETTE-SYNDROME. 004474 04-11
DO STIMULANTS PROVOKE, CAUSE, OR EXACERBATE TICS AND TOURETTE-SYNDROME? 004485 04-11

TOXIC
MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

TOXICITY
MICROPROPERTIES OF OPERANT-BEHAVIOR AS ASPECTS OF TOXICITY. 004666 04-15

TOXICOLOGY
THE BRAINSTEM AUDITORY EVOKED-RESPONSE AS A TOOL IN NEUROBEHAVIORAL TOXICOLOGY AND MEDICINE. 004277 04-05

TRACT
COMPARISON OF THE POTENCIES OF CLEBOPRIDE AND OTHER SUBSTITUTED BENZAMIDE DRUGS ON ISOLATED GASTROINTESTINAL TRACT OF THE GUINEA-PIG AND RAT. 003928 04-03

TRAINING
FACTORS REGULATING DRUG CUE SENSITIVITY: LIMITS OF DISCRIMINABILITY AND THE ROLE OF A PROGRESSIVELY DECREASING TRAINING DOSE IN FENTANYL SALINE DISCRIMINATION. 004088 04-04
CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS. 004603 04-15

TRANQUILIZER
A COMPARATIVE CLINICAL-TRIAL WITH THE TRANQUILIZER TRAZODONE AND THE TRICYCLIC-ANTIDEPRESSANT CLOMIPRAMINE. 004380 04-09

TRANQUILIZING
THE PHARMACOLOGICAL CHARACTERISTICS OF THE TRANQUILIZING EFFECT OF HYDIPHEN. 004261 04-04

TRANS-ISOMERS
PLASMA LEVELS OF THE CIS-ISOMERS AND TRANS-ISOMERS OF DOXEPIN AND DESMETHYLDOXEPIN AFTER ADMINISTRATION OF DOXEPIN TO PATIENTS. 004355 04-09

TRANSCALLOSAL
THE EFFECT OF NOOTROPIL ON THE TRANSCALLOSAL AND PRIMARY EVOKED-RESPONSES OF THE CAT CEREBRAL-CORTEX. 003780 04-03

TRANSECTION
DENERVATION SUPERSENSITIVITY TO 5 HYDROXYTRYPTOPHAN IN RATS FOLLOWING SPINAL TRANSECTION AND 5,7 DIHYDROXYTRYPTAMINE INJECTION. 003722 04-03
DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD. 003800 04-03

TRANSFER
NMR SPECTRAL STUDY OF PROTON TRANSFER IN AMITRIPTYLINE-HYDROCHLORIDE CHLORDIAZEPOXIDE-HYDROCHLORIDE COMBINATIONS IN DIPOLAR APROTIC SOLVENTS. 003654 04-01

TRANSIENT
TRANSIENT HYPERKINESIA AFTER A SINGLE INTRAVENOUS PERFUSION OF DIPHENYLHYDANTOIN: REPORT OF A CASE ASSOCIATED WITH NONTOXIC PLASMA LEVELS OF DIPHENYLHYDANTOIN. 004638 04-15

TRANSLATION
CELL-FREE TRANSLATION OF FREE AND MEMBRANE-BOUND POLYSOMES AND POLYADENYLATED MRNA FROM RABBIT BRAIN FOLLOWING ADMINISTRATION OF D LYSERGIC-ACID-DIETHYLAMIDE IN VIVO. 003832 04-03

TRANSMISSION
THE EFFECTS OF ALPHA AND BETA NEUROTOXINS FROM THE VENOMS OF VARIOUS SNAKES ON TRANSMISSION IN AUTONOMIC GANGLIA. 003750 04-03
INFLUENCE OF THE DOPAMINERGIC AGONISTS BROMOCRIPTINE, PIRIBEDIL AND NOMIFENSINE ON THE SYMPATHETIC NEURAL TRANSMISSION IN THE NICTITATING MEMBRANE OF THE CAT. 003822 04-03
PRESYNAPTIC MODULATION OF SYNAPTIC TRANSMISSION IN HELIX-POMATIA: THE EFFECTS OF SEROTONIN AND DOPAMINE ANTAGONISTS. 003869 04-03
DIFFERENTIAL-EFFECTS OF PENTOBARBITAL AND ETHER ON THE SYNAPTIC TRANSMISSION OF THE HIPPOCAMPAL-CA1-REGION IN THE RAT. 003903 04-03
ELECTROPHYSIOLOGICAL EVIDENCE FOR PRESYNAPTIC ACTIONS OF PHENCYCLIDINE ON NORADRENERGIC TRANSMISSION IN RAT CEREBELLUM. 003926 04-03

TRANSMITTERS
DRUGS, TRANSMITTERS AND HORMONES, AND MATING-BEHAVIOR. 004721 04-17

TRANSPORT
PAPAIN-DERIVED FRAGMENT IIC TETANUS-TOXIN: ITS BINDING TO ISOLATED SYNAPTIC MEMBRANES AND RETROGRADE AXONAL TRANSPORT. 003734 04-03
STUDIES ON AXONAL TRANSPORT IN DOPAMINERGIC NEURONS: EFFECT OF NEUROPHARMACOLOGIC LESIONS. 003858 04-03
THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT. 003897 04-03
RESERPINE EFFECT ON THE AXONAL TRANSPORT OF DOPAMINE-BETA-HYDROXYLASE AND TYROSINE-HYDROXYLASE IN RAT-BRAIN. 003904 04-03
STUDIES ON GAMMA AMINOBUTYRIC-ACID TRANSPORT IN COBALT EXPERIMENTAL EPILEPSY IN THE RAT. 003990 04-03
PROPERTIES OF THE OPTICAL-ISOMERS AND METABOLITES OF KETAMINE ON THE HIGH-AFFINITY TRANSPORT AND CATABOLISM OF MONOAMINES. 004009 04-03
THE EFFECT OF NORADRENALINE ON NA-K TRANSPORT IN RAT-CEREBRAL-CORTICAL SLICES. 004056 04-03
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05
INTERACTION OF CHLORPROMAZINE WITH THE TRANSPORT SYSTEM OF GLUCOSE IN HUMAN ERYTHROCYTES. 004529 04-13

TRANXILIUM
PHARMACOLOGICAL PECULIARITIES OF A BENZODIAZEPINE/ATARACTIC-DRUG AND ITS THERAPEUTIC RELEVANCE: THE SPECIAL STATUS OF CLORAZEPATE-DIPOTASSIUM (TRANXILIUM). 004527 04-13

TRANYLCYPROMINE
CHARACTERISTIC HYPERPYREXIA INDUCED BY LICL AND TRANYLCYPROMINE IN RATS. 004278 04-05

TRAZODONE
BIOCHEMICAL INVESTIGATIONS INTO THE MODE OF ACTION OF TRAZODONE. 003753 04-03
THE INTERACTION OF TRAZODONE WITH RAT-BRAIN MUSCARINIC-CHOLINOCEPTORS. 003855 04-03
TRAZODONE EFFICACY AND SAFETY IN ENDOGENOUS DEPRESSION: A DOUBLE-BLIND COMPARISON WITH IMIPRAMINE. 004346 04-09

A COMPARATIVE CLINICAL-TRIAL WITH THE TRANQUILIZER TRAZODONE AND THE TRICYCLIC-ANTIDEPRESSANT CLOMIPRAMINE. 004380 04-09

THE ANTIDEPRESSANT EFFECTS OF TRAZODONE AND INHIBITION OF PLATELET SEROTONIN REUPTAKE. 004383 04-09

AN EVALUATION OF TRAZODONE IN THE TREATMENT OF DEPRESSION. 004386 04-09

A COMPARISON OF TRAZODONE AND DOTHIEPIN IN DEPRESSION. 004394 04-09

TRAZODONE IN DEPRESSION. 004414 04-09

TREATED

ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN. 003820 04-03

DEVELOPMENTAL-CHANGE IN REARING RESPONSE TO ATROPINE IN RATS TREATED WITH 6 HYDROXYDOPA. 004191 04-04

CATECHOLAMINE SEROTONIN INTERACTION EFFECTS ON ACTIVITY IN RATS NEONATALLY TREATED WITH 6 HYDROXYDOPAMINE. 004194 04-04

NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE. 004264 04-05

NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. II: EFFECTS OF EXTENDED EXPOSURE TO ACRYLAMIDE. 004265 04-05

A FOLLOWUP STUDY OF SCHIZOPHRENIC-OUTPATIENTS TREATED WITH DEPOT NEUROLEPTICS. 004342 04-08

NORMAL PLASMA DOPAMINE-BETA-HYDROXYLASE IN NONTREATED AND TREATED PARKINSON-PATIENTS. 004471 04-11

PECULIARITIES OF THE CEREBRAL PATHOMORPHOLOGY OF PATIENTS WITH SCHIZOPHRENIA TREATED WITH PSYCHOTROPIC-DRUGS (PHARMACOLOGICAL PATHOMORPHOSIS). 004528 04-13

ELECTROENCEPHALOGRAPHIC CHANGE IN PARKINSONIAN-PATIENTS TREATED WITH LEVODOPA CARBIDOPA. 004557 04-13

CONCENTRATIONS OF CHLORPROMAZINE AND TWO OF ITS ACTIVE METABOLITES IN PLASMA AND CEREBROSPINAL-FLUID OF PSYCHOTIC-PATIENTS TREATED WITH FIXED DRUG DOSES. 004559 04-13

TREATING

PROBLEMS OF TREATING DEFORMING MYODYSTONIA WITH L-DOPA, AND PREDICTION OF ITS THERAPEUTIC EFFECT. 004536 04-13

PRESENT ATTEMPTS AT TREATING TARDIVE-DYSKINESIA. 004629 04-15

TREATMENT

EFFECT OF CHRONIC MORPHINE TREATMENT ON THE INTERACTION BETWEEN THE PERIAQUEDUCTAL GREY AND THE NUCLEUS-RAPHE-MAGNUS OF THE RAT. 003727 04-03

CATECHOLAMINE TURNOVER IN RAT-CEREBRAL-CORTEX AND CAUDATE FOLLOWING REPEATED TREATMENT WITH DIHYDROERGOTOXINE. 003765 04-03

EFFECTS OF ACUTE AND CHRONIC AMPHETAMINE TREATMENT ON PURKINJE NEURON DISCHARGE IN RAT CEREBELLUM. 003793 04-03

THE EFFECTS OF CHRONIC METHYLPHENIDATE TREATMENT ON GROWTH AND ENDOCRINE FUNCTION IN THE DEVELOPING RAT. 003811 04-03

INCREASED MESOLIMBIC DOPAMINE BINDING FOLLOWING CHRONIC HALOPERIDOL TREATMENT. 003872 04-03

EFFECT OF NEONATAL HYDROCORTISONE TREATMENT ON BRAIN-MONOAMINES IN DEVELOPING RATS. 003893 04-03

METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT. 003905 04-03

THE DOPAMINE-RECEPTOR COMPLEX: BIOCHEMICAL CONSEQUENCES OF SUPERSENSITIVITY INDUCED BY TREATMENT WITH 6 HYDROXYDOPAMINE OR MORPHINE. 003958 04-03

CHANGES IN REGIONAL BRAIN LEVELS OF AMINO-ACID PUTATIVE NEUROTRANSMITTERS AFTER PROLONGED TREATMENT WITH THE ANTICONVULSANT-DRUGS DIPHENYLHYDANTOIN, PHENOBARBITONE, SODIUM-VALPROATE, ETHOSUXIMIDE, AND SULTHIAME IN THE RAT. 003961 04-03

EFFECT OF PRENATAL NEUROLEPTIC TREATMENT ON MEMBRANE RECEPTOR DEVELOPMENT IN THE BRAIN. 003989 04-03

CHRONIC NEUROLEPTIC TREATMENT SPECIFICALLY ALTERS THE NUMBER OF DOPAMINE-RECEPTORS IN RAT-BRAIN. 004033 04-03

EFFECTS OF A HIGH-DOSE TREATMENT OF METHAMPHETAMINE ON CAUDATE DOPAMINE AND ANOREXIA IN RATS. 004073 04-04

INDUCTION OF BEHAVIORAL-SUPERSENSITIVITY TO APOMORPHINE BY DFP TREATMENT. 004099 04-04

EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS. 004101 04-04

EFFECTS OF SUBCHRONIC DESMETHYLIMIPRAMINE (DMI) TREATMENT OF THE CLASSICALLY CONDITIONED EYEBLINK RESPONSE IN RABBITS. 004180 04-04

TREATMENT OF UNSTABLE ANGINA BY DILTIAZEM. 004307 04-07

CORRELATIONS BETWEEN VISUAL-EVOKED-POTENTIALS AND PSYCHOPATHOLOGICAL-FINDINGS IN SCHIZOPHRENIC-PATIENTS UNDER TREATMENT WITH VARIOUS PSYCHOPHARMACOLOGICAL-DRUGS. 004315 04-08

PRELIMINARY TRIAL OF CLONIDINE TREATMENT IN TWO PATIENTS SUFFERING FROM CHRONIC SCHIZOPHRENIA. 004320 04-08

PLASMA LEVELS OF BETA ENDORPHIN UNDER CHRONIC NEUROLEPTIC TREATMENT IN SCHIZOPHRENIC-PATIENTS: FAILURE OF NALOXONE TO COUNTERACT CURATIVE EFFECTS OF NEUROLEPTIC-DRUGS. 004321 04-08

THE TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: AN INTERVIEW WITH DR. J. HUSSER. 004328 04-08

NEUROENDOCRINE-TESTS DURING TREATMENT WITH NEUROLEPTIC-DRUGS: I. PLASMA PROLACTIN RESPONSE TO CHLORPROMAZINE CHALLENGE. 004329 04-08

HALOPERIDOL AND DROPERIDOL TREATMENT IN SCHIZOPHRENICS: CLINICAL APPLICATION OF THE PROLACTIN MODEL. 004332 04-08

A DOUBLE-BLIND COMPARISON OF THREE DOSAGES OF FLUTROLINE (CP-36584) IN THE TREATMENT OF SCHIZOPHRENIA. 004333 04-08

THE USE OF SODIUM-NUCLEINATE IN THE TREATMENT OF SCHIZOPHRENIC-PATIENTS. 004339 04-08

LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BICHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08

EVALUATIONS OF LOXAPINE-SUCCINATE IN THE AMBULATORY TREATMENT OF ACUTE SCHIZOPHRENIC-EPISODES. 004345 04-08

CLINICAL-RESPONSE AND BLOOD LEVELS IN THE TREATMENT OF DEPRESSION WITH A NEW ANTIDEPRESSANT-DRUG, AMOXAPINE. 004356 04-09

GUIDELINES ON THE DIAGNOSIS AND TREATMENT OF DEPRESSION. 004376 04-09

TREATMENT OF DEPRESSION WITH AN MAO-INHIBITOR FOLLOWED BY 5 HTP -- AN UNFINISHED RESEARCH PROJECT. 004377 04-09

CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT. 004382 04-09

AN EVALUATION OF TRAZODONE IN THE TREATMENT OF DEPRESSION. 004386 04-09

STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09

VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY. 004392 04-09

ALTERATIONS IN NORADRENERGIC FUNCTION DURING CLORGYLINE TREATMENT. 004393 04-09

LITHIUM TREATMENT OF MANIC-DEPRESSIVE-ILLNESS. A PRACTICAL GUIDE. 004408 04-09

ELECTROCARDIOGRAM-CHANGES AND PLASMA DESIPRAMINE LEVELS DURING TREATMENT OF DEPRESSION. 004411 04-09

CHANGES IN PSYCHOPATHOLOGIC SYMPTOMS DURING 20 DAYS OF TREATMENT WITH ANTIDEPRESSANTS AND NEUROLEPTIC-DRUGS. 004415 04-09

CONTROLLED CLINICAL-TRIAL OF NOMIFENSINE IN THE TREATMENT OF DEPRESSION. 004417 04-09

PRAZEPAM: A NEW BENZODIAZEPINE FOR THE TREATMENT OF ANXIOUS-DEPRESSIVE STATES. 004419 04-10

DIFFERENTIAL DIAGNOSIS AND TREATMENT OF PANIC ATTACKS AND PHOBIC-STATES. 004424 04-10

AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT. 004426 04-10
DRUG-THERAPY FOR HYPERACTIVITY: TREATMENT PROCEDURES IN NATURAL SETTINGS. 004449 04-11
TREATMENT OF SEX-OFFENDERS WITH MEDROXYPROGESTERONE-ACETATE. 004450 04-11
TREATMENT OF ENCOPRESIS WITH IMIPRAMINE. 004451 04-11
METHADONE TREATMENT OF HEROIN ADDICTS IN SWITZERLAND. 004452 04-11
HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004456 04-11
THE CLASSIFICATION OF SLEEP-DISORDERS AND THE TREATMENT OF VARIOUS FORMS OF SOMNAMBULISM. 004461 04-11
EFFECT OF TREATMENT WITH SODIUM-VALPROATE AND DIAZEPAM ON PLASMA CORTICOTROPIN IN NELSONS-SYNDROME. 004463 04-11
SCOPOLAMINE IN CHOLINOLYTIC TREATMENT. 004468 04-11
TREATMENT OF EPILEPSIES WITH CLONAZEPAM (ANTELEPSIN). 004481 04-11
THE TREATMENT OF INSOMNIA THROUGH HOMEOPATHY IN A CLINIC. 004484 04-11
SINGLE-CASE STUDY OF CLINICAL-RESPONSE TO HIGH-DOSE ERGOT ALKALOID TREATMENT FOR DEMENTIA. PRELIMINARY REPORT. 004493 04-11
CEREBROSPINAL-FLUID HOMOVANILLIC-ACID PATTERNS DURING NEUROLEPTIC TREATMENT. (UNPUBLISHED PAPER). 004502 04-13
A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM. 004520 04-13
TREATMENT OF UNDERNUTRITION AND ELECTROLYTE-DISTURBANCES IN ANOREXIA-NERVOSA. 004531 04-13
TREATMENT OF NARCOLEPSY AND SLEEP-APNEA WITH GAMMA HYDROXYBUTYRATE: A CLINICAL AND POLYSOMNOGRAPHIC CASE-STUDY. 004571 04-14
PROSPECTS FOR THE TREATMENT OF POSTENCEPHALITIC PARKINSONISM WITH ANTILYMPHOCYTIC IMMUNOGLOBULIN. 004572 04-14
CORRECTION OF HORMONAL ACTIVITY OF THE THYROID-GLAND AS A METHOD OF PATHOGENIC THERAPY IN A COMPREHENSIVE TREATMENT OF PATIENTS WITH TEMPORAL EPILEPSY. 004579 04-14
USE OF LYSINE-VASOPRESSIN IN THE TREATMENT OF POSTTRAUMATIC AMNESIA. 004583 04-14
OPIOID DEPENDENCE: MECHANISMS AND TREATMENT. 004587 04-14
CLINICAL STRATEGIES FOR ANTIPSYCHOTIC-DRUG TREATMENT, TARDIVE-DYSKINESIA, AND THE TRAINING OF RESEARCH PSYCHIATRISTS. 004603 04-15
LECITHIN FOR THE TREATMENT OF TARDIVE-DYSKINESIA. 004612 04-15
NEUROLEPTIC TREATMENT AS EXPERIENCED BY A PSYCHIATRIST. 004613 04-15
TREATMENT OF TARDIVE-DYSKINESIA. 004616 04-15
A STUDY ON MENTAL-SYMPTOMS DEVELOPED DURING THE TREATMENT OF PARKINSONS-DISEASE. 004618 04-15
BACLOFEN IN THE TREATMENT OF TARDIVE-DYSKINESIA: OPEN LABEL STUDY. 004619 04-15
A CASE OF ACUTE AGRANULOCYTOSIS DURING TREATMENT WITH CLOZAPINE. 004642 04-15
RESULTS OF TREATMENT BY MODITEN DEPOT IN OUTPATIENTS-WARDS IN THE SOUTH MORAVIAN REGION. 004648 04-15
APOMORPHINE-INDUCED STEREOTYPY IN MATURE AND SENESCENT RATS FOLLOWING CESSATION OF CHRONIC HALOPERIDOL TREATMENT. 004651 04-15
LITHIUM-CARBONATE IN THE TREATMENT OF MOVEMENT-DISORDERS. A CRITICAL REVIEW. 004668 04-15
THE USE OF CLINICAL KINETIC DATA IN TREATMENT WITH ANTIDEPRESSANT-DRUGS. 004686 04-16
STUDY ON THE STABILITY OF THE FACTORIAL STRUCTURE OF THE AMP SYSTEM DURING TREATMENT. 004696 04-16
ANOREXIA-NERVOSA. SYMPTOMS, COURSE AND POSSIBILITIES FOR TREATMENT. 004711 04-17
PSYCHOPHARMACOLOGY AND PSYCHOTHERAPY IN THE TREATMENT OF ANXIETY. 004712 04-17
THERAPEUTIC TREATMENT OF INSUFFICIENT PERFORMANCE IN CEREBROVASCULAR-DISEASES. 004718 04-17
EMOTIONAL-DISORDERS IN CHILDREN AND ADOLESCENTS: MEDICAL AND PSYCHOLOGICAL APPROACHES TO TREATMENT. 004742 04-17
CURRENT TRENDS IN TREATMENT IN PSYCHIATRY. 004747 04-17

TREATMENTS
THE BEHAVIORAL-EFFECTS OF D-AMPHETAMINE ALONE AND IN COMBINATION WITH ACUTE AND CHRONIC MORPHINE TREATMENTS IN RATS. 003915 04-03
ALTERATIONS IN GAMMA AMINOBUTYRIC-ACID-RECEPTOR SENSITIVITY FOLLOWING ACUTE AND CHRONIC ETHANOL TREATMENTS. 004037 04-03
CLASSICAL NEUROLEPTICS AND DECONDITIONING ACTIVITY AFTER SINGLE OR REPEATED TREATMENTS: ROLE OF DIFFERENT CEREBRAL NEUROTRANSMITTERS. 004115 04-04
PREVALENCE OF HYPERACTIVITY AND RELATED TREATMENTS AMONG ELEMENTARY SCHOOL CHILDREN. 004469 04-11

TREMORS
MODIFICATION OF DRUG-INDUCED CATATONIA AND TREMORS BY QUIPAZINE IN RATS AND MICE. 004164 04-04

TRENDS
PSYCHOPHARMACOTHERAPY: THE PRESENT STATE AND THE DEVELOPMENT OF TRENDS. 004723 04-17
CURRENT TRENDS IN TREATMENT IN PSYCHIATRY. 004747 04-17

TRH
BIOLOGICAL EVALUATION OF A TRH ANALOGUE WITH A MODIFIED PROLINE RESIDUE. 003662 04-01
PHARMACOLOGICAL-ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04
TSH, HGH, HPR, AND CORTISOL RESPONSE TO TRH IN DEPRESSED-PATIENTS. 004399 04-09
BASAL PROLACTINAEMIA AND RESPONSES TO TRH AND SULPIRIDE IN DIFFERENT CATEGORIES OF MALE SEXUAL-DYSFUNCTIONS. 004500 04-13

TRIAL
PRELIMINARY TRIAL OF CLONIDINE TREATMENT IN TWO PATIENTS SUFFERING FROM CHRONIC SCHIZOPHRENIA. 004320 04-08
DES-TYROSYL-GAMMA-ENDORPHIN IN SCHIZOPHRENIA: A DOUBLE-BLIND TRIAL IN 13 PATIENTS. 004322 04-08
A DOUBLE-BLIND TRIAL: THE USE OF OXPRENOLOL AND DIAZEPAM IN ANXIETY. [illegible] 04-10

TRICYCLIC
BLOOD LEVEL MEASUREMENTS OF TRICYCLIC DRUGS AS A DIAGNOSTIC TOOL. 004346 04-09

TRICYCLIC-ANTIDEPRESSANT
INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN. 003756 04-03
DOXEPIN, A TRICYCLIC-ANTIDEPRESSANT, BINDS TO NORMAL, INTACT ASTROGLIAL CELLS IN CULTURES AND INHIBITS THE ISOPROTERENOL-INDUCED INCREASE IN CYCLIC-AMP PRODUCTION. [illegible] 04-03
ALPHA2-ADRENORECEPTORS IN RAT-BRAIN ARE DECREASED AFTER LONG-TERM TRICYCLIC-ANTIDEPRESSANT DRUG-TREATMENT. 004038 04-03
EFFECT OF CHRONIC-TREATMENT WITH TRICYCLIC-ANTIDEPRESSANT DRUGS ON IDENTIFIED BRAIN NORADRENERGIC AND SEROTONERGIC NEURONS. [illegible] 04-03
SUBCHRONIC-TREATMENT WITH THE TRICYCLIC-ANTIDEPRESSANT DMI INCREASES ISOLATION-INDUCED FIGHTING IN RATS. [illegible] 04-04
A COMPARATIVE CLINICAL-TRIAL WITH THE TRANQUILIZER TRAZODONE AND THE TRICYCLIC-ANTIDEPRESSANT CLOMIPRAMINE. [illegible] 04-09

NEUROLEPTIC TRICYCLIC-ANTIDEPRESSANT COMBINATION: PHARMACOLOGICAL-ASPECTS AND THERAPEUTIC INTEREST. 004501 04-13

SYMPATHOMIMETIC-AMINES AND TRICYCLIC-ANTIDEPRESSANT DRUGS. 004678 04-16

TRICYCLIC-ANTIDEPRESSANT-INDUCED

TRICYCLIC-ANTIDEPRESSANT-INDUCED MANIA. 004656 04-15

TRICYCLIC-ANTIDEPRESSANTS

THE EFFECT OF DIBENZAZEPINES (TRICYCLIC-ANTIDEPRESSANTS) ON CEREBRAL CAPILLARY PERMEABILITY IN THE RAT IN VIVO. 003974 04-03

TRICYCLIC-ANTIDEPRESSANTS AND HISTAMINE H1-RECEPTORS. 003986 04-03

EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON TETRABENAZINE-INDUCED DEPLETION OF BRAIN MONOAMINES IN RATS. 1. NOREPINEPHRINE. 004062 04-03

THE EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS ON PERFORMANCE UNDER A DIFFERENTIAL-REINFORCEMENT-OF-LOW-RATES SCHEDULE IN RATS. 004175 04-04

INDIVIDUAL DIFFERENCES IN EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND ANTICHOLINERGIC-DRUGS ON OPERANT-BEHAVIOR IN THE SQUIRREL-MONKEY. 004176 04-04

MECHANISM OF MEMBRANE STABILIZING AND LYTIC-EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS. 004283 04-05

PHARMACOKINETICS AND CLINICAL-RESPONSE TO TRICYCLIC-ANTIDEPRESSANTS. 004370 04-09

DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09

THE EFFECT OF FIVE TRICYCLIC-ANTIDEPRESSANTS ON SALIVARY FLOW AND MOOD IN HEALTHY VOLUNTEERS. 004560 04-14

TRICYCLIC-ANTIDEPRESSANTS AND ALCOHOLIC BLACKOUTS. 004617 04-15

RADIOIMMUNOASSAY OF TRICYCLIC-ANTIDEPRESSANTS. 004674 04-16

THERAPEUTIC MONITORING OF PLASMA CONCENTRATIONS OF TRICYCLIC-ANTIDEPRESSANTS: PERSPECTIVE OF THE CLINICAL LABORATORY. 004681 04-16

A RAPID AND SENSITIVE RADIORECEPTOR ASSAY FOR TERTIARY AMINE TRICYCLIC-ANTIDEPRESSANTS. 004689 04-16

TRIFLUOROETHYL-DIHYDROXYPHENYLETHYLAMINE

PREPARATION AND BIOLOGICAL ACTIONS OF N 2,2,2 TRIFLUOROETHYL-DIHYDROXYPHENYLETHYLAMINE. 003697 04-02

TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE

STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE. 003706 04-02

TRIGGER

THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS. 003953 04-03

TRIIODOTHYRONINE

INFLUENCE OF CARBAMAZEPINE ON SERUM THYROXINE AND TRIIODOTHYRONINE IN PATIENTS WITH EPILEPSY. 004488 04-11

TRIPHOSPHATE

5' TRIPHOSPHATE RECYCLES INDEPENDENTLY OF ACETYLCHOLINE IN CHOLINERGIC SYNAPTIC VESICLES. 004063 04-03

TRITIATED

COMPARISON OF THE BINDING CHARACTERISTICS OF TRITIATED OPIATES AND OPIOID-PEPTIDES. 003802 04-03

TROTTING

DIAZEPAM-INDUCED ATAXIA IN TROTTING SQUIRREL-MONKEYS. 004138 04-04

TRYPTAMINE

N,N DIISOPROPYLTRYPTAMINE (DIPT) AND 5 METHOXYDIISOPROPYLTRYPTAMINE (5 MEO-DIPT). TWO ORALLY ACTIVE TRYPTAMINE ANALOGS WITH CNS ACTIVITY. 004310 04-07

TRYPTOPHAN

STRESS-MODULATED ALTERATION OF BRAIN BIOGENIC-AMINES IN THE RAT: EFFECTS OF L TRYPTOPHAN. 003978 04-03

EFFECT OF PRENATAL PHENYTOIN ADMINISTRATION ON BRAIN TRYPTOPHAN METABOLISM OF RAT OFFSPRING DURING THE PREWEANING PERIOD. 004108 04-04

THE EFFECTS OF TRYPTOPHAN AND MANIPULATIONS OF SEROTONERGIC-RECEPTORS ON TONIC IMMOBILITY IN CHICKENS. 004245 04-04

POTENTIATION OF THE EFFECT OF ANTIDEPRESSANT-DRUGS BY TRYPTOPHAN. 004412 04-09

CORRECTION OF THE EXTRAPYRAMIDAL NEUROLEPTIC-SYNDROME BY TRYPTOPHAN AND THE TIME-COURSE OF ITS CONTENT IN THE BLOOD OF PATIENTS. 004434 04-11

HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004456 04-11

TRYPTOPHAN-HYDROXYLASE

LONG-TERM EFFECTS OF MULTIPLE DOSES OF METHAMPHETAMINE ON TRYPTOPHAN-HYDROXYLASE AND TYROSINE-HYDROXYLASE ACTIVITY IN RAT-BRAIN. 003850 04-03

STUDIES ON THE KINETIC PROPERTIES OF TRYPTOPHAN-HYDROXYLASE OF RABBIT MESENCEPHALON AND PONS-MEDULLA: EFFECT OF LONG-TERM-TREATMENT WITH NEUROLEPTICS AND ANTIDEPRESSANTS. 003852 04-03

() 6 FLUOROTRYPTOPHAN, AN INHIBITOR OF TRYPTOPHAN-HYDROXYLASE: SLEEP AND WAKEFULNESS IN THE RAT. 004189 04-04

TSH

TSH, HGH, HPR, AND CORTISOL RESPONSE TO TRH IN DEPRESSED-PATIENTS. 004399 04-09

DIFFERENT EFFECTS OF TRICYCLIC-ANTIDEPRESSANTS AND TETRACYCLIC-ANTIDEPRESSANTS ON THE RELEASE OF TSH, PROLACTIN, AND GROWTH-HORMONE AFTER ADMINISTRATION OF THYROSTIMULATING-RELEASING-HORMONE IN MANIC-DEPRESSIVES. 004407 04-09

TUBOCURARINE

ANTAGONISM OF SOME CENTRAL-EFFECTS OF D TUBOCURARINE BY GAMMA AMINOBUTYRIC-ACID. 004102 04-04

TURNOVER

MYOINOSITOL TURNOVER IN THE INTACT RAT-BRAIN: INCREASED PRODUCTION AFTER D-AMPHETAMINE. 003723 04-03

CATECHOLAMINE TURNOVER IN RAT-CEREBRAL-CORTEX AND CAUDATE FOLLOWING REPEATED TREATMENT WITH DIHYDROERGOTOXINE. 003765 04-03

SOME BARBITURATES ENHANCE THE EFFECT OF MUSCIMOL ON DOPAMINE TURNOVER IN THE RAT RETINA. 003873 04-03

EFFECT OF IMIPRAMINE ON CENTRAL 5 HYDROXYTRYPTAMINE TURNOVER AND METABOLISM IN RATS. 003999 04-03

ONTOGENY OF HISTAMINERGIC NEUROTRANSMISSION IN THE RAT-BRAIN: CONCOMITANT DEVELOPMENT OF NEURONAL HISTAMINE, H1-RECEPTORS, AND H1-RECEPTOR-MEDIATED STIMULATION OF PHOSPHOLIPID TURNOVER. 004021 04-03

ACETYLCHOLINE TURNOVER AND AGGRESSION IN RELATED THREE STRAINS OF MICE. 004151 04-04

TWO-COMPONENT

SIMULTANEOUS HIGH-PERFORMANCE LIQUID-CHROMATOGRAPHIC-DETERMINATION OF AMITRIPTYLINE-HYDROCHLORIDE IN TWO-COMPONENT TABLET FORMULATIONS. 004673 04-16

TWO-DRUG

RAPID ACQUISITION OF A TWO-DRUG DISCRIMINATION: TIME OF DAY EFFECT UPON SALINE STATE. 004214 04-04

TWO-SHOCK

A SIGNAL-DETECTION-ANALYSIS OF MORPHINE EFFECTS ON THE RESPONSE BIAS OF RATS IN A TWO-SHOCK DISCRIMINATION TASK. 004124 04-04

TYPE-1

INTERCONVERTING MU AND DELTA-FORMS OF TYPE-1 OPIATE-RECEPTORS IN THE RAT STRIATAL PATCHES. 003737 04-03

TYPICAL

THE EFFECT OF TYPICAL AND ATYPICAL NEUROLEPTICS ON BINDING OF (3H)SPIROPERIDOL IN CALF CAUDATE. 003906 04-03

TYRAMINE

INFLUENCE OF CALCIUM ON NORADRENALINE RELEASE EVOKED BY 5 HYDROXYTRYPTAMINE, TYRAMINE AND POTASSIUM FROM GOAT PIAL-ARTERIES. 003925 04-03

TYROSINE-HYDROXYLASE
LONG-TERM EFFECTS OF MULTIPLE DOSES OF METHAMPHETAMINE ON TRYPTOPHAN-HYDROXYLASE AND TYROSINE-HYDROXYLASE ACTIVITY IN RAT-BRAIN.
003850 04-03
RESERPINE EFFECT ON THE AXONAL TRANSPORT OF DOPAMINE-BETA-HYDROXYLASE AND TYROSINE-HYDROXYLASE IN RAT-BRAIN.
003904 04-03
BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY.
004018 04-03

ULTRAFILTRATE
CONCENTRATIONS AND KINETICS OF CARBAMAZEPINE IN WHOLE SALIVA, PAROTID SALIVA, SERUM ULTRAFILTRATE, AND SERUM.
004545 04-13

ULTRASTRUCTURAL
ULTRASTRUCTURAL LOCALIZATION OF MONOAMINES IN NERVE FIBERS OF THE PINEAL-GLAND IN GOLDEN HAMSTERS.
003666 04-01

ULTRASTRUCTURE
EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC AXON TERMINALS IN THE MOUSE ADRENAL-MEDULLA.
003916 04-03

UNANESTHETIZED
CONVERGENT PROPERTIES AND CHEMICAL SENSITIVITY OF MIDBRAIN RETICULAR FORMATION NEURONS OF UNANESTHETIZED RABBITS.
003972 04-03

UNDERCUT
ASTHMA THERAPY MAY UNDERCUT KIDS AT SCHOOL.
004475 04-11

UNDERNUTRITION
TREATMENT OF UNDERNUTRITION AND ELECTROLYTE-DISTURBANCES IN ANOREXIA-NERVOSA.
004531 04-13

UNDESIRABLE
UNDESIRABLE EFFECTS OF MEDICINES: A REVIEW OF SEVERAL PUBLICATIONS ISSUED FROM 1977-1979.
004632 04-15
SIDE-EFFECTS AND UNDESIRABLE COMBINATIONS OF PSYCHOTROPIC-MEDICATIONS.
004663 04-15

UNEXTRACTED
VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA.
003715 04-03

UNFINISHED
TREATMENT OF DEPRESSION WITH AN MAO-INHIBITOR FOLLOWED BY 5 HTP -- AN UNFINISHED RESEARCH PROJECT.
004377 04-09

UNILATERAL
THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS.
004117 04-04
THE INFLUENCE OF UNILATERAL 6 HYDROXY-DOPAMINE LESIONS OF THE SUBSTANTIA-NIGRA IN THE ABSENCE OF THE TELENCEPHALON.
004197 04-04

UNILATERALLY
THE RELATIONSHIP BETWEEN LOSS OF DOPAMINE NERVE TERMINALS, STRIATAL (3H)SPIROPERIDOL BINDING AND ROTATIONAL-BEHAVIOR IN UNILATERALLY 6 HYDROXYDOPAMINE LESIONED RATS.
004129 04-04

UNIMPAIRED
UNIMPAIRED QUININE METABOLISM IN RATS WITH VENTROMEDIAL HYPOTHALAMIC LESIONS.
003821 04-03

UNITARY
MUSCARINIC-RECEPTOR: MULTIPLE SITES OR UNITARY CONCEPT?
003896 04-03

UNMASKING
CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED.
003911 04-03

UNMYELINATED
SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE.
003778 04-03

UNSTABLE
TREATMENT OF UNSTABLE ANGINA BY DILTIAZEM.
004307 04-07

UNWANTED
UNWANTED EFFECTS OF LITHIUM-CARBONATE USED IN THE PREVENTION OF RELAPSES OF AFFECTIVE-ILLNESS.
004625 04-15

UPTAKE
INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER.
003669 04-01
NONCOMPETITIVE AMINE UPTAKE INHIBITION BY THE NEW ANTIDEPRESSANT PRIDEFINE.
003771 04-03
A STUDY OF GAMMA AMINOBUTYRIC-ACID UPTAKE IN NORMAL AND DOWNS-SYNDROME PLATELETS.
003787 04-03
EFFECTS OF CONFORMATIONALLY RESTRAINED ANALOGUES OF SEROTONIN ON ITS UPTAKE AND BINDING IN RAT-BRAIN.
003794 04-03
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: KINETIC STUDIES.
003814 04-03
UPTAKE OF RADIOCALCIUM BY NERVE-ENDINGS ISOLATED FROM RAT-BRAIN: PHARMACOLOGICAL-STUDIES.
003815 04-03
INHIBITION OF SYNAPTOSOMAL CALCIUM UPTAKE BY ETHANOL.
003827 04-03
THE UPTAKE OF CARNITINE BY SLICES OF RAT-CEREBRAL-CORTEX.
003843 04-03
EFFECT OF VERAPAMIL ON 45CA UPTAKE BY SYNAPTOSOMES.
003856 04-03
ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE.
003879 04-03
THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS.
003900 04-03
EFFECTS OF DELTA9 TETRAHYDROCANNABINOL AND CANNABIDIOL ON SODIUM-DEPENDENT HIGH-AFFINITY CHOLINE UPTAKE IN THE RAT HIPPOCAMPUS.
003908 04-03
EFFECTS OF HALOPEMIDE ON GABA-RECEPTOR BINDING, UPTAKE AND RELEASE.
003913 04-03
AMINE UPTAKE INHIBITORS: CRITERIA OF SELECTIVITY.
003921 04-03
THE HUMAN PLATELET AS A MODEL FOR THE GLUTAMATERGIC NEURON: PLATELET UPTAKE OF L GLUTAMATE.
003923 04-03
ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS.
003930 04-03
EFFECTS OF CANNABINOIDS ON CATECHOLAMINE UPTAKE AND RELEASE IN HYPOTHALAMIC AND STRIATAL SYNAPTOSOMES.
003970 04-03
THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES.
004028 04-03
INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES.
004042 04-03
ANORECTIC-PROPERTIES OF A NEW LONG ACTING SEROTONIN UPTAKE INHIBITOR.
004108 04-04
THE EFFECT OF DOPAMINE UPTAKE BLOCKING-AGENTS ON THE AMPHETAMINE-INDUCED CIRCLING-BEHAVIOR IN MICE WITH UNILATERAL NIGROSTRIATAL LESIONS.
004117 04-04
DIFFERENTIAL-EFFECTS OF SEVERAL DOPAMINE UPTAKE INHIBITORS AND RELEASING AGENTS ON LOCOMOTOR-ACTIVITY IN NORMAL AND IN RESERPINIZED MICE.
004130 04-04
A SIMPLE HISTOCHEMICAL SCREENING METHOD FOR AMINE UPTAKE.
004295 04-06
EFFECT OF NOREPINEPHRINE UPTAKE BLOCKERS ON NOREPINEPHRINE KINETICS.
004506 04-13
EFFECTS OF RO-11-2465, A NEW PSYCHOTROPIC-AGENT ON THE UPTAKE OF SEROTONIN BY HUMAN PLATELETS -- IN VITRO DETERMINATION OF THE IC50.
004532 04-13
SPECIFIC GABA-RECEPTOR AGONISTS AND UPTAKE INHIBITORS: DESIGN, DEVELOPMENT AND STRUCTURE-ACTIVITY STUDIES.
004725 04-17
ANTIDEPRESSANTS AND THE SEROTONIN UPTAKE IN PLATELETS.
004727 04-17

URINARY
TOWARD A BIOCHEMICAL CLASSIFICATION OF DEPRESSIVE-DISORDERS IV: PRETREATMENT URINARY MHPG LEVELS AS PREDICTORS OF ANTIDEPRESSANT RESPONSE TO IMIPRAMINE.
004406 04-09
VARIATIONS IN URINARY LEVELS OF 3 METHOXY-4-HYDROXYPHENYLGLYCOL-SULFATE IN PATIENTS WITH DEPRESSIVE-SYNDROMES.
004538 04-13

URINE

KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13

ACUTE PHENCYCLIDINE (PCP) INTOXICATION: QUANTITATIVE URINE LEVELS AND CLINICAL MANAGEMENT. 004665 04-15

MASS SCREENING AND CONFIRMATION OF DIAZEPAM IN URINE BY EMIT THIN-LAYER-CHROMATOGRAPHY. 004672 04-16

GLC/TLC ANALYSIS OF CODEINE AND MORPHINE IN URINE VIA DERIVATIZATION TECHNIQUES. 004687 04-16

USEFULNESS

AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT. 004426 04-10

A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM. 004543 04-13

UTILIZATION

EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05

VALPROATE

MECHANISM OF VALPROATE PHENOBARBITAL INTERACTION IN EPILEPTIC-PATIENTS. 004522 04-13

VALPROIC-ACID

ANTICONVULSANT ACTIVITY OF METABOLITES OF VALPROIC-ACID. 004168 04-04

VALPROIC-ACID IN CHILDHOOD-EPILEPSY: ANTICONVULSIVE EFFICACY IN RELATION TO ITS PLASMA LEVELS. 004525 04-13

VALUE

VALUE OF PROPANIDID IN ELECTROCONVULSIVE-THERAPY (COMPARISON WITH THIOPENTONE). 004379 04-09

VALUES

CEREBROSPINAL-FLUID VALUES OF HVA AND 5 HIAA IN PATIENTS WITH ENDOGENOUS DEPRESSION DURING THE COURSE OF TREATMENT. 004382 04-09

HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004456 04-11

VARIANCE

CONSISTENCY IN CATECHOLAMINE EXCRETION IN LABORATORY AND NATURAL SETTINGS: CORRELATIONAL AND VARIANCE COMPONENTS ANALYSES. 004508 04-13

VARIATIONS

GENETIC VARIATIONS IN MIDBRAIN DOPAMINE CELL NUMBER: PARALLEL WITH DIFFERENCES IN RESPONSES TO DOPAMINERGIC AGONISTS AND IN NATURALISTIC BEHAVIORS MEDIATED BY CENTRAL DOPAMINERGIC-SYSTEMS. (UNPUBLISHED PAPER). 004112 04-04

VARIATIONS IN URINARY LEVELS OF 3 METHOXY-4-HYDROXYPHENYLGLYCOL-SULFATE IN PATIENTS WITH DEPRESSIVE-SYNDROMES. 004533 04-13

EFFECT OF LITHIUM ON REACTION-TIME – A STUDY OF DIURNAL VARIATIONS. 004607 04-15

VARIES

THE SPECIFIC ACTIVITY OF PLATELET MONOAMINE-OXIDASE VARIES WITH PLATELET COUNT DURING SEVERE EXERCISE AND NORADRENALINE INFUSION. 004509 04-13

VASA-DEFERENTIA

ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE. 003879 04-03

VASCULAR

EFFECTS OF 3',4' DIHYDROXYNOMIFENSINE ON THE DOPAMINE VASCULAR RECEPTOR. 003890 04-03

CONSISTENT UNMASKING OF DOPAMINE-INDUCED DILATION OF THE CANINE FEMORAL VASCULAR BED. 003911 04-03

VASOPRESSIN

INDICATIONS FOR A BRAIN UPTAKE OF LABELLED VASOPRESSIN AND OCYTOCIN AND THE PROBLEM OF THE BLOOD-BRAIN-BARRIER. 003669 04-01

VASOPRESSIN STIMULATES RELEASE OF BETA LIPOTROPIN AND BETA ENDORPHIN IN CONSCIOUS RATS AS MEASURED BY RADIOIMMUNOASSAY OF UNEXTRACTED PLASMA. 003715 04-03

VEIN

INTERACTION OF THE TRICYCLIC-ANTIDEPRESSANT AMITRIPTYLINE WITH PREJUNCTIONAL ALPHA AND MUSCARINIC-RECEPTORS IN THE DOG SAPHENOUS VEIN. 003756 04-03

VELOCITY

MEASUREMENTS OF NERVE CONDUCTION VELOCITY DURING DECREASING TOXIC DIPHENYLHYDANTOIN LEVELS AND THE BEGINNING OF CARBAMAZEPINE MEDICATION: A CLINICAL NEUROPHYSIOLOGICAL REPORT. 004441 04-11

VENOMS

THE EFFECTS OF ALPHA AND BETA NEUROTOXINS FROM THE VENOMS OF VARIOUS SNAKES ON TRANSMISSION IN AUTONOMIC GANGLIA. 003750 04-03

VENOUS

THE DYNAMICS OF SYSTEMIC VENOUS, ARTERIAL, AND CEREBROSPINAL-FLUID PRESSURE UNDER I.V. ADMINISTRATION OF POLYETHYLENE-GLYCOL. 004045 04-03

VENTRAL

SENSITIVITY TO GABA OF NEURONS OF THE DORSAL AND VENTRAL LATERAL GENICULATE NUCLEI IN THE RAT. 003877 04-03

MORPHINE DIFFERENTIALLY AFFECTS VENTRAL TEGMENTAL AND SUBSTANTIA-NIGRA BRAIN REWARD THRESHOLDS. 004187 04-04

VENTRICULAR-MUSCLE

ELECTROPHYSIOLOGICAL-EFFECTS OF IMIPRAMINE ON BOVINE VENTRICULAR-MUSCLE AND PURKINJE-FIBRES. 003988 04-03

VENTROMEDIAL

THYROXIN SENSITIVITY OF SENSORIMOTOR CORTICAL NEURONS AND THE HYPOTHALAMIC VENTROMEDIAL NUCLEUS. 003713 04-03

UNIMPAIRED QUININE METABOLISM IN RATS WITH VENTROMEDIAL HYPOTHALAMIC LESIONS. 003821 04-03

VEP

THE EFFECT OF SODIUM-VALPROATE ON THE PHOTOSENSITIVE VEP. 004513 04-13

VERAPAMIL

EFFECT OF VERAPAMIL ON 45CA UPTAKE BY SYNAPTOSOMES. 003856 04-03

VERONA

PSYCHOTROPIC-DRUGS AND PSYCHIATRIC-HOSPITAL ADMISSIONS IN VERONA, ITALY. 004717 04-17

VERSION

A MODIFIED VERSION OF THE SIMULTANEOUS DISCONTINUATION OF PSYCHOTROPIC-DRUGS (COMBINED WITH THE ADMINISTRATION OF DIURETICS) AS A METHOD OF HALTING PROLONGED ATTACKS OF SCHIZOPHRENIA. 004584 04-14

VERTEBRAL

THE SIMULTANEOUS INFUSION OF DRUGS VIA THE LEFT AND RIGHT VERTEBRAL ARTERY OF THE CAT; A MODIFIED ANIMAL-MODEL FOR THE STUDY OF POSSIBLE CENTRAL-ACTIONS OF DRUGS UPON THE LOWER BRAINSTEM. 004297 04-06

VERTIGO

STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROOTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09

DOSE-EFFECT OF DEAE ON SUBJECTIVE PROBLEMS, VERTIGO, DEPRESSION, ASTHENIA, CEPHALALGIA, AND TONIC POSTURAL ACTIVITY PROBLEMS RECORDED WITH STATOKINESIMETER IN POSTCONCUSSIONAL-SYNDROME. 004472 04-11

THE EFFICACY OF PIRACETAM IN VERTIGO: A DOUBLE-BLIND STUDY IN PATIENTS WITH VERTIGO OF CENTRAL ORIGIN. 004478 04-11

VERVET-MONKEYS

PERIPHERAL-CORRELATES OF SEROTONERGICALLY-INFLUENCED BEHAVIORS IN VERVET-MONKEYS (CERCOPITHECUS-AETHIOPS-SABAEUS). 004204 04-04

VESICLES

INHIBITION BY CAFFEINE OF CALCIUM UPTAKE BY BRAIN MICROSOMAL VESICLES. 004042 04-03

5' TRIPHOSPHATE RECYCLES INDEPENDENTLY OF ACETYLCHOLINE IN CHOLINERGIC SYNAPTIC VESICLES. 004063 04-03

VESTIBULAR
ETHANOL-INDUCED CHANGES IN CYCLIC-GUANOSINE-PHOSPHATE METABOLISM IN MOUSE VESTIBULAR REGION. 003784 04-03
SELECTIVE EFFECT OF ETHANOL ON THE VESTIBULAR NUCLEUS NEURONS IN THE CAT. 004139 04-04
VIDEO-ANALYSIS
ON THE RELATIONSHIP BETWEEN MEASURES OBTAINED BY VIDEO-ANALYSIS OF NONVERBAL-BEHAVIOR AND SELF-RATING OF MOOD. 004410 04-09
VIEWPOINT
STUDIES ON THE TREATMENT AND DIAGNOSIS OF NEUROTIC VERTIGO FROM THE VIEWPOINT OF NEUROTOLOGY: OBSERVATION OF THE BALANCE TEST FOR ANALYZING NEUROTIC VERTIGO. 004387 04-09
VILOXAZINE
MULTICENTRE-STUDY WITH VILOXAZINE (VIVALAN) IN DEPRESSED-PATIENTS. 004375 04-09
VILOXAZINE IN THE TREATMENT OF DEPRESSIVE-NEUROSIS: A PLACEBO AND STANDARD (IMIPRAMINE) CONTROLLED CLINICAL-STUDY. 004392 04-09
VINBLASTINE
THE EFFECTS OF COLCHICINE AND VINBLASTINE ON MEMORY IN CHICKS. 004069 04-04
VINYL-GABA
EFFECT OF GAMMA VINYL-GABA ON BICUCULLINE-INDUCED SEIZURES. 004157 04-04
VISUAL
THE EFFECT OF PSYCHOSTIMULANTS ON CHANGES IN THE EXCITABILITY OF THE VISUAL CEREBRAL-CORTEX. 003919 04-03
AN ANALYSIS OF VISUAL OBJECT REVERSAL LEARNING IN THE MARMOSET AFTER AMPHETAMINE AND HALOPERIDOL. 004208 04-04
PERSONALITY AND DRUGS IN VISUAL FIGURAL AFTEREFFECTS. 004581 04-14
VISUAL-EVOKED-POTENTIALS
CORRELATIONS BETWEEN VISUAL-EVOKED-POTENTIALS AND PSYCHOPATHOLOGICAL-FINDINGS IN SCHIZOPHRENIC-PATIENTS UNDER TREATMENT WITH VARIOUS PSYCHOPHARMACOLOGICAL-DRUGS. 004315 04-08
VIVALAN
MULTICENTRE-STUDY WITH VILOXAZINE (VIVALAN) IN DEPRESSED-PATIENTS. 004375 04-09
VOLTAGE-INDEPENDENT
THE NA-K-ATPASE: A PLAUSIBLE TRIGGER FOR VOLTAGE-INDEPENDENT RELEASE OF CYTOPLASMIC NEUROTRANSMITTERS. 003953 04-03
VOLUNTEERS
APOMORPHINE, HALOPERIDOL AND THE AVERAGE EVOKED-POTENTIALS IN NORMAL HUMAN VOLUNTEERS. 004549 04-13
THE EFFECT OF FIVE TRICYCLIC-ANTIDEPRESSANTS ON SALIVARY FLOW AND MOOD IN HEALTHY VOLUNTEERS. 004560 04-14
WAKEFULNESS
() 6 FLUOROTRYPTOPHAN, AN INHIBITOR OF TRYPTOPHAN-HYDROXYLASE: SLEEP AND WAKEFULNESS IN THE RAT. 004189 04-04
WAKING
DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02
WARFARIN
DRUG-INTERACTIONS OF AMITRIPTYLINE AND NORTRIPTYLINE WITH WARFARIN IN THE RAT. 003912 04-03
WATER
CENTRAL-EFFECTS OF ANGIOTENSIN-II IN WATER AND SALINE LOADED RATS. 003845 04-03
NALOXONE SUPPRESSES FOOD/WATER CONSUMPTION IN THE DEPRIVED CAT. 004114 04-04
THE SITE OF ACTION OF NALOXONE IN SUPPRESSING FOOD AND WATER INTAKE IN RATS. 004146 04-04
IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15
WAVES
DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS? 003704 04-02
WEIGHT
DEPOT FLUPHENAZINE MAINTENANCE-TREATMENT AND ASSOCIATED WEIGHT CHANGES. 004635 04-15
WEIGHTS
COCAINE AND SEIZURE PROTECTION IN MICE OF VARYING BRAIN WEIGHTS. 004103 04-04
WET-DOG-SHAKES
STUDIES OF CARBACHOL-INDUCED WET-DOG-SHAKE BEHAVIOR IN RATS. 004241 04-04
WHEEL
NALOXONE SUPPRESSES FEEDING AND DRINKING BUT NOT WHEEL RUNNING IN RATS. 004080 04-04
WITHDRAWAL
EFFECT OF LOW-DOSE LITHIUM ADMINISTRATION AND SUBSEQUENT WITHDRAWAL ON BIOGENIC-AMINES IN RAT-BRAIN. 003708 04-03
THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT. 003897 04-03
EFFECTS OF ETHANOL ADMINISTRATION AND WITHDRAWAL ON NEUROTRANSMITTER-RECEPTOR SYSTEMS IN C57 MICE. 003979 04-03
THE EFFECTS OF ACUTE AND CHRONIC ETHANOL ADMINISTRATION AND ITS WITHDRAWAL ON GAMMA AMINOBUTYRIC-ACID-RECEPTOR BINDING IN RAT-BRAIN. 004035 04-03
CHARACTER AND MEANING OF QUASI-MORPHINE WITHDRAWAL PHENOMENA ELICITED BY METHYLXANTHINES. 004087 04-04
EFFECTS OF WITHDRAWAL FROM LONG-TERM DIPHENYLHYDANTOIN TREATMENT ON AUDIOGENIC-SEIZURES AND MAXIMAL ELECTROSHOCK-INDUCED SEIZURES IN RATS. 004181 04-04
OPIATE-DEPENDENCE FOLLOWING ACUTE INJECTIONS OF MORPHINE AND NALOXONE: THE ASSESSMENT OF VARIOUS WITHDRAWAL SIGNS. 004209 04-04
PHARMACOLOGICAL-ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04
LONG-TERM NEUROLEPTIC TREATMENT OF CHRONIC SCHIZOPHRENIC-PATIENTS: CLINICAL AND BIOCHEMICAL-EFFECTS OF WITHDRAWAL. 004344 04-08
A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL. 004445 04-11
ADVERSE-EFFECTS OF ANTIPARKINSON-DRUG WITHDRAWAL. (UNPUBLISHED PAPER). 004623 04-15
WITHDRAWAL SYMPTOMS AFTER GRADUATED CESSATION OF IMIPRAMINE IN CHILDREN. 004630 04-15
WITHDRAWAL-LIKE
HIPPOCAMPAL INVOLVEMENT IN THE PHARMACOLOGIC INDUCTION OF WITHDRAWAL-LIKE BEHAVIORS. 004140 04-04
ATTENUATION OF DELTA9 TETRAHYDROCANNABINOL-INDUCED WITHDRAWAL-LIKE BEHAVIOUR BY DELTA9 TETRAHYDROCANNABINOL. 004243 04-04
WITHDRAWAL-SYNDROME
RX-336-M, A NEW CHEMICAL TOOL IN THE ANALYSIS OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004093 04-04
PHYSIOLOGICAL AND BEHAVIORAL APPROACHES TO THE STUDY OF THE QUASI-MORPHINE WITHDRAWAL-SYNDROME. 004242 04-04
WOMEN
ELECTROPHYSIOLOGICAL AND PSYCHOLOGICAL CHANGES INDUCED BY STEROID-HORMONES IN MEN AND WOMEN. 004500 04-13
XANTHURENIC-ACID
HYPERVENTILATION-SYNDROME, TREATMENT WITH L TRYPTOPHAN AND PYRIDOXINE; PREDICTIVE VALUES OF XANTHURENIC-ACID EXCRETION. 004436 04-11
XQ-FRAGILE-SITE
FRAGILE SITES IN HUMAN CHROMOSOMES I. THE EFFECT OF METHIONINE ON THE XQ-FRAGILE-SITE. 004515 04-13
YOHIMBINE
ANTIDOPAMINERGIC PROPERTIES OF YOHIMBINE. 003995 04-03
HUMAN PLATELET ALPHA2-ADRENERGIC-RECEPTORS: LABELING WITH 3H YOHIMBINE, A SELECTIVE ANTAGONIST LIGAND. 004576 04-14

YOUNG
EFFECTS OF A SINGLE-THERAPEUTIC-DOSE OF GLYCEROL ON CEREBRAL METABOLISM IN THE BRAINS OF YOUNG MICE: POSSIBLE INCREASE IN BRAIN GLUCOSE TRANSPORT AND GLUCOSE UTILIZATION. 004281 04-05
HYPERACTIVES AS YOUNG ADULTS: PROSPECTIVE TEN-YEAR FOLLOWUP. 004454 04-11
KINETICS AND BIOTRANSFORMATION OF LORMETAZEPAM: II. RADIOIMMUNOLOGIC DETERMINATIONS IN PLASMA AND URINE OF YOUNG AND ELDERLY SUBJECTS: FIRST-PASS EFFECT. 004516 04-13
IN NORMAL YOUNG MEN ACUTE DOPAMINERGIC BLOCKADE DOES NOT IMPAIR FREE WATER EXCRETION FOLLOWING A STANDARD WATER LOAD. 004600 04-15

YOUTH
TARDIVE-DYSKINESIA AND OTHER DRUG-INDUCED MOVEMENT-DISORDERS AMONG HANDICAPPED CHILDREN AND YOUTH. 004614 04-15

ZIMELIDINE
EFFECTS OF ZIMELIDINE ON SEROTONINERGIC AND NORADRENERGIC NEURONS AFTER REPEATED ADMINISTRATION IN THE RAT. 003991 04-03
ATTENUATION OF PETHIDINE-INDUCED ANTINOCICEPTION BY ZIMELIDINE, AN INHIBITOR OF 5 HYDROXYTRYPTAMINE REUPTAKE. 004118 04-04
SINGLE-DOSE PHARMACOKINETIC DATA ON ZIMELIDINE IN DEPRESSED-PATIENTS. 004385 04-09
MAPROTILINE, NOMIFENSINE, MIANSERIN, ZIMELIDINE: A REVIEW OF ANTIDEPRESSANT EFFICACY IN INPATIENTS. 004731 04-17

ZUCKER
METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT. 003905 04-03

45-0088-S
PHARMACOLOGY OF 2 O CHLOROBENZOYL-CHLORO-METHYL-NA-GLYCYLGLYCINANILIDE HYDRATE (45-0088-S), A COMPOUND WITH BENZODIAZEPINE-LIKE PROPERTIES. 003692 04-02

45CA
EFFECT OF VERAPAMIL ON 45CA UPTAKE BY SYNAPTOSOMES. 003856 04-03

45CA2
INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03

77BR
SPECIFIC IN VIVO BINDING OF 77BR P BROMOSPIROPERIDOL IN RAT-BRAIN: A POTENTIAL TOOL FOR GAMMA-RAY IMAGING. 004293 04-06

VOL. 19 CUMULATIVE INDEX June 1982

Psychopharmacology Abstracts

HE

PSYCHOPHARMACOLOGY ABSTRACTS is a publication of the National Clearinghouse for Mental Health Information of the National Institute of Mental Health. It is a specialized information medium designed to assist the Institute in meeting its obligation to foster and support laboratory and clinical research into the nature and causes of mental disorders and methods of treatment and prevention. Specifically, this information service is designed to meet the needs of investigators in the field of psychopharmacology for rapid and comprehensive information about new developments and research results. For information or correspondence with the National Institute of Mental Health concerning *Psychopharmacology Abstracts*, changes of address, or removal of names from the mailing list see the inside back cover page.

The Secretary of Health and Human Services has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through November 15, 1982.

CROSS-REFERENCE LIST

The use of a Key-Word-out-of-Context (KWOC) index, while saving time and money, poses a problem to users seeking to locate relevant references on a given topic, as all references are not found under one entry. To alleviate this problem, we have prepared the following cross-reference list.

A

Ability see also
  Learning ability
Abuse see also
  Drug abuse
Access see
  Continuous access
Accidents see
  Cerebrovascular accidents
Acetylcholine see also
  ACH
Acetylsalicylic acid see also
  Aspirin
ACH see also
  Acetylcholine
Acid see also
  Names of individual acids
Act see
  Controlled substances ac
ACTH see also
  Adrenocorticotropin
Acting see
  Centrally acting
  CNS acting
  Long-acting
  Short-acting
Action(s) see
  Anorectic actions
  Behavioural actions
  Biochemical action
  Central action(s)
  Dual action(s)
  Hypotensive action
  Inhibitory actions
  Mechanism-of-action
  Neurotoxic action(s)
  Neurotropic action
  Psychotropic action
  Site-of-action
Activated see
  Dopamine-activated
  Na-K-activated
Active see
  Centrally active
  Highly active
Activity see
  Alpha-adrenergic activity
  Anorectic activity
  Antiarrhythmic activity
  Anticandidal activity
  Anticholinergic activity
  Anxiolytic activity
  Behavioral activity

  ACTH

- ADTN see also
  - Aminodihydroxytetrahydronaphthalene
- AEP see also
  - Evoked potential
- Affective disorders see also
  - Bipolar
  - Depression
  - Manic-depressive
  - Unipolar
- Affinity see also
  - High affinity
- Agent(s) see
  - Addictive agents
  - Anorectic agents
  - Antianxiety agents
  - Anticonvulsant agents
  - Antiepileptic agents
  - Blocking agents
  - Catecholamine depleting agent
  - Convulsant agents
  - Depolarizing agent
  - Disinhibiting agent
  - Dopaminergic agent(s)
  - Hallucinogenic agent
  - Narcotic agents
  - Neuroactive agents
  - Neuroleptic agents
  - Neuropharmacological agents
  - Neuropsychiatric agents
  - Oxotremorine-like agent
  - Pharmaceutic agents
  - Pharmacologic agents
  - Pharmacological agents
  - Psychopharmacologic agents
  - Psychopharmacological agents
  - Psychotropic agent
  - Releasing agents
  - Serotonergic agents
  - Vasoactive agents
- AHR-1118 see
  - Pridefine
- Aids see
  - Sleeping aids
- Alcohol see also
  - Ethanol
  - Ethylalcohol
- Alteration see also
  - Attentional alteration
  - Rate altering
- Amine(s) see also
  - Biogenic amine
  - Brain amine
  - Monoamine(s)
  - Names of specific amines
  - Sympathomimetic amines
- Aminobutyric acid see also
  - GABA
- Aminodihydroxytetrahydronaphthalene see also
  - ADTN
- Amphetamine see also
  - D-Amphetamine
  - Dextroamphetamine
  - L-Amphetamine
  - Methamphetamine
  - Methylamphetamine
- Analysis see also
  - Behavioral analysis
  - Behavioural analysis
  - Mass spectral analysis
  - Mass spectrometric analysis
  - Microanalysis
  - Psychometric analysis
  - Signal detection analysis
  - Symptom profile analysis
  - Video analysis
- Analyzed see
  - Computer analyzed
- AMPT see
  - Methyl-p-tyrosine
- Antidepressant see also
  - Names of specific compounds
  - Nontricyclic antidepressant
  - Polycyclic antidepressants
  - Tetracyclic antidepressant(s)
  - Tricyclic antidepressant(s)
- Antihypertensive effects see also
  - Hypotensive effect
- Anxiety see also
  - Panic anxiety
  - Phobic anxiety
- AOAA see
  - Aminooxyacetic acid
- Apnea see
  - Sleep apnea
- Application(s) see
  - Microiontophoretic applications
- Approach(es) see
  - Psychodynamic approach
  - Psychotherapeutic approaches
- Area see
  - Preoptic area
- Artery(ies) see also
  - Cerebral artery(ies)
  - Mensenteric arteries
  - Pial arteries
  - Pulmonary arteries
  - Vertebral artery

- Aspect(s) see
  - Associative aspects
  - Behavioral aspect
  - Biochemical aspects
  - Clinical aspects
  - Metabolic aspects
  - Nonassociative aspects
  - Pathophysiological aspects
  - Pharmacological aspects
  - Psychiatric aspects
  - Technical aspect
- Aspirin see also
  - Acetylsalicylic-acid
- Assay see also
  - Microassay
- Assessment see also
  - Electromyographic assessment
- Associations see also
  - Verbal associations
- ATPASE see also
  - Adenosine-triphosphatase
- Autoreceptor(s) see also
  - Alpha2-adrenergic autoreceptor
  - Dopamine autoreceptor(s)
  - GABA autoreceptors
  - Presynaptic autoreceptors
  - Serotoninergic autoreceptor
- Availability see also
  - Commercially available
- Aversion(s) see also
  - Taste aversion(s)
- Avoidance see also
  - High avoidance
  - Low avoidance
  - Passive avoidance
  - Shock avoidance
  - Sidman avoidance

B

- Barnetil see
  - Sultopride
- Barrier see
  - Blood brain barrier
- Based see
  - Community based

SUBJECT INDEX

[The Subject Index is machine generated. Keywords in the titles of abstracts appear alphabetically in the the left hand margin; under each keyword is a list of titles in which the keyword appears. The spelling of words in the titles of abstracts has not been changed; hence, two spellings of the same word may appear in this index — for example, BEHAVIOR and BEHAVIOUR.]

ABANDONMENT
SELF-MEDICATION, ABANDONMENT, MANIPULATION, AND DEPENDENCE IN DRUG-THERAPY IN PSYCHOSOMATIC-ILLNESS: COMPARATIVE POLYCENTRIC RESEARCH ON VARIOUS PSYCHOTROPIC-DRUGS. 002189 02-11

ABILITIES
MOTOR-LEARNING ABILITIES IN SUBJECTS TREATED WITH LITHIUM-SALTS AND TRICYCLIC-ANTIDEPRESSANTS. 002058 02-09

ABILITY
A COMPARISON OF HUMAN TACTILE STIMULUS VELOCITY DISCRIMINATION WITH THE ABILITY OF S-I CORTICAL NEURONS IN AWAKE RHESUS-MONKEYS TO SIGNAL THE SAME VELOCITY DIFFERENCES BEFORE AND AFTER NONANESTHETIC DOSES OF PENTOBARBITAL. 000055 01-03
ABILITY OF AGED RATS TO ALTER BETA-ADRENERGIC-RECEPTORS OF BRAIN IN RESPONSE TO REPEATED ADMINISTRATION OF RESERPINE AND DESMETHYLIMIPRAMINE. 000113 01-03
THE HYPOTHERMIC-EFFECTS OF CLONIDINE AND OTHER IMIDAZOLIDINES IN RELATION TO THEIR ABILITY TO ENTER THE CENTRAL-NERVOUS-SYSTEM IN MICE. 003933 04-03

ABNORMAL
THE ALBINO LOCUS PRODUCES ABNORMAL RESPONSES TO OPIATES IN THE MOUSE. 001675 02-04
ABNORMAL REGULATION OF PROLACTIN RELEASE IN IDIOPATHIC PARKINSONS-DISEASE. 002255 02-13
CORRECTION BY PROPRANOLOL OF THE ABNORMAL ADRENALINE DISCHARGE INDUCED BY EMOTIONAL-STRESS IN CEREBRAL HEMORRHAGE PATIENTS. 002295 02-13
ABNORMAL MATURATION OF CEREBRAL-CORTEX AND BEHAVIORAL-DEFICIT IN ADULT RATS AFTER NEONATAL ADMINISTRATION OF ANTIBODIES TO GANGLIOSIDE. 003025 03-04
ABNORMAL TRANSMETHYLATION REACTION DURING THE METABOLISM OF DOPAMINE, TRYPTAMINE, AND SEROTONIN, AND SCHIZOPHRENIC-SYMPTOMS: A CRITICAL REVIEW. 003404 03-13
PREVALENCE OF PERSISTENT ABNORMAL INVOLUNTARY-MOVEMENTS AMONG PATIENTS IN A NIGERIAN LONG-STAY PSYCHIATRIC UNIT. 004334 04-08
ABNORMAL MOVEMENTS INDUCED BY PSYCHOTROPIC-DRUGS. 004652 04-15

ABNORMAL-BEHAVIOR
PSYCHONEUROENDOCRINOLOGY AND ABNORMAL-BEHAVIOR. 002347 02-14

ABNORMALITIES
PROTEIN ABNORMALITIES IN MACROPHAGES BEARING ASBESTOS. (UNPUBLISHED PAPER). 001037 02-01
VITAMIN RESPONSIVE GENETIC ABNORMALITIES. (UNPUBLISHED PAPER). 001388 02-03
HORMONAL ABNORMALITIES IN ANOREXIA-NERVOSA (AN). 002099 02-11
ABNORMALITIES OF LITHIUM TRANSPORT IN PATIENTS WITH AFFECTIVE-DISORDERS. 002269 02-13
DOPAMINERGIC ABNORMALITIES IN POSTMORTEM SCHIZOPHRENIC BRAIN. 002575 02-17
METABOLIC AND SYMPATHOADRENAL ABNORMALITIES IN THE OBESE ZUCKER RAT: EFFECT OF CHRONIC PHENOXYBENZAMINE TREATMENT. 003905 04-03

ABNORMALITY
DEVELOPMENT AND USE OF PHARMACOLOGICAL-PROBES OF THE CNS IN MAN: EVIDENCE OF CHOLINERGIC ABNORMALITY IN PRIMARY AFFECTIVE-ILLNESS. 002506 02-16

ABRUPT
PANIC-ANXIETY AFTER ABRUPT DISCONTINUATION OF AMITRIPTYLINE. 003223 03-09
CLINICAL AND BIOCHEMICAL-CORRELATIONS IN ABRUPT DISCONTINUATION OF PSYCHOPHARMACOTHERAPY. 004330 04-08

ABSCESSES
ABSCESSES FOLLOWING PROLONGED INTRAMUSCULAR ADMINISTRATION OF PERPHENAZINE-ENANTATE. 000888 01-15

ABSORPTION
ABSORPTION OF 14C LABELED METHADONE BY PORTAL AND EXTRAPORTAL VENOUS CIRCULATIONS FOLLOWING INTRAPERITONEAL AND INTRODUODENAL ADMINISTRATION. 000094 01-03
EFFECT OF DOSE ON PHENYTOIN ABSORPTION. 000773 01-13
MEAL-DEPENDENT ABSORPTION OF ENTERIC-COATED SODIUM-VALPROATE. 000777 01-13
MICROSCOPIC EVIDENCE OF LYMPHOGENIC ABSORPTION OF OIL IN HUMANS RECEIVING NEUROLEPTIC OILY DEPOT PREPARATIONS INTRAMUSCULARLY. 000890 01-15
PREDICTION OF THE VOLUME OF DISTRIBUTION FROM IN VITRO DATA AND USE FOR ESTIMATING THE ABSOLUTE EXTENT OF ABSORPTION. 000907 01-16
ABSORPTION OF LEVODOPA AFTER RECTAL ADMINISTRATION. 003406 03-13
ORAL AND RECTAL ABSORPTION OF CHLORAL-HYDRATE AND ITS BETAINE COMPLEX. 004554 04-13
CLINICAL-PHARMACOLOGY: DRUG ABSORPTION. 004740 04-17

ABSTINENCE
ENKEPHALIN LEVELS DECREASE IN RAT STRIATUM DURING MORPHINE ABSTINENCE. 000027 01-03
AN ELECTROMYOGRAPHIC-METHOD FOR THE ASSESSMENT OF NALOXONE-INDUCED ABSTINENCE IN MORPHINE-DEPENDENT RATS. 000433 01-04
NARCOTIC ANTAGONIST PRECIPITATED ABSTINENCE: RELATIONSHIP TO WITHDRAWAL INDUCING BENZAZOCINES. (PH.D. DISSERTATION). 001518 02-03
CYCLIC-AMP-INDUCED CHANGES IN THE ELECTROENCEPHALOGRAM AND IN BEHAVIOR DURING MORPHINE-DEPENDENCE AND ABSTINENCE IN THE RAT. 003078 03-04
EFFECTS OF NARCOTIC ABSTINENCE ON SCHEDULE-CONTROLLED BEHAVIOR IN DEPENDENT RATS. 004230 04-04
SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11
DOPAMINE AND 5 HT SUPERSENSITIVITY IN NONORGANIC CENTRAL PAIN AND IN MORPHINE ABSTINENCE: FORTUITOUS OR REAL ANALOGY? 004553 04-13

ABSTINENCE-BEHAVIOR
EFFECTS OF BRANCHED-CHAIN FATTY-ACIDS ON GABA DEGRADATION AND BEHAVIOR: FURTHER EVIDENCE FOR A ROLE OF GABA IN QUASI-MORPHINE ABSTINENCE-BEHAVIOR. 001809 02-04

ABSTINENCE-BEHAVIOUR
DIPROPYLACETATE-INDUCED ABSTINENCE-BEHAVIOUR AS A POSSIBLE CORRELATE OF INCREASED GABAERGIC ACTIVITY IN THE RAT. 001606 02-04

ABSTINENCE-SYNDROME
AN ABSTINENCE-SYNDROME FOLLOWING CHRONIC ADMINISTRATION OF DELTA9 TETRAHYDROCANNABINOL IN RHESUS-MONKEYS. 001621 02-04
THE SHORT-TERM AND LONG-TERM EFFECTS OF BETA ENDORPHIN ON THE OPIATE ABSTINENCE-SYNDROME IN RATS. 001643 02-04
DOSE-RESPONSE STUDY OF THE PRECIPITATED ABSTINENCE-SYNDROME FOR MORPHINE: SYSTEMIC VS PERIAQUEDUCTAL GRAY NALOXONE. (PH.D. DISSERTATION). 002979 03-04
POSSIBLE INFLUENCE OF OPIOID NORMETABOLITES ON THE ONSET, MAGNITUDE AND QUALITY OF THE OPIOID ABSTINENCE-SYNDROME. 004610 04-15
CASE-REPORT OF UNUSUAL DIAZEPAM ABSTINENCE-SYNDROME. 004643 04-15

ABSTINENT
SEXUAL-BEHAVIOUR OF MORPHINE-DEPENDENT AND ABSTINENT MALE RATS. 000438 01-04

ABSTRACTS
ABSTRACTS OF THE ANNUAL GENERAL CONFERENCE OF THE EUROPEAN-BRAIN-AND-BEHAVIOUR-SOCIETY, HELD AT LOUVAIN-LA-NEUVE, BELGIUM, ON NOVEMBER 13-15TH, 1980. 003617 03-17

ABUNDANCE
ABUNDANCE AND LOCATION OF 125I SALMON CALCITONIN BINDING-SITE IN RAT-BRAIN. 001320 02-03

ABUNDANT
THE HIGH-AFFINITY CHOLINE UPTAKE SYSTEM WITH RESPECT TO THE MUSCARINIC-RECEPTORS USING A SYNAPTOSOMAL FRACTION ABUNDANT IN PRESYNAPTIC MEMBRANES. 004028 04-03

ABUSE
ISSUES FOR INPATIENT TREATMENT OF CHRONIC PCP ABUSE. 000736 01-12
EPIDEMIOLOGY OF PCP ABUSE: THE MIDWEST PERSPECTIVE. 000740 01-12
PCP ABUSE: DIAGNOSTIC AND PSYCHOPHARMACOLOGICAL-TREATMENT APPROACHES. 000746 01-12
USE AND ABUSE OF BENZODIAZEPINES. 000877 01-15
CHRONIC PHENCYCLIDINE (PCP) ABUSE: A PSYCHIATRIC-PERSPECTIVE. 000935 01-17
MEDICAL AND PSYCHIATRIC-COMPLICATIONS OF PENTAZOCINE AND TRIPELENNAMINE ABUSE. 000955 01-17
THE BENZODIAZEPINES – USE AND ABUSE. 000960 01-17
ABUSE OF THE ANTIPARKINSON-DRUGS: A REVIEW OF THE LITERATURE. 000989 01-17
ABUSE POTENTIAL OF LOPERAMIDE. 002413 02-15
RELAPSE TO NARCOTIC SELF-ADMINISTRATION IN MORPHINE POSTADDICT RATS: A POSSIBLE MODEL FOR PREDICTING ABUSE LIABILITY OF NARCOTIC-DRUGS. (PH.D. DISSERTATION). 003097 03-04
PSYCHOACTIVE-MEDICATION USE AND ABUSE AMONG AN ADULT RURAL POPULATION. (PH.D. DISSERTATION). 003627 03-17
LONG-TERM USE AND ABUSE OF BENZODIAZEPINES. 004598 04-15
A MULTIVARIATE ANALYSIS OF THE INFRARED SPECTRA OF DRUGS OF ABUSE. 004688 04-16

ABUSER
PHARMACODYNAMICS AND PHARMACOKINETICS OF DIAZEPAM IN AN ABUSER. 000867 01-15

ABUSERS
OUTPATIENT TREATMENT ISSUES AND STRATEGIES FOR ACUTE AND CHRONIC PCP ABUSERS. 000919 01-17

ACCELERATION
ACCELERATION OF DESIPRAMINE-INDUCED DECREASE OF RAT CORTICOCEREBRAL BETA-ADRENERGIC-RECEPTORS BY YOHIMBINE. 000326 01-03
CORTICAL RECOVERY FROM EFFECTS OF MONOCULAR DEPRIVATION: ACCELERATION WITH NOREPINEPHRINE AND SUPPRESSION WITH 6 HYDROXYDOPAMINE. 003024 03-04
CONDITIONED DRUG-EFFECTS OF D-AMPHETAMINE-INDUCED AND MORPHINE-INDUCED MOTOR ACCELERATION IN MICE: EXPERIMENTAL APPROACH FOR PLACEBO-EFFECT. 004128 04-04

ACCIDENTAL
ACCIDENTAL INTRAARTERIAL INJECTION OF DIAZEPAM. 002598 02-17

ACCLIMATIZATION
CORE TEMPERATURE CHANGES FOLLOWING ADMINISTRATION OF NALOXONE AND NALTREXONE TO RATS EXPOSED TO HOT AND COLD AMBIENT TEMPERATURES: EVIDENCE FOR THE PHYSIOLOGICAL ROLE OF ENDORPHINS IN HOT AND COLD ACCLIMATIZATION. 004034 04-03

ACCUMBENS
BEHAVIOURAL-RESPONSES TO STEREOTACTICALLY CONTROLLED INJECTIONS OF MONOAMINE NEUROTRANSMITTERS INTO THE ACCUMBENS AND CAUDATE-PUTAMEN NUCLEI. 001708 02-04

ACCUMULATION
INHIBITORY-EFFECTS OF ANTICONVULSANT-DRUGS ON CYCLIC-NUCLEOTIDE ACCUMULATION IN BRAIN. 000090 01-03
ADENOSINE REGULATES VIA TWO DIFFERENT TYPES OF RECEPTORS, THE ACCUMULATION OF CYCLIC-AMP IN CULTURED BRAIN CELLS. 000308 01-03
EFFECT OF DESMETHYLIMIPRAMINE ON THE KINETICS OF CHLORPHENTERMINE ACCUMULATION IN ISOLATED PERFUSED RAT LUNG. 000524 01-05
CHANGE IN PYRUVATE-DEHYDROGENASE ACTIVITY INFLUENCE PYRUVATE SUPPORTED CALCIUM ACCUMULATION BY BRAIN MITOCHONDRIA. (UNPUBLISHED PAPER). 001147 02-03
STUDIES ON THE EFFECT OF ALPHA MELANOCYTE-STIMULATING-HORMONE AND RELATED PEPTIDES ON THE ACCUMULATION OF P AMINOHIPPURIC-ACID IN RENAL CORTICAL SLICES. (UNPUBLISHED PAPER). 001372 02-03
CALCIUM-SENSITIVE ACCUMULATION OF NOREPINEPHRINE IN RAT-CEREBRAL-CORTEX. 002685 03-03
ALPHA2-ADRENERGIC AMINES, ADENOSINE AND PROSTAGLANDINS INHIBIT LIPOLYSIS AND CYCLIC-AMP ACCUMULATION IN HAMSTER ADIPOCYTES IN THE ABSENCE OF EXTRACELLULAR SODIUM. 002728 03-03
EFFECT OF TAURINE ON 45CA2 ACCUMULATION IN RAT BRAIN SYNAPTOSOMES. 002855 03-03
EFFECTS OF D AMINOLAEVULINIC-ACID, PORPHOBILINOGEN, AMINO-ACIDS AND BARBITURATES ON CALCIUM ACCUMULATION BY CULTURED NEURONS. 002859 03-03
INCREASE OF C-GMP AND ACCUMULATION OF 45CA2 EVOKED BY DRUGS ACTING ON SODIUM OR POTASSIUM CHANNELS. 003709 04-03
HALOTHANE ACCUMULATION IN RAT-BRAIN AND LIVER. 003774 04-03
DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. II. FACTORS AFFECTING THE ACCUMULATION OF CYCLIC-AMP IN PIECES OF INTACT CARP RETINA. 003776 04-03
ACCUMULATION OF AMANTADINE BY ISOLATED CHROMAFFIN GRANULES. 003866 04-03
THE EFFECTS OF THYROTROPIN-RELEASING-HORMONE ON CYCLIC-AMP ACCUMULATION IN RABBIT CEREBROCORTICAL TISSUE IN THE PRESENCE AND ABSENCE OF CNS DEPRESSANTS. 004010 04-03
PHENYTOIN INHIBITION OF CYCLIC-GUANOSINE-MONOPHOSPHATE (C-GMP) ACCUMULATION IN NEUROBLASTOMA CELLS BY CALCIUM-CHANNEL BLOCKADE. 004020 04-03
A MECHANISM FOR THE ACCUMULATION OF CHOLINE IN ERYTHROCYTES DURING TREATMENT WITH LITHIUM. 004520 04-13

ACCURACY
EFFECTS OF PIMOZIDE ON ACCURACY OF PERFORMANCE AND DISTRIBUTION OF CORRECT RESPONDING ON A SIMULTANEOUS DISCRIMINATION TASK IN THE RAT. 001806 02-04
ACCURACY OF PATIENT INTERVIEWS AND ESTIMATES BY CLINICAL STAFF IN DETERMINING MEDICATION COMPLIANCE. 003618 03-17
MEPROBAMATE REDUCES ACCURACY OF PHYSIOLOGICAL DETECTION OF DECEPTION. 004585 04-14

ACETONE
SYNTHESIS OF POTENTIAL ANTICONVULSANTS: CONDENSATION OF ISATINS WITH ACETONE AND RELATED KETONES. 003699 04-02

ACETYL-COENZYME-A
ADRENERGIC REGULATION OF THE REDUCTION IN ACETYL-COENZYME-A:ARYLAMINE-N-ACETYLTRANSFERASE IN THE RAT PINEAL. 002654 03-03

ACETYL-ETHYL-TETRAMETHYL-TETRALIN
THE PATHOGENESIS OF PRIMARY INTERNODAL DEMYELINATION PRODUCED BY ACETYL-ETHYL-TETRAMETHYL-TETRALIN: EVIDENCE FOR PRESERVED SCHWANN-CELL SOMAL FUNCTION. 002905 03-03

ACETYLATOR
ACETYLATOR PHENOTYPE AND LUPUS-ERYTHEMATOSUS. 003545 03-15

ACETYLCHOLINE
THE CRYSTAL AND MOLECULAR STRUCTURE OF THE ACETYLCHOLINE ANTAGONIST DIMETHYLAMINOBUTYNYLCYCLOHEXYLHYDROXY 2 PHENYLACETATE HCL. 000003 01-01
DOPAMINE, ACETYLCHOLINE, AND GABA EFFECTS IN ACUTE DYSTONIA IN PRIMATES. 000043 01-03
DIMETHYLAMINOETHANOL (DEANOL) METABOLISM IN RAT-BRAIN AND ITS EFFECT ON ACETYLCHOLINE SYNTHESIS. 000150 01-03
THE EFFECT OF MORPHINE ON PURINE AND ACETYLCHOLINE RELEASE FROM RAT-CEREBRAL-CORTEX: EVIDENCE FOR A PURINERGIC COMPONENT IN MORPHINES ACTION. 000234 01-03
(3H)ACETYLCHOLINE AND (3H)5 HYDROXYTRYPTAMINE RELEASE FROM RAT-MIDBRAIN SLICES AND THE EFFECTS OF CALCIUM AND PHENOBARBITAL. 000251 01-03

REGULATION OF STRIATAL ACETYLCHOLINE CONCENTRATION BY D2 DOPAMINE-RECEPTORS.
000269 01-03

IN VITRO ACETYLCHOLINE RELEASE FROM RAT CAUDATE-NUCLEUS AS A NEW MODEL FOR TESTING DRUGS WITH DOPAMINE-RECEPTOR ACTIVITY.
000289 01-03

THE EFFECTS OF MUSCARINIC-RECEPTOR BLOCKERS ON THE TURNOVER-RATE OF ACETYLCHOLINE IN VARIOUS REGIONS OF THE RAT-BRAIN.
000328 01-03

TOLERANCE TO INCREASES IN STRIATAL ACETYLCHOLINE CONCENTRATIONS AFTER REPEATED ADMINISTRATION OF APOMORPHINE-DIPIVALOYL-ESTER.
000464 01-04

REGULATION OF ACETYLCHOLINE RELEASE DURING INCREASED NEURONAL ACTIVITY. (UNPUBLISHED PAPER).
001061 02-01

EFFECT OF THE NEW GAMMA AMINOBUTYRIC-ACID AGONIST SL-76-002 ON STRIATAL ACETYLCHOLINE: RELATION TO NEUROLEPTIC-INDUCED EXTRAPYRAMIDAL ALTERATIONS.
001119 02-03

FACTORS INFLUENCING THE RELEASE OF LABELLED GAMMA AMINOBUTYRIC-ACID AND ACETYLCHOLINE EVOKED BY ELECTRICAL-STIMULATION WITH ALTERNATING POLARITY FROM RAT CORTICAL SLICES.
001130 02-03

EFFECT OF MOXESTROL ON HALOPERIDOL-INDUCED CHANGES IN STRIATAL ACETYLCHOLINE LEVELS AND DOPAMINE TURNOVER.
001218 02-03

LONG-TERM ADMINISTRATION OF ATROPINE, IMIPRAMINE, AND VILOXAZINE ALTERS RESPONSIVENESS OF RAT-CORTICAL-NEURONES TO ACETYLCHOLINE.
001306 02-03

ASCORBIC-ACID, AN ENDOGENOUS FACTOR REQUIRED FOR ACETYLCHOLINE RELEASE FROM THE SYNAPTIC VESICLES.
001322 02-03

DIRECT EVIDENCE AGAINST ACETYLCHOLINE AS THE DILATOR TRANSMITTER IN THE CAT CEREBRAL-ARTERY.
001336 02-03

ACETYLCHOLINE AND AMINO-ACID NEUROTRANSMITTERS IN EPIDURAL CUPS OF FREELY-MOVING-RATS: EFFECT OF ACUTE AND CHRONIC-TREATMENT WITH ANTISCHIZOPHRENIC-DRUGS.
001386 02-03

EFFECTS OF DIAZEPAM ON ADENOSINE AND ACETYLCHOLINE RELEASE FROM RAT-CEREBRAL-CORTEX: FURTHER EVIDENCE FOR A PURINERGIC MECHANISM IN ACTION OF DIAZEPAM.
001414 02-03

EFFECT OF ANTINOCICEPTIVE DOSES OF OXOTREMORINE ON MOUSE-BRAIN ACETYLCHOLINE TURNOVER-RATE.
001513 02-03

ACTIONS OF ENKEPHALIN, MU AND PARTIAL AGONIST ANALGESICS ON ACETYLCHOLINE TURNOVER IN RAT-BRAIN.
001541 02-03

GLYCINE, ACETYLCHOLINE, AND SEROTONIN: NEUROTRANSMITTERS OR NEUROMODULATORS?
002271 02-13

THE EXCITATORY ACTION OF ACETYLCHOLINE ON HIPPOCAMPAL NEURONES OF THE GUINEA-PIG AND RAT MAINTAINED IN VITRO.
002704 03-03

THE PRESYNAPTIC STIMULATING EFFECT OF ACETYLCHOLINE ON DOPAMINE RELEASE IS SUPPRESSED DURING ACTIVATION OF NIGROSTRIATAL DOPAMINERGIC NEURONS IN THE CAT.
002733 03-03

MODULATION BY ENDOGENOUS DOPAMINE OF THE RELEASE OF ACETYLCHOLINE IN THE CAUDATE-NUCLEUS OF THE RABBIT.
002751 03-03

PIRACETAM DIMINISHES HIPPOCAMPAL ACETYLCHOLINE LEVELS IN RATS.
002934 03-03

THE EFFECTS OF ACETYLCHOLINE AND GLUTAMATE ON SEPTAL NEURONS IN VITRO.
002941 03-03

RELEASE OF ACETYLCHOLINE FROM RAT-BRAIN SYNAPTOSOMES STIMULATED WITH LEPTINOTARSIN, A NEW NEUROTOXIN.
003148 03-06

MODULATORY EFFECT OF BRAIN ACETYLCHOLINE ON REFLEX-INDUCED BRADYCARDIA AND TACHYCARDIA IN CONSCIOUS RATS.
003744 04-03

COMPARISON OF THE EFFECTS OF THE STEREOISOMERS OF FENFLURAMINE ON THE ACETYLCHOLINE CONTENT OF RAT STRIATUM, HIPPOCAMPUS AND NUCLEUS-ACCUMBENS.
003758 04-03

OXOTREMORINE DOES NOT ENHANCE ACETYLCHOLINE RELEASE FROM RAT DIAPHRAGM PREPARATIONS.
003819 04-03

ALTERATIONS OF ACETYLCHOLINE AND CHOLINE METABOLISM IN MAMMALIAN PREPARATIONS TREATED WITH BETA BUNGAROTOXIN.
003820 04-03

PRESYNAPTIC REGULATION OF THE RELEASE OF ACETYLCHOLINE BY 5 HYDROXYTRYPTAMINE.
003843 04-03

INVESTIGATION OF ACTION OF ENKEPHALIN ON THE SPONTANEOUS AND EVOKED RELEASE OF ACETYLCHOLINE FROM RAT CORTICAL AND STRIATAL SLICES.
003862 04-03

ACTION OF ENKEPHALIN ANALOGUES AND MORPHINE ON BRAIN ACETYLCHOLINE RELEASE: DIFFERENTIAL REVERSAL BY NALOXONE AND AN OPIATE-PENTAPEPTIDE.
003863 04-03

THE EFFECT OF CHRONIC NICOTINE AND WITHDRAWAL ON INTRAAXONAL TRANSPORT OF ACETYLCHOLINE AND RELATED ENZYMES IN SCIATIC-NERVE OF THE RAT.
003897 04-03

THE EFFECT OF ACETYLCHOLINE RELEASE ON CHOLINE FLUXES IN ISOLATED SYNAPTIC TERMINALS.
003924 04-03

ACETYLCHOLINE AND CHOLINE-ACETYLTRANSFERASE.
003930 04-03

CORRELATIONS BETWEEN NA-K-ATPASE ACTIVITY AND ACETYLCHOLINE RELEASE IN RAT CORTICAL SYNAPTOSOMES.
003937 04-03

EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX.
003969 04-03

INHIBITION OF THE SYNTHESIS OF ACETYLCHOLINE IN RAT-BRAIN SLICES BY (-) HYDROXYCITRATE AND CITRATE.
004044 04-03

5' TRIPHOSPHATE RECYCLES INDEPENDENTLY OF ACETYLCHOLINE IN CHOLINERGIC SYNAPTIC VESICLES.
004063 04-03

CHOLINE REVERSES NALOXONE-INDUCED DECREASES IN HIPPOCAMPAL ACETYLCHOLINE CONTENT AND SUPPRESSES ESCAPE-BEHAVIOR IN OPIATE-DEPENDENT RATS.
004076 04-04

ANTITREMOR ACTION OF C1ODICHOL, A PERIPHERAL ACETYLCHOLINE SYNTHESIS INHIBITOR.
004096 04-04

ACETYLCHOLINE TURNOVER AND AGGRESSION IN RELATED THREE STRAINS OF MICE.
004151 04-04

ACETYLCHOLINE-INDUCED

ACETYLCHOLINE-INDUCED MODULATION OF HIPPOCAMPAL PYRAMIDAL NEURONS.
003728 04-03

ACETYLCHOLINE-RECEPTOR

PHOSPHORYLATION OF THE MEMBRANE-BOUND ACETYLCHOLINE-RECEPTOR: INHIBITION BY DIPHENYLHYDANTOIN.
001257 02-03

ENZYMATIC CARBOXYMETHYLATION OF THE NICOTINIC ACETYLCHOLINE-RECEPTOR. (UNPUBLISHED PAPER).
001318 02-03

MUSCARINIC ACETYLCHOLINE-RECEPTOR. (UNPUBLISHED PAPER).
002667 03-03

ACETYLCHOLINE-RECEPTORS

LITHIUM REDUCES THE NUMBER OF ACETYLCHOLINE-RECEPTORS IN SKELETAL-MUSCLE.
000232 01-03

THE BINDING OF SOME ANTIDEPRESSANT-DRUGS TO BRAIN MUSCARINIC ACETYLCHOLINE-RECEPTORS.
001253 02-03

PSYCHOTHERAPEUTIC-DRUGS, HISTAMINE H1-RECEPTORS AND MUSCARINIC ACETYLCHOLINE-RECEPTORS.
004737 04-17

ACETYLCHOLINESTERASE

ACTION OF BARBITURATES ON ACTIVITY OF ACETYLCHOLINESTERASE FROM SYNAPTOSOMAL MEMBRANES.
000224 01-03

ACETYLCHOLINESTERASE AND CHOLINESTERASE ACTIVITIES IN THE MOUSE CEREBELLUM FOLLOWING MISONIDAZOLE TREATMENT.
003123 03-05

INHIBITION OF AMINOPEPTIDASE AND ACETYLCHOLINESTERASE BY PUROMYCIN AND PUROMYCIN ANALOGS.
003835 04-03

INSEPARABILITY OF ACETYLCHOLINESTERASE AND NERVE EXCITATION.
003875 04-03

ACETYLENIC-GABA

EFFECTS OF GAMMA ACETYLENIC-GABA AND GAMMA VINYL-GABA ON ELECTRICALLY-INDUCED SPINAL-CORD CONVULSIONS AND ON SPINAL-CORD GABA CONCENTRATION.
000145 01-03

MAPPING OF DYSKINETIC-MOVEMENTS INDUCED BY LOCAL APPLICATION OF PICROTOXIN OR () GAMMA ACETYLENIC-GABA ON THE RAT MOTOR-CORTEX.
000458 01-04

GAMMA ACETYLENIC-GABA IN TARDIVE-DYSKINESIA.
002101 02-11

MULTIPLE EFFECTS OF REPEATED ADMINISTRATION OF GAMMA ACETYLENIC-GABA ON RAT-BRAIN METABOLISM.
002878 03-03

TREATMENT OF HUNTINGTON-DISEASE WITH GAMMA ACETYLENIC-GABA, AN IRREVERSIBLE INHIBITOR OF GABA-TRANSAMINASE: INCREASED CSF GABA AND HOMOCARNOSINE WITHOUT CLINICAL AMELIORATION.
003458 03-14

ACETYLENIC-GAMMA-AMINOBUTYRIC-ACID

CHANGES IN PRIMARY AFFERENT DEPOLARIZATION AFTER ADMINISTRATION OF GAMMA ACETYLENIC-GAMMA-AMINOBUTYRIC-ACID (GAG), A GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE (GABA-TRANSAMINASE) INHIBITOR.
000174 01-03

ACETYLESTERS

GAS-CHROMATOGRAPHY/MASS-SPECTROMETRY STABLE ISOTOPIC ANALYSES FOR DEANOL, CHOLINE, AND THEIR ACETYLESTERS.
004683 04-16

ACETYLMANNOSAMINE

INCORPORATION OF N ACETYLMANNOSAMINE INTO RAT-BRAIN SUBCELLULAR GANGLIOSIDES: EFFECT OF PENTYLENETETRAZOL-INDUCED CONVULSIONS IN BRAIN GANGLIOSIDES.
002937 03-03

ACETYLMETHADOL

PHARMACODYNAMIC PROFILES OF L ALPHA ACETYLMETHADOL (LAAM) AND ITS N DEMETHYLATED METABOLITES, NORLAAM AND DINORLAAM, DURING SELF-ADMINISTRATION IN THE DEPENDENT RAT.
000505 01-04

OCCURRENCE OF CORNEAL OPACITIES IN RATS AFTER ACUTE ADMINISTRATION OF L ALPHA ACETYLMETHADOL.
001853 02-05

A CHARACTERIZATION OF THE BEHAVIORAL-EFFECTS OF LEVO ALPHA ACETYLMETHADOL IN THE RAT AND IN THE PIGEON. (PH.D. DISSERTATION).
003047 03-04

A CLINICAL, CONTROLLED-STUDY OF L ALPHA ACETYLMETHADOL IN THE TREATMENT OF NARCOTIC ADDICTION.
003335 03-11

EFFECTS OF LEVO ALPHA ACETYLMETHADOL (LAAM) ON MORPHINE SELF-ADMINISTRATION IN THE RAT.
004170 04-04

MORPHINE CHALLENGES IN LEVO ALPHA ACETYLMETHADOL (LAAM) POSTADDICT RATS.
004259 04-04

ACETYLSALICYLIC-ACID

BEHAVIOURAL-EFFECTS OF ACETYLSALICYLIC-ACID, PARACETAMOL, CAFFEINE, GUAIPHENESIN AND THEIR COMBINATIONS.
001805 02-04

ACH

INHIBITION OF ACH RELEASE BY PROSTAGLANDIN-E1 IN THE RABBIT SUPERIOR-CERVICAL-GANGLION.
001205 02-03

ACH-RECEPTOR

IMMUNODETECTION OF ACH-RECEPTOR IN THE CNS. (UNPUBLISHED PAPER).
003670 04-01

5 HYDROXYTRYPTAMINE CONTROLS ACH-RECEPTOR SENSITIVITY OF BULLFROG SYMPATHETIC GANGLION CELLS.
003710 04-03

ACID

THE CONTRIBUTION OF ALPHA1 ACID GLYCOPROTEIN, LIPOPROTEINS, AND ALBUMIN TO THE PLASMA BINDING OF PERAZINE, AMITRIPTYLINE, AND NORTRIPTYLINE IN HEALTHY MAN.
002214 02-13

BINDING OF PERAZINE TO ALPHA1 ACID GLYCOPROTEIN.
002290 02-13

PARTIAL PURIFICATION OF ACID SPHINGOMYELINASE FROM NORMAL AND PATHOLOGICAL (A.. NIEMANN-PICK TYPE C) HUMAN BRAIN.
003671 04-01

THE EFFECTS OF NEFOPAM ON BLOOD ACID BASE STATUS IN THE RABBIT: INTERACTIONS WITH MORPHINE IN THE MOUSE AND RABBIT.
004279 04-05

ACIDIC

REVERSIBLE RING-OPENING REACTIONS OF NIMETAZEPAM AND NITRAZEPAM IN ACIDIC MEDIA AT BODY-TEMPERATURE.
004517 04-13

ACOUSTIC

5 METHOXYDIMETHYLTRYPTAMINE: SPINAL-CORD AND BRAINSTEM MEDIATION OF EXCITATORY EFFECTS ON ACOUSTIC STARTLE.
001605 02-04

SPINAL MODULATION OF THE ACOUSTIC STARTLE RESPONSE: THE ROLE OF NOREPINEPHRINE, SEROTONIN AND DOPAMINE.
002950 03-04

ACQUISITION

EFFECT OF BETA ENDORPHIN AND NALOXONE ON ACQUISITION, MEMORY, AND RETRIEVAL OF SHUTTLE AVOIDANCE AND HABITUATION LEARNING IN RATS.
000410 01-04

THE EFFECTS OF PIPRADROL ON THE ACQUISITION OF RESPONDING WITH CONDITIONED REINFORCEMENT: A ROLE FOR SENSORY PRECONDITIONING.
001572 02-04

EFFECTS OF A LOW-DOSE AND A HIGH-DOSE OF BETA ENDORPHIN ON ACQUISITION AND RETENTION IN THE RAT.
001663 02-04

L-DOPA ENHANCES ACQUISITION OF AN INHIBITORY AVOIDANCE RESPONSE.
001711 02-04

EFFECTS OF PHENCYCLIDINE, PENTOBARBITAL, AND D-AMPHETAMINE ON THE ACQUISITION AND PERFORMANCE OF CONDITIONAL DISCRIMINATIONS IN MONKEYS.
001723 02-04

CUMULATIVE AFTERDISCHARGE AS THE PRINCIPAL FACTOR IN THE ACQUISITION OF KINDLED SEIZURES.
002862 03-03

EFFECT OF P CHLOROPHENYLALANINE ON THE ACQUISITION OF TOLERANCE TO THE HYPNOTIC-EFFECTS OF PENTOBARBITAL, BARBITAL, AND ETHANOL.
003883 04-03

RAPID ACQUISITION OF A TWO-DRUG DISCRIMINATION: TIME OF DAY EFFECT UPON SALINE STATE.
004214 04-04

ACQUISITION-BEHAVIOR

EFFECTS OF METHYLPHENIDATE-HYDROCHLORIDE ON REPEATED ACQUISITION-BEHAVIOR IN HYPERKINETIC-CHILDREN. (PH.D. DISSERTATION).
003386 03-11

EFFECTS OF DEXTROAMPHETAMINE-SULFATE ON REPEATED ACQUISITION-BEHAVIOR AND MOOD IN HUMANS: A PRELIMINARY REPORT.
003459 03-14

ACRYLAMIDE

THE ETIOLOGY OF TOXIC PERIPHERAL NEUROPATHIES: IN VITRO EFFECTS OF ACRYLAMIDE AND 2,5 HEXANEDIONE ON BRAIN ENOLASE AND OTHER GLYCOLYTIC ENZYMES.
000131 01-03

NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. I: EFFECTS OF A SINGLE EXPOSURE TO ACRYLAMIDE.
004264 04-05

NEUROTRANSMITTER-RECEPTORS IN BRAIN REGIONS OF ACRYLAMIDE TREATED RATS. II: EFFECTS OF EXTENDED EXPOSURE TO ACRYLAMIDE.
004265 04-05

ACTH

CHANGES OF ACTH, STH, TSH AND PROLACTIN LEVELS IN ENDOTOXIN SHOCK IN RATS.
000119 01-03

OPIATE-RECEPTORS MAY MEDIATE THE SUPPRESSIVE BUT NOT THE EXCITATORY ACTION OF ACTH ON MOTOR-ACTIVITY IN RATS.
000337 01-04

ACTH MODULATION OF MEMORY STORAGE PROCESSING. (UNPUBLISHED PAPER).
001250 02-03

ACTH MEDIATION OF LEARNED-FEAR: BLOCKADE BY NALOXONE AND NALTREXONE.
001597 02-04

ACTH POTENTIATES MORPHINE-INDUCED CONDITIONED TASTE-AVERSION.
001781 02-04

TRIAL OF A PEPTIDE FRACTION OF ACTH (ACTH4-10) IN THE ALCOHOLIC BRAIN-DAMAGE-SYNDROME.
002318 02-14

EXPLORATION AND MOTOR-ACTIVITY AFTER INTRAVENTRICULAR ACTH, MORPHINE AND NALOXONE.
002991 03-04

ACTH-INDUCED

ACTH-INDUCED GROOMING INVOLVES HIGH-AFFINITY OPIATE-RECEPTORS.
002985 03-04

ACTH-LIKE

ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR.
004109 04-04

ACTH1-24

EFFECTS OF ACUTE CENTRAL AND PERIPHERAL ACTH1-24 ADMINISTRATION ON LORDOSIS BEHAVIOR.
002975 03-04

TESTOSTERONE POTENTIATION OF THE EFFECTIVENESS OF ACTH1-24 ON THE INDUCTION OF THE STRETCH-YAWNING-SYNDROME (SYS) IN MALE GUINEA-PIGS.
003074 03-04

HORMONAL STIMULATION AFTER INJECTION OF THYROTROPHIN-RELEASING-FACTOR (TRF) AND ACTH1-24 IN PATIENTS FOLLOWING CHRONIC-TREATMENT WITH NEUROLEPTICS: PRELIMINARY-STUDY.
004505 04-13

ACTH4-10

ACTH4-10 AND MEMORY IN ECT TREATED AND UNTREATED PATIENTS. I. EFFECT ON CONSOLIDATION.
001982 02-09

ACTH4-10 AND MEMORY IN ECT TREATED PATIENTS AND UNTREATED CONTROLS. II. EFFECT ON RETRIEVAL.
001983 02-09

TRIAL OF A PEPTIDE FRACTION OF ACTH (ACTH4-10) IN THE ALCOHOLIC BRAIN-DAMAGE-SYNDROME.
002318 02-14

POSSIBLE MECHANISMS OF EFFECT OF ACTH4-10 AND ITS ANALOG, CONTAINING D ISOMER OF PHENYLALANINE, ON BEHAVIOR.
002949 03-04

IMITATION, SOCIAL FACILITATION, AND THE EFFECTS OF ACTH4-10 ON RATS BAR-PRESSING-BEHAVIOR.
003009 03-04

ACTH4-9

Y-MAZE BEHAVIOR AFTER AN ANALOG OF ACTH4-9, EVIDENCE FOR AN ATTENTIONAL-ALTERATION.
001676 02-04

EFFECTS OF AN ACTH4-9 RELATED PEPTIDE UPON INTRACRANIAL SELF-STIMULATION AND GENERAL-ACTIVITY IN THE RAT.
001679 02-04

INDUCTION OF ANALGESIA BY CENTRAL ADMINISTRATION OF ORG-2766, AN ANALOG OF ACTH4-9.
003112 03-04

A SYNTHETIC ACTH4-9 ANALOGUE (ORGANON-2766) AND SLEEP IN HEALTHY MAN.
004574 04-14

ACTINOMYCIN-D

INHIBITION OF BEHAVIORAL-EFFECTS OF COCAINE BY ACTINOMYCIN-D IN RATS.
000346 01-04

ACTIVATION

ACTIVATION OF CORTICAL CIRCUITS DURING INTERICTAL SPIKES.
000056 01-03

THE ROLE OF INTRANEURONAL 5 HT AND OF TRYPTOPHAN-HYDROXYLASE ACTIVATION IN THE CONTROL OF 5 HT SYNTHESIS IN RAT-BRAIN SLICES INCUBATED IN K-ENRICHED MEDIUM.
000123 01-03

ANALYSIS OF THE ACTIVATION OF DOPAMINE METABOLISM BY A SEROTONIN UPTAKE INHIBITOR.
000315 01-03

METERGOLINE ANTAGONISM OF 5 HYDROXYTRYPTAMINE-INDUCED ACTIVATION OF RAT-CEREBRAL-CORTICAL NA-K-ATPASE.
000329 01-03

BRADYKININ-RECEPTOR STIMULATION OF C-AMP INVOLVES PHOSPHOLIPID METHYLATION, CA-FLUX, PHOSPHOLIPASE-A2 ACTIVATION AND PROSTAGLANDIN FORMATION. (UNPUBLISHED PAPER).
001002 02-01

CENTRAL LEVELS OF NORADRENALINE, 3 METHOXY-4-HYDROXYPHENYLETHYLENEGLYCOL AND CYCLIC-AMP IN THE RAT AFTER ACTIVATION OF LOCUS-COERULEUS NEURONS: INFLUENCE OF SINGLE AND REPEATED NEUROLEPTIC TREATMENT.
001095 02-03

PROSTACYCLIN-DEPENDENT ACTIVATION OF ADENYLATE-CYCLASE IN A NEURONAL SOMATIC CELL HYBRID: PROSTANOID STRUCTURE-ACTIVITY RELATIONSHIPS.
001132 02-03

MIANSERIN: DIRECT ACTIVATION OF BRAIN NOREPINEPHRINE NEURONS BY BLOCKING ALPHA2-RECEPTORS.
001214 02-03

ACTIVATION OF PRESYNAPTIC ALPHA NORADRENALINE-RECEPTORS IN RAT-BRAIN BY THE POTENT DOPAMINE-MIMETIC N,N DIPROPYL-ADTN.
001390 02-03

BRAIN STRIATAL TYROSINE-HYDROXYLASE: ACTIVATION OF THE ENZYME BY CYCLIC-AMP INDEPENDENT PHOSPHORYLATION.
001423 02-03

THE EFFECT OF NALOXONE ON THE ACTIVATION OF EMOTIONALLY POSITIVE REACTION PRODUCED BY DRUGS WITH A DEPENDENCE LIABILITY.
001556 02-03

ACTIVATION AND LATERALIZATION OF SENSORIMOTOR FIELD FOR PERIORAL BITING-REFLEX BY INTRANIGRAL GABA AGONIST AND BY SYSTEMIC APOMORPHINE IN THE RAT.
001657 02-04

VARIATIONS IN PSYCHOPHYSIOLOGICAL ACTIVATION RESPONSES IN DEPRESSIVE-STATES.
001965 02-09

STRETCH-INDUCED MYOTUBE GROWTH CORRELATES WITH NA-PUMP ACTIVATION. (UNPUBLISHED PAPER).
002087 02-10

THE PRESYNAPTIC STIMULATING EFFECT OF ACETYLCHOLINE ON DOPAMINE RELEASE IS SUPPRESSED DURING ACTIVATION OF NIGROSTRIATAL DOPAMINERGIC NEURONS IN THE CAT.
002733 03-03

LEVONANTRADOL, A POTENT CANNABINOID RELATED ANALGESIC, ANTAGONIZES HALOPERIDOL-INDUCED ACTIVATION OF STRIATAL DOPAMINE SYNTHESIS.
002786 03-03

IDENTICAL RESPONSES OF THE TWO HIPPOCAMPAL THETA GENERATORS TO PHYSIOLOGICAL AND PHARMACOLOGICAL ACTIVATION.
002792 03-03

ACTIVATION OF SOLUBLE STRIATAL TYROSINE-HYDROXYLASE IN THE RAT BRAIN AFTER CDP-CHOLINE ADMINISTRATION.
002816 03-03

EFFECT OF DOPAMINE ON ACTIVATION OF RAT STRIATAL ADENYLATE-CYCLASE BY FREE MG2 AND GUANYL-NUCLEOTIDES.
002825 03-03

BARBITURATE ENHANCEMENT OF GABA-MEDIATED INHIBITION AND ACTIVATION OF CHLORIDE ION-CONDUCTANCE: CORRELATION WITH ANTICONVULSANT AND ANESTHETIC ACTIONS.
002885 03-03

EFFECT OF SODIUM-VALPROATE ON MOTOR FUNCTION REGULATED BY THE ACTIVATION OF GABA-RECEPTORS.
003033 03-04

NEUROLEPTICS: ACTIVATION OR INHIBITION OF THE DOPAMINERGIC-SYSTEM?
003424 03-13

DOES P CHLOROPHENYLALANINE PRODUCE DISTURBED WAKING, DISTURBED SLEEP OR ACTIVATION BY PONTO-GENICULO-OCCIPITAL WAVES IN CATS?
003704 04-02

AN EVALUATION OF THE MECHANISM BY WHICH SEROTONERGIC ACTIVATION DEPRESSES RESPIRATION.
003917 04-03

BETA PHENYLETHYLAMINE REVERSAL OF CHLORPROMAZINE-INDUCED ACTIVATION OF STRIATAL TYROSINE-HYDROXYLASE AND CATALEPSY.
004018 04-03

INHIBITORY-ACTION OF THE COMBINATION OF AMINOPYRINE AND SECOBARBITAL ON EEG ACTIVATION, NEOCORTICAL RECRUITING AND AUGMENTING RESPONSES IN RABBITS.
004022 04-03

EFFECTS OF PROPRANOLOL ON THE LOCOMOTOR-STIMULATION INDUCED BY ACTIVATION OF POSTSYNAPTIC CATECHOLAMINE-RECEPTORS.
004126 04-04

REDUCTION IN OPIATE ACTIVATION AFTER CHRONIC ELECTROCONVULSIVE-SHOCK -- POSSIBLE ROLE FOR ENDORPHINS IN THE BEHAVIORAL-EFFECTS OF CONVULSIVE-SHOCK-TREATMENT. (UNPUBLISHED PAPER).
004154 04-04

CONTRIBUTION OF SOCIAL FACTORS TO OPIATE-INDUCED ACTIVATION IN THE MOUSE.
004156 04-04

A COMPARATIVE EVALUATION OF THE USEFULNESS OF PSYCHOPHYSIOLOGICAL-TESTS DURING VARIOUS LEVELS OF ACTIVATION OF THE CENTRAL-NERVOUS-SYSTEM.
004543 04-13

ACTIVATORS

PSYCHOMOTOR STIMULANTS AS ACTIVATORS OF NORMAL AND PATHOLOGICAL-BEHAVIOR: IMPLICATIONS FOR THE EXCESSES IN MANIA. (UNPUBLISHED PAPER).
002353 02-14

ACTOMETRIC

THE ANOREXIC AND ACTOMETRIC EFFECTS OF COCAINE AND TWO COCA-EXTRACTS.
000344 01-04

ACYLASE

AN EVALUATION OF THE USEFULNESS OF THE ACYLASE TEST IN NEUROLEPTIC TREATMENT.
004426 04-10

ACYLCYANAMIDES

ACYLCYANAMIDES, ACYLUREA, AND VARIOUS SUBSTITUTED ARYLALLOPHANATES; EFFECT ON THE CNS.
003689 04-02

ACYLUREA

ACYLCYANAMIDES, ACYLUREA, AND VARIOUS SUBSTITUTED ARYLALLOPHANATES; EFFECT ON THE CNS.
003689 04-02

ADAPTATION

NEUROTRANSMITTER RELATED ADAPTATION IN THE CENTRAL-NERVOUS-SYSTEM FOLLOWING CHRONIC MONOAMINE-OXIDASE-INHIBITION.
000038 01-03

CENTRAL NORADRENERGIC ADAPTATION TO LONG-TERM-TREATMENT WITH IMIPRAMINE IN RHESUS-MONKEYS.
000182 01-03

LONG-TERM-TREATMENT WITH NEUROLEPTIC-AGENTS: ADAPTATION PHENOMENA AND THEIR SIGNIFICANCE WITH REGARD TO SCHIZOPHRENIC-SYMPTOMATOLOGY AND SIDE-EFFECTS.
002370 02-15

IN VITRO CELLULAR ADAPTATION OF SEROTONERGIC PROCESSES AFTER CHRONIC CENTRAL PHENOBARBITAL ADMINISTRATION.
002813 03-03

THERAPY AND SOCIAL ADAPTATION OF OLIGOPHRENICS (REVIEW OF THE LITERATURE).
004444 04-11

ADAPTATIONS

RECEPTOR ADAPTATIONS TO CENTRALLY ACTING DRUGS.
003585 03-17

ADAPTIVE

ADAPTIVE CHANGES OF THE STRIATAL DOPAMINE SYSTEM INDUCED BY REPEATED ADMINISTRATION OF NEUROLEPTICS AND ERGOT DERIVATIVES.
001156 02-03

ADDICTION

IATROGENIC OPIATE ADDICTION: SUCCESSFUL DETOXIFICATION WITH CLONIDINE.
000666 01-11

THE TREATMENT OF OPIATE ADDICTION USING METHADONE-CHLORHYDRATE. 002600 02-17

A CLINICAL, CONTROLLED-STUDY OF L ALPHA ACETYLMETHADOL IN THE TREATMENT OF NARCOTIC ADDICTION. 003335 03-11

ACTION ON THE EMOTIONALLY-REINFORCED BRAIN SYSTEM AS A MEANS OF TREATING ALCOHOLISM AND DRUG ADDICTION PATHOGENETICALLY. 003641 03-17

ADDICTIVE-AGENTS

ADDICTIVE-AGENTS AND INTRACRANIAL-STIMULATION (ICS): MORPHINE, NALOXONE, AND PRESSING FOR AMYGDALOID ICS. 000371 01-04

ADDICTIVE-BEHAVIOR

ADDICTIVE-BEHAVIOR. 002114 02-11

ADDICTS

A PRELIMINARY OPEN-STUDY OF THE USE OF AMINEPTINE OF THE DEFICIENT SYNDROME OF HEBEPHRENICS AND OF ADDICTS DURING WITHDRAWAL. 004445 04-11

METHADONE TREATMENT OF HEROIN ADDICTS IN SWITZERLAND. 004452 04-11

SUPPRESSION OF MORPHINE ABSTINENCE IN HEROIN ADDICTS BY BETA ENDORPHIN. 004489 04-11

ADENINE-NUCLEOTIDES

ADENINE-NUCLEOTIDES AND SYNAPTIC TRANSMISSION IN THE IN VITRO RAT HIPPOCAMPUS. 000080 01-03

REACTIVITY OF ISOLATED CANINE CEREBRAL-ARTERIES TO ADENINE-NUCLEOTIDES AND ADENOSINE. 000210 01-03

ADENOSINE

REACTIVITY OF ISOLATED CANINE CEREBRAL-ARTERIES TO ADENINE-NUCLEOTIDES AND ADENOSINE. 000210 01-03

BLOCKADE OF STRIATAL NEURONE RESPONSES TO MORPHINE BY AMINOPHYLLINE: EVIDENCE FOR ADENOSINE MEDIATION OF OPIATE ACTION. 000229 01-03

ADENOSINE REGULATES VIA TWO DIFFERENT TYPES OF RECEPTORS, THE ACCUMULATION OF CYCLIC-AMP IN CULTURED BRAIN CELLS. 000308 01-03

INHIBITION OF (3H)DIAZEPAM BINDING TO RAT-BRAIN CORTICAL SYNAPTOSOMAL MEMBRANES BY ADENOSINE UPTAKE BLOCKERS. 000330 01-03

MORPHINE ENHANCES ADENOSINE RELEASE FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 000451 01-04

ADENOSINE ANALOGS AS SUBSTRATES AND INHIBITORS OF S ADENOSYLHOMOCYSTEINE-HYDROLASE. (UNPUBLISHED PAPER). 001021 02-01

REGIONAL RELEASE OF (3H)ADENOSINE DERIVATIVES FROM RAT-BRAIN IN VIVO: EFFECT OF EXCITATORY AMINO-ACIDS, OPIATE AGONISTS, AND BENZODIAZEPINES. 001303 02-03

INHIBITORY ACTION OF ADENOSINE ON SYNAPTIC TRANSMISSION IN THE HIPPOCAMPUS OF THE GUINEA-PIG IN VITRO. 001401 02-03

AMINOPHYLLINE AND THEOPHYLLINE DERIVATIVES AS ANTAGONISTS OF NEURONAL DEPRESSION BY ADENOSINE: A MICROIONTOPHORETIC-STUDY. 001410 02-03

EFFECTS OF DIAZEPAM ON ADENOSINE AND ACETYLCHOLINE RELEASE FROM RAT-CEREBRAL-CORTEX: FURTHER EVIDENCE FOR A PURINERGIC MECHANISM IN ACTION OF DIAZEPAM. 001414 02-03

ALPHA2-ADRENERGIC AMINES, ADENOSINE AND PROSTAGLANDINS INHIBIT LIPOLYSIS AND CYCLIC-AMP ACCUMULATION IN HAMSTER ADIPOCYTES IN THE ABSENCE OF EXTRACELLULAR SODIUM. 002728 03-03

METHYLXANTHINES MODULATE ADENOSINE RELEASE FROM SLICES OF CEREBRAL-CORTEX. 002907 03-03

DO BENZODIAZEPINES BIND AT ADENOSINE UPTAKE SITES IN CNS? 002933 03-03

EFFECTS OF MORPHINE AND CAFFEINE ON ADENOSINE RELEASE FROM RAT-CEREBRAL-CORTEX: IS CAFFEINE A MORPHINE ANTAGONIST. 003864 04-03

THE EFFECT OF ADENOSINE AND GUANOSINE ON THE CONTENT OF SEROTONIN AND CATECHOLAMINES IN THE BRAIN IN THE RESTORATION PERIOD FOLLOWING EXPERIMENTAL CLINICAL DEATH. 003882 04-03

ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03

EFFECTS OF ETHANOL ON ACETYLCHOLINE AND ADENOSINE EFFLUX FROM THE IN VIVO RAT-CEREBRAL-CORTEX. 003969 04-03

POTENTIATION OF THE EFFECTS OF ADENOSINE ON ISOLATED CARDIAC-MUSCLE AND SMOOTH-MUSCLE BY DIAZEPAM. 004266 04-05

ADENOSINE-CYCLIC-MONOPHOSPHATE-PHOSPHODIESTERASE

REGULATION BY A BETA-ADRENERGIC-RECEPTOR OF A CA-INDEPENDENT ADENOSINE-CYCLIC-MONOPHOSPHATE-PHOSPHODIESTERASE IN C6-GLIOMA CELLS. (UNPUBLISHED PAPER). 001403 02-03

ADENOSINE-DEAMINASE

ADENOSINE AND CYCLIC-AMP IN RAT-CEREBRAL-CORTICAL SLICES: EFFECTS OF ADENOSINE UPTAKE INHIBITORS AND ADENOSINE-DEAMINASE INHIBITORS. 003950 04-03

ADENOSINE-RECEPTORS

ADENOSINE-RECEPTORS IN RAT TESTES: LABELING WITH 3H CYCLOHEXYLADENOSINE. 002835 03-03

ADENOSINE-RECEPTORS IN THE CENTRAL-NERVOUS-SYSTEM: RELATIONSHIP TO THE CENTRAL-ACTIONS OF METHYLXANTHINES. 003766 04-03

ADENOSINE-TRIPHOSPHATASE

ETHANOL SEDATIVE HYPNOTIC-INTERACTIONS: IN VITRO STUDIES ON NA-K-ACTIVATED ADENOSINE-TRIPHOSPHATASE. 004269 04-05

ADENOSINE-TRIPHOSPHATASES

INTERACTION STUDIES OF ETHANOL AND PSYCHOTROPIC-DRUGS IN RODENTS: POSSIBLE INVOLVEMENT OF ADENOSINE-TRIPHOSPHATASES. 001281 02-03

ADENOSINE-TRIPHOSPHATE

4 AMINOPYRIDINE BLOCKADE OF NEURONAL DEPRESSANT RESPONSES TO ADENOSINE-TRIPHOSPHATE. 003963 04-03

ADENOSYL-L-HOMOCYSTEINE

ANTICONVULSANT PROPERTIES OF S ADENOSYL-L-HOMOCYSTEINE. 001227 02-03

ADENOSYL-L-METHIONINE

DECREASE OF NORADRENALINE O METHYLATION IN RAT-BRAIN INDUCED BY L-DOPA. REVERSAL EFFECT OF S ADENOSYL-L-METHIONINE. 004019 04-03

ADENOSYLHOMOCYSTEINE-HYDROLASE

IRREVERSIBLE INHIBITION OF S ADENOSYLHOMOCYSTEINE-HYDROLASE BY NUCLEOSIDE ANALOGS. (UNPUBLISHED PAPER). 001010 02-01

ADENOSINE ANALOGS AS SUBSTRATES AND INHIBITORS OF S ADENOSYLHOMOCYSTEINE-HYDROLASE. (UNPUBLISHED PAPER). 001021 02-01

ADENOSYLMETHIONINE

DECREASED CEREBRAL CATABOLISM OF (3H)HISTAMINE IN VIVO AFTER S ADENOSYLMETHIONINE ADMINISTRATION. 002883 03-03

ADENYLATE-CYCLASE

(3H)5 HT BINDING-SITES AND 5 HT-SENSITIVE ADENYLATE-CYCLASE IN GLIAL CELL MEMBRANE FRACTION. 000093 01-03

SUBSENSITIVITY OF THE NOREPINEPHRINE-RECEPTOR COUPLED ADENYLATE-CYCLASE SYSTEM IN BRAIN: EFFECTS OF NISOXETINE VERSUS FLUOXETINE. 000208 01-03

SEROTONIN-SENSITIVE ADENYLATE-CYCLASE AND (3H)SEROTONIN BINDING-SITES IN THE CNS OF THE RAT -- I. KINETIC PARAMETERS AND PHARMACOLOGICAL-PROPERTIES. 000213 01-03

SEROTONIN-SENSITIVE ADENYLATE-CYCLASE AND (3H)SEROTONIN BINDING-SITES IN THE CNS OF THE RAT -- II. RESPECTIVE REGIONAL AND SUBCELLULAR DISTRIBUTIONS AND ONTOGENETIC DEVELOPMENTS. 000214 01-03

OPIOID DEPENDENT DUAL-REGULATION OF ADENYLATE-CYCLASE IN A CELL-FREE SYSTEM. (UNPUBLISHED PAPER). 001033 02-01

PROSTACYCLIN-DEPENDENT ACTIVATION OF ADENYLATE-CYCLASE IN A NEURONAL SOMATIC CELL HYBRID: PROSTANOID STRUCTURE-ACTIVITY RELATIONSHIPS. 001132 02-03

DOPAMINE-SENSITIVE ADENYLATE-CYCLASE AND RECEPTOR BINDING-ACTIVITIES FOLLOWING ACUTE AND CHRONIC NEUROLEPTIC-DRUG TREATMENT. (UNPUBLISHED PAPER). 001172 02-03

ENDOGENOUS GUANYL-NUCLEOTIDES: COMPONENTS OF THE STRIATUM WHICH CONFER DOPAMINE SENSITIVITY TO ADENYLATE-CYCLASE. 001313 02-03

DOPAMINE-SENSITIVE ADENYLATE-CYCLASE AND DOPAMINE/NEUROLEPTIC-RECEPTOR BINDING: EFFECT OF NEUROLEPTIC-DRUGS. 001358 02-03

DIHYDROXY AND TRIHYDROXY ANALOGS OF CHLORPROMAZINE INFLUENCE THE CENTRAL-ACTIVITY OF ADENYLATE-CYCLASE AND CYCLIC-AMP-PHOSPHODIESTERASE.
001405 02-03

STIMULATION OF ADENYLATE-CYCLASE IN RAT STRIATUM BY PERGOLIDE: INFLUENCE OF GTP.
001448 02-03

FUNCTIONAL ASPECTS OF THE NOREPINEPHRINE-RECEPTOR COUPLED ADENYLATE-CYCLASE SYSTEM IN THE CENTRAL-NERVOUS-SYSTEM.
001493 02-03

STIMULATION OF RETINAL ADENYLATE-CYCLASE BY VASOACTIVE INTESTINAL PEPTIDE (VIP).
002811 03-03

EFFECT OF DOPAMINE ON ACTIVATION OF RAT STRIATAL ADENYLATE-CYCLASE BY FREE MG2 AND GUANYL-NUCLEOTIDES.
002825 03-03

STEREOSPECIFIC INHIBITION OF DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN CARP RETINA BY THE ENANTIOMERS OF (/-) 1 CYCLOPROPYLMETHYL TRIFLUOROMETHYLTHIODIBENZOCYCLOHEPTENYLIDENEPIPERIDINE.
003706 04-02

STIMULATORY ACTION OF LISURIDE ON DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN THE RAT STRIATAL HOMOGENATE.
003718 04-03

DOPAMINE-ACTIVATED ADENYLATE-CYCLASE OF SPINAL-CORD: SUPERSENSITIVITY FOLLOWING TRANSECTION OF THE CORD.
003800 04-03

OPIOIDS, NORADRENALINE AND GTP ANALOGS INHIBIT CHOLERA-TOXIN ACTIVATED ADENYLATE-CYCLASE IN NEUROBLASTOMA-X GLIOMA HYBRID CELLS.
003975 04-03

DOPAMINERGIC MECHANISMS IN THE TELEOST RETINA. I. DOPAMINE-SENSITIVE ADENYLATE-CYCLASE IN HOMOGENATES OF CARP RETINA; EFFECTS OF AGONISTS, ANTAGONISTS AND ERGOTS.
004051 04-03

WHY DOES SULPIRIDE NOT BLOCK THE EFFECT OF DOPAMINE ON THE DOPAMINE-SENSITIVE ADENYLATE-CYCLASE?
004055 04-03

RECEPTORS, ADENYLATE-CYCLASE, DEPRESSION, AND LITHIUM.
004353 04-09

ADH

INAPPROPRIATE ADH SECRETION: THE ROLE OF DRUG RECHALLENGE.
002629 02-17

ADHERENCE

ADHERENCE TO LITHIOTHERAPY.
002507 02-16

ADHESION

DEVELOPMENTALLY REGULATED LECTINS IN SLIME MOULDS AND CHICK TISSUES -- ARE THEY CELL ADHESION MOLECULES?
003724 04-03

ADIPOCYTES

ALPHA2-ADRENERGIC AMINES, ADENOSINE AND PROSTAGLANDINS INHIBIT LIPOLYSIS AND CYCLIC-AMP ACCUMULATION IN HAMSTER ADIPOCYTES IN THE ABSENCE OF EXTRACELLULAR SODIUM.
002728 03-03

ADIPOSE

EFFECTS OF RATE OF BLOOD FLOW ON FRACTIONAL EXTRACTION AND ON UPTAKE OF INFUSED NORADRENALINE BY BROWN ADIPOSE TISSUE IN VIVO.
001231 02-03

ADJUNCTIVE

EFFECTS OF PSYCHOTROPIC-DRUGS ON FI-RESPONDING AND ADJUNCTIVE DRINKING IN RATS.
001693 02-04

ADJUSTMENTS

HEXAMETHONIUM MODIFICATION OF CARDIOVASCULAR ADJUSTMENTS DURING COMBINED STATIC DYNAMIC ARM EXERCISE IN MONKEYS.
001242 02-03

ADJUVANT

PSYCHIATRIC MORBIDITY AND PHYSICAL TOXICITY ASSOCIATED WITH ADJUVANT CHEMOTHERAPY AFTER MASTECTOMY.
002433 02-15

ADMINISTRATIONS

MODIFICATION OF DOPAMINE-RECEPTORS IN BRAIN BY CONTINUOUS AMPHETAMINE ADMINISTRATIONS TO RATS.
001395 02-03

PHARMACOKINETIC PROFILE OF VALPROIC-ACID IN RHESUS-MONKEYS FOLLOWING SINGLE BOLUS AND CONSTANT RATE INTRAVENOUS ADMINISTRATIONS.
002797 03-03

EFFECTS OF REPEATED ADMINISTRATIONS OF DIHYDROERGOTOXINE (REDERGINE) ON THE SLEEP-WAKEFULNESS CYCLE IN THE CAT.
003703 04-02

ADMISSIONS

PSYCHOTROPIC-DRUGS AND PSYCHIATRIC-HOSPITAL ADMISSIONS IN VERONA, ITALY.
004717 04-17

ADOLESCENCE

THE USE OF LITHIUM-CARBONATE IN ADOLESCENCE.
000992 01-17

ON THE QUESTION OF PARENCHYMAL DAMAGE CAUSED BY LONG-TERM THERAPY WITH PSYCHOTROPICS IN ADOLESCENCE.
004626 04-15

ADOLESCENT

PREDICTORS OF ADOLESCENT HEIGHT AND WEIGHT IN HYPERKINETIC-BOYS TREATED WITH METHYLPHENIDATE.
003509 03-15

PHENYTOIN TOXICITY IN A BRAIN-DAMAGE ADOLESCENT: A CASE-REPORT.
003512 03-15

MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN ADOLESCENT.
004637 04-15

ADOLESCENTS

MARIJUANA: A REVIEW OF MEDICAL RESEARCH WITH IMPLICATIONS FOR ADOLESCENTS.
000871 01-15

INITIAL PRESCRIPTION OF PSYCHOTROPIC-MEDICATIONS FOR ADOLESCENTS IN A MEDICAL/PROFESSIONAL INSTITUTE, AND THE ROLE OF THE PSYCHIATRIST IN A MEDICAL/PROFESSIONAL INSTITUTE.
002621 02-17

LATE RESULTS OF LITHIUM TREATMENT OF ADOLESCENTS WITH ATTACK LIKE SCHIZOPHRENIA.
003177 03-08

ON THE EFFECTS OF SULTOPRIDE ADMINISTERED IN LOW-DOSAGES TO OLDER CHILDREN AND ADOLESCENTS.
003230 03-09

TREATMENT OF ANXIETY IN CHILDREN AND ADOLESCENTS.
003349 03-11

PHARMACOLOGICAL INFLUENCE OF SEXUAL-FUNCTIONS IN ADOLESCENTS.
004436 04-11

DRUG-INDUCED PSYCHOSIS AND SCHIZOPHRENIA IN ADOLESCENTS.
004596 04-15

EMOTIONAL-DISORDERS IN CHILDREN AND ADOLESCENTS: MEDICAL AND PSYCHOLOGICAL APPROACHES TO TREATMENT.
004743 04-17

ADRENAL

RELEASE OF ARACHIDONIC-ACID FROM ADRENAL CHROMAFFIN CELL-CULTURES DURING SECRETION OF EPINEPHRINE. (UNPUBLISHED PAPER).
001027 02-01

INFLUENCE OF DRUGS AFFECTING THE PITUITARY ADRENAL AXIS ON CHROMAFFIN CELLS.
001183 02-03

ADRENAL-GLAND

EFFECT OF OXOTREMORINE ON ORNITHINE-DECARBOXYLASE ACTIVITY OF THE ADRENAL-GLAND IN RAT.
000246 01-03

IDENTIFICATION AND QUANTIFICATION OF 1,2,3,4 TETRAHYDRO-BETA-CARBOLINE, 2 METHYL-TETRAHYDRO-BETA-CARBOLINE, AND 6 METHOXY-TETRAHYDRO-BETA-CARBOLINE AS IN VIVO CONSTITUENTS OF RAT-BRAIN AND ADRENAL-GLAND.
002636 03-01

ADRENAL-HORMONES

ADRENAL-HORMONES AND ETHANOL INGESTION IN C57BL/CRGL AND C3H/CRGL/2 MICE.
002739 03-03

ADRENAL-MEDULLA

REGULATION OF CHOLINERGIC TRANSMISSION IN ADRENAL-MEDULLA. (UNPUBLISHED PAPER).
001182 02-03

BETA ENDORPHIN-INDUCED HYPERGLYCEMIA IS MEDIATED BY INCREASED CENTRAL SYMPATHETIC OUTFLOW TO ADRENAL-MEDULLA.
002924 03-03

EFFECTS OF TAIPOXIN ON THE ULTRASTRUCTURE OF CHOLINERGIC AXON TERMINALS IN THE MOUSE ADRENAL-MEDULLA.
003916 04-03

ADRENALECTOMIZED

CORTICOSTERONE INCREASES THE SYNTHESIS OF A SOLUBLE PROTEIN IN PITUITARY-GLANDS FROM ADRENALECTOMIZED MALE RATS WHICH PRECIPITATES WITH ANTI-RAT GROWTH-HORMONE ANTISERUM. (UNPUBLISHED PAPER).
001122 02-03

ADRENALINE

INCREASED ADRENALINE, BETA-ADRENERGIC-RECEPTOR STIMULATION AND PHOSPHOLIPID METHYLATION IN PINEAL-GLAND OF SPONTANEOUSLY HYPERTENSIVE-RATS. (UNPUBLISHED PAPER).
001458 02-03

CORRECTION BY PROPRANOLOL OF THE ABNORMAL ADRENALINE DISCHARGE INDUCED BY EMOTIONAL-STRESS IN CEREBRAL HEMORRHAGE PATIENTS.
002295 02-13

ADRENALINE: A SECRET AGENT IN MEMORY.
002345 02-14

ADRENALINE-INDUCED

THE BLOOD-BRAIN-BARRIER IN ADRENALINE-INDUCED HYPERTENSION.
000147 01-03

ADRENERGIC

SEIZURES AND RELATED EPILEPTIFORM ACTIVITY IN HIPPOCAMPUS TRANSPLANTED TO THE ANTERIOR-CHAMBER OF THE EYE: MODULATION BY CHOLINERGIC AND ADRENERGIC INPUT. 000095 01-03

THE RELEASE OF CATECHOLAMINES FROM ADRENERGIC NEURONS. 000974 01-17

AN EXAMINATION OF FACTORS INFLUENCING ADRENERGIC TRANSMISSION IN THE PITHED RAT, WITH SPECIAL REFERENCE TO NORADRENALINE UPTAKE MECHANISMS AND POSTJUNCTIONAL ALPHA-ADRENOCEPTORS. 001196 02-03

ADRENERGIC NONSPECIFIC POTENTIATION OF YOHIMBINE TOXICITY IN MICE BY ANTIDEPRESSANTS AND RELATED DRUGS AND ANTIYOHIMBINE ACTION OF ANTIADRENERGIC AND SEROTONERGIC DRUGS. 001330 02-03

INDIRECT ADRENERGIC EFFECT OF HISTAMINE IN CAT CEREBRAL-ARTERIES. 001355 02-03

RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS. (UNPUBLISHED PAPER). 001488 02-03

AMPHETAMINE STEREOTYPIES AND POLYRIBOSOMAL DISAGGREGATION IN RATS: EFFECTS OF ADRENERGIC AND SEROTONERGIC BLOCKING-AGENTS. 001531 02-03

DORSAL TEGMENTAL BUNDLE DESTRUCTION: EFFECTS ON OPERANT-BEHAVIOR, BRAIN CATECHOLAMINE LEVELS, AND BEHAVIORAL-SUPPRESSION PRODUCED BY ADRENERGIC AGONISTS. 001726 02-04

ADRENERGIC MODULATION OF THE HYPOTHALAMIC CHOLINERGIC MECHANISM IN THE CONTROL OF EMOTIONAL DEFENSIVE-BEHAVIOR IN THE CAT. 001761 02-04

THE CORRELATION OF CATECHOLAMINE AND ADRENERGIC PARAMETERS WITH DRUG-THERAPY OF NEUROTIC AND ENDOGENOUS DEPRESSIONS. 002047 02-09

CHANGES IN BODY-TEMPERATURE AFTER ADMINISTRATION OF ADRENERGIC AND SEROTONERGIC-AGENTS AND RELATED DRUGS INCLUDING ANTIDEPRESSANTS. 002532 02-17

ADRENERGIC REGULATION OF THE REDUCTION IN ACETYL-COENZYME-A:ARYLAMINE-N-ACETYLTRANSFERASE IN THE RAT PINEAL. 002654 03-03

DIFFERENTIAL-EFFECT OF CHRONIC DESIPRAMINE AND AMITRIPTYLINE TREATMENT ON RAT-BRAIN ADRENERGIC AND SEROTONERGIC-RECEPTORS. 002914 03-03

ROLE OF ADRENERGIC BLOCKING-AGENTS AND GLUCOCORTICOIDS ON THE REGULATION OF PITUITARY OPIOID-PEPTIDES LEVELS. 003801 04-03

NYSTAGMIC RESPONSES OF HIPPOCAMPAL ORIGIN WITH REFERENCE TO EXCITABILITY OF CHOLINERGIC AND ADRENERGIC COMPONENTS INVOLVED IN THE HIPPOCAMPUS OF RABBITS. 003842 04-03

SUBSTANCE-P INCREASES HYPOTHALAMIC BLOOD FLOW VIA AN INDIRECT ADRENERGIC CHOLINERGIC INTERACTION. 003887 04-03

THE IMPORTANCE OF CATECHOLAMINE UPTAKE INHIBITION IN THE REVERSAL OF GUANETHIDINE BLOCKADE OF ADRENERGIC NEURONS. 003900 04-03

SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION. 004206 04-04

RETROGRADE AMNESIA PRODUCED BY ELECTRICAL-STIMULATION OF THE AMYGDALA: ATTENUATION WITH ADRENERGIC ANTAGONISTS. 004231 04-04

PERIPHERAL SEROTONERGIC AND ADRENERGIC RESPONSES IN DEPRESSION. 004364 04-09

THE STATE OF THE ADRENERGIC AND CHOLINERGIC SYSTEMS IN SCHIZOPHRENIC-PATIENTS DURING PSYCHPHARMACOTHERAPY. 004526 04-13

ADRENERGIC-RECEPTOR

MORPHINE WITHDRAWAL CAUSES SUBSENSITIVITY OF ADRENERGIC-RECEPTOR RESPONSE. 002838 03-03

ADRENERGIC-RECEPTORS

ASSESSMENT OF ADRENERGIC-RECEPTORS IN VIVO IN EXPERIMENTAL ANIMALS AND MAN. (UNPUBLISHED PAPER). 001034 02-01

ACUTE AND CHRONIC EFFECTS OF PSYCHOACTIVE-DRUGS ON ADRENERGIC-RECEPTORS AND CALMODULIN. 004750 04-17

ADRENOCEPTOR

A NEUROENDOCRINE-STUDY OF ADRENOCEPTOR FUNCTION IN ENDOGENOUS DEPRESSION. 004362 04-09

ADRENOCEPTORS

DESENSITIZATION OF ADRENOCEPTORS AFTER IMMOBILIZATION STRESS OR REPEATED INJECTION OF ISOPROTERENOL IN RATS. (UNPUBLISHED PAPER). 001546 02-03

ADRENOCORTICAL

THE EFFECT OF PROPYLNORANTIFEIN ON BEHAVIORAL-REACTIONS, ADRENOCORTICAL ACTIVITY, AND ENERGY METABOLISM IN THE ANIMAL BRAIN. 004075 04-04

ACTH-LIKE PEPTIDES, PITUITARY ADRENOCORTICAL FUNCTION AND AVOIDANCE-BEHAVIOR. 004109 04-04

ADRENOCORTICOTROPIN

THE EFFECT OF NEUROPEPTIDE FRAGMENTS OF ADRENOCORTICOTROPIN AND VASOPRESSIN ON BEHAVIORAL-ACTIVITY IN RATS. 001812 02-04

ADRENORECEPTOR

PLASMA CATECHOLAMINES IN RATS EXPOSED TO COLD: EFFECTS OF GANGLIONIC AND ADRENORECEPTOR BLOCKADE. 002863 03-03

ADTN

(3H) 2 AMINODIHYDROXYTETRAHYDRONAPHTHALENE (ADTN): REGIONAL DISTRIBUTION AND IN VIVO BINDING AFTER ACUTE AND CHRONIC DRUG-TREATMENT. 000052 01-03

SELECTIVE STORAGE IN VIVO OF 5,6 ADTN IN DOPAMINE RICH AREAS OF THE RAT-BRAIN. 000324 01-03

HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP. 004066 04-04

ADULT

PLASMA LEVELS OF DIPHENYLHYDANTOIN AND THE CONTROL OF ADULT EPILEPTIC-SEIZURES: A CHILEAN EXPERIENCE. 000102 01-03

BRAINSTEM AUDITORY EVOKED-POTENTIALS AND MYELIN CHANGES IN TRIETHYLTIN-INDUCED EDEMA IN YOUNG ADULT RATS. 000509 01-05

DEXTROAMPHETAMINE: COGNITIVE AND BEHAVIORAL-EFFECTS IN NORMAL AND HYPERACTIVE-BOYS AND NORMAL ADULT MALES. 000716 01-11

NEONATAL ADMINISTRATION OF MET-ENKEPHALIN FACILITATES MAZE-PERFORMANCE OF ADULT RATS. 001673 02-04

NEUROLEPTIC TREATMENT FOR A SUBSTANTIAL PROPORTION OF ADULT LIFE: BEHAVIOURAL-SEQUELAE OF 9 MONTHS HALOPERIDOL ADMINISTRATION. 001858 02-05

A COMPARISON OF THE EFFECTS OF PENTOBARBITAL AND DIPHENYLHYDANTOIN ON THE GABA SENSITIVITY AND EXCITABILITY OF ADULT SENSORY GANGLION CELLS. 002692 03-03

EFFECTS OF FETAL TREATMENT WITH METHYLAZOXYMETHANOL-ACETATE AT VARIOUS GESTATIONAL DATES ON THE NEUROCHEMISTRY OF THE ADULT NEOCORTEX OF THE RAT. 002770 03-03

ABNORMAL MATURATION OF CEREBRAL-CORTEX AND BEHAVIORAL-DEFICIT IN ADULT RATS AFTER NEONATAL ADMINISTRATION OF ANTIBODIES TO GANGLIOSIDE. 003025 03-04

SUPPRESSION OF ACTIVE SLEEP BY CHRONIC-TREATMENT WITH CHLORIMIPRAMINE DURING EARLY POSTNATAL DEVELOPMENT: EFFECTS UPON ADULT SLEEP AND BEHAVIOR IN THE RAT. 003056 03-04

BEHAVIOURAL-CHANGES IN ADULT RATS FOLLOWING ADMINISTRATION OF ANTIBODIES AGAINST BRAIN GANGLIOSIDES. 003071 03-04

PSYCHOACTIVE-MEDICATION USE AND ABUSE AMONG AN ADULT RURAL POPULATION. (PH.D. DISSERTATION). 003627 03-17

THE EFFECTS OF P CHLOROAMPHETAMINE ADMINISTRATION ON LOCOMOTOR-ACTIVITY AND SEROTONIN IN NEONATAL AND ADULT RATS. (UNPUBLISHED PAPER). 004169 04-04

ADULT-ONSET

ADULT-ONSET STUTTERING TREATED WITH ANTICONVULSANTS. 003290 03-11

ADULTS

EFFECTS OF METHYLPHENIDATE ON LEARNING A BEGINNING READING VOCABULARY BY NORMAL ADULTS. 000812 01-14

EFFECT OF OPIATES AND OPIATE ANTAGONISTS ON SOMATOSENSORY EVOKED-POTENTIALS IN PATIENTS WITH SCHIZOPHRENIA AND NORMAL ADULTS. 002222 02-13

EFFECTS OF THIORIDAZINE (MELLARIL) ON TITRATING DELAYED MATCHING-TO-SAMPLE PERFORMANCE IN MENTALLY-RETARDED ADULTS. 002471 02-15

EPILEPSY IN ADULTS. 003375 03-11

THE MANAGEMENT OF CHRONIC BEHAVIOR-DISORDERS IN MENTALLY-RETARDED ADULTS WITH LITHIUM-CARBONATE. 003376 03-11

ATTENTION DEFICIT-DISORDER (MINIMAL-BRAIN-DYSFUNCTION) IN ADULTS: A REPLICATION STUDY OF DIAGNOSIS AND DRUG-TREATMENT. 003389 03-11

EFFECTS OF THIORIDAZINE (MELLARIL) ON TITRATING DELAYED MATCHING-TO-SAMPLE PERFORMANCE OF MENTALLY-RETARDED ADULTS. 003392 03-11

HYPERACTIVES AS YOUNG ADULTS: PROSPECTIVE TEN-YEAR FOLLOWUP. 004454 04-11

ADVANTAGE

ADVANTAGE OF PHARMACOKINETIC DATA DURING TREATMENT OF PSYCHOSES WITH HALOPERIDOL. 000577 01-08

STUDY OF MAPROTILINE IN OUTPATIENT TREATMENT OF DEPRESSIVE-STATES BY THE GENERAL-PRACTITIONER: ADVANTAGE OF SINGLE-NIGHTLY-DOSE. 001961 02-09

ADVANTAGE OF MONOTHERAPY WITH CLOBAZAM IN THE TREATMENT AND POSTTREATMENT OF ALCOHOLIC WITHDRAWAL. 002140 02-11

ADVANTAGES

ADVANTAGES AND DISADVANTAGES OF PROLONGED USE OF NEUROLEPTICS. 003470 03-15

ADVERSE

CLINICAL-PHARMACOLOGY: ADVERSE DRUG INTERACTIONS. 003399 03-13

ADVERSE-EFFECTS

PREVENTION OF TARDIVE-DYSKINESIA AND OTHER DRUG RELATED ADVERSE-EFFECTS. 004601 04-15

ADVERSE-EFFECTS OF ANTIPARKINSON-DRUG WITHDRAWAL. (UNPUBLISHED PAPER). 004623 04-15

ADVERSE-REACTIONS

PSYCHOTHERAPEUTIC-DRUGS: IMPORTANT ADVERSE-REACTIONS AND INTERACTIONS. 002383 02-15

ADVERSE-REACTIONS TO MEDICATIONS PRESCRIBED FOR HYPERKINESIS. (PH.D. DISSERTATION). 002411 02-15

AEP

PSYCHOTROPIC-DRUG-INDUCED CHANGES IN AUDITORY AVERAGED EVOKED-POTENTIALS: RESULTS OF A DOUBLE-BLIND TRIAL USING AN OBJECTIVE FULLY AUTOMATED AEP ANALYSIS METHOD. 003412 03-13

AFFECTIVE-DISORDER

INCREASED VULNERABILITY TO CHOLINERGIC STIMULATION IN AFFECTIVE-DISORDER PATIENTS. 002003 02-09

MAOI-INDUCED RAPID CYCLING BIPOLAR AFFECTIVE-DISORDER IN AN ADOLESCENT. 004637 04-15

AFFECTIVE-DISORDERS

COGNITIVE AND AFFECTIVE-FUNCTIONS IN PATIENTS WITH AFFECTIVE-DISORDERS TREATED WITH LITHIUM: AN ASSESSMENT BY QUESTIONNAIRE. 000604 01-09

LITHIUM TREATMENT IN AFFECTIVE-DISORDERS: THERAPEUTIC PLASMA LEVEL. 000635 01-09

LITHIUM TREATMENT IN AFFECTIVE-DISORDERS FROM VIEWPOINT OF TRANSCULTURAL PSYCHOPHARMACOLOGY: THERAPEUTIC PLASMA LEVEL. 000636 01-09

AMITRIPTYLINE, NORTRIPTYLINE PLASMA LEVELS AND CLINICAL-RESPONSE IN WOMEN WITH AFFECTIVE-DISORDERS. 000757 01-13

RENAL FUNCTION IN LITHIUM AND NONLITHIUM TREATED PATIENTS WITH AFFECTIVE-DISORDERS. 000837 01-15

DISCUSSION OF CLINICAL-PAPERS ON LITHIUM TRANSPORT IN AFFECTIVE-DISORDERS. 001987 02-09

LITHIUM TRANSPORT STUDIES IN AFFECTIVE-DISORDERS. 002024 02-09

ABNORMALITIES OF LITHIUM TRANSPORT IN PATIENTS WITH AFFECTIVE-DISORDERS. 002269 02-13

THE ROLE OF NOREPINEPHRINE IN AFFECTIVE-DISORDERS. 002278 02-13

A TEST OF A NEUROTRANSMITTER MODEL OF THE AFFECTIVE-DISORDERS. (PH.D. DISSERTATION). 003063 03-04

THE EFFECT OF SODIUM-VALPROATE ON MANIA: THE GABA HYPOTHESIS OF AFFECTIVE-DISORDERS. 003218 03-09

PSYCHOTROPIC-DRUGS AND THEIR RELATIONSHIP WITH PSYCHOPATHOLOGY OF AFFECTIVE-DISORDERS. 004361 04-09

LITHIUM IN THE PROPHYLAXIS OF RECURRENT AFFECTIVE-DISORDERS (EFFECTIVENESS OF LOW PLASMA LEVELS AND PREDICTORS TO CLINICAL-RESPONSE). 004365 04-09

LITHIUM USE IN AFFECTIVE-DISORDERS. 004367 04-09

EFFECT OF LITHIUM ON GLYCINE LEVELS IN PATIENTS WITH AFFECTIVE-DISORDERS. 004606 04-15

KIDNEY FUNCTION IN PATIENTS WITH AFFECTIVE-DISORDERS WITH AND WITHOUT LITHIUM THERAPY. 004664 04-15

AFFECTIVE-EPISODE

AFFECTIVE-EPISODE FREQUENCY AND LITHIUM THERAPY. 000587 01-09

AFFECTIVE-FUNCTIONS

COGNITIVE AND AFFECTIVE-FUNCTIONS IN PATIENTS WITH AFFECTIVE-DISORDERS TREATED WITH LITHIUM: AN ASSESSMENT BY QUESTIONNAIRE. 000604 01-09

AFFECTIVE-ILLNESS

ANTIDEPRESSANT POTENTIATION OF 5 HYDROXYTRYPTOPHAN BY L DEPRENIL IN AFFECTIVE-ILLNESS. 000608 01-09

AMPHETAMINE AND PIRIBEDIL IN AFFECTIVE-ILLNESS. 000618 01-09

SENSITIZATION AND OSCILLATION FOLLOWING REPEATED STIMULATION: RELATIONSHIP TO AFFECTIVE-ILLNESS AND ITS TREATMENT WITH LITHIUM AND CARBAMAZEPINE. 002031 02-09

DEVELOPMENT AND USE OF PHARMACOLOGICAL-PROBES OF THE CNS IN MAN: EVIDENCE OF CHOLINERGIC ABNORMALITY IN PRIMARY AFFECTIVE-ILLNESS. 002506 02-16

BIOLOGICAL-RHYTHM DISTURBANCES IN AFFECTIVE-ILLNESS. 002628 02-17

THYROTROPHIN RESPONSE TO THYROTROPHIN-RELEASING-HORMONE IN UNIPOLAR AND BIPOLAR AFFECTIVE-ILLNESS. 003237 03-09

UNWANTED EFFECTS OF LITHIUM-CARBONATE USED IN THE PREVENTION OF RELAPSES OF AFFECTIVE-ILLNESS. 004625 04-15

AFFECTIVE-PSYCHOSES

COMPARATIVE CHARACTERISTICS OF THE PROPHYLACTIC PROPERTIES OF SHORT-TERM AND LONG-ACTING LITHIUM-CARBONATE PREPARATIONS IN ENDOGENOUS AFFECTIVE-PSYCHOSES. 004390 04-09

AFFECTIVE-PSYCHOSIS

BIPOLAR AFFECTIVE-PSYCHOSIS WITH ONSET BEFORE AGE 16 YEARS: REPORT OF 10 CASES. 002001 02-09

AN ATTEMPT TO ASSESS THE EFFECT OF LITHIUM ON THE NEUTROPHIL LEUKOCYTE SYSTEM IN AFFECTIVE-PSYCHOSIS. 004416 04-09

AFFERENT

CHANGES IN PRIMARY AFFERENT DEPOLARIZATION AFTER ADMINISTRATION OF GAMMA ACETYLENIC-GAMMA-AMINOBUTYRIC-ACID (GAG), A GAMMA AMINOBUTYRIC-ACID-TRANSAMINASE (GABA-TRANSAMINASE) INHIBITOR. 000174 01-03

DEMONSTRATION OF SUBSTANCE-P IN AORTIC NERVE AFFERENT FIBERS BY COMBINED USE OF FLOURESCENT RETROGRADE NEURONAL LABELING AND IMMUNOCYTOCHEMISTRY. (UNPUBLISHED PAPER). 001024 02-01

AFFERENTS

SELECTIVE SYNAPTIC ANTAGONISM BY ATROPINE AND ALPHA AMINOADIPATE OF PULVINAR AND CORTICAL AFFERENTS TO THE SUPRASYLVIAN VISUAL AREA (CLARE-BISHOP AREA). 002752 03-03

EVIDENCE THAT THE OPIATE-RECEPTORS OF THE SUBSTANTIA-GELATINOSA CONTRIBUTE TO THE DEPRESSION, BY INTRAVENOUS MORPHINE, OF THE SPINAL TRANSMISSION OF IMPULSES IN UNMYELINATED PRIMARY AFFERENTS. 002767 03-03

NALOXONE EFFECTS ON THE BLOOD-PRESSURE RESPONSE INDUCED BY THIN-FIBER MUSCULAR AFFERENTS. 002794 03-03

SUPRASPINAL INHIBITION OF THE EXCITATION OF DORSAL-HORN NEURONES BY IMPULSES IN UNMYELINATED PRIMARY AFFERENTS: LACK OF EFFECT BY STRYCHNINE AND BICUCULLINE. 003778 04-03

AFFINITIES

THE AFFINITIES OF ERGOT COMPOUNDS FOR DOPAMINE AGONIST AND DOPAMINE ANTAGONIST RECEPTOR SITES. 001254 02-03

GABA-RECEPTORS REGULATE THE AFFINITIES OF ANIONS REQUIRED FOR BRAIN SPECIFIC BENZODIAZEPINE BINDING. 002903 03-03

AFFINITY

ON THE CAPACITY OF PRESYNAPTIC ALPHA-RECEPTORS TO MODULATE NOREPINEPHRINE RELEASE FROM SLICES OF RAT NEOCORTEX AND THE AFFINITY OF SOME AGONISTS AND ANTAGONISTS FOR THESE RECEPTORS. 000323 01-03

AFFINITY CHROMATOGRAPHY OF THE BETA-ADRENERGIC-RECEPTOR AND CHARACTERIZATION OF ANTIBODIES RAISED AGAINST PURIFIED RECEPTOR PREPARATIONS. 001009 02-01

NEGLIGIBLE AFFINITY OF HISTAMINE H2-RECEPTOR ANTAGONISTS FOR CENTRAL ALPHA1-ADRENOCEPTORS. 001508 02-03

MULTIPLE CNS RECEPTOR INTERACTIONS OF ERGOT ALKALOIDS: AFFINITY AND INTRINSIC ACTIVITY ANALYSIS IN IN VITRO BINDING SYSTEMS. 001516 02-03

MU-RECEPTORS AND DELTA OPIATE-RECEPTORS: CORRELATION WITH HIGH-AFFINITY AND LOW AFFINITY OPIATE BINDING-SITES. 001554 02-03

RELATIONSHIPS BETWEEN STRUCTURE AND ALPHA-ADRENERGIC-RECEPTOR AFFINITY OF CLONIDINE AND AND SOME RELATED CYCLIC-AMIDINES. 002698 03-03

PENTOBARBITAL: DUAL-ACTIONS TO INCREASE BRAIN BENZODIAZEPINE-RECEPTOR AFFINITY. 002896 03-03

EFFECT OF THE POSITION OF THE PHENOLIC GROUP IN MORPHINANS ON THEIR AFFINITY FOR OPIATE-RECEPTOR BINDING. 003702 04-02

AFTERCARE

DOUBLE-BLIND COMPARISON OF HALOPERIDOL AND THIOTHIXENE WITH AFTERCARE TREATMENT EVALUATION IN PSYCHIATRIC-OUTPATIENTS WITH SCHIZOPHRENIA. 000574 01-08

FOLLOWUP TREATMENT AND AFTERCARE OF DISCHARGED SCHIZOPHRENIC-PATIENTS. 000944 01-17

AFTERDISCHARGE

FLASH-EVOKED AFTERDISCHARGE IN RAT AS A MODEL OF THE ABSENCE SEIZURE: DOSE-RESPONSE STUDIES WITH THERAPEUTIC DRUGS. 000160 01-03

THE ROLE OF BIOGENIC-AMINES IN AMYGDALAR KINDLING. I. LOCAL AMYGDALAR AFTERDISCHARGE. 000327 01-03

RELATION OF MONOMETHYLHYDRAZINE (MMH) SEIZURE THRESHOLDS TO AFTERDISCHARGE THRESHOLDS WITH AMYGDALOID STIMULATION IN CATS. 000474 01-04

A STUDY ON EFFECTS OF ANTIEPILEPTIC-DRUGS UPON THE HIPPOCAMPAL AFTERDISCHARGE. 002844 03-03

CUMULATIVE AFTERDISCHARGE AS THE PRINCIPAL FACTOR IN THE ACQUISITION OF KINDLED SEIZURES. 002862 03-03

POWER SPECTRAL ANALYSIS OF THE FLASH-EVOKED AFTERDISCHARGE. 003133 03-06

AFTERDISCHARGES

INFLUENCE OF CARBAMAZEPINE ON THALAMOCORTICAL AND HIPPOCAMPOCORTICAL SELF-SUSTAINED AFTERDISCHARGES IN RATS. 001356 02-03

THE EFFECT OF ELECTRICAL-STIMULATION OF THE LOCUS-COERULEUS AND INTRAPERITONEAL INJECTION OF CERTAIN PHARMACOLOGICAL SUBSTANCES ON THE THRESHOLD OF HIPPOCAMPAL AFTERDISCHARGES. 003885 04-03

AFTEREFFECTS

PERSONALITY AND DRUGS IN VISUAL FIGURAL AFTEREFFECTS. 004581 04-14

AG-3-5

PHARMACOLOGICAL-ASPECTS OF SHAKING-BEHAVIOR PRODUCED BY TRH, AG-3-5, AND MORPHINE WITHDRAWAL. 004248 04-04

AGE

AGE, DEMENTIA, DYSKINESIAS, AND LITHIUM RESPONSE. 000594 01-09

EFFECTS OF AGE AND OTHER DRUGS ON BENZODIAZEPINE KINETICS. 000681 01-11

EFFECT OF AGE AND ROUTE-OF-ADMINISTRATION ON LD50 OF LITHIUM-CHLORIDE IN THE RAT. 001413 02-03

BIPOLAR AFFECTIVE-PSYCHOSIS WITH ONSET BEFORE AGE 16 YEARS: REPORT OF 10 CASES. 002001 02-09

OPEN-STUDY OF L 5 HTP IN MELANCHOLIC-DEPRESSED-PATIENTS OVER 50 YEARS OF AGE. 002016 02-09

SPECIFIC 3H IMIPRAMINE BINDING IN HUMAN PLATELETS: INFLUENCE OF AGE AND SEX. 002254 02-13

CHANGES IN PREVALENCE, SEVERITY, AND RECOVERY IN TARDIVE-DYSKINESIA WITH AGE. 002455 02-15

AGE DEPENDENT CHANGES IN THE BETA ENDORPHIN CONTENT OF DISCRETE RAT-BRAIN NUCLEI. 002635 03-01

MIND/BRAIN IN THE AGE OF PSYCHOPHARMACOLOGY: A CROSSROADS FOR MEDICINE AND MINISTRY. 003624 03-17

PIRACETAM ACTIVITY MAY DIFFER ACCORDING TO THE AGE OF THE RECIPIENT MOUSE. 003705 04-02

EFFECTS OF AGE ON DOPAMINERGIC-SUPERSENSITIVITY INDUCED BY CHRONIC FLUPHENAZINE. 003940 04-03

EFFECTS OF ANIMAL AGE AND PHENOBARBITAL ON RAT LIVER GLUCOSE-6-PHOSPHATASE ACTIVITY. 003997 04-03

EFFECTS OF ANISOMYCIN ON RETENTION OF THE PASSIVE-AVOIDANCE HABIT AS A FUNCTION OF AGE. 004097 04-04

AGE-DEPENDENT

AGE-DEPENDENT MODIFICATION OF DRUG INTERFERENCE ON THE ENZYMATIC ACTIVITIES OF THE RAT-BRAIN. 003730 04-03

AGE-RELATED

AGE-RELATED ELECTROPHYSIOLOGICAL CHANGES IN RAT-CEREBELLUM. 000197 01-03

AGE-RELATED CHANGES IN BODY-TEMPERATURE RESPONSES TO MORPHINE IN RATS. 001366 02-03

AGE-RELATED FACTORS AFFECTING ANTIDEPRESSANT-DRUG METABOLISM AND CLINICAL-RESPONSE. 002035 02-09

CLINICAL PHARMACOKINETICS IN NEWBORNS AND INFANTS: AGE-RELATED DIFFERENCES AND THERAPEUTIC IMPLICATIONS. 003343 03-11

PHARMACOTHERAPY FOR AGE-RELATED BEHAVIORAL-DEFICIENCIES. 003391 03-11

AGE-SPECIFIC

AGE-SPECIFIC DOSES OF LORMETAZEPAM AS A NIGHT SEDATIVE IN CASES OF CHRONIC SLEEP-DISTURBANCE. 004309 04-07

AGED

ABILITY OF AGED RATS TO ALTER BETA-ADRENERGIC-RECEPTORS OF BRAIN IN RESPONSE TO REPEATED ADMINISTRATION OF RESERPINE AND DESMETHYLIMIPRAMINE. 000113 01-03

DRUGS AND THE AGED. 002593 02-17

ALTERATIONS IN DIHYDROMORPHINE BINDING IN CEREBRAL HEMISPHERES OF AGED MALE RATS. 003936 04-03

PSYCHOPHARMACOTHERAPY OF SEXUAL-DISORDERS IN THE AGED. 004466 04-11

AN OVERVIEW OF PHARMACOLOGIC-TREATMENT OF COGNITIVE DECLINE IN THE AGED. 004482 04-11

PSYCHOPHARMACOLOGY FOR THE AGED. 004701 04-17

AGENT

ADRENALINE: A SECRET AGENT IN MEMORY. 002345 02-14

AGES

MORPHINE TREATMENT AT DIFFERENT INFANT AGES: INFLUENCE ON LATER MORPHINE EFFECTS IN RATS. (PH.D. DISSERTATION). 000511 01-05

AGGRAVATED

A CASE OF PETIT-MAL EPILEPSY AGGRAVATED BY LITHIUM. 004641 04-15

AGGREGATED

POSSIBLE MECHANISM FOR THE ENHANCED LETHALITY OF MORPHINE IN AGGREGATED MICE. 000437 01-04

AGGREGATES

EFFECTS OF ISOPROTERENOL ON THE DEVELOPMENT OF BETA-ADRENERGIC-RECEPTORS IN BRAIN CELL AGGREGATES. 002932 03-03

AGGREGATION

PLATELET AGGREGATION, 5 HYDROXYTRYPTAMINE UPTAKE AND RELEASE IN HUNTINGTONS-CHOREA.
002112 02-11

CANALIZATION OF AROUSAL IN THE PREWEANLING RAT: EFFECTS OF AMPHETAMINE ON AGGREGATION WITH SURROGATE STIMULI.
002965 03-04

SELECTIVE INHIBITORY-EFFECTS OF CHLORPROMAZINE AND IMIPRAMINE ON PLATELET AGGREGATION.
004518 04-13

AGGRESSION

ALCOHOL AND CHLORDIAZEPOXIDE INCREASE SUPPRESSED AGGRESSION IN MICE.
000434 01-04

PSYCHOPHARMACOLOGY OF AGGRESSION.
000721 01-11

PSYCHOPHARMACOLOGY OF AGGRESSION.
000995 01-17

COMPARATIVE-STUDY OF AGGRESSIVE-BEHAVIOUR AFTER INJECTION OF CHOLINOMIMETICS, ANTICHOLINESTERASES, NICOTINIC, AND MUSCARINIC GANGLIONIC STIMULANTS INTO THE CEREBRAL VENTRICLES OF CONSCIOUS CATS: FAILURE OF NICOTINIC-DRUGS TO EVOKE AGGRESSION.
001568 02-04

NALOXONE PRETREATMENT ENHANCES SHOCK-ELICITED AGGRESSION.
001615 02-04

AN IMPROVED MODEL OF INTRASPECIFIC AGGRESSION: DOSE-RESPONSE ANALYSIS OF APOMORPHINE-INDUCED-FIGHTING AND STEREOTYPY IN THE RAT.
002983 03-04

DRUG REGIMENS FACILITATING AGGRESSION: BEHAVIOR, AMINE, AND RECEPTOR ALTERATIONS.
002987 03-04

AGGRESSION ALTERING EFFECTS OF CYCLIC-AMP.
003021 03-04

LITHIUM AND PORCINE AGGRESSION.
003048 03-04

PHARMACOLOGICAL EVIDENCE FOR CATECHOLAMINE INVOLVEMENT IN ANIMAL AGGRESSION.
003052 03-04

FACILITATED SHOCK-INDUCED AGGRESSION AFTER CHRONIC-TREATMENT WITH ANTIDEPRESSANT-DRUGS IN THE RAT.
003058 03-04

FAILURE TO FIND SEX-DIFFERENCES IN TESTOSTERONE ACTIVATED AGGRESSION IN TWO STRAINS OF RATS.
003107 03-04

PHARMACOLOGICAL EVIDENCE FOR CATECHOLAMINE INVOLVEMENT IN ANIMAL AGGRESSION.
003140 03-06

ERGOT DRUGS SUPPRESS PLASMA PROLACTIN AND LACTATION BUT NOT AGGRESSION IN PARTURIENT MICE.
003159 03-07

PRENATAL EXPOSURE TO SYNTHETIC PROGESTINS INCREASES POTENTIAL FOR AGGRESSION IN HUMANS.
003527 03-15

ACETYLCHOLINE TURNOVER AND AGGRESSION IN RELATED THREE STRAINS OF MICE.
004151 04-04

AGGRESSIVE

BICUCULLINE ANTAGONIZES EFFECTS OF DIAZEPAM ON AGGRESSIVE AND TIMID-BEHAVIOUR IN MICE.
000485 01-04

COMPARISON OF SCH-12679 AND THIORIDAZINE IN AGGRESSIVE MENTAL-RETARDATES.
002119 02-11

LITHIUM THERAPY IN AGGRESSIVE MENTALLY-SUBNORMAL-PATIENTS.
002316 02-14

MOLINDONE-HYDROCHLORIDE IN THE TREATMENT OF AGGRESSIVE, HOSPITALIZED CHILDREN.
003321 03-11

EFFECTS OF LITHIUM-CARBONATE AND HALOPERIDOL ON COGNITION IN AGGRESSIVE, HOSPITALIZED SCHOOL-AGE CHILDREN.
003360 03-11

EFFECTS OF LITHIUM-CARBONATE AND HALOPERIDOL ON COGNITION IN AGGRESSIVE HOSPITALIZED SCHOOL-AGE CHILDREN.
003361 03-11

POSSIBLE MUSCARINIC CHOLINERGIC MEDIATION OF PATTERNED AGGRESSIVE REFLEXES IN THE CAT.
004153 04-04

AGGRESSIVE-BEHAVIOR

ROLE OF BRAIN DOPAMINERGIC MECHANISMS IN RODENT AGGRESSIVE-BEHAVIOR: INFLUENCE OF (OR -)N N PROPYLNORAPOMORPHINE ON THREE EXPERIMENTAL MODELS.
000340 01-04

EFFECTS OF SODIUM-DIPROPYLACETATE, MUSCIMOL-HYDROBROMIDE AND (R,S) NIPECOTIC-ACID-AMIDE ON ISOLATION-INDUCED AGGRESSIVE-BEHAVIOR IN MICE.
001756 02-04

INHIBITION OF AGGRESSIVE-BEHAVIOR IN RHESUS-MONKEYS BY BUSPIRONE.
003103 03-04

AGGRESSIVE-BEHAVIOR INDUCED BY APOMORPHINE IN RATS SUBMITTED TO FOUR STRESSFUL-SITUATIONS.
003163 03-07

LITHIUM AND AGGRESSIVE-BEHAVIOR.
004409 04-09

AGGRESSIVE-BEHAVIOUR

COMPARATIVE-STUDY OF AGGRESSIVE-BEHAVIOUR AFTER INJECTION OF CHOLINOMIMETICS, ANTICHOLINESTERASES, NICOTINIC, AND MUSCARINIC GANGLIONIC STIMULANTS INTO THE CEREBRAL VENTRICLES OF CONSCIOUS CATS: FAILURE OF NICOTINIC-DRUGS TO EVOKE AGGRESSION.
001568 02-04

AGGRESSIVE-BEHAVIOURAL-PHENOMENA

THE PHARMACOLOGY OF AGGRESSIVE-BEHAVIOURAL-PHENOMENA ELICITED BY MUSCARINE INJECTED INTO THE CEREBRAL VENTRICLES OF CONSCIOUS CATS.
001569 02-04

AGGRESSIVE-PATIENT

ACUTE MANAGEMENT OF THE VIOLENT AGGRESSIVE-PATIENT.
000586 01-09

AGING

SERUM PROLACTIN DURING AGING AND THE EFFECTS OF ERGOTS.
001171 02-03

BRAIN CATECHOLAMINES, MENTAL-ILLNESSES, AGING AND SENILE-DEMENTIA: BIOCHEMICAL-CONSIDERATIONS AND PHARMACOLOGICAL-CONSIDERATIONS.
001550 02-03

PSYCHOPHARMACOLOGY OF THE AGING.
002142 02-11

NEUROPSYCHIATRIC SIDE-EFFECTS OF DRUGS IN THE ELDERLY. VOL. 9, AGING.
002573 02-17

THE PSYCHOBIOLOGY OF AGING.
003861 04-03

MEMORY, OPIATE-RECEPTORS, AND AGING.
004143 04-04

PSYCHOPHARMACOLOGY OF AGING.
004710 04-17

AGITATED

TREATMENT OF TARDIVE-DYSKINESIA IN AN AGITATED, DEPRESSED-PATIENT.
002038 02-09

AGITATION

AGITATION, DISORIENTATION, AND HALLUCINATIONS IN PATIENTS ON CIMETIDINE: A REPORT OF THREE CASES AND LITERATURE REVIEW.
000896 01-15

AGONIST

CLENBUTEROL, A CENTRAL BETA-ADRENOCEPTOR AGONIST.
000120 01-03

DIFFERENTIAL REGULATION OF MUSCARINIC AGONIST BINDING-SITES FOLLOWING CHRONIC CHOLINESTERASE INHIBITION.
000279 01-03

INTRAVENOUS GABA AGONIST ADMINISTRATION STIMULATES FIRING OF A10 DOPAMINERGIC NEURONS.
000320 01-03

TRANSIENT ABOLITION OF GENERALIZED PHOTOSENSITIVE EPILEPTIC-DISCHARGE IN HUMANS BY APOMORPHINE, A DOPAMINE-RECEPTOR AGONIST.
000714 01-11

EFFECT OF THE NEW GAMMA AMINOBUTYRIC-ACID AGONIST SL-76-002 ON STRIATAL ACETYLCHOLINE: RELATION TO NEUROLEPTIC-INDUCED EXTRAPYRAMIDAL ALTERATIONS.
001119 02-03

EFFECT OF GABA AGONIST AND ANTAGONISTS ON CAPDIOVASCULAR AND SYMPATHETIC RESPONSES IN SHR AND WKY RATS. (UNPUBLISHED PAPER).
001224 02-03

THE AFFINITIES OF ERGOT COMPOUNDS FOR DOPAMINE AGONIST AND DOPAMINE ANTAGONIST RECEPTOR SITES.
001254 02-03

UNITARY DOPAMINERGIC-RECEPTOR COMPOSED OF COOPERATIVELY LINKED AGONIST AND ANTAGONIST SUBUNIT BINDING-SITES.
001342 02-03

BENZODIAZEPINES MODIFY THE AGONIST RESPONSES AT A PRESYNAPTIC GABA-RECEPTOR.
001377 02-03

SOME CENTRAL-EFFECTS OF IMPROMIDINE, A POTENT AGONIST OF HISTAMINE H2-RECEPTORS.
001417 02-03

ACTIONS OF ENKEPHALIN, MU AND PARTIAL AGONIST ANALGESICS ON ACETYLCHOLINE TURNOVER IN RAT-BRAIN.
001541 02-03

ACTIVATION AND LATERALIZATION OF SENSORIMOTOR FIELD FOR PERIORAL BITING-REFLEX BY INTRANIGRAL GABA AGONIST AND BY SYSTEMIC APOMORPHINE IN THE RAT.
001657 02-04

MORPHINE ANALGESIA AFTER INTRATHECAL ADMINISTRATION OF A NARCOTIC AGONIST, CHLOROXYMORPHAMINE AND ANTAGONIST, CHLORNALTREXAMINE.
001695 02-04

PHENCYCLIDINE AS AN INDIRECT DOPAMINE AGONIST.
001719 02-04

NEUROCHEMICAL EVIDENCE AND BEHAVIORAL-EVIDENCE FOR A SELECTIVE PRESYNAPTIC DOPAMINE-RECEPTOR AGONIST.
002236 02-13

PERGOLIDE, A POTENT LONG-ACTING DOPAMINE-RECEPTOR AGONIST.
002257 02-13

DOPAMINE ANTAGONIST AND AGONIST TREATMENT OF TARDIVE-DYSKINESIA.
002377 02-15

PIPERIDINE-4-SULPHONIC-ACID, A NEW SPECIFIC GABA AGONIST.
002647 03-02

EFFECT OF KAINIC-ACID LESIONS ON MUSCARINIC AGONIST RECEPTOR SUBTYPES IN RAT STRIATUM.
002679 03-03

DIFFERENTIAL REGULATION BY GUANINE-NUCLEOTIDES OF OPIATE AGONIST AND ANTAGONIST RECEPTOR INTERACTIONS.
002688 03-03

CHRONOLOGY OF NEUROCHEMICAL ALTERATIONS INDUCED BY GABA AGONIST ADMINISTRATION.
002713 03-03

PROPERTIES OF DOPAMINE AGONIST AND ANTAGONIST BINDING-SITES IN MAMMALIAN RETINA.
002814 03-03

THE NEUROLATHYROGEN, BETA N OXALYL-L-ALPHA-BETA-DIAMINOPROPIONIC-ACID, IS A POTENT AGONIST AT GLUTAMATE PREFERRING RECEPTORS IN THE FROG SPINAL-CORD.
002858 03-03

DOPAMINERGIC AGONIST AND ANTAGONIST EFFECTS ON STRIATAL TYROSINE-HYDROXYLASE DISTRIBUTION.
002898 03-03

EFFECTS OF ACUTE OR CHRONIC ADMINISTRATION OF LOW-DOSES OF A DOPAMINE AGONIST ON DRINKING AND LOCOMOTOR-ACTIVITY IN THE RAT.
002982 03-04

CLINICAL-PHARMACOLOGY OF MIXED AGONIST ANTAGONIST DRUGS.
003329 03-11

MORPHICEPTIN (NH4-TYR-PRO-PHE-PRO-CONH2): A POTENT AND SPECIFIC AGONIST FOR MORPHINE MU-RECEPTORS.
003746 04-03

RESPONSE OF STRIATONIGRAL SUBSTANCE-P SYSTEMS TO A DOPAMINE-RECEPTOR AGONIST AND ANTAGONIST.
003826 04-03

ON THE IMPORTANCE OF AGONIST CONCENTRATION GRADIENTS WITHIN ISOLATED TISSUES. INCREASED MAXIMAL RESPONSES OF RAT VASA-DEFERENTIA TO (-) NORADRENALINE AFTER BLOCKADE OF NEURONAL UPTAKE.
003879 04-03

BINDING OF (3H) MUSCIMOL, A POTENT GAMMA AMINOBUTYRIC-ACID-RECEPTOR AGONIST, TO MEMBRANES OF THE BOVINE RETINA.
003954 04-03

ACTIONS OF MU, KAPPA, SIGMA, DELTA AND AGONIST/ANTAGONIST OPIATES ON STRIATAL DOPAMINERGIC FUNCTION.
004053 04-03

HYPERACTIVITY FOLLOWING INJECTION OF A GLUTAMATE AGONIST AND 6,7 ADTN INTO RAT NUCLEUS-ACCUMBENS AND ITS INHIBITION BY THIP.
004066 04-04

PHARMACOLOGICAL-STUDIES WITH AN ALKYLATING NARCOTIC AGONIST, CHLOROXYMORPHAMINE, AND ANTAGONIST, CHLORNALTREXAMINE.
004082 04-04

AGONIST-INDUCED

AGONIST-INDUCED CHANGES IN BETA-ADRENERGIC-RECEPTOR DENSITY AND RECEPTOR-MEDIATED RESPONSIVENESS IN SLICES OF RAT-CEREBRAL-CORTEX.
000072 01-03

AGONIST-MEDIATED

SPINAL-CORD PHARMACOLOGY OF ADRENERGIC AGONIST-MEDIATED ANTINOCICEPTION.
004206 04-04

AGONISTIC-BEHAVIOUR

EFFECTS OF SCOPOLAMINE ON AGONISTIC-BEHAVIOUR IN MICE.
001690 02-04

EFFECT OF PIRACETAM ON AGONISTIC-BEHAVIOUR IN MICE.
001796 02-04

AGONISTS

EFFECTS OF DOPAMINERGIC AGONISTS AND ANTAGONISTS ON (3H)APOMORPHINE BINDING TO STRIATAL MEMBRANES: SULPIRIDE LACK OF INTERACTIONS WITH POSITIVE COOPERATIVE (3H)APOMORPHINE BINDING.
000099 01-03

COMPARTMENTATION OF CATECHOLAMINES IN RAT-BRAIN: EFFECTS OF AGONISTS AND ANTAGONISTS.
000125 01-03

REDUCTION IN THE NUMBER OF SEROTONIN-RECEPTORS IN THE BRAINSTEM OF MORPHINE-DEPENDENT RATS: RELATION TO BLOCKADE OF NALOXONE PRECIPITATED JUMPING BY SEROTONIN AGONISTS.
000258 01-03

EFFECTS OF NORADRENERGIC AGONISTS AND ANTAGONISTS ON GROWTH-HORMONE SECRETION UNDER GAMMA HYDROXYBUTYRATE NARCOANALGESIA IN THE RAT.
000262 01-03

MONOAMINE REPLACEMENT AFTER RESERPINE: CATECHOLAMINERGIC AGONISTS RESTORE MOTOR-ACTIVITY BUT PHENYLETHYLAMINE RESTORES ATROPINE-RESISTANT NEOCORTICAL LOW VOLTAGE FAST-ACTIVITY.
000309 01-03

ON THE CAPACITY OF PRESYNAPTIC ALPHA-RECEPTORS TO MODULATE NOREPINEPHRINE RELEASE FROM SLICES OF RAT NEOCORTEX AND THE AFFINITY OF SOME AGONISTS AND ANTAGONISTS FOR THESE RECEPTORS.
000323 01-03

NORADRENERGIC AGONISTS AND ANTAGONISTS: EFFECTS ON CONDITIONED FEAR AS MEASURED BY THE POTENTIATED STARTLE PARADIGM.
000372 01-04

ATTEMPTS TO REINSTATE LORDOSIS REFLEX IN ESTROGEN-PRIMED SPINAL FEMALE RATS WITH MONOAMINE AGONISTS.
000421 01-04

ROTATION INDUCED BY INTRANIGRAL INJECTIONS OF GABA AGONISTS AND ANTAGONISTS: ZONE-SPECIFIC EFFECTS.
000422 01-04

PSYCHIATRIC MANIFESTATIONS INDUCED BY DOPAMINE PRECURSORS OR DOPAMINE AGONISTS.
000865 01-15

GUANINE-NUCLEOTIDES INHIBIT BINDING OF AGONISTS AND ANTAGONISTS TO SOLUBLE OPIATE-RECEPTORS. (UNPUBLISHED PAPER).
001035 02-01

GABA AGONISTS AND UPTAKE INHIBITORS DESIGNED AS AGENTS WITH IRREVERSIBLE ACTIONS.
001079 02-02

GAMMA AMINOBUTYRIC-ACID AGONISTS: AN IN VITRO COMPARISON BETWEEN DEPRESSION OF SPINAL SYNAPTIC ACTIVITY AND DEPOLARIZATION OF SPINAL ROOT FIBRES IN THE RAT.
001104 02-03

INTRACELLULAR OBSERVATIONS ON THE EFFECTS OF MUSCARINIC AGONISTS ON RAT SYMPATHETIC NEURONES.
001143 02-03

EFFECTS OF ALPHA-ADRENOCEPTOR AGONISTS AND ANTAGONISTS AND OF ANTIDEPRESSANT-DRUGS ON PRESYNAPTIC AND POSTSYNAPTIC ALPHA-ADRENOCEPTORS.
001146 02-03

A PROPOSED MODE OF ACTION FOR NARCOTIC AGONISTS AND ANTAGONISTS.
001168 02-03

DOPAMINERGIC-SUPERSENSITIVITY: INFLUENCE OF DOPAMINE AGONISTS AND DRUGS USED FOR THE TREATMENT OF TARDIVE-DYSKINESIA.
001169 02-03

REGIONAL RELEASE OF (3H)ADENOSINE DERIVATIVES FROM RAT-BRAIN IN VIVO: EFFECT OF EXCITATORY AMINO-ACIDS, OPIATE AGONISTS, AND BENZODIAZEPINES.
001303 02-03

ATTEMPTS TO DEVELOP SUPERSENSITIVITY OR SUBSENSITIVITY RETINAL DOPAMINE-RECEPTORS AFTER VARIOUS TREATMENTS WITH ANTAGONISTS OR AGONISTS.
001350 02-03

PRESYNAPTIC AND POSTSYNAPTIC MECHANISMS IN HALOPERIDOL-INDUCED SENSITIZATION TO DOPAMINERGIC AGONISTS.
001392 02-03

DECREASE IN (3H) SEROTONIN BINDING IN RAT-BRAIN PRODUCED BY THE REPEATED ADMINISTRATION OF EITHER MONOAMINE-OXIDASE-INHIBITORS ON CENTRALLY-ACTING SEROTONIN AGONISTS.
001463 02-03

GABA AGONISTS DISSOCIATE STRIATAL UNIT ACTIVITY FROM DRUG-INDUCED STEREOTYPED-BEHAVIOUR.
001716 02-04

DORSAL TEGMENTAL BUNDLE DESTRUCTION: EFFECTS ON OPERANT-BEHAVIOR, BRAIN CATECHOLAMINE LEVELS, AND BEHAVIORAL-SUPPRESSION PRODUCED BY ADRENERGIC AGONISTS.
001726 02-04

CIRCLING PRODUCED BY SEROTONIN AND DOPAMINE AGONISTS IN RAPHE LESIONED RATS: A SEROTONIN MODEL.
001783 02-04

EFFECTS OF INTRAPALLIDAL OPIATE-RECEPTOR AGONISTS ON STRIATALLY-EVOKED HEAD-TURNING.
001785 02-04

BEHAVIORAL-EFFECTS OF DOPAMINE AGONISTS ACROSS THE ESTROUS-CYCLE IN RATS.
001792 02-04

DISCRIMINATIVE-STIMULUS EFFECTS OF PROTOTYPE OPIATE-RECEPTOR AGONISTS IN MONKEYS.
001803 02-04

COMPARISON OF OPIATE AGONISTS AND THEIR N ALLYL DERIVATIVES IN THE PRODUCTION OF PHYSICAL-DEPENDENCE IN THE RAT. 001841 02-05

THE ROLE OF DIFFERENTIAL BLOCKADE OF ALPHA-ADRENERGIC AGONISTS IN CHLORPROMAZINE-INDUCED HYPOTENSION. 001851 02-05

ANTIPSYCHOTIC-PROPERTIES AND ANTIDYSKINETIC-PROPERTIES OF ERGOT DOPAMINE AGONISTS. 002178 02-11

DOPA AND DOPAMINE AGONISTS IN DEPRESSION. 002310 02-13

TARDIVE-HYPERKINESIA. EFFECTS OF SULPIRIDE AND GABA SYSTEM AGONISTS. 002405 02-15
